THE ENCYCLOPAEDIA OF ISLAM

THE ENCYCLOPAEDIA OF ISLAM

NEW EDITION

PREPARED BY A NUMBER OF
LEADING ORIENTALISTS

EDITED BY

C. E. BOSWORTH, E. VAN DONZEL, W. P. HEINRICHS
AND *the late* G. LECOMTE
ASSISTED BY P.J. BEARMAN AND MME S. NURIT

UNDER THE PATRONAGE OF
THE INTERNATIONAL UNION OF ACADEMIES

VOLUME IX

SAN — SZE

TUTA SUB AEGIDE PALLAS · 1683 ·

LEIDEN
BRILL
1997

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government; the British Academy; the Oriental Institute, Leiden; Académie des Inscriptions et Belles-Lettres; and the Royal Netherlands Academy of Sciences.

The articles in this volume were published in double fascicules of 112 pages, the dates of publication being:

1995: Fascs. 147-150, pp. 1-208

1996: Fascs. 151-157, pp. 209-600

1997: Fascs. 158-162, pp. 601-920

ISBN 90 04 10422 4

PRINTED IN THE NETHERLANDS

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to list after each contributor's name the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears within square brackets after the name of the original author.

ADDENDA AND CORRIGENDA

VOLUME V

P. 88[b], **ḲIBLA**, ii, *add at end*: A second treatise of Ibn al-Hay<u>th</u>am on the determination of the *ḳibla* by spherical trigonometry is now published in A. Dallal, *Ibn al-Haytham's universal solution for finding the direction of the Qibla by calculation*, in *Arabic Science and Philosophy*, v (1995), 145-93.

Further information on the Persian Mecca-centred world-map discussed in the article AL-SAMT is included in the article AL-ṬĀSA and in the addenda and corrigenda to AL-SAMT.

P. 807[a], **LU<u>GH</u>Z**, *add to Bibl*: Shams Anwari-Alhosseyni, *Loġaz und Mo'ammā. Eine Quellenstudie zur Kunstform des persischen Rätsels*, Berlin 1986.

P. 1169[b], **MA<u>GH</u>NĀṬĪS**. 2, *add at end*: The treatise in ms. Berlin Ahlwardt 5811 mentioned on p. 1169b is in fact a late copy of the treatise by the Yemeni Sulṭān al-A<u>sh</u>raf—see AL-ṬĀSA for this and several other additional sources. The various publications by J. Klaproth and E. Wiedemann listed in the bibliography, as well as numerous others, have been reprinted in one volume as Fuat Sezgin *et alii* (eds.), *Islamic geography*, xv, *Reprint of studies on nautical instruments*, Frankfurt 1992.

(ED.)

VOLUME VII

P. 1027, **NAṢRIDS**, in genealogical table, *for* the date of Muḥammad XI (*el Chiquito*), *read* (1451-2/1453-5), and p. 1027[a], l. 7 from foot, *for* 949/1533-4, *read* 940/1533-4.

VOLUME VIII

P. 245[b], **<u>SH</u>AKĀK**, l. 11, *for* Idrīs Bidlīsī, *read* <u>Sh</u>araf al-Dīn Bidlīsī.

P. 447[b], **RA<u>SH</u>ĪD RIḌĀ**, *add to Bibl.*, first para.: *Maḳālāt al-<u>Sh</u>ay<u>kh</u> Ra<u>sh</u>īd Riḍā*, ed. Yūsuf Ḥusayn Ībi<u>sh</u> and Yūsuf Ḳuzmā <u>Kh</u>ūrī, 5 vols. Beirut 1994 (with good index).

P. 869[a], **SA'ĪDĀ GĪLĀNĪ**, l. 4 from bottom, *delete*: his wife.

P. 1056[a], AL-**SAMT**, *add at end*: In May 1995 a second Persian world-map centred on Mecca came to light and is now in a private collection. It is very similar to the first one, which became available for study in 1989, but more crudely executed. However, it still bears the paraphernalia for a European-type universal inclining sundial. (The sundial on the first, not necessarily of the same kind, is missing.) It is clear that both maps were copied from others, the original probably bearing more geographical information than either of these.

The first map is still to be dated *ca.* 1110/1700 (± 20 years); the second is undoubtedly later but bears striking resemblances in calligraphy and appendages (such as screws and feet) to the first, if not in general aspect and finish. Both maps are not necessarily from Iṣfahān, for <u>Kh</u>urasānian forms of the Persian ordinal numerals are found on them. However, apart from various astrolabes by Muḥammad Zamān (*ca.* 1075/1665) of Ma<u>sh</u>had, no other astronomical instruments survive from northeastern Persia in late-Ṣafawid times.

The geographical data in al-<u>Kh</u>āzinī's *Sand<u>j</u>arī Zī<u>d</u>j*, which was thought to have been derived from a world-map of the same kind as the first Persian world-map—this was stated in the article AL-SAMT—was in fact derived by calculation, as research in April 1995 established. The longitude and latitude values were indeed read from a map by or in the tradition of al-Bīrūnī but the *ḳibla*-values are inaccurate, not because they were read from a hypothetical Mecca-centred map of al-Bīrūnī but because al-<u>Kh</u>āzinī rounded them to the nearest 20' before finding the *ḳibla*. To do this he apparently used a *ḳibla*-table (with values for each degree of longitude difference from Mecca up to 60° and each degree of latitude difference up to 30°), which he mentions in the *Zī<u>dj</u>* but which is not contained in any of the known manuscripts; it can further be shown that this *ḳibla*-table was carelessly computed. In other words, we must look elsewhere for the inspiration for the Persian world-maps.

The geographical data on both of them (*ca.* 150 localities on each, the selection being slightly different on the two maps) was taken from a Tīmūrid geographical table compiled in Kī<u>sh</u> [*q.v.*] *ca.* 850/1450, and the anonymous compiler of that table (extant in ms. London, B.L. Or. 7489, fols. 53a-58b, where, however, the values of the *ḳibla* and distance to Mecca for some 250 localities originally given to seconds have been rounded to minutes) is certainly a possible candidate. But the writings of Ḥaba<u>sh</u> al-Ḥāsib [*q.v.*] and al-Bīrūnī [*q.v.*] particularly with regard to the astrolabe labelled *mubaṭṭa<u>kh</u>* (with a melon-shaped rete), indicate that already in the 3rd/9th and 5th/11th centuries Muslim astronomers were concerned with mappings preserving distance and direction to a central point (see E.S. Kennedy, P. Kunitzsch and R.P. Lorch, *The Melon Astrolabe of Ḥabash al-Ḥāsib*, in *ZGAIW* [1996]), a subject first broached in Europe in the 16th century and first applied to a Mecca-centred map in the early 20th century. (D.A. KING)

S

CONTINUATION

ṢANʿĀʾ, from ancient times the chief town of the Yemen [*q.v.*] and present capital of the unified Republic of Yemen. Its present population is reckoned to be just over half a million. The town is situated in the centre of the northern highlands of the Yemen at lat. 15° 22′ N. and long. 44° 11′ E., i.e. about 170 km/106 miles as the crow flies from the nearest point on the Red Sea and 300 km/186 miles approximately from the Indian Ocean port of Aden [see ʿADAN]. Ṣanʿāʾ is located at a height above sea level of more than 2,200 m/7,216 feet. It is all but surrounded by mountains, D̲j̲abal Nuḳum (2,892 m/9,486 feet) in the east, at the foot of which the town lies spread, D̲j̲abal ʿAybān (3,194 m/10,476 feet) in the west, the highest peak in the immediate vicinity, and the twin peaks of al-Nahdayn (2,513 m/8,243 feet) which lie due south. Its climate is a temperate one, generally very dry and mild. Its rainfall pattern is consistent, with maximum falls in March, April, May and July, August, September (see Acres, Lewcock and Wilson, in Serjeant and Lewcock, *Ṣanʿāʾ*, 13-19, in *Bibl.* below).

Pre-Islamic Ṣanʿāʾ

Despite the current claim that the name of Ṣanʿāʾ is derived from the excellence of its trades and crafts (perhaps the feminine form of the Arabic adjective *aṣnaʿ*), it is highly probable that the name is Sabaic and, in keeping with the basic meaning in Sabaic of the root *ṣnʿ*, means "well fortified" (A.F.L. Beeston *et alii, Sabaic dictionary*, Louvain and Beirut, 1982, 143). It is certainly as a military centre that the town emerges in the pre-Islamic inscriptions, particularly as the headquarters of the Sabaeans for their military expeditions southwards against Ḥimyar [*q.v.*]. Inscriptions Ja 575, 576, for example, speak of Sabaean campaigns launched from Ṣanʿāʾ (*bn/hgrn/ṣnʿw*) (A. Jamme, *Sabaean inscriptions from Maḥram Bilqîs*, Baltimore 1962, 64 ff.) and Ja 574, 576, 577 (Jamme, 60 ff.) announce a triumphant return to Ṣanʿāʾ (*ʿady/hgrn/ṣnʿw*) from the wars. Apart from being a "town" (*hgr*), Ṣanʿāʾ was also a *maḥram* (*mḥrm*) which Beeston (*Ṣanʿāʾ*, 37) interprets as "a place to which access is prohibited or restricted, no matter whether for religious or for other reasons." The palace of G̲h̲umdān [*q.v.*] is also mentioned in the pre-Islamic inscriptions (e.g. J. Ryckmans, *La Mancie par ḥrb*, in *Festschrift Werner Caskel*, Leiden 1968, 263 (NNAG 12)) and see *Ṣanʿāʾ*, 44. Islamic tradition also reports that the mid-6th century Abyssinian King Abrahah [*q.v.*] built a church in Ṣanʿāʾ (al-Ḳalīs) (al-Ṭabarī, i, 934), for a study of which see *Ṣanʿāʾ*, 44-9.

Unfortunately, the inscriptions do not tell us when the site of Ṣanʿāʾ was first settled, nor do they mention the town's ancient name of Azāl (al-Hamdānī, 55). The above quoted inscriptions and a very large majority of the texts mentioning the name of the town are all to be dated to the 3rd century A.D. The site must, of course, have been settled a very good deal earlier (see Beeston, in *Ṣanʿāʾ*, 36-9).

Early Islamic and mediaeval Ṣanʿāʾ

For the more than two centuries of the early Islamic history of Ṣanʿāʾ, we have little more than a list of the governors despatched to the Yemen by the Prophet, the Orthodox, Umayyad and ʿAbbāsid caliphs. A comprehensive list was attempted in *Ṣanʿāʾ*, 53-4, and Tables 1, 4, 6, 8 and 11 of ʿAbd al-Muḥsin Madʿad̲j̲ M. al-Madʿad̲j̲, *The Yemen in early Islam, 9-233/630-847, a political history*, London 1988, should also be consulted. The remainder of the period can be divided into six as follows: the Yuʿfirids, 232-387/847-997 [*q.v.*], the Ṣulayḥids, 439-92/1047-99 [*q.v.*], the sultans of Hamdān, 493-569/1099-1173, the Ayyūbids, 569-628/1173-1230 [*q.v.*], the Rasūlids 628-783/1230-1381 [*q.v.*] and a period in which the Zaydī Imāms controlled Ṣanʿāʾ, 783-953/1381-1546 [see ZAYDIYYA].

A detailed history of this period cannot be given here, and a few notes will suffice. The Yuʿfirids, it might be noted, were the first Yemeni dynasty to take other than a purely local control of any part of the Yemen. Descended from Ḥimyar, they regarded themselves as their legitimate heirs and moved into Ṣanʿāʾ from their original territory in S̲h̲ibām when they perceived the weakness of the local ʿAbbāsid governors posted there. Their 150 years' rule of Ṣanʿāʾ came to an end in 387/997, leaving the town in anarchy until the arrival of the Fāṭimid Ṣulayḥids in 439/1047.

Our sources are particularly silent about the Ṣulayḥids during their Ṣanʿāʾ period. The zenith of Ṣulayḥid rule came later during the period during which they were centred in Dhū D̲j̲ibla, which the dynasty settled in about 480/1087. With the death in 492/1098 of the *Dāʿī* Sabaʾ b. Aḥmad, Ṣanʿāʾ was lost to the Ṣulayḥids.

During the period 492-569/1098-1173 Ṣanʿāʾ fell under the rule of three families of Hamdān from Yām, also Ismāʿīlīs like the Ṣulayḥids: Banū Ḥātim (I), Banu 'l-Ḳubayb and Banū Ḥātim (II) (G.R. Smith, *The Ayyūbids and early Rasūlids in the Yemen*, London 1974-8, 2 vols., ii, 68, 70-5). Depending almost entirely on the forces which could be mustered from Hamdān [*q.v.*], the three families controlled Ṣanʿāʾ and were still there to contest authority with the Ayyūbids after their conquest of Tihāma [*q.v.*] and the southern highlands from Egypt in 569/1173.

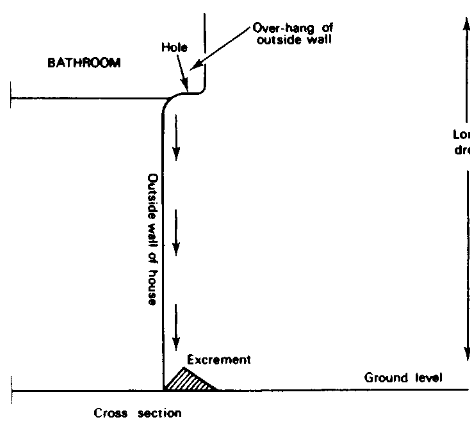
It cannot be said that Ṣanʿāʾ was constantly in the hands of the Ayyūbids during their period in the Yemen. Rather, the Ayyūbids fought from time to time against those in control in the town, firstly the

Hamdānid sultans, later the Zaydīs, and always after fairly elaborate military manoeuvres to secure D̲h̲amār to the south of Ṣanʿāʾ. They took over the town for a period, until ousted, and then the whole process began all over again after an interval of time.

A similar story can be told of the Rasūlid period during the years 628-723/1230-1323. Despite the brilliance of Rasūlid administrative and intellectual achievement in Tihāma and the southern highlands, they too never succeeded in occupying with anything like permanency the chief town of the country. During approximately the last 130 years of the dynasty, 723-858/1323-1454, Ṣanʿāʾ remained in general within the political orbit of the Zaydīs and beyond the grasp of the Rasūlids and indeed of their successors, the Ṭāhirids [*q.v.*] (see Smith, *Some observations on the Tahirids and their activities in and around Ṣanʿāʾ (858-923/1454-1517)*, in Ihsan Abbas *et alii* (eds.), *Studies in history and literature in honour of Nicola A. Ziadeh* ..., London 1992, 29-37). (See Smith, *Ṣanʿāʾ*, 49-68).

Late mediaeval and modern Ṣanʿāʾ

Again, elaborate details are not possible here and the following is a very brief outline of dates and political events. From about 954/1547, when the Ottoman Özdemir Pas̲h̲a [*q.v.*] advanced on Ṣanʿāʾ, until 1038/1629 Ṣanʿāʾ was the capital of Ottoman Yemen. Although he did not deal the *coup de grâce*—that was left to the Imām al-Muʾayyad—the real hero of the Turks' expulsion from Ṣanʿāʾ and the Yemen was al-Ḳāsim b. Muḥammad, al-Ḳāsim al-Kabīr. Right through to the mid-13th/19th century, the Zaydī Imāms controlled Ṣanʿāʾ and northern Yemen with more or less authority. Zaydī rule, however, seriously declined, mainly as a result of internal squabbling, allowing a second Ottoman occupation of the Yemen. The Ottomans had already begun to expand in Arabia and in 1289/1872 Aḥmad Muk̲h̲tār Pas̲h̲a entered Ṣanʿāʾ to begin the second Ottoman occupation of the Yemen until about 1337/1918. The post-1337/1918 history of Ṣanʿāʾ and the Yemen is that of the Zaydī Ḥamīd al-Dīn house, under the Imāms Yaḥyā, Aḥmad and, for a few days only in 1382/1962, al-Badr. The house rose to prominence in Zaydī circles in 1307/1890 in the figure of al-Manṣūr bi 'llāh Muḥammad b. Yaḥyā Ḥamīd al-Dīn. The Imām Aḥmad (1367-82/1948-62), famed for his bravery and learning as much for his ruthlessness and toughness, died from natural causes in 1382/September 1962. His son, al-Badr, was proclaimed Imām and widely recognised, but was compelled to flee Ṣanʿāʾ after he was attacked by young army officers who had been plotting a military coup. Ḥamīd al-Dīn rule was brought to an end and the newly-appointed chief of staff, ʿAbd Allāh al-Sallāl, was pronounced the new president of the Yemen Arab Republic.



The Republic needed vast numbers of Egyptians troops to prop it up in the face of general royalist opposition. They left the Yemen only in 1967 at the time of the Six-Day War between Egypt and Israel and the Republican government, balanced between the Zaydī and S̲h̲āfiʿī religious and tribal interests, the military and a new breed of Western-educated technocrat, continued in power and opened up talks with the People's Democratic Republic of Yemen on the question of the formation of a unified Yemen. The Republic of Yemen came into being in 1990 with Ṣanʿāʾ as its capital (see Serjeant, in *Ṣanʿāʾ*, 68-108).

The buildings of Ṣanʿāʾ

The visitor to the old town of Ṣanʿāʾ (which is still largely intact though surrounded by new development) notices the extremely prominent traditional domestic architecture, the high, multi-storey tower house. It is usually square and at least five, if not eight or nine storeys high. The ground floor is used as stores and for the domestic animals and the top storey, called by the name *mafrad̲j̲*, is used as a second reception room and for the daily afternoon *ḳāt*-chewing ritual (see Lewcock and Serjeant, in *Ṣanʿāʾ*, 436-500).

Another extremely prominent architectural feature in Ṣanʿāʾ is naturally the mosque and there are over one hundred in the town. Al-Ḥad̲j̲arī (*Masād̲j̲id Ṣanʿāʾ*, Ṣanʿāʾ 1361) lists about a hundred of many different periods and is a mine of information regarding their history and general background. Perhaps the most impressive and interesting for the historian is the Great Mosque (*al-D̲j̲āmiʿ al-Kabīr*) whose original foundation no doubt has an early Islamic date (al-Madʿad̲j̲, *The founding of the Great Mosque* ..., in *New Arabian Studies*, i [1993], 175-88, suggests the first construction was in 11/633, p. 184). For a detailed study of the mosques of Ṣanʿāʾ, see Serjeant, Lewcock, Smith and Costa, in *Ṣanʿāʾ*, 310-90).

The public baths (*ḥammāmāt*) play an important social role in the daily life of Ṣanʿāʾ and there are seventeen still in operation today, some possibly pre-Islamic in foundation. The fuel burnt is human excrement (*k̲h̲arā*), which is reputed to burn giving off great heat. The fuel is collected from the "long drop" (*manṭal*) found in every house in the town for this very purpose. Women have their own bath times regulated at each public bath and the baths play a particularly important role at festival times (*aʿyād*) (see Lewcock, Akwaʿ and Serjeant, *Ṣanʿāʾ*, 501-25).

Long drop (*Manṭal*)

The market of Ṣanʿāʾ

The large market in Ṣanʿāʾ has been the subject of some academic studies (see in particular Serjeant, Akwaʿ and Dostal, in *Ṣanʿāʾ*, 159-302) and the complexities of its administration and organisation are beginning to be understood. A 12th/18th century document entitled *Ḳānūn Ṣanʿāʾ*, which is a collection of market regulations, was published by Ḥusayn b. Aḥmad al-Ṣayāg̲h̲ī in 1964 (*Mad̲j̲allat al-Mak̲h̲ṭūṭāt*, 273-307) and it has also been the subject of a lengthy study in *Ṣanʿāʾ*, 179-240. Today's Ṣanʿāʾ market is dealt with in some detail by Dostal, in *Ṣanʿāʾ*, 241-75.

The mint of Ṣanʿāʾ

The earliest coins which can be assigned to Ṣanʿāʾ date from 156-8/772-4, and the 3rd/9th century in particular saw a huge output from the mint, "a substantial proportion of all the gold being coined in the territories of the caliph", according to Lowick (in

Ṣanʿāʾ, 303). Umayyad, ʿAbbāsid, Ayyūbid, Rasūlid, Ottoman and, of course, Zaydī coins minted in Ṣanʿāʾ are all attested.

Bibliography: It is difficult to exaggerate the scholarly importance of R.B. Serjeant and R. Lewcock (eds.), *Ṣanʿāʾ, an Arabian Islamic city*, London, 1983, written by a whole team of Yemen specialists, for almost any aspect of the history, culture and daily life of the town. Other sources not mentioned in the text are: Ḥusayn ʿAbd Allāh al-ʿAmrī and Yūsuf Muḥammad ʿAbd Allāh, art. *Ṣanʿāʾ*, in Aḥmad Djābir ʿAfīf *et alii* (eds.), *al-Mawsūʿa al-Yamaniyya* (*The Encyclopaedia of Yemen*), Ṣanʿāʾ 1992, ii, 583-8. *History*: Aḥmad b. ʿAbd Allāh al-Rāzī, *Taʾrīkh madīnat Ṣanʿāʾ*, ed. Blackburn, *The collapse of Ottoman authority in Yemen, 968/1560-976/1568*, in *WI*, xix (1979). Buildings: P. Costa, *La Moschea grande di Ṣanʿāʾ*, in *AIUON*, xxxiv (1974). Mint: Ramzi J. Bikhazi, *Coins of al-Yaman, 132-569 AH*, in *al-Abḥāth*, xxxiii (1970).

(G.R. Smith)

SANAD [see isnad].

SANADJĀT, weights of a balance (in full *sanadjāt al-mīzān*); also applied to balances, steelyards; also the weights of a clock (sing. *sandja*). The forms with *ṣād* also occur (*ṣanadjāt* and *ṣandja*) but the former is the more chaste (see Lane, s.v.). There are two recognised plural forms, *sanadjāt* and *sinadj* (in modern Egyptian Arabic *sinag*, plural of *singa*). The word is Persian in origin, being connected with *sang*, meaning both stone and weight, since in ancient times weights were non-metallic (cf. the Hebrew of Deut. xxv, 13). According to Muslim tradition, it was a Jew named Sumayr, during the time of al-Ḥadjdjādj b. Yūsuf [*q.v.*], who first proposed to regulate the new dirhams of the reformed coinage of 75/694 by means of the use of fixed weights (Ibn al-Athīr, iv, 337). Previously, the custom apparently had been to weigh one coin of good quality against another. When a large number had thus been weighed, this lot was weighed against a similar number and the surplus, if any, was carried forward. The first coin weights of Islam were made of bronze and are excessively rare. Weights of iron are also recorded but no examples are extant. Under the Umayyad caliph ʿAbd al-Malik (65-86/685-705 [*q.v.*]), weights made of glass were recommended to be used since they did not change by increase or decrease (al-Damīrī, *Ḥayāt al-ḥayāwān*, i, 59). This carried on the practice of Ptolemaic and Byzantine times. These glass weights, however, were confined to Egypt and were in use from Umayyad until Mamlūk times. The old opinion that they were glass coins, *nummi vitrei*, was first exploded by Castiglioni in 1847, and later, after the fact had been overlooked, by E.T. Rogers in 1873. Various collections of these *sanadjāt* have been published. As they generally bear inscriptions with the names of caliphs, or governors, or inspectors of markets, and an indication of weight, they are very valuable, not only for Islamic history and metrology, but also for Arabic epigraphy.

The great physicist al-Khāzinī [*q.v.*] paid particular attention to the weights used in his balances [see mīzān], in which of course he achieved a very high degree of accuracy. In his introduction to his description of the *Balance of wisdom*, he devotes two paragraphs to a discussion of the weights specific to this machine. He does not seem to imply that the *ṣanadjāt*—always with *ṣād* in his work—can be in mixed units in weighing operations, but simply says that they are to be "*dirhams*, *mithkāls* or others". Presumably the units chosen in any particular operation depended upon the mass of the objects to be weighed. For each unit there were nine different weights of *ṣanadjāt*: for unity, 1, 2 and 5; for tens, 10, 20 and 50; for hundreds, 100, 200 and 500. With these values, using different combinations, any required weight could be obtained (*Kitāb Mīzān al-ḥikma*, Ḥaydarābād 1940, 108-9).

The term *sanadjāt* is also occasionally used for other kinds of weights such as counterweights or pellets discharged from the mouths of falcons in water-clocks (see E. Wiedmann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, Hildesheim 1970, i, 127). More usual terms for weights where the precise value is unimportant are *mithkāla* and *bayḍa*.

(J. Walker-[D.R. Hill])

SANĀʾĪ, Madjdūd b. Ādam al-Ghaznawī, Persian poet. In early sources already the *kunya* Abu 'l-Madjd is sometimes added to his name. As a pen name he used Sanāʾī, only rarely Madjdūd or Madjdūd Sanāʾī. The former name could have been derived from Sanāʾ al-Milla, one of the *laḳabs* of the Ghaznawid sultan Masʿūd III, but the poet's actual relationship to this ruler is unclear, because no panegyrics directly addressed to him by Sanāʾī have been preserved. As a matter of fact, no reliable biographical data outside the poet's own works are available. However, the many references to the historical context to be found in his poetry, including dedications to a great number of patrons, make it possible to reconstruct his life, at least in its main outlines.

The only known dating of his birth, in 437/1045-6, which is recorded in the *Mudjmal-i Faṣīḥī*, is highly improbable. It may be regarded as certain that he was

born at Ghazna about the beginning of the last quarter of the 5th/11th century. In spite of the reputation of a learned poet, expressed by the epithet *ḥakīm* commonly added to his name, we know nothing about his formal education beyond the fact that in a prose introduction to the *Ḥadīḳat al-ḥaḳīḳa* his father is said to have been a *muʿallim*. According to the picture of his early life sketched in the *Kārnāma-yi Balkhī* and the panegyrics contained in his *Dīwān*, he was during these years a minor poet who maintained connections with patrons from all social groups in the Ghaznawid residence except, as it seems, the court of the sultan itself. We find among them officials of the state bureaucracy, military men, members of the Islamic clergy as well as scholars, scribes and poets. One of his most important protectors was Thiḳat al-Mulk Ṭāhir b. ʿAlī, the head of the department of correspondence, who also patronised the poet Masʿūd-i Saʿd-i Salmān [*q.v.*]. According to a *ḳiṭʿa* in Sanāʾī's *Dīwān*, he prepared a collection of Masʿūd's poetry. There is also mention of his copying the poems of another prominent poet, ʿUthmān Mukhtārī [*q.v.*].

His relations with a few prominent Islamic scholars, belonging to the Ḥanafī school of law, foreshadowed the future course of his literary career. The celebrated story of Sanāʾī's abandoning professional poetry after a meeting with a "drinker of dregs" (*lāy-khʷār*), first told by Dawlatshāh towards the end of the 9th/15th century, has no historical value, but does reflect an evident break in his career as a poet, more or less coinciding with his departure from Ghazna. First he went to Balkh, and from there to other cities in Khurāsān, which was then under the rule of the Saldjūḳs. As it appears from the *Kārnāma-yi Balkhī*, written shortly after he left Ghazna, this event took place before 508/1114-15, the year of Masʿūd III's death. He probably did not return to his native city before about 520/1126. During this exile, he almost completely abandoned the secular poetry of the court tradition, seeking instead the patronage of people belonging to the religious class. Of crucial importance was his stay at Sarakhs, where he established a close relationship with Sayf al-Ḥaḳḳ Abu 'l-Mafākhir Muḥammad b. Manṣūr. This Ḥanafī scholar was, as his title *aḳḍā 'l-ḳuḍāt* indicates, also a person of some political weight. Besides, he was a renowned preacher (*wāʿiẓ*), who delivered his sermons in a *khānḳāh* of his own. Sanāʾī wrote some of his most remarkable poems for Muḥammad b. Manṣūr, addressing him both as a protector and as a spiritual guide. There are further references to the poet's visits to Nīshāpūr and Harāt. In the latter town, he met with the descendants of Shaykh ʿAbd Allāh al-Anṣārī [*q.v.*]. This is in fact the only contact of his with a Ṣūfī community for which there exists reliable evidence. The tradition that Sanāʾī was a pupil of Shaykh Yūsuf al-Hamadhāni, which eventually led to his inclusion in the Ṣūfī affiliations (cf. R. Gramlich, *Die schiitischen Derwischorden Persiens*, i, Wiesbaden 1965, 8), is certainly unhistorical.

The reasons for his return to Ghazna are not known to us. However, again a remarkable change in his career can be noticed. While he was still in Khurāsān, Sanāʾī had become a celebrated writer of religious poetry for which there appeared to exist a lively interest among the ruling classes, who hitherto had only patronised secular poetry. For the first time in his career, Sanāʾī drew the attention of a royal patron when the Ghaznawid sultan Bahrāmshāh [*q.v.*] invited him to the court. Although he clearly stated his determination to stay aloof from the affairs of this world, he nevertheless wrote his major *mathnawī* as well as a number of short poems for this sultan. Very different dates are suggested in later sources for the year of his death. The most likely is 11 Shaʿbān 525/9 July 1131, mentioned in a notice on the last day of his life, which became attached as an appendix to a prose introduction to the *Ḥadīḳa*. The same date is mentioned in the *Nafaḥāt al-uns* of Djāmī [*q.v.*].

The works of Sanāʾī encompass the entire range of classical Persian poetry. Though most poems deal with religious subjects, specimens of purely secular poetry are by no means absent. Even the religious poems often contain panegyrical elements showing the poet's dependence on the material support of patrons throughout his career. The *Dīwān* of Sanāʾī is preserved in a number of ancient manuscripts, the oldest dated of which is Velieddin 2627 (Bayezit Library, Istanbul), copied in 684/1285. They show great differences, as far as the order of the poems, variant readings and the number of verses are concerned. It is, therefore, impossible to establish which of them could be taken to represent a genuine textual tradition going back to the time of the poet himself. In one strain of the early tradition, the poems were grouped into a few sections marked by generic indications. The most important genres thus distinguished are the *zuhdiyyāt*, "ascetic poems" (most of them long *ḳaṣīdas*) and the *ḳalandariyyāt*, poems characterised by the use of antinomian motives referring to the debauchery of beggars and drunks. Of considerable interest is also the group of the *ghazaliyyāt* because this is the earliest sizable corpus of this kind of poems known in the history of Persian literature.

As a writer of *mathnawīs*, Sanāʾi is best known for his long didactical poem which is usually entitled *Ḥadīḳat al-ḥaḳīḳa wa-sharīʿat al-ṭarīḳa*, "The garden of truth and the law of the right path". The history of this text is even more complicated than that of the *Dīwān*. To all appearances, the poet died before he could give the poem its final form. At least one early version, however, was prepared for Sultan Bahrāmshāh, when the poet was still alive. A copy of this version, under the title *Fakhrī-nāma*, has survived in the manuscript Bağdatlı Vehbi 1672 (Süleymaniye Library, Istanbul), which was copied at Konya on 7 Shawwāl 552/12 November 1157. It contains about 5000 *bayts*, i.e. approximately half the amount of lines found in most later copies. It is not likely, however, that all the lines not contained in the Vehbi manuscript are unauthentic. The textual tradition has preserved a few documents which indicate that intensive editorial work was done on the poem soon after the first version was completed, including a rough copy (*musawwada*) of 10,000 *bayts* prepared by the poet to be sent to Khʷādja Burhān al-Dīn, a scholar from Ghazna who lived at Baghdād, after the poem had come under attack for its alleged pro-ʿAlid tendencies. After Sanāʾī's death, Bahrāmshāh ordered a certain Muḥammad b. ʿAlī al-Raffāʾ to make yet another redaction. As a result of these initial rearrangements, as well as of subsequent editorial interference, the *Ḥadīḳa* was transmitted in several different forms. As late as the 11th/17th century, the Indian scholar ʿAbd al-Laṭīf al-ʿAbbāsī made an attempt to harmonise the various traditions of the text; he also wrote a commentary, entitled *Laṭāʾif al-ḥadāʾiḳ min nafāʾis al-daḳāʾiḳ*. Later a few other commentaries were composed (cf. J. Stephenson, *The enclosed garden of the truth*, repr. Wellingborough 1975, Introd., pp. xxi-xxv). One of the selections made from the poem, which is sometimes entitled *Laṭīfat al-ʿirfān*, has been ascribed to Sanāʾī as well as to Farīd al-Dīn ʿAṭṭār [*q.v.*], but its real author is probably Niẓām al-Dīn Maḥmūd Ḥusaynī Shīrāzī,

a poet of the 9th/15th century also known by the pen name of Dāʿī.

The *Ḥadīḳāt al-ḥaḳīḳa* is the first specimen of a mystical *mat̲h̲nawī* in Persian literature and has had a considerable impact on later writers in the same genre, notably on D̲j̲alāl al-Dīn Rūmī [*q.v.*], whose *Mat̲h̲nawī-yi maʿnawī* was composed after the example given by Sanāʾī. The great number of manuscripts known to exist bears witness to an immense popularity lasting throughout the centuries. It is a didactic poem conceived as a continuing discourse on a wide variety of ethical and religious subjects. In the early *Fak̲h̲rī-nāma* version, the vague outline of an allegory, comparable to that of his earlier work *Sayr al-ʿibād ilā 'l-maʿād*, appears when the poet tells of a meeting with a spiritual guide, who is the personification of the Active Intellect. In later redactions this feature was almost obliterated and replaced by a division of the text into chapters. The text contains numerous references to philosophy and the sciences and has therefore often been called an "encyclopaedia of Ṣūfism". This is a misleading qualification because these elements are always subordinated to the didactic discourse. The same applies to the narratives, which take a far less important part in Sanāʾī's poem than they do in the works of later writers of Persian didactic *mat̲h̲nawīs*.

Sanāʾi left two other *mat̲h̲nawīs*, of a much smaller size. The first, *Kārnāma-yi Balk̲h̲ī*, sometimes also called *Muṭāyaba-nāma* ("Book of jest"), is a completely secular poem of no more than 433 *bayts*. It was written at Balk̲h̲ shortly after Sanāʾī had left G̲h̲azna. In a mixture of praise and satire, this topical poem reviews the people who were the poet's patrons during his early years, arranged according to their social position. The second, the *Sayr al-ʿibād ilā 'l-maʿād* ("The journey of the devotees to the place of return") is Sanāʾī's most interesting work. Two-thirds of its 800 lines describe the development of the narrator's soul in the allegory of a spiritual journey. From his conception onwards, he climbs the ladder of existence, partly under the guidance of the Active Intellect. He reaches the goal of this quest when he meets with the preacher Muḥammad b. Manṣūr, his actual patron during his stay at the city of Sarak̲h̲s, whose praise fills the remaining part of the poem. The *Sayr al-ʿibād* is written in an enigmatic style with only few explanations provided in the text. Stylistically it shows a resemblance to philosophical allegories in Arabic, such as Ibn Sīnā's *Ḥayy ibn Yaḳẓān* [*q.v.*] and the *Lug̲h̲z ḳābis* by Miskawayh [*q.v.*]. An anonymous commentary is extant, the oldest version of which is contained in the ms. Nâfiz Paşa 410 (Süleymaniye Library, Istanbul), dated 674/1275.

All genuine *mat̲h̲nawīs* of Sanāʾi were written in the metre *k̲h̲afīf*, which, through his example, became one of the patterns most often used for didactic mystical poetry. In the same metre, a number of other short *mat̲h̲nawīs* occur in manuscripts of his works, which are falsely attributed to him. Some of these were works by other poets which were manipulated in order to pass them off as genuine texts by Sanāʾī, e.g. *ʿIs̲h̲k-nāma*, which actually is a verse commentary on the *Sawāniḥ* of Aḥmad al-G̲h̲azālī [*q.v.*], and *Ṭarīḳ al-taḥḳīḳ*, written in imitation of the *Ḥadīḳa* by Aḥmad al-Nak̲h̲čiwānī who probably lived in the 8th/14th century (on these and other poems of this group, see B. Utas, *Ṭarīq ut-taḥqīq*, Lund 1973, *passim*). Others, like *Taḥrīmat al-ḳalam* and *ʿAḳl-nāma*, both appearing for the first time in the Velieddin manuscript of 684 A.H., were deliberately composed as pseudo-Sanāʾī texts (cf. *Of piety and poetry*, 113-18).

A small collection of letters by Sanāʾi was published by Nad̲h̲īr Aḥmad (*Makātīb-i Sanāʾī*, Aligarh 1962). There are two prose introductions to his works containing his name as the author. One of these, which is in fact the same text as the introduction by al-Raffāʾ, is almost certainly spurious.

Sanāʾī's great impact on Persian mystical poetry has given rise to the view that he was a prominent Ṣūfi himself. There is little historical evidence available to substantiate this view. The most important patrons of his art were Islamic scholars, many of whom were also renowned as preachers. The predominently homiletic style of his religious poetry fits this social environment extremely well. With its characteristic blend of ethics, wisdom, mysticism and praise of the Prophet and other great men of Islam it appealed to the community of the Muslims as a whole rather then to a restricted circle of Ṣūfi adepts only. This also explains the varied use made by later generations of his verse.

Kadkānī, *Tāziyānahā-yi sulūk. Naḳd wa taḥlīl-i čand ḳaṣīda az Ḥākim Sanāʾī*, Tehran 1372/1993.

(J.T.P. de Bruijn)

ṢANAM (a.), image, representation and, especially, idol (from the Common Semitic root *ṣ-l-m*, cf. Akk. *ṣalmu*, Aram. *ṣalmā*, Hebr. *ṣelem*, etc., by a shift of *l* into *n*, see Gesenius-Buhl, 684); for Old Testament parallels, see *inter alia*, Num. xxxiii. 52; II Kings xi. 18; Ezek., vii. 20; Amos, v. 26). It is in this sense that it is found in the Ḳurʾān, where the pl. *aṣnām* is cited five times (VI, 74; VII, 138; XIV, 35; XXI, 57; XXVI, 71).

Ṣanam progressively replaces *nuṣub* (pl. *anṣāb*, Hebr. *maṣṣᵉbōt*, Gen. xxxv. 14), a term denoting "carved stones over which the blood of victims sacrificed to idols was poured, stones making up tumuli and those delimiting the sacred enclosure (*ḥimā*) of the sanctuary" (T. Fahd. *Panthéon*, 26). From being the rough stone making up the *nuṣub*, the idol became "a carved stone" (Yāḳūt, iv, 622; *fa-naḥatahu ʿalā ṣūrat aṣnām al-Bayt* [i.e. the Kaʿba]). Ibn His̲h̲ām writes (*Sīra*, 54 = al-Azraḳī, *Ak̲h̲bār Makka*, 78) that all the inhabitants had an idol (*ṣanam*) which they worshipped, and whenever one of them left on a journey, the last thing he did before leaving and the first on his return, was to touch the idol (*tamassaḥa bihi*; cf. Gen. xxxi. 14). Hence, Yāḳūt says, the cult of stones amongst the Arabs in their encampments began from their deep attachment to the idols of the *Ḥaram* (*loc. cit.*). This cult reflects a state of affairs well before the reform of ʿAmr b. Luḥayy in the 3rd century A.D., which introduced into central Arabia statues of gods brought in from Hīt (Heliopolis = ʿAmmān), where he had sought medical treatment. "In effect, the *teraphīm* of the Canaanites, the *elōhīm* of the Hebrews and the *ilānī* of the Assyrians long survived up to the time of the coming of monotheism in the shape of betyles in stone, in sand

held together with milk, in flour and in wood, in pagan Arabia" (see refs. in Fahd, *op. cit.*, 28-9). "It was in the mid-3rd century A.D. that Nabataean and Syro-Palestinian influences affected, in the urban centres, the evolution in form of the Arab pantheon, and it was then that the stone betyle became an idol". Wellhausen correctly affirmed this when he wrote that the images were not genuinely Arabic, since *wat͟han* and *ṣanam* were imported words and things. See his *Reste*², 102; D. Nielsen, *Die altarabische Mondreligion und die mosaische Überlieferung*, Strassburg 1904).

According to al-Azraḳī, there was no house in Mecca without its idol. Those carved out of wood seem to have been those of the high-born and rich, as were imported products. Ibn His͟hām states (*Sīra*, 303-4) that "ʿAmr b. D̲j̲amūḥ, who was one of the *sayyids* of the Banū Salama and one of their leaders, had taken into his house a wooden idol (*ṣanam*), called Manāt, according to the practice of notables of that time; he considered it as a god, and worshipped and purified it". ʿIkrima, son of Abū D̲j̲ahl [*q.v.*], the fierce enemy of the Prophet, made idols. Traders went and offered them to the Bedouins, who bought them and placed them within their tents (al-Azraḳī, 77-8).

After the triumph of Christianity in the Orient, the Ḥid̲j̲āz had remained a stronghold of paganism, where idol carvers could still gain a living. It was not surprising that, when the Prophet entered Mecca in triumph, he had 360 idols in the Kaʿba immediately destroyed (*ibid.*, 77; Ibn al-At͟hīr, ii, 192; cf. Fahd, *Panthéon*, 31). According to a leading Jordanian historian, met by the author in Kuwait shortly after the expulsion from the Kaʿba in 1979 by French guards of the rebels who had barricaded themselves there, the ground collapsed as the result of a bomb explosion and revealed a pile of statues buried below ground; the Saudi authorities hastened to dispose of them.

Thus the religions of pagan Arabia, from betyles to carved idols, retained their primitive internal structure, and although social conditions and artistic influences might affect the actual forms of representation, this had no effect on the conceptual development of the cults there. A list of the Arab gods can be found in Fahd's *Panthéon*, with all the known information about some 90 of them, and showing that these Arab cults were static and characteristic of the desert and nomadic life, in which betyles, idols and sacred trees were the dominant features.

(J.-P. MOLENAT)

SANANDAD̲J̲ or SINANDAD̲J̲, older form SINNA, the administrative capital of the modern Persian province of Kurdistān and the general name for the district round it.

1. The town. The name Sinna came into historical prominence only from the 9th/15th century onwards, the main urban centre of the district having preciously been Sīsar [*q.v.*], as the seat of the Kurdish *wālīs* or local rulers of Ardalān [*q.v.*]. Under the year 988/1580, the 10th/16th century historian of the Kurds, S͟haraf al-Dīn K͟hān Bidlīsī [*q.v.*], speaks in his *S͟haraf-nāma* (ed. V. Véliaminof-Zernof, St. Petersburg 1860-2, i, 88) of a land grant held by Tīmūr K͟hān of Ardalān, which included Ḥasanābād, Sīna, etc., but the local historian of Sanandad̲j̲, ʿAlī Akbar Muns͟hī Waḳāyiʿ-nigār (wrote *ca.* 1310/1892-3, see Storey, i, 1300, cf. also 369), in his ms. work on the geography and history of Sanandad̲j̲, the *Ḥadīḳa-yi Nāṣirī* (Fr. résumé by B. Nikitine, in *RMM*, xlix, 70-104), says that Sinna was built by the *wālī* Sulaymān Khān on the ruined site of an earlier settlement; the Persian *taʾrīk͟h* or chronogram for this event is given as *g͟hamhā* "sorrows" = 1046 in *abd̲j̲ad* [/1636-7].

The *wālīs*, being near the Perso-Turkish frontier, took an active part in the wars between the Ṣafawids and the Ottomans, sometimes on one side, sometimes on the other; during this period, Ardalān enjoyed, like ʿArabistān and Luristān, a semi-independent existence. During the Afg͟hān invasion of Persia, in 1132/1720, the Kurdish chief of Sulaymāniyya [*q.v.*] seized Sinna, but the *wālī* of Ardalān Subḥān Werdī K͟hān recovered it in the time of Nādir S͟hāh. Amān Allāh "the Great" (1212-40/1797-1825) much improved the town of Sinna, and entertained there Sir John Malcolm and J.C. Rich, but his grandson Amān Allāh b. K͟husraw K͟hān Nā-kām (1265-84/1848-67) was the last hereditary *wālī* of Kurdistān, since the central government in Tehran under Nāṣir al-Dīn S͟hāh [*q.v.*] now extended its direct control over the western provinces.

The town lies between the right bank of the Ḳis͟hlaḳ river (which eventually flows down to the Diyālā and then the Tigris) and Mount Āwīdar, which separates Sinna from the old capital Ḥasanābād. The citadel of the *wālīs*, described by such 19th century travellers as Malcolm, Rich and Čirikov, is on a hill some 21 m/70 ft. high in the centre of the town. The town's population at that time was largely Kurdish, but with a substantial Jewish minority and a few Chaldaean Catholic and Armenian Christians, and it was a lively commercial centre, exporting oak-galls, tragacanth, furs and carpets. In modern Persia, Sanandad̲j̲ (lat. 35° 19′ N., long 47° 01′ E.) is the administrative capital of the province (*ustān*) of Kurdistān, with a population in 1991 of 244,249 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division). Senna carpets remain a principal product of the town and its hinterland.

2. The district. The older district of Sinna corresponds with the heartland of the modern Kurdistān province, with high, treeless plateaux in the northeast and southeast, whilst its central part is intersected by

numerous valleys, sloping down to deciduous forests in the east. The main mountain massif is the Kūh-i Čihil Čas̲h̲ma (*ca.* 3,658 m/12,000 ft.) to the north of Sanandad̲j̲ and running westwards to the ᶜIrāḳī frontier. For a detailed survey of topography, see Minorsky's *EI*[1] art. *Senna.*

Ethnically, the population is mainly Kurdish, Sunnīs of the S̲h̲āfiᶜī *mad̲h̲hab*, amongst whom *s̲h̲ayk̲h̲s* of the Naḳs̲h̲bandiyya [*q.v.*] Ṣūfī order have traditionally been influential, although the *wālīs* of Ardalān were S̲h̲īᶜī, possibly as a result of former connections with the Ahl-i Ḥaḳḳ [*q.v.*] Gūrān. In addition to the majority of Kurdish speakers, the area to the west of Sanandad̲j̲, going up to and slightly across the frontier with ᶜIrāḳ, contains speakers of the Hawrāmānī or Awromani dialect of the Northwest Iranian tongue Gūrānī [see GŪRĀN; HAWRĀMĀN; and to the references there, add D.N. MacKenzie, *The dialect of Awroman (Hawramānī-ī Luhōn)*, in *Royal Danish Acad. of Sciences*, phil.-hist. series, iv/3 (Copenhagen 1966), pp. 141].

(V. MINORSKY-[C.E. BOSWORTH])

AL-ṢANᶜĀNĪ, ᶜABD AL-RAZZĀḲ B. HAMMĀM b. Nāfiᶜ, Abū Bakr al-Yamanī al-Ḥimyarī, Yemeni scholar, b. 126/744, d. in the middle of S̲h̲awwāl 211/middle of January 827. The *nisba* al-Ḥimyarī indicates that he was a *mawlā* [*q.v.*] of the Banū Ḥimyar. According to the biographical sources, he was of Persian origin (*min al-abnā*ʾ [see ABNĀʾ], ᶜId̲j̲lī, *Taʾrīk̲h̲ al-t̲h̲iḳāt*, Beirut 1984, no. 1000). His father was already a learned man and traditionist (Ibn Saᶜd, v, 399). ᶜAbd al-Razzāḳ received his training as a scholar in Ṣanᶜāʾ, where he studied for a period of about eight years with Maᶜmar b. Rās̲h̲id (d. 153/770) (Aḥmad b. Ḥanbal, *al-ᶜIlal wa-maᶜrifat al-rid̲j̲āl*, Beirut 1988, ii, no. 2599; Ibn Abī Ḥātim, *al-D̲j̲arḥ wa 'l-taᶜdīl*, Ḥaydarābād 1952, iii, 38) who was himself of Baṣran origin and who had settled in Ṣanᶜāʾ after studying in Baṣra, Medina and Mecca. Moreover, ᶜAbd al-Razzāḳ participated in the lectures of a number of visiting scholars including the Meccans Ibn D̲j̲urayd̲j̲ (d. 150/767), Sufyān b. ᶜUyayna (d. 198/813-4) and the Kūfan Sufyān al-T̲h̲awrī (d. 161/778) (Ibn Abī Ḥātim, *Taḳdimat al-maᶜrifa li-kitāb al-d̲j̲arḥ wa-'l-taᶜdīl*, Ḥaydarābād 1952, 52-3; al-D̲h̲ahabī, *Mīzān al-iᶜtidāl fī naḳd al-rid̲j̲āl*, Cairo 1907, ii, 127). It was during his commercial trips to Syria (al-D̲h̲ahabī, *Ḥuffāẓ*, i, 364) and during the *Ḥad̲j̲d̲j̲* that ᶜAbd al-Razzāḳ came into contact and studied with other eminent scholars of the middle of the 2nd/8th century like al-Awzāᶜī (d. 157/774) and Mālik b. Anas (d. 179/795) [*q.vv.*].

In the last quarter of the 2nd century A.H., ᶜAbd al-Razzāḳ became the leading scholar of the Yemen. His fame attracted students from all parts of the Islamic world, amongst them the ᶜIrāḳīs Yaḥyā b. Maᶜīn (d. 233/848) and Aḥmad b. Ḥanbal (d. 241/855), two famous *ḥadīt̲h̲* scholars of the 3rd/9th century. The reputation of ᶜAbd al-Razzāḳ was first of all based on his book or books. The oldest information about his works comes from his pupils mentioned above (Ibn Ḥanbal, *ᶜIlal*, iii, no. 3882, iv, no. 3940). There is a difference of opinion as to the titles of his book or books. Ibn al-Nadīm (d. 385/995), for instance, mentions a *Kitāb al-Sunan fi 'l-fiḳh* and a *Kitāb al-Mag̲h̲āzī* (*Fihrist*, Cairo 1929-30, 318), Ibn K̲h̲ayr (d. 575/1179) claims to have known several *riwāyāt* of a work called *Muṣannaf*—which is probably identical with the *Kitāb al-Sunan* quoted by Ibn al-Nadīm—and the *Kitāb al-Mag̲h̲āzī*, which according to him was originally a part of the *Muṣannaf*. He further refers to a book annexed to the *Muṣannaf* called *D̲j̲āmiᶜ* which he describes as a work of Maᶜmar b. Rās̲h̲id merely transmitted by ᶜAbd al-Razzāḳ (*Fahrasa*, Saragossa 1894, 127-30). Al-D̲h̲ahabī (d. 748/1347) mentions a *D̲j̲āmiᶜ al-kabīr* (*Mīzān*, ii, 126), al-Ṣafadī (d. 764/1362-3) a *Tafsīr* (*Nakt al-himyān*, Cairo 1911, 192), and Ibn Kat̲h̲īr (d. 774/1372-3), finally, alongside the *Muṣannaf* names a *Musnad* (*al-Bidāya wa 'l-nihāya*, ix, 265).

ᶜAbd al-Razzāḳ's reputation as a traditionist is ambivalent. The reasons for reservations against him were: he sometimes transmitted from memory and then made mistakes (al-Ṣafadī, *Nakt*); at the end of his life he became blind and was then not able to personally verify transmissions from him (al-D̲h̲ahabī, *Mīzān*, ii, 127; Ibn Ḥad̲j̲ar, *Tahd̲h̲īb al-tahd̲h̲īb*, Ḥaydarābād 1907-9, vi, 312); and he was allegedly a partisan of the S̲h̲īᶜa (Ibn Ḥanbal, *ᶜIlal*, ii, no. 1545; Ibn Ḥibbān, *al-T̲h̲iḳāt*, Ḥaydarābād 1982, viii, 412). Despite these insinuations, leading traditionists such as Aḥmad b. Ḥanbal, al-Buk̲h̲ārī, Muslim, etc., accepted a large part of his transmission as being reliable, and thus ᶜAbd al-Razzāḳ became a key figure in the *asānīd* [see ISNĀD] of the most important Sunnī *ḥadīt̲h̲* compilations.

Of ᶜAbd al-Razzāḳ's works the following have been preserved: (1) A compilation of traditions from earlier scholars, *Tābiᶜūn*, *Ṣaḥāba* and the Prophet, called *al-Muṣannaf* (ed. in 11 vols. Ḥabīb al-Raḥmān al-Aᶜẓamī, Dabhel-Beirut 1970-2; [2]1983). It contains a *Kitāb al-Mag̲h̲āzī* and at the end a *Kitāb al-D̲j̲āmiᶜ* which are both to a very large extent works of his teacher Maᶜmar b. Rās̲h̲id as transmitted by ᶜAbd al-Razzāḳ. (The ms. of a *Kitāb al-Ṣalāh* recorded by F. Sezgin, *GAS*, i, 99, is a fragment of the *Muṣannaf*.) The edition of the *Muṣannaf* is based on different transmissions of the work which have been put together (see H. Motzki, *Die Anfänge der islamischen Jurisprudenz*, Stuttgart 1991, 53-6). (2.) The *Ṣaḥīfat Hammām b. Munabbih*, a collection of 137 *aḥādīt̲h̲* of the Prophet from Abū Hurayra transmitted by ᶜAbd al-Razzāḳ through Maᶜmar through Hammām b. Munabbih (d. 101/719-20 of 102/720-1) (ed. Muḥammad Ḥamīdullāh 1953, rev. ed. Luton 1979). (3.) A *Tafsīr* (ms. Cairo, Dār al-Kutub, no. 242 *tafsīr*), which is largely a *tafsīr* by his teacher Maᶜmar.

The works of ᶜAbd al-Razzāḳ are extremely important for the study of early Islamic jurisprudence, *ḥadīt̲h̲* and exegesis of the Ḳurʾān because they contain older sources or materials which have otherwise been lost. ᶜAbd al-Razzāḳ had direct access to authors of the first extensive compilations of traditions arranged according to subject (*muṣannafāt* [see MUṢANNAF]) like those by Maᶜmar b. Rās̲h̲id, Ibn D̲j̲urayd̲j̲, Sufyān al-T̲h̲awrī and Sufyān b. ᶜUyayna. His own *Muṣannaf* is to a large extent compiled from materials received from these four scholars, and it is very probable that

these materials came for the most part from their books. In general, ʿAbd al-Razzāḳ's transmission from these teachers of his seems to be reliable (see Motzki, *op. cit.*, 56 ff.). Access to the oldest compilations of legal traditions which are not limited to prophetic *ḥadīth*—as ʿAbd al-Razzāḳ's *Muṣannaf* offers—opens new venues for researching both the origins of Islamic jurisprudence as well as the development of *ḥadīth* in general.

Bibliography: Some information on ʿAbd al-Razzāḳ is to be found in almost all of the biographical sources on scholars of the 2nd and 3rd centuries A.H. In addition to the works mentioned in the article, see also Bukhārī, *K. al-Taʾrīkh al-kabīr*, Ḥaydarābād 1941-2, iii/2, 130; ʿUḳaylī, *K. al-Ḍuʿafāʾ al-kabīr*, Beirut 1984, iii, 107-11. The most comprehensive collections of traditions about him are in: Dhahabī, *Siyar aʿlām al-nubalāʾ*, Beirut 1981 ff., ix, 563-80; Ibn Manẓūr, *Mukhtaṣar taʾrīkh madīnat Dimashk li-Ibn ʿAsākir*, Beirut 1984 ff., xv, 97-107; Mizzī, *Tahdhīb al-kamāl fī asmāʾ al-ridjāl*, Beirut 1992, xviii, 52-62. For the edition of the *Muṣannaf* mentioned in the article, two different indices are available: *Fahāris*, Beirut 1987 in 1 vol.; *Fihris aḥādīth wa-āthār*, Beirut 1988 in 4 vols.

(H. MOTZKI)

AL-ṢANʿĀNĪ, ḌIYĀʾ AL-DĪN SHAʿBĀN b. Salīm b. ʿUthmān al-Ḥāsikī al-Rūmī, Yemenite poet and physician (1065-1149/1655-1736).

Shaʿbān's father was an Ottoman trooper from the town of Ḥasaka on the river Khābūr [*q.v.*], and his mother was Yemeni by birth. Shaʿbān was held in high esteem by his contemporaries, above all in his capacity as a panegyrist and man of letters but he was also known for his stirring sermons of exhortation. For some time, he lived by trade, but later he devoted himself to medicine and henceforth earned his livelihood out of medical practice (*taṭabbub*). In his fifties, he was struck by hemiplegia (*fālidj*) which increasingly isolated him as he grew older. A poor man, he died in his home town Ṣanʿāʾ [*q.v.*] aged 81.

Most of Shaʿbān's œuvre fell into oblivion after his death, including an anthology entitled *Dīwān Badr Shaʿbān*. Except for some fragments of poetry as preserved by his biographers, only two pieces from his pen have come down to us, sc. a dispute about rank between a freeborn woman and a female slave (see *Bibl.*), and an extensive didactic poem on dietetics and hygienics designed for domestic use (see *Bibl.*).

Kahl, *Die Natāʾiğ al-fikar des Šaʿbān ibn Salīm aṣ-Ṣanʿānī. Eine jemenitische Gesundheitsfibel aus dem frühen 18. Jahrhundert. Text, Übersetzung und Kommentar*, Wiesbaden 1993, 3-8 (and the bio-bibliographical sources quoted there).

(O. KAHL)

AL-ṢANAWBARĪ, ABŪ BAKR (or Abu 'l-Ḳāsim or Abu 'l-Faḍl) MUḤAMMAD B. AḤMAD (or Aḥmad b. Muḥammad) b. al-Ḥusayn b. Marrār al-Ḍabbī (the *nisba* al-Ṣīnī, given by Mez, *Renaissance*, 250, Eng. tr. 261, is a scribal error) al-Ḥalabī al-Anṭākī, poet and librarian at the court of Sayf al-Dawla [*q.v.*] in Mawṣil and Aleppo.

Born in Antioch before *ca.* 275/888 (if Iḥsān ʿAbbās, *Dīwān al-Ṣanawbarī*, Beirut 1970, poem 231, v. 67 is to be taken literally), he died in Aleppo in the year 334/945. Since his chronology is consonant with neither the *Aghānī* nor the *Yatīma*, very little is known about his life. He was a close friend of Kushādjim [*q.v.*], the poet and master-cook to Sayf al-Dawla, and eventually became his son-in-law, exchanging several verse epistles with him, as was the practice of the time (see J.E. Montgomery, *Abū Firās's poetic correspondence with Abū Zuhayr*, in *The Occasional Papers of the School of Abbasid Studies*, St. Andrews, ii [1988], 1-45). The tradition that al-Ṣanawbarī was himself a keen gardener may be aetiological, based on his fame and pre-eminence as a nature poet. As Mez, *loc. cit.*, explains, the *laḳab al-ṣanawbarī* presumably means that either he or his father traded in pine nuts (*ṣanawbar*). Al-Ṣanawbarī, however, according to Ibn ʿAsākir, *Tahdhīb Taʾrīkh Dimashk*, Damascus 1329, i, 456, claimed that the name had been given to his grandfather by the caliph al-Maʾmūn [*q.v.*], on account of the keenness of his reasoning in disputations (?). His poems in praise of the *ahl al-bayt* [*q.v.*] point to his Shīʿī affiliations, but as this is not attested by any later authorities it may simply be that these poems were composed to harmonise with, or on behalf of, the Shīʿī Ḥamdānids [*q.v.*]. Among his *rāwīs* were Abu 'l-Ḥasan al-Adīb and Abu 'l-Ḥasan Muḥammad b. Aḥmad b. Djumayʿ al-Ghassānī.

Al-Ṣanawbarī's *dīwān* was edited (in alphabetical and not generic order) by Abū Bakr al-Ṣūlī [*q.v.*]. According to the *Fihrist*, 168, it amounted to 200 folios. The section containing the rhyme-letters *rāʾ* to *ḳāf* is still extant in a ms. in Calcutta (see ʿAbbās, *op. cit.*, 6), although this is not exhaustive as ʿAbbās, *Takmilat Dīwān al-Ṣanawbarī*, poems 83-98, and L. al-Ṣaḳḳāl and D. al-Khaṭīb, *Tatimmat Dīwān al-Ṣanawbarī*, Aleppo 1971, poems 27-37, indicate. The *dīwān* contains the full panoply of poetic types encountered in the collections of other contemporary poets (panegyrics and vituperations [50 pieces], love poems [especially *mudhakkarāt*, poems composed about boys, 80 pieces], veneric and cynegetic pieces, threnodies and consolations [40 pieces], occasional snippets composed to order, etc.) but is justly famous for its 40 nature poems, both epigrams and *ḳaṣīdas* [*q.v.*]: *rabīʿiyyāt* (vernal poems), *zahriyyāt* (floral poems), *rawḍiyyāt* (meadow poems) and even *thaldjiyyāt* (snow poems). Whilst al-Ṣanawbarī is heavily indebted to his poetic forbears, especially Ibn al-Muʿtazz [*q.v.*], he is acknowledged as the creator of the fully independent nature *ḳaṣīda*, doing as much for horticultural poetry as Abū Nuwās [*q.v.*] did for viticultural poetry. His achievement is that he not only liberated nature as a theme of the Arabic poetic répertoire, establishing it as a genre in its own right, but that he also enlarged its scope to encompass other genres, such as the *khamriyya* [*q.v.*]. The key-note of this poetry is the striving after wonderment and effect, being very much the product of the *badīʿ* [*q.v.*] style and being heavily dependent upon "phantastic" (*takhyīlī*) imagery, as later defined by ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1087 [*q.v.* in Suppl.]), imagery which involves the inversion of the conventional leading to an anthropomorphisation of nature. These effects are directed at the auditor/reader's appreciation of the poet's display of "linguistic ingenuity ... a style in which the probable is made improbable, the familiar enigmatic, the ordinary miraculous" (S. Sperl, *Mannerism in Arabic poetry*, Cambridge 1989, 156).

In modern scholarship, al-Ṣanawbarī's nature poetry has been studied from the exclusive viewpoint of the imagination, as literary (mannerist) artifice devoid of any connection with reality. This is to overlook the occasional or social nature of much of this poetry; it is not the poetic exercise of the imagination, but was presumably composed for the garden banquet-cum-*madjlis* "when the caliph or a grandee would invite the habitués of his salon to a Sans-souci

in the gardens at the edge of town" (G.E. von Grunebaum, *Aspects of Arabic urban literature*, in *Islamic Studies*, viii [1969], 293). Hence the repeated, witty shifts in register, from the "phantastic" to the ontological, i.e. from the imaginary to the real. His influence on Andalusian poetry was such that Ibn Khafādja [*q.v.*] was crowned the Ṣanawbarī of the West.

A commentary on Dhu 'l-Rumma's *Bāʾiyya* was also penned by al-Ṣanawbarī.

Bibliography: Given in the article. For a survey of 20th-century scholarship and an extensive discussion of al-Ṣanawbarī's nature poems, see G. Schoeler, *Arabische Naturdichtung. Die Zahrīyāt, Rabīʿīyāt und Rauḍīyāt von ihren Anfängen bis aṣ-Ṣanaubarī. Eine gattungs-, motiv- und stilgeschichtliche Untersuchung*, Beirut 1974, 273-343; and Sezgin, *GAS*, ii, 501-2. Other works containing discussions of al-Ṣanawbarī are A. Hamori, *On the art of medieval Arabic literature*, Princeton 1974, 78-87; M.M. Badawi, *From primary to secondary Qaṣīdas: thoughts on the development of Classical Arabic poetry*, in *JAL*, xi (1980), 29-31; E. Wagner, *Grundzüge der klassischen arabischen Dichtung*, Darmstadt 1988, ii, 145-50; J. Stetkevych, *The zephyrs of Najd: the poetics of nostalgia in the Classical Arabic Nasīb*, Chicago 1993, 183-7. See also C.E. Bosworth, *Ṣanawbarī's elegy on the pilgrims slain in the Carmathian attack on Mecca (317/930): a literary-historical study*, in *Arabica*, xix (1972), 222-39. (J.E. MONTGOMERY)

SANDĀBIL, a town said to be the capital of the king of China in the account of the Arab traveller and littérateur Abū Dulaf Misʿar b. Muhalhil [*q.v.*] purporting to describe his participation in an embassy of the Chinese king Ḳālīn b. al-Shakhīr returning from the court of the Sāmānid *amīr* Naṣr b. Aḥmad (301-31/914-43 [*q.v.*]) at Bukhārā.

Abū Dulaf describes it as an immense city, one day's journey across, with walls 90 cubits high and an idol temple bigger than the sacred mosque at Jerusalem (*First Risāla*, Fr. tr. G. Ferrand, in *Relations de voyages ... relatifs à l'Extrême Orient du VIII^e au XVIII^e siècles*, Paris 1913-14, 219-20, 221; Ger. tr. A. von Rohr-Sauer, *Des Abû Dulaf Bericht über seine Reise nach Turkestan, China und Indien*, Bonn 1939, 17, 27-30, text originally known in Yāḳūt, *Buldān*, ed. Beirut, iii, 440, 444-5, cf. 275, and in al-Ḳazwīnī, *Āthār al-bilād*, ed. Wüstenfeld, ii, 30 ff.). It is not, however, mentioned in other early Muslim sources on China (the *Ḥudūd al-ʿālam*, Gardīzī, Marwazī), and its existence as such is dubious, given also further doubts about the historicity of this Sino-Sāmānid mission (see C.E. Bosworth, *An alleged embassy from the Emperor of China to the Amīr Naṣr b. Aḥmad: a contribution to Sāmānid military history*, in Minovi and Afshar (eds.), *Yâdnâme-ye īrânī-ye Minorsky*, Tehran 1969, 8-9). Marquart, *Streifzüge*, 84-9, cf. von Rohr-Sauer, *op. cit.*, 58-60, sought to identify Sandābil with Kan-chu, in Kan-su province [*q.v.*], which would be geographically feasible. Minorsky pointed out, *Ḥudūd al-ʿālam*, comm. 232, that the name of the "large town governed from China" in the anonymous geography, tr. 85, Khāl.b.k, resembles in the Arabic script the S.n.dāb.l of Abū Dulaf, especially in its last three letters, and noted that the place mentioned in the *Ḥudūd al-ʿālam*'s chapter on China immediately before Khāl.b.k is Khāmčū = Kan-chu. It seems impossible to take the question any further than this.

Bibliography: Given in the article. (C.E. BOSWORTH)

ṢANDAL (A., P. *čandal* from Skr. *čandana*) is the sandal wood, coming from several unrelated trees which are mainly of Indian and Southeast Asian origin.

Both white and yellow sandalwood were, in fact, only different kinds of *Santalum album L., Santalaceae*. It supplies the bright, white sap-wood and the reddish heartwood. Because of its peculiar scent, probably experienced as very pleasant, it was appreciated from time immemorial and used, among other purposes, for perfumeries, and its ethereal oils against inflammations of the urinary passages. The red sandalwood, on the other hand, is the heartwood of *Pterocarpus santalinus L., Leguminosae*. It is totally scentless and of little value, but was popular for its beauty. It is not known how the name *ṣandal* was transferred from the white-yellow to the red wood. The Arabic authors know the same threefold distinction. Sandalwood was unknown to the Greeks. The most comprehensive account about *ṣandal* is found in al-Nuwayrī, *Nihaya*, xii, 39-42, tr. Wiedemann, in *Aufsätze zur arabischen Wissenschaftsgeschichte*, ii, 252-4, 263. The yellow, fat (*al-dasim*), heavy wood, which looks as if it were painted over with saffron and is therefore also called *al-zaʿfarānī*, is accounted the best sandalwood. It has a strong fragrance and is designated as *al-maḳāṣīrī* (the meaning of this *nisba* is not clear, cf. Dozy, *Suppl.*, ii, 358-9). Of the white sandalwood, which is also fragrant, there exist various varieties, which incline partly to yellow, brown and red.

The use of various sandalwoods in medicine, above all of their ethereal oils, is described extensively from several sources by Ibn al-Bayṭār (*Djāmiʿ*, iii, 89, 10-31 = Leclerc, no. 1418). When added to electuaries (*maʿdjūnāt*), they are *inter alia* effective against fever and heating of the bile. If inhaled, its powder is effective against pleurisy (*birsām*) and congestion (? *lahīb*). If the electuary is applied together with rosewater as a poultice, it is effective against erysipelas (*ḥumra*), boils of feverish gout (*al-niḳris al-ḥārr*) and infections of the eyelids (*shatar*).

In the Maghrib, as repeatedly stated by ʿAbd Allāh b. Ṣāliḥ, Ibn al-Bayṭār's teacher (see Dietrich, *Dioscurides triumphans*, iii, 31, 38, 93, and Dozy, *Suppl.* i, 846a), *ṣandal* indicates thyme (*nammām*) and the wild and cultivated mint (*Thymus serpyllum L., Labiatae*).

A.W. Gött., Phil.-Hist. Kl., N.F.*, no. 173, Göttingen 1988; idem, *Die Ergänzung Ibn Ǧulǧul's zur Materia medica des Dioskurides*, no. 38, in *Abh. A.W. Gött., Phil.-Hist. Kl., N.F.*, no. 202, Göttingen 1993. (A. DIETRICH)

ṢANDJ, ṢINDJ, pl. *ṣunūdj*, the generic term for any kind of cymbal. Both al-Djawharī and al-Djawālīḳī say that the word is an Arabicised one. Lane thinks that it is derived from the Persian *sandj* or *sindj* and Ibn Khurradādhbih (d. near the opening of the 10th century) avers that the Persians invented it (al-Masʿūdī, *Murūdj*, viii, 90 = § 3214). However, the instrument was well known to the ancient Semites. We read of the *ṣandj* in early Arabic literature. Al-Ḳuṭāmī refers to the *ṣandj al-djinn* and Ibn Muḥriz [*q.v.*] was called the *ṣannādj al-ʿArab*. The feminine form of the latter, said to express an intensive, is also to be found in the cognomen of al-Aʿshā Maymūn known as the *ṣannādjat al-ʿArab* and in a certain Mustarād *al-ṣannādja*. Yet it is difficult to say whether the actual instrument or mere symbolism is aimed at in these instances. Further confusion is added by the fact that the word *ṣandj* (< Pers. *čang*) was also given by some

Arabic writers to the harp, although the more general name for the latter was *djank* [see MIʿZAF].

The term *ṣandj* or *ṣindj* is generally used for the cymbal in the East, although *zindj* has been more common in the West since the Middle Ages. The instrument is played in pairs and is used to regulate the measure or rhythm in both music and dancing. That it had a definite place as a rhythmic intrument in days of old is stated by Ibn Zaylā (d. 440/1048) in his *Kitāb al-Kāfī* (ed. Z. Yūsuf, Cairo 1964). It is to be found in several shapes and sizes. The finger cymbals used today are generally about 4 or 5 cm in diameter and they are usually attached to the thumb and middle finger. They are depicted by Niebuhr (i, tab. xxvi), Villoteau (pl. cc. 26), Lane (*Modern Egyptians*, ch. xviii), Christianowitsch (no. 36), Lavignac (2794, 2936), and Sachsse (tab. 8, no. 36). Specimens may be found in museums, notably Brussels (no. 293) and New York (no. 383). Other names for the cymbal, according to Villoteau (980), are *zīl* (< Turk. *zill*), *kās* (probably of cup-shape form originally), and *sadjdja* or *sādjdja*, although probably this ought to be written *ṣadjdja*. In Syria we have the term *fuḳaysha*, and in Morocco *nuwayḳsa* (dimin. of *nāḳūs*) in common use, the former being a metathesis of *shuḳayfa* (see below). The term *ṣalāṣil* (sing. *ṣalṣal*) was also applied to all high-sounding clashed metal instruments, of this type. Like *zīl* or *zill*, it is of onomatopoeic origin, the verbal root being *ṣalla* ("to sound"). There are cognates in all the Semitic languages. Saadia (d. 941) equates the Arabic root with the Hebrew *ṣālal*, and we have the Arabic *muṣalṣalāt* standing for the Hebrew *ṣelṣelīm* (cymbals) of Psalm cl. 5, in the *Glossarium latino-arabicum* (11th century). Small cymbals attached to a frame were also in use. This instrument was known as the *djaghāna* or *ṣaghāna* (see below). It resembled a pair of metal tongs with two or three arms branching from the open ends, a small cymbal being attached to each arm. Nowadays it is called a *zillī māsha* ("jingling tongs"). We see it depicted in Sāsānid art, and it is mentioned by Ibn Khallikān (tr. de Slane, iii, 491) and in the *Anwār-i Suhaylī*. There are two Turkish specimens at New York (nos. 353, 1377).

The hand cymbals are to be found in both the plate and bowl shape. This belongs to martial and processional music. Clement of Alexandria (*Paedagogus*) said that the Arabs used cymbals (κύμβαλα) in war, and this seems to be hinted at in the later Arabic reference to the *ṣannādjat al-djaysh*, although Arabic lexicographers think differently. Al-Djawharī describes a cup-shape instrument called the *ṣaḥn*. It was a small bronze cup (*ṭusayt*) which was struck against another of its kind. This cup or bowl-shape cymbal was favoured in martial music, and it is delineated in several pictures of a military band which are found in the treatise on automata by Badīʿ al-Zamān al-Djazarī (*flor.* later 6th/12th century [*q.v.* in Suppl.]) which have been reproduced (*The legacy of Islam*, 1st ed., fig. 91; Schulz, *Die pers.-islam. Miniaturmalerei*, tab. ii; al-Djazarī, tr. D.R. Hill, *The book of knowledge of ingenious mechanical devices*, Dordrecht 1974). At this period, however, the cymbal was called the *kās*, *kāsa* or *kaʾs*, and Nāṣir-i Khusraw (*Safar-nāma*, ed. Schefer, 43, 46,47) mentions it among the martial instruments of the Fāṭimids. In the *Alf layla wa-layla* (i, 66,323; ii, 656; iii, 150, 271, 274, 298), these bowl-shaped *kuʾūs* or *kāsāt* are frequently mentioned in company with *ṭubūl* (drums) in the warlike scenes. In modern times, the hand cymbal is plate-shaped and known as the *ṣandj*, *zīl* and *kās* (Villoteau, *loc. cit.*; Russell, *Aleppo*, i, 151). Villoteau gives the diameter of the Egyptian instrument as 24.4 cm. For a Palestinian example, see Sachsse (66, tab. 8). For numbers used in military bands, see ṬABL-KHĀNA. For quite a century and a half, Turkey has been famed for the manufacture of cymbals and in the earlier part of the 20th century several thousands were exported from Istanbul every year. There are two other mediaeval names for the cymbal which are worth recording, viz. *ṣaffāḳatān* and *musāfiḳ*. The former occurs in the *Kitāb al-Aghānī* (v, 75), and Ibn Ḥadjar al-Haytamī (Berlin ms. 5517, fol. 19b) likens it to the *ṣandj* (cymbal). *Musāfiḳ* and *musāfiḳa* equate with *cymbalum* in the *Glossarium latino-arabicum* and the *Vocabulista in Arabico* (12th-13th century).

Clappers. In Arabic, handclapping is called *ṣafḳ*, *safḳ*, *taṣfīḳ*, *tasfīḳ* and *taṣfīḥ*, all of these terms being derived from verbal roots meaning "to clap the hands", and are of the same kin as the Hebrew *ṣāpaḳ* (Ezekiel, xxi. 17). A plate of wood or metal was called a *ṣafīḥa*, and from the same root we get *muṣaffaḥāt*, a word which appears to denote "clappers". Labīd [*q.v.*], the Arabic poet, places *muṣaffaḥāt* in the hands of wailing women (*anwāḥ*). Another word for clappers occurs in the *Vocabulista Aravigo* (1501) where we have *maciquif* (*chapas para tañer*) and *mabiquif* (*tarreñas chapas para tañer*) registered. Doubtless the *b* in the latter is a slip for *c*. Dozy was of the opinion that both these words were metatheses of *musāfiḳ*, but it is more likely that the word intended is *mashāḳif* (sing. *mishḳifa*), the Aramaic root corresponding to this being *sheḳaf* ("to clap the hands"). See also *shaḳf* and *shuḳūf* (*testa*) in the *Glossarium latino-arabicum* and the *Vocabulista in Arabico*. In modern times the *shuḳayfāt* were small small cymbals (or *castanets*) used by dancers. For a design of these clappers, see the *Kitāb al-Burhān* in the Bodleian Library (Or. 133, fol. 11b). In Persia and Turkey they are known as the *čārpāra* (lit. "four pieces") or *čālpāra*. See Farmer, *Turkish musical instruments*, in *JRAS* (1936). Castanets are mentioned by Ibn Khaldūn (ed. Quatremère, ii, 354, tr. Rosenthal, ii, 397) and Villoteau (981) says that they were called *aḳligh* in Egypt. Outside of Spain, where they may have been known as the *kāsatān* (hence perhaps *castanet*), they have not been favoured.

The Percussion slab known as the *nāḳūs* is dealt with separately; see NĀḲŪS.

Percussion staff. This was the *ḳaḍīb*, an instrument found in the hands of several of the early musicians of Islam. Its identity has long been a puzzle to both musicographers and orientalists. It was a staff which was used for rhythmic purposes either by striking it upon the ground or upon something else. Ibn Ḥadjar al-Haytamī (d. 972/1565, fol. 19b) has a section entitled "Concerning beating (*ḍarb*) with the *ḳaḍīb* upon cushions (*wasāʾid*)". It recalls an incident in the "Story of the Mock Caliph" in the *Alf layla wa-laylā* where a cushion (*mudawwara*) is struck as a signal for servants to appear. Burton will not allow that a cushion is meant, and substitutes "a circular plate of wood or metal, a gong". We get a slight idea of the sound of the *ḳaḍīb* from the fact that Muḥammad is said to have been averse to the tick-tack (*ṭaḳṭaḳa*) of the *ḳaḍīb*, and the same is said of the imām al-Shāfiʿī (al-Shalāḥī, fol. 79). It is given a place in music by the Ikhwān al-Ṣafāʾ (i, 91) and Ibn Zaylā, although later it fell into desuetude and was only to be found in the hands of the amateur and the folk. Indeed, the word *muḳtaḍab* came to mean "untrained" or "extemporised".

Bells. Ordinarily, the cup, bowl, or cone shape bell is known in Arabic as the *djaras*, whilst the sphere-shape bell is called the *djuldjul*. On the other hand, *djaras* also stands for a large bell (*campana*) and *djuldjul*

for a small bell (*tintinnabulum*), the probable reason being that the first-mentioned form was generally found in the large instrument whilst the second-mentioned form was generally found in the small instrument. Bells were used on the necks of animals in pre-Islamic days, and there is a tradition that Muḥammad was averse to the sound of the caravan bells so that the fiction arose that "angels will not associate with a company where there is a *d̲j̲aras*" (e.g. Muslim, *Libās*, trad. 103). A collection of these bells, either on a board or on a chain or rope, is known as a *ṭabla*. The term was probably borrowed from the Hebrew *ṭablā*, which, in turn, had its origin in the Greek τάβλα, because these bells were generally attached to a tablet of wood. There is a specimen of a *ṭabla* at New York (no. 2659), the largest bell being 10 × 5.8 cm. Bells were also used to increase the din of battle so as to affright the enemy, as we are told by Ibn Zaylā, and in the story of G̲h̲arīb and his brother ʿAd̲j̲īb in the *Alf layla wa-layla* (iii, 294) we read of the camels and mules in battle being furnished with large bells (*ad̲j̲rās*), small bells (*d̲j̲alād̲j̲il*), as well as jingles (*ḳalākil*). According to Cervantes, the Moors of Spain did not tolerate their use as martial instruments.

The small bell (*d̲j̲uld̲j̲ul*), sometimes called a pellet bell, was spherical. Like *ṣalṣal*, *dabdab*, etc., the word is of onomatopoeic origin. Al-K̲h̲alīl (d. probably in 175/791) likened the sound of the small cymbals (*ṣunūd̲j̲*) hanging in the rim of the tambourine (*duff*) to that of the small bells (*d̲j̲alād̲j̲il*; see K̲h̲ʷārazmī, *Mafātīḥ al-ʿulūm*, 236). Indeed, these small bells were sometimes attached to tambourines [see DUFF]. Al-Muzarrid (6th century A.D.) speaks of small (tambourine) bells (*d̲j̲alād̲j̲il*) replying to the wind instruments (*mazāmīr*; see the *Mufaḍḍaliyyāt*, i, 165). These *d̲j̲alād̲j̲il* were also attached to the necks of smaller animals in the form of a *ṭabla*, and in Mamlūk times they were fastened to the hats of criminals (al-Maḳrīzī, *Sulūk*, i/2, 106). They also formed part of the impedimenta of itinerant minstrels, who likewise wore them on their hats (J.S. Buckingham, *Travels*, i, 100), as did the fools in Talmudic Jewry (Jastrow, *Dict. Targ.*, 518). In Persia, the large bell is called a *zang* or *darā* and the small bell a *zangula* or *zangulīča*. In Turkey they are the *čang* and *čingraḳ* respectively.

An elaborate type of chimes was known to the Arabs, who borrowed the idea from the Greeks. It is described in a treatise by one Mūristus [*q.v.*], who, in turn, was indebted to an Egyptian named Sāʿāṭus or Sāṭus, whose writings were known in Arabic as early as the 4th/10th century at least (*Fihrist*, 270). This instrument was called the *d̲j̲uld̲j̲ul al-ṣayyāḥ* (clamorous bell) or the *d̲j̲uld̲j̲ul al-ṣiyāḥ* (octavo bell). See *Mach.*, ix, 26.

Another jingling instrument was the *d̲j̲ag̲h̲āna* or *ṣag̲h̲āna* (< Pers. *čag̲h̲āna*). It took several forms. One was a sceptre of wood surmounted by hoops of wire from which were suspended about a hundred small bells. For a design, see Niebuhr (tab. xxviii). Another kind was surmounted by a metal cone pavilion, hence the European name of *Chapeau Chinois* which was given to it. From this, and from three or four horizontal arms, small bells and cymbals were hung. It was borrowed by European military bands in the 18th century from the Turks, and in Britain was known as the "Jingling Johnnie". See Farmer, *Rise and development of military music*, fig. 9. For the Turkish instrument, see Wittman, *Travels in Turkey* (1803). Oriental Christians use a different type known as the *mirwaḥa* (lit. "fan"). It is described and delineated by Bonanni (127, pl. lxxxix), La Borde (i, 282), and Villoteau (1008-10). A fourth type is the *dabbūs* used by the *darwīs̲h̲* fraternities. It is a wooden sceptre, to the head of which is attached a number of chains (*ṣalāṣil*) with jingling pieces of metal fixed loosely in the links. There is a specimen 69 cm long at New York.

Rattle. This is generally known as the *s̲h̲ak̲h̲s̲h̲īk̲h̲a*. In Persia and Turkey, there is the *ḳās̲h̲iḳ*, which is two wooden spoons attached to each other, in the hollow of which are a number of small bells. It is more generally struck with a stick. See Advielle (15) and Lavignac (3076).

Harmonica and glockenspiel. The Ik̲h̲wān al-Ṣafāʾ (i, 90) deal with vessels (*awānī*), pots (*tard̲j̲ahārāt*), and jars (*d̲j̲irār*) as idiophones. In Arabic, the general name for the harmonica was *ṭusūt* and Ibn K̲h̲aldūn speaks (*loc. cit.*) of these *ṭusūt* being played with sticks (*ḳuḍbān*). The Persian Ibn G̲h̲aybī describes *sāz-i kāsāt* (lit. musical bowls), which were made of earthenware and the notes of which were determined by the amount of water with which each bowl was filled (*D̲j̲āmiʿ al-alḥān*, Bodleian Library, ms. Marsh 282, fols. 78, 81b). An Arabic author of the 9th/15th century refers to the harmonica as the *kīzān* (cups) and *k̲h̲awābiʾ* (jars) and mentions the water content (B.L., Or. 2361, fol. 173). Ibn Ḥad̲j̲ar al-Haytamī describes (fol. 19b) the beating with reeds (*aḳlām*) upon earthenware (*ṣīnī*). The glockenspiel is mentioned only by Ibn G̲h̲aybī (fol. 81b), and he registers the instrument under *sāz-i alwāḥ-i fūlād* ("instrument of slabs of steel"). It comprised 35 slabs, each giving a particular note.

(H.G. FARMER)

SAND̲J̲A, the name of a small, right-bank affluent (Grk. Singas, Modern Tkish. Keysun Çayı, a tributary of the Gök Su) of the upper Euphrates and of a small town on it, both coming in mediaeval Islamic times within the northern part of Diyār Muḍar [*q.v.*]. The Sand̲j̲a river runs into the Euphrates between Sumaysāṭ and Ḳalʿat al-Rūm [*q.vv.*]. It was famed for its bridge, said by the Arabic geographers to have been composed of a single arch of 200 paces' length constructed from dressed stone, and to have been one of the wonders of the world (cf. Yāḳūt, *Buldān*, iii, 264-5). It was here and at nearby Baddāyā that the Artuḳid Nad̲j̲m al-Dīn Il G̲h̲āzī crossed in 513/1119 on his campaign at Tell Bas̲h̲īr against the Franks from the County of Antioch (see Cahen, *La Syrie du Nord*, 283 ff., and MARD̲J̲ DĀBIḲ).

Bibliography: Le Strange, *Palestine under the Moslems*, 531; idem, *Lands*, 123-4; Cl. Cahen, *La Syrie du Nord à l'époque des Croisades*, Paris 1940, 127, 295-6; J. Tischler, *Kleinasiatische Hydronymie*, Wiesbaden 1977, 136.

(C.E. BOSWORTH)

SAND̲J̲AḲ (T.), a Turkish term with various significations. (1) flag, standard, banner (Arabic *liwāʾ*), especially of a large size (more important than the *bayraḳ*, Ar. *rāya* or *ʿalam*) and suitable for fixing in the ground or hoisting permanently on a monument or a ship; (2) (nautical term) ensign; pennant (*ikind̲j̲i sand̲j̲aḳ*), starboard; (3) formerly a military fief or *k̲h̲āṣṣ* [*q.v.*] of a certain extent in the Ottoman empire; (4) a Turkish administrative and territorial division; (5) (in the expression *sand̲j̲aḳ tikeni* or *dikeni*, from the Turkish translation of *Burhān-i ḳāṭiʿ*, 88, 25) a synonym of *sind̲j̲an tikeni* (on this plant, see Barbier de Meynard, ii, 101, who gives it as a Persian word).

As al-Ḳalḳas̲h̲andī pointed out in the 9th/15th century (*Ṣubḥ al-aʿs̲h̲ā*, v, 458), *sand̲j̲-aḳ* comes from the verb *sand̲j̲-maḳ* (not *sand̲j̲ī-maḳ*, as in the author already quoted) which means "to sting, prick, plant, stick a

weapon or pointed object in the body of an enemy or in the ground (cf. Sāmī Bey, *Ḳāmūs-i Türkī*). The form *sančaḳ* found in Čaghatāy (Boudagov) and even in an old Serbian loanword (Miklosich, *Die türkischen Elemente in den südost-europäischen Sprachen*, Vienna 1884, ii, 50) corresponds to the verb *sanč-* of the Orkhon inscriptions (see Thomsen, 42; Radloff, 132). Cf. also F.W.K. Müller, *Uigurica*, ii, 78, 30 and 86, 48. In Kirghiz the form used is *shansh-* (Radloff, *Wörterbuch*, iv, 949), and in Uriankhay *shanïsh-* and *čanïsh-* (Katanov, *Opït izledovaniya*, 429, 779, with the meaning "to prick, stab, erect, fix"). Maḥmūd al-Kāshgharī (5th/11th century), *Dīwān Lughāt al-Türk*, ed. Kilisli Rifʿat Bey, ii, 171, 180, 182, iii, 310, also gives (iii, 108) *sandjghan* equivalent to *sandjan* (*sindjan*) already quoted, which is a Turkish participle used as the name of a prickly plant.

The word *sandjaḳ* belongs to a family of derivatives which all contain the idea of "point" and mean (the word itself sometimes): harpoon, fork, piercing pain, colic. Such are *sančïgh, sandjïkh, sandjïḳ, čančḳï* (Tobolsk), *shanïshḳï* (Kirghiz), *sandjïghï, sandjï* (whence *sandjï-maḳ* in ʿOthmānlï). We may add on the authority of Abu 'l-Fidāʾ and the Turkish-Arabic glossary published by Houtsma, Leiden 1894, 80, and 29 of the Arabic text, the proper name *Sandjar* [*q.v.*], glossed *yaṭʿan*, in preference to the usually accepted etymology from Sindjar, the name of his place of birth (see *Recueil des historiens des Croisades*, i, 1872, and index under *Sindjar*).

Sandjaḳ has passed into a certain number of other languages; more recently into the Balkan languages (cf. the work by Miklosich quoted above and Saineanu, *Influenta orientala*), and earlier into Arabic (cf. Dozy, *Supplément*, and W. Marçais, *Le dialecte arabe de Tlemcen*, Paris 1902, 270, 90, 92), and into Persian where, according to the *Burhān-i ḳāṭiʿ*, it means or meant a "flag, a large metal pin intended to keep on the head a kind of hood worn by women"; "a kind of girdle". In Modern Persian *sandjāḳ* (*sic*) simply means "pin" (in opposition to "needle") (cf. Nicolas, *Dictionnnaire français-persan*, under the word "pin"). Freytag took *sandjaḳ* for a Persian word, and the Turks still keep the orthography which it has in Persian (*s-n-dj-ā-ḳ*), while they write the verb *ṣandj-* with a *ṣād*. We may note that in Persian *dirafsh* "flag" also means "point" (see Vullers), whence the Ottoman Turkish word *direwüsh* (see Hind-oghlu s.v. "pointe" and "poinçon"). The *Burhān-i ḳāṭiʿ* gives a variant of *sandjāḳ* in the form *sandjūḳ*. If it is not a corruption due to the Persian, we have here another example of a Turkish word preserved through its use in Persian. The word *sandj-ūḳ* is very well explained with the help of the Turkish suffix *-uḳ* (*-iḳ*) which makes a passive participle from transitive verbs. *Sandjūḳ* then would mean "sharpened, fixed". The suffix *-aḳ*, with its tendency to designate place-names (which very well fits a flag "fixed" or "able to be fixed") seems to have been more in use very early.

The etymological details which are given above without excluding the explanation of *sandjaḳ* by "lance with a pennon" (it is that of al-Ḳalḳashandī, who uses the word *rumḥ*) make very probable the explanation as "flag with a staff sharpened at the foot". Independently of this peculiarity it is difficult to say what was the exact form of the primitive Turkish *sandjaḳ*; did they have a horse's tail (or the tail of a yak, of which von Hammer speaks in his definition, *Hist. de l'empire ottoman*, xvii, 257) or were they always flags? Were they like the *čalïsh* or *shalïsh* mentioned by Ibn Khaldūn (for the references see Dozy, *Supplément*, under the word *djālīsh*; it has become *ḥālīsh* by an error in Djewdet Pasha and Aḥmed Rāsim, quoted below in the *Bibliography*)? The meaning of these terms may be more indefinite than we think, and varied a great deal with time and place. The word *tugh* [*q.v.*], which could be taken in the meaning "horse's tail", meant, according to al-Kāshgharī, not only a "flag of silk or orange brocade" but also "drum", another symbol of sovereignty (i, 169, iii, 92). Ibn Khaldūn confuses the flag with the "parasol" of the prince or *djitr*, better *čatr* (Persian) pronounced *čatïr* (al-Kāshgharī, i, 340), then *čadïr* "tent", by the Turks who have preferred these words to their old *čovač* "silk parasol of the Turkish Khaghans" (*ibid.*, ii, 149, 17, iii, 45, 15; cf. the ʿOthmānlï *čoghash* "a place in the sun", and a passage in Rabghuzi in Radloff, *Wörterbuch*, iv, 59, under *djavač*!).

Whatever its primitive form, the *sandjaḳ* appears among the Saldjūḳs as an insignum of royalty. In the Turkish text of Ibn Bībī (ed. Houtsma, in *Recueil*, iii) the word *sandjaḳ* is always found in connection with the title *Sulṭān* (*Sulṭānïn sandjaghï*). This standard is mentioned (135-6, 144, 169, 170, 289, 357) à propos of different sieges of strong places, on the walls of which it was placed after capitulation. Sometimes (135-6) it is the besieged themselves who, ready to surrender and no doubt seeing in this banner a guarantee of protection against pillaging, asked for a *sandjaḳ* to be sent. It is not, however, necessary that the sultan himself should be present and the historian (357) shows us the *beylerbeyi* setting out on an expedition with the standard of the sovereign.

For a long time the neighbouring princes and vassals of the Saldjūḳs respected their privilege, but the Atabeg of Mawṣil, Sayf al-Dīn al-Ghāzī, son of ʿImād al-Dīn Zangī (d. November 1149), was the first of the *aṣḥāb al-aṭrāf* to have a *sandjaḳ* carried unfurled over his head (Ibn al-Athīr, *Hist. des Atabeks de Mossoul*, in *RHC*, *Hist. or.*, ii/2, 167).

The Ayyūbids followed the example of their predecessors. In 594/1198 the sultan of Egypt, al-Malik al-ʿAzīz, conferred on his nephew al-Malik al-Muʿaẓẓam ʿIsā, when he became prince of Damascus, "the *sandjaḳ* and the *liwāʾ* to display throughout the world" (*Kitāb al-Rawḍatayn*, in *RHC*, v, 117). In 648/1250 Aybak the Turkoman, married to an Ayyūbid princess and proclaimed sultan of Egypt, took part in a procession in which the royal banners were unfurled for him (*al-sanādjiḳ al-sulṭāniyya*; cf. Abu 'l-Fidāʾ, *Annales*, ed. Reiske, iv, 516 of the Arabic text and 515 of the Latin tr.). Among the Mamlūks, a distinction was made between the *sandjaḳdār* "royal standard-bearer" and the ordinary *ʿalamdār* (M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, p. xcvii); afterwards, in Turkish Algeria this distinction disappeared; see J. Deny, in *Mélanges René Basset*, Paris 1923-5, ii, 35.

According to one later Ottoman tradition, not to be taken literally but nevertheless attesting to the significance of the *sandjaḳ*/banner as a political symbol, at the end of the Saldjūḳ empire in Asia Minor the *sandjaḳ* became one of the insignia of investiture of new sovereigns, notably of the first ʿOthmānlï sultan. In 679/1280, after the capture of Ḳaradja Ḥiṣār by ʿOthmān, Sultan ʿAlāʾ al-Dīn II to celebrate this conquest sent him by the hands of Aḳ Timur, ʿOthmān's nephew, a *sandjaḳ* "with its accessories" (*sandjaḳ yaraghï*), as ʿĀshïḳ Pasha-zāde tells us (ed. Constantinople 1332, 8-9); Neshrī prefers another version (see Nöldeke, in *ZDMG*, xiii [1859], 207-9). ʿAshïḳ Pasha-zāde mentions in this connection that ʿOthmān thus became *sandjaḳ beyi*, and we know that it was from this time that the *khuṭba* was read in his name (for the first

time at Ḳarad̲j̲a Ḥiṣār by Dursun Faḳīh). According to the same authority, the *sand̲j̲aḳ*s were made of cloth produced in Philadelphia or Ala S̲h̲ehir (56).

When they became independent in their turn, the Ottoman rulers appointed *sand̲j̲aḳ beyi*s in larger and larger numbers and the *sand̲j̲aḳ*, somewhat diminished in splendour, became identified with the territory over which it waved, not as a symbol of independence but of political authority deputised by the ruler; it appears henceforth as the term for a political/administrative division. The original patrimony around Bursa remained the Ottoman *bey*'s [*q.v.*] domain; areas added by conquest, such as Ḳarasī [*q.v.*] and Izmid [*q.v.* in Suppl.] in Anatolia or on the frontier zone in Thrace were entrusted, as newly created *sand̲j̲aḳ*s, to other members of the House of ʿOt̲h̲mān or to the commanders leading the conquest. In time, each of the smaller Anatolian principalities incorporated into the Ottoman state, and the successive frontier conquests in the Balkans, constituted a separate *sand̲j̲aḳ* as a territory of command. At a rough estimate, a *sand̲j̲aḳ* encompassed an area of several thousand km^2 and a population of perhaps 100,000 on average. Usually reflecting pre-Ottoman administrative divisions and geographical realities, *sand̲j̲aḳ* size and boundaries remained fairly stable through the centuries; provinces in modern Turkey, especially in western and northern Anatolia, are very similar to 15th-century *sand̲j̲aḳ* divisions.

At least until the mid-16th century, *sand̲j̲aḳ* maintained two distinct but eventually merging senses, military command and a provincial district: in the sense of command of a body of troops there were, in addition to the *sand̲j̲aḳ beyi* of a district, *sand̲j̲aḳ beyi*s of Anatolian auxiliary troops, *müsellem* (cavalry) and *yaya* (infantry). Even the *sand̲j̲aḳ beyi*s proper, i.e. of a district, were sometimes referred to as *atlu sand̲j̲aḳ beyi*, i.e. cavalry commander, in their primary role as the commander of all the *dirlik*-holders, i.e. those officers and cavalrymen whose living was maintained by revenue-grants in a particular district. The *sand̲j̲aḳ beyi* was required to maintain his own military retinue supported by the official *k̲h̲āṣṣ* [*q.v.*] revenues allocated to him, the number of his retinue being commensurate with the size of his *k̲h̲āṣṣ*. In time of mobilisation, the *sand̲j̲aḳ beyi* led his own household and the troops of his district to join the campaign, sometimes entrusted with discreet military operations such as reconnaissance and advance or rear guard, otherwise marching into battle under the command of the *beylerbeyi* [*q.v.*] of the province. The maritime *sand̲j̲aḳ*s, most of them included in the *ḳapudan pas̲h̲a*'s [*q.v.*] province of *D̲j̲azāʾir-i Bahr-i Sefīd* (*q.v.*; literally, Aegean Islands, but also including mainland Anatolian and Grecian districts) supplied ships for naval campaigns instead of (but sometimes as well as) cavalry troops.

Eventually, the sense of district for *sand̲j̲aḳ* (also *liwāʾ*, especially in documents) and district-governor for *sand̲j̲aḳ beyi* (also *mīr liwāʾ*) came to predominate. *Sand̲j̲aḳ* can be considered the main administrative division in the Ottoman empire in various senses. For one thing, in lesser *dirlik*s the area supplying the *dirlik*-holder's income was co-extensive with the limits of his authority. For higher level officers, the *dirlik*, *k̲h̲āṣṣ*, was normally wholly included within the territory, but the territory governed was much larger than the *k̲h̲āṣṣ*. A *sand̲j̲aḳ beyi* usually derived his *k̲h̲āṣṣ* income from the main towns of his district, the percentage of urban vs. rural taxes constituting his *k̲h̲āṣṣ* varying according to the level of town development and commercial taxes in each district; the rest of the *sand̲j̲aḳ* might support a dozen or so officers' *dirlik*s (*zeʿāmet*) and a few hundred *timar*s for cavalrymen (*sipāhī* [see SIPĀHĪ. 1]). In other words, it is at the *sand̲j̲aḳ* level that the administrative unit was much larger than an officer's revenue source. The governor-general (*beylerbeyi*) was also the *sand̲j̲aḳ beyi* of the chief district of his province. The primary administrative role of the *sand̲j̲aḳ* is underscored by the fact that provincial area regulations (*ḳānūn-nāme* [*q.v.*]) as well as land and population surveys (*taḥrīr*) were drawn up for each *sand̲j̲aḳ*.

In 1527, after the great conquests of Selīm I but before Hungary and eastern Anatolia were fully integrated in the realm, there were 97 *sand̲j̲aḳ*s in seven provinces, as well as 17 Kurdish *sand̲j̲aḳ*s of special status (Topkapı Palace Archives, D. 5246). Later in the 16th century some larger districts e.g. Bosna [*q.v.*], were reconstituted as provinces; there was also expansion both in the north-west and in the east; the result is that the number of provinces and districts increased to about 35 and more than 300 respectively. Especially in frontier regions, the tendency was to create smaller provinces with just a few districts; the aim seems to have been to concentrate a larger number of higher-ranking officials in sensitive areas.

Identified very closely with the command of his district's troops, the position of the *sand̲j̲aḳ beyi* eroded as the military value of provincial cavalry declined in the 17th century. There was a relative centralisation of provincial authority at the province level in the hands of the governor-general, who very often came to depend on local notables for routine administration rather than through *sand̲j̲aḳ beyi*s. This process is already discerned at the end of the 16th century by the restyling of provinces as *eyalet*s rather than *beylerbeyilik*. Nevertheless, both the *dirlik*-holding provincial cavalry and the *sand̲j̲aḳ beyi* survived a long time after, though in reduced circumstances. When the *dirlik*s were finally abolished in 1837 the *sand̲j̲aḳ* became simply an administrative subdivision. The *mutaṣarrif*, the governor of a *sand̲j̲aḳ* (or *liwāʾ* or now also *mutaṣarrifliḳ*) was henceforth a civil official, distinct from the *mīr liwāʾ* who now became the modern general of the brigade. The division into *sand̲j̲aḳ*s was maintained by the 1864 and 1871 laws of the *wilāyet*s (the former *eyālet*s). The term was finally abolished in provincial administration by the Ankara Grand National Assembly in the 1921 Constitution.

SAND̲J̲AḲ BEYI [see SAND̲J̲AḲ].

SAND̲J̲AḲ-I S̲H̲ERĪF, LIWĀʾ-I S̲H̲ERĪF or ʿALEM-I NEBEWĪ, in Ottoman Turkish usage the sacred standard of the Prophet Muḥammad which is

kept in the palace of Topkapi̊ at Istanbul (see TOPKAPI̊ SARAYI̊) together with the other holy relics of Islam (*Emānāt-i Mübāreke* or *Mukaddese*) such as the Holy Mantle (the *Burda*) [see KHIRKA-YI̊ SHERĪF], Holy Footstep and Beard of the Prophet (see KADAM SHARĪF and LIḤYA-YI SHARĪF].

According to a tradition recorded by Mouradgea D'Ohsson (*Tableau général de l'Empire Othoman*, Paris 1788-1824, ii, 378) and the Ottoman historian Fi̊ndi̊kli̊li̊ Meḥmed Agha (*Silāḥdar Tar'īkhi*, ed. Aḥmed Refīk [Altınay], Istanbul 1928, i, 14) this is the black banner known as *ʿUkāb* used among other standards in the battles against Kuraysh. It was used as a door curtain by ʿĀʾisha as well. ʿAlī carried it at the conquest of Mecca and handed it to ʿAmr b. al-ʿĀṣ [*q.v.*] during the battle of Ṣiffīn (37/657). During the reigns of the first four caliphs, this battle standard was always planted in front of the troops. It was handed down from the Umayyads to the ʿAbbāsids and was handed to the Ottoman sultan Selīm I [*q.v.*] by Khāʾir Beg [*q.v.*] after the conquest of Cairo in 922/1517. Another tradition has it that it was presented to the Ottoman sultan by Abū Numayy, son (and successor) of the *Sharīf* of Mecca Abu 'l-Barakāt, at the same time, as a symbolic expression of his submission. In this case, the colour is given as green and its size as 0.13 x 113 cm. However, according to the historian Muṣṭafā ʿĀlī (948-1008/1541-1600) [see ʿĀLĪ], Sultan Selīm did not carry the sacred standard with him to Istanbul at the time. It appears to have been deposited in the provincial treasury of Damascus. A standard of the Prophet reportedly usually accompanied the yearly Ḥadjdj caravan from there. Ewliyā Čelebi [*q.v.*] mentions having seen the sacred standard next to the *Maḥmal* [*q.v.*] at the occasion of the departure of such a caravan in Damascus in 1672 (see S. Faroqhi, *Herrscher über Mekka: die Geschichte der Pilgerfahrt*, Munich-Zürich 1990, 52). The Ottoman historian Selānikī [*q.v.*], confirmed by ʿĀlī, narrates that in 1001/1593 at the outbreak of the so-called "Long War" against the Habsburg Emperor, it was decided to have the sacred standard from Damascus brought to the army in the field in order to raise the morale of the troops. The following years, each campaigning season, the standard travelled up and down under an escort of the Damascus Janissary contingent. In 1003/1595 it was decided to deposit the sacred standard definitively in the palace of Topkapi̊ so that it could be kept together with the other relics of the Prophet. On 23 Shawwāl 1004/20 June 1596, Sultan Meḥemmed III [*q.v.*] took the standard with him leading the army in person. At that occasion it was escorted by 300 *sayyids* led by the so-called *sandjak-i sherīf sheykhi*. During the battle it was planted in front of the tent of the sultan, with *ḥāfiẓs* reciting sūra XLVIII (*al-Fatḥ*). The sacred standard probably stood before the Sultan's person during the Battle of Mezö-Keresztes/Hač Owasi̊ [*q.v.*], 23-6 October 1596, although this is only mentioned by Selānikī and not by a number of eye-witness accounts which do mention the sultan as putting on the Holy Mantle and handling the sword of the caliph ʿAlī, Dhu'l-Fakār [*q.v.*].

From this time onwards, the sultans, when not joining their armies in the field, appointed the Grand Vizier *serdār-i ekrem*, commander-in-chief (see BAB-I̊ SERʿASKERĪ). Upon leaving the capital, the Grand Vizier went in a ceremonial procession to the imperial tent erected in camp at Dāwūd Pasha (in the case of war in Europe) or Ḥaydar Pasha (in the case of war in Asia), there to receive the insignia of office from the hands of the sultan: a sable fur caftan, a *Selīmī* turban with one or more aigrettes (*sorguč*), a gilt sword and the sacred standard. The sultan wished his vizier success and the latter left, carrying the sacred standard on his shoulder. Upon the return of the army, a like ceremonial took place.

When the *Kapudān Pasha* put out to sea, he offered a ceremonial salute to the *Sandjak-i Sherīf*, exhibited for the occasion in the arsenal (*Tersāne-yi ʿĀmire* [see TERSĀNE]) in the presence of the Grand Vizier. The sacred standard was also brought forward in times of rebellion. An exceptional occasion was Muṣṭafā Pasha Bayrakdār's [*q.v.*] planting it in front of his troops entering the capital to depose Sultan Muṣṭafā IV [*q.v.*] on 4 Djumādā II 1223/28 July 1808 (General State Archives The Hague (ARA), Van Dedem Papers 2.21.049-61).

Six Grand Viziers were killed in action while the sacred standard was with them, including Khādim Sinān Pasha on 29 Dhu 'l-Ḥidjdja 922/1517 while defending the person of the sultan against rebel soldiery, and Shehīd ʿAlī Pasha on 16 Shaʿbān 1128/1715 with the sacred standard in his hands in the Battle of Grosswardein/Nagyvarad, leading the counter attack against the imperial army. Count Marsigli, describing the various banners and standards in use with the Ottoman army, mentions the standard of the Prophet. He never saw it deployed either in camp or on the march. He concludes from the event that the Ottomans were always successful in saving the sacred standard from falling into the hands of the enemy in their many defeats during the war in Hungary (1683-99) because it was always heavily escorted. After the disastrous battle of Salankamen (24 Dhu 'l-Kaʿda 1102/19 August 1691), the escort was richly rewarded for bringing it safely back home. According to the story, a miracle happened which made the banner invisible when passing through the enemy cavalry. (L.F. Marsigli, *Stato militare dell'Imperio Ottomanno*, The Hague 1732, repr. Graz 1972, ii, 51-2).

By the end of the 11th/17th century, the sacred standard was badly worn. The original black banner was replaced by three green silk banners, to each of which were attached pieces of the *Sandjak-i Sherīf*, thus transferring its blessed powers to the new standards. One of these was handed to the outgoing commanders-in-chief, one the sultan kept with his own person when travelling outside the capital and one was permanently kept in the treasury of the Topkapi̊ Palace (in the *Khirka-yi Sherīf Dāʾiresi*). The lasting respect in which the sacred standard was held by the Ottomans is exemplified by the traditional view that all men between seven and seventy years of age were obliged to join the *djihād* [*q.v.*] when the standard was brought forward. The place in front of the throne room in the Topkapi̊ Palace where it used to be planted was held to be sacrosanct and not to be trodden by anyone's feet. Till 1908, two soldiers with fixed bayonets stood on guard there.

The handling of the sacred standard was regulated. Texts of such regulations (*kānūn-nāme*) of different periods are extant. When Sultan Maḥmūd II [*q.v.*] ordered the destruction of the Janissaries (see YEÑI ČERI) on 9 Dhu 'l-Kaʿda 1241/15 June 1826, the loyal "people of Muḥammad" were called to gather around the sacred standard, which stood planted upon the *minbar* of the mosque of Sultan Aḥmed I. The last time the *Sandjak-i Sherīf* was deployed was on 25 Dhu 'l-Ḥidjdja 1332/14 November 1914 at the proclamation of the so-called "Holy War" (*Djihād-i Ekber*) against the Entente Powers.

SAND̲J̲AR b. Malik S̲h̲āh, ʿAḍud al-Dawla Abu 'l-Ḥārit̲h̲ Aḥmad, Sald̲j̲ūḳ *malik* in K̲h̲urāsān 490-511/1097-1118 and then supreme sultan of the Great Saldjuḳs, ruling K̲h̲urāsān and northern Persia till his death in 552/1157; he accordingly ruled for some 60 years. The name Sand̲j̲ar, which occurs for other members of the Sald̲j̲ūḳ family and elsewhere in the Turkish world, seems to mean in Turkish "he who pierces, thrusts", cf. M.Th. Houtsma, *Ein türkisch-arabisches Glossar*, Leiden 1894, text 29, glossary 78, 80, and the detailed discussion by P. Pelliot, in *Oeuvres posthumes*, ii, Paris 1949, 176-80; a contemporary European rendering is given by Otto of Freising in his chronicle, *sub anno* 1145: *Saniardos/Samiardos fratres*.

He was born in either Rad̲j̲ab 477/November 1084 or Rad̲j̲ab 479/November 1086, his mother being one of Malik S̲h̲āh's concubines. Whilst still a boy, he was in 490/1097 appointed by his half-brother Berk-yaruḳ [*q.v.*] as governor of K̲h̲urāsān after the unsuccessful revolt there and death of Arslan Arg̲h̲un b. Alp Arslan. During the internecine struggles over the supreme sultanate between Berk-yaruḳ and Muḥammad b. Malik S̲h̲āh [*q.v.*], Sand̲j̲ar generally took the side of his full brother Muḥammad, but from the constitutional aspect regarded himself as governor only of the eastern provinces and as subordinate to the supreme sultan in the western lands, calling himself on his coins of this time merely a *malik* and acknowledging Berk-yaruḳ and then Muḥammad as *al-Sulṭān al-Muʿaẓẓam*.

However, when Muḥammad died in 511/1118, Sand̲j̲ar refused to consider himself subordinate to his nephew in the west, Maḥmūd b. Muḥammad [*q.v.*], and as the senior member of the Sald̲j̲ūḳ family, both his *de facto* power and his position under Turkish tribal custom gave him a claim to the supreme sultanate even though this had previously been held, for eighty years, by the Sald̲j̲ūḳ who controlled western Persia and ʿIrāḳ. The squabbling sons of Muḥammad b. Malik S̲h̲āh were too divided and militarily weak to dispute Sand̲j̲ar's position, and they had generally to place Sand̲j̲ar's name plus his title of *al-sulṭān al-muʿaẓẓam* on their coins before their own names and titles. The only serious opposition at the outset to Sand̲j̲ar's claims here came from Maḥmūd, but in 513/1119 Sand̲j̲ar marched westwards with a powerful army, whose commanders included, besides the sultan himself, four vassal kings, defeated Maḥmūd at Sāwa [*q.v.*] in northern D̲j̲ibāl and marched onwards to Baghdad. When peace was made, Maḥmūd agreed to Sand̲j̲ar's supremacy and was made the latter's heir (in the event, he died long before Sand̲j̲ar did), but had to relinquish to Sand̲j̲ar the Caspian provinces of Māzandarān and Ḳūmis and the town of Rayy, the key point for control of northern Persia, and to agree to the re-appointment of Sand̲j̲ar's *s̲h̲iḥna* or military governor in Bag̲h̲dād. It was during these year also that Sand̲j̲ar was again concerned with the Ismāʿīlīs of northern Persia and K̲h̲urāsān; in 497/1104, when he was *malik*, he had sent an expedition against these sectarians in Ṭabas, and now in 520/1126 his vizier Muʿīn al-Dīn Muk̲h̲taṣṣ al-Mulk campaigned in Ḳuhistān (an action which doubtless contributed to his death by assassination in the following year). In the 1140s, however, Sand̲j̲ar and the Ismāʿīlī leaders who had succeeded to Ḥasan-i Ṣabbāḥ [*q.v.*] came to some sort of *modus vivendi*.

On Maḥmūd's death in 525/1131, his brothers Masʿūd, Ṭog̲h̲rïl (II) and Sald̲j̲ūḳ S̲h̲āh successfully disputed the succession of Maḥmūd's young son Dāwūd, but were unable to agree amongst themselves as to who should be sultan. They laid the question before Sand̲j̲ar, as senior member of the dynasty. Sand̲j̲ar's favoured candidate was Ṭog̲h̲rïl, but his preoccupation with events in Transoxania at this time (see below) prevented him from providing Ṭog̲h̲rïl with much military support, and the latter died anyway in 529/1134, allowing Masʿūd to succeed in the west and to reign there for twenty years. Sand̲j̲ar's last major intervention in the affairs of the family in the west had been his defeat of Masʿūd at Dīnawar in 526/1132, but thereafter, affairs in K̲h̲urāsān and Transoxania increasingly claimed his attention.

Sand̲j̲ar continued to exercise the overlordship over the Ḳarak̲h̲ānids of Transoxania [see ilek-k̲h̲āns] first imposed by his father Malik S̲h̲āh, but had on various occasions to lead expeditions acrosse the Oxus against recalcitrant K̲h̲āns. In 495/1102 he had stemmed at Tirmid̲h̲ the invasion of one Ḳarak̲h̲ānid claimant and had placed on the throne in Samarḳand Arslan K̲h̲ān Muḥammad (II). But towards the end of the latter's long reign, in 524/1130, Sand̲j̲ar had to come with an army to reinforce the K̲h̲ān's faltering authority in Samarḳand. He set up various Ḳarak̲h̲ānid nominees on the throne there, ending with (possibly in 526/1132) Arslan K̲h̲ān Muḥammad's third son Maḥmūd, who was Sand̲j̲ar's nephew, since his mother Terken K̲h̲ātūn was Sand̲j̲ar's sister. The fortunes of Sand̲j̲ar and Maḥmūd were to be closely interwoven over the ensuing year; when Sand̲j̲ar was captured by the Og̲h̲uz in 548/1153 (see below), Maḥmūd was recognised by the Sald̲j̲ūḳ army in K̲h̲urāsān as interim sultan of K̲h̲urāsān and, after Sand̲j̲ar's death, likewise as legitimate ruler there till his own death in 557/1162.

As ruler of K̲h̲urāsān, Sand̲j̲ar was also concerned with the neighbouring great power to his east, the G̲h̲aznawids. Since the peace agreement between Čag̲h̲rï Beg and the G̲h̲aznawid Ibrāhīm b. Masʿūd in 451/1059, there had been a considerable Sald̲j̲ūḳ cultural penetration of the G̲h̲aznawid empire, visible for instance in numismatic patterns, titulature and literary trends. A raid early in his reign by Sand̲j̲ar into G̲h̲ūr [*q.v.*], the mountainous central region of Afg̲h̲ānistān, is recorded, but a succession dispute within the G̲h̲aznawid royal house also allowed Sand̲j̲ar to extend direct Sald̲j̲ūḳ sovereignty over the G̲h̲aznawid lands of eastern Afg̲h̲ānistān. When Arslan S̲h̲āh came to the throne of G̲h̲azna in 509/1115, his brother Bahrām S̲h̲āh escaped to K̲h̲urāsān and appealed to Sand̲j̲ar for help. The Sald̲j̲ūḳ sultan marched eastwards with a formidable army, defeated Arslan S̲h̲āh, sacked G̲h̲azna and placed Bahrām S̲h̲āh on the throne there (510/1117). The latter agreed to become Sand̲j̲ar's vassal, to place his name first in the *k̲h̲uṭba* and on the coinage and to pay an annual tribute of 250,000 dīnārs. For some thirty years, Bahrām S̲h̲āh acknowledged this subordinate status, only once becoming restive when in 529/1135 Sand̲j̲ar and his other vassal, the K̲h̲ʷārazm

Shāh Atsïz, came with their forces to Ghazna, expelling Bahrām Shāh to India before he returned and agreed to resume his vassalage.

Along the northern fringes of Khurāsān, Sandjar had as vassals, in addition to the Ḳarakhānids, the Khwārazm Shāhs of the line established by his father Malik Shāh, sc. the line of Anūshtigin Gharčaʾī [see KHWĀRAZM-SHĀHS]. The second ruler of this line, Ḳuṭb al-Dīn Muḥammad, was Sandjar's faithful vassal, as was initially his son and successor ʿAlāʾ al-Dīn Atsïz, attending Sandjar's court regularly. But relations deteriorated as Atsïz built up his own military strength and began to identify himself with the particular interests of his province, until in 533/1138 he rebelled openly. Sandjar invaded Khwārazm, drove out Atsïz and left there a Saldjūḳ prince and his atabeg; but as on earlier occasions when outside powers had endeavoured to impose their rule over the province, the Khwārazmian people rose up against the occupiers and expelled them, enabling Atsïz to return and take the offensive against Transoxania.

There now appeared a new force in the affairs of Central Asia, the Ḳara Khiṭay [*q.v.*], the Kʾi-tan or Liao of the Chinese sources. Within the western Ḳarakhānid principality, disaffected Ḳarluḳ [*q.v.*] tribesmen called in the Ḳara Khiṭay; Maḥmūd Khān of Samarḳand in turn appealed to his suzerain and kinsman Sandjar. The latter appeared in Transoxania with a large army, but was in 536/1141 defeated by the Ḳara Khiṭay in a bloody battle on the Ḳaṭwān steppe of Ushrūsana [*q.v.*], on the middle Syr Darya. Sandjar and Maḥmūd Khān fled to Khurāsān, abandoning Transoxania, and the Ḳara Khiṭay went on to make Atsïz their own vassal; accordingly, whilst Sandjar's defeat was clearly opportune for Atsïz, it seems improbable that the Shāh had, as some of the Islamic sources assert, incited the Ḳara Khiṭay to invade as an act of revenge on Sandjar for the sultan's killing of his son Atlïgh. At this point, Atsïz raided into Khurāsān himself, but was driven back by a Saldjūḳ counter-invasion of Khwārazm which penetrated to the capital Gurgāndj and compelled the Shāh to disgorge the treasuries which he had previously looted from Sandjar's capital of Marw (538/1143-4). Yet once again, Khwārazm proved too hostile for Saldjūḳ troops to be able to remain there.

However, the tragic end to Sandjar's reign and the resultant downfall of Saldjūḳ power in the east came about not from the attacks of external foes like the Ḳara Khiṭay or from those of rebellious vassals like Atsïz, but from an explosion of internal discontent within Khurāsān itself, largely brought about by the policies of Sandjar's aides and officials there. Khurāsān and the steppes to the southeast of the Caspian Sea, in Gurgān and Dihistān, contained extensive pasture grounds which supported numerous groups of tribally-organised Turkmens. These included Turkmens driven southwards into the Khurāsānian fringes by the recent upheavals in the Central Asian steppes, including the pressures from the Khwārazm Shāhs and the Ḳara Khiṭay, and also descendants of the Oghuz tribesmen whose dynamic had brought the Saldjūḳs to power in the Islamic lands a century earlier. The sultans had accordingly always felt certain obligations towards these kinsfolk of theirs, often making special administrative arrangements for them in the regions where they were especially numerous, appointing special officials (*shiḥna, raʾīs* [*q.vv.*]) to act as channels of communication between the nomads and the Saldjūḳ state, whose dominating Perso-Islamic ethos was now largely alien to the Turkmens. These arrangements now came under severe strain because of the financial exigencies arising from Sandjar's military adventures, increasingly expensive after 529/1135; he is said to have disbursed three million dīnārs for the Transoxanian campaign of 536/1141, not counting the cost of presents and robes of honour given to various local potentates. The burden of taxation in order to pay for these fell on sedentaries and nomads alike, but the Oghuz in the upper Oxus regions of Khuttal and Ṭukhāristān [*q.vv.*] finally rebelled against the tax demands and the harsh collecting methods of the *shiḥna* over the Turkmens there, the slave commander ʿImād al-Dīn Ḳumāč of Balkh. Despite placatory approaches from the Oghuz, Sandjar insisted on mounting punitive expeditions against them, but he was twice defeated, forced to evacuate his capital Marw and finally captured by the nomads (548/1153). The Oghuz bands swept through Khurāsān, attacking towns there and showing particular violence and hostility towards members of the Saldjūḳ administration and the religious classes, closely linked with the Saldjūḳ state; a general climate of insecurity was created in both towns and countryside of Khurāsān, in which various other anti-social elements such as the *ʿayyārs* [*q.v.*] took advantage of the breakdown of authority to further their own interests.

The leaderless Saldjūḳ army in Khurāsān offered the throne there to the refugee Ḳarakhānid Maḥmūd Khān who, as the son of Sandjar's sister, had Saldjūḳ blood in his veins, and the Saldjūḳ sultan in the west, Muḥammad (II) b. Maḥmūd [*q.v.*], agreed to this and sent an investiture diploma. In fact, over the next few years, real power in Khurāsān fell into the hands of Saldjūḳ *amīrs*, such as Muʾayyid al-Dīn Ay Aba at Nīshāpūr and Ikhtiyār al-Dīn Ay Taḳ at Rayy, for Maḥmūd Khān was never able to establish firm control over the whole of Khurāsān, and he died in any case by 559/1164. Sandjar, meanwhile, was carried round by his Oghuz captors for three years, apparently in humiliating circumstances and enduring hunger and deprivation, until he managed in 551/1156 to escape to Tirmidh and Marw. But a year later he died, aged 71, and with him, the authority of the Saldjūḳs in eastern Persia ceased; to contemporaries it seemed like the end of an epoch.

Sandjar's court, when he was not campaigning, was normally based on Marw, where he also had a fully-developed administration, headed by the *dīwān-i aʿlā*, presided over by a series of viziers, of whom eight are known, from Shihāb al-Islam ʿAbd al-Razzāḳ (511-16/1117-22) to Niẓām al-Mulk Ḥasan (at some point after 547/1152). These were usually Persians or Arabs, though from 516/1122 to 518/1124 Sandjar had a Turkish vizier, Muḥammad b. Sulaymān Kāshgharī Yïghan (or Ṭoghan) Beg. We know something also of provincial administration within Sandjar's dominions, *inter alia* from the collection of administrative documents, the *ʿAtabat al-kataba*, made by Muntadjab al-Dīn Badīʿ Djuwaynī, who was head of Sandjar's chancery, *dīwān-i inshāʾ*, at Marw. This administration was exercised through centrally appointed officials with designations like *wālī, nāʾib, shiḥna* and *raʾīs*, although this last had an additional role as representative of the urban notables vis-à-vis the sultan [see RAʾĪS. 2], and we possess from Sandjar's reign documents on the nomination of provincial governors for Gurgān and its dependencies, Māzandarān, Rayy, Balkh and its dependencies, Marw, Ṭūs and Dihistān.

The court at Marw was also a centre for Persian literary activity, under the patronage of the sultan and

of his great officials and commanders. Barthold's categorical assertion that Sandjar was illiterate (*Turkestan*, 308) requires further proof before this can be accepted, since we know that some at least of his kinsmen and contemporaries amongst the western Persian Saldjūḳs were highly literate. The Persian poet Muʿizzī (d. *ca.* 519-21/1125-7 [*q.v.*]) was Sandjar's chief eulogist during the earlier part of his reign, and it was to seek Muʿizzī's intermediacy that the anecdotist Niẓāmī ʿArūḍī Samarḳandī [*q.v.*] came to Sandjar's court when it was at Ṭūs in 510/1116-17. Also, Adīb Ṣābir [*q.v.*] served both as Sandjar's panegyrist and on official missions, and it was in this latter function that the poet was killed by the Khwārazm Shāh Atsïz (in the mid-1140s). The great theologian al-Ghazālī [*q.v.*] sent a letter to, and made a speech before, Sandjar (see *Makātīb-i fārsī-yi Ghazālī bi-nām-i Faḍāʾil al-anām min rasāʾil Ḥudjdjat al-Islām*, ed. ʿAbbās Iḳbāl, Tehran 1333/1954, 3-5, 6-10 (with interesting introd. by the original compiler), German tr. Dorothea Krawulsky, *Briefe und Reden des Abū Ḥāmid Muḥammad al-Gazzālī*, Friburg-im-Br. 1971, 63-76.

(C.E. Bosworth)

ṢANF, a geographical term appearing in the accounts of Arab travellers from the mid-8th century and denoting at times an island, and at others a kingdom of the mainland, bordering on the sea, or a sea. Study of these itineraries makes it clear that they refer to Čampā or Champa situated between Cambodia and the delta of the Song Coi in Viêt Nam. The information given by these authors is very laconic, and, curiously, the 13th and 14th century texts are much less well documented than the earliest ones. There is practically nothing on the people there, sometimes described as being brown, nor on the political situation, except that Ibn al-Nadīm [*q.v.*] (end of the 10th century) speaks of a victorious war by the Viêt Nam which ravaged the land. All accounts stress the production there of aloes wood, considered as excellent, except for Yāḳūt in his *Muʿdjam al-buldān* (end of the 12th-opening of the 13th century), who considered this product as the worst possible. Al-Idrīsī (12th century) is the fullest, speaking of stock-rearing (bovines and buffaloes) and agriculture (rice, sugar cane, coconut palms and bananas). He describes Hindu-type customs (respect for cows), whereas Ibn al-Nadīm merely mentions Buddhist temples, which can only have been rare at his time. These texts also contain tall stories, such as that in the *Mukhtaṣar al-ʿadjāʾib* (beginning of the 11th century) on the legend of the island of the White Palace, made of crystal, which Alexander the Great allegedly visited.

Ṣanf seems to have been a stage much frequented by Muslim merchants travelling between the Indian Ocean and the China Seas. Better known under its Sanskrit name of Čampā, the plains around the deltas were inhabited by populations of controversial origin but who belonged to the Austronesian linguistic family. In the mountains, proto-Indo-Chinese tribes (Sedang, Bahnar, Jörai, Rhadé, etc.), speaking Austronesian or Môn-Khmer languages, were more or less in a vassal status.

The ancient Cham seem to have been organised in principalities which were at first independent, stretched along between the Hoanhsoʾn and the Phan-rang region. The first to appear in history was the most northerly one, founded in A.D. 192 and known under the Chinese name of Línyì. Before the beginning of the 7th century, all these principalities must have been brought together. Čampā had a very lively history. The Čam were excellent warriors and remarkable sailors, willingly turning to piracy. The land was torn apart by frequent revolts and succession wars. As an agressive neighbour, it often fought with Cambodia, occupied Angkor 1177-81, but became a Khmer province 1202-20. During 1283-5, it successfully repelled a Mongol invasion. But the main enemy was Viêt Nam. Having the advantage until the 10th century, it then fell behind, alternately suffering defeats and making counter-attacks. The king Bong Nga (1360-90) invaded the delta of the Song Coi three times. After him, decadence set in. In 1471 the Viêtnamese emperor Lê Thanh Tôn crushed the kingdom, which became a vassal state, gradually nibbled away and progressively depopulated. There remained only a few enclaves and a shadow of former royalty. In 1832, the last king and part of the population took refuge in Cambodia.

Inspired by Indian culture, the Cham created a brilliant and varied civilisation whose architectural remains, for long neglected, are now being restored. Society was in origin matrilineally organised, and it adopted the Hindu system of castes and customs. At the present time, there remain few Cham in Viêt Nam, most of them preserving an impoverished form of Brahmanic rites.

The presence of colonies of Muslim merchants is known from the middle of the 10th century, and a Muslim even led two embassies to China in 958 and 960 (see *Ḥudūd al-ʿālam*, tr. Minorsky, tr. 86, comm. 240). It is unknown when Islam penetrated Cham society, but this was probably at the end of the 15th century. Yet it has always remained a minority faith, and one varying a great deal from the fundamental norms [see further Čam].

(P.L. LAMANT)

ṢANHĀDJA, an important group of Berber tribes who played an historical role in North Africa from the 4th/10th century onwards. They lived in the two Maghribs and in Ifrīkyia; some were sedentary, whilst others had moved into the desert and become nomadic. According to the Berber genealogists, the Ṣanhādja were one of the seven great tribes descended from Bernès, son of Berr. On the other hand, for the Arab genealogists, like Ibn al-Kalbī, they had, in common with the Kutāma or Ketāma, a Yemeni origin, and had allegedly been sent to the Maghrib by Ifricos, one of the kings of Yemen.

The whole history of the Ṣanhādja was dominated by their opposition to another great group of Berber tribes, the Zanāta, in particular, to the Miknāsa, Maghrāwa [*q.v.*] and the Banū Ifrān [*q.v.*]. According to Ibn Khaldūn, the Ṣanhādja had almost 70 branches, one of the most important being the Talkāta who occupied part of the central Maghrib. The first known chief of the Talkāta was probably Manād b. Mankūs, whose son Zīrī was the ancestor of the Zīrid dynasty [*q.v.*] and the founder of their capital, Ashīr, in the Djabal Titteri (324/935).

As partisans of the Fāṭimids, this branch of the Ṣanhādja had adopted Shīʿism (they were later, however, to return to Sunnism), and when the Fāṭimid caliph al-Muʿizz [*q.v.*] left for Egypt (361/972), he entrusted the government of Ifrīkiya to the Zīrids. Since they then became practically independent, the Zīrids ruled in Ifrīkiya and the eastern part of the central Maghrib until the opening of the 12th century A.D. (498/1105). Their break with the Fāṭimids in Cairo provoked the unleashing against Ifrīkiya by the Fāṭimids of the Banū Hilāl [*q.v.*] Arabs, who devastated the land. Another Ṣanhādja kingdom had seen the light in the central Maghrib; a grandson of Zīrī b. Manād, Ḥammād b. Buluggīn, after having built the Ḳalʿat Banī Ḥammād [*q.v.* and ḤAMMĀDIDS], separated from his Zīrid cousins. In order to get away from the Hilālian pillagers, one of Ḥammād's successors founded Bidjāya [*q.v.*] (Bougie) (before 461/1068-9). But gradually, these Ṣanhādja of the eastern Maghrib became dominated by the Hilāl and other Arab tribes.

At the end of the 4th/beginning of the 11th century, a son of Zīrī b. Manād, Zāwī, departed for Spain, where, after having entered the service of al-Manṣūr Ibn Abī ʿĀmir, the regent for the Umayyad empire, he founded an independent state around Granada. This Ṣanhādja branch, however, abandoned al-Andalus in 416/1025 [see ZĪRIDS of Spain].

Within the Sahara, there nomadised a second group of the Ṣanhādja, the Lamtūna [*q.v.*], wearers of the *lithām* or veil, the Almoravids [see AL-MURĀBIṬŪN]. After having conquered Morocco, these last seized Tlemcen, Oran and all the coastal region up to Algiers (475/1082). They clashed with their fellow-tribal brethren of the Banū Ḥammād and then embarked on the conquest of al-Andalus.

The two Ṣanhādja kingdoms, descendants of Zīrī b. Manād, in the Maghrib and in Ifrīkiya, disappeared around the middle of the 6th/12th century when a further wave of Berbers, the Almohads [see AL-MUWAḤḤIDŪN], conquered the whole of Barbary as far as Tunis. As for the Almoravid Ṣanhādja, they were crushed by the Almohads in Spain as well as in the Maghrib. A fraction of them, the Banū Ghāniya [*q.v.*], ruled in the Balearic Islands in the 6th/12th century. They even managed to seize Bidjāya (581/1185), Algiers, the Ḳalʿat Banī Ḥammād and Gafsa, invaded the Djerid and reached Tripoli and Tunis in 599/1203; but they ended up being defeated by the Almohads (621/1224), and Ṣanhādja domination of Barbary was ended.

A few tribes of the Ṣanhādja lived in the Maghrib al-Aḳṣā, in the Sūs and in the Atlas, sc. the Lamṭa [*q.v.*] and the Gazzūla, nomads, and the sedentary Haskūra. Other less important groups lived, and still live, in the Atlantic coastal plains of Morocco, the Shāwiya [*q.v.*] and the Dukkāla, and above all, in the north, near the Rīf [*q.v.*], such as the Boṭṭuya and the Banū Uryāghul; but none of these Ṣanhādja tribes enjoyed any political power.

(CHANTAL DE LA VERONNE)

AL-**SANHŪRĪ**, ʿABD AL-RAZZĀḲ, b. 11 August 1895 in Alexandria, Egypt, d. 1971 in Cairo, is the Arab world's most distinguished scholar of modern jurisprudence, with the regeneration of Islamic law figuring prominently in his work. He is renowned for drafting new civil codes for Egypt, ʿIrāḳ, Syria and Libya which incorporate Islamic legal rules to the extent which he considered appropriate for each country, and for comparative treatises on civil law and the sources of legal right in Islamic jurisprudence.

Al-Sanhūrī obtained a *licence en droit* in 1917 from the Khedival School of Law (Cairo), graduating top in his class. He began his juristic career as *wakīl niyāba* in the Mixed Courts of al-Manṣūra and was a teacher in the school for *Sharīʿa* judges. In 1921 he went to France for doctoral studies at the University of Lyon with E. Lambert. There he wrote two theses, one on English law which won the *prix de thèse*. The other, *Le Califat* (Paris 1926) is a study of doctrine and history of the caliphate which concludes with proposals to revive that institution (abolished by the Turks in 1924) and to reform the legal systems of Arab states.

Returning to Cairo in 1926, al-Sanhūrī was appointed in the Faculty of Law at the National (later Cairo) University, and began to write treatises on the theory of obligations and contracts, notably *ʿAḳd al-īdjār* (1930) and *Naẓariyyat al-ʿaḳd* (1934). Drawing from comparative and Islamic law and case material of the Egyptian courts, he sought to make Egyptian and Islamic law part of comparative jurisprudence.

In 1935 he was invited to Baghdād as professor and Dean of the newly-established Law School. He taught comparative (Islamic and Western) law and began work on constructing ʿIrāḳ's modern civil code. The technique he used to compare codifications of Islamic law (*Madjalla* and *Murshid al-ḥayrān*) with legal rules in European codes is explained in *Madjallat al-Ḳaḍāʾ* (Baghdād) (1936/2).

Back in Egypt in 1936, he was briefly Dean of the Law Faculty of Cairo University and began work on revising the Egyptian civil law. His views about revision appear in *al-Ḳānūn wa 'l-iḳtiṣād* (1936/6) and *al-Kitāb al-dhahabī li 'l-maḥākim al-ahliyya* (Cairo 1938). Al-Sanhūrī defended the final version before Parliament in 1948 against critics who wanted a completely Islamic code. He claimed the revised code included all the Islamic law it was then possible to adopt, "having

regard to sound principles of modern legislation."

Al-Sanhūrī was active in Egyptian nationalist politics and became prominent in public life from the 1930s. He was among the founders of the Saʿdist party (1937), Deputy Minister of Justice (1944) and Minister of Education (1945-6 and 1947). The pinnacle of his public career came in 1949 when he was appointed Chief Justice of the *Madjlis al-dawla*. He made it "a towering fortress of the protection of rights and the guardian of liberties" (Mūrsī, 1980).

At first he supported the Revolution of 1952 and the Free Officers. Later came his concern to re-establish constitutional government and civilian rule. During the political turbulence of March 1954, al-Sanhūrī was physically attacked at the *Madjlis* by demonstrators and never again held public office.

Thereafter, he worked on his two major treatises: *Maṣādir al-ḥaḳḳ fī 'l-fiḳh al-Islāmī*, 6 pts. in 2 vols., Cairo 1954-9, and *al-Wasīṭ fī sharḥ al-ḳānūn al-madanī al-djadīd*, 10 pts. in 12 vols., Cairo 1952-70, completed the year before he died. Both are still in print and serve as basic reference works.

(ENID HILL)

AL-**SANHŪRĪ**, ABU 'L-ḤASAN ʿALĪ B. ʿABD ALLĀH al-Nuṭūbisī al-Mālikī, Nūr al-Dīn, Egyptian *uṣūlī faḳīh* and grammarian (*ca.* 814-89/*ca.* 1411-84).

He was born at Nuṭūbis, and he lived at Sanhūr near Alexandria, where he learnt the Ḳurʾān, and finally settled at Cairo, in the Azhar. Amongst his masters there were some of the most celebrated religious lawyers of the time, with whom he studied, amongst other works, the *ʿAḳīla* and the *Ḥirz al-maʿānī* of al-Shāṭibī [*q.v.*]. The *Alfiyya* of Ibn Mālik [*q.v.*] and the two *Mukhtaṣars* of Abū ʿAmr Ibn al-Ḥādjib [*q.v.*]. He also followed courses in mathematics and the division of inheritances. He then made the Pilgrimage, and spent some time at Mecca.

He wrote a *sharḥ* on the *Mukhtaṣar* of Khalīl b. Isḥāḳ [*q.v.*], an unfinished work; a *taʿlīḳ* to the *Talḳīn* of ʿAbd al-Wahhāb al-Baghdādī (d. 422/1031); and two commentaries on the grammatical work, the *Ādjurrūmiyya* of Ibn Ādjurrūm [*q.v.*] (see for the mss. of this, Brockelmann, II², 238 no. 5 and S II, 333 no. 5; he is not to be confused with another commentator on the *Ādjurrūmiyya*, ʿAlī b. Ḥasan al-Sanhūrī al-Shāfiʿī). He taught at the Barḳūḳiyya and Ashrafiyya *madrasas*, becoming in the end *shaykh al-Mālikiyya*. His pupils included the famous North African *faḳīh* and mystic Aḥmad Zarrūḳ, as well as other outstanding Egyptian scholars (see a story on their numbers in Makhlūf) who studied *fiḳh* and Arabic grammar and philology with him. Concerning one of them, we know that he studied with al-Sanhūrī the *Mukhtaṣar*, part of Saḥnūn's *Mudawwana* and the *Tafrīʿ* of Ibn al-Djallāb, Ibn Abī Zayd's *Risāla*, Ibn ʿAskar's *ʿUmda*, as well as the *Irshād* (see al-Ḳarāfī, *Tawshīḥ*, 184 no. 183).

Bibliography: Sakhāwī, *Ḍawʾ*, v, 249-51 no. 843; Ḳarāfī, *Tawshīḥ al-dībādj*, ed. A. al-Shatyawī, Beirut 1983, 130-2 no. 127; Ibn al-Ḳāḍī, *Durrat al-ḥidjāl fī asmāʾ al-ridjāl*, ii, 444; Aḥmad Bābā al-Timbuktī, *Nayl al-ibtihādj*, Beirut n.d., 208-9; Ismāʿīl al-Baghdādī, *Hadiyyat al-ʿārifīn*, Istanbul 1951, I, 737; M. Petry, *The civilian elite of Cairo in the later Middle Ages*, Princeton 1981; J. Berkey, *The transmission of knowledge in medeval Cairo. A social history of Islamic education*, Princeton 1992.

(MARIBEL FIERRO)

AL-**SANHŪRĪ, ABU** 'L-**NADJĀ** [see SĀLIM B. MUḤAMMAD].

SANIYA [see NĀʾŪRA].

SANṬŪR, a musical instrument still surviving today in the urban music-making of Turkey (very rare), of ʿIrāḳ (integrated with the *čalghī* quartet accompanying *al-maḳām al-ʿirāḳī* [see MAḲĀM], of Persia and of Kashmīr (played solo). It is a cithara-tympanon-dulcimer made of wood, in the shape of a flat isosceles trapezoid provided with 72 to 96 strings of metal stretched from the string-holders (left-hand side of the trapezoid) to the pegs (right-hand side), grouped into groups of four strings and then resting on from 18 to 24 bridges. It is played with two wooden sticks (*maḍrab*) covered with tow or cotton and held by the musician between thumb and index finger (the techniques differ according to various schools); the strings give out a crystal-like sound prolonged by lengthy reverberation.

The *sanṭūr* of Persia spans four octaves and 33 degrees in heptatonic diatonic scales. Since the bridges are arranged in two groups of nine each, the ninth bridge allows the division of a note (e.g. *fa* natural and *fa* sharp in order to change *gūsha*, melodic model). It is therefore more a question of the soloist's virtuosity than of modulation (*talwīn*).

The *sanṭūr* of ʿIrāḳ spans three octaves and a third, and its two groups of twelve bridges define 48 degrees. The various ways of tuning the strings provides in the same register the possibility of modulating between genres (*djins*) and of passing from a Bayātī (A-B𝄳-C-D ♮) to a Ṣabā (A-B𝄳-CH-D ♮) and a Ḥidjāz (A-B♭-CH-D ♮).* It thus leads more to modulation than to virtuosity.

The origins of the *sanṭūr* are unclear. It has been alleged to be Assyrian(?). It does not appear in classical miniature paintings; it may be evoked in the *K. al-Adwār* of Ṣafī al-Dīn al-Urmawī [*q.v.*] (Baghdād, 7th/13th century); it appears on a fresco of the Čihil Sutūn palace in Iṣfahān (11th/17th century); it is mentioned in the Comte de Gobineau's *Trois ans en Asie*, Paris 1859; and it appears at the end of the 19th century on the "chromolithographs" of Ḳādjār-period Persia. At the beginning of the 20th century, it was very common in the coffee houses of Istanbul, Tehran and Baghdād, and took on a connotation of being connected with amusement and play, before illustrating the type of music called "traditional" by the West. Its present-day most brilliant exponent is the Persian Farāmarz Pāyvar.

* *Musical abbreviations*: 𝄳 = less one or two commas; H = sharpened by a lemma.

Bibliography: Farāmarz Pāyvar, *Dastūr-i sanṭūr* (method), Tehran; idem, *Sī ḳaṭʿ-i čahārmidrāb bāra-yi*

sanṭūr (30 exercises in virtuosity for the *sanṭūr*), Tehran, both publ. after 1960; *The new Grove dictionary of musical instruments*, London 1984, iii, 291-2 (good bibl.). (J.-C. Chabrier)

SANTURIN ADASÎ, the Turkish name for Santorin, Grk. Thera, Lat. Sancta Irini, the volcanic island which is the southernmost of the Aegean Cyclades group, to the north of Crete.

It may already have suffered from Arab raids from Crete in the 3rd/9th century, from the Arabs of Sicily and then from Western corsairs, although it is recorded as inhabited in *ca.* 549/1154 by al-Idrīsī (tr. Jaubert, ii, 127), the first to employ the name Santurin (< the island's patroness St. Irene) (see A. Savvides, *Notes on mediaeval Thera/Santorin until the late 15th century*, in *Pariana*, xv, no. 53 [1994], in Greek). Turkmen raids from Menteshe and Aydîn [*q.vv.*] in 1318-31 and 1345-60 resulted in limited damage (see E.A. Zachariadou, *Trade and Crusade. Venetian Crete and the emirates of Menteshe and Aydin, 1300-1415*, Venice 1983, 13, 51, 93-4, 103, 188) and during the 9th/15th century, the Ottoman sultans recognised Venetian suzerainty over the island in a series of treaties (see Pitcher, *Hist. geogr. of the Ottoman empire*, 67 and maps VIII, XIV). Ottoman raids, including one by Khayr al-Dīn Pasha [*q.v.*] in 943/1537, led to an agreement (*ʿahd-nāma*) in 972/1575, and in the next year Piyāle Pasha [*q.v.*] took it in a series of operations which ended Latin rule in the Archipelago (see B. Slot, *Archipelagus turbatus ... 1550-1718*, Leiden 1982, 32 ff., 73 ff.). In fact, it was administered on favourable terms by Joseph Nasi, Duke of Naxos [see NAKSHE] and in the following century was still largely self-governing but suffering from Venetian corsair raids, even though there were no Muslims on the island and at least part of the Christians were Roman Catholics.

A brief Russian capture of the island during the 1768-74 Russo-Turkish War was followed by definitive Ottoman rule until in May 1821 the island rebelled against Turkish rule (see Pegues, *Histoire ... de Santorin*, Paris 1842, 352-3, 619 ff.), though, as was also the case in Naxos, by no means unanimously, given the Catholic population. The island in fact briefly rose against its first Greek governor, Capodistrias, in 1831, but was finally annexed to the newly-founded Kingdom of Greece by the 1832 Treaty of Constantinople.

Its liberation movements* (in Grk.), in *EEKM*, ix (1971-3), 718-46; A. Tselikas, *Memories from Santorine 1573-1819* (in Grk.), Athens 1985. (A. Savvides)

SANUA, JAMES [see ABŪ NAḌḌĀRA].

AL-**SANŪSĪ**, Abū ʿAbd Allāh Maḥammad b. Yūsuf b. ʿUmar b. Shuʿayb (b. at Tlemcen 838 or 839/1435-6, d. Djumādā II 895/May 1490), North African theologian and mystic.

1. Life and influence.

Despite the decline of the Banū Zayyān or ʿAbd al-Wādids [*q.v.*], Tlemcen was still one of the main cultural centres of the Maghrib. In his youth, al-Sanūsī studied the Ḳurʾān with his father, and other teachers for Arabic language and for arithmetic and the law of successions (receiving an *idjāza* from one of the later teachers, Abu 'l-Ḥasan al-Ḳalaṣādī, on whom see Brockelmann, II², 343-4, SII, 378-9), for the *Mudawwana* of al-Tanūkhī, for the astrolabe, for the *uṣūl al-dīn* and for the *Djumal* of al-Khūnadjī. In such an environment of scholars, al-Sanūsī stood out as precocious. With his half-brother ʿAlī al-Talūtī, he studied the *Risāla* of Ibn Abī Zayd al-Ḳayrawānī [*q.v.*], the *Irshād* of the Imām al-Ḥaramayn al-Djuwaynī [*q.v.*] and *tawḥīd*, and received another *idjāza*. During a stay in Algiers, he studied the *ḥadīth* collections under ʿAbd al-Raḥmān al-Thaʿālibī, and then at Oran followed the teaching of the great Ṣūfī Ibrāhīm b. Muḥammad al-Tāzī.

Being inclined to asceticism, he fasted one day out of two and rarely left his dwelling. He kept vigils for several night on end and then embarked on a period of fasting. He was famed for his practise of *istikhāra* [*q.v.*], one which enabled him to give a reply to a problem obtained during sleep. Because of his gift of knowing how to interpret (lit. "read", *ḳaraʾa*) his dreams and those of others, the public came to him from all over the kingdom to hear his dicta, and he gained an unequalled reputation in the religious, especially mystical, sciences. He continued to teach in the mosque until illness compelled him to slow down and in the end brought his life to an end in 894/1490.

Soon afterwards, a *ḳubba*, rectangular in shape and covered with shiny green fabrics, was erected in his honour in the cemetery of al-ʿUbbād (Sidi Bou-Médine); it contained the catafalques of al-Sanūsī and his half-brother al-Talūtī, who had died shortly after. But he allegedly had another tomb amongst the Awlād Ḥammū, thus gaining him the name of Bū Ḳabrīn (likewise amongst the Banī Bū Saʿīd, etc.). Each winter, when the corn was still green, a great communal meal (*waʿda*) was given by the people of Tlemcen to the poor and to strangers, near al-Sanūsī's tomb, the latter being called *Dhū 'l-Waḳfa* "master of the drought" because of a miracle described by Ibn Maryam in his *Bustān*. At the end of the meal, there was a communal prayer for rain. Sīdī Sanūsī was equally invoked in periods of protracted drought. At Tlemcen, no less than two mosques perpetuate his memory. An apparently older one, at the gate of the Darb al-Masūfa quarter, is said to be that of Ibn al-Bannāʾ and to have been the mosque were al-Sanūsī taught and worshipped. The other is said to have been built on the site of the house where he was born, in the Banū Djumla quarter. Both were richly endowed with *ḥubus*.

Al-Sanūsī had numerous students, such as al-Mallālī, author of his biography and of a commentary on the *Ṣughrā*; Abu 'l-Ḳāsim al-Zawāwī; Ibn al-ʿAbbās al-Ṣaghīr, Ibn Abī Madyan; and Ibn Saʿd al-Tilimsānī, one of the sources of Aḥmad Bābā. They contributed to the spread of their master's works in the West Africa, by means of the trading links well established with that region, especially through the milieux of scholars, such as the family of Aḥmad Bābā of Timbuctu, in the 10th/16th century in Mali, and ʿUthmān b. Fūdī [*q.v.*] (Usumanu dan Fodio) in northern Nigeria in the 12th/18th century.

Over the centuries, al-Sanūsī has remained a source of inspiration and study. His three *ʿaḳāʾid* marked the grades of primary, middle and advanced studies, with the *Ṣughrā al-ṣughrā* sometimes replacing the *Sughrā* in the first grade. In Algeria, there have been various commentaries from scholars so diverse as al-Warthīlānī (d. 1193/1779), Abū Rās (d. 1238/1823), etc. The famous poet Ibn Amsāyib (d. 1190/1768) used the theme of a visit to Sīdī Sanūsī's tomb and was buried near him. At the opening of the 20th century, Ibn Bādīs used al-Sanūsī for his Ḳurʾān commentary. Moroccan scholars studied the three *ʿaḳāʾid* with the commentaries and gloss of al-Dasūḳī. Thus the Fāsī al-Mandjūr studied and commented on al-Sanūsī, as well as the Miknāsī al-Wallālī, the minister al-Zayyānī and the Ṣūfī Ibn ʿAdjība. Till the beginning of the 20th century, the teaching of logic at Fās was

done through the *Mukhtaṣar*; *kalām* with the three creeds and the abridgement of the *Ṣughrā*, with commentaries; and theology with the *Ṣughrā* and the gloss of al-Yūsī on the *Kubrā*. In the 11th/17th century, the *ʿAkīda al-ṣughrā* spread through West Africa to the Niger under the Fulani name *kabbe*. Thereafter, commentaries and glosses on them began to abound in the Arabic literature of West Africa, especially the lesser, middle and greater commentaries on the *Ṣughrā*, which was most often called *Umm al-barāhīn*.

In Egypt, al-Sanūsī was taught at the Azhar, notably with the commentaries of al-Faḍālī (d. 1821) and his pupil al-Badjūrī (d. 1860), up to the coming of the Salafiyya [*q.v.*] cultural and social reform movement. Muḥammad ʿAbduh [*q.v.*] often cites him, and it was certainly al-Sanūsī who provided him with the three modalities of judgement: necessity (*al-wudjūb*), impossibility (*al-istiḥāla*) and possibility (*al-djawāz*), and his attitude to the Muslim community, in his *Risālat al-Tawḥīd*, has reminiscences of that of the scholar of Tlemcen. Finally, in Asia, and especially in Malaysia and Indonesia, it has been the *Umm al-barāhīn*, also called *al-Durra*, which has been the most popular of those works explaining the Ashʿarī doctrine on the divine and prophetal attributes (*ṣifāt*). Copies of it often have interlinear Malay or Javanese translations. In the Pesantrens [*q.v.*], the commentaries and glosses are studied on the old, original texts (*matn*).

2. Works.

As far as is at present known al-Sanūsī's work (apart from the five *ʿakāʾid, al-Kubrā, al-Wusṭā, al-Ṣughrā, Ṣughrā al-ṣughrā* and *Mukaddima*) comprises a large number of commentaries on many varied topics—works of logic, the *Ṣaḥīḥ* of Muslim, algebra, medicine, the Ḳurʾānic *ḳirāʾāt*, Ṣūfī manuals, *tafsīr*, etc. (for details, see Brockelmann, II², 323-6, S II, 352-6, and Moh. Ben Cheneb, *EI*¹ art. *s.v.*). Almost all of these are abridgements or works of vulgarisation.

In his *Ṣughrā*, al-Sanūsī gives an exposition of the essentials of faith according to a methodical form of augment. Knowledge (*ʿilm*) is based on judgement *ḥukm*), which stems from the divine law (*sharīʿa*), custom (*ʿāda*), experience and reason (*ʿaḳl*). Rational judgement (*al-ḥukm al-ʿaḳlī*) comprises the three categories of necessity, impossibility and possibility, Aristotelian modalities adopted by Islamic philosophy and theology. God has twenty attributes: six are divine, seven comprise real ideas (*ṣifāt al-maʿānī*) and seven are ideal ones (*ṣifāt maʿnawiyya*). These are followed by the attributes of the divine messengers. Finally, he concludes that the *shahāda* sums up in its first part all that a believer need know of God, whilst the second part involves belief in all the prophets, angels, revealed books and the Resurrection, affirmed as true by the Prophet.

Al-Sanūsī's doctrine, as it appears from his works, is made up of prudence (*tawaḳḳuf*) and reason, in pursuit of equilibrium and salvation. It was certainly influenced by signs of a shaking-up of values in the society of his time vis-à-vis the state, religion and cultural traditions, with the faith confronted by new problems. It was open to non-Muslim theological influences, as in his interpretation of the Gospel according to St. John, xiv, 16-17, 26, 29, and of the theme of the Paraclete (*baraḳlīṭ*): the saviour of the human race is our Lord Muhammad (*raḥma li ʾl-ʿālamīn*). The ideas of the various *madhāhib* are set forth and discussed. It was also inspired by the works of al-Ghazālī's teacher al-Djuwaynī (the former's ideas being spread in the Maghrib by Ibn Tūmart [*q.v.*]), notably by the *Irshād* and the *Shāmil*, seen both in its form and in certain concepts, such as al-Ashʿarī's classification of the divine attributes into three subdivisions, as in al-Djuwaynī; and the difference between *nafsiyya* or consubstantial attributes and qualitative, *maʿnawiyya*, ones. Similarly, al-Ghazālī's influence (the *Iḳtiṣād*) appears in the division into seven of the divine attributes of God and the prophets, whilst al-Sanūsī also takes up the Ashʿarī idea of *kasb*.

However, at times he takes up a position differing from such Ashʿarī authorities as these two, al-Ashʿarī himself and al-Bāḳillānī, rejecting that which offends against reason and dogma (*Muḳaddima*, 65-7). His system of ethics is inspired by al-Ghazālī, especially in the *Iḥyāʾ*, where, on all occasions, he seeks out a middle position.

He condemns firmly blind acceptance (*taḳlīd* [*q.v.*]). Merely reading the Ḳurʾān and *ḥadīths* is inadequate for understanding the bases of faith (*īmān*); sound reasoning (*al-naẓar al-ṣaḥīḥ*) is preferable to this (*Wusṭā*), and must lead to what is sought. Judgement thus rests on proof, aided by knowledge (*ʿilm*) or intuition (*maʿrifa*). Dogmatic theology is the queen of sciences and involves demonstrable proof (*burhān*) to distinguish between dialectic, rhetoric, poetry and sophism (the divisions of Aristotelian logic). The truths of the Ḳurʾān can thereby be apprehended and anthropomorphic interpretations (*tadjsīm*) avoided. Following a tradition of the Almohad dynasty, al-Sanūsī wanted the people to have a simplified access to God, leaving for an élite (*khāṣṣa*) the possibility of a deep study of the principles of religion, a theme which he often takes up with his pupils and in his works, notably in his division of knowledge into two branches, an external (*ẓāhir*) one and an esoteric (*bāṭin*) one, for him the truest and noblest knowledge.

Finally, by his public and private life, al-Sanūsī became part of the popular Ṣūfism illustrated by Tlemcen's patron saint, Abū Madyan: a moderate Ṣūfism, with simple dogma and intelligible to the believers. From his independence and originality, and his deep, widely-connected thought, he seems clearly to be, in company with the Persian al-Dawānī [*q.v.*], the most important Muslim theologian of the 9th/15th century (Fakhry).

AL-SANŪSĪ, MUḤAMMAD B. ʿALĪ, scholar and Ṣūfī of Algerian origin, and founder of the Sanūsiyya [*q.v.*].

Born on 12 Rabīʿ I 1202/22 December 1787 at al-Wāsiṭa (or douar al-Thorch), some 40 km/25 miles to the east of Mustaghānim, he belonged to the Awlād Sīdī ʿAbd Allāh, Idrīsid *shurafāʾ* of the Madjāhir, a Makhzan tribe of Oran under the Turkish régime. He inherited from his family the *nisba* al-Khaṭṭabī (from ʿAbd Allāh al-Khaṭṭāb, the ancestor of the Awlād Sīdī ʿAbd Allāh, who lived at the beginning of the 10th/16th century), and those of al-Ḥasānī and al-Idrīsī (which refer to the origins of his Sharīfian line). The qualificative of al-Sanūsī would appear to have been borrowed from a local toponym (the name of a mountain) of the region of Tilimsān (Tlemcen), where his family previously lived. This *nisba* implies no link of kinship with Muḥammad b. Yūsuf al-Sanūsī, the Tlemceni scholar of the 9th/14th century [*q.v.*].

Muḥammad al-Sanūsī studied initially within his own family and in several intellectual centres of Oran: Mustaghānim, Mazūna and Tilimsān. At eighteen years old, in 1220/1805 (al-Dadjdjānī, following King Idrīs), or at twenty-one, in 1223/1808-1809 (K. Vikør, following al-Lībī), he left to pursue his studies at Fez. He stayed there, according to the authors, seven years (al-Libi/Vikør) or fourteen years (Idrīs/al-Dadjdjānī), associating with major scholars of the period. In Fez, he joined several major Ṣūfī orders, in particular the Shādhiliyya in its Djazūliyya, Nāṣiriyya and Ṭayyibiyya branches, as well as various local *ṭuruḳ*. He appears also to have been affiliated to the Darḳāwiyya and the Ḳādiriyya, but he does not mention them in the list of the forty *ṭuruḳ*, the *wird* of which he was later to claim. He was the pupil of Aḥmad al-Tidjānī, with whom he studied the Ḳurʾān, but whose way he does not seem to have adopted.

He left Fez in 1233/1818 (al-Lībī) or in 1235/1819-20 (al-Dadjdjānī). According to al-Lībī, he apparently made a first pilgrimage to Mecca in 1232-3/1817-18, before his final departure from the Moroccan city. After Fez, his traces are followed with some difficulty: he probably spent some time in his native region, and then he made a leisurely progress along the confines of the Sahara. But the statement of Rinn (1884), according to which al-Sanūsī was crossing the Sahara at the time of the arrival of the French in Algiers, is not to be taken seriously. He had long since left Algeria and was never to return there.

After staying two to three years in Cairo, al-Sanūsī arrived in Mecca *ca.* 1240-1/1825-6. It was there that he encountered the Moroccan scholar and Ṣūfī Aḥmad b. Idrīs, who had been residing in the Holy City some twenty years. A mystical master, Ibn Idrīs claimed a brief lineage which was traced by way of two intermediaries to the mysterious Ḳurʾānic figure of al-Khaḍir [*q.v.*], and hence to the Prophet, always present at the origin of these successive transmissions (whence the names of Khaḍiriyya and Muḥammadiya given to the Way). Ibn Idrīs was not the founder of a structured fraternity but the respected master of a circle of disciples in the Holy Cities, and later in the Yemen.

Al-Sanūsī did not remain for more than two or three years under the tutelage of his master. When the latter departed for the Yemen (1243/1827-8), he became his *khalīfa* at Mecca. As a pupil of Ibn Idrīs, al-Sanūsī had acquired specific esoteric knowledge

and had reconsidered certain areas of *ᶜilm*. It was also no doubt under his influence that he consolidated his distinctive positions in judicial matters: the criticism of blind imitation (*taḳlīd*), the combined utilisation of the four *madhāhib*, and the recourse to *idjtihād*, which were to characterise profoundly his later positions, and which would expose him to the criticisms of the scholars of al-Azhar (in particular, of Muḥammad ᶜAlī ᶜIllaysh). The teachings of Ibn Idrīs were clearly distinct from those of the Wahhābīs, with whom a number of restrained polemics were held.

When Ibn Idrīs died at Ṣabyā in 1253/1837, al-Sanūsī became a master in his own right and the *zāwiya* of Ibn Idrīs, situated on the hill of Abū Ḳubays, a neighbourhood of Mecca, became by gradual and barely perceptible stages, at no date which can be specifically assigned, the centre of the new "Sanūsiyya" brotherhood. Distinct derivatives emerged at the same time under the influence of other disciples, such as the Mirghāniyya which found its preferred territory in the Sudan.

Probably hindered in Arabia, by Wahhābī activity and the power of the local religious establishment, the founder of the Sanūsiyya henceforward sought new places for settlement in the African continent. From this time until his death, the chronology of his life is one of alternation between Mecca and the new African *zāwiyas*: 1255/1840: departure from Mecca; 1262/1846: return to Mecca, after founding four *zāwiyas*, including that of al-Bayḍāʾ, in the territory of Barḳa (Cyrenaica); 1270/1854: new departure from Mecca and settlement at al-ᶜIzziyya, then, in 1273/1856, at Djaghbūb, a "new city" created out of nothing in an inhospitable desert location on the western borders of Egypt. It was there that he died, on 9 Ṣafar 1276/2 September 1859.

At the time of his first journey to the West, Muḥammad al-Sanūsī had entered Tunisia and approached the Algerian frontier, but the region was unstable at that time and seemed to him unfavourable for his projects, and the presence of other Ṣūfī orders was also a hindrance. Finally, in Tripoli, he reached an agreement with the local Ottoman power, then barely reinstated in Libya, and he turned, in the course of his wanderings, towards the Djabal al-Akhḍar, to the north of Cyrenaica, approaching the Bedouin of the region, entirely ignorant of the precepts of the Law. Thus the Sanūsiyya, unable to establish itself in the neighbouring countries, became "Libyan", with a strong concentration in the Djabal al-Akhḍar, and a salient extending across the Fezzān as far as the Algerian borders.

Muḥammad al-Sanūsī conceived his work as being primarily a carefully-structured missionary project. He thus laid the foundations of a system which his son and successor Muḥammad al-Mahdī was subsequently to pursue energetically. In this system, the epitome of pious endeavour is the construction of a *zāwiya*, a place of assembly, of teaching and of arbitration, a sedentary and agricultural centre for the diffusion of Sanūsī ideas and policies in a nomadic environment. Thus there was established across Cyrenaica and the Fezzān a network of Sanūsī *zāwiyas*, which guaranteed the diffusion of Islamic models and celebrated the *baraka* of the founder.

On the doctrinal level, al-Sanūsī is seen as a reformist (appeal to *idjtihād*). Tenacious legends notwithstanding, al-Sanūsī was not, no more than was Aḥmad b. Idrīs, an apologist of *djihād* against the Europeans. He maintained an apolitical stance, prepared to deal with the Ottoman authorities and giving priority to a "grass-roots" re-Islamisation among the disinherited populations. In terms of Ṣūfism, he is seen as the reviser, and to a certain extent the unifier, of the forty *ṭuruḳ*, the *asānīd* of which he lists meticulously. Al-Sanūsī left behind him, in the various domains of *ᶜilm*, and more particularly in that of Ṣūfism, a prolific written corpus, quite apart from his numerous letters. Al-Dadjdjānī has listed 44 titles. Among these, eight of the most important have been collected and printed in *al-Madjmūᶜat al-mukhtāra* at the orders of King Idrīs: *al-Durar al-saniyya*, which eulogises the Idrīsī family; *Īḳaẓ al-wasnān* and *Bughyat al-maḳāṣid*, which deal with *taḳlīd* and *idjtihād; K. al-Manhal al-rawī al-rāʾiḳ*, which, in its early sections, recalls his masters and his studies; *Muḳaddimat Muwaṭṭaʾ al-Imām Mālik*, which addresses questions of Mālikī law; *al-Salsabīl al-muᶜīn*, which is devoted to the analysis of forty Ṣūfī brotherhoods; and *Shifāʾ al-ṣadr bi-ārā al-masāʾil al-ᶜashar*, which concerns ten problems of cultic practice (prayer with arms folded, etc.). Some works, destroyed by the Italians, are known only by their titles.

Thus there evolves, across the 72 years of his life, the figure of a teacher versed in multiple disciplines, of a reviver of Islam and of Ṣūfism, of a missionary and an organiser, but also of an eminent individual, endowed with *baraka*, whose charisma was renowned throughout the central and eastern Sahara.

AL-**SANŪSĪ**, SHAYKH SAYYID AḤMAD (1290-1351/1873-1933), Third Grand Master of the Sanūsiyya [*q.v.*] order of dervishes. His full name was al-Sayyid Muḥammad al-Mahdī Aḥmad b. al-Sayyid Muḥammad al-Sharīf b. al-Sayyid Muḥammad b. ᶜAlī al-Sanūsī al-Khaṭṭābī al-Hasanī al-Idrīsī.

He was born at Djaghbūb, a grandson of the founder of the order, and received a classical education in Islamic learning from his father, uncle, etc., according to the high standards of Sanūsī tradition. He succeeded to the leadership at Ḳūrū (Borku, in Chad), where his uncle resided from 1899 till his death in 1902, being the eldest member of the Sanūsī family. Next to his spiritual leadership, Aḥmad al-Sharīf developed a political and military organisation for the Sanūsī community against French expansion in the Sudan region, but after a defeat, he decided to withdraw from Ḳūrū to the old centre at Kufra [*q.v.*] in 1902. In need of international recognition and support, he agreed to the establishment of direct Ottoman rule in Cyrenaica and Fazzān (1910), and the 7,000 Ottoman troops in the province co-operated now against the enemies of the faith, these being in 1911

the Italians invading Ottoman Libya [see LĪBIYA. 3] until Muḥarram 1331/December 1912. During this period the Sanūsī *shaykh* issued a proclamation of *djihād* against the enemies of Islam. After the conclusion of the Italo-Ottoman peace of Lausanne-Ouchy (15 October 1912), the Sanūsī leader continued resistance against the Italians with the discreet support of the Ottoman (Young Turks') government. The sultan-caliph, Meḥemmed V [*q.v.*] approved of Aḥmad al-Sharīf's installation of a "Sanūsiyya Government" in Cyrenaica and Fazzān. From 1912 till 1915 Aḥmad al-Sharīf was able to defeat Italian forces at times. Apart from regular financial and logistic support, the sultan-caliph awarded the Shaykh honours and decorations. When Italy joined the Entente Powers against, i.a., the Ottoman Empire in 1915, Aḥmad al-Sharif was secretly appointed the sultan's representative (*nā'ib ul-sulṭān*) with the rank of Vizier and the title of Pasha (*irāde* of 6 August 1915). During the same year 1915, from June onwards, a regular communication with Istanbul was ensured by German and Austro-Hungarian submarines carrying arms, munitions and men to the Sanūsī forces, but their guerrilla attack against the British in western Egypt failed (15 Rabīʿ I 1334/22-3 January 1916).

Aḥmad al-Sharīf retreated with 800 followers and was chased back to Djaghbūb, from where he went on to the Sirtica region of Tripolitania. He maintained his relationship with the Ottomans, but the influence of his cousin, Sayyid Muḥammad Idrīs (the later King Idrīs I al-Sanūsī of Libya) was by now increasing. With the permission of Aḥmad al-Sharīf, Idrīs opened up negotiations with the British and the Italians (1917). In 1918 the Sanūsī *shaykh* was made the sultan's representative in all North Africa, but his actual influence on affairs was steadily in decline. On 13 Dhu 'l-Ḳaʿda 1336/21 August 1918 Aḥmad al-Sharīf left Libya, for good as it turned out to be, brought by a German submarine to Istanbul. He relinquished political leadership but remained the spiritual chief of the Sanūsiyya *ṭarīḳa* till his death, and his lasting prestige is evident from the fact that he was chosen to officiate at the ceremonial girding of the sword of the new Ottoman sultan, Meḥemmed VI Waḥīd al-Dīn [*q.v.*], at Eyyūb in 1336/1918. Widely regarded as one of the foremost fighters for Islam, Aḥmad al-Sharīf chose the side of the resistance against the Allies in Anatolia led by Muṣṭafā Kemāl Pasha [see ATATURK], and became one of his emissaries in the provinces of Anatolia. (Muṣṭafā Kemāl was photographed in an Arab dress presented to him by the Sanūsī *Shaykh* at this time.) In 1922 he journeyed to southeastern Anatolia along the Turco-French front, *inter alia* arbitrating a peace amongst the Arab tribes there, but after the definitive victory of Muṣṭafā Kemāl, Aḥmad al-Sharīf returned to Istanbul and became involved in the question of the Ottoman caliphate [see KHILĀFA], which was not after all offered to him, in spite of the support of his cause by Ibn Suʿūd [see ʿABD AL-ʿAZĪZ ĀL SAʿŪD], Imām Yaḥyā of Yemen and Saʿd Zaghlūl Pasha [*q.v.*]. In 1924 he left for Damascus. The French did not permit him to stay there, and he went on to the Ḥidjāz, dying at Medina on 13 Dhu 'l-Ḳaʿda 1351/10 March 1933.

(A.H. DE GROOT)

SANŪSIYYA, a Ṣūfī brotherhood or *ṭarīḳa*, founded in the middle of the 19th century by Muḥammad b. ʿAlī al-Sanūsī [*q.v.*]. Denounced by a French "black legend", as tenacious as it is ill-founded, as a centre of anti-western subversion across the Sahara, the Sanūsiyya order was confronted at a very early stage with the game of the European Powers. For this reason, it is better known for its political role, real or supposed, than for its specifically Ṣūfī teaching.

After studying in Fez, Muḥammad b. ʿAlī al-Sanūsī (born in December 1787 near Mustaghānim, in Algeria), had become, at the time of his Pilgrimage during the 1820s, one of the disciples of Aḥmad b. Idrīs, a Moroccan Ṣūfī and Sharīf residing in the Holy Places; when the latter departed for the Yemen in 1827, he remained in Mecca as his *khalīfa*. Aḥmad b. Idrīs belonged to a mystic lineage going back to the Moroccan Ṣūfī and Sharīf ʿAbd al-ʿAzīz al-Dabbāgh, belonging to a Shādhilī spiritual lineage, initiated by the mysterious Ḳur'ānic figure known by the name of al-Khaḍir [*q.v.*].

After the death in 1837 of Aḥmad b. Idrīs, who was more the founder of a circle of disciples than of an organised *ṭarīḳa*, the disciples of the Master split into different groups. Muḥammad b. ʿAlī al-Sanūsī, who was one of the oldest and, perhaps, one of the most advanced in the way, then inaugurated his own structure by gradual stages, and the Idrīsiyya *zāwiya* of Mecca, on the hill of Abū Ḳubays, became the first "Sanūsī" establishment.

Muḥammad al-Sanūsī emerges, in his works, as the inspirer of a Sunnī and moderate Ṣūfism. Summing up the forty ways into which he was initiated, he claims a *ṭarīḳa muḥammadiyya* which is the quintessence of them all and which makes the encounter, in dreams and while awake, with the Prophet, and the appeal for his guidance and imitation of his model, the supreme qualities of the initiate. The *dhikr* of the *ṭarīḳa* is constituted by a distinctive prayer, the *ṣalāt al-ʿaẓīmiyya*, a prayer for the Prophet inherited from Aḥmad b. Idrīs, which takes its title from the repetition of *Allāh al-ʿAẓīm* ("God the Most Great"), and by various *aḥzāb* and *awrād*, including a *haylala* the text of which is prolonged by the formula "in every look and every breath, a number of times which only the knowledge of God can apprehend" (a formula which also features in the *ʿAẓīmiyya*).

But it is not the *dhikr* which constitutes the most original part of the Sanūsī programme. The principal work of Muḥammad al-Sanūsī was directed in fact towards the realisation of a centralised and hierarchical order based on a network of *zāwiyas* established in places judged to be strategic from the point of view of communication routes, of the supply of water or of the local tribal composition. The *zāwiya* is thus the

ultimate act of piety, and the creation of it follows a precise protocol. The appeal for it must be made by the population concerned. The latter sends a delegation to the chief of the brotherhood, before whom it solemnly confirms its wishes, and takes on the obligation of constructing the buildings of the *zāwiya* and of working periodically in its service. Muḥammad al-Sanūsī would then appoint, from among his disciples, a *shaykh*, obliged to marry into the local population. Regular and prolific correspondence maintains the link between the centre and the new local outpost. Each *zāwiya* is simultaneously an educational centre, a staging-post and a hostel for travellers, a place of worship and an agricultural location. It is, in the desert environment, a small urban enclave, representing the sedentary values and models which are those of normative Islam. By virtue of this network, which developed in Libya from the 1840s onward, the *ṭarīḳa* is observed, in the first phase of its existence, to be a missionary order whose vocation is then to disseminate Islam among the disinherited populations of the central Sahara.

The history of the Sanūsiyya may be divided into several sequences. The first, under the leadership of the founder—known as *al-Ustādh* (Master) and as *al-Imām al-akbar* (Great Imam)—saw the expansion of the movement in an east-west direction, following the lines of wells and the routes of the Pilgrimage. Before reaching its furthest point and establishing its niche in Cyrenaica, the brotherhood had, in fact, spent a long time in search of the right territory. The Sanūsiyya often encountered the resistance of the existing local powers and the presence of other Islamic organisations and clientèles. Its extension into Cyrenaica (foundation of the first African *zāwiya*, al-Bayḍā᾽, at Cyrene at the end of 1842) and, to a lesser extent, into the central Sahara, thus represents a last resource: it was only in these regions that the presence of weak and scattered authorities, and the absence of powerful religious institutions, enabled it to acquire suitable space.

During its expansion in the Sahara, the Sanūsiyya came into contact with the world of the nomad. It was there, far from the major centres of power and of scholarship, that it found a loyal following, one which was furthermore more attached to the *baraka* of the Master than to his erudite teaching. Thus there was established between the brotherhood and the Saharan nomads a durable bond of friendship. The Sanūsī made alliance with the Bedouin (Madjābra and Zwāya, in Cyrenaica, and to a lesser extent, Ṭwāreg Ajjer, to the west) one of the pillars of their system.

But the Sanūsī system was not restricted to the nomadic world. The brotherhood exploited to its advantage a new trans-Saharan route, inaugurated at the beginning of the century through the initiative of Ouaddaï (Waddai). This route, still precarious and experimental, which ran from Benghāzī to Abeche by way of Kufra, and which was one of the last trans-Saharan axes still usable (the others having fallen victim to political anarchy or to European interference), became under its protection, from the middle of the century onward (*zāwiya* of Tazar, to the north of Kufra, 1848-9; *zāwiya* of al-Djūf, Kufra, *ca.* 1856), one of the principal foundations of its power. The Sanūsī system was born of this combination of exploitation of a caravan axis with colonisation of the desert. In the course of this process, the *ṭarīḳa* became the manager and controller of a region and the promoter of an economy. But its activity was essentially regulatory. Just as it did not then aspire to political power, the Sanūsiyya had no wish to undertake economic enterprises. The benefits which accrued to it from its protection of commerce were symbolic (alliances and allegiances) or material (gifts, agricultural produce). The activity of the Sanūsī *ikhwān* was one element in a major project, envisaging first a general recognition of the *baraka* of the Master, from which esteem, clientèle and material goods would subsequently flow.

A veritable "Maghribī multi-national" at the outset, bearing in mind the origin of the closest disciples of the Master, the Sanūsiyya then began to "Libyanise" itself. The two sons of the *Imām al-akbar*'s middle age were born in Cyrenaica, respectively in 1262/1844 (Muḥammad al-Mahdī) and 1262/1846 (Muḥammad al-Sharīf). Muḥammad b. ʿAlī al-Sanūsī himself left the Ḥidjāz for good in 1854 and established his headquarters at Djaghbūb, a new city in the heart of the desert and near the Egyptian border, in 1856. It was there that he died in 1859.

His son and successor Muḥammad al-Mahdī, who was to preside over the destinies of the movement for more than forty years, emerges as an organiser of talent. It was he who gave to the foundations laid by his father a systematic development. It was also he who oriented the brotherhood towards the south, in the direction of Central Africa. The first sub-Saharan *zāwiya* came into being at Chemidour (currently in eastern Niger) from 1861-2 onwards. Later, faced by increasing interference on the part of ʿAbd al-Ḥamīd II, Muḥammad al-Mahdī who, like his father, had maintained amicable relations with the Ottoman authorities, abruptly transferred his headquarters from Djaghbūb to Kufra (June 1895), then to Gouro, to the north of what is currently Chad, in December 1899, preferring a *hidjra* to confrontation. The attractions of Ouaddaï, rich in ivory, in ostrich feathers and, additionally, in slaves, also played a role in this long march towards the south.

This southward orientation of the movement coincided with the French advance towards Lake Chad. From 1901 onwards the Sanūsiyya improvised, in difficult conditions, resistance to the French assaults, establishing for this purpose a defensive system and then appealing for Turkish protection. Its destiny was henceforward to be inseparably embroiled in the game of the Great Powers. Thus on 9 November 1901, French troops attacked the *zāwiya* of Bīr ʿAlālī situated some 100 km/60 miles from Lake Chad. Initially defeated, the French forces took control of the place on 20 January 1902. This was the beginning of a long Franco-Sanūsī war which ended with the fall of the fortified *zāwiya* of ʿAyn Galakka (to the south of Gouro) on 27 November 1913.

After the death of Muḥammad al-Mahdī at Gouro on 2 June 1902, the latter's nephew, Aḥmad al-Sharīf (1872-1933 [see AL-SANŪSĪ, SHAYKH SAYYID AḤMAD]), became the third Master of the *ṭarīḳa*. He immediately decided to return to Kufra and began to organise the brotherhood on more secular lines, a development which prolonged and reinforced the politicisation and militarisation which had become apparent during the confrontation with the French. When the Italians arrived in Libya (October 1911), he used all his influence to achieve the mobilisation of his followers in a *djihād* against the invader and allied himself with the Ottoman forces. This "djihādist" orientation, alien to the founder of the Way, henceforward made of the Sanūsiyya a politico-military organisation aligned with the Ottoman caliphate. In 1914, Aḥmad al-Sharīf allied himself to the Central Powers. At the latter's insistence, Sanūsī forces fought on all fronts: they attacked the British in Egypt (November 1915),

expelled the Italians from Tripolitania and the Fezzān (September 1914-April 1915), then engaged in a conflict with the French in the Sahara, which culminated in the seizure of the French fortress of Djanet (2 March 1916), the capture of P. de Foucauld, killed accidentally by a Ṭwāreg sentry (1 December 1916), and the siege of the French outpost of Agadès (1 December 1916-3 March 1917). Already split into a number of "fiefs" according to the various branches of the family, deprived progressively of a single direction, the Sanūsiyya were devastated by this war and by the defeats inflicted on it in all theatres of operation after 1916. Muḥammad Idrīs, elder son of Muḥammad al-Mahdī, promoted by the British as a useful intermediary, negotiated with the latter and with the Italians and signed an accord at ʿAkrama near Tobruk in April 1917. The accord integrated the Sanūsīs into the camp of the Allied Powers in exchange for a partial recognition of the brotherhood. In August 1918 Aḥmad al-Sharīf left Tripolitania aboard a German (or Austrian) submarine and abandoned the supervision of the *ṭarīḳa*.

The subsequent period reflects the political history of Libya. After a long period of ambiguity in the relations between Italians and Sanūsīs, and the signing of accords which were never properly implemented, the final struggle began in the late 1920s: Italian troops entered Djaghbūb in February 1926 and Kufra in January 1931. One of the leaders of the brotherhood, ʿUmar al-Mukhtār, kept alive the last embers of Sanūsī resistance until he was captured and publicly hanged by the Italians in September 1931.

During the Second World War, a Sanūsī force was raised to fight alongside the British. The liberation of Cyrenaica (1943) and British support for Muḥammad Idrīs cleared the way for the inauguration of the Sanūsī monarchy at the head of an independent Libya (24 December 1951). Like other Maghribī Sharīfian lineages in other periods, the *ṭarīḳa sanūsiyya* thus became, in circumstances of peril for the Muslims, a symbol of political legitimacy, but these new dispositions proved impossible to maintain or to extend. The seizure of power by the "Free Unionist Officers" under the leadership of Colonel Ḳadhdhāfī (1 September 1969) [see LĪBIYĀ. 3] led in Libya to a lasting "excision from history" of the brotherhood, which has come to at least temporary extinction.

SAR-I PUL, "the head of the bridge", called by Arab geographers Raʾs al-Ḳanṭara, is a town of Afghān Turkistān (lat. 36° 13′ N., long. 65° 55′ E., alt. 610 m/2,007 feet), on the Āb-i Safīd, from the bridge over which it takes its name. It is not to be confused with a village near Samarḳand or a quarter of Nīshāpūr, both of the same name, each of which is historically as important as the Afghān town. Between the northern spurs of the Paropamisus and the sands to the south of the Oxus, in a fertile tract well-watered by streams from the mountains, but proverbially unhealthy, lay four Özbeg khānates or petty principalities, Akča, Shibarghān, Maymana and Sar-i pul with Andkhūī (Andkhud), the independence of which was destroyed by the Durrānī and Bārakzāy Amīrs of Afghānistān in the mid-19th century. Of these principalities, Sar-i pul was the last to succumb to the ruler of Kābul. In 1865 the troops stationed there revolted against the Amīr Shīr ʿAlī, but the mutiny was suppressed by ʿAbd al-Raḥmān Khān, who eventually succeeded as Amīr; not long afterwards Sar-i pul lost the last vestiges of its independence, but the former geographical and political divisions of the principalities were preserved and their Uzbeg inhabitants exempt from liability to military service.

The site of Sar-i pul is probably identical with that of the town Anbār or Anbīr, one of the main centres of the mediaeval Islamic principality of Djūzdjān [*q.v.*, and see *EIr* art *Anbār* (C.E. Bosworth)]. The modern town of Sar-i pul comes within the present Djūzdjān province of Afghānistān; in *ca.* 1955 it had an estimated population of 5,000.

(T.W. Haig*)

SĀRA, wife of the Biblical patriarch Abraham [see IBRĀHĪM]. Sarah enters the text of the Ḳurʾān only in its rendition of the etiological narrative surrounding the name Isaac (Hebrew *wayyiṣḥaḳ* "and he laughed") from Gen. xvii, 15-22, xviii, 11-15 and xxi, 5-7; thus in Ḳurʾān, XI, 71-3, and LI, 29-30, Sarah laughs at the messengers who bring the news that she will bear a son in her (and Abraham's) old age, but she remains unnamed and is referred to simply as *imraʾatuhu* "his [Abraham's] wife". The issue of Sarah's laughing (and thus doubting God) drew some Muslim exegetical attention as it did in the Jewish tradition (e.g. al-Ṭabarī, *Tafsīr, ad* XI, 71); the solution cited by al-Farrāʾ, *Maʿānī ʾl-Ḳurʾān*, Cairo 1955-72, ii, 22, and Ibn Ḳutayba, *Gharīb al-Ḳurʾān*, ed. A. Ṣaḳr, Cairo 1958, 205-6, and then in many sources after them, avoids the problem by defining the verb *ḍaḥika* as "menstruate" rather than "laugh" (justified by the idea that "rabbits laugh when they menstruate"), reflecting a popular rabbinic gloss of the Hebrew *ʿednah* in Gen. xviii, 12, as "menstruate" rather than "pleasure" (see M.M. Kasher, in *Encyclopedia of Biblical interpretation*, New York 1953, iii, 26).

In the wider Muslim elaboration of Biblical history, Sarah plays a substantial role. The story of her beauty and her being taken by Pharaoh, leading to the proclamation by Abraham that "She is my sister", created a great deal of discussion (see R. Firestone, *Difficulties in keeping a beautiful wife: the legend of Abraham and Sarah in Jewish and Islamic tradition*, in *Jnal. of Jewish Studies*, xlii [1991], 196-214). The incident became a part of an early tradition concerning the "three lies of Abraham" (e.g. Abū ʿUbayd, *al-Khuṭab wa 'l-mawāʿiẓ*, ed. Ramaḍān ʿAbd al-Tawwāb, Cairo 1986, 113) as well as creating extensive discussions concerning the true lineage of Sarah (see Firestone, *The problem of Sarah's identity in Islamic exegetical tradition*, in *MW*, lxxx [1990], 65-71; idem, *Prophethood, marriageable consanguinity, and text: the problem of Abraham and Sarah's kinship relationship and the response of Jewish and Islamic exegesis*, in *JQR*, lxxxiii [1993], 331-47). One tradition also states that her original name was Yasāra, but this was changed to Sāra when she was promised Isaac, and the *yāʾ* was given to John (the Baptist) whose name was changed, through this addition, from Ḥayā to Yaḥyā (see Abū Rifāʿa al-Fārisī, *Badʾ al-khalḳ wa-ḳiṣaṣ al-anbiyāʾ*, in R.G. Khoury (ed.), *Les légendes prophétiques dans l'Islam*, Wiesbaden 1978, 308). This may be compared with the change from Sarai to Sarah in Gen. xvii, 15, and the rabbinic comments on the status of the *yod* in her name (see Kasher, ii, 248, where reference is made to the change of name from Hoshea to Joshua (Num. xiii, 16) with the addition of a *yod* from Sarah's name is also cited).

The sacrifice of Abraham's son [see ISḤĀḲ; ISMĀʿĪL] also brings Sarah into the accounts, especially as it ties into the understanding of her death. The concern of the son for the fate of his shirt and whether this would cause his mother grief (and lead to her death) is prominent. Also, Sarah is portrayed as a true believer in God alongside Abraham and her son, as within Judaism and Christianity (see Hebr. xi, 11), in the accounts of her resisting Satan's temptation to interfere in the sacrifice after Satan tells her about Abraham's plan (see Abū ʿUbayd, *al-Khuṭab*, 111-12; al-Ṭabarī, i, 293).

Bibliography: Given in the article; see also J. Horovitz, *Koranische Untersuchungen*, Berlin-Leipzig 1926, 114, on the pre-Islamic use of the name; R. Firestone, *Journeys in Holy Lands*, Albany, N.Y. 1990. (A. RIPPIN)

SARĀ [see SARĀY].

SARĀB (A.), mirage.

1. As a natural phenomenon. *Sarāb* is specifically the illusion of water (sometimes running water, due to a sense of the verb *saraba*) seen at midday which appears to be on the ground, as compared to *āl*, which is seen early and late in the day and makes things appear to float in mid-air and quiver. The lexicographical tradition attempts several ways of distinguishing these two words, but the emphasis on the time of day of their appearance is the most consistent differentiation. *Sarāb* is used twice in the Ḳurʾān, in XXIV, 39, within a simile for the deeds of the unbelievers, the value of which turns out to be a mirage before God, and in LXXVII, 20, in reference to the last day on which mountains will vanish (into thin air), as in the experience of a mirage.

The image of a "mirage" as reflected in Ḳurʾān, XXIV, 39, gains powerful resonances in Ṣūfī thought, especially Ibn ʿArabī, *Futūḥāt Makkiyya*, Būlāḳ 1329/1911, ii, 105, where the verse is interpreted to suggest that God appears to people in the form of their need; pursuing that form, which is a mirage, reveals the non-being of God and leads to the true vision of the divine.

Bibliography: *EI*[1], s.v. *āl*; Lane, i, 127-8 (s.v. *āl*); *tafsīr* and Ḳurʾān-lexicographical tradition esp. on XXIV, 39; W.C. Chittick, *The Sufi path of knowledge. Ibn al-ʿArabī's metaphysics of imagination*, Albany, N.Y. 1989, 378-9. (A. RIPPIN)

2. In poetry. The mirage or fata Morgana, in its two forms distinguished by the Arabs (*sarāb* and *āl*, see above), is very often described by pre- and early Islamic Arabic poets in brief passages rarely exceeding two lines, incorporated in their *ḳaṣīda*s containing desert scenes. Often it is said to move, dance or "amble" (*djarā, raḳaṣa, khabba*), to glitter or shimmer (*taraḳraḳa, lamaʿa*) like water, enveloping hills and sand dunes that appear clothed in it, or partly hiding camels that seem to wade or move in it like ships. Its apparent movements make it seem alive, like animals or humans. Later, urban, poets remain fond of the images, the main differences being that the mirage, now become part of the poetic universe rather than an everyday reality, generally changes from a *primum* into a *secundum comparationis*, and that it is increasingly used less as a potential source of strongly visual imagery than as a symbol of deceit, thwarted expectations, illusions and unfulfilled promises, to point a moral rather than adorn a scene. The frequent occurrence of this image is no doubt partly due to the Ḳurʾān, where the *sarāb* already stands for illusion and futility (XXIV, 39) or instability (LXXVIII, 20). For small selections of the vast but scattered material (Dhu 'l-Rumma's *Dīwān* alone offers over thirty passages), see e.g. Ibn Abī ʿAwn, *Tashbīhāt*, London 1950, 71-4; Abu 'l-Hilāl al-ʿAskarī, *Dīwān al-maʿānī*, Cairo 1352/1933-4, ii, 128-9; Shimshāṭī, *al-Anwār wa-maḥāsin al-ashʿār*, i, Kuwait 1977, 355-9.

(G.J.H. VAN GELDER)

SARACENS, a vague term used in the West for the Arabs and, eventually, other Islamic peoples of the Near East, in both pre-Islamic and mediaeval times.

1. Earlier usage.

Saracens was one of the many terms that Classical authors and ecclesiastical writers, used for the Arabs, the others being Arabes, Skēnitai, Ṭayyāyē, Ismailitai and Hagarēnoi. It became the most common of all these terms, although it was one that the Arabs did not use in referring to themselves. The term was a coinage composed of *Sarak and the Greek suffix *ēnos*, and both its etymology and denotation are controversial.

Many *etyma* have been suggested for this term, such as *sharḳ* (the east), *saraḳa* (steal) and *Sawāriḳ* (a tribe), but all of them have been weighed and found wanting. The most recent effort, one that has received a wide vogue, considers the *etymon* to be *shrkt*, federation, a term to be found in the bilingual Greek-Aramaic inscription of Thamūd in Ruwāfa. Many serious objections were advanced against this etymology, even before a close examination of this inscription revealed that the term *shrkt* was a misreading of *shrbt* (tribe), a conclusion supported by the Greek version of the inscription which has *ethnos*, the exact equivalent of *shrbt*.

The failure of all these attempts to explain *Sarakēnos* calls for a return to what the Classical authors said about the term, accepted long ago by Nöldeke as the true etymology. The earliest certain attestations of it go back to the 1st century A.D. when Dioscorides of Anazarbos, a physician-pharmacologist, spoke of the Saracen tree imported through the Nabataeans, and Pliny the Elder, who spoke of the Saracens as the Arcani who lived beyond the Nabataeans. Thus the two authors pinpointed the Saracens as a people in northwestern Arabia and clearly indicated that the term was not a generic but specific one. Ptolemy in his

Geography speaks of a district *Sarakēnē* in Arabia Petraea, and Stephanus of Byzantium in his *Ethnika* speaks of Saraka as a district beyond the Nabataeans whose inhabitants are called the *Sarakenoi*; although a 6th century writer, Stephanus depended on the much earlier works of Ulpianus and Uranios. These writers provide data for the most plausible etymology of the term, that relating to a region, Saraka. This is supported by the fact (unnoted by the etymologists of this term) that the Greek suffix *ēnos* is used to form ethnic adjectives from geographical names.

Surprisingly, however, Saraka seems to have disappeared from Arabian toponymy, although Arab geographers know of two almost homophonous placenames in the Ḥijāz, a valley (Suwāriḳ) and a village (al-Suwāriḳiyya). Serious consideration should, therefore, be given to the possibility that Saraka is none other than Sarā(t), the well-known mountain range in that area. It is either a dialectal version of Sarā(t) or it experienced epenthesis by the intrusion of the *kappa*.

Even more important is the denotation of the term. It clearly was applied originally to a group of Arab pastoralists in northwest Arabia, but soon it became the generic term for all the Arab pastoralists within as well as without the Roman *limes*. And so it was used by the secular and ecclesiastical historians of the 4th century, such as Ammianus Marcellinus and Eusebius respectively. The latter developed an interest in both the term and what the term stood for. For them, the Saracens were the Biblical people, the sons of Ishmael, hence the children of the bondwoman Hagar and thus "outside the promises". As some of the Saracens attacked the inmates of the monastic establishments in the Orient, such as those in Chalcidice and the Desert of Judah near the Jordan, they acquired a bad reputation among these ecclesiastical historians, some of whom indulged in etymologising the term "Saracen" along pejorative lines. Such was Sozomen, who suggested that in order to avoid the opprobrium attaching to their descent from Hagar, the bondwoman, the Arabs started to call themselves by a name that related them to Sarah, the wife of the first patriarch. These perceptions of the Arabs most probably explain the emergence of other Biblical terms for the Arabs, such as Ismailitai and Hagarēnoi, with the same pejorative implications.

Latin authors who came to the East, such as Jerome, also etymologised the term along these Biblical lines and so projected an uncomplimentary image of the Saracens. Jerome's unfortunate experience with some marauding Saracens while he lived in Chalcidice and at Bethlehem, contributed further to the deterioration of that image in his writings. Such was also the experience of the pilgrim, the Anonymous of Placentia, with the Saracens of Sinai in the 6th century. Thus through the writings of such influential figures as Jerome, the term "Saracen" with all its pejorative implications reached Western Europe long before the Muslim Arabs appeared in the Roman Occident in the 2nd/8th century.

(IRFAN SHAHÎD)

2. In mediaeval European usage.

The term "Saracen" (OFr. *Sar(r)azin, Sar(r)acin*, OEng. *Sarracene*), whatever its origin (see above, 1.) came into both Late Greek and Late Latin usage during late antiquity, and at that time simply meant "Arab". With the rise of Islam, and in subsequent mediaeval European times, European writers used "Saracen" to denote "Arab" or "Muslim" or both, according to context. With the contacts of the Crusaders with the Saldjūḳs of Rūm in the 6th/12th century and the rise of the appellation *Turcia* for Asia Minor, and, above all, with the appearance of the Ottomans, "Saracen" in the sense of "Muslim" gave place to "Turk". As the Christian *reconquista* in the Iberian peninsula progressed, followed by Spanish and Portuguese attacks on the North African mainland, "Saracen" in the sense of "Arab" began to be generally replaced by "Moor", since the Christian peoples of the Iberian peninsula had used *Mauri* and *Moros* for the Arab-Berber invaders of their land [see MOORS]. The increasing numbers of Western travellers in North Africa and the Near East also came to use "Arab" more particularly in a pejorative sense (here following the usage of the indigenous urban populations of those lands) for "Bedouins, brigands". Hence in Western Europe, by the later Middle Ages, "Saracen" had tended to fall out of usage and to be replaced by somewhat more specific terms.

The great literary usage of "Saracen" in the European high Middle Ages was, of course, to designate the Muslim opponents of the Christians in the *Chansons de geste*, mostly set fictiously in the time of Charlemagne or his son Louis I ("The Pious") and written in the various forms of Old French. From these originals, whose genesis in time is uncertain, the views and concepts of the *Chansons* spread to other vernacular literatures, such as Spanish, Provençal and Italian, and also to English and German literature. These *Chansons* provide for us an idea of what was the unofficial, un-clerical, un-academic view of the Muslims (as opposed to the views of monkish and other clerical polemicists) during the Middle Ages. But whether their (largely unknown) poetic creators meant to provide a realistic portrait, as they conceived it, of their Muslim foes in Spain, North Africa, Syria or Egypt, or whether they used "Saracen" in a vague, general sense, is not always clear.

Byzantine usage of the term "Saracens" probably lasted till the end of the empire. Certainly, Ibn Baṭṭūṭa was addressed as such (*ḳul li-hādhā 'l-Sarākinū yaʿnī al-Muslim*) by a monk in Constantinople (H.A.R. Gibb pointed out that it was chronologically impossible, however, that this monk could have been the ex-Emperor Andronicus II) when he was there, probably in the autumn of 732-3/1332 (*Riḥla*, ii, 441-2, tr. Gibb, ii, 512-13).

Bibliography: The literature on Christian conceptions of Muslims as shown by the *chansons de geste* is extensive. A useful start can be made from the detailed bibliographical information in N. Daniel, *Heroes and Saracens. An interpretation of the* Chansons de Geste, Edinburgh 1984, 280-1 (studies), 320-7 (texts).

(C.E. BOSWORTH)

SARAJEVO, principal city of Bosnia (and of

the republic of Bosnia-Herzegovina of former Yugoslavia), situated on the banks of a small river known as the Miljacka (western tributary of the river Bosna), at the outlet of a valley opening towards the West, this being the "Plain of the Seraglio"—in Turkish *Saray Ova* or *Saray Ovası* (hence the name of the city), surrounded by tall and precipitous mountains (notably those of Ozren (1,452 m/4,762 feet) and of Trebević (1,629 m/5,343 ft)), at an altitude, according to the various neighbourhoods, of between 537 m/1,761 ft and 700 m/2,296 ft.

Its first mention, under the name of *Vrhbosna* ("the Crete of Bosnia", of which the *župa* (local parochial district) of the same name is mentioned from the 10th century onwards) apparently dates from 1415, but this appellation in fact only applied to the fortress situated on a rocky promontory dominating the city (and the small township in front of the latter), since the city of Sarajevo as such, for a long time called simply *Saray* (meaning the seraglio, i.e. the "palace"), or *Bosna Saray*, was founded *ca.* 1429 according to some authors, but quite certainly at a later date, by the Ottomans (see e.g. B. Djurdjev, art. BOSNA, at vol. I, 1263a).

The fertile region around Sarajevo, with its abundant water sources and forests, was inhabited from the Neolithic period (2400 to 2000 B.C.), as is proved by the excavations of Butmir (one of the principal urban centres of the Balkan peninsula in this period, the ceramics of which are renowned). Other prehistoric dwellings have been brought to light on the slopes of Trebević (as on those of Debelo Brdo), some of which may have possibly existed even before the Roman period. Towards the end of the Bronze Age (900 B.C.), this region experienced an Illyrian influx, of which numerous vestiges have been discovered. In the Roman period, the 8th Augustan Legion was based on the plain of Sarajevo, and the well-known sulphurous bathing establishments of Ilidža, a thermal station situated in the foothills of Mount Igman (today some ten kilometres from the centre of the city) were developed. Other Roman remains have been discovered within Sarajevo itself.

After the fall of the Roman Empire, the Eastern Goths were the first to establish themselves in this territory, then, in 535 A.D. the entire region was conquered by the Byzantine Emperor Justinian I. During the 7th century Slavic tribes occupied the region, and from the 10th century onwards there began to be formed, in the depression between the current cities of Sarajevo and of Zenica, the nucleus of the future mediaeval Bosnian state. It is known, on the other hand, according to a document of the king of Hungary Béla IV dating from 1244, that at that time the territory of Sarajevo formed a part of the *župa* (local parochial district) of Vrhbosna, then the site of the cathedral of Saint Peter, centre of the diocese. As early as 1379, the presence was noted at Vrhbosna of traders from Ragusa, who mentioned a locality called Trgovište (meaning "the place of [open] market") situated in the territory of what is now the city of Sarajevo, at the point where the stream known as Koševo (currently the name of a quarter of the city) joins the river Miljacka. It is also known that in 1415 a local dignitary, the voïvode Pavle Radenović, was buried at Vrhbosna.

The first decades of the 15th century were marked by increasingly frequent incursions on the part of the Ottoman cavalry, who took possession in 1416 (or possibly not until 1428) of the fortress of Hodidjed, a strategic position commanding the valley of Miljacka, situated two hours' march from Vrhbosna. Hodidjed was definitively captured by the Ottomans in the summer of 1435 (according to some sources in the previous year), thus some thirty years before the laying of the first foundations of the future city of Sarajevo, intended as a secure base for the conquest of Bosnia, of Herzegovina, of northern Serbia, of Dalmatia and of a part of Croatia, then also, a century later, of a part of Hungary.

The Ottomans recognised at a very early stage the value of its location, and when they conquered Bosnia during the time of Meḥemmed I, in the spring of 867/1463, they made it the principal arsenal of the conquered territory. From 1438-9 onward an Ottoman governor was installed there, with the duty of controlling the indigenous local dynasties (in particular that of the Pavlovićs) who were required to pay tribute. After the definitive conquest of the kingdom of Bosnia, and the execution of its last king, Stjepan Tomašević, the Ottoman governor at first resided at Vrhbosna, the name of which was to be retained for some time (at least until the beginning of the 16th century), as is shown by the travel-writing of Felix Petancius and of Benedict Kuripešić, and exchanges of letters with Ragusa (where the following forms are found: Werchbossen, Verchbossen, Verbosavia, Verbosania, Verchbossania, etc.).

The first significant foundations date from the years 1460-1 (cf. the *wakf-nāme* of 1462 of ʿĪsā Beg, son of Isḥāḳ Beg, who was to become *sandjaḳ beg* of Bosnia in 1464): initially, the governor's palace and a wooden mosque, then a bridge over the Miljacka, a caravanserai, a *bedesten*, a *ḥammām*, residential houses, shops, water-mills, etc. It is said that from 1455 onward the new urban centre (*ḳaṣaba*), was called sometimes *Saray*, sometimes *Saray owasî*, or even *Saray ḳaṣabasî*, the first mention of its current form (which is found in a letter written in Cyrillic characters) dating from 1507. Twenty years after the first constructions, in 1480, the city was taken by assault and burnt, in the course of a raid mounted jointly by the Hungarian garrison of Jajce led by Peter Doczy, and Serbian troops under the command of the despot Vuk Grgurović/Branković ("Zmaj Ognjeni Vuk").

Sarajevo's most illustrious period belongs to the 16th-17th centuries. It corresponds, of course, to the era of the greatest expansion of the Ottoman Empire in the Balkans and in South-Eastern Europe, but also to the Ottoman golden age *per se*, a period in which the massive quantities of booty amassed in the course of incessant military campaigns against "the infidels" brought prosperity to commerce and to craftsmanship, and assisted in the development of a large number of towns. Sarajevo was for close on a century the seat of the governors of Bosnia (more precisely, from 1463 to 1533, at which date the latter was transferred to Banja Luka [*q.v.*] before being restored to Sarajevo in 1637-8). Its governors (ʿĪsā Beg, Ayās Beg, Yaḥyā Pas̲h̲a, Iskender Pas̲h̲a (whose name is still born by the quarter of "Skenderija"), then the son of the latter, Mustay Beg, and the most illustrious of them, G̲h̲āzī K̲h̲osrew Beg, a native of the town of Trebinje in Herzegovina, who lived for seventeen years on the banks of the Miljacka (he was several times *sandjaḳ beg* of Bosnia between 1521 and the year of his death, 1541, and was buried in Sarajevo), embellished it with the construction of a large number of renowned buildings: the mosques of ʿĪsā Beg (926/1520), of G̲h̲āzī K̲h̲osrew Beg (937/1530 [see K̲H̲OSREW BEG]) with a *medrese* built in 1537, a library, a *tekke*, a public kitchen, a hospice for travellers, a stone-built *k̲h̲ān*, a *bedesten*, a *ḥammām*, etc.), of G̲h̲āzī ʿAlī Pas̲h̲a (969/1561), of Ferhād Beg (also in

969/1561), not forgetting the Imperial Mosque "Careva džamija" (built in 1566 at the order of Süleymān the Magnificent, to replace the former mosque of the same name, founded in 1457 and destroyed in 1480), and many others; the *tekke*s of the Mewlewīs, of the Khalwetīs, as well as that of the Ḳādirīs (the renowned *tekke* of Ḥādjdjī Sinān Āghā, constructed in 1638-40 and subsequently restored on numerous occasions); the *bedestens* (in particular the well-known "Bursa bezistān" built by Rüstem Pasha [*q.v.*] in 1551); the clock tower (built at the end of the 16th century or at the start of the 17th), the *medreses*, the *türbes*, the fountains, the baths, the *khāns*, etc.

The number of inhabitants of the city, which had gained the status of *shehir* before the 16th century, grew rapidly as a result of the influx of the Muslim population, which settled at the outset on the left bank of the Miljacka; for a very long time, each religious group lived in separate *maḥalles*. This population consisted above all of new converts—there had been progressive Islamisation of a significant section of the local Slav population—as well as numerous administrative and religious cadres, Ottoman civilians and soldiers, of diverse origins and belonging to the most varied ethnic groups, as is demonstrated by the genealogies of some of the eminent Muslim families of the city. But the city also expanded as a result of an influx of indigenous Christian populations. It is interesting to note in this context that in 1477 there were in Sarajevo 103 Christian households, 8 households of Ragusans, and only 42 Muslim households (see Hamdija Kreševljaković, *Esnafi*, 1958, 9, quoting an article of Nedim Filipović). The Christian population was composed of the Orthodox—whose Old Church, "Stara Crkva", was built in 1528, then rebuilt on several occasions after numerous fires, in particular in 1616 and in 1658, subsequently reconstructed completely in 1730, then once more renovated in 1793 (the list of popes of Sarajevo from 1516 to 1804 may be found in V. Skarić, *Srpski...*, 140-1)—and of Catholics, some of whom came from Ragusa [*q.v.*] in the course of the second half of the 16th century and settled in a separate quarter, subsequently called "Latinluk". Not to be ignored is the arrival, also around the middle of the 16th century, of a relatively substantial Jewish colony. These were, of course, Jews expelled from Spain and Portugal, who settled in a quarter later known as "Čifuthana". The synagogue was probably built around 1580, then completely renovated in 1821, having been twice damaged by fire, in 1697 and in 1788. The total number of hearths (in Turkish *odjāk*) thus apparently increased from 153 in 1477, to 181 in 1480, subsequently to 1024 in the first half of the 16th century, then to 4270 in the second half of the 16th century. Aided by geographical position and "the industries of war", commerce and craftsmanship developed rapidly, as is clearly shown by the number of warehouses and covered markets, of traders and of types of merchandise which were sold there or which passed through the city. In fact, the city was located "on the caravan-route leading from Istanbul and from Salonica towards the West, at a staging-point where it was necessary to substitute horses and mules for camels" (G. Veinstein, *op. cit.*, in *Bibl.*, 92). It was linked to the Adriatic coast on the one hand by the valley of the Neretva, on the other by the route situated further to the north-west, leading from Livno to Split. Furthermore, in the local context, the city, situated at a crossroads, was also an excellent outlet for agricultural markets. In a totally different domain, it may be added that in 1085/1674-5 under Meḥemmed IV and in 1099/1687-8 under Süleymān II [*q.vv.*], copper coinage was struck there (these being the coins known as *mankïr*). This economic prosperity was naturally accompanied by increasingly intense religious and cultural activity, for Sarajevo had very rapidly become an important administrative centre. With reference to the Muslim population, there is abundant testimony (cf. for example the works cited in the *Bibl.* of H. Tahmiščić, of M. Mujezinović and of H. Šabanović); in the literary domain as such, the best known names for the whole of this period remain those of Meḥmed Nergisī (d. 1044/1635 [*q.v.*]) and of Ḥasan Ḳāʾimī (d. *ca.* 1101/1690, cf. J. Šamić, *op. cit.*). It should, however, be noted that the overall development of the city was thwarted on numerous occasions by various scourges: outbreaks of plague (like that of 1526-7) and of cholera (1691), fires (particularly worth mentioning are those of 1644 and 1656) and earthquakes, not to mention famines. In spite of all this, the description of Sarajevo in 1660 provided by Ewliyā Čelebi (even bearing in mind the exaggerations characteristic of this author) is quite impressive: the city reportedly then comprised 400 *maḥalles*, including ten Christian ones and two Jewish ones (it may be recalled that according to an earlier source at the end of the 16th century, the city allegedly comprised 91 Muslim *maḥalles* and two Christian *maḥalles*), 17,000 houses, 77 mosques and 100 *mesdjids*, a clock tower, numerous *medreses* and other specialised religious schools, 180 *mektebs*, 47 *tekkes*, 110 public fountains, 300 *sebīls*, 700 wells, 76 flour mills, five *ḥammāms*, 670 private bathrooms, three caravanserais, 23 *khāns*, 1,080 shops, a *bedesten*, seven bridges over the Miljacka, an Orthodox church, a Catholic church, a synagogue, seven *ʿimārets*, etc.

This long period of prosperity was brusquely interrupted four decades later, in September 1697, by a terrible and totally unexpected blow, the sacking and burning of the city by Austrian troops commanded by Prince Eugene of Savoy who, taking advantage of his victory over the Ottomans before Zenta, carried out an exceedingly bloodthirsty raid, leaving behind him, after a brief occupation of the city, the ruins of Sarajevo ablaze. The unsuccessful siege of Vienna attempted by the Ottomans in 1683 marked, effectively, the beginning of a totally different period, that of the *reconquista*, and of the definitive withdrawal of Ottoman troops from Hungary and from Slavonia, but also from Voïvodina, from Croatia and from Dalmatia. A new era also began for the city of Sarajevo (the seat of the Ottoman *wezīrs* was furthermore transferred after 1699 to Travnik, where it remained until 1850), a period during which relations between the Muslim and non-Muslim populations of the region deteriorated sharply, as did relations between on the one hand the ruling classes composed of indigenous Muslims, the *aghas*, the *aʿyāns* and the local *begs*, struggling fiercely to preserve their long-standing privileges, and on the other the Porte, resolutely promoting a whole series of new reforms—for the most part exceedingly unpopular—and its representatives who, appointed for very short periods, sought to enrich themselves with maximum haste at the expense of the indigenous populations, irrespective of religion, although the non-Muslims bore the heaviest burden.

In the 18th century, the economic and financial crisis of the Ottoman Empire, following the crisis of the very structures of the state, considerably weakened the latter's military power. This had immediate repercussions for the whole of the *eyālet* of Bosnia, henceforward a frontier region bordering on Christian Europe, as well as for the city of Sarajevo, where

disorder and corruption became rife. In fact, the arrival in the city of huge numbers of Janissaries forced to leave the vast territories conceded to the "infidels" provided a ready source of troops for rebel governors, who relied upon them on every occasion, also upon a large number of malcontents among the aggrieved local *sipāhīs* and the Muslim masses of the city, whose standard of living had worsened considerably since the beginning of the reconquest, with the constant increase in levies and the creation of new taxes. There ensued a series of revolts and seditious activities, punctuated by full-scale internal wars such as those conducted, on behalf of the central power, after the major revolt against the Porte which erupted in Sarajevo in 1750, by Meḥmed Pas̲h̲a Kukavica, a native of Foča in Bosnia (from 1752 onwards), or by the *ḳul čāwūš* ʿAlī Ag̲h̲a (from 1772 onwards). These difficult times were accompanied by a whole series of scourges, first plague, which raged on a number of occasions in the course of this century (in 1731-2, 1741, 1762-3 and 1781-2), then numerous fires which devastated Sarajevo on some ten occasions (in 1721, 1724, 1731, 1748, 1766, 1769, 1773, 1776, the most serious occurring in 1788 and 1797), as well as numerous floods. In spite of all this, efforts were made to restore certain ancient buildings, such as the fortress situated in the old town (in 1729-39), the mosque known as "Magribija" (constructed in the 16th century and entirely rebuilt in 1766), the Serbian Orthodox church (rebuilt in 1730 and fully restored in 1793—we are told that in 1720 the city reportedly contained between 3,000 and 5,000 Serbs, cf. V. Skarić, *Srpski*, 54, but this number must also include the Serbs of the surrounding villages gravitating round the Orthodox church in Sarajevo), etc. It may be recalled finally that the history of Sarajevo in the second half of the 18th century is drawn from an exceptional source, the *Chronicle* of Mullā Muṣṭafā Bāšeski (1731-2 to 1809), which covers the years 1746-1804, and which contains a mine of first-hand information.

At the beginning of the 19th century, general discontent and resistance to reforms continued in Sarajevo, just as in other regions of Bosnia and of Herzegovina, to the point where insurrections against the governors sent by the Porte (or even sometimes directly against the central power) were carried out with increasing intensity. This was particularly the case in 1814 and then in 1826 (date of the major revolt which followed the suppression of the corps of Janissaries). But these revolts were invariably brutally suppressed, for example, by D̲j̲elāl ul-Dīn Pas̲h̲a in 1829, and subsequently by ʿAbd ül-Raḥmān Pas̲h̲a. However, soon afterwards, in 1246/1831, a new major uprising erupted, this time against reforms in the organisation of the Ottoman army and led by the *ḳapudān* Ḥuseyin Beg Gradaščević, nicknamed "Zmaj od Bosne" (i.e. "Dragon of Bosnia"). The movement spread rapidly at first, both in Bosnia and Herzegovina, but when, some time later, other *ḳapudāns* dissociated themselves from it and joined the side of the government forces [see RIḌWĀN BEGOVIĆ], it too was suppressed, with much bloodshed, after a decisive battle which took place at Pale near Sarajevo. (Attention should be drawn in this context to a tendency which has been observed throughout the Balkans: during the Communist period, some historians and pseudo-historians of former Yugoslavia represented these various uprisings against the Porte, led by various local *condottieri*, as "national revolts" of the indigenous Muslim populations against the Ottoman Turks, which is manifestly false.) In spite of these numerous setbacks, some years later (in 1840 and then in 1848), there was a renewal of uprisings against the *wezīrs* of the Porte based in Travnik, which induced the latter to embark on a wide-ranging policy of repression. The task was entrusted, in 1850, to ʿÖmer Pas̲h̲a (formerly a junior officer in the Austrian army, a native of Lika, in Krajna, a region of Croatia, whose name before his conversion to Islam was Mihailo (Mića) Latas (1806-71)), who, armed with special powers and a substantial military force, definitively crushed all resistance in 1850-1, executing in the process a large proportion of the indigenous Muslim ruling class, just as he had done previously, in actions of a similar type, in Syria, in Albania and in Kurdistan, or was later to do in Montenegro and in Herzegovina, although his efforts in Crete in 1867 were unsuccessful. After these bloody events, the seat of the Ottoman *wezīrs* in Bosnia was definitively transferred from Travnik to Sarajevo. From this time onwards, the city experienced the implementation of a number of reforms aimed at European-style modernisation, as during the vizierate of Ṭopal ʿOt̲h̲mān Pas̲h̲a (i.e. between 1861 and 1869), a period which saw a hesitant and belated reform of education, the establishment of the first Ottoman printing-press in these regions (that of the *wilāyet*), and thus the appearance of the very first local Muslim journals (cf. Dj. Pejanović, *op. cit.*, in *Bibl.*). Two other phenomena affected the city of Sarajevo substantially from the mid-19th century onwards: on the one hand, the gradual and final disappearance of the organisation of the *eṣnāf* (guilds of craftsmen) which had dominated the economic life of the city in preceding centuries; on the other hand, and most importantly (as this was to change enormously the relations existing between the various populations of the city), the gradual but constant enrichment of many of the Serbian families of Sarajevo, who were subsequently to represent a considerable social force in the material and spiritual life of the city. It is, however, worth remembering that, in the words of a significant remark of M. Ekmečić, "around the middle of the last century (i.e. the 19th), Sarajevo contained 100 mosques, and *one* Serbian Orthodox church" (cf. *Srpski narod u Turskoj od sredine XIX veka do 1878*, in *Istorija srpskog naroda*, v/1 [Belgrade 1981], 454). Finally, it may be noted that, as in the past, Sarajevo had to endure in the 19th century a prolonged outbreak of plague (in 1813-16), and a number of major fires (in 1831, 1842, 1852, and the most devastating of all, in 1879).

According to the resolutions of the Congress of Berlin (June-July 1878), Bosnia and Herzegovina were placed under the mandate of Austria-Hungary, although the latter did not formally annex the two provinces until October 1908. The troops of the Dual Monarchy entered the city of Sarajevo in August 1878, having encountered a desperate resistance, as unexpected as it was murderous, on the part of a section of the Muslim population of the city, which lasted eight hours. It was led by numerous local individuals, including an *imām*, Hadži Lojo (Loyo), although there was no significant involvement on the part of Sarajevo's Muslim ruling class, which remained aloof from this popular movement. The forty years of Austro-Hungarian occupation (1878-1918) transformed the appearance of the city beyond recognition, not only in matters of town-planning and architecture, but also in terms of the religious (corresponding in this particular case to *ethnic*) composition of the population. This is clearly illustrated by the following table, devised by one of the two most knowledgeable historians of the city, Hamdija Kreševljaković (the

other specialist being Vladislav Skarić). What is established is on the one hand a quite spectacular fall in the percentage of the Muslim population, and on the other an extraordinary increase in the percentage of the Catholic population (see Kreševljaković, *Sarajevo za vrijeme*, 38):

year	*total pop.*	*Muslims*	*Orthodox*	*Catholics*	*Jews*
1851	21,102	15,224 (72.23%)	3,575 (16.94%)	239 (1.14%)	1,714 (8.12%)
1879	21,377	14,848 (69.45%)	3,747 (17.52%)	678 (3.26%)	2,077 (9.74%)
1885	26,267	15,787 (60.09%)	4,431 (16.88%)	3,326 (12.66%)	2,618 (9.96%)
1895	38,083	17,787 (45.06%)	5,858 (15.39%)	10,672 (28.02%)	4,054 (10.64%)
1910	51,919	18,460 (35.57%)	8,450 (16.27%)	17,922 (34.51%)	6,397 (12.33%)
1921	60,087	21,465 (35.73%)	12,479 (20.77%)	18,076 (30.08%)	7,427 (12.36%)

Seeing the occupation of Bosnia-Herzegovina as a first stage in its colonisation of the Balkans, the Austro-Hungarian government proceeded methodically towards the implementation of numerous projects, especially in Sarajevo, designed to facilitate the attainment of this objective, while at the same time demonstrating to international opinion the civilising nature of its mission: construction of railway, of a central electricity system and of urban canals; improvement of the quays of the Miljacka; construction of the Catholic cathedral (1884-9, replacing the former Catholic church, on which little information is available, as is hardly surprising when the figures in the above table are considered); building of a monumental Town Hall in pseudo-Moorish style (1896), and many other public buildings on the grand scale (such as the magnificent Zemaljski Musej (1888), modelled on the Vienna Museum, the Theatre, the Law Courts, the Bank, the Protestant Church, the Hospital, schools, hotels, etc.; not forgetting the laying-out, in 1886, of the city's first municipal park on the site of a Muslim cemetery). This rapid Europeanisation brought to Sarajevo many soldiers and officials. Among the latter, both in administration and in education, there were to be found a large number of Orthodox (i.e. Serbs) and Catholics (predominantly Croats, who were joined by considerable numbers of new arrivals from elsewhere: Austrians, Germans, Hungarians, Poles, Czechs, Slovaks, Slovenians, Rumanians, etc.) (see Kreševljaković, *op. cit.*, 37-9). The city was extended rapidly in a westwards direction, i.e. towards the plain, and towards Ilidža, which soon became a kind of "oriental Baden". At the same time, as was to be anticipated, there was a decline in the craftsmanship of the city, an inevitable consequence of the appearance of the first factories.

The shock experienced by the Muslim population of Sarajevo, as a result of Austro-Hungarian occupation and the sudden irruption of all this modernity, was acute, as is shown by many texts of this period, and also by the emigration (although apparently of limited extent) of some of the inhabitants of the city to Turkey, or towards closer regions still controlled by the Ottoman Empire (see A. Popovic, *Isl. balk.*, 272-3). However, gradually the Muslim reacted and organised themselves into a religious community guided by an *Ulema medžlis* and an administration of *wakfs*, at the head of which was the chief of the community bearing the title of *Reʾis al-ulema* (see *EI*², I, 1273b). In matters affecting schools, and education in general, great changes took place, since the Austro-Hungarian authorities completely reformed the organisation of public instruction. In this new system, which had little effect on the various Muslim elementary schools, *medreses*, more or less "reformed", served for the training of religious functionaries of inferior status. The best-known in Sarajevo at this time were the Kuršumlija and Hanika *medreses*, both dating from the time of G͟hāzī K͟hosrew Beg (cf. *Spomenica Gazi...*). Furthermore, in 1887, a special college was inaugurated in Sarajevo with the aim of training judges for the Muslim courts and senior religious functionaries. This was the highly-renowned *Šeriatska Sudačka Škola u Sarajevu*, which was the principal seed-bed of the Muslim religious intelligentsia of Bosnia-Herzegovina between 1887 and the Second World War, and where the duration of studies was five years. Many details concerning this institution are to be found in the two volumes compiled on the occasion of its thirty-fifth and fiftieth anniversaries: in *Tridesetpetogodišnji izvještaj Šeriatske Sudačke Škole u Sarajevu*, Sarajevo 1917, and especially in *Spomenica Šeriatske Sudačke Škole u Sarajevu, izdana povodom pedesetgodišnjice ovoga zavoda* (*1887-1937*), Sarajevo 1937. In 1892 an academy was also founded for the training of school-teachers (*Dār al-muʿallimīn*), where the course of study lasted three years. It should be noted that there was at first, among the local Muslims, a period of passivity, of mistrust and of defiance regarding everything emanating from the Austro-Hungarian authorities. In this context, worth citing for example is the fact that in 1887, at the time of the inauguration of the *Šer. Sud. Škola* which has been mentioned above, the new administration encountered obstinate resistance on the part of the Muslims, who refused to send their sons to the school, with the result that the first pupils of this establishment were recruited among orphans (cf. Abduselam Balagija, *Les musulmans yougoslaves*, Algiers 1940, 115). But subsequently, as a result of a gradual transformation of opinions, many Muslim children began to attend secular elementary schools and academies. Some even pursued studies abroad, especially in Vienna and in Budapest, for those to whom Zagreb was not a preferable option, to qualify as doctors, engineers, etc. Others also went abroad, but with the object of pursuing traditional studies, in Istanbul, in Cairo and in Medina, or on

the contrary, to become initiated into Western-style Islamology, in Vienna (as was the case with Šukrija Alagić, Fehim Bajraktarević and Safvet-beg Bašagić) or in Budapest (in the case of Šaćir Sikirić), thus becoming the very first local orientalists.

There is much that should be said regarding the Muslim press of Sarajevo during these four decades. This evidently reflects accurately the principal political, social, cultural and other tendencies which emerged in the Muslim community, a community which found itself from day to day, without really understanding *how*, being carried along in the wake of the other populations of the city, which until recently had only constituted the *reʿāyā*. Details should also be supplied regarding the first Muslim political parties founded in Sarajevo in this period (on these parties, see Popovic, *op. cit.*, 287-9). Finally, it may be recalled that it was in Sarajevo, on 28 June 1914, that the Archduke of Austria Franz Ferdinand was assassinated by Gavrilo Princip, a young local Serb, and that this act served as the pretext for the unleashing of the First World War.

From 1918 to 1941, Sarajevo was part of the Kingdom of Yugoslavia (a state which was initially called, and for a short time, "Kingdom of the Serbs, of the Croats and the Slovenians"). While continuing to play its role as a major regional city, and although it was, from 1929 onwards the centre of the Drinska Banovina, i.e. the Department of Drina, Sarajevo quite rapidly lost its former importance and was relegated to the second rank, suffering unfavourable comparisons (in all respects) in regard to the major centres of the country, such as Belgrade, Zagreb and Ljubljana. It retained its picturesque monuments and its pleasing aspect of an ancient Ottoman city, with its "upper town" composed of residential quarters and its "lower town", with its *čaršija*, the streets of which still bore the names of the crafts which had been practised there, its mosques, its quarters of former times, and its cemeteries extending over the neighbouring hills (in particular, one of the most spectacular of all, the Jewish cemetery, dating from the 16th century, situated on the left bank of the Miljacka). Sarajevo nevertheless continued to develop on the economic, industrial, cultural and political levels. Its population, within which the religious barriers were becoming blurred, with the consequence that an increasing number of mixed marriages was observed, grew from 60,087 inhabitants in 1921 ("more than a third of whom are Muslims, who are for the most part craftsmen", F. Babinger, *op. cit.*, in *Bibl.*) to slightly more than 80,000 in 1941. The city was naturally the principal religious and cultural centre not only for the Muslims of Bosnia-Herzegovina, but also for the Muslim community of the Kingdom as a whole (see BOSNA, and Popovic, *Isl. balk.*, 312 ff. and *passim*). As regards the Muslim scholastic establishments, it should be noted that the *medrese* of Ghāzī Khosrew Beg continued to offer higher secondary education, but also that a new pilot scholarly establishment was opened, known as the "Academy of Islamic Law" (*Šerijatska gimnazija*), which was the only Muslim academy in the Kingdom where Muslim pupils could receive an education comparable to that dispensed in other public academies. As for the *Šeriatska Sudačka Škola*, it was converted in 1937 to the *Viša islamska šerijatsko-teološka škola u Sarajevu* ("Islamic High School of Law and Theology") and gained the status of a Faculty. Furthermore, the Muslim press (of various tendencies) continued to develop, as did the Muslim political parties (which were to disappear in 1941). (On these topics, see Popovic, *op. cit.*, 328-31 and *passim.*)

During the Second World War (1941-5), the city of Sarajevo was part of the Fascist Croat state of Ante Pavelić, then, after the war, it became the capital of the Federal Socialist Republic of Bosnia-Herzegovina of Titoist Yugoslavia. In the course of this latter period (1945-92), Sarajevo experienced extraordinary growth, expanding from some 100,000 inhabitants in 1946, to 213,092 in 1961, then to about 250,000 in 1968, and passing the figure of 300,000 in 1992, henceforward comprising a large number of modern quarters, most of them extending over the plain. The city continued to be the base for the guidance of the Yugoslav Muslim community and the seat of its chief. (On relations between the latter and the Communist authorities during this period, see Popovic, *Les musulmans yougoslaves*.) As regards the Muslim educational establishments, they experienced several phases, which may be summarised thus. At the very beginning of the taking of power by the Communists, all the Muslim religious schools mentioned above were closed. Thus the *Viša isl. šer.-teol. škola* was definitively closed in April 1946, this coinciding with the abolition of the Muslim courts. Then, gradually, as a result of an extraordinary reversal of the situation, beginning with the Communist government's decision to seek a major role in the organisation—predominantly Muslim—of Non-Aligned States, a new system was put in place. Under this system, the principal institution for the training of religious cadres became once more the renowned Gazi Husrevbeg *medrese*, then some time later, in 1977, there was established (still in Sarajevo) a Faculty of Islamic Theology (*Islamski Teološki Fakultet*). The same period saw a remarkable flourishing of the Muslim press.

The disintegration of Titoist Yugoslavia, following the collapse of the Communist world and the resurgence of various local nationalisms, culminated in the spring of 1992 in a brutal civil war in Bosnia-Herzegovina, in which the city of Sarajevo has become one of the principal theatres of operations (on these controversial and poorly-understood issues, as well as on the Muslim community, cf. X. Bougarel, *Discours d'un ramadan de guerre civile*, in *L'Autre Europe*, 26-7 [Paris 1993], 171-197; and idem, *Un courant panislamiste en Bosnie-Herzégoviné*, in G. Kepel (ed.), *Exils et royaumes. Les appartenances au monde arabo-musulmans aujourd'hui*, Paris 1994, 275-99). At present, it is impossible to see when, or how, the city of Sarajevo can regain a semblance of normality.

SARAKHS, a town of northern Khurāsān, lying in the steppe land to the north of the eastern end of the Köpet Dagh mountain chain. It was situated on the right or eastern bank of the Tadjant (modern Tedjen) river, whose uncertain flow received the waters of the Harī Rūd before finally petering out in the Ḳara Ḳum desert [*q.v.*]. According to the mediaeval Islamic geographers, the river bed only contained water at the time of floods, i.e. winter and early spring. Various channels were taken off the river for irrigation, but scantiness of water supply always limited agriculture there. In mediaeval times also the road from Nīshāpūr and Ṭūs to Marw passed through Sarakhs.

The geographers record a tale that the town was founded by the legendary Turkish king Afrāsiyāb, but nothing seems to be known of any pre-Islamic history. The first mention of Sarakhs in Islamic history is in 22/643 when the Arab commander al-Aḥnaf b. Ḳays [*q.v.*] sent one of his officers to it, but this can only have been an exploratory probe since ʿAbd Allāh b. ʿĀmir [*q.v.*] in 31/651-2 led a campaign into Khurāsān, capturing Nīshāpūr and other towns as far as Sarakhs (al-Ṭabarī, i, 2682, 2884, 2887-8). Sarakhs is mentioned during the fighting in Khurāsān between Abū Muslim's partisans and the last Umayyad governor there, Naṣr b. Sayyār [*q.v.*], and in 185/801 there took place at Sarakhs and at neighbouring Nasā [*q.v.*] a rebellion against the oppressive ʿAbbāsid governor ʿAlī b. ʿĪsā b. Māhān [*q.v.*] led by the *mawlā* Abu 'l-Khaṣīb Wuhayb b. ʿAbd Allāh (183-6/799-802) (see E.L. Daniel, *The political and social history of Khurasan under Abbasid rule 747-820*, Minneapolis and Chicago 1979, 171). The geographers of the 4th/10th century describe Sarakhs as a considerable town, half the size of Marw, with a Friday mosque, good agriculture, including grain grown for export to Nīshāpūr, and extensive pasture grounds for camels and sheep. Within the population, so al-Muḳaddasī states, there were two factions of the Ḥanafī ʿArūsiyya and the Shāfiʿī Ahliyya (see C.E. Bosworth, *The Ghaznavids*, 165-6).

Sarakhs played a significant role in the overrunning of Khurāsān by the Turkmens in the first half of the 5th/11th century. In 425/1025 Maḥmūd of Ghazna allowed 4,000 Oghuz families and their herds to cross the Oxus and settle near Farāwa, Abīward [*q.vv.*] and Sarakhs, but by 428/1036 the Oghuz were demanding a grant of the revenues of Marw, Abīward and Sarakhs. It suffered badly from the devastations of the Turkmens, so that when Masʿūd of Ghazna appeared there with his army in 431/1040, the exasperated inhabitants refused him entry, and Masʿūd had to storm the citadel, killing many of the people; it was thus from Sarakhs that the sultan set forth for his ill-fated battle with the Saldjūḳs and their forces at Dandānḳān [*q.v.* in Suppl.] in the waterless desert between Sarakhs and Marw (see Bosworth, *The Ghaznavids*, 224, 250-1, 265). In the second half of the 5th/12th century and after the end of Sandjar's sultanate, Sarakhs was held by the Oghuz chief Malik Dīnār, and then by the Khʷārazmian claimant to power, Sulṭān Shāh b. Il Arslan. During the time of the Mongol invasions, Čingiz Khān in 618/1221 sent his son Toluy to occupy the towns of Khurāsān, including Sarakhs; it submitted and received a Mongol *shiḥna*, but rebelled, like other towns in the province, on hearing rumours of the Khʷārazm-Shāh Djalāl al-Dīn's successes (Djuwaynī-Boyle, i, 155-6, 162, 301). The town must nevertheless have slowly revived after the Mongol devastations. Ibn Baṭṭūṭa [*q.v.*] passed through it without mentioning anything except Sarakhs's connection with the Ṣūfī *shaykh* Luḳmān al-Sarakhsī (whose *gunbad* or tomb still exists in the town) (*Riḥla*, iii, 79, tr. Gibb, iii, 583), but Ḥamd Allāh Mustawfī (mid-8th/14th century) describes the town as having a strong wall 5,000 paces in circumference and a flourishing agriculture, especially of melons and grapes (*Nuzha*, ed. Le Strange, 159, tr. 155).

During the period of Ṣafawid-Özbeg warfare, it had an exposed position in the frontier zone between the two rival powers. In 932/1526 ʿUbayd Allāh Khān Shībānī occupied Sarakhs en route for his campaign against Mashhad and Ṭūs (*Bābur-nama*, tr. Beveridge, 534). The raids of the Tekke Turkmens of Marw on Persian territory did not cease until after the Persian government in *ca.* 1850 constructed a strong fort at Sarakhs, on the left or western bank of the Tedjen river, shortly after which a new threat appeared when the Russians moved into Central Asia and built a military post and settlement at Old Sarakhs on the right bank (G.N. Curzon, *Persia and the Persian question*, London 1892, i, 195-8).

Modern Persian Sarakhs (lat. 36° 32′N., long. 61° 07′ E.) is the chef-lieu of a *bakhsh* of the same name in the *shahrastān* of Mashhad in the province (*ustān*) of Khurāsān; in *ca.* 1950 it had a population of 5,000 (Razmārā, *Farhang-i djughrāfiyā-yi Īrān-zamīn*, ix, 212-13), which had increased by 1991 to 22,247 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division).

AL-**SARAKHSĪ**, ABU 'L-ʿABBĀS AḤMAD b. al-Ṭayyib b. Marwān, the most prominent disciple of al-Kindī and, like his master, a dedicated advocate of Greek learning at the unsure early stage of its Muslim integration, but with a more pronounced inclination toward *adab*.

He was born around 220/835 and died early in 286/899. A fact attested for his obscure early life is his participation as the delegate of al-Kindī in a multireligious philosophical-theological debate about Christianity and the Trinity (see Moosa and Holmberg). He began his career as an educator of the future caliph al-Muʿtaḍid. In 271-2/885, he accompanied the prince on an unsuccessful military expedition to al-Ṭawāḥīn in southern Palestine, keeping a journal detailing its itinerary. He became an influential *nadīm* [*q.v.*] of the caliph and, in 282/895, was appointed to the *ḥisba* [*q.v.*] and other offices. This, however, may have contributed to his downfall. Already in the following year, he was incarcerated. He died, or rather was put to death, in prison three years later. The reason for this turn in his fortunes was a mystery that was much debated at the time and continued to intrigue scholars through the centuries. Many explanations were put forward, none of them provable. The unwise betrayal of a high-level secret, a falling-out with the caliph himself, and also rumours of "heresy", might have contributed. He appears indeed to have unwisely expressed objectionable views, including seeming doubts about the credibility of prophets (see also below). His supposed influence on the caliph in religious matters might have become an embarrassment to the latter, once he was given highly visible official positions. And there were no doubt the usual rivalries at court; he himself is described as fiercely protective of his position (see al-Ṣafadī, *Wāfī*, xii, 17, under al-Ḥasan b. Abi 'l-Raʿd al-Khurāsānī).

His great productivity as a scholar and writer may in part have been as transmitter of al-Kindī, albeit, it seems, a rather creative one; this is particularly likely where identical titles on philosophical subjects are attested for both only in late bibliographical tradition. No copy of a complete work of his has been authenticated so far. The recent discovery of a *Kitāb Ādāb al-mulūk* also remains doubtful for the time being, even though the title appears among his works; the attribution to him is found in only one of the two manuscripts now known, and the work itself is an interesting reworking of the *Akhlāḳ al-mulūk* by Muḥammad b. al-Ḥārith al-Taghlibī/Thaʿlabī, published earlier as *Kitāb al-Tādj* with a wrong attribution to al-Djāḥiẓ (see G. Schoeler, in *ZDMG*, cxxx [1980], 217-25). On the other hand, we have a cornucopia of quotations from his works or attributed to him as a transmitter; a noteworthy recently published source is Abū Ḥayyān al-Tawḥīdī, *Baṣāʾir*, ed. Wadād al-Ḳāḍī, Beirut 1408/1988. Geography, in particular, was enriched by his above-mentioned journal; it was discovered in al-Muʿtaḍid's library under interesting circumstances and acquaints us with a unique document of early Muslims geography. He is credited with other geographical and topographical writings. He and al-Kindī are said to have provided the materials for a world map (see M. Kropp, in *Proceedings of the Ninth Congress of the Union Européenne des Arabisants et Islamisants*, Leiden 1981, between 160 and 161). He wrote on the full extent of the paideia of the *nadīm*, on cooking and politics, on love and music, among many other subjects. Fragments on the theoretical aspects of music are preserved in al-Ḥasan b. Aḥmad al-Kātib, *Kamāl adab al-ghināʾ*, ed. Cairo 1975, v. *mūsīḳī*, vii, 683-4; Fr. tr. Amnon Shiloah, *La perfection des connaissances musicales*, Paris 1972). He occurs frequently as a transmitter of anecdotes on singers and wits. His interest in comparative religion is further attested by his report on the Ṣābians on the basis of al-Kindī preserved in the *Fihrist* (another fragment in ʿAbd al-Djabbār, *Mughnī*, v, 152). His hilarious spoof that targeted the anti-Greek religious bias of a narrow-minded member of the Ibn Thawāba family [*q.v.*] as told by Abū Ḥayyān al-Tawḥīdī, *Akhlāḳ al-wazīrayn*, ed. Ibn Tāwīt al-Ṭandjī, Damascus 1385/1965, 235-47, may possibly have been concocted or embellished by al-Tawḥīdī himself; be this as it may, its ascription to him as well as his writing on Ṣābianism could easily have added to impeaching his orthodoxy for later generations. All his works and ideas (among them the invention of a transliteration system for foreign languages, see Ḥamza al-Iṣfahānī, *Tanbīh*, ed. M.Ḥ. Āl Yāsīn, Baghdād 1968, 35) reveal a lively thinker and (to a degree) free spirit who probably had few equals in his time. He may well be considered as representative of intellectual currents in contemporary Baghdād that were about to change direction.

Bibliography: The main sources for his life and works are the *Fihrist* and, secondarily, Ibn Abī Uṣaybiʿa. Cf. further, for instance, Masʿūdī; Ḳifṭī; Yāḳūt, *Irshād*, i, 158-60; Dhahabī, *Siyar*, Beirut 1412/1992, xiii, 448-9; Ṣafadī, *Wāfī*, vii, 5-8; Ibn Ḥadjar, *Lisān*, i, 198-9; Brockelmann, I^2, 231-2, S I, 375; Sezgin, *GAS*, iii, 259, v, 263, vi, 162-3, vii, 137, ix, 233. Numerous other biographical references are almost exclusively concerned with the circumstances of his death. See F. Rosenthal, *Aḥmad b. aṭ-Ṭayyib as-Saraḫsī*, American Oriental Series 26, New Haven 1943; idem, in *JAOS*, lxxi (1951), 135-42, lxxvi (1956), 27-32, lxxxi (1961), 222-4; idem, articles to be published on *Ādāb al-mulūk* and on the *Rangstreit* between lovers of boys and of girls; Matti Moosa, in *al-Madjalla al-Baṭriyarkiyya* (*The Patriarchal Magazine, Organ of the Syrian Orthodox Patriarchate of Antioch and All the East*), vii (1969), 189-97, 244-52; idem, in *JAOS*, xcii (1972), 19-24; B. Holmberg, *A treatise on the unity and Trinity of God by Israel of Kashkar*, Lund Studies in African and Asian Religions 3, Lund 1988, 50 ff., 84 ff.; Mudjtabā Mīnuwī, in *Djāwīdan Khirad*, i (1354/1975), 9-18 (no more publ.; reference provided by Said Arjomand). (F. ROSENTHAL)

AL-**SARAKHSĪ**, MUḤAMMAD B. AḤMAD b. Abī Sahl Abū Bakr, Shams al-Aʾimma, a Ḥanafī jurist of the 5th/11th century, who lived and worked in Transoxania, inheriting and developing the juristic tradition of that region. He produced a number of works, the most important being the *Mabsūṭ*, the *Sharḥ al-Siyar al-kabīr*, and the *Uṣūl al-fiḳh*. The first of these is a work of *furūʿ*, a commentary on the *mukhtaṣar* of Muḥammad b. Muḥammad al-Marwazī (d. 334/945). This in turn was an epitome of the works of Muḥammad b. al-Ḥasan al-Shaybānī, the foundational texts of the Ḥanafī tradition. Al-Sarakhsī reintroduced and explored the rules of al-Shaybānī, organising his material around points of dispute (*ikhtilāf*) and incorporating information related to local Ḥanafī tradition and other schools of law, apparently derived from oral transmission and local teaching practice. His organisation, comprehensive coverage, exploration of *ikhtilāf*, and manipulation of hermeneutical argument, all conduce to make this work a remarkable achievement of juristic literature. It remained a point of reference for the developing Ḥanafī *furūʿ* tradition till the 19th century. The *Sharḥ* is a commentary on the *Kitāb al-Siyar al-kabīr* of al-Shaybānī. In its published form it is not always easy

to distinguish the text and the commentary (also true of the *Mabsūṭ*), but it too demonstrates an overall concern for comprehensive coverage, development of rules and considered hermeneutical argument. Al-Sarakhsī's *Uṣūl* draws on the independent Transoxanian Ḥanafī tradition represented by Abu 'l-Ḥasan al-Karkhī (d. 340/951) and Aḥmad b. Muḥammad al-Shāshī (d. 344/955) and on the *uṣūl* works of al-Djaṣṣāṣ (d. 370/980). He also refers to the *Risāla* of al-Shāfiʿī, the opinions and some writings of later Shāfiʿī thinkers (e.g. Ibn al-Suraydj, d. 306/918), and to the major stances of other traditions.

The Ḥanafī biographical tradition has little independent information on al-Sarakhsī's life. It draws on and elaborates clues supplied in the works. The Introduction to the *Mabsūṭ* and the concluding formulae of a number of its sections reveal that the author dictated it from prison. The *Sharḥ* identifies ʿAbd al-ʿAzīz b. Aḥmad al-Ḥulwānī as a teacher, and the *Uṣūl* begins with the statement that it was dictated in Ūzdjand or Özgend in 479/1086. Biographical notices emerge later e.g. in the *Kitāb al-Djawāhir al-muḍiyya* of ʿAbd al-Ḳādir b. Abi 'l-Wafāʾ Muḥammad b. Muḥammad al-Ḳurashī (d. 775/1373) and the *Tādj al-tarādjim* of al-Ḳāsim Ibn Ḳuṭlubughā (d. 879/1474). In addition to conventional and formulaic items, al-Ḳurashī states that al-Sarakhsī died *ca.* 490/1096, and names three students, Muḥammad b. Ibrāhīm al-Ḥaṣīrī, ʿUthmān b. ʿAlī al-Baykandī and ʿUmar b. Ḥabīb, grandfather of al-Marghīnānī, the author of the *Hidāya*. Ibn Ḳuṭlubughā expands the story of the imprisonment, adds that al-Sarakhsī ended his life in Farghāna under the protection of the Amīr Ḥasan, suggests a date of death about 500/1106, and gives an anecdote about a local *amīr* and his *umm walads*. The anecdote is intended to demonstrate the knowledge, skills and integrity of al-Sarakhsī, but Heffening, in *EI*[1], discovered in it a cause for his imprisonment. Abu 'l-Ḥasanat Muḥammad ʿAbd al-Ḥayy al-Lakhnawī, writing in 1293/1876, summarised the biographical tradition, incorporating a few more details (e.g. he identifies another student, Muḥammad b. ʿAbd al-ʿAzīz al-Ūzdjandī, grandfather of Ḳāḍīkhān) and citing an aberrant death date of 438/1046. Ḥādjdjī Khalīfa, v, 363, gives 483/1090 as date of death and has been followed by Brockelmann, Heffening and Sezgin.

SARAḲUSṬA, Saragossa, a town situated on the river Ebro in Spain, regional capital of its eponymous province and of the current *Communidad Autónoma de Aragón*. Founded in 24 B.C. by Augustus as a Roman military colony, on the Iberian site of Salduba, it was called in Latin *Caesarea Augusta*, a name corrupted into the form *Cesaragosta*, which was adopted, virtually unchanged, by the Muslims after their conquest of the Iberian Peninsula; it is transcribed into Arabic as *Saraḳusṭa* (*nisba: Saraḳusṭī*). The correspondences *s* > *z* and *ḳ* > *g* and the current assimilation *-st-* > *-z-* explain its modern form in Spanish, Zaragoza.

Saraḳusṭa was one of the most important cities (*madīna*) of al-Andalus, between 95/714 and its conquest by Alfonso I of Aragon (512/1118), considered the regional capital (*ḥāḍira*) or the "metropolis" of the "Upper March" of al-Andalus (*umm al-thaghr al-aʿlā*), the *thaghr* or northern frontier extending in principle to the north of the Pyrenees, and, after the Christian conquests as far as Pamplona (captured in 183/799) and Barcelona (captured in 185/801). This was fixed, for the duration of the three remaining centuries, in the valley of the Ebro, with the zones (*iḳlīm*) of Saraḳusṭa and of Tudela (Tuṭīla), Huesca (Washḳa), Barbastro (Barbiṭāniya), Lerida (Lārida) and Calatayud (Ḳalʿat Ayyūb), in addition to the eastern zone of Tortosa (Ṭurṭūsha) and the southern zone of Bārūsha, bordering on the "Middle March" (*al-thaghr al-awsaṭ*).

The zone (*iḳlīm*) of Saraḳusṭa included the districts (*nāḥiya*) of the city itself (*al-madīna*), and others such as Belchitá (Balshād), Cazarabet (Ḳaṣr ʿAbbād), Cutanda (Ḳutanda), Fuentes (Fūntish), Gallego (Djalliḳ), Jalon (Shalūn), Pleitas (Balṭash), and Zaydūn. It comprised fortresses (*ḥiṣn*), villages (*balda*) and hamlets (*ḳarya*), denominations applied not always systematically to places in this zone, such as Alcañiz (Ḳannīsh), Almenara (al-Manāra), Caspe (Ḳashb), Calanda (Ḳalanna), Montañana (Munt Anyāt), Ricla (Rikla), Rueda de Jalón (Rūṭa), and Zuera (Ṣukhayra).

The town plan of Saraḳusṭa included a space enclosed within a wall of stone, built by the Romans and preserved throughout the four centuries of Muslim domination; this wall surrounded an irregular rectangle of approximately 600 × 900 m where, according to the calculations of L. Torres Balbás, some 17,000 inhabitants lived. This intramural space was crossed by two perpendicular highways (the former *cardo* and *decumanus*) which connected four gates: the Gate of the Bridge (*Bāb al-Ḳanṭara*), on the river Ebro; to the east, the Gate of *al-Ḳibla*, or of Valencia; to the west the Gate of Toledo, or "of the Jews" (*Bāb al-Yahūd*), and to the south the Gate of the Ṣinhādja, indicating a settlement of these Berbers, a name still evident in the "Cinegio" Arch. In the north-west corner of the enclosed space there was a fortified compound, the seat of authority (*al-Ḳaṣr*), known as *al-Sudda* (like the *Sudda* of Cordova), a name currently born by the "Torreón de la Zuda". Also within the enclosed space stood the Great Mosque (*al-Djāmiʿ*), which according to an improbable tradition is said to have been founded by a number of venerable individuals (*ṣaḥāba* or *tābiʿūn*) who were supposed to have arrived in Saraḳusṭa with the vanguard of the Muslim conquerors: archaeology has proved that this Great Mosque was built over a Roman temple, dating from the time of Tiberius, which became a church with the arrival of Christianity. Some Andalusian sources indicate that the Great Mosque of Saraḳusṭa was enlarged twice, in 242/856-7 and *ca.* 409-12/1018-21. Recent archeological excavations have revealed the rectangular shape (54 x 86 m) of this Mosque, with a pillar-supported hall of nine naves, comparable in dimensions to the greatest mosques of al-Andalus, those of Cordova and Seville. All that remains of it are the lower portions of the minaret, and a few capitals dating from the 5th/11th century and uncovered in excavations carried out in what is now the Seo del Salvador, the church constructed by the Christians on the site of the Great Mosque of Saraḳusṭa.

Outside the wall there were extensive suburbs (*rabaḍ*), such as that known as "the Tannery" (*al-*

Dibāgha, currently the suburb of "Altabás", formerly "Atabahas", on the other side of the river), several named after the Ṣinhādja (outside the eponymous Gate), and other suburbs which encompassed the wall in its entirety, in their turn defended by a wall of clay (*radam*), with its own small gates, five of which are known to us by later names belonging to the Christian period. Outside the Gate of Sancho, to the north-west, stretched the great public esplanade of the *Muṣāra* or *Muṣallā* (a name retained in what is now "Almozara" street.)

Outside this wall of clay is located the most important building of Saraḳusṭa which is still standing: the castle-palace of Aljafería (*al-Djaʿfariyya*), named after Abū Djaʿfar, *kunya* of the king of the *ṭāʾifa* of Saraḳusṭa, al-Muḳtadir (second half of the 5th/11th century), who built the palace alongside a tower dating from the Umayyad period (currently "Torre del Trovador") which possibly has Roman foundations. The builder-king celebrated his palace in his poetry, calling it "house of joy" (*dār al-surūr*); his honorific title of al-Muḳtadir is to be found inscribed on a capital of the Aljafería. preserved in the Museum of Saragossa.

Saraḳusṭa, known as the "White City" (*al-madīna al-bayḍāʾ*), appeared, according to the Arab geographers, as "a white stain surrounded by the vast emerald green of its countryside". In fact, the sources praise the quality and the abundance of its agriculture, well irrigated by the great river Ebro and its numerous tributaries. Commerce found in Saraḳusṭa "the gateway to all routes", according to a reference in the sources. There were salt mines and a thriving fur trade, producing some renowned furs known as *saraḳusṭiyya*.

In this space, the Muslim life of Saraḳusṭa developed during the four centuries (2nd-8th to 6th-12th) of Islamic political domination, also during the following four centuries (from 1118 to 1614) of the well-documented presence of "Mudéjar" [*q.v.*] and "Moriscos" [*q.v.*], the "Moors", subjected to Christian politieal power. The four centuries of Muslim political domination reflect the general chronology of the history of al-Andalus [*q.v.*]: (a) conquest and rule by *amīrs* dependent on the Orient and Ifrīḳiya; (b) the independent Umayyad dynasty of al-Andalus; (c) the kingdoms of *taifas* (*mulūk al-ṭawāʾif*); and (d) the Almoravids. Nothing certain is known regarding the Muslim conquest of Saraḳusṭa, possibly in 95/714; Christian sources, such as the *Crónica Mozárabe*, speak of fierce resistance on the part of the town, but two Christian churches remained in use there throughout the Islamic period: the church of Santa Maria (with the pious tradition of the apparition of the "Pillar") and the church of Las Santas Masas, centres of an active Christian presence in the town. There was also a Jewish community, to which sporadic reference is made.

Saraḳusṭa takes a prominent role in the history of al-Andalus from the year 124/742 onwards, becoming embroiled in the struggles of the *baladiyyūn* Arabs against the Shāmiyyūn, and of the "North Arabs" against the "South Arabs", the latter forming the majority in the Upper March. In 132/749-50, the governor of al-Andalus Yūsuf al-Fihrī [*q.v.*] sent to Saraḳusṭa as *wālī* a certain al-Ṣumayl, a "North Arab", in the hope of exercising better control over the "South Arab" majority; the latter rose in revolt four years later, and ultimately supported the candidature of the Umayyad ʿAbd al-Raḥmān I [*q.v.*], but after the latter had become *amīr* of al-Andalus, these "Southern Arabs", dominating the Upper March, rebelled incessantly against the central power of al-Andalus, even seeking the aid of Charlemagne, who came to Saraḳusṭa in 778 but found the gates of the city closed against him; whilst withdrawing, the Frankish army was attacked, this constituting some of the most renowned episodes recorded in the *Chanson de Roland*.

These frontier regions of al-Andalus persisted in their autonomist tendencies, rejecting both dependence on the Christians and dependence on Cordova, which sent its armies there on numerous occasions, commanded in person by successive *amīrs* of al-Andalus, who succeeded, periodically, in controlling the region by installing Cordovan governors, an unsatisfactory measure in terms of internal administration, and especially in terms of the external Christian threat. Collaboration with local families, in principle loyal to the Umayyads, was the major recourse of the central power, from the later years of the 2nd/8th century onwards. The *muladí* (*muwallad* [*q.v.*]) family of the Banū Ḳasī [*q.v.*] were to become periodically the masters of Saraḳusṭa, leading protagonists, probably, in the activities of the Upper March, alternating loyalty and rebellion towards the Umayyad *amīrs*, until the decline of *muladí* power throughout al-Andalus, and its progressive replacement by a new power exercised by certain Arab families, who were relied upon by the Umayyads from the later years of the 3rd/9th century onwards, as happened as Saraḳusṭa with the Banū Tudjīb or Tudjībiyyūn [*q.v.*], in power between 276/890 and 430/1038, such families alternated between submissiveness and an autonomism which was total after the civil war (*fitna*) of the early 5th/11th century, leading to the establishment of the first dynasty of the *taifa* of Saraḳusṭa, which was replaced by the dynasty of the Banū Hūd [*q.v.*], from 430/1038 until the conquest by the Almoravids in 503/1110. The latter were, however, unable to maintain Muslim political domination at Saraḳusṭa for more than eight years, until 512/1118. The Muslim inhabitants remained there after the Christian conquest, subject to the regulations imposed upon "Mudéjars" [*q.v.*] and "Moors" [*q.v.*], until their expulsion in 1614.

Cultural life came into being very early at Saraḳusṭa, given its status as an important urban centre, with the first manifestations in the 3rd/9th century, and with consolidation in the following century, centred on cultured families such as the Banū Fūrtish and the Banū Thābit, among others. During these two centuries, Saraḳusṭa was in a state of some cultural isolation from the rest of al-Andalus but maintained direct relations with the Orient and the Maghrib, especially through the journey of the Pilgrimage. The cultural flowering of the 5th/11th century was, in part, the result of the arrival of major poets and scribes from Codova, making their way to the great *taifa* of the Upper March, under the patronage of the rulers of the Banū Tudjīb and Banū Hūd. In the 6th/12th century, the finest flowering of the culture of Saraḳusṭa was to be seen amongst its citizens in exile, as in the case of Ibn Bādja [*q.v.*], but in the city and its neighbourhood the culture of the Mudejars and the Moors also survived, manifesting itself in *aljamía* (*al-ʿadjamiyya*).

(M.J. Viguera)

AL-**SARAKUSTĪ**, the *nisba* of two Andalusian traditionists, father and son, both connected with the northern Spanish town of Sarakusta [*q.v.*] or Saragossa. These are Abū Muḥammad Kāsim b. Thābit b. Ḥazm b. ʿAbd al-Raḥmān b. Muṭarrif b. Sulaymān b. Yaḥyā al-ʿAwfī al-Zuhrī (255-302/869-914) and his father Abu 'l-Kāsim Thābit (217-313/832-925 or 314/926). The biographical sources mention variants in their *nasab* that show that their genealogy was manipulated. They were Berbers who had established ties of *walāʾ* (*walāʾ ʿalāka*) with the Banū Zuhra, as all the Berbers of the Upper Frontier in al-Andalus had done. Kāsim's father Thābit, angry for some unknown cause, decided not to use the *nisba* al-Zuhrī and adopted instead the *nisba* al-ʿAwfī. This way he pretended that his ancestors were clients of a descendant of the Prophet's Companion ʿAbd al-Raḥmān b. ʿAwf al-Zuhrī [*q.v.*], who was allegedly in the Iberian Peninsula at the time of the conquest.

Kāsim and his father are credited with having introduced into al-Andalus al-Khalīl's *Kitāb al-ʿAyn*, but they are especially famous for their work on *gharīb al-ḥadīth* (before them, the Andalusians ʿAbd al-Malik b. Ḥabīb and Ibn ʿAbd al-Salām al-Khushanī had already written books on the same genre). Both travelled to the East in the year 288/900, studying in Miṣr (Old Cairo) and Mecca with, among others, the traditionists al-Nasāʾī, al-Bazzār and Ibn al-Djārūd (a complete list of their teachers is given by Ibn Ḥārith al-Khushanī; see also al-Fahhām in *RAAD*, li [1976], 512-3). In 294/906 they returned to al-Andalus as experts in *ḥadīth* and *lugha*. Kāsim commenced work on his *al-Dalāʾil fī sharḥ mā aghfala Abū ʿUbayd wa-bn Kutayba min gharīb al-ḥadīth*, but died before he finished it. The book was completed by his father Thābit. Al-Zubaydī reports that some said they were not the real authors but rather it was the work of an Eastern author. In any case, it was much lauded, all the Andalusian biographers repeating Abū ʿAlī al-Kālī's praise, stressing that it was unparalleled even in the East (we are here at the beginning of the development of an Andalusian sense of local pride well reflected in Ibn Ḥazm's *Risāla fī faḍāʾil al-Andalus* where of course the *K. al-Dalāʾil* has a place of honour). Organised according to the *musnad* system, the *K. al-Dalāʾil* is partially preserved in three mss.: BG Rabat, no. 197 *kāf* (microfilm in the Maʿhad al-makhṭūṭāt); Ẓāhiriyya, no. 1579 = no. 41 *lugha* (microfilm in Maktabat al-Awkāf, Baghdād); Türk Evkaf Müzesi, Istanbul, no. 1682. They have been carefully described by al-Faḥḥām, who is also responsible for a partial edition of the text. Muḥammad b. Aflaḥ, *mawlā* of al-Ḥakam II, wrote a *Taʿlīk ʿalā 'l-Dalāʾil* (see M. al-Manūnī, *Thakāfat al-ṣakāliba bi 'l-Andalus*, in *Awrāk*, v-vi [1982-3], 27, no. 33). The well-documented transmission of *al-Dalāʾil* through different chains reaches up to the Andalusī Ibn Sālim al-Kalāʿī (7th/13th century).

Kāsim is described as ascetic and pious. Pressed by his father, who had been a judge in Saragossa, to accept the same post, Kāsim asked for three days to consider the matter and died in the meantime. On the basis of this anecdote, the historical value of which is open to discussion, he is credited with being a *mudjāb al-daʿwa*, for he would have succesfully asked God to spare him the dangerous office of judge.

There is information about other members of the family who specialised in the transmission of the *K. al-Dalāʾil*, for example Kāsim's son Thābit (289-352/902-63), who wrote a copy of the work for al-Ḥakam II. The last known descendant is Thābit b. ʿAbd Allāh b. Thābit b. Saʿīd b. Thābit b. Kāsim b. Thābit (d. 514/1120).

(Maribel Fierro)

SARANDĪB, the name given in mediaeval Islamic geographical and historical sources to the island of Ceylon (modern Sri Lanka). The Arabic form renders well the Skr. *Siṃhala* "Ceylon" + *dvīpa* "island"; an intermediate form is found in al-Bīrūnī, *India*, tr. E. Sachau, London 1910, i, 233, as *Sangaladīp*. By the time of Yāḳūt (early 7th/13th century), the form *Sīlān* is found (*Buldān*, ed. Beirut, i, 346, art. *Baḥr al-Hind*).

Most of the mediaeval Islamic geographers, from Ibn Khurradādhbih onwards, give some account of Sarandīb, placing it in the Sea of Harkand (= the Bay of Bengal) between India and China and describing it as the last of the Dībadjāt (an Arabised plural form of Skr. *dvīpa*), i.e. the Indian Ocean archipelagos of the Laccadives, Maldives [*q.vv.*], etc. An authority like al-Idrīsī gives an exaggeratedly large size for Sarandīb, an over-estimation going back to Ptolemy and noted by Marco Polo in his section on Seilan (Yule-Cordier, *The Book of Ser Marco Polo*, London 1903, ii, 312-30, chs. xiv-xv). For the Arab and Persian writers, the most notable feature was the island's mountain, called *R.hūn* (from Skr.) in the *Akhbār al-Ṣīn wa 'l-Hind* (written 236/851), § 5 (a text much used by subsequent writers, e.g. al-Masʿūdī, *Murūdj*, i, 167-8 = §§ 175-6, etc.), regarded as the spot to which Adam descended on his expulsion from Paradise, leaving a footprint given as 70 cubits in size. At a later time, Ibn Baṭṭūṭa was to note that Muslims, Hindus and Buddhists alike regarded the mountain as holy, with the Buddhists considering the footprint as that of the Buddha (*Riḥla*, iv, 165-85, German tr. H. von Mzik, *Die Reise des Araber Ibn Baṭūṭa durch Indien und China (14. Jahrhundert)*, Hamburg 1911, 353-67).

The *Akhbār* further states (§§ 5, 51) that Sarandīb had two kings and that it was the custom of the island that a dead king was immolated with his wives also throwing themselves on the funeral pyre, if they wished. Sauvaget observed that the detail of the two kings was known from the time of Cosmas Indicopleustes (6th century A.D.), reflecting the frequent division of power between a Singhalese monarch and a Tamil one in the north-east of Ceylon. Also mentioned are the import of wine from ʿIrāḳ and Fārs by Muslim merchants for the king to enjoy personally and to sell to his subjects, and, apparently, the existence in the forests of Ceylon of the aboriginal Vedda people.

Bibliography: See especially, J. Sauvaget, *ʾAḫbār aṣ-Ṣīn wa l-Hind. Relation de la Chine et de l'Inde*, Paris 1948, §§ 5, 51 and comm., and G. Ferrand, *Relations des voyages et textes géographiques ... relatifs à l'Extrême-Orient du VIII^e au XVIII^e siècles*, Paris 1913, see index s.v. Sirandib, with trs. of the relevant texts, to which may be added *Hudūd al-ʿālam*, tr. Minorsky, 61, § 5.2, comm. 194, and *Marvazī*, tr. idem, 46, 50. For Idrīsī's detailed account of Sarandīb and his map, see S. Maqbul Ahmad, *India and the neighbouring territories in ... al-Sharīf al-Idrīsī*, Leiden 1960, text 27-30, comm. 122-6 and Map II. For the spread of Islam there and subsequent history of the island, see CEYLON.

(C.E. BOSWORTH)

SĀRANGPUR, a small town in Central India, before Partition in the Native State of Dewās, now in the Shajapur District of the state of Madhya Pradesh in the Indian Union (lat. 23° 34′ N, long. 76° 24′ E). It is essentially a Muslim town, founded by the sultans of Mālwā [*q.v.*], but on an ancient site. It was reputedly the location of a battle in 840/1437 when Maḥmūd Khaldjī I of Mālwā was defeated by the forces of Mēwāṙ [*q.v.*], and, of more certain historicity, it was captured in 932/1526 from Maḥmūd II of Mālwā by Rāṇā Sāṇgā [*q.v.*] of Čitawr. Then in 968/1561 it was seized by Akbar from the local governor Bāz Bahādur and incorporated into the Mālwā *ṣūba* of the Mughal empire, becoming the chef-lieu of the *sarkār* of Sārangpur. After falling to the Marāṭhās [*q.v.*] in 1734, it was in 1818 restored to the Dewās State. The town contains several ruinous Islamic buildings, including a mosque with an inscription from 901/1496 by Ghiyāth al-Dīn Shāh Khaldjī.

SARĀPARDA (P., lit. "palace-curtain"), the term applied in the sources for the Great Saldjūḳs and the Rūm Saldjūḳs to the great tent carried round by the sultans, regarded, with the *čatr* or *miẓalla* [*q.v.*], as one of the emblems of sovereignty. It is described in such sources as Rāwandī, Rashīd al-Dīn and Ibn Bībī as being red, the royal colour, and as having internal curtained compartments forming rooms.

(ED.)

AL-**SARĀT** (A. "the back"), the collective name, not particularly widespread, of the chains of mountains which run from the Gulf of ʿAḳaba down to the Gulf of Aden [see AL-ʿARAB, Djazīrat, ii]. The word *sarāt* occurs quite often in the construct state, as in *sarāt al-azd*, *sarāt al-hān*, etc. In both Saudi Arabia and in Yemen, al-Sarāt separates the lowlands along the Red Sea [see AL-GHAWR; TIHĀMA] from the high plateau. The commonest view in the Arab sources is that al-Sarāt is identical with al-Ḥidjāz [*q.v.*] "the barrier". As a whole, the chains of mountains are cut up into large and small ranges which intersect in all directions. Al-Sarāt is in general treeless, with black rocky ravines, ridges, peaks and pinnacles. Breakneck paths and bridle paths, often hardly traceable on the rock, lead up to narrow gates which give access to mountain villages found on almost inaccessible heights. There are well-cultivated fields in terraces along the slopes and in the valleys, protected by a wall of large stones. The fields yield coffee, protected from the heat of the sun by shade-giving trees, grapes and sugar-cane.

The heat on the western slopes is tropical, reaching from 23° C. in January-February to daytime shade temperatures of 38° C., and frequently of 49° C., in summer (June-August). In winter some cyclones skirt the Arabian Peninsula moving southwards and providing some precipitation [see MAKKA. 3. The Modern City. Floods]. At night, the temperature drops considerably, and the mountain tops are frequently covered with snow. In March and April some rains fall, normally torrential, while the rainy period lasts from the middle of June to the end of September. A further particularity of the climate of the western slopes are the Tihāma fogs, called *umma* or *sukhaymānī*. The climate of the eastern slopes is extremely dry, but the valleys, because of the rainy seasons, have a perennial water supply and show great wealth in fruit, cereals, plants and trees.

There are only a few gaps in the al-Sarāt chains: from Yanbuʿ al-Baḥr to Yanbuʿ al-Nakhl, and via Badr Ḥunayn to Medina; from Djudda to Mecca; from al-Shuḳayya via al-Darb to Abhā [*q.v.*]; in Yemen, from al-Ḥudayda [*q.v.*] to Ṣanʿāʾ and from al-Mukhā to Taʿizz [*qq.v.*].

SARAṬĀN (A.), masculine substantive (pl. *sarāṭīn*) denoting crustaceans (*kishriyyāt*) in general and, more specifically, those which are collected for human consumption. The root *s-r-ṭ* evokes, on the one hand, the notion of eating greedily and, on the other, that of running rapidly. The form *saraṭān* serves as a substantive, also as a verbal noun and an adjective; it is only the substantive which is considered in this article. Being applied to edible crustaceans (*maḥāra*), it has undergone considerable distortions according to specific regions; thus the forms encountered include *sarṭaʿān, salṭaʿān, ṣalṭaʿān, salṭaʿūn, salʿaṭān* and *zalʿaṭān*. Alongside this term, each crustacean bears other names which often recur to denote other species.

1. The decapod crustaceans.

(1) The spider crab (*Maia squinado*): *samak ʿankabūt, durūnī, ʿuḳrāysha, midja*.

(2) The squill-fish (*Scyllarus latus*) and the mantis-shrimp (*Squilla mantis*): *zīr al-baḥr, istākūzā al-raml*.

(3) The crab (*Carcinus*): *saraṭān al-baḥr* and all the distortions of *saraṭān* mentioned above, *ʿaḳrīsha, ḳamarūn, abū ḳamrūn* from the Spanish *camaron, djanīb, bū djnīb, abū djalambū, manʿ*.

(4) The edible crab (*Cancer pagurus* or *Carcinus maenas*): *umm djnība, khumkhum, risī*.

(5) The prawn and the shrimp (*Penaeus caramote, Palemon serratus*): *abayān, irbiyān, urbiyān, rubyān, burghūth al-baḥr, naylūn, ḳumbrī, ḳunbrī, bū ḳūsa, djambarī, djammarī, bū ḳamrūn, ḳazzāzī*.

(6) The crayfish, river lobster (*Astacus fluviatilis*): *saraṭān nahrī* and all the distortions of *saraṭān* mentioned above, *gharan, djarād al-nahr*.

(7) The lobster (*Homarus vulgaris*): *saraṭān al-baḥr, zalʿaṭān baḥrī, irbiyān, urbayān, rubyān, ḥimār, bābās/pāpās, ḳarnīṭ, ḳunbār, karkand, bū maḳḳūsa, djarād al-baḥr*.

(8) The crawfish, spiny lobster (*Palinurus vulgaris*): *angust, ankūsh, istākūzā 'l-shuʿāb al-murdjaniyya* and all the names of the crab, the prawn, the crayfish and the lobster.

(9) The hermit crab, soldier crab (*Pagurus bernhardus*): *ḳaṭā, saraṭān nāsik*.

2. Literature.

Few ancient authors have discussed crustaceans. Aristotle, in his *Historia Animalium* (see *Bibl.*), offers some observations regarding the ethology of these aquatic creatures, observations which later Arab authors were content to reproduce to the letter; these include al-Djāḥiẓ, in the 3rd/9th century and, later, al-Damīrī in the 8th/14th century, in his brief article *saraṭān* (see *Bibl.*) concerning the crayfish and ancient legends relating to it. Thus finding in a village a dead crayfish, lying on its back, is a mark of protection against plagues and natural disasters. If it is attached to a fruit-tree, the latter will bear an abundant crop. In the Sea of China, a marine crustacean which comes ashore and dies of desiccation provides Chinese physicians with an ingredient for medicines designed to combat leprosy. In the same period as that in which al-Damīrī was writing, Ibn Manglī included, in his treatise on hunting (see *Bibl.*), a brief chapter on the crayfish borrowed from his contemporary. It is interesting to note that for all these ancient authors the crustaceans are not decapods, but octopods, the pair of pincers (*minḳash, minḳākh, malḳaṭ*) not being regarded as feet.

3. Permissibility of consumption.

By virtue of the Ḳurʾānic verse (V, 95/96): "You are permitted the game of the sea (*ṣayd al-baḥr*) and the food which is found there", crustaceans taken alive may, once cooked, be lawfully eaten.

4. Specific qualities.

According to al-Damīrī, the flesh of edible crustaceans is beneficial in the treatment of dorsal pains and of phthisis. Bearing on one's person the head of a crayfish prevents sleep when the moon is shining brightly, but induces sleep when there is no moon. If a crayfish is roasted and pulverised, the powder, applied to haemorrhoids, causes them to subside. If the pincer of a crayfish is applied to a fruit-tree bearing a full crop, all the fruits will fall without the slightest cause. If a crayfish is applied to a deep wound enclosing an arrowhead, the latter is easily extracted. Finally, the crayfish serves as a talisman against any bite of a snake or a scorpion.

5. Oneiromancy.

Seeing a crustacean in a dream is the sign of a person of great guile, strongly armed, very preoccupied, going far afield in search of possessions and of unsociable nature. One who dreams of eating the flesh of a crayfish could receive good things from a faraway place.

6. Astronomy.

Al-Saraṭān, "the Crayfish" or "Cancer" is the fourth zodiacal constellation containing the two stars known as "the two Pincers" (*al-zubānayān*ⁱ), these being:

(1) α (alpha) *Cancri*, mag. 4,4 (*zubānā 'l-saraṭān al-djanūbiyya*) "the southern Pincer of the Crayfish"; and

(2) ι (iota) *Cancri*, mag. 4,2 (*zubānā 'l-saraṭān al-shamāliyya*) "the northern Pincer of the Crayfish".

7. Medicine.

Al-saraṭān is the medical name currently given to the disease of cancer, with the synonym *ākila*, "the devourer", and the adjective *saraṭānī*, "cancerous".

(F. VIRÉ)

SARAWAK, a state on the west coast of the island of Borneo and a constituent part of the Federation of Malaysia since 1963. Originally the name referred to a dependency of the sultanate of Brunei consisting of the Sarawak, Samarahan and

Lundu river basins. Through a series of treaties (the first in 1841) with the Sultan of Brunei [*q.v.* in Suppl.], these territories passed to the "White Rajahs", the Brooke dynasty who administered Sarawak between 1841 and 1946. In 1946 the Brookes ceded their territory to the British Crown, and Sarawak, together with Sabah [*q.v.*], became British colonies. The wide variety of indigenous ethnic groups includes Ibans, Bidayuh (Land Dayaks), Melanau, Kayans, Kenyahs, Klemantans, Muruts and Malays. The general term "Dayak" was widely used to describe any non-Muslim peoples.

The Muslim population has generally been held to be about 20% of the total and is made up primarily of Malay-speaking riverine and coastal dwellers.

Brooke policy was to give effect to native laws and customs, and Islam was but one amongst a number of recognised law systems. There was no attempt to administer the strict principles of the *Sharīʿa* until very recently (see below). Instead, it became the practice to note down the main principles of Islam as these were seen to affect public administration, and to enforce them through administrative procedures. Marriage, divorce, inheritance and conversion were all regulated in this way.

From the early years of this century, Muslim matters were governed by the *Undang-Undang Mahkamah Melayu Sarawak* (Laws of the Sarawak Malay Court). This document was a compendium of Malay custom and amended from time to time. It never constituted a "Code of Muslim Law" but instead was directed toward the regulation of a society whose members shared recognisably Muslim values, particularly as to relations between the sexes. No hard and fast line was drawn between custom (*adat*) and the *Sharīʿa*.

It has been noted that the conflict between traditional and modernist Muslims which occurred in the Peninsular Malay states was absent in Sarawak, possibly because the small number of local religious scholars studied in Mecca, not in Cairo, the centre of late 19th century reformist ideas, and because Brooke rule isolated Sarawak Muslims from contact with the international Muslim community. Also, the *pondok* schools [see PESANTREN] which on the Peninsula provided elementary training in the Muslim sciences, were not developed in Sarawak. In 1939 a group of Malays in Kuching established the *Persatuan Melayu Sarawak* (the Sarawak Malay Association), one of whose aims was to protect Islam. The Association was banned under the Japanese Occupation of Sarawak, although there was otherwise little interference by the Japanese in the everyday affairs of Malays (Muslims).

This rather static position has been fundamentally changed from the 1980s. A Department of Religious Affairs has been established, Muslim officials have a defined status in the administrative system of the state, a *Sharīʿa* Court system is in place and *ḥadjdj* and educational finances are provided. Islam has also a political voice in state affairs as in the other states of Malaysia [*q.v.*]. *Dakwah* activity has been increasingly evident.

(VIRGINIA MATHESON HOOKER)

SARAY, or SARAI, the name of two successive capitals of the Golden Horde located on the lower Volga. Of Persian origin, *sarāy* "palace" or "court", entered Turkic in the 11th century, where it was often paired with *ḳarshi*, from the Tokharian B *kerciye* "royal palace", to designate the principal camp of a nomadic ruler (Nadelyaev, *et al.*, *Drevnetyurskiy slovar'*, 429, 488 and Clauson, *Etymological dictionary*, 664). In the Mongolian era, 13th-14th centuries, there was a further proliferation of Sarais (see, for example Galstyan, *Armyanskie istočniki*, 28) and this has given rise to considerable uncertainty and debate over the nomenclature, locale and chronology of the Golden Horde capitals.

The first of these capitals, now called Old Sarai for the sake of clarity, is located along the left bank of the Akhtuba, an eastern tributary of the Volga, near the modern village of Selitrennoe, about 125 km/77 miles north of Astrakhan. Founded by Batu, the son of Djoči, Činggis Khān's eldest son, some time after the conquests of Russia and the Ḳïpčaḳ steppe (completed around 1242), Sarai is first mentioned by name in 1254 when the Franciscan William of Rubruck visited the site on his way to Mongolia. He relates only that Sarai was newly-built by Batu and had a palace (*Mongol mission*, ed. Dawson, 207, 210). The character of the new capital is nicely evoked in Djuwaynī's depiction of Sarai as both a "camp" (*mukhayyam*) and as a "city" (*shahr*) (i, 222; Djuwaynī-Boyle, i, 267).

According to the archeological evidence, Sarai was a large complex, about four km/12½ miles in length and covering an area of 10 km². The city had a well-developed network of streets (usually defined by drainage ditches), water reservoirs, markets and substantial artisans' quarters which housed jewellers, metalsmiths and glass- and ceramics-makers. The walled villas of the wealthy were generally located on the outskirts of the city (Egorov, *Istoričeskaya geografiya*, 114-117; Fyodorov-Davydov, *Golden Horde cities*, 19-22).

The most informative literary sources on Old Sarai all date to the 1330s, just before the move of the capital upstream to New Sarai (Sarāy al-Djadīd), and consequently there has always been some dispute over which city is described in these accounts. In most cases, however, a careful reading of the source resolves the apparent ambiguity. Ibn Baṭṭūṭa, for example, begins his description of "al-Sarā" by stating that it took four days of travel to reach the capital from Ḥādjdj Tarkhān, the modern Astrakhan. Clearly, therefore, he visited Old Sarai, which is 125 km/77 miles from Astrakhan, and not New Sarai, which is a further four days' journey to the north. Moreover, the dimensions of the Sarai he depicts also confirm this conclusion; his city, like Old Sarai, is large, a half-day's ride in length (tr. Gibb, ii, 515-16), while the New Sarai, according to recent topographical studies (see below), was much smaller, barely 2 km² in area. Other contemporaneous accounts, by Abu 'l-Fidāʾ and al-ʿUmarī, also picture a large, populous city and are, in all probability, referring to Old Sarai (Abu 'l-Fidāʾ *Taḳwim*, tr. ii, i, 322-3; al-ʿUmarī, ed. Lech, Ger. tr. 146, Arabic text 81).

The city described by these authors was full of merchants and markets. European sources, such as the commercial manual of Pegolotti, correctly place Sarai on the main overland trade route leading from the Crimea to China (Yule, *Cathay*, iii, 147; cf. Bratianu, *Recherches*, 239-41). The inhabitants, as was typical of

Mongolian capitals, were diverse: Muslims and Christians and numerous ethnic groups including Alans, Circassians, Russians, Ḳîpčaḳs and Greeks, each of which, according to Ibn Baṭṭūṭa, had its own quarter and bazaar. In its early decades Sarai had a substantial Christian, mainly Orthodox, population. In 1261 a bishop was appointed to Sarai to minister to its Christian residents and visitors. This bishop also played a central role in diplomacy between the Mongols, the Russian principalities and Byzantines (*Nikon chronicle*, tr. Zenkovsky, iii, 37, 45, 63, 132; Meyendorf, *Byzantium*, 45, 46, 78, 132, 150, 185). The Orthodox presence at Sarai is reflected in the numerous finds of metal icons and other religious objects (Poluboyarinova, *Russkie lyudi*, 49-54). Over the course of time, and particularly during the early decades of the 14th century, the city took on a more Muslim character. Özbek, the khān of the Golden Horde (*r.* 1311-41), and a convert to Islam, built a *madrasa* in Sarai and successfully attracted Muslim scholars to his capital (al-ʿUmarī, ed. Lech, Ger. tr. 136, Arabic text 68). By the late 1330s when the Franciscan Pascal of Vittoria reached "Sarray", he viewed it as "a city of Saracens", and notes further that several years prior to his arrival Christian missionaries were martyred there (Yule, *Cathay*, iii, 82, 83).

The transference of the capital from Old to New Sarai took place, by the best available evidence, at the end of Özbek's reign. The issue is complicated, however, by the existence of contradictory information on the origin and name of the new capital. Muslim writers of the 14th and 15th centuries often refer to a second Sarai founded by Berke (*r.* 1257-66), the first ruler of the Golden Horde to embrace Islam. According to a tradition related by Ibn ʿArabshāh, the historian of the Tīmūrid period, Berke first constructed and then peopled his Sarai with Muslim divines as a conscious means of spreading Islam in the pagan steppe (tr. Sanders, 77-9; cf. al-ʿUmarī, ed. Lech, Ger. tr. 146, Arabic text 81). Moreover, Naṭanzī, writing in the early 15th century, refers to both a Sarāy-i Barka and a Sarāy-i Bātū (ed. Aubin, 81, 97, 366). Such terminology, however, is never encountered in earlier sources. Rashīd al-Dīn, for example, speaks of Bātū's death at Sarāy, and more significantly, of Berke's burial at Sarāy-i Bātū (ed. Karīmī, i, 122, ii, 744). Berke's capital, an island of the faith in a sea of paganism, is, in all likelihood, a pious fiction, one that has bedevilled many 19th- and 20th-century scholars who have sought to equate Sarāy-i Barka with Sarāy al-Djadīd. In reality, Sarāy al-Djadīd was built in the 1330s and became the new capital in the early 1340s when Djanibek (*r.* 1342-57) came to power. Several lines of evidence point to this conclusion. First, the earliest literary reference to New Sarai is a report of an anonymous 14th-century Mamlūk author who relates that Özbek died there in 1341 (Tizengauzen, *Sbornik materialov*, i, Russian tr. 263, Arabic text 254). Second, and even more helpful, is Ibn ʿArabshāh's statement that "between the building of Sarāy and its devastation there passed sixty-three years" (tr. Sanders, 79). Since its destruction by Tīmūr occurred in 1395, the city was founded in *ca.* 1332. The numismatic evidence also supports this chronology; minting, which began in Old Sarai around 681/1282-3, is drastically reduced after 740/1339-40, and in the following year, 741/1340-41, silver dirhams appear for the first time in Sarāy al-Djadīd. Thereafter, Sarāy al-Djadīd becomes one of the most active mints in the Golden Horde, while Old Sarai's output is limited and intermittent (Fedorov-Davīdov, *O načale monetnoy čekanki*, 83; Mellinger, *Coins of the Golden Horde*, 170-3). Lastly, extensive archeological investigation of the site shows that it was founded in the 14th century; no evidence has emerged to support an earlier date.

New Sarai, modern Tsarev, was located on the Akhtuba, just below the great bend of the Volga, about 125 km/77 miles north of Old Sarai. The area encompassed by New Sarai is well defined by a defensive ditch that encircled the city. Oval in shape, New Sarai was 1.6 km in length and 1 km wide. Inside are the remains of a modest earthen embankment with strong points guarding the main gates. In the view of the excavators, the ditch and the wall were not part of the original construction but a later addition, probably dating to the 1360s. Within the walls, the New Sarai, like the Old, had a network of streets defined by drainage ditches, along which were located individual homes. In the southeastern quarter of the city, there were a number of fenced-in villas, while the poorer classes and artisans were concentrated in the centre of the city where they often lived in earthen dugouts (*zemlyanka* in Russian). Northwest of the main city was a suburb with its own walls, streets and water supply (Fedorov-Davīdov *et alii, Arkheologičeskie issledovaniya*, 68-71). The living quarters unearthed at New Sarai reveal, not unexpectedly, an admixture of styles. The square and rectangular houses of wood and brick find their prototypes in Khʷārazm, the well-attested use of yurts in the city goes back, of course, to Mongolian-Turkic traditions, while the earthern dugouts show continuity with the local Saltovo-Mayaki culture of the 5th-10th centuries (Egorov, *Zilishča*, 172-93).

The internal history of the new capital is little known. One can infer that it was touched but not devastated by the plague which repeatedly swept through Russia and the Volga region between 1345-54 (*Nikon chronicle*, ed. Zenkovsky, iii, 157). This threat, as Mellinger has suggested, might explain the appearance of new coins in 749/1348-49 bearing the inscription Sarāy al-Maḥrūsa, "Saray the preserved [of God]" (*Coins of the Golden Horde*, 178-80). New Sarai, from the number of metal, stone, and ceramic crosses found there, also had a Christian population, and it seems likely that the "bishops of Sarai" appointed in the latter half of the 14th century, because of the continued importance of their diplomatic functions, were now stationed at New Sarai, near the court of the Golden Horde (Poluboyarinova, *Russkie lyudi*, 54-72; *Nikon chronicle*, ed. Zenkovsky, iii, 242, iv, 14, 135, 139).

New Sarai was buffeted by the growing turmoil within the Golden Horde. Under Mamai, a non-Činggisid general who attempted to control the Horde through puppet rulers, the capital became a major centre of resistance to his rule. In 1361, according to a Russian source, "the Lords of Sarai" rebelled, "fortified Sarai", elevated a khān of their own, and in the following year fought a battle with the forces of Mamai (*Nikon chronicle*, ed. Zenkovsky, iii, 189). Apparently it is these events that produced the ditch and embankment uncovered by Soviet archeologists at New Sarai. Mamai later met defeat at the hands of the Moscovite Principality in 1380 and Toktamïsh, a Čingisid from the eastern wing of the Djočid line, seized control of the Golden Horde with the support of Tīmūr. According to Russian and Turkish sources, he occupied "Sarai" where he was formally enthroned (*Pamyatniki literaturï drevney Rusi*, 191, 192; Abu 'l-Ghāzī Bahādur Khān, *Histoire*, tr. Desmaisons, 171). That New Sarai is probably meant here is supported

by the fact that Toktamīsh issued considerable coinage at Sarāy al-Djadīd throughout his reign. But since coins were also minted at Sarai at this time, a measure of ambiguity remains (Mukhamadiev, *Monetnaya sistema*, 147, 152). In this connection, however, it is important to consider that for the Mongols the concept of a single and fixed capital had far less significance and meaning than it did for sedentary peoples and that they continued their nomadic lifestyle long after the empire was founded. The elder Polos, for example, met Berke in the vicinity of Oucaca (Ükek), a summer pasturage halfway between Sarai and Bulghar, and Russian sources indicate that Özbek had a camp as far west as the Sea of Azov (Marco Polo, ed. Moule and Pelliot, i, 74, 76; *Nikon chronicle*, tr. Zenkovsky, iii, 104). This pattern persisted into the later 14th and 15th centuries, for the extant *yarlïks* (decrees) of the Golden Horde clearly reveal that its rulers were still on the move, making annual rounds (Usmanov, *Žalovannïe aktï*, 264-5). For the Mongols, their successive capitals, Old and New Sarai, were much enlarged winter camps which housed them for only part of the year (see al-ʿUmarī, ed. Lech, Ger. tr. 147, Arabic text 83; cf. also Györffy, *Système des résidences*, 48-53, 135). This is why the Russian chroniclers, who report endless official trips to the Khān, always say that their prince went to the *orda*, never to Sarai, for they well understood that the actual "capital" of the Horde was wherever the moving camp (*orda*) of the Khān was located at a given point in time.

The rapid decline of the Golden Horde, quite visible by the last decades of the 14th century, had immediate and disastrous repercussions for all the Golden Horde cities of the Volga basin. When Toktamīsh and his patron Tīmūr fell out, the latter launched a major punitive campaign which culminated in the winter of 1395 with the destruction of Hadjdj Tarkhān and New Sarai, or Sarai the Great (Saray Velikiy) as the Russian "Story of Temir Aksak" has it (*Pamyatniki literaturï drevney Rusi*, 232, 233). According to Tīmūrid historians, Sarai and its surrounding districts were sacked, levelled and set ablaze (Sharaf al-Dīn ʿAlī Yazdī, ed. ʿAbbāsī, i, 552; Niẓām al-Dīn Shāmī, ed. Tauer, i, 164). Yet despite the claims of total devastation, these cities were at least partially rebuilt. In the reign of the Khān Muḥammad (1421-45) Hadjdj Tarkhān, Sarāy al-Djadīd and Sarai were again issuing a limited number of coins (Mukhamadiev, *Monetnaya sistema*, 157).

The final destruction of the Golden Horde capitals can be dated to the last half of the 15th century. Afanasiy Nikitin, a Russian merchant who traversed the entire length of the Volga in 1466, mentions only one Sarai in his detailed itinerary (Nikitin, *Khoženie*, 11, 34, 53, 71). By this time, evidently, one of the two capitals had already faded into obscurity. And the survivor, whatever its identity, was soon under attack. In 1471 troops from the Russian town of Vyatka raided down the Volga, temporarily occupied Sarai, seized much booty, and successfully returned home (*Iosafovskaya letopis'*, ed. Zimin, 73). Another Russian raid came in 1480, and in the following year the Siberian and Noghai Tatars joined forces and systematically pillaged all the camps of the Great (Golden) Horde "between the Don and Volga" (*Kazanskaya istoriya*, ed. Moiseeva, 56; *Ustyužskii letopisnïi svod*, ed. Serbina, 93-4). The Golden Horde had been dealt a crippling blow from which it never recovered and Sarai, its long-time capital, departs from the historical stage.

Well-known and important cities in the Islamic world and Eastern Europe, the fame of the Sarais spread much further afield. Chaucer, in *The Squire's Tale* refers to "Sarray in the Land of Tartarye" and Sarai/Sarra appears on European maps in the 1320s with anachronistic references as late as the 17th century. Fra Mauro's world map of 1459 even registers the two Sarais, the "great" and the "small" (Tardy, *Contribution*, 182, 184, 185-6, 189, 190, 206, 212, 217).

(T.T. Allsen)

SARĀY (p.) (from an Old Persian form **srāda*, root *Θrā* "to protect") means in Persian dwelling, habitation or house. The word is frequently compounded with another substantive to indicate a particular kind of building. The best known example is *kārwān sarāy* "caravanserai", a roadside stopping-place for caravans [see KHĀN]. Similarly, the *Djannat-sarāy* added to the northern part of the shrine at Ardabīl by the Ṣafawid Shāh Ṭahmāsp I *ca.* 947/1540 is a domed octagonal building used for Ṣūfī gatherings and prayer (A.H. Morton, *The Ardabīl shrine in the reign of Shāh Ṭahmāsp I*, in *Iran*, xii [1974], 31-64, and xiii [1975], 39-58, no. C). The word *sarāy* was extended to refer to the seat of government and the residence of a prince. It could refer to a town. Aḳ Sarāy [*q.v.*], for example, is a town in inner Anatolia with a castle built by the Saldjūḳ sultan of Rūm, Ḳïlïdj Arslan II (r. 551-88/1156-92). Seray Berke [*q.v.*], capital of the Blue Horde in southern Russia, takes its name from its founder Berke (r. 655-65/1257-67). The most common meaning of *sarāy*, however, is palace, and this article is a general review of Islamic palaces. It includes examples known by other names, but concentrates on those in the eastern Islamic lands, where the word *sarāy* is common and on those that are not published elsewhere in the *Encyclopaedia of Islam*.

In early Islamic times [see ARCHITECTURE], palaces were known in Arabic by various terms, including the rare *balāṭ* [*q.v.* in Suppl.], derived from the Latin *palatium*. A more common term was *ḳaṣr*, used for Umayyad desert palaces and frontier forts. Ḳaṣr al-Ḥayr al-Gharbī [*q.v.*], for example, was an Umayyad castle, and Ḳaṣr al-Ḥayr al-Sharḳī [*q.v.*], an Umayyad agricultural settlement. These fortified residences were square, two-storeyed structures, usually 35 or 70 m per side, with apartments of several rooms opening on to a central court. They are remarkable for their elaborate decoration, including floor mosaics, paintings, and carved stuccoes, and the fancier establishments formed part of larger complexes with mosques, baths, dams and other buildings. The biggest, the palace at Ukhayḍir [*q.v.*] in southern ʿIrāḳ, is generally considered to be somewhat later (late 8th century) and is distinguished not only by its larger size (112 × 82 m) but also by its inventive vaulting and extensive decoration in carved stucco and brick laid in geometric patterns. Many of these residences can be considered to continue the Late Antique tradition of the *villa rustica*, centres of agricultural exploitation and private pleasure away from the prying eyes of the urban establishment. The square forms were repeated extensively in Central Asian palaces of the feudal aristocracy [see DIHḲĀN]. Their residences, known as *kūshk*, were mud-brick buildings with a central court or domed hall surrounded by living quarters.

In contrast to these rural establishments from early Islamic times, many of which are still standing, contemporary urban palaces are known primarily through texts and identified by other names. One was *ḳubbat al-khaḍrāʾ*. This was the name of the palace erected at Damascus by the first Umayyad caliph Muʿāwiya (r. 41-60/661-80), and it reoccurs frequently in early Islamic times, for example at the palace erected by the ʿAbbāsids in their new capital at Baghdād, founded in 156/962. Although often translated as "Green Dome", referring to an oxidised copper coverning over a wooden dome, the term is better translated "Dome of Heaven", referring to the long-standing Mediterranean tradition of a heavenly dome over the ruler's throne.

Another type of urban palace was the Dār al-Imāra ("House of Government"), usually built adjacent to the congregational mosque to allow the governor ready access. The Dār al-Imāra erected by Saʿd b. Abī Waḳḳāṣ [*q.v.*] at Kūfa in 17/638 just after the conquest of ʿIrāḳ was excavated between 1935 and 1956 by the Iraqi Directorate of Antiquities. It was a square building (12,100 m square, or 110 m on a side) enclosing a large courtyard with *īwāns* on three sides and a triple-aisled hall and domed room on the south. The Dār al-Imāra erected by Abū Muslim at Marw in 129/747 is known through textual descriptions. It was also a square building, but had a central domed chamber surrounded by four *īwāns* that opened on to four courts.

With the founding of Sāmarrāʾ [*q.v.*] by the ʿAbbāsid caliphs in the 3rd/9th century, Islamic palaces changed dramatically and became significantly broader and lower. The gargantuan 176-ha palace founded by the ʿAbbāsid caliph al-Muʿtaṣim at Sāmarrāʾ in 221/836 was known as the Dār al-Khilāfa and later as the Djawsaḳ al-Khāḳānī. Excavated by the German Samarra Expedition of 1911-13 and surveyed since 1983 by the Iraqi Directorate of Antiquities, the site included immense gardens and two main palatial units. The southern one, used for public audience, was a square building (180 × 200 m) with a monumental gateway (Bāb al-ʿĀmma), throne halls, rooms and a large courtyard on the east. The northern one, used for private residence, had a smaller square reception hall and residential apartments. The palace built by al-Mutawkkil two decades later was on a similar scale and had a corresponding division between spaces for public audience and private residence. These sprawling palace-cities with *īwāns* connecting closed and open spaces allowed visitors to process in an ascending crescendo towards the ruler, and the magnificent wall decoration, known from contemporary descriptions and fragmentary remains, was intended to underscore the ruler's power and majesty.

ʿAbbāsid palaces set the model throughout the Islamic world in the mediaeval period, and other rulers copied not only the architectural units—two juxtaposed rectangular halls or four *īwāns* around a court—but also the sprawling spaces divided into public and private realms. The palace-city founded in 325/936 by the Umayyads of Spain outside Cordova at Madīnat al-Zahrāʾ [*q.v.*], which has been excavated and reconstructed by the Spanish since 1911, was laid out on the slopes of the Sierra Morena in a series of cascading terraces that took advantage of the site. From gardens in the lower zone, one ascended to workshops and court buildings in the middle zone and then to the Alcazar in the highest zone, which contain-

ed the *dār al-mulk*, the private quarters of the caliph and his close associates. The large scale (the site measured some 1500 by 750 m or 112 ha) and layout, like the rich decoration, was meant to project the Umayyad caliph's role, as had the ʿAbbāsid palace at Sāmarrāʾ.

The two palaces built by the Fāṭimid caliphs in their new city of al-Ḳāhira [*q.v.*] were smaller but also splendid establishments. They flanked the main north-south road through the city, which became known as Bayn al-Ḳaṣrayn. The Great Eastern Palace built for the caliph al-Muʿizz (r. 341-65/953-75 [*q.v.*]) reportedly covered 10 ha and had 12 pavilions; the Small Western Palace built for his successor al-ʿAzīz (r. 365-86/975-996) was set in front of a vast garden. The Fāṭimid palaces were destroyed and the sites built over after the Ayyūbids transferred the seat of power to the citadel. The palace and state buildings were located in the southern enclosure constructed in the second half of the 7th/13th century. The most impressive unit was the dome chamber of the Dār al-ʿAdl, built by the Mamlūk sultan al-Nāṣir Muḥammad in 733/1333-4. It survived until the 19th century, when it was cleared to make way for the Mosque of Muḥammad ʿAlī. The citadel, with palace and other establishments for the rulers, was a common feature of cities in the Levant during the mediaeval period which can be found in Damascus, Aleppo and elsewhere.

Palaces in the eastern Islamic lands also repeated many of the same ideas established under the ʿAbbāsids. Three mud-brick palaces were built at La<u>sh</u>karī Bāzār [*q.v.*], a royal suburb that extended six km northwards from Bust along the east bank of the Helmand River. Begun as a garden development in the 4th/10th century and expanded in the 5th/11th and 6th/12th centuries, the site was excavated by the French in the 1940s and 1950s (D. Schlumberger *et alii, Lashkari Bazar. Une résidence royale ghaznévide et ghoride*, Méms. DAFA, xviii [1978]; see also the important considerations by Terry Allen, *Notes on Bust*, in *Iran*, xxvi-xxviii [1988-90]). The earliest was the small Centre Palace, erected along the river bank with a nearby pavilion and large garden to the east. It may be the *kū<u>sh</u>k* erected by the Ṣaffārid Ṭāhir at the beginning of the 4th/10th century and is unrelated to the larger and better known South Palace, assigned to the reign of the <u>Gh</u>aznawid Maḥmūd (388-421/998-1030). In both plan—a large rectangle enclosing a central courtyard with *īwāns* on the four sides—and decoration—panels of stucco carved in relief—the South Palace at La<u>sh</u>karī Bāzār copies the Mesopotamian prototypes used at the ʿAbbāsid palaces at Sāmarrāʾ. Its most distinctive feature is a second *īwān*-hall lying beyond the north *īwān* and overlooking the river. The grandest reception room in the palace, it had a dado painted with a frieze of attendants and walls revetted in baked brick and carved stucco in geometric patterns and inscription bands. The third palace at the site, the poorly-known North Palace, was a large rectangular enclosure containing three self-contained buildings, each with a central courtyard.

The plan of *īwāns* grouped around a courtyard, and rich decoration in carved stucco and painting, continued to be hallmarks of palaces erected in the 5th/11th and 6th/12th centuries at other sites in the eastern Islamic lands under later <u>Gh</u>aznawids and their local representatives. For example, the large palace erected by Masʿūd III (r. 492-508/1099-1115) to the east of <u>Gh</u>azna [*q.v.*] had a rectangular court (50 × 32 m) paved in marble and surrounded by 32 niches and *īwāns* on the four sides, with an additional throne room beyond the south *īwān*. Excavations uncovered an extraordinary inscription in floriated Kūfic that extends for 250 m around the court. The text is a Persian poem extolling the virtues of the sultan and the glories of his palace and was composed specifically for the new construction (A. Bombaci, *The Kūfic inscription in Persian verses in the court of the Royal Palace of Masʿūd III at Ghazni*, Rome 1966). Similarly, the palace erected by local rulers in the northern suburb of old Tirmi<u>dh</u> [*q.v.*] on the right bank of the Oxus River comprised several buildings grouped around a courtyard. Excavations by the Termez Archaeological Expedition (TAKE; 1936-8) and others have yielded rich decoration in carved stucco, including panels with animals and other zoomorphic motifs. The palace built in the late 3rd/9th or early 4th/10th century at Hulbuk, capital of the mediaeval province of <u>Kh</u>uttalān [*q.v.*] on the Kyzyl (A<u>khsh</u>) River in southern Tajikistan, was rebuilt three times, and each time the carved stucco panels and murals were renewed. The site, excavated since the 1960s, has yielded more than 5,000 panels and fragments of carved stucco, with an exceptionally diverse range of geometric, floral and epigraphic motifs (E. Gulyamova, *Reznoy <u>sh</u>tuk <u>Kh</u>ul'buka, Material'naya kul'tura Tad<u>zh</u>ikistana*, iii [1978], 186-202).

Nothing has survived of Sal<u>dj</u>ūḳ palaces in Persia, but they probably provided the models for the palace parks built by the Sal<u>dj</u>ūḳs of Rūm in the 7th/13th century in or near Konya, Kayseri and Alanya. They had multi-storey pavilions commanding fine views, often over a nearby lake, and were resplendently revetted in glazed tiles. A riparian view also provided the setting for the contemporary Ḳara Sarāy ("Black Palace"), the palace built by the Atabeg Badr al-Dīn Luʾluʾ at Mawṣil between 630/1233 and 657/1259 (F. Sarre and E. Herzfeld, *Archäologische Reise im Euphrat- und Tigris-Gebiet*, Berlin 1920, ii, 239-49). Although much of the palace was destroyed in the 1980s, it was a two-storey masonry construction with *īwāns* grouped around a central court and had fine decoration in carved stucco. It is one of the few examples of a *sarāy* in the Arab lands, but in its foundation inscription (*RCEA*, no. 4451) it was simply called *bināʾ* ("building" or "structure"), and the name Ḳara Sarāy is probably modern.

With the advent of the Mongols, the tent, often set in a garden, became a major form of palatial architecture [see <u>KH</u>AYMA]. These portable structures with rigid supports covered with fabric have not survived, but textual descriptions and depictions in later book paintings show that they were large and elaborately decorated ensembles. For example, the tent that Hülegü used when he ascended the throne near Bal<u>kh</u> was made of gold-on-gold material and attached by a thousand gold nails; it included an elevated pavilion and a magnificent audience hall decorated with gold and silver gem-studded vases (Ra<u>sh</u>īd al-Dīn, *<u>Dj</u>āmiʿ al-tawārī<u>kh</u>*, ed. and tr. É. Quatremère, *Histoire des Mongols de la Perse*, Paris 1836, repr. Amsterdam 1968, 159-65). The ruler's large tent supported by guy ropes (*bārgāh*) was often combined with a trellis tent (*<u>kh</u>argāh*) which served as a private chamber. These tents made fitting palaces for rulers: a trellis tent that belonged to the Aḳ Ḳoyunlu ruler Uzun Ḥasan (r. 857-82/1453-78 [*q.v.*]) had a wooden door painted in red and blue with scenes of fighting beasts and was covered with blue cloth and trimmed with red silk.

The tent was not the only type of palace used in the later period, however, and other palaces built of more permanent materials continued forms and decoration used earlier. The large and elaborately decorated

hunting lodge uncovered by German excavations in the early 1960s at Takht-i Sulayman, to the southeast of Lake Urmiya, was begun *ca.* 673/1275 by Abaḳa on the foundations of the Sāsānid sanctuary of Shīz [*q.v.*], the site where the Sāsānid emperors were crowned. The palace had an artificial pond in the centre of a large courtyard (125 × 150 m) surrounded by porticoes and four *īwāns* and lavish decoration in carved marble and lustre and *lādjwārdīna*; and a balcony supported on wooden columns afforded a fine view of the pond (R. Naumann, *Die Ruinen von Tacht-e Suleiman und Zendan-e Suleiman*, Berlin 1977). Textual descriptions and depictions in contemporary paintings show that other Il Khānid palaces also used the *īwān* plan and had elaborate decoration. By the Mongol period, the word *sarāy* was increasing applied to palaces, even those built earlier. The Il Khānid historian Ḥamd Allāh Mustawfī al-Ḳazwīnī, for example, referred to the palace that the Būyīd ʿAḍud al-Dawla (r. 367-72/978-83) had built in eastern Baghdād as *sarāy-i sulṭān* ("palace of the sultan"; *Taʾrīkh-i Guzīda*, ed. Nawāʾi, Tehran 1339, 415). An enlarged and rebuilt version of the one his father Muʿizz al-Dawla had founded, the palace, which is totally destroyed, had a great court surrounded by domed porticoes, halls for audience, residences, and gardens.

The Tīmūrids continued to use both the tent and the structural palace, and the word *sarāy* was also used with a qualifying adjective of colour to refer to a major palace or citadel. The most famous Tīmūrid example is the Aḳ Sarāy ("White Palace"), the palace that Tīmūr built between 781 and 798/1379-96 in his birthplace, Kish [see KASH], later known as Shahr-i Sabz ("The Verdant City"). The palace was located in the northeast quadrant of the new walled enclosure, and its façade faced north towards Samarḳand, the chief city of the realm. All that remains is the colossal entrance portal (*pīshṭāḳ*) with a vault 22 m wide, but from the description by the Spanish ambassador Ruy Gonzales de Clavijo, it is possible to reconstruct the plan of a courtyard building with four axial *īwāns*. The name, which was used in contemporary sources, cannot refer to the actual colour of the building, which was resplendent with coloured tiles, but is thought to signify "aristocratic" (L. Golombek and D. Wilber, *The Timurid architecture of Iran and Turan*, Princeton 1988, no. 39). The Gök Sarāy ("Blue Palace") that Tīmūr built at Samarḳand *ca.* 802/1400 was a four-storey palace that has been destroyed. Suburban palaces were often called *bāgh*, meaning a park or estate with buildings and gardens; other terms used in the Tīmūrid period include *takht*, meaning a pavilion with a view, *khāna* and *manzil* ("residence"), and *kūshk* or *ḳaṣr*, some of which were larger than kiosks or pavilions (T. Allen, *A catalogue of the toponyms and monuments of Timurid Herat*, Cambridge, Mass. 1981, nos. 405 and 206)

The palace precinct laid out between 998/1590 and 1020/1611 by the Ṣafawid Shāh ʿAbbās I in his new capital at Iṣfahān continues many Tīmūrid traditions, especially the unfortified exterior and the garden setting dotted with pavilions, but most of the structures were built of masonry, and not fabric tents. The precinct, sandwiched between the *Maydān-i Shāh* ("Royal Square") and the *Čahār Bāgh*, the boulevard with trees and water channels that leads south across the Ziyānda River, was divided into two zones. A more public zone near the *maydān* contained workshops and administrative offices, while a more private residential area behind it contained gardens with small open pavilions. These were often known as *hasht bihisht* ("Eight Paradises"), from their plan—an octagon with eight rooms or apartments arranged around a large central hall. The form copies now-vanished Tīmūrid models, known from other buildings such as the *Çinili Köşk* ("Tiled Kiosk") added to the Topkapı Palace in Istanbul in 878/1473 and the Hasht Bihisht, the palace that the Aḳ Ḳoyunlu ruler Yaʿḳūb built at Tabrīz in 892/1486. The name was popular in the Ṣafawid period, as in the pavilion built in Iṣfahān by Sulaymān I/Ṣafī II (r. 1077-1105/1666-94), and many smaller examples. Columnar porches were another popular design for Ṣafawid palaces, found in Iṣfahān at the Čihil Sutūn and repeated at Khīva, where the Tash Ḥawli ("Stone Courtyard") palace (1830-8) incorporated several pillared porticoes arranged around courtyards within its 163 rooms.

Many of these Tīmūrid and Ṣafawid forms were copied in the palaces built under the Mughals in the Indian subcontinent, but they were incorporated inside walled palace-fortresses and executed in local materials, particularly red sandstone contrasted with white marble. In general, a main gate led to a long bazaar which gave on to the courtyard and hall for public audience. This public area was separated from a more private one that had courtyards with pavilions, often called *maḥall* (*q.v.* for an extensive discussion of both pavilions and their setting; and see MUGHALS. 7. Architecture, for a discussion of chronological and stylistic developments). Buildings were laid out to take advantage of topography and setting. At Fatḥpūr Sīkrī [*q.v.*], Abkar's fiat city (979-93/1571-85), for example, the tallest building, the five-story pavilion with domed kiosk now known as the Pandj Maḥall ("Palace of Five [Levels]"), demarcates public space from private; in the Red Fort (1048-58/1639-48) built by Shāh Djahān in his suburb of Shāhdjahānābād [see DIHLĪ. ii], the private pavilions overlook the Yamunā or Jumna River. The looser arrangement of earlier sites, such as the Red Fort at Āgra, became increasingly regularised, as at Fatḥpūr Sikrī, and especially at Shāhdjahānābād. This greater attention to symmetry and axiality underscores the increasing role of ceremonial in Mughal life.

Unlike the Ṣafawids and Mughals, who built numerous palaces in several places, the Ottomans maintained their court in a single palace, the *Saray-i humayūn*, founded by the Ottoman sultan Meḥemmed II [*q.v.*] after the conquest of Constantinople in 857/1453 and used as the primary residence of the Ottoman sultans until the 19th century. Although commonly known today as the Topkapı Seray after a shore pavilion built near a gate of that name, until the 19th century it was called in Ottoman sources *sarāy-i djedīd-i ʿāmire* ("New Imperial Palace") or *yeñi sarāy* ("New Palace") to contrast it to the *eski sarāy* ("Old Palace"), the first palace that Meḥemmed had built in the centre of city, and to the Tekfūr Sarāy, the Byzantine palace (Gülru Necipoğlu, *Architecture, ceremonial, and power: the Topkapi Palace in the fifteenth and sixteenth centuries*, New York and Cambridge, Mass. 1991, 4). Set on a magnificent promontory on the tip of the peninsula overlooking the Bosphorus and the harbour of the Golden Horn, the palace comprises an outer precinct or park, known as the First Court, and an inner precinct of three courts constituting the palace proper. A line of three great portals leading into the First, Second, and Third Courts provided a major ceremonial axis to the audience hall (T. *ʿarḍ odasī*) set beyond the third portal. Behind were gardens with pavilions, and to the left were several residences with courtyards, including several for the sultan's harem.

The separation of men's and women's quarters was picked up in European languages, where several loanwords from *sarāy*, such as the Italian *seraglio* and the French *sérail* are sometimes found with the meaning "harem".

The palace-city was also developed in the western Islamic lands, as at the Alhambra, built up in the 7th/13th and 8th/14th centuries outside Granada [see GHARNĀṬA. Monuments. B]. One of the best preserved and most popular examples of an Islamic palace, it is actually a series of palaces, including the more public Comares Palace with its audience hall and the more private Palace of the Lions.

The arrangement seen at the Alhambra reappears in palaces built later in the western Islamic lands. The ruined Badīʿ Palace, built at Marrākush [*q.v.*] by the Saʿdian ruler Aḥmad al-Manṣūr (r. 986-1012/1578-1603) for official receptions, for example, is an inflated version of the Court of the Lions. The biggest was the palace-city built by the Filālī ruler Ismāʿīl (r. 1082-1139/1672-1727) at Miknās [*q.v.*], where seven km of thick mud-brick walls with bastions enclose three separate palaces, each comprising several smaller palaces of differing arrangements as well as pavilions, mosques, barracks, prisons, stables, granaries, olive presses and huge pools to water the extensive gardens (M. Barrucand, *Urbanisme princier en Islam: Meknès et les villes royales islamiques post-médiévales*, Paris 1985). The scale is far grander than at the Alhambra, and the site was so large that the palaces were never finished. Pisé, made from the ever-available earth, was the main material of construction, but other materials, such as columns and marbles, were salvaged from other sites or imported.

In the 18th and 19th centuries, palaces in the Islamic lands were often built on European models or incorporated features of Western architecture, such as monumental stairways, tall windows, engaged pilasters, and landscape murals. Dolmabahçe Palace, the Ottoman palace built on the shore of the Bosphorus in 1853-5 to replace Topkapı Palace, had an opulent double staircase with rock crystal balustres, the first ceremonial staircase to survive since the Bāb al-ʿĀmma at Sāmarrāʾ. The Ḳādjār dynasty of Persia continued the practice of seasonal migration that the Il Khānids and Tīmūrids had maintained and had palaces throughout the country. Fatḥ ʿAlī Shāh (r. 1212-50/1797-1834) enlarged the Gulistān Palace in Tehran, a rambling series of buildings and gardens within a walled enclosure that served as winter residence and administrative centre, by adding the Takht-i Marmar, a columnar audience hall on the form of a traditional *tālār*. To cater for his peripatetic lifestyle, he also established many summer palaces, often terraced structures set in elaborate gardens, including several in hillside villages subsequently incorporated in the northern suburbs of Tehran. His palaces were often decorated with large murals depicting the Shāh and his court. The largest was a mural painted by ʿAbd Allāh Khān in 1812-13 to decorate the Nigāristān Palace; it showed the ruler enthroned in state with 118 life-size figures. The spate of palace construction continued under Nāṣir al-Dīn (r. 1264-1313/1848-96), but the elegant symmetry typical of Fatḥ ʿAlī Shāh's work was abandoned and European elements, such as pilasters and tall windows, were added to traditional features such as coloured tilework, ornately carved stucco, and mirror mosaic.

SARBADĀRIDS, the name given to the rulers of the Bayhaḳ (Sabzawār [*q.v.*]) region of Khurāsān and a section of their followers, in the half century between the death of Abū Saʿīd [*q.v.*] and the conquest of Persia by Tīmūr [*q.v.*]. (On the name, often also found as Sarbadāl ("refactory"), see e.g. Nawāʾī, note in Samarḳandī, 432.) The Sarbadārid régime has been variously viewed as a robber state, a social revolutionary movement animated by a strong Mahdist impulse, and a type of Shīʿī "republic" (see Roemer, 38-9). It can most usefully be seen as an attempt at self-government among the indigenous population of western Khurāsān, faced with the disintegration of Mongol rule.

The Sarbadārid uprising started in Bāshtīn, in the district of Sabzawār, on 9 Shaʿbān 737/13 March 1337 (Faryūmadī, 347; cf. Samarḳandī, 147). ʿAbd al-Razzāḳ, son of a respected local notable, murdered a tax official and, in an effort to forestall the consequences, rose in revolt. The readiness of others to follow ʿAbd al-Razzāḳ, who is painted as a rash and abusive character, and later his more sophisticated brother, Wadjīh al-Dīn Masʿūd, can and has been explained by the financial oppression of the *wazīr* of Khurāsān, ʿAlāʾ al-Dīn Muḥammad (Āmulī, 181-2). ʿAlāʾ al-Dīn's exactions were driven by the need to finance the aspirations of the Čingizid pretender Ṭughāy Tīmūr, whose vain efforts to impose himself as heir to the Īlkhānate depleted Khurāsān's resources and caused the Mongol leaders to neglect the Sarbadārid uprising until it was too late.

ʿAbd al-Razzāḳ was himself devoid of any great political purpose, but was able to gain control of Sabzawār (12 Ṣafar 738/9 September 1337), where several members of ʿAlāʾ al-Dīn's family were killed (Faryūmadī, 347, 326). ʿAbd al-Razzāḳ's immoral behaviour led to his death late in 738/June 1338 at the hands of his brother Masʿūd, who represented the wider ambitions of the rural landowners of the region, anxious to throw off Mongol rule. The growing band of soldiers, young men and *ʿayyārs* [*q.v.*] who eagerly joined him were rewarded by an egalitarian distribution of the spoils gained from a series of raids, directed particularly against the Djaʾun-ī Ḳurbān, which culminated in the capture of Nīshāpūr (Āmulī, 182).

More significantly, Masʿūd sought to strengthen

the rather flimsy bases of his authority, and also to attract further support, by involving Shaykh Ḥasan-i Djūrī, a disciple of the Māzandarānī Shīʿī *darwīsh*, Shaykh Khalīfa, in his cause. Although there seems little doubt that Djūrī had not become master of a radical underground movement, he recognised that the grievances of his adherents and of the oppressed Muslims of Khurāsān in general could best be represented if he associated himself with the protests being voiced by the outlaws of Sabzawār. Thus began the uneasy alliance between the Sarbadārids and the Shaykhīs that gives the régime its distinctive character (Aubin, in *StIr*, v/2 [1976]).

Ṭughāy Tīmūr, in whose name coins had continued to be minted, even in Sabzawār (Masson Smith, 109, 201), could no longer afford to ignore the Sarbadārids, and after an exchange of messages that reflected the new religious dimension contributed by Ḥasan-i Djūrī (Mīrkhwānd, 614), the two sides met near the Gurgān river. Ṭughāy Tīmūr's army was routed. ʿAlāʾ al-Dīn Muḥammad, his *wazīr*, was pursued and killed in Kābūd Djāma on 23 Shaʿbān 742/1 February 1342 (Ibn Yamīn, 569). The Sarbadārids now coined in the name of Ṭūghāy Tīmūr's rival Sulaymān, the protégé of the Čūbānids [*q.v.*], and sought to expand their domains further at the expense of the Karts [*q.v.*] of Harāt. This evidently coincided with a crisis in the relationship between Masʿūd and the Shaykhīs, for during a battle near Zāwa on 13 Ṣafar 743/18 July 1342 (Ibn Yamīn, 570), Ḥasan-i Djūrī was killed, allegedly on Masʿūd's orders (Faryūmadī, 348), turning victory into defeat. Undeterred, Masʿūd soon launched an invasion of Rustamdār and Māzandarān, but the campaign ended in disaster, and he was killed in Dhu'l-Ḳaʿda 743/April 1343 (Āmulī, 183-9; Faryūmadī, 348). The following year, coins in Ṭughāy Tīmūr's name were again minted in Dāmghān, which had previously passed out of his control.

The leadership was now assumed by one of Masʿūd's commanders, Muḥammad Aytīmūr, who was obliged to acknowledge once more the sovereignty of Ṭughāy Tīmūr. Although he had shown himself a competent ruler, he was murdered at the instigation of the *darwīshs*, in Muḥarram 747/April 1346 (Faryūmadī, 348), who perhaps favoured a more aggressive policy. This inaugurated a period of instability as the Sarbadārs, broadly loyal to the family of Masʿūd Bāshtīnī, and defending the interests of the Sarbadārid troops, vied for power with the *darwīshs*, whose chief spokesman (though not their spiritual leader), Khwādja Tādj al-Dīn ʿAlī b. Shams al-Dīn Čishumī, finally agreed to become ruler (16 Shaʿbān 748/21 November 1347; Faryūmadī, 348). Tādj al-Dīn ʿAlī brought a measure of order to Sarbadārid affairs. He issued the first independent Sarbadārid coinage (748/1348), Sunnī in type, and followed a programme of economic and moral reform designed to appeal to the wide range of opinion contained within the Sarbadārid state (Masson Smith, 130-2). In general, he was also able to reach agreements with his various neighbours. In 752/1351, following the incorporation of Harāt into the Čaghatayid sphere of influence, ʿAlī deemed it prudent to mint coins once more in the name of Ṭughāy Tīmūr. This appeasement of the Mongols, in top of his own autocratic methods, led to his murder on 28 Shawwāl 752/18 December 1351 (Ibn Yamīn, 571).

One of the assassins, Yaḥyā Karrābī, a landed proprietor of the district, resumed military hostilities and after several confrontations with Ṭughāy Tīmūr, whose *ordū* was weakened by the Black Death, he feigned a willingness to make peace and treacherously murdered the last of the Čingizids in his camp at Pul-i Ḥadjdjī Khātūn, near Sulṭān Duwīn, on 16 Dhu'l-Ḳaʿda 754/13 December 1353 (Dawlatshāh, 237-8). Karrābī later came to terms with the Mongol rulers of eastern Khurāsān, in a coalition against the *malik* of Harāt, but was almost immediately murdered, on 10 Muḥarram 759/23 December 1357 (Ibn Yamīn, 568; Aubin, in *Turcica*, viii [1976], 39-41).

Another period of instability followed, again marked by a series of coups and political murders, the precise chronology of which remains elusive; even the most reliable sources are inconsistent and mutually incompatible. This may partly be due to the difficulty (even for contemporaries) of distinguishing the nominal from the actual periods of power enjoyed by the different leaders, the two most prominent of whom, Ḥaydar-i Ḳaṣṣāb and Ḥasan-i Dāmghānī, both installed their own candidates before seizing power. One of these, Luṭf Allāh son of Wadjīh al-Dīn Masʿūd, was the last member of this family to rule. Internal divisions spawned external threats. Amīr Walī, son of the former governor of Astarābād, took advantage of the situation to extend his control in the area, ostensibly on behalf of Ṭughāy Tīmūr's son Luḳmān. He defeated the forces sent by Ḥaydar-i Ḳaṣṣāb and was able to issue coins in his own name in Astarābād in 759/1358 (Morton, 257). A large force led by Ḥasan-i Dāmghānī was also defeated (Faryūmadī, 330). Dāmghānī faced further difficulties. Darwīsh ʿAzīz, a follower of Ḥasan-i Djūrī, installed himself in Mashhad, where his devotions attracted followers. With their support, he rose in revolt and seized Ṭūs. Contrary to some assertions, there is no numismatic evidence that he tried to establish a Mahdist state there (Morton, 257). He was expelled from Khurāsān, but Khwādja ʿAlī b. Muʾayyad, son of a Sabzawārī notable, rose in revolt in Dāmghān, sought Darwīsh ʿAzīz's help and together they captured Sabzawār. Ḥasan-i Dāmghānī was murdered, evidently in 763/1362.

With the accession of Khwādja ʿAlī, the Shīʿism of the Sabzawārīs first found explicit political expression. He announced his rule with a new issue of coins bearing a Shīʿī formula, and instituted the practice of leading a horse out twice daily for the Ṣāḥib-i Zamān's expected arrival. Towards the end of his reign he invited an Imāmī scholar, Muḥammad b. Makkī al-ʿĀmilī [*q.v.*], to Sabzawār to preside over the establishment of Twelver Shīʿism in the Sarbadārid realm, anticipating a similar move by the Ṣafawids [*q.v.*] a century and a half later. Ibn Makkī was unable to accept, but he wrote a work on Imāmī *fiḳh* to guide Khwādja ʿAlī (Mazzaoui, 66-7). The earlier measures probably reveal the influence of Darwīsh ʿAzīz and the Shaykhiyya, still hoping for a new dispensation; nevertheless, Khwādja ʿAlī's commitment to this view was lukewarm, and within a year he had engineered the removal of Darwīsh ʿAlī (18 Rabīʿ I 764/5 January 1363; Faṣīḥ, 95-6) and driven out the Shaykhiyya, even going so far as to desecrate the tombs of Shaykh Khalīfa and Ḥasan-i Djūrī (Mīrkhwānd, 624). The flight of Darwīsh ʿAlī's successor, Rukn al-Dīn, to the court of Shah-i Shudjāʿ the Muẓaffarid [*q.v.*] led to an invasion of Sarbadārid territory with Muẓaffarid support, in which Sabzawār was captured in 778/1376. Khwādja ʿAlī was obliged to seek refuge with Amīr Walī, who helped him regain the city on 8 Radjab 781/20 October 1379 (Faryūmadī, 331-3); but Khwādja ʿAlī was left with a greatly reduced realm.

Two years later, in 783/1381, Khwādja ʿAlī took

the opportunity of preserving himself by entering Tīmūr's service. On his death in Ḥuwayza in 788/1386, the Sarbadārid realms were divided amongst several leaders, who also served Tīmūr, particularly in the administration of Lower ʿIrāḳ. In 808/1405, an attempt by a relative of Kh^wādja ʿAlī to claim his "hereditary rights" to the former Sarbadārid territories ended in his execution and the sack of Sabzawār. Another member of the family later won fame as the poet Amīr Shāhī.

The Sarbadārid régime channelled a number of currents flowing through Khurāsānian society in the 8th/14th century. Its history reveals something of the aspirations of the rural population and their leaders, the activities of the *futuwwa* [*q.v.*] organisations, the growing role of Ṣūfī *shaykhs* in political life, and the hesitant emergence of Shīʿism as an expression of local particularism. Many of these themes are apparent in the poetry of the panegyrist Ibn Yamīn [*q.v.*], who also praises the building works of rulers such as Tādj al-Dīn ʿAlī and Yaḥyā Karrābī (Ibn Yamīn, 30, 86). The latter's restoration of the *ḳanāts* [*q.v.*] in Ṭūs (Dawlatshāh, 282-3) is symptomatic of the Sarbadārids' vain but heroic attempt to counter the negative effects of Mongol rule in Khurāsān.

2. Studies. For the earlier work, see V.F. Büchner, EI[1] SERBEDĀRS. Two full-length monographs have since appeared, namely I.P. Petrushevskiĭ, *Dvizhenie serbedarov v Khorasane*, in *Učenye Zapiski Instituta Vostokovedeniya Akademii Nauk SSR*, xiv (1956), 91-162, tr. Karīm Kishāwarz, *Nahḍat-i Sarbadārān dar Khurāsān*, in *Farhang-i Īrān-zamīn*, x (1341/1962), 124-224, and J. Masson Smith Jr., *The history of the Sarbadār dynasty 1336-1381 A.D. and its sources*, The Hague and Paris 1970. The latter attracted useful comments from H. Arroyo, *Complement to the numismatic history of the Sarbadār dynasty*, in *Seaby's Coin and Medal Bulletin* (1975), 302-4, and A.H. Morton, *The history of the Sarbadārs in the light of new numismatic evidence*, in *NC*, 7th ser., xvi (1976), 255-8. Knowledge of the period has been greatly advanced by a number of studies by J. Aubin, notably, *La fin de l'État sarbadâr du Khorassan*, in *JA* (1974), 95-118; idem, *Aux origines d'un mouvement populaire médiéval: le Cheykhisme du Bayhaq et du Nichâpour*, in *StIr*, v/2 (1976), 213-24; idem, *Le khanat de Čagatai et le Khorassan, 1334-1380*, in *Turcica*, viii (1976), 16-60; idem, art. *ʿAbd-al-Razzāq Bāštīnī*, in *EIr*, i (1985), 153-4; and idem, *Le* quriltai *de Sultân-Maydân (1336)*, in *JA* (1991), 175-97. The most recent survey is by H.R. Roemer, *The Jalayirids, Muzaffarids and Sarbadārs*, in *Camb. hist. Iran*, vi (1986), esp. 24-39, 49-50. ʿAbd al-Rafīʿ Ḥaḳīḳat, *Taʾrīkh-i djanbish-i Sarbadārān wa dīgar djanbish-hā-yi Īrāniyān dar ḳarn-i hashtum-i hidjrī*, [2]Tehran 1363/1984, is unaware of Masson Smith and Aubin's work. See also Rashīd Yāsimī, *Aḥwāl-i Ibn-i Yamīn*, Tehran 1303/1924; M.M. Mazzaoui, *The origins of the Ṣafawids: Šīʿism, Ṣūfism, and the Gulāt*, Wiesbaden 1972. (C.P. MELVILLE)

SARDĀB (P.), literally "cool water", often found in the Arabised form *sirdāb*, an underground chamber used for keeping cool during the extreme heat of e.g. the ʿIrāḳī or Persian summers.

Such building constructions are an ancient feature of Middle Eastern life, being found amongst the Egyptians of Pharaonic times and in Babylonia. Examples of them have been found in the remains of the early ʿAbbāsid palace at al-Ukhayḍir [*q.v.*] and at al-Muʿtaṣim's palace, the Djawsaḳ al-Khāḳānī, at Sāmarrā. At Baghdād until recent times, traditional-type houses had a semi-basement vaulted cellar sunk into the ground some 1.5 m/5 ft. below the surface of the ground. This was ventilated by a shaft on the north side of the chamber running up to the highest point of the house in order to catch the cooler north wind (this shaft being called in mediaeval Arabic *bādahandj* or *bādandj*, Arabised from Persian *bādhandj* [see BĀDGĪR in Suppl.], and also by several small windows just above ground level. People would spend the hottest hours of the day, from mid-morning till sunset, in these rooms. In the equally hot and humid coastlands of Khūzistān, Fārs and Kirmān in southern Persia, such chambers are also found and are called *zīr-i zamīn* ("subterranean"); again, they are usually provided with a ventilating shaft or *bādgīr*. It was more elaborate forms of these which G.N. Curzon encountered at Shushtar on Khūzistān, under the name of *shabedan* or *shevedan*. These were hewn into the bedrock on which the town stood to depth of 18 m/60 ft. or more, reached by steps, and with a ventilating shaft and with light coming from a circular light in the vaulted roof; during July and August, the inhabitants lived almost entirely in these subterranean chambers (*Persia and the Persian question*, London 1892, ii, 367).

By extension, the term *sardāb/sirdāb* came to designate any kind of underground room or passage. In Ibn Baṭṭūṭa, *Riḥla*, i, 264-5, tr. Gibb, i, 165-6, *sardāb* is used for the passage constructed by ʿĀʾisha and leading from the Prophet's mosque in Medina to what was the house of Abū Bakr outside the mosque precincts (cf. the *khawkha* or private entrance to the mosque, regarded as a special privilege (*khaṣīṣa*) of Abū Bakr's; see Wensinck, *A handbook of Muhammadan tradition*, 6, and C.E. Bosworth, *Al-Maqrīzī's "Book of contention and strife concerning the relations between the Banū Umayya and the Banū Hāshim"*, Manchester n.d. [1981], 86-7, 139).

SARDĀNIYA, the most usual Arabic transcription of the place name Sardinia, the second largest in size of the island in the western Mediterranean. The author of the *EI*[1] article mentions also the transcription *Sardaniya*.

Amongst the reasons impelling the Arabs, who had just invaded North Africa at the beginning of the 7th century A.D., to conquer Sardinia, was the fact that it was an appendage of the Byzantine Exarchate of

Africa. To this first reason, one might add a desire to acquire the silver mines required for a bimetallic monetary system, one based on both gold and silver, and timber for constructing ships. In Sardinia, there were silver mines in the district of Sulcis, not far from Cagliari, whilst the whole island was practically covered with forests.

The historical information.

At least eleven different Arabic sources describe, in a summary fashion and without details, a series of incursions stretching from the 8th to the 12th century A.D. and taking place at the following dates: 84/703-4; 87/705-6; 89/707-8; 92/710-11; 114/732; 117/735; 119/737; 135/752-3; 201/816-17; 206/821-2; 322/933-4; 323/934-5; 405/1014; 406/1015; and 446/1054. The sources in question are 1. the *K. al-Imāma* of Ps.-Ibn Ḳutayba, attributed to Ibn al-Ḳūṭiyya (d. 367/977); 2. al-Ḍabbī (d. 599/1203); 3. Yāḳūt (d. 626/1233); 4. Ibn al-Athīr (d. 630/1233); 5. Abu 'l-Fidā' (d. 732/1331); 6. al-Nuwayrī (d. 732/1332); 7. Ibn ʿIdhārī (d. 750/1349); 8. al-Dhahabī (d. 748/1348); 9. Ibn Khaldūn (d. 808/1406); 10. al-Maḳrīzī (d. 845/1442); and 11. Abu 'l-Maḥāsin Ibn Taghrībirdī (d. 874/1470).

On the Sardinian side, the sources provide no details at all on an Arab presence in the island except for general statements that the Sardinians always fought with great courage against the invaders. One fact only is reported in detail by sources worthy of credence, such as the Venerable Bede and Paul the Deacon, author of the *Historia Langobardorum*. This is the transfer of the body of St. Augustine from Cagliari to Pavia, in northern Italy, at the intervention of the King of the Lombards, Liutprand, who between 721 and 726 purchased the relics of the saint so as not to leave them in the hands of the Saracens.

Surviving traces.

Epigraphy. In the Cagliari Archaeological Museum there are three Kūfic inscriptions. The first is a funerary stele of the prismatic type called *mḳabriyya* in the Maghrib, which comes from Assemini, a small town to the north of Cagliari. On it there is the name of a certain Maryam, daughter of ʿAṭiyya al-Sarrādj, deceased in 470/1077. The second was found at Cagliari, in the neighbourhood of the palace which was formerly that of the Viceroy; it is a fragment, whose date may be identified with the former one. The third stems from Olbia, in the north. It is a large rectangular slab, with the top part and the right-hand side missing. The name which can be partly read is Muṣṭafā Muḥammad al-M ... These inscriptions are carved on a kind of limestone which is found in Sardinia, but the dates fall after the period of an Arab presence, which ended towards 1070.

Coins. Given the small number of pieces of money (19 in all) kept in the Archaeological Museum at Cagliari, one is tempted not to take them into account. But 11 of the coins belong to the period between 700 and 778; moreover, 7 are copper, a metal which was not transported about and which no-one hoarded in a monetary form.

Toponyms. Numerous scholars have categorically stated that Sardinian toponomastic has no Arabic terms at all. There are nevertheless some elements which invite reflection. The etymology of Alghero could be "grotto, cave" in Arabic. There exists in fact in the outskirts of this town the "grotta di Nettuno" to which one descends by means of "la escala del Cabirol" of 600 paces and which has been known since Antiquity for its internal lake and its enormous halls with fantastic rock-shapes. There are at least two other examples of place names involving numerals: Arbatax, which is pronounced locally Arbatash, which in Maghribī Arabic means "14", and also Assemini, which could mean in Arabic "8th", and which is found inserted into a context of place names which begins with Quinto ("the 5th") and ends with Decimo ("the 10th").

In brief, the dates given, with not exactitude, by the Arabic historians point rather to raids, except perhaps for a half-century of occupation in the area around Cagliari, between 700 and 750 A.D. The surviving traces—epigraphic, numismatic and some place names—have dates varying between the 8th and the 11th century, which could suggest the existence of colonies which are not, unfortunately, confirmed by other sources.

Oman, *Vestiges arabes en Sardaigne*, in *ROMM* (1970), 175-84; idem, *Iscrizioni arabe di Sardegna*, in *Atti della Settimana di Studi Mediterranei Medioevali e Moderni*, Cagliari 1979, 213-27; idem, *Monete con iscrizioni arabe nel Museo Archeologico Nazionale di Cagliari*, in *Annali dell'Istituto Italiano di Numismatica*, xv (1968), 115-17; Maria Giovanna Stasolla, *Arabi e Sardegna nella storiografia araba del Medioevo*, in *Studi Magrebini*, Naples, xiv (1982), 1-40, Appendice II, see Bibl.; Emanuela Boiardi, *Gli Arabi in Sardegna nel secolo VIII e la traslazione del corpo di S. Agostino*, diss. Bologna 1978-9, unpubl. (G. Oman)

SARDĀR (P.), often Arabised as Sirdār, "supreme military commander", literally "holding or possessing the head", i.e. chief or leader. It was borrowed in the military sense by the Turks, who, however, sometimes derive it in error from *sirr-dār* ("the keeper of a secret"). Through Turkish it has reached Arabic, and in a letter written in 989/1581 by "one of the princes of the Arabs (of Yaman)" occurs the phrase *wa-ʿayyana sardār*[an] *ʿala 'l-ʿasākir* ("and he appointed a commander over the troops"), on which Rutgers comments "Vocabulum *sardār*, quod Persicae originis est, *ducem* exercitûs significat". The abstract substantive *sardāriyyat* in the sense of the post or office of commander of an army also occurs; and it was doubtless owing to the familiarity of the Arabic-speaking people of Egypt with the borrowed word that it was selected as the official title of the British commander-in-chief of the Egyptian and Sudanese armies in the periods of the Protectorate and the Condominium. In Persia the word was until the early 20th century much used as a component part of honorific titles, such as *Sardār-i Ẓafar* and *Sardār-i Djang*. In British India it was used generally of the (Indian) commissioned officers of the army as a class. *Sardār log* meant "the (Indian) officers of a corps or regiment". It was formerly applied to the head of a set of palanquin-bearers, and it was still in the early 20th century applied to the valet or body-servant of a European in northern India, as the chief of his household servants. *Sardār Bahādur* was a title of honour attached to the first class of the Order of British India, an order confined to Indian commissioned officers of the army.

SARDHANĀ, a town, also the centre of a *taḥṣīl*, in the Meerut [see mīraṭh] District of northwestern India, now in the Uttar Pradesh State of the Indian Union. The town is situated in lat. 29° 09′ N., long. 77° 36′ E. and lies some 19 km/12 miles to the northwest of Meerut town.

It achieved fame in the later 18th century, when Walter Reinhardt, called Sombre or Samrū, of Luxemburg origin, after having been a mercenary in both French and British service, received from Mīrzā Nadjaf Khān, general of the Mughal Emperor Shāh ʿĀlam II [*q.v.*], the *pargana* [*q.v.*] of Sardhanā [*q.v.*]. This became, after his death in 1778, the centre of a small, virtually independent principality, kept up by his remarkable Indian wife, the Bēgam Samrū [*q.v.*], surviving within British territory as a distinct entity and family estate until her death in 1836, when it was resumed, eventually being granted to Djān Fishān Khān, formerly leader of the Sayyids of Paghmān in Afghānistān and his family. In 1961, Sardhanā had a population of 16,563, and the *taḥṣīl* (in whose rural areas the Muslims are especially represented) one of 361,063.

(C.E. BOSWORTH)

SARDJ (A.), a masc. noun (pl. *surūdj*) denoting the horse saddle, and this uniquely; from the same root *s-r-dj*, there is *sarīdja* for a mule or camel saddle. From this root stem also the verbs *saradja*, also forms II and IV, for "to saddle a mount" (also used are *kasā al-sardj* and, for unsaddling, *ramā al-sardj*), and then *sarrādj* and *surūdjī* for the saddle-maker and seller of saddles, and *sirādja* and *surūdjiyya* for the craft of making saddles. A horse which is saddled is *musarradj*. Every town of the Arab lands had its own quarter or market for saddle-makers (*sūḳ al-sarrādjīn*), usually located near the ways out of the urban area in order to facilitate traffic with the countryside.

Amongst the Arabs, the traditional saddle is made up of the saddle-bow (*ʿaẓam al-sardj*), a basic frame made out of two wooden curved pieces connected together by their ends and forming a vaulted shape on the mount's back. The interior of this vaulted shape is padded, and on this base is placed the leather seat (*kursī*) of the saddle. The front of the pommel (*ḳarbūṣ*, pl. *ḳarābīṣ*, and vars. *ḳarbūs, ḳarbūṭ*) is slightly raised and the reins can be fastened.to it. The back pommel (*karbūs muʾakhkhar*) supporting the rider's reins is generally very high. Each lateral facing of leather or quarter, on which the backside of the rider is set down, receives the stirrup-leather (*sayr al-rikāb*) bearing the stirrups and the stirrup-holder (*ribāṭ*, pl. *rubuṭ*). Between the mount's back and the saddle is placed the saddle-cloth (*mirshaḥa*), with wool preferred to cotton, thus avoiding rubbing, callosities and wounds. The whole of the saddle is then fixed on the animal's back by the saddle-girth (*miḥzam, waḍīn, ʿadjala*), and a long chest tether (*labab*) or breast-strap keeps it from moving back. At the opening of the 8th/14th century, the author of a work on hunting, Ibn Manglī (see the tr. of F. Viré, *De la chasse*, Paris 1984, 43-4), categorically forbids use of the high back pommel of the saddle, which the Persians, he alleges, supposedly introduced, because it impedes the drawing of a bow, both in hunting and in combat; he denounces its nine major faults and adjures the Mamlūks to reject this type of saddle.

The saddle could be decorated with gleaming ornaments and pieces of embroidery and copper studding; for ceremonial processions, parades, etc., it could be covered over with a caparison (*ḳarabasūn*) embroidered with gold thread.

The saddle strapped on to the horse's back provides the basis for figurative expressions like *māla sardjuka* "your saddle has slipped off" for "your affairs are going badly"; *rānī fi 'l-sardj* "see me firmly in the saddle", meaning "I have succeeded"; and, the contrary, *rānī warāʾ al-sardj* "see me behind the saddle", meaning "I have failed/lost".

SAREKAT ISLAM, a Muslim movement in the Netherlands East Indies which flourished 1912-27.

The establishment in 1912 of *Sarekat Islam* opened a new era for both Islam and political mobilisation in the Dutch East Indies. It actually grew out of an association with more limited aims, the *Sarekat Dagang Islam* ("Association of Islamic Traders"), set up in 1909 by Raden Mas Tirtoadisoerjo, a Javanese aristocrat and merchant whose trading company was then being liquidated. He and other Javanese merchants set this up as a co-operative trading association to counter Chinese economic dominance; from the late 19th century, the Chinese had begun to take over even those small industries (such as the production of batik cloth and *kretek* cigarettes) which had till then been Javanese-dominated. The association organised successful anti-Chinese boycotts and propaganda, leading to government action against it. One of its members, the batik manufacturer Hadji Samanhoedi, consequently turned to Hadji Omar Said Tjokroaminoto to rebuild the association. Tjokroaminoto, born in 1882, was the son of a relatively minor official in the colonial Javanese bureaucracy, and had himself been trained at the training school for native officials (OSVIA, *Opleidingsschool van Inlandschen Ambtenaren*). However, he spent only three years in the bureaucracy before moving on to other occupations which led him to travel widely across Java. He now established a re-formed organisation, called *Sarekat Islam*, on 10 September 1912. The original commercial orientation and anti-Chinese element remained and are evident in the association's newsletter, *Oetoesan Hindia* ("The Indies Messenger"). But *Sarekat Islam* soon became a mass movement whose membership went far beyond the élite group responsible for its foundation. It grew phenomenally and drew in diverse elements: not only the small group of Muslim entrepreneurs from whom the founders had been drawn, but also Muslims from the world of the mosque school, Islamic reformists, and, increasingly, the peasant masses. Already by 1914 it had over 360,000 members, and by the time of its first national congress in June 1916 it had recruited more than 80,000 members outside Java.

Islam had had a leading role in large-scale political mobilisation for many centuries. Yet this mobilisation had been pre-modern in its organisational form, being led by traditional élites such as the hereditary aristocracies of the Indies or the élites associated with mosque schools and *tarekats*. In Java, mobilisation in the name of Islam had been led by princes, and Islam had been largely subordinated to pre-Islamic Javanese political values. Many Islamic concepts had been redefined to accommodate to a highly monarchocentric policy in which service tó the ruler (*ngawula*) was the supreme moral virtue, and Javanese rulers claimed to be endowed with both *waḥy* [*q.v.*] and the Light of Prophecy. From the foundation of *Sarekat Islam* it is clear that Islam had freed itself from the old royalist ideology and patrimonial forms of mobilisation, and had done much to make possible an indigenous political life based on associational forms, on *Gesellschaft* rather than *Gemeinschaft*. Indonesia's links with the heartland of Islam had also greatly

strengthened since the late 19th century through a large increase in those making the Pilgrimage, who returned with a stronger commitment to Islamic norms and also brought back a better knowledge of political and military developments overseas. At the local level, the modernising aspect of *Sarekat Islam* was less evident, indeed was sometimes replaced by a protest against the cost to the peasantry of economic modernisation under the colonial aegis, or against the Chinese money-lenders to whom indebted or tax-burdened peasants had to turn. The years 1913-14 saw a peak of anti-Chinese violence. To say "I am a Muslim" at this period was a way for those at the bottom of the colonial racial hierarchy (below Dutch, Eurasians, and Chinese) to claim a more positive identity than that allocated to them by the Dutch term *inlander* (native). *Sarekat Islam* by its very name tapped this sense of identity and grievance. In addition, Tjokroaminoto was a charismatic leader who became a focus for the messianic beliefs that had been a prominent feature of traditional movements, whether Islamic or Javanist. By now the organisation, rather ambitiously, claimed a membership of two millions.

The role of Islam in introducing more modern concepts into political mobilisation in the Indies was certainly not uncontested. Socialist ideas first developed a significant presence in the Indies just at the time *Sarekat Islam* was established. The Dutch Socialist Sneevliet founded the ISDV (*Indische Sociaal-Demokratische Vereeniging,* Indies Social Democratic Union) in May 1914 and, after a lack of success with the Eurasian community, turned his attention to *Sarekat Islam.* From 1916, the Semarang branch of *Sarekat Islam* was the centre of the Socialist wing, led by the 17-year-old Semaun. Semarang was then the most progressive and liberal city in the Indies, the centre of an embryonic proletariat (associated with the railways and service industries) and of trade union activity. At the second *Sarekat Islam* conference in 1917, the Semarang group moved to insert into the organisation's programme the combating of "sinful" (i.e. foreign) capitalism, later to be extended to capitalism in general. The position of the Semarang group was strengthened after the October Revolution in Russia (which led to a dramatic rise in membership of *Sarekat Islam*), and they were joined by two central Javanese aristocrats, Darsono and Surjopranoto. An opposing group under Abdul Muis and Hadji Agus Salim (who had originally joined *Sarekat Islam* as a government spy but been converted to its cause) were branded as tools of the colonial government. At the third *Sarekat Islam* conference, Tjokroaminoto succeeded in reconciling the two factions.

1919 was a turbulent year on Java, with sugar plantations set on fire and peasants refusing to perform forced labour. In mid-year there occurred local incidents first in Sulawesi and then in West Java. The latter case ended in the slaughter by government troops of a Garut landowner, Hadji Hasan, and members of his family, after they had shut themselves into their house and refused to hand over the rice tax. It was claimed that there was within *Sarekat Islam* a clandestine "Section B", dedicated to the overthrow of colonial rule. As planters and others in the European community panicked at the spectre of a Muslim conspiracy, the government reacted strongly, leading many of the middle-class Muslims who had founded *Sarekat Islam* to leave the organisation. The relatively liberal attitude to Islam initiated by Snouck Hurgronje's policy advice to the colonial government was under serious challenge.

In May 1920 the ISDV changed its name to Perserikatan Komunis di Inida ("Indies Communist Union", later "Party") and in July 1920 the Comintern passed a resolution that pan-Islamic movements be opposed as strengthening Turkish imperialism, despite Sneevliet's plea that cooperation continue. *Sarekat Islam* had already set up a committee in support of the caliphate and it was becoming clear that the division between the Socialist and pan-Islamic wings of the party was sharpening. Tjokroaminoto, the chief architect of compromise, was arrested on the grounds of supposed involvement in the Garut affair. During his absence, on the occasion of the October 1921 conference, Hadji Agus Salim introduced party discipline in *Sarekat Islam,* leading to a split between the Islamic and Socialist-Marxist movements and to a subsequent battle between them for control of the branches. Despite the organisational break, at the popular level Islamic communist movements continued to exist, as for instance that led by the extremely popular Haji Misbach in Solo, whose peasant following were attracted by the idea of reinstituting a golden age of justice for all. When *Sarekat Islam* imposed party discipline, he opted for the PKI, and was subsequently banished by the government.

In January 1922 a strike of employees in the government-run pawnshops, the first large-scale union-sponsored work stoppage, took place. It was supported by a number of political organisations, and the subsequent government crack-down fell most heavily on *Sarekat Islam* in the arrest and deportation of its leadership. At this juncture the gulf between the aspirations of the Indonesian oppositional movements and the limits set by the colonial government was harshly illuminated. Semaun subsequently resumed leadership of the decapitated PKI, and Tjokroaminoto that of *Sarekat Islam.* The latter now published his book *Islam and Socialism* (*Islam dan Sosialisme*) which represents a hardening of his attitude to Marxism. In it he attempts to demonstrate that Islamic socialism is the most perfect kind, not only by reference to Muhammad's teachings but also by a reconstruction of society under the Orthodox Caliphs. He says that the state owned land, which was the same as ownership by the people; that society was neither autocratic nor bureaucratic; and that the army was a people's army. Among the socialistic regulations in force were prohibition of *ribā*, the institution of *zakāt*, injunctions to charity, and the egalitarianism evident in the communal prayers and during the Pilgrimage. In this book, Tjokroaminoto strongly attacks historical materialism as denying God, and deifying material things. He condemns Bebel's famous dictum to the effect that it is not that God created man, but that man has invented God. Much of the work is organised not around specifically socialist ideas but around the ideals of Liberty, Equality, and Fraternity, indicating the extent to which Islamic thinkers of the period felt the need to justify Islam in terms of Western political ideals, whether liberal or socialist.

December 1927 saw the first federation of Indonesian political parties (PPPKI: *Permufakatan Perhimpunan Politiek Kebangsaan Indonesia,* "Union of Indonesian Political Associations"), subsequent to the elimination of the Communist Party after an unsuccessful localised uprising in 1926. This began a phase when there was pressure on all political parties to define or re-define themselves in terms of the nationalist focus indicated by the use of the word "Indonesia". *Sarekat Islam* duly changed its name to *Partai Sarekat Islam Indonesia* ("The Sarekat Islam Party of Indonesia"). After Tjokroaminoto's death in 1934, PSII lost much of its influence, and from 1937 on-

wards, a number of breakaway movements left to establish separate parties, adding to the plurality of Islamic organisations, which already encompassed the social movement Muhammadiyah (set up in the same year as *Sarekat Islam*) and the *Nahdatul Ulama* ("Association of *Ulama*") set up in 1926. In an evermore repressive colonial situation, it was impossible for any movement to replicate the early success of *Sarekat Islam* in mass mobilisation: in 1939, PSII, though still larger than any other political party, had only 12,000 members left. PSII was dissolved at the beginning of the Japanese Occupation, and in November 1943 the Japanese created the *Madjelis Sjuro Muslimin Indonesia* ("Indonesian Muslim Council" or Masjumi) as a single organisational vehicle for Islam. This unity lasted until 1952, when the *Nahdatul Ulama* split off, and Indonesia's first elections in 1955 were contested by a number of Islamic parties which, though they jointly obtained a majority of the votes, were unable to co-operate to form a government based on Islam.

The history of *Sarekat Islam* is thus paradigmatic of that of political Islam in Indonesia, exhibiting a tremendous capacity for mass mobilisation, the necessity to address powerful competing ideologies both traditional and modern, and the effect of continuing internal divisions in preventing the translation of mass appeal into political dominance.

ṢARF (A.), a term of Arabic grammar. Literally meaning "averting", "divergence", this term became in later grammar the current indication for the science of "morphology" as a synonym for *taṣrīf* [*q.v.*]. In the early stages of Arabic grammar the term was used in two completely different senses. In Sībawayhi's *Kitāb*, *ṣarf* is almost always connected with the verb *inṣarafa* in the sense of "to be fully declined", said of a noun. In Sībawayhi's theory of grammar the normal situation for a noun is to have three case-endings to indicate the three cases (in Western grammars of Arabic such words are said to be triptotic in contrast to words that have only two endings, which are said to be diptotic). This normal situation obtains when the noun is as near as possible to its lightest, i.e. most flexible form, the triliteral masculine noun. Such a noun is said to be completely *mutamakkin*, i.e. having full freedom of movement (synonym *munṣarif*). When a noun is diverted from this normal pattern it runs the risk of losing its full declension. This at least is the way the later grammarians (as for instance al-Zadjdjādj's *K. mā yanṣarif wa-mā lā yanṣarif*) view the behaviour of these words. But it seems that in the *Kitāb Sībawayhi* matters are somewhat different; here the emphasis is on the absence or presence of nunation. The lightness of a word (i.e. its unmarked use with maximum syntactic freedom) enables it to carry nunation, but when it deviates from its normal pattern, it becomes heavier (i.e. more marked) and as a consequence, loses the nunation and full declinability (*tark al-ṣarf*, e.g. *Kitāb*, i, 163.11; ii, 2.11 and many other examples, cf. Troupeau, 1976, 123, who translates *ṣarf* with "conversion"). It is difficult to explain this use from the lexical meaning of the word, since it is precisely the adherence to a certain pattern that brings nunation and thus *ṣarf*, and only when a word is diverted from its normal pattern (*maḥdūd ʿan al-bināʾ alladhī huwa awlā bihi* as al-Khalīl says, *apud* Sībawayhi, *Kitāb*, ii, 14.5-11, who himself uses the term *maʿdūl ʿan* in the same passage) it loses the *ṣarf* (for a detailed analysis of the treatment of this issue in the *Kitāb*, see Reuschel, 1959, 41-7).

One explanation for this use of the term *ṣarf* may be the behaviour of a word like *amsi* "yesterday". Normally, this word has no nunation and only two endings, since it is used as a temporal adjunct (*ẓarf*), i.e. in a more restricted construction than the syntactically free words. But when it is diverted from its usual category and used as a proper name it becomes fully declinable with nunation (*maṣrūf*, *Kitāb*, ii. 43.6 *li-anna amsi hāhunā laysa ʿalā 'l-ḥadd*). Perhaps this is the origin of the term: sometimes words are diverted from their own category to another and then they acquire nunation and full declinability. If this explanation is correct, the original meaning of the term has been generalised to all words receiving nunation (and full declinability). In later grammar, the theory of full declinability was expressed in a canonical list of factors that cause words to lose one of their endings (the so-called *mawāniʿ al-ṣarf*): two factors from this list in combination (e.g. when a word is both feminine and used as proper name) cause a word to become diptotic (cf. e.g. in al-Zamakhsharī's *Mufaṣṣal*, 9-10).

The discussions in this part of the *Kitāb* are typically morphological problems, in which the test of the proper names is used as a device to find out what the status of a word is and to which category it belongs (cf. Carter, 1983). These problems have nothing to do with the syntactic relations within the sentence, since diptotic words, even though they have only two endings, are syntactically used in all three cases. This may explain why in later grammar *ṣarf* was used as a synonym for *taṣrīf* and became one of the normal terms for "morphology".

The lexical meaning of *ṣarafa* "to divert, avert" is much clearer in the other sense in which *ṣarf* is used in early grammar, in particular by al-Farrāʾ. Here it means the divergence or non-identity between two constituents of the sentence. In the sentence *lā taʾkul al-samaka wa-tashraba 'l-labana*, for instance, the subjunctive of *tashraba* is explained by al-Farrāʾ by a principle of "divergence" between the two verbs. This construction may be compared to the use of the accusative indicating referential non-identity in a sentence such as *zaydun khalfaka*, as against the sentence *zaydun ṣāḥibuka*, where the nominative indicates the identity of the two nouns. According to Carter, 1973, this is Sībawayhi's theory (he uses the verb *ṣarafa* in connection with this construction, *Kitāb*, i, 418-19), but it became associated with Kūfan grammar under the name of *ṣarf*, which continued to be used in this sense in later explanations of the construction (cf. e.g. Ibn al-Anbārī, *Inṣāf*, 229-30; Owens, 1990, 157 f.; Baalbaki, 1981, 22). The term is, indeed, fairly frequent in al-Farrāʾ's *Maʿānī* (e.g. i, 33; other instances in Carter, 1973, 298, n. 1).

ṢARF, a term of Islamic law [see Suppl.].

SARḤADD (P.), lit. "upper frontier, boundary", a general geographical term specifically applied in southeastern Persia to the mountain region in the modern Persian province of Balūčistān and Sīstān adjoining the frontier with Pākistānī Balūčistān. Its mountain chains run generally from northwest to southeast, and include the volcanic (still partially active) Kūh-i Taftān (4,042 m/13,262 feet), the highest point, but there are also east-west-running outliers, such as the Kūh-i Bazmān (3,489 m/11,478 feet) which connects the Sarḥadd with the D̲j̲abal Bāriz [*q.v.* in Suppl.]. The only village/small town of any note is K̲h̲ʷās̲h̲ or Vas̲h̲t, in a broad and fertile valley on the western slopes of the main mountain chain and situated on the road linking Zāhidān (Zahedan) with Īrāns̲h̲ahr and Čāhbahār on the Makrān [*q.v.*] coast.

The Sarḥadd's role in history has been mainly as a refuge area e.g. for the Mihrabānid Maliks of Nīmrūz in the later 9th/15th century (see C.E. Bosworth, *The history of the Saffarids of Sistan and the Maliks of Nimruz (247-861 to 949/1542-3)*, Costa Mesa, Calif. and New York 1994, 463-5). By the later 19th century, the region had become largely depopulated, with irrigation and agriculture abandoned, because of endemic banditry; this last provoked in 1916 a punitive expedition of the Indian Army mounted from British Balūčistān into the Kūh-i Mōrpīs̲h̲ (see R.E.H. Dyer, *The raiders of the Sarhad, being an account of a campaign of arms and bluff against the brigands of the Persia-Baluchi border during the Great War*, London 1921).

Bibliography: See also P.M. Sykes, *Ten thousand miles in Persia or eight years in Irán*, London 1902, 93, 136 ff.; C.E. Bosworth, *Historical notes on the Sarhadd region in Baluchistan*, in Irfan Habib (ed.), *Professor Mohammad Habib centenary volume*, ʿAlīgaṙh, forthcoming. (C.E. BOSWORTH)

SARHANG (P.), a term denoting a rank of officer or commander in mediaeval Persian armies and paramilitary groups (cf. Vuller, *Lexicon persico-latinum*, ii, 261-2, 293; *dux exercitus, praefectus*). Thus the *sarhang*s were leaders of bands of *ʿayyār*s [*q.v.*] or Sunnī orthodox vigilantes combatting the K̲h̲ārid̲j̲īs in 3rd/9th century Sīstān, and Yaʿḳūb b. al-Lay̲t̲h̲, founder of the Ṣaffārid dynasty [*q.v.*], embarked on his rise to power by becoming a *sarhang* in the *ʿayyār* forces of a local leader in Bust, Ṣāliḥ b. al-Naḍr al-Kinānī (*Taʾrīk̲h̲-i Sīstān*, ed. Bahār, passim; Gardīzī, *Zayn al-ak̲h̲bār*, ed. Nazim, 11, ed. Habībī, 139; see the discussion by Bosworth in *BSOAS*, xxxi [1968], 539-40).

In modern Persia, *sarahang* denotes the rank of colonel.

Bibliography: Given in the article. (C.E. BOSWORTH)

SĀRĪ, Arabic form Sāriya, a town of the Caspian region of Persia, in mediaeval Islamic times within the province of Ṭabaristān, now in the modern province of Māzandarān [*q.v.*] (lat. 36° 33′ N., long. 53° 06′ E.). It lies some 32 km/20 miles from the Caspian Sea on the Tīd̲j̲in river (*Ḥudūd al-ʿālam*, tr. 77: Tīžin-Rūd̲h̲) and in the hot and humid coastal plain; the surrounding region has always been famous for its silk production and its fruits.

Whether Sārī had any pre-Islamic history is unclear, though Islamic lore assigned its foundation to the legendary Pīs̲h̲dādid [*q.v.*] figure, Ṭahmūra̲t̲h̲. Details are lacking of the first appearance of the Arabs there; this may have been in the time of ʿU̲t̲h̲mān's governor of Kūfa, Saʿīd b. al-ʿĀṣ [*q.v.*]. Sulayman b. ʿAbd al-Malik's governor Yazīd b. al-Muhallab [see MUHALLABIDS] temporarily occupied the town, but was compelled to withdraw by the Dābūyid [see DĀBŪYA] Ispahba̲d̲h̲ Farruk̲h̲ān. The first Islamic building erected there was a congregational mosque built by the first ʿAbbāsid governor of Ṭabaristān, Abu 'l-K̲h̲uḍayb, in 140/757-8. It remained generally the capital of the indigenous Ispahba̲d̲h̲s, with the Arab governors installed at nearby Āmul [*q.v.*], although in the 3rd/9th century the Ṭāhirid governors and the local ʿAlids moved their capital to Sārī, and the Bāwandids remained there till the 7th/13th century. The town was flourishing in the 4th/10th century, according to the geographers, with a citadel surrounded by a moat and rampart and a flourishing textiles industry.

There is little mention of Sārī in later Islamic times. It suffered on Mongol times and was sacked by Tīmūr's troops in 795/1393, yet recovered and remained the capital of Māzandarān till the Zands, who transferred it to Bārfurūs̲h̲. Āg̲h̲ā Muḥammad K̲h̲ān Ḳād̲j̲ār brought it back again to Sārī, but in the 19th century the town declined in favour of Āmul and Bārfurūs̲h̲-Bābul and only revived in the 20th century with the advent of the railway and of better road communications during the Pahlavī period. It is now the capital both of a *s̲h̲ahrastān* or canton of the same name and of the province (*ustān*) of Māzandarān; in *ca.* 1950 the population was 25,000, but this has now risen to 185,844 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division). See further, MĀZANDARĀN.

SARĪʿ, an Arabic metre with the following three main types, each consisting of six feet to the line and differing in the last foot (*ḍarb*) only:

(a) – – ᴗ – | – – ᴗ – | – ᴗ – ‖ – – ᴗ – | – – ᴗ – | – =
(b) – – ᴗ – | – – ᴗ – | – ᴗ – ‖ – – ᴗ – | – – ᴗ – | – ᴗ –
(c) – – ᴗ – | – – ᴗ – | – ᴗ – ‖ – – ᴗ – | – – ᴗ – | – –

(in which = represents an overlong syllable i.e. consonant + long vowel + consonant). The first and fourth foot come in three variants: – – ᴗ –, – ᴗ ᴗ – and ᴗ – ᴗ –. The second and fifth foot have either – – ᴗ – or – ᴗ ᴗ –. In the work of Ibn al-Rūmī (221-76/836-96 [*q.v.*]), the distribution of these types is: type (a) 6%, (b) 39% and (c) 55%; the three types together are used in almost 7% of the poems in the *dīwān*.

In K̲h̲alīlian theory [see ʿARŪḌ], *sarīʿ* is the ninth metre, and the first metre of the fourth circle. The

scansion of the circle metre is *mustafʿilun mustafʿilun mafʿūlātu* (twice). Types (a), (b) and (c) are called *awwal al-sarīʿ*, *thānī 'l-sarīʿ* and *thālith al-sarīʿ*. Al-Khalīl b. Aḥmad (d. 175/791 [*q.v.*]) distinguishes three other types of *sarīʿ*, whereas some later metricians mention a seventh type. The most important of these are two types of three-foot *sarīʿ*:

(d) – – ⏑ – | – – ⏑ – | ⏓ – =
(e) – – ⏑ – | – – ⏑ – | ⏓ – – .

In practice, however, types (d) and (e) are called *radjaz* [*q.v.*] by many authorities (cf. Ibn Rashīḳ, *ʿUmda*, i, 183; al-Damanhūrī, *Irshād*, 76 ll. 13-17). The division of opinion explains why, for instance, the ten pieces in three-foot *sarīʿ* metres of the *Ḥamāsa* of Abū Tammām are placed under the *ardjāz* in the index of the edition of al-Marzūḳī's commentary, whereas al-Tibrīzī's commentary contains an explicit reference to the *sarīʿ* metre in seven of these pieces (see ed. Freytag, i, 308, 332, 675, 798, 801, 802, 808; but note the fact that the metre of the piece which begins on p. 297 is said to be *min mashṭūr al-radjaz*).

A different system is found in al-Djawharī (d. 393/1003 or later [*q.v.*]). He does not recognise the *sarīʿ* as an independent metre, but considers the six-foot types as sub-forms of a *basīṭ* from which the second foot of each hemistich has been left out (*ʿArūḍ al-waraḳa*, 23-4; Ibn Rashīḳ, *ʿUmda*, i, 137, ii, 303). The three-foot or *mashṭūr* types, sc. (d) and (e) above, are, according to him, sub-forms of *radjaz* (*ʿArūḍ al-waraḳa*, 46 n. 15).

For further statistics and a discussion of the growing importance of the metre in ʿAbbāsid times, see J. Bencheikh, *Poétique arabe*, 203-40.

(W. Stoetzer)

AL-**SARĪ** b. al-Ḥakam b. Yūsuf al-Balkhī, governor and financial controller of Egypt from 1 Ramaḍān 200/3 April 816. On 1 Rabīʿ I 201/27 Sept. 816, the troops openly mutinied against him, and al-Maʾmūn was forced to remove al-Sarī from his post and replace him by Sulaymān b. Ghālib; al-Sarī was put in prison and Sulaymān entered upon his office on Tuesday, 4 Rabīʿ I 201/30 Sept. 816. He was removed from office as early as 1 Shaʿbān 201/22 Feb. 817, as the result of a repeated revolt of the troops, and al-Sarī was again appointed by al-Maʾmūn. The news of his appointment reached Egypt on 12 Shaʿbān 201/4 March 817; al-Sarī was released from prison and entered al-Fusṭāṭ on the same day. He held office till his death on 30 Djumādā I 205/11 Nov. 820. That al-Sarī played a prominent part in Egypt even before his appointment as governor is evident also from his mention in the *ṭirāz* of a *kiswa* intended for the Kaʿba of the year 197/812-13. His name is also found on gold and copper coins of Egypt; see W. Tiesenhausen, *Monnaies des Khalifes orientaux*, 188, no. 1700 (Miṣr 200 A.H.), 193, no. 1737 (200 and 202 A.H.); H. AL-**SARĪ** b. **MANṢŪR** [see abu 'l-sarāya].

AL-**SARĪ** b. Aḥmad b. al-Sarī al-**RAFFĀʾ** al-Kindī al-Mawṣilī, Abu 'l-Ḥasan (d. 362/972-3 according to Yāḳūt, *Irshād*, iv, 185, and Ibn al-ʿAdīm, *Bughya*, ix, 435; other dates are also given), Arab poet and anthologist, particularly famous for his descriptive poetry (*awṣāf*).

He was born in Mawṣil, where his father apprenticed him to the clothes-menders/jobbing tailors (*raffāʾūn*), hence his nickname, which is, however, not yet used by the contemporary source Ibn al-Nadīm (*Fihrist*, 169). In spite of his lowly occupation he tried his hand at poetry, and al-Bākharzī lists him among poets who had to earn their living by hard work, alongside the rice-bread baker al-Khubzaruzzī, the market-crier al-Waʾwāʾ al-Dimashḳī, and the cloth merchant Abū Hilāl al-ʿAskarī [*q.vv.*] (*Dumyat al-ḳaṣr*, ed. al-Ḥulw, Cairo 1968, i, 528-9). He was apparently not a complete autodidact, since the name of his teacher, the otherwise unknown Abū Manṣūr Ibn Abī Barrāk, is mentioned by Ibn al-Nadīm (*Fihrist*, 169, l. 12), but he is otherwise said to have been uneducated. After achieving a certain fame as a poet, he went to the Ḥamdānid court in Aleppo in 345/956-7 (for the year, see Ibn al-ʿAdīm, *Bughya*, ix, 428) and found acceptance among the court poets of Sayf al-Dawla. After the latter's death in 333/945, he moved on to Baghdād and sang the praises of the Būyid vizier al-Muhallabī (d. 352/963 [*q.v.*]). The sources are not in unison about his worldly affairs in this period: some depict him as poor and debt-ridden (al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, ix, 194), others as wealthy (al-Thaʿālibī, *Yatīma*, ii, 119; Yāḳūt, *Irshād*, xi, 185). For the time of al-Muhallabī's successor al-ʿAbbās b. al-Ḥusayn al-Shīrāzī (appointed vizier in 356/967, d. 362/973 [*q.v.*]) we have an anecdote related by al-Muḥassin b. Ibrāhīm al-Ṣābiʾ (d. 401/1010; see al-ṣābī, no. 8), according to which al-Sarī must have been a man of modest means at the time (*apud* Ibn al-ʿAdīm, *Bughya*, ix, 429-30).

The main feature of al-Sarī's life as depicted in the sources is his constant feud with the two Khālidī brothers, Abū Bakr Muḥammad b. Hāshim and Abū ʿUthmān Saʿīd b. Hāshim (see al-khālidiyyān). They too came from Mawṣil and it seems that already early on al-Sarī accused them of stealing his own as well as other poets' poetry. Ibn al-Nadīm, in his paragraph on the Khālidīs, concurs that it was second nature to them to appropriate (*ghaṣabā*) verses they liked (*Fihrist*, 169, l. 21-3). To make the accusation stick, al-Sarī used the devious method of making copies of the *dīwān* of Kushādjim (d. *ca.* 350/961 [*q.v.*]), whom he admired and emulated, and including the best poems of the Khālidīs in them (al-Thaʿālibī, *Yatīma*, ii, 118; Yāḳūt, *Irshād*, xi, 183; Ibn Khallikān, ii, 360). The feud between al-Sarī and his adversaries was a long-lasting one; in the account of al-Khaṭīb al-Baghdādī, the Khālidīs appear as al-Sarī's ineluctable nemesis, who succeed in poisoning his relationships with Sayf al-Dawla, al-Wazīr al-Muhallabī, and other patrons. Al-Sarī himself was, however, not immune to the accusation of *sariḳa*: Ibn al-Nadīm—amidst a

string of admiring epithets—calls him a man "of many thefts" (*kat͟hīr al-sariḳa, Fihrist*, 169, l. 28). It is, however, important here to distinguish between two kinds of plagiarism, (a) wholesale lifting of other people's poems (*muṣālata*, for the term see e.g. *Yatīma*, ii, 119, l. 5), and (b) taking up, and playing with, existing and attributable motifs. Both play a role in al-Sarī's literary life. On the one hand, Ibn al-Nadīm mentions that al-Sarī is said to have appropriated the poetry of his teacher Ibn Abī Barrāk (*Fihrist*, 169, l. 12), and al-T͟haʿālibī writes that he discovered a number of identical poems in the collection of poetry of the two K͟hālidīs in the handwriting of Abū ʿUt͟hmān, the younger of the two brothers, and the collection of al-Sarī's poetry in the poet's own handwriting, both belonging to the bibliophile Abū Naṣr Sahl b. al-Marzubān (*Yatīma*, ii, 118-19; one of the poems he quotes in this regard is actually also included in Kus͟hād͟jim, *Dīwān*, ed. K͟hayriyya M. Maḥfūẓ, Bag͟hdād 1390/1970, 230, no. 210, and has even a fourth avatar in an unattributed appearance in al-Sarī's own anthology *K. al-Muḥibb* [see below], iv, 326, no. 717). Al-T͟haʿālibī declares himself unable to decide whether the duplication of poems is due to *tawārud* "two poets having the exact same idea" or *muṣālata* "appropriating another poet's poems" (*Yatīma*, ii, 119, ll. 4-5). If theft is involved, it is still unclear who is the thief and who the victim. In his chapter on the K͟hālidī brothers, al-T͟haʿālibī thus uses the term *tasāruḳ* "two-way theft" to characterise the cases of strong similarity between the K͟hālidīs and al-Sarī which he presents to the reader (*Yatīma*, ii, 184-6 [Abū Bakr], and 199-201 [Abū ʿUt͟hmān]). He also makes an important observation concerning the reason that made the free floating, or malicious stealing, of so many poems possible: there is, between al-Sarī and the K͟hālidīs, "an amazing agreement and a close similarity in handling the reins of the rhymes and fashioning the adornment of the motifs" (*Yatīma*, ii, 119, ll. 5-6). The only way of redress that a poet had to combat an infringement of his "copyright" was to complain (*taẓallum*) about this injustice to the authorities, most commonly to the recipients of their panegyrics. A fair amount of al-Sarī's poems contain such complaints against the K͟hālidīs.

The other type of plagiarism is the more regular and—in an age of mannerist poetising—hardly reprehensible type of adopting and, if possible, improving successful motifs of earlier poets. Al-T͟haʿālibī gives a list of 44 such cases and praises al-Sarī for his skilful "plagiarism" (*ḥusn al-sariḳa wa-d͟jawdat al-ak͟hd͟h*, see *Yatīma*, ii, 120, penult.). The "victims" are almost all "modern" poets, led by al-Mutanabbī who serves as a model twelve times.

Al-Sarī al-Raffāʾ has left three works, two of which, the *Dīwān* and *al-Muḥibb wa 'l-maḥbūb wa 'l-mas͟hmūm wa 'l-mas͟hrūb*, have been preserved. The latter is an anthology of the *maʿānī*-catalogue type, i.e. a topically arranged selection of poetic fragments with descriptions of the various parts of the beloved, of the lover, of spring, and of wine. The majority of the poets are "Moderns", but Umayyad poets have their fair share, while pre-Islamic ones occur very rarely.

The *Dīwān* was, according to Ibn al-Nadīm (*Fihrist*, 169, penult.), edited by the poet himself shortly before his death on *ca.* 300 leaves who then added more material to it. It was also edited by an unknown "modern" *adīb* in the alphabetic arrangement according to rhyme letters. This may mean that the poet's edition was not alphabetical. If so, the situation may be reflected in the surviving manuscripts, some of which are alphabetical, while others are not (see the description of the mss. in *Dīwān*, i, 188-208). However, the situation was very likely more complicated: al-T͟haʿālibī enumerates three sources for his knowledge of al-Sarī's poetry: the *Dīwān* as brought to him from Bag͟hdād, a number of outstanding poems recited to him and given for copying by the famous poet and epistolographer Abū Bakr al-K͟hʷārazmī (d. 383/993 [*q.v.* under AL-K͟HʷĀRAZMĪ]), and a volume (*mud͟jallada*) in al-Sarī's own hand-writing in the possession of Abū Naṣr Sahl b. al-Marzubān and containing many additions to the *Dīwān*. But still, he says, he found in the secondary literature fragments of poems by al-Sarī that he could not trace in his sources. Ibn al-ʿAdīm lists nine people, among them Abū Bakr al-K͟hʷārazmī, who are said to have transmitted al-Sarī's poetry (*Bag͟hya*, ix, 428). The details of the early transmission of al-Sarī's poetry are thus still obscure.

The opinions about al-Sarī's stature as a poet were generally very high. He is even called "next in line" (*radīf*) after al-Mutanabbī and superior to him in tenderness (*riḳḳa*) (on the title-page of the *Dīwān* ms. Laleli 1745, see introd. of ed. in *Dīwān*, i, 189). He is particularly famous for his ecphrastic poetry, "very versatile in similes and descriptions" (*kat͟hīr al-iftinān fi 'l-tas͟hbīhāt wa 'l-awṣāf*), as Ibn al-Nadīm says (*Fihrist*, 169, 29). The index of poetically described objects in the recent *Dīwān* edition lists 150 items (!). Not all of them yield monothematic poems, many are integrated into larger frameworks. Some of these seem to be unusual polythematic structures, possibly created by al-Sarī. Thus poem no. 353 (*Dīwān*, ii, 464-5) starts with a description of the morning and a rooster, leads on to a wine song, and ends with a panegyric on Sayf al-Dawla. An interesting subgenre with al-Sarī is his descriptions of his own poetry, of which al-T͟haʿālibī gives a small collection of examples (*Yatīma*, ii). A close literary study is still lacking.

Bibliography: Works. *Dīwān*, first ed. Cairo 1355 (based on two mss.); ed. Ḥabīb Ḥusayn al-Ḥasanī, 2 vols., [Bag͟hdād] 1981 (based on ten mss.); *al-Muḥibb wa 'l-maḥbūb wa 'l-mas͟hmūm wa 'l-mas͟hrūb*, ed. Miṣbāḥ G͟halāwund͟jī [?], 4 vols. [vol. 4, ed. (W.P. HEINRICHS)

SARĪ AL-SAḲAṬĪ, Abu 'l-Ḥasan b. al-Mug͟hallis, important Ṣūfī of the second generation of Ṣūfīs in Bag͟hdād, 155-253/772-867.

Biography

Born as the son of a pedlar (*saḳaṭī*) who had settled at an early date in the Karkh [*q.v.*] quarter of Baghdād, Sarī rose to be a distinguished wholesale trader, known for his honesty (*Taʾrīkh Baghdād* (= *TB*) ix, 189). Like other merchants, he devoted himself to *ḥadīth* studies which, as the names of his teachers indicate, must have brought him from Baghdād via Kūfa to Mecca (*Ḥilya*, x, 127).

At the age of *ca.* 35-40 he encountered the saint Maʿrūf al-Karkhī (d. 815 [*q.v.*]), which brought his career as a merchant to a sudden end and initiated the second period of his life. The world had beome indifferent to him; he abandoned his trade and chose the Ṣūfī path. Several journeys opened up new horizons for him. In the convent of ʿAbbādān [*q.v.*] he tried to join the Baṣra school through fasting exercises. On the road he came to know the Syrian anchorite ʿAlī al-Djurdjānī, who exerted a lasting influence upon him (*Ḥilya*, x, 110-11) and directed his eye towards Syria, where he became acquainted with the school of Ibrāhīm b. Adham [*q.v.*], which was to impress him in more than one way. He stayed at Damascus, Ramla, Jerusalem and Tarsus in the north, from where he joined the *djihād*, at already sixty years of age (*Ḥilya*, x, 126). His wandering years ended around 218/833 with his definite return to Baghdād. Probably already before his journeys he had won there Bishr al-Ḥāfī (d. 840 [*q.v.*]) as a paternal friend. For his views he was also indebted to Fuḍayl b. ʿIyāḍ (d. 803 [*q.v.*]), whom he did not, however, come to know personally. He does not seem to have maintained close relations with al-Muḥāsibī (d. 857 [*q.v.*]), who was very closely connected to him as far as Ṣūfī ethics and self-education were concerned (cf. J. van Ess, *Gedankenwelt*, 10).

The third period of Sarī's life, which began immediately after his return to Baghdād, was that of his great role as a teacher. Pupils did not only come flocking in from ʿIrāḳ and Khurāsān (Abu 'l-Ḳāsim al-Djunayd, Abū Saʿīd al-Kharrāz, Abu 'l-Ḥusayn al-Nūrī, Samnūn, Ibn Masrūḳī and others), but also from Syria (e.g. ʿAlī al-Ghaḍāʾirī and Ismāʿīl b. ʿAbd Allāh al-Shāmī). It was not only professional Ṣūfīs who joined him, but also pious workmen and merchants, unto the *muḥaddith* [see ḤADĪTH] and the *ḳāḍī* (*TB*, ix, 191-2, 189, l. 15). Sarī must have been an outstanding teacher, who knew how to address and stimulate everyone, whether personally or in the course of lectures (e.g. *Ḥilya*, x, 119, ll. 15 ff.), but who also knew what he could demand of the individual person. Only the intimates had insight in his mystical experience. On the other hand, he also composed a rule for novices (*Ḥilya*, x, 117 below).

We do not know how long Sarī was active as an educator. From a certain moment onwards he withdrew completely into his own world of experience and permitted only intimates, above all Abu 'l-Ḳāsim al-Djunayd (d. 910), to approach him. For this fourth period of Sarī's life, too, people in Baghdād had a concrete explanation. Once he was teaching in his circle when the misanthrope Abu Djaʿfar al-Sammāk passed and marred the holding of further sessions by remarking: "Abu 'l-Ḥasan, you have become the resting-place of the idlers" (*TB*, xiv, 411).

Sarī's character

In his statements as well as in the accounts about him, Sarī appears as a noble, unselfish, helpful and dynamic personality who, as a member of the Islamic community, felt himself responsible for the well-being of his fellow men (cf. *TB*, ix, 188). This attitude had already won him the favour of Maʿrūf al-Karkhī and made him later responsive to the *futuwwa* [*q.v.*] of Ibrāhīm b. Adham, who did every kind of work for others but would himself never lay claim to their help. The after-effects of his influence also sharpened Sarī's sensitivity to decent good manners (*adab*, cf. *Ḥilya*, x, 120, ll. 20-1, 122, ll. 18-20).

Like Ibn Adham, Sarī was a man of action and not a theoretician. Knowledge (*ʿilm*) interested him only in so far as it could be turned into deed (*ʿamal*). He shared Bishr al-Ḥāfī's scepticism of knowledge of the *ḥadīth*; according to him, it was "no provision for the hereafter" (*ibid.*, x, 127). Consequently, he transmitted only traditions which were illustrated by his own attitude or which would support the latter. He was no less at a loss with theology, even if occasionally he knew how to gain a Ṣūfī aspect from a theologumenon (cf. *Mukhtaṣar Taʾrīkh Dimashk* = *MTD*, ix, 227 in the middle). There was only one knowledge for which he had a burning interest, namely, the paths to self-knowledge and self-education; as a protagonist of this field of knowledge, he particularly esteemed al-Muḥāsibī (*Ḳūt al-ḳulūb*, ii, 35, ll. 11-12 = Gramlich, *Die Nahrung*, i, 503).

Other main features of Sarī's character were his sincerity and veracity. Bishr al-Ḥāfī had trained him in the freedom not to fool others in anything (*Lumaʿ* 373, ll. 5-8), and Sarī himself demanded that nothing should be done or left out "on behalf of people" but only on behalf of God alone (*Ṣifat al-ṣafwa*, ii, 213), in other words, that there should be practised what in ʿIrāḳ was understood as *ikhlāṣ* [*q.v.*] and which Sarī, in association with al-Djurdjānī, still called *taṣḥīḥ al-irāda* "purification of intention" (al-Sulamī, 51; for al-Djurdjānī, see *Ḥilya*, x, 112). In the method of carrying through this attitude against all impulses of hypocrisy (*riyāʾ*), he largely followed al-Muḥāsibī (cf. *ibid.*, x, 125, and van Ess, *Gedankenwelt*, 149 ff.).

Above all, he fought a particular case of hypocrisy, which one might qualify as "business by means of religion". On a lower level he condemns "eating thanks to one's religion" (*Ḥilya*, x, 117, ll. 7-10; see for this, *Lumaʿ*, 201, l. 3; Meier, *Abū Saʿīd*, 304); on a higher one, he censures the claim to social authority of many a Ḳurʾān reader on the ground of his piety and religious knowledge, which he misuses (*MTD*, ix, 226-7). As a general remedy and as preventive medicine, he recommends "anonymity" (*khumūl*), following also in this point Bishr al-Ḥāfī's example.

The end of zuhd

Sarī belongs to the generation of Ṣūfīs in which—not least under the influence of a new mystical experience—the authentic wealth of ideas of *zuhd* is partly commuted, partly refined, but sometimes also hyperbolically brought *ad absurdum*. The theatrical tirades of the ascetics against the world became silent, and the fierce battle against its allurement gave way to indifference (see for this, *MTD*, ix, 219). Sarī indeed abandoned his trade because of lack of interest in wordly affairs, but on the other hand he did not simply throw away all his worldly goods but put them into action for works pleasing to God. *Zuhd* became an inner attitude and signified that "the heart is free from that from which the hands are free" (*Lumaʿ*, 46).

The most important means of commuting *zuhd* was "scrupulousness" (*waraʿ*), i.e. the painful effort to come only in contact with "what is permitted" (*ḥalāl*). The first matter to be dealt with was one's daily bread. The scrupulous person wanted to know where his sustenance came from, and who had dealt with it before it reached his hands. Sarī then extended this method to all implements of daily life (*TB*, ix, 189). He apparently came to know these implements in Syria, in the heritage of Ibn Adham (cf. *Ḥilya*, x, 116,

22-3). The idea of narrowing what is permitted by means of *wara*ᶜ in such a way that *zuhd* practically loses its object goes also back to this heritage. This was in any case the way in which Sarī proceeded (*TB*, ix, 190). When sure of their irreproachable origin, he was by all means open to worldly titbits (*MTD*, ix, 217 below). But he followed Ibn Adham's ideas of *wara*ᶜ also in another aspect; not only did he not want to eat anything which might burden him before God, but neither should food render him indebted to any creature (*Luma*ᶜ 183, ll. 6-7; on Ibn Adham, cf. al-Ḳus̲h̲ayrī, 59, ll. 9-10 = Gramlich, *Das Sendschreiben*, 172).

All along there had been a latent conflict between excessive service of God (*ᶜibāda* [*q.v.*]), as practised by the ascetics, and social requirements. Initially, Sarī had clearly decided in favour of the latter. He transmitted to his pupils (al-Sulamī, 165, ll. 9-10) the relevant *ḥadīt̲h̲*, taken over from Maᶜrūf: "He who fulfills a wish of his Muslim brother is rewarded in the same way as one who has served God during all his life" (*Manāḳib*, 626-7). In the last period of his life, however, he recommends as "the direct path into paradise" that "one should occupy oneself with the service of God, turn only to Him in such a way that there does not remain anything else inside oneself" (*Ḥilya*, x, 119). Ascetic piety expressed in works is certainly not at stake any more here, but it was on the one hand a matter of the delight of being alone with God (cf. *ibid.*, x, 117, l. 14, 125, l. 10) and on the other a matter of avoiding temptations, no less important for Sarī (al-Sulamī, 50, ll. 6-7).

With the conviction of his own depravity, Sarī enters the field of hyperbolism. This conviction may have been furthered by continuous self-criticism and by examination of his conscience, but it also corresponds to an old praxis of exercise in humility (cf. van Ess, *Gedankenwelt*, 158): one forces oneself to the notion that one is worse than everybody else. Fuḍayl b. ᶜIyāḍ [*q.v.*] held the same view (*Ḥilya*, viii, 101). To the alarm of his pupils, Sarī did not even wish to have preference over homosexual boys (al-Sulamī, 49, ll. 10 ff.) and continuously squinted at the tip of his nose in order to investigate whether his face had not already become black because of his depravity (*Ḥilya*, x, 116; this passage became famous, cf. *Taᶜarruf*, 31, l. 8).

Sarī also gives a new turn to another ascetic motive, namely ostentatious and continuous mourning as it was practised by the *bakkāʾūn* and later by Fuḍayl b. ᶜIyāḍ. Sarī still allows for this attitude when he mentions "weeping about one's sins" as the first of the "five most beautiful things" (al-Sulamī, 54). Later, being mournful becomes for him the characteristic of someone who loves God (as in *Ḥilya*, x, 125, l. 24), and when he exclaims before al-D̲j̲unayd "I should wish that the mourning of the entire mankind be thrown upon me" (*ibid.*, 118); this may conceivably have an altruistic meaning, but certainly not the former ascetic one.

Finally, a word on the primal ascetic motive of fear of God and His Judgement. It is true that reminiscences of both the absolute and the polarised fear of God are not lacking in Sarī's thinking (e.g. *Ḥilya*, x, 118, ll. 2-4, and al-Sulamī, 53, l. 5), but the starting point of his reflections is a well-considered balance between fear and its counter-force, namely, hopefulness (for this problem see Meier, *Abū Saᶜīd*, 148 ff.), put down in a fragment of a letter of a later period, the only authentic document of Sarī which we possess (*Luma*ᶜ, 238). However, he developed this dichotomy further in a Ṣūfī way. On the one hand, he does this with the help of a surmounting third notion: firstly, it is the shame (*ḥayāʾ*) before God's eye (*Ḥilya*, x, 117), which takes the place of the mere fear of His punishment and hope for His grace (see also ᶜAṭṭār, *Tad̲h̲kira*, i, 253, ll. 14-15, 247, ll. 20 ff.); secondly, Sarī introduces here as a fourth binding force, after the example of S̲h̲aḳīḳ al-Balk̲h̲ī (*Adab al ᶜibādāt*, 20-1), the love of God, which outshines the elementary experiences of fear and hope. On the other hand, he refines fear and hope into feelings of reverence (*hayba*) and intimacy (*uns*) (*Ṣifat al-ṣafwa*, ii, 215, ll. 7-8). All "new" notions are characterised as personal feelings towards God and therefore indicate that we find ourselves already in the sphere of mysticism. In the "five things next to which nothing else rests in the heart", Sarī gives a summing up, namely "fear of God alone, hope in God alone, love of God alone, shame before God alone, and intimacy with God alone" (*Ḥilya*, x, 124-5).

Sarī's mystical experiences

We are extremely badly informed about what Sarī made public of his mystical experience (cf. al-Sulamī, 48, ll. 3-2; al-Ḳus̲h̲ayrī, 10, l. 2 = Gramlich, *Das Sendschreiben*, 41). It is certain that this experience was completely under the imprint of the love of God. The impulse might go back to Maᶜrūf al-Kark̲h̲ī who, after his death, could only be imagined in paradise as being drunk with the love of God (*Manāḳib*, 675-6) and who is said to have been moved by the love of God to that form of renunciation of the world which he also knew how to provoke in Sarī (*Ḳūt*, iii, 82, ll. 4 ff.). In fact, it is to al-D̲j̲unayd exclusively that we owe all information on Sarī's love of God, and so it dates only from the third or fourth periods of his life.

Here, too, in the most authentic field of his mysticism, Sarī is seen as the practical man who is averse from all forms of speculation. He does not want to have anything to do with the Ṣūfī theory of love; on the contrary, he wants to understand love of God as a psychosomatic phenomenon. While speaking about this, he tried to extend the skin of his forearm, and when this proved to be impossible, he said, "If I were to assert that this skin had dried up on this bone out of love for Him, I would speak the truth" (al-Ḳus̲h̲ayrī, ii, l. 11 = Gramlich, *Das Sendschreiben*, 41-2). Elsewhere, too, he depicts the love of God as an inner burning (*TB*, ix, 191, ll. 7-10) and does not get tired of quoting corresponding verses on profane love (*Luma*ᶜ, 251, ll. 4-6). It is, therefore, no wonder that he also transmitted the famous-infamous *ḥadīt̲h̲ al-ᶜis̲h̲ḳ* (al-Ḳus̲h̲ayrī, 112, l. 23 = Gramlich, *Das Sendschreiben*, 317; for the *ḥadīt̲h̲* itself, see Massignon, *Essai*, 195-6).

Sarī represents here the well-known conviction that lovers of God would be tested by Him in the hardest possible way, so that the truthfulness of their love might prove itself. In a dream he hears God telling them: "I want to bring down upon you as many proofs as you have breaths, which not even the solid mountains would stand. Will you bear them patiently (*a-taṣbirūna*)?" They answer: "If it is You who tests us, do whatever You wish!" (*Ṣifat al-ṣafwa*, ii, 216, ll. 15 ff.). Sarī himself did not advance any further opinion on this, but we possess a vivid description by al-D̲j̲unayd of the torments in question, where he depicts the desperate endeavours with which the mystic tries to win back the situation of bliss, caused by the union, after he has awaken from ecstasy (*Kitāb al-Fanāʾ*,34-8 = Gramlich, *Islamische Mystik*, 19-22). Perhaps the linguistic virtuoso that the pupil was, retained here his master's experiences.

Sarī was indeed very well acquainted with the ecstatic heights of mystical experience. Al-D̲j̲unayd

reports about a trance of the master, in which his face radiated in such a way that the bystanders could no more stand the sight (*Lumaᶜ*, 307, ll. 13 ff.). Moreover, Sarī confirmed to him that ecstatic experiences (*mawādjīd ḥādda*) and intensive thoughts of God (*adhkār ḳawiyya*) could lead the mystic so far that "his face might be beaten with a sword without him being aware of it" (*ibid.*, 306, ll. 6-12). It may be that what Sarī once indicated as his nightly "experiences" (*fawāʾid*) (*Ḥilya*, x, 121, ll. 20-1) were such states of trance, and that what he called his *awrād* [see WIRD] were corresponding *dhikr* exercises. But since he considered ecstasy as a charisma (*karāma*), he did not of course want to talk about it (cf. his postulate of the *ṣiyānat al-karāmāt*, *Ḥilya*, x, 120, l. 13).

ṢARÏ ᶜABD ALLĀH EFENDĪ, Ottoman poet, man of letters and bureaucrat (?992-?1071/?1584-?1661).

He was also reported to have been a good calligrapher and an ardent lover and cultivator of flowers, Ibrāhīm I dubbing him *sershükūfedji* (*čičekči bashi*) (see Ömer Faruk Akün, in *İA*, art. *Sarı Abdullah*). In his own works he is referred to as ᶜAbd Allāh b. al-Seyyid (or al-Sherīf) Muḥammad b. ᶜAbd Allāh (Akün, *loc. cit.*). He seems to have been born in Istanbul, but the sources disagree on the date of birth. His father Sayyid Muḥammad had fled from the Maghrib to Istanbul and settled there; his mother was a daughter of the Beglerbegi Meḥmed Pasha (d. 997/1588-9), brother of the Grand Vizier Khalīl Pasha, by whom he was brought up and given an education under Shaykh Maḥmūd of Scutari and others (see Nihad Sâmi Banarlı, *Resimli Türk edebiyatı tarihi*, Istanbul 1976, 700), with early exposure to mysticism, Khalīl Pasha himself having close *ṭarīḳa* connections [see KHALĪL PASHA ḲAYṢARIYYELI].

He served as *tedhkiredji* (private secretary) to Khalīl Pasha when, in his second vizierate, the latter was given command of the troops in the Persian campaign, and in 1037/1627-8 was appointed *reʾīs ül-küttāb* [*q.v.*] in place of Meḥmed Efendi, who had just died, but was soon dismissed at the same time as his patron. After the latter's death in 1038/1629, he remained out of office until 1040/1638 when he was appointed to the imperial *rikāb* [*q.v.*]. He accompanied Murād IV on his Baghdād campaign and then became *reʾīs ül-küttāb* for the second time. He continued in various positions until 1065/1655 when he retired from public life and devoted his remaining years to writing. His tomb is in the cemetery of Maltepe outside the Top Kapı (Gate of St. Romanus) in Istanbul (Gibb, *HOP*, iv, 79).

A member of the Bayrāmiyya *ṭarīḳa*, Ṣarï ᶜAbd Allāh Efendi had a close relationship also with leaders of the Mawlawiyya [*q.v.*], and most of his works (in Turkish and Arabic) were connected with mysticism. His five-volume *Djewāhir-i bewāhir-i Methnewī*, written 1035-41/1625-31 and dedicated to Murād IV, is a Turkish translation of and commentary on the first volume of Mawlānā's Persian *Mathnawī*, but has been described as an "encyclopaedia of mysticism" (Akün, *loc. cit.*), containing as it does information about various orders and legends of saints. The interpretation is closely related to Ṣarï ᶜAbd Allah's knowledge of Ibn al-ᶜArabi's [*q.v.*] doctrines. Although stylistically the work is part of the high culture, with sections in rhymed prose, it also contains sentences that are short and simple, and close to the spoken language (Banarlı, *op. cit.*). It was printed at Istanbul in 1288/1871. Among his other works are: *Naṣīhatü ʾl-mülük*, a Mirror for Princes and discussion of death and the hereafter; *Themerātü ʾl-fuʾād*, a discussion on mystical topics with Ismāᶜīl Anḳarawī [*q.v.*], which also refers to various orders and personages; *Djawharatu ʾl-bidāya*, another mystical work but dedicated to Murād IV, with an introduction describing his recent conquest of Baghdād; and *Dustūru ʾl-inshāʾ*, a collection of official correspondence and other documents (some of his own composition), interesting from the aspect of foreign relations. He also wrote poetry and songs of a mystical tenor under the *makhlaṣ* ᶜAbdī.

Bibliography: For further details and bibl., see Akün, *op. cit.*

(CL. HUART-[KATHLEEN BURRILL])

ṢARÏ KÜRZ or ṢARÏ GÖREZ (on the pronunciation of the second element in the name, see M.C. Şehabeddin Tekindağ, *Yeni kaynak ve vesikalar ışığı altında Yavuz Sultan Selim'in İran seferi*, in *Tarih Dergisi*, xvii/22 [1967], 49-78, n. 20), *laḳab* [*q.v.*] of the Ottoman scholar and statesman Nūr al-Dīn Ḥamza b. Yūsuf of Ḳarasi.

The date of his birth is unknown. According to Tashköprü-zāde [*q.v.*] (*al-Shaḳāʾiḳ al-nuᶜmāniyya fī ᶜulamāʾ al-dawlat al-ᶜUthmāniyya*, Beirut 1395/1975, 181), he studied with the "*ᶜulamāʾ* of his age", and successively with Khaṭīb-zāde and Khōdja-zāde [*q.v.*]. He next "entered the service" of Khōdja Sinān Pasha [*q.v.*], Grand Vizier between 881/1476 and 882/1477 (İ.H. Uzunçarşılı, *Hızır Bey oğlu Sinan Paşa'nın vezir-i âzamlığına dâir çok kıymetli bir vesika*, in *Belleten*, xxvii [1963], 37-44), accompanying his patron to exile in Sivrihisar in 882/1477 (Tashköprüzāde, *op. cit.*, 106-9). On his accession in 886/1481, Bāyezīd II [*q.v.*] recalled Sinān Pasha, and appointed him *müderris* at the Dār al-Ḥadīth in Edirne [*q.v.*], whither Ṣarï Kürz accompanied him as his teaching assistant. After the Dār al-Ḥadīth, Ṣarï Kürz became *müderris* "at several *madrasas*", finally at one of the Eight Madrasas attached to the Mosque of Meḥemmed II [see ṢAḤN-I THAMĀN]. He evidently remained on

intimate terms with Bāyezīd II, since the only incident in his career to enter the Ottoman historiographical tradition is his embassy on behalf of this sultan to his son Prince Selīm (Selīm I [*q.v.*]) in 917/1511 (*Die Altosmanischen Anonymen Chroniken*, ed. F. Giese, Breslau 1922, 130; Ahmet Uğur, *The reign of Sultan Selīm I in the light of the Selīm-nāme literature*, Berlin 1985, 160, 171, 177; D̲j̲elāl-zāde Muṣṭafā, *Selīm-nāme*, ed. Ahmet Uğur and Mustafa Çuhadar, Ankara 1990, 258, 295). By the year 917/1511, Bāyezīd had also appointed him *ḳāḍī* of Istanbul, a post which he held until 919/1513 or later (for *wakfiyyes* which he validated in these years as *ḳāḍī* of Istanbul, see Ö.L. Barkan and E.H. Ayverdi, *İstanbul vakıfları tahrir defeteri. 935 (1546) tarihli*, nos. 2107, 906). Selīm I appointed him successively *ḳāḍī ʿasker* [*q.v.*] of Anatolia and *ḳāḍī ʿasker* of Rumelia. It was he who in 920/1514 issued the *fatwā* sanctioning the opening of hostilities against the Ṣafawids [*q.v.*] and the massacre of their adherents in Anatolia (for text and facsimile of the *fatwā*, see Tekindağ, *op. cit.*). Tas̲h̲köprü-zāde reports that Selīm eventually dismissed him as *ḳāḍī ʿasker* of Rumelia "because of something that happened between them", and re-appointed him to one of the Eight Madrasas. He seems to have ended his career as *ḳāḍī* of Istanbul, since he validated *wakfiyyes* in Istanbul in 924/1518 and 927/1521 (Ö.L. Barkan and E.H. Ayverdi, *op. cit.*, nos. 917, 2163). He died, Tas̲h̲köprü-zāde says, "in 928 or 929"/1521-3, and was buried "next to his mosque in the city of Constantinople". The mosque in question must be the mosque of "Ṣarî Kez", which Ewliyā Čelebi [*q.v.*] (*Seyāhat-nāme*, i, Istanbul 1314/1896-7, 310) places "in the ʿAlī Pas̲h̲a market, near [the mosque of Meḥemmed] the Conqueror". The mosque gave its name to a quarter in the Fātiḥ district of Istanbul, known variously as Ṣarî Kez or Ṣarî Güzel (Semavi Eyice, *İstanbul'da yayla camileri*, in *Tarih Dergisi*, x [1954], 34 nn. 8, 9).

Tas̲h̲köprü-zāde records Ṣarî Kürz as the author of a work of Ḥanafī *furūʿ* entitled *al-Murtaḍā* (see Ḥād̲j̲d̲j̲ī K̲h̲alīfa, ed. Flügel, *Kas̲h̲f al-ẓunūn*, v, 491), and a book of responsa to the legal conundrums of Sayyidī Ḥamīdī (*ibid.*, vi, 241). Ḥād̲j̲d̲j̲ī K̲h̲alīfa (iv, 170) also lists a gloss on al-Iṣfahānī's commentary on the *Ṭawāliʿ al-anwār* of al-Bayḍāwī.

Bibliography: In addition to the references given in the text, see R.C. Repp, *The Müfti of Istanbul*, Oxford 1986, 218-20; Meḥmed T̲h̲üreyyā, *Sid̲j̲ill-i ʿOt̲h̲mānī*, repr. Farnborough 1971, iv, 581; Ḥafiẓ Ḥüseyn Aywansarāyī, *Ḥadīḳat al-d̲j̲awāmiʿ*, Istanbul 1281/1864-5, 133-4. (C. Imber)

ṢARÎ MEḤMED PAS̲H̲A, Baḳḳāl-zāde, Ḥad̲j̲d̲j̲ī, S̲h̲ehrī, Defterdār (?-1129/1717), Ottoman statesman, born in Istanbul (hence: *S̲h̲ehrī*), a son of a Muslim Turkish grocer. He styled himself *El-Ḥād̲j̲d̲j̲ Meḥmed ed-Defterī* in the preface to his chronicle.

He made his career in the financial department of the Porte [see māliyye]. In 1081/1671 he was employed in the office of the *rūznāmd̲j̲e-yi ewwel ḳalemi* [*q.v.*]. He won the patronage of the *defterdār* Ḳilič ʿAlī Efendi, *bas̲h̲defterdār* (in function 1102/1691-2) and was promoted to *mektūbd̲j̲u* (= *mektūbī*), head of the secretariat of the principal *defterdār*. The Grand Vizier Rāmī Meḥmed Pas̲h̲a [*q.v.*] appointed him principal *defterdār* (17 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1114/5 May 1703). This was the first of his seven appointments to this high office. At the time of the Edirne Revolt he was dismissed (13 Rad̲j̲ab 1115/23 August 1703). The new Sultan Aḥmed III [*q.v.*] reinstated him soon at the behest of the rebels, who demanded Ṣarî Meḥmed's financial acumen to produce the necessary funds for their "Accession Fee" (*d̲j̲ulūs bak̲h̲s̲h̲īs̲h̲ī*). Dismissed after this operation, he was relegated to the *rūznāmd̲j̲e-yi ewwel* office. *Defterdār* again on 23 S̲h̲awwāl 1115/29 February 1704, he lost the position after eleven months. Re-appointed 14 months later, he remained in function for one year and 5 months. The next turn of office lasted from 20 D̲h̲u 'l-Ḳaʿda 1119/12 February 1708 till 3 D̲j̲umādā II 1121/10 August 1709, when he lost favour with the Grand Vizier Čorlulu ʿAlī Pas̲h̲a [*q.v.*] and retired into private life at his *ḳonaḳ* in the Ḳumḳapî quarter of the capital. The Grand Vizier removed him from the centre of power by appointing him (titular) *mutaṣarrîf* of Salonica, ranking as a pas̲h̲a of "two tails" [see ṭug̲h̲] and sending him as military governor to the frontier fortress town of Bender (Bessarabia) [*q.v.*]. Later, he was given the government of Izmid as well. Ṣarî Meḥmed Pas̲h̲a became *defterdār* again in 1123-4/1712 for five months. After the conclusion of peace with Russia at Edirne (1125/1713), he was appointed a member of the boundary commission which settled the new border in Podolia. Upon their return to Istanbul, the sultan awarded caftans of honour to *inter alios* Ṣarî Meḥmed, who soon was made *defterdār* again (1126/1714). He appears to have been a client of the *ḳapudānpas̲h̲a* Ḥād̲j̲d̲j̲ī Meḥmed Pas̲h̲a "D̲j̲anîm K̲h̲od̲j̲a" [*q.v.*]. Next year he joined the campaign in the Morea led by the Grand Vizier Damād ʿAlī Pas̲h̲a [*q.v.*]. His task was the provisioning of the army via Eğriboz [*q.v.*]. After the Grand Vizier's death in the battle of Peterwardein, Ṣarî Meḥmed Pas̲h̲a received the rank of vizier (4 Ramaḍān 1128/22 August 1716). He had been hoping for the grand vizierate, but he loyally served under the new Grand Vizier, the aged Ḥād̲j̲d̲j̲ī Arnawūd K̲h̲alīl Pas̲h̲a [*q.v.*], fighting Prince Eugene of Savoy and the Imperial army near Belgrade. He seems not to have become member of the faction of the sultan's favourite, Damād News̲h̲ehirli İbrahīm Pas̲h̲a [*q.v.*]. Ṣarî Meḥmed openly vented his disappointed ambition and lost the confidence of the sultan. In 1129/1717 he was recalled to the Porte, and his new appointment as military governor of Salonica meant his disgrace. He received the order to organise a force of 3,000 to be recruited from the *Ewlād-i Fātiḥān* (originally Anatolian Turks settled in Rumelia) at his own expense and to join the main army at Nis̲h̲ to take up the guarding of the "Iron Gate" of the Danube. He failed to comply, and openly criticised the sultan's policy. His behaviour led to his downfall; he was accused of incitement to revolt and of previous misconduct in the field before Temesvár in 1716, where his force of 1000 *dalḳîlîč-serdengečti* volunteers withdrew without fighting. A *ḳapîd̲j̲îbas̲h̲î* sent from the Porte had him executed in the castle of Ḳawāla [*q.v.*]. His possessions in Istanbul, Salonica, Bender and Sīwās were confiscated. At least one son survived him, Meḥmed Emīn, *alaybeyi* at Sīwās in 1179/1767 (see above, vol. I, at 295a).

ṢARĪ ṢALṬŪḲ DEDE, Turkish warrior-saint of the 7th/13th century.

The sources on his life are extremely meagre. The earliest surviving work in which he is mentioned is Ibn Baṭṭūṭa's *Riḥla*. The author states that when he passed through the town of "Bābā Salṭūḳ" in the Dasht-i Ḳipčaḳ [*q.v.* in Suppl.] (probably near the lower Dnieper in the Ukraine) in 732/1332, he learned that its namesake was "an ecstatic devotee, although things are told of him which are reproved by Divine Law" (tr. H.A.R. Gibb, *The travels of Ibn Baṭṭūṭa*, Cambridge 1958-71, ii, 499-500). About the same time, legendary stories related to Ṣarī Ṣalṭūḳ had entered the Bektāshī *wilāyet-nāmes*. By the 9th/15th century, he was considered to be a Bektāshī saint (F.M. Köprülü, *The Seljuks of Anatolia*, tr. and ed. G. Leiser, Salt Lake City 1992, 81 n. 82). Next, he appears briefly in the *Taʾrīkh-i āl-i Saldjūḳ*, written by the Ottoman historian Yazīdjī-oghlu (or Yazīdjī-zāde) ʿAlī during the reign of Murād II (824-55/1421-51). According to this work, which is virtually the only historical source on his life, Ṣarī Ṣalṭūḳ "of blessed memory" went to Constantinople to join the deposed Saldjūḳ sultan ʿIzz al-Dīn Kaykāwūs II and his army after they had taken refuge in Byzantine territory from Kaykāwūs's brother and his Mongol protectors. These Turks found favour with the Byzantine emperor, who subsequently gave them Dobrudja [*q.v.*] as an abode. Later, the emperor imprisoned Kaykāwūs, but he was freed by Berke Khān of the Golden Horde, who gave him and his followers hospitality in the Crimea. Berke Khān then transferred the Turks of Dobrudja, among them Ṣarī Ṣalṭūḳ, into the steppe (*dasht*). When Kaykāwūs died in the Crimea in 679/1280, one of his sons claimed the throne and asked for permission to return to Rūm. At that point, Berke Khān ordered Ṣarī Ṣalṭūḳ to lead the remaining Turks back to Dobrudja. Meanwhile, another of Kaykāwūs's sons had been held in Constantinople, where he was baptised by the Patriarch. Ṣarī Ṣalṭūḳ successfully asked for him to be freed. He returned to Islam and became a dervish. Ṣarī Ṣalṭūḳ then transferred to him the supernatural power that he had received as a shepherd from the holy man Maḥmūd Khayrānī (d. 667/1269) of Akshehir and sent him to Ṣulṭāniyya. Ṣarī Ṣalṭūḳ later died in Dobrudja (P. Wittek, *Yazïdjïoghlu ʿAlī on the Christian Turks of the Dobruja*, in *BSOAS*, xiv [1952], 639-68). While describing Süleymān's Mohács campaign (932/1526), Kemāl Pasha-zāde [*q.v.*] (or Ibn Kamāl, d. 940/1534), *Taʾrīkh-i āl-i ʿOthmān*, mentions Ṣarī Ṣalṭūḳ in passing as a wonder-working saint in Dobrudja. Sayyid Luḳmān (d. *ca.* 1010/1601-2 [*q.v.*]), *Idjmāl-i aḥwāl-i āl-i Saldjūḳ*, essentially repeats Yazīdjī-oghlu's information, but adds that Ṣarī Ṣalṭūḳ went to Rumelia in 662/1263-4 (relevant passages from these writers in A. Decei, *Le problèm de la colonisation des Turcs seljoukides dans la Dobrugea au XIIIe siècle*, in *Tarih Araştırmaları Dergisi*, vi [1968], 85-111).

Yazīdjī-oghlu's report clearly reflects the incident in which Kaykāwūs II [*q.v.*] fled from the Mongols to the court of Michael VIII Palaeologus in 660/1262 and subsequently reached the Crimea. Some of the Turks who followed him later settled permanently in Dobrudja and were thus apparently the first to establish Islam in the Balkans. Nevertheless, most of these Turks eventually became Christians known as the Gagauz [*q.v.*]. We have neither a contemporary Christian (Byzantine) nor Muslim source, however, that mentions a Ṣarī Ṣalṭūḳ in connection with these events. It is also noteworthy that none of the aforesaid Ottoman historians links Ṣarī Ṣalṭūḳ with the Bektāshīs. Yet by the 9th/15th century, Ṣarī Ṣalṭūḳ appears in Bektāshī tradition as a shepherd whom Ḥādjdjī Bektāsh sends, via Sinope, to Georgia, where he converts the Georgians. Then he goes to Dobrudja, where he kills a dragon which had captured the daughters of a king, at the fortress of Kaliakra (Ḳilghra). Afterwards, he calls the people to Islam and builds a *tekke* (Köprülü, *The Seljuks*, 54-5).

Relying primarily on Bektāshī *wilāyet-nāmes* and other legendary or semi-legendary sources, it is generally held today that there actually was a saint named Ṣarī Ṣalṭūḳ and that he was a disciple of Ḥādjdjī Bektāsh. Moreover, the heterodox dervish Baraḳ Baba [*q.v.*] claims, in turn, that he was a disciple of Ṣarī Ṣalṭūḳ (Köprülü, *Islam in Anatolia*, tr. and ed. G. Leiser, Salt Lake City 1993, 22-3). Indeed, Köprülü considers Ṣarī Ṣalṭūḳ to be one of a series of warrior *babas* or *alp-erens* connecting the uprising of Bābā Isḥāḳ [*q.v.*] in eastern Anatolia in 638/1240 with the revolt of Badr al-Dīn [*q.v.*] b. Ḳāḍī Samāwnā in Dobrudja in 819/1416 (*op. cit.*, 15, 22, 77 n. 55, 78 n. 57, 90 n. 111, and esp. A.Y. Ocak, *La révolte de Baba Resul ou la formation de l'hetérodoxie musulmane en Anatolie au XIIIe siècle*, Ankara 1989, 100-5 and *passim*). Still, it is unclear if this Ṣarī Ṣalṭūḳ and the one who accompanied the Turks to Dobrudja in the 7th/13th century were the same person.

In any case, by the mid 9th/15th century, it was the legendary Ṣarī Ṣalṭūḳ who, as an heroic figure in the epic *Ṣalṭuḳ-nāme*, supplanted the vague historical personage in the Turkish consciousness. In 878/1473 when Prince Djem [*q.v.*] was in Edirne guarding the Balkan borders while Meḥemmed II was on campaign against Uzun Ḥasan, he heard many stories about Ṣarī Ṣalṭūḳ from various places in Rumelia and commissioned one Abu 'l-Khayr al-Rūmī to compile a book about him. Abu 'l-Khayr collected material for seven years, visiting all the places associated with Ṣarī Ṣalṭūḳ in Anatolia and Rumelia, and then wrote his *Ṣalṭuḳ-nāme*. This work followed, but was superior to, the *Baṭṭāl-nāme* and *Dānishmend-nāme* as the last in the cycle of epic romances concerning the conquest of Anatolia and Rumelia. The first two works were centred on Anatolia, while the *Ṣalṭūḳ-nāme* focussed on Rumelia. In this epic, Ṣarī Ṣalṭūḳ was a great Ṣūfī who had close relations not only with Ḥādjdjī Bektāsh, but also with Djalāl al-Dīn al-Rūmī, Abū Isḥāḳ al-Kāzarūnī and even Naṣr al-Dīn Khodja [*q.vv.*]. He commanded miraculous powers and defended Muslims and converted unbelievers from China to Andalusia. He first lived in Sinope, then in the Crimea, then along the Danube, and finally in Edirne. (He was often associated, initially, with northern Anatolia. The Bolu *sāl-nāme* of 1334/1915-6, 226, for example, states that the region of Bartïn north of Bolu near the Black Sea had previously been referred to as "Ṣalṭuḳ ili", the province of Ṣalṭuḳ.) His major objective was to Islamise Rumelia, and he predicted the conquest of that region in the time of the sons of ʿOthmān. Although the *Ṣalṭūḳ-nāme* is replete with fabulous elements (including stories common to those in the Bektāshī *wilāyet-nāmes*), and blends numerous local traditions (he was often identified with such Christian personalities as St. Nicholas) with Muslim or Turkish traditions, it also reflects many historical events that occurred between 1200 and 1400, such as the struggle of the Anatolian Saldjūḳs and *beyliks* against the Mongols, Byzantines and other

Western powers; the relations of the Golden Horde with the West and Byzantium; the struggle of the Aydînid ruler Umur Bey with the Christians of the West; and the establishment of the Ottoman State.

The *Ṣaltūḳ-nāme* was written, in fact, much like the first anonymous Ottoman chronicles. It is especially important for describing the psychological state of the unbelievers created by the Ottoman invasion of the Balkans (Köprülü, *The Seljuks*, 43-52). It even sheds light on social life in Anatolia under the Ilkhāns and in the Crimea under the Golden Horde.

Ewliyā Čelebi (d. *ca.* 1095/1684 [*q.v.*]) reports the existence of two works, now lost, on the legendary Ṣarî Ṣalṭūḳ: a *risāla* by Yazîdjî-oghlu Meḥmed Čelebi (d. 855/1451) and a *Ṣaltūḳ-nāme* by Kenʿān Pasha (d. 1069/1659 [*q.v.*]) (*Seyāhat-nāme*, Istanbul 1896-1935, iii, 366/Topkapı Sarayı Bağdat Köşkü ms. 305, fol. 127b). Ewliyā claims that his real name was Muḥammad Bukhārī, that he was girded with a wooden sword by Aḥmad Yasawī [*q.v.*] and sent to the assistance of Ḥādjdji Bektāsh, who then sent him to Dobrudja; that he lived in Arpa Čukuru, Sīwās and Tokat; and that he was the patron saint, *pīr*, of the *boza* makers (*op. cit.*, ii, 134/Bağdat ms. 304, fol. 266a, and i, 659/Bağdat ms. 304, fol. 212b). Ewliyā also relates the story that Ṣarî Ṣalṭūḳ instructed his disciples to bury him in seven coffins in remote towns in Rumelia (indeed, as far away as Sweden) "so that the ignorance of where the body really was would produce everywhere a pilgrimage of Muslims and from the pilgrimage would result the incorporation of these lands into the kingdom of Islam" (*op. cit.*, ii, 133/Bağdat ms. 304, fol. 266a ff.). This indicates, of course, that the legendary Ṣarî Ṣalṭūḳ was not only a major symbol of the Islamisation and Turkification of Rumelia, but that he was also probably a composite of many of the warrior dervishes who went to that region after the original Ṣarî Ṣalṭūḳ's death. Certainly, the fact that most of the followers of the original Ṣarî Ṣalṭūḳ eventually converted to Christianity is strong evidence that the legendary person was much more important and influential in this respect than the original. In addition to his burial sites in Rumelia, he had resting places as well in Anatolia. The latter are revered even today: Iznik, Bor near Niğde, and Diyarbakır (G. Smith, *Some türbes/maqāms of Sarı Saltuq, an early Anatolian Turkish ġāzī-saint*, in *Turcica*, xiv [1982], 216-25). Nevertheless, his "true" burial place is generally considered to be at Babadaghî [*q.v.*], in Dobrudja just south of the Danube delta. This site was often the centre of Türkmen, *ghāzī* and heretical dervish activity. While on campaign, Bāyezīd II visited Babadaghî in 889/1484 and built there a great mosque and *zāwiye* dedicated to Ṣarî Ṣalṭūḳ. According to Ewliyā, he also rebuilt the saint's *türbe*, which had become an object of pilgrimage, and endowed a *madrasa* and baths in the town. Later, in 945/1538, Süleymān also showed interest in Ṣarî Ṣalṭūḳ and spent several days visiting his tomb. In the 12th/18th century, Babadaghî began a long period of decline. But the saint's modest tomb still stands, an often-repaired and humble reminder of a thriving Ottoman past (J. Deny, *Sarı Saltıq et le nom de la ville de Babadaghı*, in *Mélanges offerts à Emile Picot*, Paris 1913, 1-15; M. Kiel, *The türbe of Sarı Saltık at Babadag-Dobrudja*, in *Güney-Doğu Avrupa Araştırmaları Dergisi*, vi-vii [1977-8], 205-25).

(G. Leiser)

SARIḲA (A.), theft, noun of agent Sāriḳ "thief". Islamic legal theory distinguishes between *al-sariḳa al-ṣughrā* (theft) and *al-sariḳa al-kubrā* (highway robbery or brigandage), each with different *ḥadd* punishments.

(1) Theft (*sariḳa*) is punished by cutting off the hand, according to sūra V, 42. This was an innovation of the Prophet's; but, according to the *Awāʾil* literature, this had already been introduced in the days of paganism by al-Walīd b. Mughīra (Nöldeke-Schwally, *Gesch. d. Qorāns*, i, 230). This method of punishment may be of Persian origin (cf. *Lettre de Tansar*, ed. J. Darmesteter in *JA*, Series 9, iii [1894], 220-1, 525-6; *Sad Dar*, 64,5 = *Sacred books of the East*, xxiv, 327). In pre-Islamic Arabia, theft from a fellow-tribesman or from a guest was alone considered despicable, but no punishment was prescribed for it; the person had himself to see how he could regain his property (G. Jacob, *Altarabisches Beduinenleben*², 217-18; cf. J.L. Burckhardt, *Bemerkungen über die Beduinen*, Weimar 1831, 127 ff. 261 ff.). In the beginning of the 1st/7th century, the right or left hand was cut off; there was no fixed rule. The Ḳurʾān leaves the point obscure, and one tradition says that Abū Bakr ordered the left hand to be cut off (*Muwaṭṭaʾ*, *Sariḳa*, *bāb* 4; al-Shāfiʿī, *Kitāb al-Umm*, vi, 117). Cf. the variant of sūra V, 42, *aymānahumā*, transmitted by Ibn Masʿūd.

According to the teaching of the *fuḳahāʾ*, the thief's right hand is cut off (for a second crime the left foot, then the left hand, then the right foot) and at the wrist; the stump is held in hot oil or fire to stop the bleeding. The Ḥanafīs and Zaydīs, however, put the culprit into prison at his third crime, which the Shāfiʿīs and Mālikīs only do after his fifth. The Shīʿīs inflict imprisonment for the third offence and death for the fourth. The punishment was inflicted in public; the thief was frequently led round the town seated backwards on an ass with the limb cut off hung round his neck (cf. Ibn Mādja, *Ḥudūd*, *bāb* 22; O. Rescher, *Studien über den Inhalt von 1001 Nacht*, in *Isl.* [1919], ix, 68 ff.). Punishment could not be inflicted in cases of pregnancy, severe illness or when the weather was very cold or very hot. It is a *ḥadd* punishment, as a right of God (*ḥaḳḳ Allāh*) is violated by theft. But as the rights of the owner are also injured (*ḥaḳḳ ādamī*) the thief is bound to make reparation. If the article stolen has disappeared, he is kept under arrest (not so, according to Abū Ḥanīfa). The caliph ʿUmar is said always to have condemned the thief to return double the value (cf. Roman Law: Justinian, *Instit.*, 4, 1, 5).

The jurists define theft for which the *ḥadd* punishment is prescribed as the clandestine removal of legally recognised property (*māl*) in the safe keeping (*ḥirz*) of another of a definite minimum value (*niṣāb*; among the Ḥanafīs and Zaydīs 10 dirhams, among the Mālikīs, Shāfiʿīs and Shīʿīs ¼ dīnār or 3 dirhams) to which the thief has no right of ownership; it is so distinguished from usurpation (*ghaṣb*) and embezzlement (*khiyāna*). By *ḥirz* is meant guarding by a watchman or by the nature of the place (e.g. a private house). Thus theft from a building accessible to the public (e.g. shops of the market, in the open air, baths) is not

liable to the *ḥadd* punishment. This is further only applied to one who (1) has attained his majority (*bāligh* [*q.v.*]), (2) is *compos mentis* (*ʿāḳil*) and (3) has the intention (*niyya*) of stealing, i.e. is not acting under compulsion but freely (*mukhtār*). No distinction is made between freeman or slave, male or female. The punishment is not applied in case of thefts between husband and wife and near relatives nor in the case of a slave robbing his master or a guest his host. Views are divided on the question of the punishment of the *dhimmī* and the protected alien (*mustaʾmin*) with the *ḥadd*, and on the punishment of accomplices and accessories; in any case, the total divided among the latter must reach the *niṣāb* for each of the thieves. It is not theft to take articles of trifling value (wood, water, wild game) and things which quickly go to waste (fresh fruit, meat and milk), or articles in which the *Sharīʿa* does not recognise private ownership or things which are not legitimate articles of commerce (*māl*), like freeborn children, wine, pigs, dogs, chess-sets, musical instruments, golden crosses (the theft of a full-grown slave is considered *ghaṣb*) or articles in which the thief already has a share (booty, state treasure, *waḳf*, something from the common good to the value of the share), also copies of the Ḳurʾān and books (except account books), as it is assumed the thief only desires to obtain the contents. The conception of literary theft is unknown to *fiḳh*.

The charge can be made by the owner and legitimate possessor (or depository) but not by a second thief. The legal inquiry has to be conducted in the presence of the person robbed. For proof two male witnesses are necessary or a confession (*iḳrār* [*q.v.*], which can, however, be withdrawn. It is recommended to plead not guilty if at all possible [see ʿADHĀB]. If the thief, however, has given back the article stolen before the charge is made, he is immune from punishment (sūra V, 43).

(2) Highway robbery or robbery with violence (*muḥāraba, ḳaṭʿ al-ṭarīḳ*) occurs when anyone who can be dangerous to travellers falls upon them and robs them when they are distant from any possible help or when someone enters a house, armed, with the intention of robbing (cf. Roman Law; Justinian, *Novellae*, 134, ch. 13). The Shīʿīs consider any armed attack, even in inhabited places, as highway robbery. The same regulations hold regarding the person and the object as above, especially the *niṣāb*. On the authority of sūra V, 37-8, the culprit is liable to the following *ḥadd* punishments. If a man has committed a robbery which is practically a theft to be punished with *ḥadd*, his right hand and left foot are cut off (the next time, the left hand and the right foot). If, however, he has robbed and killed, he is put to death in keeping with right of reprisal (*ḳiṣāṣ*) and his body publicly exposed for three days on a gibbet or in some other way. The punishment of death is here considered a *ḥaḳḳ Allāh*; the payment of blood-money (*diya*) is therefore out of the question. If the criminal repents, however, before he is taken, the *ḥadd* punishment is omitted; but the claim of the person robbed of the article for compensation and the talio remain. All accomplices are punished in the same way; if one of them cannot be held responsible for his actions, the *ḥadd* punishment cannot be inflicted on any.

All these laws hold only for the *ḥadd* punishment which the judge can only inflict when all conditions are fulfilled. In all other cases the thief is punished with *taʿzīr* [*q.v.*] and condemned to restore the article or to make reparation. It is the same with the thief who comes secretly but goes away openly (*mukhtalis*) or the robber who falls upon someone and robs him at a place where help is available (*muntahib*). Special laws were therefore frequently passed in Islamic states to supplement the *Sharīʿa*, in Turkey, for example, by the Ottoman sultans Meḥemmed II (*Mitteilungen zur Osm. Gesch.*, i [1921], 21, 35), Süleymān II (von Hammer, *Staatsverfassung*, i, 147-8). Meḥemmed IV and ʿAbd al-Medjīd. These laws endeavoured more and more to replace the *ḥadd* punishment by fines and corporal punishment. The Turkish criminal code of 1858 still only recognised fines and imprisonment for theft, although the *Sharīʿa* was not officially abolished thereby [see MEDJELLE].

The punitive prescriptions of the *Sharīʿa* regarding *sariḳa*, which have been either abolished or largely mitigated during the course of the 20th century, except in such countries as Saudi Arabia and the Sudan, seem likely to regain ground at the dawning of the third millennium in several parts of the Islamic world with the rise of Islamic fundamentalism.

SĀRIYA [see SĀRĪ].

SARKĀR ĀḲĀ (P.), a term used for a number of heterodox religious leaders within the broad Shīʿī tradition. It appears to have originated in the 19th century, possibly in recognition of links between the title's bearers and the Ḳādjār court. The title (meaning something like "lord and chief") was used for the first Āḳā Khān (Ḥasan ʿAlī Shāh, 1804-81 [*q.v.*] and several of his successors, as heads of the Nizārī Ismāʿīlīs (sometimes as Sarkār Āḳā Khān); it is, however, not in current use. Leaders of the Shaykhī branch of the Twelver Shīʿa [see SHAYKHIYYA] have been termed "Sarkār Āḳā" since the time of Ḥādjdj Mīrzā Muḥammad Karīm Kirmānī (1809-70 [*q.v.*], as referred to as "Sarkār-i Khān"), a great-nephew of Fatḥ-ʿAlī Shāh and a son-in-law of Nāṣir al-Dīn Shāh. The title passed to his Kirmān-based lineal successors within the Ibrāhīmī family until quite recently, and was particularly used of the late Abu 'l-Ḳāsim Khān (d. 1979). Within the Bahāʾī movement [see BAHĀʾĪS] the title is reserved for ʿAbbās Effendi ʿAbd al-Bahāʾ (1844-1921), the son of Mīrzā Ḥusayn ʿAlī Nūrī Bahāʾ Allāh [*q.v.*], whose

family had a variety of marital links to the Ḳād̲j̲ārs. In English usage, Bahāʾīs refer to him as "the Master", which is both a partial translation of Sarkār Āḳā and an echo of Christian terminology. (D. MacEoin)

SARK̲H̲AD [see salk̲h̲ad].

SARK̲H̲ĒD̲J̲, a site 10 km/6 miles to the southeast of Ahmadābād [*q.v.*] in western India, capital of the sultans of Gud̲j̲arāt [*q.v.*] in the 9th-10th/15th-16th centuries.

Its fame arises from the complex of buildings built round an artificial lake, all of them still standing and excellent specimens of 9th/15th century Gud̲j̲arāt architecture. They include the tomb of the saint S̲h̲ayk̲h̲ Aḥmad K̲h̲attū "Gand̲j̲ Bak̲h̲sh" (d. 850/1446) and a mosque of sultan Muḥammad S̲h̲āh (846-55/1442-51). It became a favourite retreat of Sultan Fatḥ K̲h̲ān Mahmūd S̲h̲āh Begṛā (862-917/1458-1511), who built the large tank, palace buildings and two mausolea for himself and his family.

(Ebba Koch)

ṢĀRLIYYA, the name of a group of Kākāʾīs or Ahl-i Ḥaḳḳ [*q.v.*] living in northern ʿIrāḳ, in a group of six villages, four on the right bank of the Great Zab and two on its left one, not far from its confluence with the Tigris and 45 km/28 miles to the south-southeast of Mawṣil. The principal village, where the chief lives, is called Wardak, and lies on the right bank; the largest village on the left bank is Sufayya.

The Ṣārlīs, like the other sects found in northern ʿIrāḳ (Yazīdīs, S̲h̲abaks, Bād̲j̲ūrān), are very uncommunicative with regard to their belief and religious practices, so that the other inhabitants of the country have in the past attributed abominable rites to them and alleged that they have a kind of secret language of their own. In 1902, Père Anastase gave some notes on the Sarlīs (and also on the sects of Bād̲j̲ūrān and the S̲h̲abaks) which he obtained from an individual in Mawṣil. According to him, their language was a mixture of Kurdish, Persian and Turkish. As to religion, they were monotheists, believing in certain prophets, in paradise and hell. They neither fasted nor prayed. They believed that their chief had the power to sell territory in paradise. For this purpose he visited all the villages at harvest time, and every Ṣārlī was allowed to purchase as many *d̲h̲irāʿ*s as he could pay for; the price of a *d̲h̲irāʿ* was never less than a quarter of a *med̲j̲īdiyye*. Credit was not granted. The chief gave a receipt which show how many *d̲h̲irāʿ*s an individual had acquired. This receipt was put in the pocket of the dead man so that he could present it to Riḍwān, the guardian of Paradise. The Ṣārlīs had also a feast-day once in every lunar year, which consisted in the consumption of a repast at which the chief presided, and to which every one contributed a cock boiled with rice or wheat. After this meal, called *aklat al-maḥabba*, the lights are said to have been extinguished and orgies of promiscuity to have taken place. The head of the community was succeeded at his death by his unmarried son; he was forbidden to shave his beard or his moustache. The Ṣārlīs were polygamous. They were said to have a sacred book written in Persian.

These statements should be taken with considerable reserve. The Ṣārlīs themselves said that they were simply Kurds and belonged originally to the Kāke Kurds who have some villages near Kirkūk. But the Kāke Kurds also had a mysterious reputation. A characteristic feature noticed in one of the Ṣārlī villages (Sufayya) was an ornament with triangular holes in the walls of the principal buildings of the village. Like the Yazīdīs [*q.v.*], the Ṣārlīs used Muslim names, and their chief in the early part of this century was one Ṭāhā Koča or Mullā Ṭāhā.

The present (1994) status, or even the continued existence, of these Ṣārlīs, is unknown, given the present impossibility of western scholars undertaking ethnological field work in the Kurdish areas of northern ʿIrāḳ.

SARMAD [see muḥammad saʿīd sarmad].

SARPUL-I D̲H̲UHĀB ("bridgehead of Zohāb"), a place on the way to the Zagros Mountains on the great Bag̲h̲dād-Kirmāns̲h̲āh road, taking its name from the stone bridge of two arches over the river Alwand, a tributary on the left bank of the Diyāla. Sarpul in the early 20th century consisted simply of a little fort (*ḳūr-k̲h̲āna* = "arsenal") in which the governor of Zohāb lived (the post was regularly filled by the chief of the tribe of Gūrān), a caravanserai, a garden of cypress and about 40 houses. The old town of Zohāb, about 4 hours to the north, is now in ruins. To the east, behind the cliffs of Hazār-D̲j̲arīb, lies the little canton of Bes̲h̲īwe (Kurdish = "below") in a corridor running round the foot of the Zagros giving access to the famous col of Pā-Ṭāḳ, on the slope of which is the Sāsānid edifice called Ṭāḳ-i Girrā. In the west, the heights of Mēl-i Yaʿḳūb separate the verdant plain of Sarpul from that of Ḳaṣr-i S̲h̲īrīn [*q.v.*]. Sarpul is the natural halting place for thousands of Persian pilgrims going to the *ʿatabāt* [*q.v.* in Suppl.] (Karbalāʾ and other S̲h̲īʿī sanctuaries). When the pilgrimage season is at its height (in autumn and winter), a hundred tents may be seen near the bridge. They belong to the Kurdish gipsy tribe of Sūzmānī (Fiyūd̲j̲), the women of which are professional dancers and singers noted for their light morals.

Sarpul corresponds to the site of the ancient K̲h̲almanu of the Assyrians, Ḥulwān [*q.v.*] of the Arabs. The earlier name survived as the Kurdish name of the Alwand, i.e. Ḥalawān. Traces of the old town are found mainly on the left bank (Pāypul) where the land is level and beautiful.

Sarpul is noted for its antiquities: (1) the bas-relief and Pahlavi inscription on the cliff on the right bank of the Alwand; (2) three steles on the cliffs of Hazār-D̲j̲arīb (on the left bank) of which two are Sāsānid (Parthian?) and the third represents Anu-Banini, king of the Lulubi; (3) two miles away, to the south of Hazār-D̲j̲arīb, is an Achaemenid tomb cut out of the rock and venerated at the present day under the name of Dukkān-i Dāwūd (David's workshop) by the Ahl-i Ḥaḳḳ [*q.v.*], who have a cemetery at the foot of the rock.

Modern Sarpul-i D̲h̲uhāb is the chef-lieu of a *bak̲h̲sh* of the same name in the *s̲h̲ahrastān* of Ḳaṣr-i S̲h̲īrīn in Kirmāns̲h̲āh province (*ustān*) (lat. 33° 27′N., long. 45° 25′ E., alt. 534 m/1,750 feet). In *ca.* 1950 it had a population of around 2,000, comprising S̲h̲īʿīs, Ahl-i Ḥaḳḳ and Sunnīs, a number swollen in winter how-

ever by the influx of transhumants from their *yaylaks* or summer pastures in the mountains.

SARRĀDJ [see SARDJ].

SARRĀDJ, BANŪ 'L [see IBN AL-SARRĀDJ, in Suppl.].

AL-**SARRĀDJ**, ABŪ MUḤAMMAD DJAʿFAR B. AḤMAD b. al-Ḥusayn al-Ḳāriʾ (d. 500/1106), known as Djaʿfar al-Sarrādj, or al-Sarrādj al-Baghdādī, a Ḥanbalī traditionist from Baghdād, noted for his poetry and author of the famous *Maṣāriʿ al-ʿushshāḳ*, was born in Baghdād at the turn of the year 417/February 1027.

He took up the study of Islamic Tradition at a very early age and received an education in the *ḳirāʾāt* [*q.v.*]. He actually taught this for several years, not without cultivating at the same time his good taste in *belles lettres* and his poetic skills. Thus al-Khaṭīb al-Baghdādī (d. 473/1071) edited a collection of his enunciations (*fawāʾid*), and specimens of his poetry are given by all of his biographers. Al-Sarrādj is said to have been proud of the many authorised transmissions (*riwāya* [*q.v.*]) he had gathered, and he continually collected—and transmitted—traditions of various kinds. He travelled to Mecca, Egypt and, a number of times, the coastal towns of Syria, especially Tyre, and to Damascus where, according to Ibn ʿAsākir, his (late) transmission from the famous Ibn Shādhān (d. 426/1034) was appreciated. Among his students figures the well-known Abū Ṭāhir al-Silafī (576/1180).

Titles of two kinds of his writings are mentioned in the sources, one being the versifications of works on *fiḳh* and religous matters, as e.g. the *K. al-Tanbīh* by Abū Isḥāḳ al-Shīrāzī (d. 476/1083), a certain *Manāsik al-ḥadjdj* and a *K. al-Mubtadāʾ*. The *al-Urdjūza fī naẓāʾir al-Ḳurʾān*, mentioned by Brockelmann, seems to belong to this group. Other titles apparently concern works of a moralising *adab* type, such as his *Ḥukm al-ṣibyān* and *Manāḳib al-ḥabash* (*al-sūdān*).

His *Maṣāriʿ al-ʿushshāḳ*, "The places (or: times, occasions) of slaughter of passionate lovers" (or, if *maṣāriʿ* is taken as the exceptional plural form of *ṣarīʿ*, "Lovers who were slain [by love]"), agrees in character with this second type of writings. It is a collection of short narrations, often accompanied by verses, about the calamity of love, which is depicted as a chaste and, mostly, a fatal experience. The author only contributes some verses at the end of each section (*djuzʾ*), and meticulously quotes *isnāds*. They show that these materials circulated among scholars of Islamic Tradition, and that they were taken, to a large extent attributed to the founders of *adab* literature, from earlier collections and, to a lesser degree, from Ṣūfī teachings. His book, which served as a basic source for later works on this topic, was classified even by mediaeval authors as *ʿadjīb* "remarkable", and, in modern studies, has raised questions as to the underlying teaching on love and its connection with the Ḥanbalī school of thought. Neither the origin of the texts, nor their presentation, which is void of any moralising commentary, demonstrates a Ḥanbalī character of the work (Bell), but the edifying effect of memorisation (*dhikr*) and the impersonal perspective prevalent in most of the narrations (Vadet) denote a moralistic attitude. In this vein, the work is comparable to earlier collections of edifying narrations or "reports", which were composed by representatives of the *Ahl al-Sunna wa 'l-Djamāʿa*, such as Ibn Abī 'l-Dunyā and others.

Bibliography: There is no critical edition of the *Maṣāriʿ*; most versions are reprints of the Beirut 1958 ed.—Entries on al-Sarrādj are found in most of the biographical literature of the period concerned: Ibn al-Djawzī, *al-Muntaẓam*, 18 vols., Beirut 1412/1992, xvii, 102-4; Yāḳūt, *Irshād*, ed. Margoliouth, ii, Leiden 1909, 401-5; Ibn Manẓūr, *Mukhtaṣar Taʾrīkh Dimashk*, vi, Damascus 1404/1984, 52; Ibn al-Nadjdjār, *al-Mustafād min dhayl Taʾrīkh Baghdād, intiḳaʾ* Ibn al-Dimyāṭī, Beirut n.d., 93-5; Ibn Radjab, *Dhayl ʿalā Ṭabaḳāt al-ḥanābila*, ed. M. Ḥāmid al-Fiḳī, i, Cairo 1952, 100-3.

For studies of his work, see Brockelmann, I², 431, S I 594; J.-Cl. Vadet, *L'esprit courtois en Orient dans les cinq premiers siècles de l'hégire*, Paris 1968, 379-430; J.N. Leder, *Ibn al-Ǧauzī und seine Kompilation wider die Leidenschaft*, Beirut-Wiesbaden 1984, 98-101; German tr. of excerpts from the *Maṣāriʿ*, by R. Paret, in *Früharabische Liebesgeschichten. Ein Beitrag zur vergleichenden Literaturgeschichte*, Sprache und Dichtung 40, Bern 1927.

(S. LEDER)

AL-**SARRĀDJ**, ABŪ NAṢR ʿABD ALLĀH b. ʿALĪ, Ṣūfī author originally from Ṭūs in Khurāsān, who lived towards the middle of the 4th/10th century and died in his home town in 378/988.

The bio-bibliographical and hagiographic literature (ʿAṭṭār, *Tadhkira*, ed. Nicholson, ii, 182-3; al-Dhahabī, *Taʾrīkh al-Islām*, cited by Nicholson in *The Kitáb al-Lumaʿ*, p. III; Ibn Taghrībirdī, *Nudjūm*, iv, 152; Djāmī, *Nafaḥāt*, no. 353; Ibn al-ʿImād, *Shadharāt*, iii, 91) gives hardly any precise information about his life and upbringing. We do, however, know the names of some of his teachers and sources of information e.g. amongst others, Djaʿfar al-Khuldī (d. in Baghdād 348/960) and Aḥmad b. Muḥamad b. Sālim of Baṣra (d. 356/967), the leading light of the Sālimiyya school. The fact that he frequented the company of this last and that he cites him does not, nevertheless, allow us to count him amongst the partisans of the Sālimiyya [*q.v.*] (see Nicholson, *op. cit.*, pp. XI-XII); the lively discussion which he had with Ibn Sālim on the validity of the *shaṭaḥāt* attributed to Abū Yazīd al-Bisṭāmī (*Lumaʿ*, ch. *Tafsīr al-shaṭḥiyyāt*) testifies all the same to his independence of mind. From the text of the *K. al-Lumaʿ* it appears that al-Sarrādj travelled widely, since he cites, on occasion, conversations which he apparently had not only in Persia but also in ʿIrāḳ, Syria and even Egypt. Above all, our sources mention the remarkable consequences of his spiritual elevation. Thus, invited during Ramaḍān to direct the education of the dervishes in the Shūnīziyya mosque at Baghdād, he is said not to have touched for a month the food which was brought to his cell (*Tadhkira*, ii, 182; *Nafaḥāt*, no. 353; Hudjwīrī, *Kashf al-maḥdjūb*, ed. Zhukovski, 417). ʿAṭṭār, and Djāmī following him, further report that

al-Sarrādj, carried off by a moment of ecstasy, plunged his face into a flaming brazier without suffering any pain or leaving any trace on his face; on the contrary, it was completely radiant. But in fact, we know hardly anything further on his life and, in particular, have no information at all on his possible successors on the mystical path. As for his disciples, we know only one name, that of Abu 'l-Faḍl of Sarakhs, the future master of Abū Saʿīd b. Abi 'l-Khayr [*q.v.*] (Muḥammad b. al-Munawwar, *Asrār al-tawḥīd*, ed. Dh. Ṣafā, 27; *Nafaḥat*, no. 354). This is a remarkable dearth of information about one who was called "the peacock of the poor" (*ṭāwūs al-fuḳarāʾ*) and whose authority and competence were widely recognised.

In fact, the personality of al-Sarrādj is completely hidden behind the *K. al-Lumaʿ* "Book of shafts of light", his main and probably only work, since, despite an affirmation of existence by Djāmī, no other title attributed to him is known to us. This work involves a treatise of considerable value, both from the richness of its documentary information on the Ṣūfism of the first Islamic centuries and also from the quality of the religious thought which informs it. Al-Sarrādj presents there the bases of knowledge understood in a mystical sense, contrasted with the Islamic religious sciences known at the time. He details in it the main stages and states of the mystical path; underlines the importance of the revealed sacred text and the prophetic example by highlighting the ways of interpretation followed by the Ṣūfīs; describes the customs (*ādāb*) of Ṣūfīs and cites the particularly significant texts of the great masters. The precision of his definitions in the technical lexicon of Ṣūfism is most valuable. He also deals with the tangible and controversial aspects of the Ṣūfī life, such as the status of miracles (*karāmāt*), the nature of ecstasy, the lawfulness of listening to music (*samāʿ* [*q.v.*]), the orthodoxy of the paradoxical utterances (*shaṭaḥāt*) attributed to certain *mashāyikh*; and the doctrinal errors of several currents of thought claiming a connection with Ṣūfism. Each chapter forms a little, autonomous treatise, in which the author cites abundantly *ḥadīths* and, especially, the dicta of the great masters of Ṣūfism. His own points of view are not concealed at all but are fitted in fairly discreetly behind the teachings of the great figures in the tradition.

The importance of the *Lumaʿ* was appreciated as soon as it appeared. Subsequent authors, like al-Ḳushayrī in his *Risāla*, found in it substantial bases of documentation, as did even Abū Ḥāmid al-Ghazālī, who drew upon it for several elements in his writings on the behaviour of Ṣūfīs (see esp. the *Iḥyāʾ*, Book ii, *K. Ādāb al-samāʿ wa 'l-wadjd*). The *Lumaʿ* also contributed to the legitimisation of Ṣūfism as an Islamic science in its own right. Al-Sarrādj showed himself quite firm about the essential point: true Ṣūfīs are not merely in complete conformity with Islamic orthodoxy but they themselves make up its spiritual élite. It is not, then, a question of an apologia, in the strict sense of the term, or of a purely defensive justification of Ṣūfism, but it goes beyond that to an argued and assured statement of the harmonious integration of mysticism within the bosom of Muslim religious life. Being moderate and aiming at a consensus of opinion, al-Sarrādj's language in the *Lumaʿ* thus forms a particularly clear and vivid example of the conception which the Ṣūfīs had of themselves towards the middle of the 4th/10th century.

Bibliography: *The Kitáb al-Lumaʿ*..., ed. with summary and glossary, by R.A. Nicholson, GMS, Leiden-London 1914; A.J. Arberry (ed.), *Pages of the Kitāb al-Lumaʿ of Abū Naṣr al-Sarrāj*, London 1947 (gathers together the lacunae of the Nicholson ed. on the basis of a Bankipore ms., with a memoir, *preface and notes*); *Schlaglichter über das Sufitum, the K. al-Lumaʿ*, introd., tr. and comm. by R. Gramlich, Wiesbaden 1990 (a valuable work, including a correction of Nicholson's text from two supplementary mss. as well as exhaustive references throughout the text to the Arabic and Persian, Ṣūfī and non-Ṣūfī, bio-bibliographical sources).

(P. LORY)

ṢARRŪF, YAʿḲŪB, a personage of the revival of Arabic culture and literature or *naḥda* [*q.v.*] (b. al-Ḥadath, 18 July 1852, d. Cairo, 9 July 1927).

Of Maronite origin, he was part of the first wave of graduates from the Syrian Protestant College in 1870 and taught for two years in American missionary schools. Little is known about his conversion to Protestantism. From 1876 onwards, together with Fāris Nimr [*q.v.*], his name was, for half a century, attached to the journal *al-Muḳtaṭaf*, which published 121 volumes over its life-span of 75 years. In order to avoid official displeasure, he emigrated on March 1885 to Egypt, with his journal. Unceasingly remaining as close as possible to contemporary issues, he translated and popularised the latest scientific discoveries, defended freemasonry, and clashed with the Jesuits of the journal *al-Mashriḳ* and the reformists of the journal *al-Manār* [*q.v.*], since he was only interested in religion (as a Christian within an Islamic society) or politics (thus he did not take up a position against the British occupation of Egypt) from the scientific viewpoint. He championed Darwinian evolution, even though his lack of a specialist scientific training did not allow him fully to understand the philosophical bases of that doctrine. As well as numerous translations, he published three novels as separate volumes, *Fatāt Miṣr, Amīr Lubnān* and *Fatāt al-Fayyūm*), as well as biographical collections and works on natural history (*Fuṣūl fī 'l-taʾrīkh al-tabīʿī min mamlakatay al-ḥayawān wa 'l-nabāt*) and astronomy (*Basāʾiṭ ʿilm al-falak wa-ṣuwar al-samāʾ*). As a journalist pre-occupied with science, he not only invented words to translate new English and French concepts into Arabic but also endeavoured to express himself in his own writings in a clear language. He proposed a theory of his own practice in this regard. His work shows the limitations of a person who acted as a channel of transmission for a modern field of knowledge without taking part in its elaboration.

(J. FONTAINE)

SĀRT, a term found in the history and ethnography of the Persian and Central Asian worlds. Originally an old Turkic word for "merchant", it occurs with this meaning in the 11th-century sources, such as Maḥmūd al-Kāshgharī's encyclopaedic dictionary *Dīwān lughāt al-Turk* (*Compendium of the Turkic dialects*, tr. R. Dankoff and J. Kelly, 3 vols., Cambridge, Mass., 1982-5, i, 269), and the

Ḳarak͟hānid mirror for princes, *Ḳutadgu bilig* by Yūsuf K͟hāṣṣ Ḥād͟jib (ed. R.R. Arat, Istanbul 1947, i, 571). For references to other editions of both works, see *Drevnetyurkskiy slovar'*, Leningrad 1969, 490).

Evidently a loan-word from the Sanskrit for "caravan leader" (*sārthavāha*), it is attested in the Uighur translation of the *Saddharmapuṇḍarīka sūtra* as *sartbav*, which is explained as "head of the merchants" (*satīg͟hd͟jīlar ulug͟hī*) (*Kuanṣi im pusar*, ed. and tr. Ş. Tekin, 1960, repr. Ankara 1993, 11), and in the Manichaean and Buddhist Uighur texts from Turfan (W. Bang and A. von Gabain, *Türkische Turfan-Texte II* and *Türkische Turfan-Texte V*, in *Sprachwissenschaftliche Ergebnisse der deutschen Turfan-Forschung*, 3 vols., repr. Leipzig 1972-85, ii, 34 and n. 16, 120 and n. B57, the latter in the form *sartavag͟hī*, which was also a designation for the Bodhisattva. See also Bartol'd, ii/1, 162, 196-7, 253). It may have come into Uighur through Sogdian (G. Clauson, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972, 846), since it was the (eastern Iranian) Sogdians who took over the trade with the Turkic peoples from the Indians (Bartol'd, ii/1, 460).

When the western Iranians secured control of the trade with the nomadic peoples, the Turks and Mongols applied the term *sārt* to them in the same sense as *tād͟jīk* [*q.v.*] (Bartol'd, ii/2, 304). Because Iranians were a sedentary Muslim people, the term also designated all sedentary Muslims, irrespective of language or ethnicity (Fragner, 21). Thus, the Mongols referred to Arslan K͟hān, the prince of the Muslim Turkic Ḳarluḳs, as *sartāḳtāi* (*tāi* being the masculine ending), which Ras͟hīd al-Dīn explained as meaning Tād͟jīk (*D͟jāmiʿ al-tawārīk͟h*, i/1, ed. A.A. Romaskevič *et alii*, Moscow 1965, 351). The *sartāḳtāi* were therefore viewed by the Mongols not just as merchants, but as bearers of Perso-Islamic civilisation. This is confirmed by the fact that the word *sartāul*, which is obviously derived from the same root (e.g. *ibid.*, ii, ed. E. Blochet, Leiden 1911, 541), occurs in Ibn Muhannā's late 14th-century polyglot glossary with the meaning *al-muslimūn* (P. Melioranskiy, *Arab filolog o mongol'skom yazïke*, in *ZVOIRAO*, xv [1904], 75 and 136). It was this term that was applied by the Mongols to the K͟hʷārazms͟hāhs and their subjects (Bartol'd ii/1, 461, ii/2, 310-11).

In the post-Mongol period in Central Asia, the term *sārt* was used synonymously with *tād͟jīk* to designate the Persian-speaking sedentary/urban population in contrast to *türk*, which was used for the Turkic-speaking nomadic or semi-nomadic population. The 15th-century Čag͟hatay Turkish author Mīr ʿAlī-S͟hīr Nawāʾī [*q.v.*] regularly referred to the Iranian people as *sart ulusī* and to their language as *sart tili*, the latter as a synonym for *fārsī* (Persian). He also stated that in K͟hurāsān the Sārts did not speak Turkish and if they did, it was clearly recognisable that they were Sārts (*Muḥākamat al-lug͟hatayn*, ed. and tr. R. Devereux, Leiden 1966, 6. See also *Abuṣka lûgatı veya Čağatay sözlüğü*, ed. B. Atalay, Ankara 1970, 264-5, for other instances of its use by Nawāʾī in the *Mad͟jālis al-nafāʾis*, etc.; also Pavet de Courteille, *Dictionnaire turc-oriental*, Paris 1870, 334). In his description of Farg͟hāna, Bābur referred to the population of Andīd͟jān as *türk*, while he said that the inhabitants of Marg͟hīnān and Asfara were *sārts*, adding that the latter were Persian-speaking (*fārsī-gūy*) (*The Bábar-náma*, facs. ed. A.S. Beveridge, 1905, repr. London 1971, fols. 2b, 3b; *Bâburnâma, Chaghatay Turkish text with Abdul-Rahim Khankhanan's Persian translation*, Turkish transcription, Persian edition and English translation by W.M. Thackston Jr., Pt. 1, [Cambridge, Mass.] 1993, 6-7 (note that K͟hānk͟hānān renders *sārt* as *tād͟jīk*)). Elsewhere, he pointed out that the urban inhabitants of Kābul were *sārts* (fols. 131 a-b; ed. and tr. Thackston, Pt. 2, [Cambridge, Mass.] 1993, 270).

Following their conquest of Central Asia in the 16th century, the nomadic Uzbeks clearly distinguished between themselves and their sedentary subjects whom they called *sārts*, irrespective of linguistic or ethnic considerations. The distinction between Uzbek and Sārt (or Tād͟jīk) was now felt more keenly than the older distinction between Türk and Sārt, probably because some of the pre-Uzbek Turkic (Čag͟hatay) tribes had already made the transition to sedentarism. Abu 'l-G͟hāzī, the 17th-century Čag͟hatay Turkish author of the *S͟had͟jara-yi Turk*, frequently employed the expression "Uzbeks and Sārts" when referring to the entire population of K͟hʷārazm (*Histoire des mongols et des tatares par Aboul-Ghâzi Béhâdour Khân*, ed. and tr. P.I. Desmaisons, 1871-4, repr. Amsterdam 1970, 231, 256). The same usage survived to the 19th century, as attested in the works of historians of K͟hīwa, such as Muʾnis, Āgahī and T͟hanāʾī, although it also took on political significance (Bregel, 123-5; Bartol'd, v, 223), as well as of K͟hoḳand (see T.K. Beisembiev, "*Taʾrik͟h-i shak͟hruk͟hi*" *kak istoričeskiy istočnik*, Alma-Ata 1987, 93).

The introduction of a critical mass of Turkic and Turkicised Mongolian nomads into Transoxiana as a consequence of the Uzbek invasions strengthened the general trend toward Turkicisation of the indigenous Iranian population. The degree to which Turkicisation and Uzbek sedentarisation had progressed by the 19th century is vividly indicated by the fact that the name Sārt, which had first been applied to sedentary Iranians and then to both Persian and Turkic-speaking urban dwellers, began to be used chiefly for Turkic-speaking or bilingual town-dwellers, while the term Tād͟jīk, which had earlier been synonymous with Sārt, was reserved for Persian-speakers only (Subtelny, 49-50; Fragner, 22). Moreover, it was now Ḳazaḳs (or Turkmens in the case of K͟hʷārazm) who as nomads were contrasted with the Sārts as urban dwellers and agriculturalists in Buk͟hārā and K͟hoḳand (Bartol'd, ii/1, 462, v, 223; Bregel, 123).

Although 19th- and early 20th-century European and Russian scholars adopted the use of the term Sārt for urban Turkic-speakers, who were regarded as the "native inhabitants" of Central Asia (Subtelny, 50; Bartol'd, ii/1, 462, ii/2, 303-5; L. Budagov, *Sravnitel'niy slovar' turetsko-tatarskik͟h narečiy*, St. Petersburg 1869, i, 612), Bartol'd himself remained sceptical about this use, since he found no direct proof for it in the historical sources (ii/1, 462). No serious attempt was ever made to determine the dialectal differences between Sārts and Uzbeks either in Buk͟hārā or in K͟hīwa, although they certainly existed and probably warranted the treatment of Sārts as a separate ethnic group (Bregel, 148; Bartol'd, ii/2, 303 ff.). However, the close symbiotic relationship that had existed for centuries between the (nomadic) Turkic and (sedentary) Iranian peoples in Central Asia, resulting in mutual linguistic and ethnogenetic influences, made it extremely difficult, if not impossible, to sort out the differences between the two (Subtelny, 44 ff.).

During the 1920s, in keeping with Soviet nationalities policies in Central Asia, which aimed at creating separate national republics based primarily on ethnolinguistic criteria, the name Sārt was banished from use and the ethnic designation Uzbek substituted for it on the grounds that Sārt had never been an ethnic term and that it was insulting to the indigenous population on account of its pejorative

popular etymology "yellow dog" (*sarî it*), which reflected the traditionally contemptuous attitude of the nomads toward sedentary peoples (Subtelny, 48, 51; Bartol'd, ii/2, 303; for other popular etymologies see Budagov, 612), although Bartol'd argued that there was nothing pejorative about the term and it had in fact been used by the Sārts as a self-designation (ii/1, 462, ii/2, 314; B. Kh. Karmîsheva, *Očerki étničeskoy istorii yužnîkh rayonov Tadžikistana i Uzbekistana*, Moscow 1976, 147). Soviet historiography never dealt adequately with the term or with the Sārts as an ethnico-linguistic group (for an overview, see Bregel, 121-2), although rich ethnographic material exists for its study (see e.g. the bibliography in E.A. Voznesenskaya and A.B. Piotrovskiy, *Materialî dlya bibliografii po antropologii i étnografii Kazakstana i sredneaziatskikh respublik. Trudî Komissii po izučeniyu plemennogo sostava naseleniya SSSR i sopredel'nîkh stran*, xiv, Leningrad 1927, 181-99).

(W. Barthold-[M.E. Subtelny])

ṢART, the form of the name in Ottoman Turkish of the small village in Lydia in Asia Minor, the ancient Sardes (αἱ Σάρδεις of the classical authors, which makes Sāmī Bey write Sārd), capital of the Lydian kingdom, situated on the eastern bank of the Sart Çay (Paktōlos) a little southward to the spot where this river joins the Gediz Çay (Hermos). Although in the later Byzantine period Sardes had lost much of its former importance (as a metropolitan see) and been outflanked by Magnesia (Turkish Maghnīsa [*q.v.*]) and Philadelphia (Ala Shehir [*q.v.*]), it still was one of the larger towns, when the Saldjūḳ Turks, in the 5th/11th century, made incursions into the Hermus valley. At the time, they were expelled by the Byzantine general Philocales (1118). At the end of the 7th/13th century, Sardes had been for some time under a combined Greek and Turkish domination, until the Greeks were able to drive away the Turks a second time (Pachymeres, ed. Niebuhr, Bonn 1835, ii, 403). In the beginning of the 8th/14th century the citadel was surrendered to one of the Saldjūḳ *amīrs*, and the town probably belonged during the remainder of that century to the territory of the Ṣarūkhān [*q.v.*] dynasty, whose capital was Maghnīsa. So when in 792/1390 the Ottoman sultan Bāyezīd I, after the conquest of the then Greek town Philadelphia, took possession of the Ṣarūkhān country, Sardes was equally incorporated in his empire (Anonymus Giese, Breslau 1922, 28; ʿĀshîḳ-pasha-zāde, Istanbul 1333, 65). After the battle of Ankara, when Tīmūr marched against Izmir (805/1402), Sardes and its citadel were probably destroyed and never recovered again.

The modern settlement of Sart (lat. 38° 28′ N., long. 28° 03′ E., alt. 102 m/335 ft.) lies between the Sart Çay and the citadel hill. This hill is a long, narrow counterfort, 200 m/656 ft. in height, belonging to Mount Tmolus (now Mahmud Dağ in the south (a topographical sketch of the site in Curtius, *Beiträge zur Geschichte und Topographie Kleinasiens*, in *Abh. Pr. Ak. W.* [1872], Plate V[2]). East of the ridge is a small mill brook called Tabak Çay; north of the town it joins the Sart Çay, which is united with the Gediz Çay about 6 km/9½ miles to the north of the acropolis hill. At the other side of the Gediz Çay is situated the big necropolis of Sardes, a large plain of mounds called *Bin Bir Tepe*. North of this plain is the Mermere Lake, the ancient Lake of Gyges. The railway from Izmir to Alaşehir runs along the southern Gediz Çay bank and has a station at Sart. Administratively, Sart now comes within the *nahiye* of Salıhlı in the *il* or province of Manisa.

Excavations at the classical, Roman and Byzantine site of Sardis have been undertaken, especially by American archaeologists since the early part of the 20th century. In recent decades, these have been associated with G.M.A. Hanfmann. See, in particular, his *Sardis und Lydien*, in *Abh. Ak. Wiss. zu Mainz, geistes- un sozial wiss. Kl.*, Jhg. 1960, 499-536; idem (ed.), *Archaeological exploration of Sardis (1958-1975). Sardis from prehistoric to Roman times*, Cambridge, Mass. 1983. See also *PW*, 1.A.2, cols. 2475-8 s.v. Sardeis, and *Der kleine Pauly*, iv, cols. 1551-2.

Cuinet, *La Turquie d'Asie*, Paris 1894, iii, 532, 533, 565; *Admiralty Handbook. Turkey*, London 1942-3, ii, 317-18, 320.

(J.H. Kramers*)

SARŪDJ, a town in Diyār Muḍar [*q.v.*] on the most southerly of the three roads from Bīredjik [*q.v.*] to Urfa [see al-ruhā] in 36° 58′ N. lat. and 38° 27′ E. long. As the name of the town is also that of the district, its relation to the ancient names Anthemusia and Batnae is disputed; see *Bibl.* On account of the fertility of the district in which the town is situated, and its central position between the Euphrates on the one side, and Urfa and Ḥarrān [*q.v.*], from each of which it is about a day's journey distant, on the other, the traffic through it brought it a certain degree of prosperity, especially as it was also important as a post-station between al-Raḳḳa and Sumaysāṭ. According to Ibn Khurradādhbih, it was 20 *farsakh*s from the former town and 13 from the latter. The principal occupation was settled by the natural suitability of the soil or growing fruit and the vine, as all the geographers tell us. Within the town itself Ibn Djubayr (late 6th/12th century) found orchards and running water.

Sarūdj—an ancient centre of Syriac Christianity, and the birthplace of Jacob of Sarūdj (d. 521)—was captured, with the rest of al-Djazīra, by the Arab commander ʿIyāḍ b. Ghanm in 18/639. Three centuries later it came within the possessions of the Ḥamdānids [*q.v.*] of Mawṣil and Aleppo, and then of the resurgent Byzantines. Towards the end of the 5th/11th century, Diyār Muḍar was controlled by the Turkmen family of the Artuḳids [*q.v.*], protégés of the Saldjūḳs, and Suḳmān b. Artuḳ made Sarūdj the centre of his lands there until the Crusaders under Baldwin of Bouillon appeared at nearby Urfa or Edessa in 1098. For nearly fifty years, the town—at this time known as the seat of a Jacobite bishopric—formed part of the Frankish County of Edessa. The Franks held Sarūdj, in the face of attacks by the Artuḳid Il-Ghāzī and the Turkish governor of Mawṣil, Mawdūd, until in Radjab 539/January 1145 it fell to ʿImād al-Dīn Zangī [*q.v.*] and reverted to Muslim control. It was as a native of the town, expelled thence by the Christians, that al-Ḥarīrī [*q.v.*] made the hero of his *maḳāmāt* [*q.v.*], Abū Zayd al-Sarūdjī; the *maḳāmāt* contain some details on the town.

By the time of Abu 'l-Fidāʾ (8th/14th century),

Sarūdj was already in ruins. Nineteenth-century travellers described it much as did the mediaeval geographers, except that it appeared smaller to them. Sachau (see *Bibl.*) actually spoke of the village of Sarūdj; in late Ottoman times it was the residence of a *ḳāʾim-maḳām*.

In modern times, the town was occupied by British and then French troops in 1920 after the First World War, but with the delimitation of the frontier, came within Turkey, so that Sürüc is now just north of the Syrian frontier. Administratively, it lies within the province or *il* of Diyarbakır and is the chef-lieu of a county or *ilce* also called Sürüc; in 1960 it had a population of 6,800.

(M. PLESSNER-[C.E. BOSWORTH])

ṢARŪKHĀN, the name of a Turkish amirate, which appeared after the collapse of the Saldjūḳ state of Rūm [see SALDJŪḲIDS. III. 5].

It was probably named after its founder, Ṣarūkhān the son of Alpagī, and it was situated in the region roughly coinciding with the ancient Lydia, a territory yielding a rich agricultural production (grapes, figs and especially cereals). Its capital was the ancient city of Magnesia on the Sipylos, called by the Turks Maghnisa [*q.v.*] or Manisa, which, after having acquired special importance under the emperors of Nicaea, was conquered by Ṣarūkhan Beg *ca.* 1313. In the beginning, the Turks of Ṣarūkhan extended their territory by fighting against the Byzantines and, according to the Ottoman chronicler Enwerī, they joined the Turks of Aydīn [*q.v.*] in naval raids directed against the Christian territories of the Aegean regions. As a result of these military activities, an important slave market was created in Maghnisa. Nevertheless, the dangerous Genoese presence in their vicinity, i.e. in the alum-producing town of Phocaea as well as on the island of Chios [see SAḲĪZ], brought them into a rapprochement with the Byzantines. When the Emperor Andronicus III Palaeologus expelled the Genoese from Chios and compelled those of Phocaea to recognise his suzerainty, he concluded a treaty with Ṣarūkhān (1329). Later, the amīr, deeply vexed by the Genoese of Phocaea since his son Süleymān and twenty-four sons of Turkish notables were being held as hostages by them, offered military aid to the emperor against the Genoese governor of Phocaea, who rebelled and tried to conquer Lesbos; a new treaty was concluded (1335). During the Byzantine civil war (1341-7), Süleymān Ṣarūkhān-oghlu followed Umur Aydīn-oghlu, the notorious ally of the pretender John Cantacuzenus, and fought on his side in Thrace, where he died after an illness (1345). In the light of a Genoese document, Ṣarūkhān also died after 1348 and was succeeded by his son Fakhr al-Dīn Ilyās. Around the same time, the amirate acquired a common frontier with the Ottomans, who annexed the amirate of Ḳarasi [*q.v.*].

An important part of the fleet of Ṣarūkhān was destroyed by the Crusaders near Imbros during one of the usual raids organised in collaboration with Umur Aydīn-oghlu and directed against the Christian territories (1347). The exact year of Ilyās' death is not known. In 1357 the amirate was governed by his son Isḥāḳ Čelebi, who was closely connected with the dervish order of the Mewlesīs or Mawlawiyya [*q.v.*]. It was probably Isḥāḳ Čelebi who established relations with the Byzantine emperor John V Palaeologus when the latter sailed to Phocaea in 1358 in order to liberate the son of the Ottoman sultan Orkhan, Khalīl, who was being held as prisoner by the Genoese. The emperor concluded a new treaty with the Ṣarūkhān-oghlu and, furthermore, he took the amīr's children as hostages to Constantinople. Isḥāḳ Čelebi probably died in 1388 and was succeeded by his son Khiḍīr Shāh, in whose days the amirate was annexed by Bayezid I [*q.v.*] (1390). Khiḍīr Shāh was sent to Bursa where he died.

Immediately after the battle of Ankara between Tīmūr and the Ottomans (804/1402), the amirate was restored by Tīmūr to Orkhan Ṣarūkhān-oghlu, who had followed him in his Anatolian campaign. It was taken by the Ottomans again in 1410 to become one of the important *sandjaḳs* of their state, while Maghnisa became the residence of one of the heirs to the throne. Nomads of Ṣarūkhān were transported by the Ottomans to Rumelia, and several soldiers were granted there *tīmārs* (the Ṣarūkhānlu).

In the territory of Ṣarūkhān and, especially, in Maghnisa, besides the important monuments erected by the Ṣarūkhān-oghullarī, new ones were added by the Ottomans to honour the residence of the Ottoman princes there; among them is the Murādiyye mosque (after Murād III), which was built by the great architect Sinān [*q.v.*].

SARWISTĀN, a small town in the Persian province of Fārs (lat. 29° 16′ N., long 53° 13′ E., alt.

1,597 m/5,238 ft.), some 80 km/50 miles to the southeast of Shīrāz on the road to Nayrīz [*q.v.*]. It seems to be identical with the Khawristān of the early Arab geographers, but first appears under the name Sarwistān ("place of cypresses") in al-Mukaddasī at the end of the 4th/10th century.

It is notable for the tomb and shrine of a local saint, Shaykh Yūsuf Sarwistānī, dated by its inscription to 682/1283, and for a nearby mysterious building situated on the Shīrāz-Fasā road 12 km/7 miles south of Sarwistān, first noted in 1810 by the English traveller Wm. Ouseley and described some 30 years later by Flandin and Coste. This has traditionally been taken by western scholarship as a Sāsānid palace, building on its vague resemblance to the Emperor Ardashīr's palace at Fīrūzābād [*q.v.*] and on the fact that al-Ṭabarī, i, 870-1, tr. Nöldeke, *Geschichter der Perser und Araber*, 111-12, says that Bahrām V Gūr's minister Mihr Narsē laid out gardens near Fīrūzābād, including one with 12,000 cypresses (*sarw*). Recently, however, a detailed architectural study by Lionel Bier has shown that it is more likely to be post-Islamic and is probably a Zoroastrian fire-temple erected in the last flowering of that faith in Fārs *ca.* A.D. 750-950, though an origin in the Būyid period is not excluded.

The modern town of Sarwistān is the chef-lieu of a *bakhsh* in the *shahrastān* of Shīrāz. In *ca.* 1950 it had a population of around 4,000, but this has risen considerably in recent decades.

SĀSĀN, Banū, the blanket designation in mediaeval Islamic literature for the practitioners of begging, swindling, confidence tricks, the displaying of disfiguring diseases, mutilated limbs, etc., so that *sāsānī* has often become a general term in both Arabic and Persian for "beggar, trickster". Ḥādjdjī Khalīfa uses *sāsānī* in the sense of "pertaining to magic or slight-of-hand", with the *ʿilm al-ḥiyal al-sāsāniyya* denoting "the science of artifices and trickery".

In his treatise warning the general public against trickery in all forms, *al-Mukhtār min kashf al-asrār*, the early 7th/13th Syrian author ʿAbd al-Raḥīm al-Djawbarī [*q.v.* in Suppl.] enumerates the whole gamut of the members of the Banū Sāsān: mountebanks, dervishes, gypsies (Zuṭṭ [*q.v.*]), those exhibiting bodily afflictions and feigning disease, those who teach tricks to animals and birds, and popular tellers of edifying tales and preachers (*wuʿʿāẓ* [see ḲĀṢṢ]), regarded as the highest class amongst the Sāsānīs; to these last, those who prey upon the populace's religious fears and scruples, al-Djawbarī devotes a whole chapter (see Bosworth, *The mediaeval Islamic underworld*, i, 24).

Other material on the Banū Sāsān can be culled from the rather exiguous sources in Arabic literature which deal with low life, including various *adab* works of al-Djāḥiẓ, Ibrāhīm al-Bayhaḳī's *K. al-Maḥāsin wa 'l-masāwī* and al-Rāghib al-Iṣfahānī's *Muḥāḍarāt al-udabāʾ*, as well as those of the *maḳāma* genre [*q.v.*] and of the shadow plays [see IBN DĀNIYĀL and KHAYĀL AL-ẒILL]. The present writer has studied in detail this material and also two long poems written substantially in the beggars' jargon (*munāghāt, lughat Banī Sāsān*) composed by the 4th/10th century traveller and littérateur Abū Dulaf al-Khazradjī and by the 8th/14th century poet Ṣafī al-Dīn al-Ḥillī [*q.vv.*], in which many of their tricks and scabrous practices are delineated (*The mediaeval Islamic underworld.* i. *The Banū Sāsān in Arabic life and lore*, ii. *The Arabic jargon texts. The* qaṣīda sāsāniyyas *of Abū Dulaf and Ṣafī d-Dīn*, Leiden 1976).

The origin of the name Banū Sāsān is shrouded in mystery. The sources give several explanations, some of them implausible. A mythical Shaykh Sāsān is often mentioned as the founder of the fraternity of crooks and beggars. One oft-repeated story found in the sources, from the time of the Persian author and translator from Pahlavi into Arabic, Ibn al-Muḳaffaʿ [*q.v.*], is that Sāsān was the son of the legendary Persian emperor of the Kayānid line, Bahman b. Isfandiyār, but was displaced from the succession to his father, hence took to a wandering live amongst, as some sources state, the nomadic Kurds (a people notorious in mediaeval Islamic times for banditry and violent ways of behaviour). Other stories hold that the Persians as a nation took to mendicancy after the Arab conquest of the 1st/7th century, and aroused pity and commiseration by claiming to be scions of the dispossessed Sāsānid royal house. The process whereby the name of a fallen dynasty is applied ironically or satirically to a later group seems psychologically possible; but some modern authors have further suggested etymologies for *sāsān* from Sanskrit or Persian (see Bosworth, *op. cit.*, i, 22-3).

Bibliography: Given in the article, and see also that to AL-DJAWBARĪ; it should be noted that the critical text of the *Kashf al-asrār* promised by the author of that article has regrettably not yet appeared.

(C.E. Bosworth)

SĀSĀNIDS, a pre-Islamic Persian dynasty that ruled a large part of western Asia from A.D. 224 until 651. In Arabic and modern usage, the dynastic name is derived from Sāsān, who is mentioned as a "lord" in the inscription of Shāpūr I [*q.v.*] on the Kaʿba of Zoroaster (SKZ). The inscription of Narseh at Paikuli also refers to the royal clan of Sāsānagān. Theophoric names in the Parthian period suggest that Sāsān may have been a minor deity or perhaps a deified ancestor. According to the late Sāsānid *Kārnāmag*, Sāsān was the son-in-law of Pāpak, who gave him his daughter in marriage because Sāsān was descended from Dārā, the last Achaemenid king. Ardashīr I [*q.v.*] was their child, although he is afterwards regarded as the son of Pāpak. In the account of al-Ṭabarī (i, 814), derived from the late Sāsānid *Xwadāy-nāmag*, Sāsān was custodian of the fire temple of Anāhitā at Iṣṭakhr [*q.v.*], married to a member of the Bazrangid ruling family in Fārs [*q.v.*], and the father of Pāpak.

The rise of this family to power was aided by Parthian (Arsacid) preoccupation with their own civil war and conflict with the Romans. In about 205-6 Pāpak overthrew the last Bazrangid ruler of Fārs and ruled at Iṣṭakhr; he was succeeded by his son, Shāpūr, in about 209. Shāpūr's younger brother, Ardashīr I, succeeded him in about 216, expanded his rule over the rest of Fārs, Khūzistān [*q.v.*] and Kirmān [*q.v.*], and, allied with the rulers of Adiabene and Garmakan, defeated and killed the Arsacid Artabanus V in battle on the plain of Hormizdagān, probably in western Media, in about 224. He commemorated his victory in a rock relief near Gūr (Fīrūzabād [*q.v.*]), where he also built the city of Ardashīr-Xwarrah (the fortune of Ardashīr). In the west, he conquered Maysān [*q.v.*], took Ctesiphon, where he was crowned

in 226, but failed to take Hatra (al-Ḥaḍr [q.v.]), conquered Media, and was turned back from Armenia (Armīniya [q.v.]) by the sons of Artabanus in about 227. In the east, he occupied the rest of the Parthian empire by force and intimidation, extinguishing the royal fires of local rulers. He also occupied coastal al-Baḥrayn [q.v.] and ʿUmān [q.v.] in Arabia. In 230 he invaded Roman Mesopotamia, claiming everything as far as Ionia and Caria by ancestral right from Cyrus to Darius, the last Persian king, whose kingdom Alexander had destroyed. Hatra went over to the Romans, whose counter-invasion of Armenia and Media by the generals of Alexander Severus was beaten back by Ardas͟hīr with heavy losses on both sides. After the death of Alexander Severus in 235, Ardas͟hīr was able to take Nisibis and Carrhae (Ḥarrān [q.v.]) in 238. In 240 his son, S͟hāpūr, was crowned as co-ruler, possibly to secure the succession. Hatra fell to them in 240, and they appear to have been victorious in Armenia before Ardas͟hīr died early in 242.

Ardas͟hīr I was the real founder of the Sāsānid monarchy. This was initially based on a cult of divine kingship that continued from the Arsacids, who had been called *theos theopator* ("god, of divine descent") and represented as receiving a diadem from Tyche on their coins, and had a royal, dynastic fire dedicated to them as to the other gods. On his coins Ardas͟hīr's earliest crown resembled that of Mithradates II, he was called "the Mazda-worshipping god, Ardas͟hīr, who is descended from the gods", and the reverse bore the image of a throne mounted on a column with the inscription "the fire of Ardas͟hīr". His royal fire was kindled at the beginning of his reign in 224-5. In rock reliefs, he was shown receiving a ring-like object from Ohrmazd, who was also portrayed as a king, probably to show the divine nature of royal authority, and/or that Ardas͟hīr ruled the world on behalf of Ohrmazd. Later tradition credits Ardas͟hīr with having the Avestan teachings collected and adding the five Gatha days to the Zoroastrian calendar.

The Achaemenid legacy was also important for the early Sāsānid monarchy, beginning with the irredentist claims of Ardas͟hīr (also made by the late Arsacids) reported by the Greek and Latin writers (who called him Artaxerxes). This legacy may be seen in the Sāsānid dynastic roots at Iṣṭak͟hr, the use of architectural motifs from Persepolis in Ardas͟hīr's palace at Fīrūzabād, the choice of the major Achaemenid site of Naḳs͟h-i Rustām for reliefs, inscriptions, and fire temples, and the later claim of their descent from Dārā. Under S͟hāpūr I this is seen in his use of an Achaemenid building at Naḳs͟h-i Rustam for his inscription and in the interest of some of his officials in viewing the paintings of Esther and Ahasuerus (Artaxerxes) in the synagogue at Dura.

The structure of the Sāsānid state under Ardas͟hīr was outwardly similar to that of the late Arsacids with sub-kings for Abrēnak͟h (probably K͟hurāsān [q.v.]), Marw [q.v.], Kirmān, and the Sakas (Sīstān [q.v.]). Greater royal centralisation was reflected in his establishment of an elaborate royal court attended by the sub-kings and the heads of Parthian noble families, and his foundation of royal cities in crown territories *(dast(a)gird)* as centres for royal administration.

S͟hāpūr I continued the work of his father, possibly conquering Gīlān [q.v.] and K͟hʷārazm [q.v.] before being drawn west by a Roman attack in 243 under Gordian III, who took Carrhae and Nisibis, annexed Osrhoene with Edessa (Urfa [q.v.]), garrisoned Singara (Sind͟jār [q.v.]), creating the province of Mesopotamia, and attacked Babylonia (Asōrestān). S͟hāpūr defeated and killed Gordian at Massice on the middle Euphrates, which he renamed Pērōz-S͟hāpūr ("victorious is S͟hāpūr", also called al-Anbār [q.v.]). Philip the Arab made peace with S͟hāpūr for 500,000 *denarii* and possibly a free hand in Armenia, which stabilised the frontier for about ten years.

In 252 S͟hāpūr had the Arsacid king of Armenia, K͟husraw, assassinated. The latter's son, Tiridates, fled to the Romans, while the sons of Tiridates joined S͟hāpūr. One of them, Artavazdes, ruled Armenia from 252 until 262. Claiming Roman harm to Armenia, in 256 S͟hāpūr attacked the Romans on the Euphrates, destroying a Roman army at Barbalissos, taking Dura, occupying Mesopotamia, and invading Syria, where he took Antioch (Anṭākiya [q.v.]) with the help of a local senator called Cyriades, who took the imperial title with Persian backing. S͟hāpūr campaigned up the Orontes valley as far as Emesa (Ḥimṣ [q.v.]) and returned to Mesopotamia. The Persian garrison in Syria was massacred in 257, Cyriades was murdered by the people of Antioch, and Dura was reoccupied by Roman-Palmyrene forces between 256 and 260, when S͟hāpūr retook it. S͟hāpūr settled his Syrian captives in K͟hūzistān at a new city called Weh Antiok S͟hāpūr ("the Better Antioch of S͟hāpūr"), which became D͟jundays͟hābūr (Gondēs͟hāpūr [q.v.]).

Between 258 and 260 S͟hāpūr besieged Edessa and Carrhae and defeated a Roman relief army near Edessa, taking Valerian captive. According to Kirdīr, who was with the army, S͟hāpūr then pillaged, burned, and destroyed Antioch and Syria, Tarsus and Cilicia, Caesarea and Cappadocia, as far as Greece, Armenia, Georgia (al-Kurd͟j [q.v.]), Albania, and Balasagan up to the Gates of the Alans. Except for Magians (Mad͟jūs [q.v.]), who were not harmed, S͟hāpūr deported tens of thousands of captives to Fārs, Parthia, K͟hūzistān, and Babylonia. He was harrassed on his return by Odainath of Palmyra, who retook Carrhae and Nisibis, besieged Ctesiphon, recovered the booty (although Kirdīr claims the booty was returned), captured S͟hāpūr's concubines, and restored the Roman frontier between 262 and 267. S͟hāpūr's settlement of his captives was part of the economic development of his state through the use of captive labour, and a denial of those labour resources to the Romans in the provinces from which they came. They were used to build dams, bridges, and irrigation works in K͟hūzistān, and to build S͟hāpūr's palace at Bīs͟hāpūr in Fārs. They also introduced eastern Mediterranean cultural influences where they settled.

S͟hāpūr commemorated his achievements in at least seven rock reliefs, and left a major inscription (SKZ) on the eastern wall of the Kaʿba of Zoroaster at Naḳs͟h-i Rustām in Parthian, Middle Persian, and Greek sometime after 262, when he replaced Artavazdes with his own son, Hormizd-Ardas͟hīr, as great-king of Armenia (262-72). In his inscriptions S͟hāpūr was called "the Mazda-worshipping god, S͟hāpūr, king of kings of Iran and non-Iran, of divine descent." There was a royal fire at Bīs͟hāpūr; S͟hāpūr's coins were the first to have the fire altar flanked by two attendants (in the 3rd century sometimes the king and queen) on the reverse; he founded many Bahrām fires, of the god of victory, in every land; he gave benefices to many Magians; he established name-fires for his own soul and for members of his immediate family and daily sacrifices of sheep, bread, and wine for twenty-nine members of the royal family, living and dead. Several of his sons had the names of deities. Such royal patronage of the Magian cult, with fires possibly beginning to replace cult

images, should be balanced by Shāpūr's reputation for tolerance, his patronage of both Kirdīr and Mānī (who converted some members of the royal family), and his toleration of Christian and Jews. The latter were left under their exilarch in return for respecting Persian law and paying taxes. According to Elisaeus Vardapet, in the 5th century, Shāpūr issued an edict that people of every religion should be left undisturbed in their belief. According to the *Dēnkard* (DKM, 412-13) he collected Magian literature which had been dispersed in India, the Byzantine Empire and other lands, that dealt with medicine, astronomy, and philosophical subjects, added them to the Avesta, had a copy put in the royal treasury, and considered bringing all systems into line with the Mazdayasnian religion. There has been modern speculation that Shāpūr favoured a universalising religious syncretism corresponding to his imperial ambition.

In his inscription (SKZ) Shāpūr described his empire as consisting of Fārs, Parthava, Khūzistān, Maysān, Asōrestān (Babylonia), Adiabene, Arabia (Bēth ʿArbāyē), Ādharbaydjān, Armenia, Iberia, Maxelonia (Lazica), Albania, Balāsagān up to the Caucasus mountains and the Gates of the Alans, the Elburz mountains, Media, Gurgān [*q.v.*], Marw, Harāt [*q.v.*], Abarshahr, Kirmān, Sīstān, Tugrān, Makrān [*q.v.*], Pardān, Hind and the land of the Kushāns up to Pashkābūr (Peshawar ?), to the borders of Kish, Sogdia and the mountain of Shash (Tashkent [*q.v.*]), and Mazon (ʿUmān) on the other side of the sea. The only definition of the difference between Iran and non-Iran is given by Kirdīr, according to whom Iran included Maysān, Ādharbaydjān, Iṣfahān [*q.v.*], Rayy [*q.v.*], Kirmān, Sīstān, Gurgān, Marw, and as far as Pashkābūr in the east. Non-Iran was the territory in the northwest including Armenia, Iberia, Maxelonia and Balāsagān up to the Gates of the Alans.

Centralising tendencies under Shāpūr were expressed in three ways. Members of the royal family participated in rule from the beginning of the dynasty and their appointment as sub-kings began the process of converting client kingdoms into provinces. By the end of Shāpūr's reign five of his sons, who did not start local dynasties, ruled Sīstān, Gīlān, Kirmān, Maysān and Armenia as kings. Second, he continued Ardashīr's policy by founding at least eleven cities out of the expanding royal domain (*dast(a)gird*), and appointed governors (*shahrābs*), with a staff of scribes, a treasurer, and a judge, for at least eight to ten new and existing cities. None of these cities were in the territory of sub-kings and thus constituted the core of directly administered territory in Asōrestān, Khūzistān, Fārs, Media and Abarshahr (Khurāsān). Third, administration was centralised at an increasingly hierarchic and elaborate royal court, attended by members of the Varāz, Sūren and Kāren families, who had Sāsānid dynastic names but no administrative positions. (Two princes called Sāsān were also raised by the Farrīgān and Kidugān families.) Court officials included the *bidaxš* (or *pitiaxš*, viceroy, regent?), *hazārabed* (commander of the royal guard), *framādār* (steward of royal property), chief scribe, chief judge, treasurer, and market inspector (*wāzārbed, agoranomos*). From the third century the Sāsānid ruling classes were organized into a hierarchy in descending order of kings and queens (*shahrdārān*), princes (*waspuhragān*), grandees (*wuzurgān*), including powerful families from the Arsacid period and court officials, and the minor nobility (*azadān*).

When Hormizd-Ardashīr (Hurmuz [*q.v.*], 272-73) succeeded his father, his brother, Narseh, the Sakānshāh, became king of Armenia (272-93). Hormizd-Ardashīr was the first to be called "king of kings of Iran and non-Iran" on his coins. He allowed Mānī to preach, but he promoted Kirdīr to Ohrmazd-*mowbed* (*mōbadh*, [*q.v.*]), and put him in charge of ritual and sealing contracts. The third century was a transition period between the Hellenistic tradition of expressing political allegiance through the cults of deified rulers and the emergence of confessional religions with mass memberships that became identified with states. By the mid-third century Manichaeism, Christianity, and an early form of Mazdaean Zoroastrianism were all spreading in Sāsānid territory. The success of the Mazdaean priests in the late 3rd century was related to the career of Kirdīr, the proliferation of Bahrām fires, and the need of the family of Bahrām I [*q.v.*] (273-76) to legitimise their succession against the claims of his brother Narseh. Bahrām I had been king of Gīlān under Shāpūr; he was shown being invested by Ohrmazd in a rock relief at Bīshāpūr; he wore the solar crown of Mithra on his coins; and enjoyed fighting, hunting, and feasting. When Mānī heard of his accession, he set out for Kushān territory, but was forbidden to go and told to present himself to Bahrām I at Djundayshābūr, where Kirdīr accused him to the king of being opposed to hunting and war. Mānī's answer that he had healed many people and driven out demons was fruitless; he was imprisoned at Djundayshābūr, where he died in 276. His successor, Sisinnios, organised the Manichaean ecclesiastical structure.

Bahrām I was succeeded by his son, Bahrām II (276-93), who was married to Shāpūrduxtak, the daughter of Shāpūr, king of Maysān. The legitimacy of this branch of the royal family was emphasised by showing Bahrām II with his wife and son, Bahrām, on the coins, some of which showed the king and queen attending the fire altar on the reverse. A close association with the god/*yazad* Varethraghna (Bahrām) was shown on the coins by the introduction of the wings of Varagn (the eagle), the bird form or symbol of Varethraghna and of victory, on Bahrām's crown, and by his queen and heir wearing animal forms of Varethraghna and other *yazads* on their heads, according to Lukonin. Bahrām II was depicted in at least ten rock reliefs engaged in combat, with his family, holding court, receiving the submission of Arabs, killing two lions and attending a fire altar. Bahrām II, his queen, and his heir were also represented on the earliest attested such Sāsānid silver cup.

Kirdīr reached the height of his career under Bahrām II, when he left four inscriptions with similar texts, located strategically near rock reliefs of Ardashīr I, Shāpūr I and Bahrām II. In them he recounted his earlier career and his promotion to *mowbed* and judge of the entire state under Bahrām II, who also made him master of ritual and put him in charge of the fires of Anāhitā-Ardashīr and of Lady Anāhitā at Iṣṭakhr, marking the first time the latter position was separated from the person of the monarch. In his time, the Mazdaean religion (*dēn Mazdēsn*) and Magians were in great honour in the state, and there was great service to the *yazads*, water, fire and cattle. He claimed to have destroyed idols and established the place of the *yazads*, increased religious rituals, founded many Bahrām fires, sealed many contracts for the fires and the Magians as well as testaments and documents, and arranged many close-kin marriages. Many of the unfaithful became faithful and abandoned the doctrines of the demons for that of the *yazads*. He also claimed to have suppressed Jews, Buddhists, two kinds of Christians, "baptists", and Zan-

dīks (probably Manichaeans). Manichaeans were persecuted under Bahrām II, their leader, Sisinnios, was killed, but they were protected and patronised by ʿAmr b. ʿAdī, the *amīr* of the Lakhm (Lakhmids [*q.v.*]) at al-Ḥīra [*q.v.*]. Kirdīr's claims may have been exaggerated, but they mark the first recorded attempt to create a mass constituency for Magianism and an affirmation of the Mazdaean identity by opposition to other religions in the late 3rd century.

These developments also contribute to the thesis that the Sāsānids persecuted non-Mazdaeans when the monarchy was weak and needed support from the Mazdaean priests. In addition to the Bahrāms' problem with legitimacy, Bahrām II had to fight on two fronts. In 283 a Roman army under the emperor Carus reached Ctesiphon, but Carus died and the army withdrew. However in 287 Bahrām II made peace with Diocletian in order to deal with the revolt of his brother Ohrmazd in the east. According to the terms, the Sāsānids ceded their claims to upper Mesopotamia and western Armenia, and an Arsacid prince was enthroned in western Armenia as Tiridates IV, leaving Narses with eastern Armenia. By the end of his reign Bahrām II had defeated Ohrmazd, conquered Sīstān and made his heir Sakānshāh.

The death of Bahrām II in 293 set off a dynastic civil war. One noble faction, led by Wahnām and joined by the king of Maysān, Ādurfarnbāg, supported the succession of the Sakānshāh as Bahrām III. Other nobles rebelled, gathered in Asōrestān, and sent for Narseh, the last son of Shāpūr, who came from Armenia to Iran and met them at Paikuli north of Khāniķīn [*q.v.*]. There Narseh was proclaimed king by an assembly of nobles that included Shāpūr the tax collector (*hargubed*), Pāpak the *bidaxš*, Ardashīr the *hazārabed*, Rakhsh the *spāhbed* and the heads of some of the great families. This event was commemorated by a stone monument bearing a major inscription in Middle Persian and Parthian, that includes events later than the meeting in 293. In this inscription Narseh proclaimed his legitimising propaganda that "Shāpūr willed that this one [Narseh] should be lord over Ērān-šahr, because he was the best, the most just, and the most vigorous after Shāpūr." He also recorded his recognition by twenty-seven rulers, who either acknowledged him as king of kings, according to Lukonin and others, or acknowledged his right to the throne, according to Frye. If the first, it would indicate an extensive, loosely-organised state; if the second, it would indicate a significant contraction of the state since the time of Shāpūr, and the revival of local rulers. Narseh then defeated the king of Maysān and rival forces in Khūzistān, captured and executed Wahnām (the fate of Bahrām III is unknown), and replaced the name of Bahrām I on the relief at Bīshāpūr with his own.

He was called "the Mazdaean, divine Narseh, king of kings of Iran and non-Iran, descended from the Gods" on his coins, which had his own face in the flames of the fire-altar on the reverse. In a rock relief at Naķsh-i Rustam he was depicted receiving a ring from a female figure, usually identified as Anāhitā, and at Paikuli he claimed to have recovered Armenia for the land of Iran through Ohrmazd, all the *yazads* and the Lady Anāhitā. Beneath the common veneration of Ohrmazd one can see a shift from one *yazad* to another, from Verethraghna to Anāhitā, associated with the new branch of the dynasty. Narseh reversed the policies of the Bahrāms, neglected fire temples, perhaps in favour of his own royal fire (his eldest grandson was called Ādur-Narseh "the fire of Narseh"), and tolerated Manichaeans.

In 296 Narseh conquered Armenia, invaded Mesopotamia, and prepared to invade Syria. Diocletian sent the Caesar Galerius, whose forces were crushed by Narseh. Galerius regrouped at Antioch and invaded Armenia in 297 where he routed Narseh and captured his family, while Diocletian advanced to Nisibis. In 298 Narseh secured the return of his family by ceding several districts on the upper Tigris to the Romans and setting the frontier at the Tigris. Tiridates was restored in Armenia, which was enlarged in the east to the frontier of Media. The king of Iberia was to be invested by the Romans, and Nisibis was to be a place of commercial exchange. The treaty of Nisibis thus marked a change in the balance of power at the end of the 3rd century with the recovery of the late Roman empire under Diocletian.

Narseh was succeeded by his son Hormizd II (302-9), who continued his father's policies and was represented in combat in a rock relief at Naķsh-i Rustam. It was during his reign that Armenia became Christian under Tiridates IV, making Christianity a political issue for the Sāsānids, especially after the conversion of Constantine in 311, and dividing Armenia henceforth between pro-Roman Christians and pro-Sāsānid nobles.

Hormizd II had several sons; the eldest, Ādur-Narseh took the throne briefly when his father died in 309, but the officials and priests at court made a posthumous son, Shāpūr II (309-79), king and enthroned him as an infant. Shāpūr II's minority lasted for fifteen years; his reign lasted for seventy years, the longest of any Sāsānid king. The survival of the Sāsānid state during Shāpūr II's minority indicates the strength of ruling institutions by the 4th century and the fact that the monarchy had become more important than the monarch as a focus of loyalty for nobles, officials and priests who had a vested interest in the system. The state was held together by its administrative structure, and a glimpse of local officials going back and forth to court is provided by two inscriptions on a doorpost at Persepolis from 311 and 327. According to post-Sāsānid accounts, the main problem during Shāpūr II's minority was the incursion of Arabs from Eastern Arabia into ʿIrāķ [*q.v.*], Khūzistān and the coast of Fārs. At his majority in 324 Shāpūr II drove them out of ʿIrāķ, began to build long walls and a trench (*khandaķ Sābūr*) along the desert frontier in the south-west to keep them out, sailed from Fārs to al-Baḥrayn, defeated the Arabs there, made eastern Arabia a province with garrisons and officials and may have built the Sāsānid fort at Sīrāf [*q.v.*] as a naval base. He resettled Arabs in Khūzistān, Fārs and Kirmān.

The resumption of war with the Romans over Armenia and Mesopotamia from 337-8 to 350 coincided with the first persecution of Christians in the Sāsānid state and support for Shāpūr by anti-Christian, pro-Sāsānid Armenian nobles. In about 350 Shāpūr II had the Armenian king Tiran killed and may have made the latter's son, Arshak (*ca.* 350-67), king. At about the same time, Christians rebelled at Susa; Shāpūr II had the city razed and trampled by elephants and built the new city of Ērān-Xwarrah Shāpūr ("Iran's glory [built by] Shāpūr") nearby. The persecution lasted until the end of his reign, encouraging the thesis that henceforth Christians tended to be persecuted during wars with Rome.

At mid-century Shāpūr was drawn east by the invasion of Central Asia by Chionite Huns. Iranians mixed with Huns were driven south and attacked eastern Iran. In the 350s Shāpūr II campaigned in the east against the Chionites and Kushāns. The Kushāns

were conquered and their territory governed into the early 5th century by a series of nine Sāsānid royal princes with the title of Kushānshāh according to Lukonin and Göbl, although there are good reasons to put this in the 3rd century. Shāpūr II came to terms with the Chionites, concluding a treaty of peace and alliance with them and the people of Gīlān (Gelani) in about 358.

He then returned to the Roman front with Chionite, Gelānī, Albani and Segestānī allies. In a letter to Constantius he revived Achaemenid irredentist claims to territory as far as the river Strymon and the border of Macedonia, as well as saying that it was his duty to recover Armenia and Mesopotamia, which had been taken from his grandfather, Narses, by double-dealing. He took Amid in 359 and Singara in 360, deporting the population to Persia. In 363 Julian marched down the Euphrates and invaded Babylonia, while Armenian forces marched east from Carrhae. Julian's rebuilding of the temple in Jerusalem encouraged Jews at Maḥoza (Weh-Ardashīr, across the Tigris from Ctesiphon) to believe the Messiah had come to return them to Palestine; thousands of them marched out of the city and were massacred by Shāpūr's troops. Ammianus Marcellinus, who was with Julian's army has left a first-hand account of his campaign and a description of Babylonia. He described wall-paintings of hunting scenes in a palace near Ctesiphon, an annual fair at Batnae in Fārs at the beginning of September to buy goods brought by Indians and Syrians by land and sea, and cities and villages all along the coast of the Gulf where many ships sailed back and forth. He also described the battle-order of the Sāsānid army at Ctesiphon with mail-clad cavalry in front, infantry behind them and elephants in the rear. The Romans won the battle at Ctesiphon in 363, but Julian was killed, and Jovian secured the retreat by ceding Nisibis, Singara and the trans-Tigris districts that Narseh had lost, and abandoning Armenia. Between 368 and 370 Shāpūr took Armenia by a combination of diplomacy and force, won over some nobles and satraps, invited the king, Arshak, to a banquet, blinded, imprisoned, and killed him, pillaged Armenia, drove the Roman protégé out of Iberia and enthroned his own one. Roman countermeasures left Iberia divided and Armenia under a son of Arshak as a Roman protégé, whom they had killed in about 373.

The reign of Shāpūr II marked the beginning of a shift in royal legitimising ideology from being of divine nature and descent to being human and descended from the Kayānid [*q.v.*] kings mentioned in the *Avesta*. Shāpūr II was the last Sāsānid king to be called "of divine descent" on his coins. In his letter to Constantius, in 358, he called himself "king of kings, partner with the stars, brother of the sun and moon." The transition was symbolised by emphasis on the royal fortune, Hvarnah (*xwarrah, farr*), as a *yazad* the subject of a *Yasht*, represented by a ram with a bow around its neck. At the siege of Amid, in 359, Shāpūr wore a gold ram's head set with gems. The garrison of Maḥoza, in 363, extolled in song the justice and good fortune (*iustitiam felicitatemque*) of their king. He ordered the Christian, Pōsī, to venerate the "fortune (*gad*) of Shāpūr, king of kings, whose nature is from the gods." According to Lukonin, the dynastic myth of Kayānid descent through Dārā was invented in Shāpūr's time by a secretary, Khorkhbud, who wrote a chronicle telling how the Hvarnah of the Kayāns had watched over Ardashīr I in the form of a ram with a bow around its neck, ensuring his victory over the Parthians.

The 4th century also saw a shift from rock reliefs to royal silver objects with hunting scenes. The metal came from a single source and the objects were probably produced in a royal workshop beginning with Shāpūr II, such as that run by Pōsī the *karugbed* at Ērānshahr-Shāpūr (Karkhe dhā Lādhan). Shāpūr II was also associated with royal banqueting customs and court protocol.

This same century was a period of sharpening religious conflict, inter-faith polemic and the consolidation of religious identities. The polemic lines were drawn among Magians, Manichaeans, Christians, Jews and fatalists. Magians and Christians opposed Manichaeans and fatalists; Magians and Jews opposed Christians, probably indicating who felt threatened by whom. According to the Dēnkard (iv, 26-7) Shāpūr II (who may have been Zurvanite) issued an edict defining true belief and condemning false belief, but does not say what they were. Under Shāpūr II the *rad*, Mahraspand, sanctioned the confiscation of the property of Manichaeans for the royal treasury. The latter's son Ādurbed was a major figure in the formulation of Mazdaean doctrine, remembered and quoted in later tradition. He stood for judicial procedure, an ethical reduction of the sphere of life controlled by fate and the embodiment of the spiritual in the material, and he opposed Manichaeans. The spread of popular piety was reflected in the motto "reliance on the *yazdān*" on personal seals, although the meaning of *yazdān* was beginning to shift from the divine beings in general to a term for Ohrmazd.

The organisational structures of Magians, Christians and Jews underwent elaboration in this century. The earliest references to a supreme *mowbed* and to a priestly hierarchy with territorial jurisdictions corresponding to secular administrative divisions belong to the reign of Shāpūr II. As part of the ruling class, Magian priests and the attendants of fire-temples were exempt from paying the poll tax. Christians formed an ecclesiastical structure under the primacy of the bishop of Ctesiphon from the early 4th century, which made it easier for the state to deal with them. Shāpūr II required the bishop of Ctesiphon, Shemᶜōn bar Sabbāᶜe, to collect a double poll tax and land tax from Christians because they were living in peace. Jews were ruled indirectly through their exilarch in return for taxes, loyalty and defence. Subordinate officials of the exilarch administered justice, collected taxes for the government, supervised markets, preserved order and defended Jewish towns. The 4th-century exilarch, ᶜUkba bar Nehemiah, established the principle that the law of the government was to be obeyed just as the Torah. By the end of the 4th century, there was an alliance between the exilarch and the rabbis, who staffed the religious courts, where they applied religious law to the life of the community, acted as local administrators, collected the poll tax and enforced dietary laws as market inspectors. By this century world-affirming doctrines were being used by the representatives of authority in the new order: Mazdaean priests, Jewish rabbis and the Christian clergy, who used ritual and law to exercise social control.

Under the successors of Shāpūr II a three-way power struggle emerged among the monarchy, the *wuzurgān* or nobles, and the Magian priests, while the pressure from steppe peoples increased. The Sāsānids were generally successful in warfare in the east until the mid-5th century. Ardashīr II (379-83) was most probably the brother of Shāpūr II; an investiture relief at Tāḳ-i Bustān near Kirmānshāh [*q.v.*] is usually

ascribed to him, although it could be that of Shāpūr II. He is said to have been killed in a revolt by the *wuzurgān*, and was succeeded by Shāpūr III (383-8), a son of Shāpūr II, who is said to have favoured the *wuzurgān*. Shāpūr III was the first to be called Kayānid on his coins, and was represented as slaying a lion on a silver plate; he left a rock relief of himself and his father at Ṭāḳ-i Bustān. He is said to have freed Christian prisoners because it was more profitable to the state to have them engage in crafts and pay taxes, which may have led the *wuzurgān* to replace him with his brother Bahrām IV (388-99). Some of the latter's coins have the earliest mint-marks. In 389 Armenia was partitioned with the Romans, at first under two Arsacid client kings, but in the 390s the western part was integrated into the Roman empire and governed by a *comes*, while Bahrām IV made his brother Bahrām-Shāpūr/Vramshapuh king of Perse-Armenia in 394, marking the end of the Arsacid dynasty of Armenia. In 395 Huns from north of the Caucasus reached Mesopotamia and were driven back. Bahrām IV died violently, possibly at the hands of the *wuzurgān*. Frye argues that the strength of local nobles over the central government in the late 4th century was due to Shāpūr II's failure to establish central authority, although it is equally possible that Shāpūr's wars served to strengthen the landed military nobility, officials, and royal princes.

Yazdadjird I (399-420) was most likely a brother of Bahrām IV and was called "delight of the state" on his coins. The incipient outline of a dual secular and religious judicial system existed by the tenth year of his reign (408-9). There was a secular hierarchy of state judge, local *rad* and judges of first instance, while the priests, under the grand Magus, performed judicial and ritual duties. Ādur-Ohrmazd (d. 407) is said to have recited the *Avesta, Yashts* and *drōn* (ceremonial food offerings) night and day as *mowbed* of Belāshfarr. The expansion of the royal domain, or its hierarchic administration, can be seen in the earliest attestation of a grand-*framādār* in 410, who was succeeded by the famous Mihr-Narseh, from the noble clan of Spendiād, who dominated the first half of the 5th century. The latter left an inscription on a bridge he had built at Fīrūzabād, and, according to al-Ṭabarī, developed four villages with orchards nearby, founded a sacred fire for his own soul in one and "named fires" in the other three for each of his sons: Zurwāndad, the Herbed of herbeds, Kardīr, the head of soldiers and Māh-Gushnasp, the head of cultivators/herdsmen. These titles were new in the 5th century; two of them are Avestan; and all three categories are Avestan. Rather than indicating the reorganisation of late Sāsānid society according to Avestan social categories, they probably show the impact of Avestan social theory in the 5th century co-ordinated with the late Sāsānid system of three major fire temples: Ādur Farnbag, of priests in Fārs; Ādur Gushnasp, of soldiers at Shīz [*q.v.*] (Takht-i Sulaymān) in Ādharbaydjān; and Ādur Burzen Mihr, of farmers in Khurāsān, that probably existed by the 5th century.

The late 4th and early 5th centuries marked the height of the alliance between the Sāsānid state and Jewish exilarchs, who resembled client kings. The wife of Yazdadjird I is said to have been the daughter of an exilarch (*Yahūdān-Shāh*); at her request he settled Jews at Gay (Iṣfahān [*q.v.*]). He is said to have honoured the exilarch, and Rabbi Ashi regarded the Persians as protectors of Jews.

Yazdadjird I also legitimised the position of Christians. After peace with the Romans/Byzantines in 409, Christians were allowed to worship publicly and bury their dead. In 410 the first synod in Sāsānid territory was arranged by the grand-*framādār* at Seleucia/Weh-Ardashīr, where the creed of Nicaea (325) was accepted and a hierarchy of metropolitan bishoprics under the catholicos of Seleucia-Ctesiphon was established parallel to the secular administration. The acts of this council were guaranteed by the double sanction of excommunication and of punishment by the King of Kings, and Yazdadjird was called "victorious" and "illustrious". Mazdaeans called him a sinner (*athīm* in the Arabic sources) and remembered him as an oppressive, cruel tyrant, which probably reflects the opposition of priests to toleration and of the *wuzurgān* to royal authority. Toleration was tested toward the end of his reign when a Christian priest in Khūzistān destroyed a fire temple and refused to rebuild it, and another extinguished a sacred fire and performed the eucharist in its place. Both were executed after trials, but rather than amounting to a "persecution", this served to define the limits of toleration. According to legend, the *wuzurgān* prayed for relief from Yazdadjird's oppression, and God sent an angel in the form of a horse that killed him.

The *wuzurgān* tried to exclude the sons of Yazdadjird from the succession. His eldest son, Shāpūr, who had succeeded Vramshapuh in Armenia in 414, went to Ctesiphon and took the throne, but was killed by the *wuzurgān*, who enthroned a descendent of Ardashīr I called Khusraw. Shāpūr's brother Bahrām, who had been raised at al-Ḥīra by al-Mundhir of Lakhm, marched on Ctesiphon with an Arab army; Khusraw abdicated and Bahrām seized the throne as Bahrām V (420-38). He remitted taxes at festivals, and mint marks became standard on coins. Early in his reign he defeated an invasion of Hephthalites (Hayāṭila [*q.v.*]) in the east, killed their king, dedicated his crown to the Gushnasp fire at Shīz and the queen and her slaves to serve there. In the west, war was waged with the Byzantines from 421 to 422 by Mihr-Narseh over the extradition of Armenian Christian refugees, while, at the instigation of Mihr-Shāpūr, head of the Magians, for five years corpses buried in the time of Yazdadjird I were exhumed and scattered about in the sun. The treaty with the Byzantines in 422 provided for religious freedom to Christians in the Sāsānid state and to Magians in the Byzantine state, and for the Byzantines to help pay for the defence of the pass at Darband [see BĀB AL-ABWĀB] by the Sāsānids. A synod in 424 established the autonomy of the Christian Church in Sāsānid territory from the Byzantine Church.

Artashes, the son of Vramshapuh, had succeeded Shāpūr as king of Armenia, but the pro-Persian *naxarars* asked to have him removed, so Bahrām V replaced him with a Persian *marzbān* (*marzpān* [*q.v.*]), in 428. Following an experiment in the 4th century, the *marzbān* emerged during the 5th century as a new kind of military governor for a frontier region, replacing royal princes as sub-kings. By the end of the 5th century, Nisibis and Asōrestān were governed by *marzbāns*.

Against Christians, who accused Magians of being polytheists and worshipping the elements, Bahrām V answered that he recognised only one deity; the rest were only courtiers of the king. He devoted Mihr-Narseh "as a slave" to the Ardwahisht fire and that of Afson-Ardashīr for several years, and tradition associated him with the Ādur Gushnasp shrine at Shīz. When he married an Indian princess, who brought the port of Daybul [*q.v.*] as her dowry, he entrusted her to the priest of the Ādur Gushnasp shrine

to be purified and converted to Magianism, and he is said to have visited this shrine on the feasts of Sada (the midwinter fire festival) and Nawrūz [*q.v.*].

Tradition also associated Bahrām V with importing Indians (Zuṭṭ [*q.v.*]) with water buffaloes to the Gulf coast of Fārs, and 4,000 Indian musicians, who spread through the provinces as entertainers. He was remembered as Bahrām Gūr ("the onager") for his skill in hunting, and his exploits were extolled in legend and illustrated in art.

For a half-century after Bahrām V there was growing disorder in the Sāsānid state, persecution and forced conversion of Christian and Jews, a seven-year drought and famine in the 460s or 470s, the payment of costly tribute to the Hephthalites and social disorders associated with the Mazdakite movement [see MAZDAK] at the end of the century. The shift from divine to Kayānid kingship was completed by the time of the son of Bahrām V, Yazdadjird II (438-57), the last to be called "divine" on his coins, while the title "Kay" was common on his coins and those of his successors. From the time of Fīrūz (459-84), Kayānid names became popular in the royal family. The significance of this lay in the role of Kayānid kings as patrons of Zoroaster and supporters of his religion in the Avesta and in the development of the myth of the Kayānid descent of the Sāsānid kings included in the Book of Kings (*Xwadāy nāmag*) that contained material from at least the 5th century.

War with the Byzantines was ended peacefully in 442 in order to deal with the steppe people in the north-east. There were repeated campaigns to keep the Kidarite Huns out of Gurgān, and Yazdadjird II is said to have moved his court to north-east Iran for seven years to hold back the Hephthalites. His reign also saw the beginning of serious efforts to spread some form of Magianism and establish a uniform religious identity among Sāsānid subjects similar to contemporary efforts by the Byzantines to deal with the Nestorian and Monophysite controversies. The title of *mowbedān mowbed* (a calque on *Shāhān-shāh*) was first attested for Mihr-Shāpūr in 446. Yazdadjird II is said to have considered it a sin to accept tribute from Christians; in 446 Christians denounced by Manichaeans were executed at Kirkuk [*q.v.*]; and the king of Albania was forced to become a Magian. He tried to convert Armenian Christians and Jews and sent Mihr-Narseh to do it, who presented Magian doctrine to them in its Zurvanite form. These efforts provoked a revolt by Christian Armenians led by Vardan, a Mamikonian prince, which was crushed by the pro-Sāsānid *naxarars* under Vasak, prince of Siunik, at the battle of Avarair in 451. Afterwards Mihr-Narseh was removed from service to the fire temples for sinfulness and assigned to the royal domains for several years. In 455 Yazdadjird II is said to have outlawed the Jewish sabbath.

The death of Yazdadjird II was followed by a dynastic civil war between two of his sons, Hormizd III (457-9) and Fīrūz (459-84), who defeated and killed his brother. During the civil war the Albanian king rebelled and allied with the Huns north of the Caucasus. After war with the Albanians, Fīrūz made peace, permitting Albanians and Armenians to remain Christian, and the Byzantines subsidised the defence of the Caucasus passes. Upon consulting with Martbut, the *mowbedān mowbed*, and other judges, Fīrūz put Mihr-Narseh in the service of the Ohrmazd-Fīrūz fire (i.e. his own royal fire). In the 460s the Hephthalites crossed the Oxus, and in about 469 defeated and captured Fīrūz, who lost Harāt to them, agreed to pay them tribute, left his son Kubādh as a hostage to guarantee its payment and levied a general poll tax over his entire state to ransom him. The great drought and famine led him to remit taxes, but together with the beginning of persecution under Yazdadjird II, may have encouraged messianic expectations among Jews in 468, four hundred years after the destruction of the Temple. About that time, the Jews of Iṣfahān are said to have flayed two *hērbeds*, and Fīrūz ordered half the Jews of Iṣfahān killed and their children to be turned over to the Sroš Āduran fire temple as slaves. In 470 two rabbis and the son of the exilarch were imprisoned and executed, and in 474 or 477 Babylonian synagogues were closed, schools destroyed, Jews were made subject to Persian law and Jewish children were turned over to Magians to be raised.

When Fīrūz died fighting the Hephthalites in 484, the *wuzurgān* enthroned his brother Balash (484-8), who secured peace with the Hephthalites in return for tribute, gave Armenian Christians religious freedom and made Armenia a royal province. By the late 5th century, Sāsānid coins began to have dates in the regnal year of the king. The desire of Balash to build baths in the cities of his empire is said to have provoked opposition from the Magian priests, who accused him of trying to abolish their laws. In 488 he was deposed by the *wuzurgān* and priests, who enthroned Kubādh I (488-96, 499-531), the son of Fīrūz.

Sectarian fragmentation and conflict among Magians and Christians were typical of the end of Late Antiquity. The 5th century saw the emergence of the egalitarian movement of the Zarādushtagān, that captured the Sāsānid state at the end of the century and survived as a sectarian form of Magianism. Contemporary with the Monophysite movement in the Byzantine empire, this was related to political support for some particular form of the dominant faith, the enforcement of religious conformity for political reasons, the popularisation of Magianism through forced conversion and the impact of the Avesta, which sanctioned the sharing of wealth, women, and wisdom. Drought, famine and the decimation of the *wuzurgān* in the Hephthalite and civil wars may have created an agricultural and demographic crisis in the state, while the *wuzurgān* engaged in local oppression under a weak monarchy. Kubādh I allied with the Zarādushtagān and their leader Mazdak [*q.v.*] as a means of popular support against the *wuzurgān* and the priests. He tried to force the Armenians to convert, permitted or ordered the sharing of women and redistributed land. The sharing of women and property may have been intended to undermine the *wuzurgān*, break down social barriers to marriage between nobles and commoners, repopulate the state and restore agriculture, but people were allowed to help themselves, causing disorders in 494-5. In 496 the *wuzurgān* deposed Kubādh over his policy toward women and held an assembly to decide what to do with him. Procopius reports that it was not legal to enthrone a commoner unless the royal family was extinct and that the majority were unwilling to kill a member of the royal family, so they imprisoned Kubādh and enthroned his brother Djāmāsp (496-99).

Kubādh escaped to the Hephthalites, whose army restored him to the throne in 499. Djāmāsp was blinded and imprisoned because, according to Procopius, no-one with a physical deformity could be king. Kubādh's second reign began with a series of natural disasters: famine and flooding on the lower Tigris, which changed its channels below Kaskar, creating swamps and turning land into desert along its former course. Needing cash to repay the Hephthalites, the

Byzantine refusal to pay for the defence of the Caucasus passes served as a pretext for predatory warfare against them. In 503 Kubā<u>dh</u> took Āmid and carried off the survivors as slaves. The Byzantines made peace in 506 and paid an indemnity to Kubā<u>dh</u>, who returned the conquered territory and the captives from Āmid. The internal situation was stabilised with the Mazdakites in control for thirty years. After his restoration, Kubā<u>dh</u> required the Arab ruler of al-Ḥīra al-Mun<u>dh</u>ir III (*ca.* 505-54) to become a Mazdakite. When the latter refused, Kubā<u>dh</u> got the Arab ruler of the Kinda [*q.v.*], al-Ḥāri<u>th</u> b. ʿAmr, whose kingdom was at its height in the early 6th century, to impose Mazdakism on the Arabs in Nad<u>j</u>d and the Ḥid<u>j</u>āz [*q.vv.*]. In 525 al-Ḥāri<u>th</u> defeated al-Mun<u>dh</u>ir and occupied al-Ḥīra until his death in 528.

Apart from the suppression of the *wuzurgān*, who never recovered their power in the state, the Mazdakite period was less of a break with than a continuation of 5th-century developments. The interest in conversion and spreading Magian observance in this period also saw the emergence of *hērbeds* as Magian missionaries, according to Chaumont, who were encouraged to return to their villages to instruct people and establish schools, where they taught children to recite the *Ya<u>sh</u>ts*. Mazdak is said to have persuaded Kubā<u>dh</u> to extinguish all but the three original sacred fires, which were associated with Avestan ideology, and the Mazdakites may have contributed to their elevation in the late Sāsānid period. Kubā<u>dh</u>'s reputation does not seem to have suffered, and he was credited with a reform of the Magian calandar. Kubā<u>dh</u> gave his sons Kayānid names and was called "Kay" on his coins along with increasing astral symbols.

Kubā<u>dh</u> also began the reforms associated with the recovery of the Sāsānid state in the 6th century. He instituted the use of an official seal for *mowbeds* to use on documents, many examples of which are attested from the late Sāsānid period. He began the survey of agricultural land in lower ʿIrāḳ for tax purposes, and began the creation or reorganisation of administrative districts later called in Arabic *kuwar*, and subdistricts called *tasōg*, which became the basis of late Sāsānid local government.

The same period saw a schism in the Christian Church in Sāsānid territory with the introduction of "western" controversies. This is usually put in terms of the formation of a Nestorian majority and Monophysite minority, but actually involved the adoption of the diophysite christology of Theodore of Mopsuestia, favoured by Bar Ṣawmā, bishop of Nisibis, who convinced Fīrūz that, if the Sāsānid Church adopted Theodore's doctrine, there would be less reason to fear Christian collusion with the Byzantines. He was excommunicated in 485 by his own catholicos, Acacius (484-96), who favoured the creed of Chalcedon (451). The doctrine of Theodore was institutionalised at the school of Nisibis, founded under Bar Ṣawmā's patronage in 496, and that year Mūsā, the Christian court astrologer of <u>D</u>jāmāsp, got royal permission (for the first time) for the election of his relative Babai as catholicos (497-515), who removed Bar Ṣawmā's excommunication at a synod in 499. By the 6th century, Nestorians controlled the Church and spread Theodore's doctrine while those opposed to them tended to become Monophysite. The Armenians rejected the Council of Chalcedon in 491, adopted a christology close to that of the Monophysites and broke completely with the Byzantine Church by 609.

The late Sāsānid state emerged in the 6th century with a centralised bureaucratic administration, hierarchic social order, commercial domination of the overland and Indian Ocean trade, and agricultural reclamation and development. The revival of a strong monarchy, military power, and growing universal claims and ambitions culminated in the wars of <u>Kh</u>usraw II in the early 7th century. This was aided by the decline of the Hephthalites, who split into eastern and western halves in about 515, and were defeated in India in about 528; they survived as small states in the east. Kubā<u>dh</u> secured the trans-Caucasus, drove the pro-Byzantine king out of Georgia and installed a *marzbān* at Mts<u>kh</u>eta in 523. War was renewed with the Byzantines in 527 with Arab forces under al-Mun<u>dh</u>ir III, who had recovered al-Ḥīra for the La<u>kh</u>mids when al-Ḥāri<u>th</u> b. ʿAmr died in 528, joining the Sāsānid army. In 531 joint Sāsānid-Arab forces defeated the Byzantines at Callinicus, but their own losses were so great that they withdrew.

The Mazdakites favoured the succession of Kāwūs, so his younger brother <u>Kh</u>usraw, allied with the Mazdaean priests, challenged Mazdak's influence over his father, assembled the Mazdakites at Ctesiphon for a religious disputation or to proclaim Kāwūs as successor in 528 or 529, convinced Kubā<u>dh</u> that Mazdak's doctrines were false and had the latter executed with 80,000 followers. When Kubā<u>dh</u> died in 531, Kāwūs claimed to succeed his father but, according to Procopius, the vote of the notables was necessary to assume royal power. They were assembled, a document was read declaring <u>Kh</u>usraw to be Kubā<u>dh</u>'s successor and they declared <u>Kh</u>usraw king. This is the first attested example of such a procedure, which was the basis for theoretical generalisations in the *Testament of Ardashir* and the *Letter of Tansar*, both 6th-century works.

<u>Kh</u>usraw I (531-79) purged his rivals among the royal family and the *wuzurgān*, suppressed the Mazdakites, and ruled fairly unopposed. There are recurring references to assemblies during his reign, where policies were approved. In 532 he made peace with the Byzantines by evacuating fortresses in Lazica, while the Byzantines resumed their subsidy to defend the Caucasus passes. <u>Kh</u>usraw I fortified the pass at Darband and built a long wall to defend the Gurgān plain. He was famous for his justice and support of Mazdaean religion, was remembered as Anū<u>sh</u>irwān [*q.v.*] ("of immortal soul") and became the subject of legend. His coins were the first to have stars between the horns of crescents, and from 535 had the slogan "may he prosper" (*abzōn*). The capital at Ctesiphon-Weh-Arda<u>sh</u>īr grew into a metropolis (al-Madāʾin [*q.v.*]) of several cities, and it was most likely <u>Kh</u>usraw I who built the great audience hall (Īwān or Ṭāḳ-i Kisrā) there.

The distinction between nobles and commoners was restored, the property of Mazdakite leaders was confiscated and given to the poor, and property taken by force was returned to its former owners. *Wuzurgān* kept their status but lost their power to a bureaucratic élite of royal officials who collected taxes directly. A new class of military landlords (*dahigān, dihḳān* [*q.v.*]) was created from the *azadān*, who were given land by the treasury in return for military service and forwarding taxes, as a basis for the army and support for the monarchy.

The state was divided into four quarters, of the South, West, North and East, each under a military governor (*spāhbed*), and divided into districts and subdistricts, with *marzbāns* in frontier districts. An elaborate central administration run by officials (*kārdārān*) was divided into departments with parallel

hierarchies reaching down into the provinces along vertical lines of authority with overlapping checks at the local level and books on the duties of officials and *mowbeds*. Confidential officers were used as internal spies and messengers, and there was a royal post for communication. The heads of departments were members of the royal court along with the grand chamberlain, grand counsellor, head steward, head of servants, royal warden, royal astrologer, head physician, chief of craftsmen and chief of cultivators; these titles were sometimes combined and may have been honorific. There were at least seven departments: the chancellery, the registry department to seal documents, the finance department to collect taxes, the department to administer the royal domain, the judiciary, the priesthood, including the office of religious works (*dīvān-i kardagān*) that registered the endowments and property of fire temples and the army. A tax reform paid for the expanded system. Khusraw I finished the cadastral survey in the Sawād [*q.v.*] of ʿIrāḳ and replaced the agricultural tax as a proportion of the harvest by a tax per unit of area under cultivation according to the type of crop, computed in cash, but paid in cash or kind. He also established a regular, annual poll tax of 4, 6, 8, or 12 dirhams, to be paid in three instalments, on the male population between the ages of 20 and 50. Members of the royal family, *wuzurgān*, soldiers, priests and royal officials were all exempt and agreed to its imposition.

A highly developed legal literature was produced in the late Sāsānid period covering legal procedures and social, economic and criminal activity. The *Dādestān nāmag* was a collection of judicial decisions; the *Mādagān* was a digest containing the opinions of jurists and royal rescripts from the 5th century until the twenty-sixth year of Khusraw II (616). Based on Magian ethical principles and religious requirements, the application of this legal system helped spread a Magian way of life.

The late Sāsānid social ethic emphasised order, stability, legality and harmony among the theoretical four estates of priests, soldiers, officials and workers, so that each would perform its specific duty toward the others. These estates were supposed to be hereditary, but in practice were overlapped by a vertical social hierarchy of the royal family, *wuzurgān*, provincial governors, small military landholders and local officials, freemen and slaves. There are scattered references to organisations of artisans and merchants. The Sāsānids monopolised the transit trade, exchanging goods with the Byzantines at markets along the western frontier at Nisibis and Dubios in Pers-armenia. Procopius describes how numerous merchants from all over Persia and some under Byzantine rule came to Dubios and traded for goods from India and Iberia.

Khusraw I was famous for his love of literature and philosophy; works were translated from Greek, Syriac and Sanskrit into Middle Persian, a set of royal astronomical tables (*Zīdj-i Shāhī*) was produced for him and there were philosophical discussions at his court. Paul the Persian, a Nestorian theologian and Aristotelian philosopher, in a Syriac introduction to logic addressed to Khusraw, argued that knowledge was better than belief based on the relativity of religious belief that resulted in a variety of opinions.

War was resumed with the Byzantines from 540 to 561 over the control of Armenia and Lazica, encouraged by Ostrogothic ambassadors, for plunder, and to divert and employ the military aristocracy. In 540 Khusraw I invaded Syria, took Antioch, burned the city and deported the survivors, and seized or extorted huge amounts of gold and silver there and from other cities on his return. He resettled the captives from Antioch in the new city of Weh Antiōk Khusraw in the south-eastern part of al-Madāʾin, which was patterned after Antioch in Syria with public baths and a hippodrome and put under the charge of a chief of artisans (*karugbad*) as a manufacturing centre. In 541 the Lazes offered Khusraw I the prospect of attacking the Byantines by sea through their land, and he invaded Lazica with Huns as allies and established direct rule there. In 542 he invaded Syria up the west bank of the Euphrates as far as Commagene. Finding nothing left to plunder or extort, he deported farmers from Callinicus on his return. He defeated the Byzantines in Armenia in 543 and invaded Mesopotamia in 544; the Byzantines agreed to a five-year truce and paid 2,000 pounds of gold. The truce was broken in its fourth year when the Lazes allied with the Byzantines to expel the Sāsānids. The fall of Petra to the Byzantines in 551 was followed by a second five-year truce, and negotiations for a peace treaty were begun in 556. Khusraw turned to the east, where the Western Turks invaded Central Asia and defeated the Hephthalites. In about 557-8 Khusraw took the Hephthalite territory south of the Oxus. A fifty-year peace was concluded with the Byzantines in 561, by which the Sāsānids evacuated Lazica in return for an annual payment of gold, religious freedom was guaranteed for Christians under the Sāsānids and Magians under the Byzantines, and Nisibis and Dara were confirmed as centres for the silk trade. Khusraw's gold coins of 564 contained universalist slogans: "he who makes the world without fear" and "may he cause the world to prosper". In 564 a member of the Sūren family was made governor of Armenia, who built a fire temple at Dvin (Dwin [*q.v.*]) and killed a leader of the Mamikonian family, provoking an Armenian revolt in 571. The Byzantines withheld their payment and indecisive warfare was renewed over Armenia and Mesopotamia from 572 to 582. There was a war with the Turks in 569-70, and between 575 and 577 a Sāsānid naval expedition conquered al-Yaman [*q.v.*] from the Ethiopians. The Armenian revolt ended with a general amnesty in 578.

The conflict between the crown and the *wuzurgān* resurfaced in the reign of Hurmizd IV (579-90), who had been designated as successor by his father Khusraw I. Hurmizd IV is said to have favoured the common people against the *wuzurgān*, possibly as a basis of support for the crown, killed some 13,000 Persian notables, executed the Jewish exilarch in 581 and closed the schools, and reduced the pay of the army. He also suppressed the priestly order of *mowbeds*; for the rest of the Sāsānid period and into early Islamic times, *hērbeds* are represented as the most important priests, although Hurmizd IV resisted their efforts to persecute Jews and Christians. In 588 Hephthalite subjects of the Western Turks invaded the east, reaching Bādghīs [*q.v.*] and Harāt. Bahrām Čubīn [see BAHRĀM], of the Mihrān family and *spāhbed* of the North, defeated the Western Turks at Harāt in 589, crossed the Oxus and defeated the Eastern Turks, and was then sent against the Byzantines in Albania, where he was defeated. Jealous of Bahrām's popularity, Hurmizd IV disgraced him on the pretext that he held back booty, provoking Bahrām to rebel in the trans-Caucasus, according to Theophylact, or in the east, according to the Syriac Khūzistān chronicle. Towards the end of 589 Bahrām marched against al-Madāʾin, where the nobles rebelled early in 590, led by Bindoe and Bisṭām, brothers-in-law of Hurmizd,

who released the nobles from prison, deposed, blinded and killed Hurmizd IV, and enthroned his son Khusraw. Bahrām defeated them in Ādharbaydjān, Khusraw fled to the Byzantines in March, Bahrām entered the capital in the summer of 590 and took the throne (Bahrām VI, 590-1) with upper-class support, including the rich Jews there. He struck coins for two years and may have associated his rule with millennial expectatations and Arsacid restoration.

Khusraw sought aid from the Byzantine emperor Maurice, who sent him money and two armies for his promise to return conquered territory and permanent peace. One army marched through Armenia, reinforced by 12,000 Armenians and awaited in Ādharbaydjān by Bindoe with 8,000 Persians. The other went through Mesopotamia and defeated Bahrām in ʿIrāķ; Bahrām headed for Ādharbaydjān, was defeated by Bindoe near Lake Urmia, and fled across the Oxus to the Turks, where he was assassinated a year later. When Khusraw returned to al-Madāʾin, his general and the Christians killed many of the Jews of Maḥoza for supporting Bahrām.

Khusraw II (591-628) returned Dāra and Mayyāfāriķīn [*q.v.*] to the Byzantines in 591, and ceded Armenia up to Lake Van and Tiflis. He remitted half the land tax, put one uncle, Bindoe, in charge of the administrative bureaux and treasuries, and the other, Bisṭām, over the north-east. Bindoe was soon executed, and Bisṭām rebelled in the north-east, striking his own coins at Rayy from about 592 to 596. In 598 an expedition annexed al-Yaman as a province. Khusraw II established his rule over the entire state by 601.

The reign of Khusraw II was the most extreme expression of late Sāsānid political absolutism and imperial ambition. In a letter to Maurice, he called himself "king of kings, master of those who have power, lord of peoples, prince of peace, saviour of men, good and eternal man among gods, most powerful god among men, most honored, victorious, ascended with the sun and companion of the stars." He was represented as the cosmocrator. His image was observed in 624 on the inside of a dome on a building at Ganzak enthroned in the heavens with the sun, moon and stars around him. He is said to have had a celestial throne with a canopy of gold and lapislazuli on which the stars, signs of the zodiac, planets and the seven climes were represented. He is also said to have been surrounded by over 360 astrologers and magicians, whose advice he sought constantly. He was called Aparwēz (Parwīz [*q.v.*] "the triumphant"), and the slogan "may he make Iran prosper" occured on some of his coins. The rock reliefs in the large grotto at Ṭāķ-i Bustān are probably his, as are the remains of a palace at Ķaṣr-i Shīrīn [*q.v.*] near Dastagerd (Daskara [*q.v.*]). He amassed a huge royal treasure, accumulated from the time of Fīrūz, reorganised the state into 35 administrative districts and built 353 fire temples, where 12,000 *hērbeds* recited rituals.

He eliminated all rival sources of power, probably in compensation for insecurity at the beginning of his reign. The Jewish exilarchate was suppressed; after 590 there was no exilarch for the rest of the Sāsānid period, Jewish schools were closed and the rabbis became the *de facto* leaders of the community. In 596 he had his own candidate elevated as Nestorian catholicos, but being deceived by a group of physicians, astrologers and Christian courtiers over the elevation of a successor in 604, after the latter died in 609, he refused to allow the election of a catholicos for the rest of his reign. In about 602 the Lakhmids were suppressed and their last king, al-Nuʿmān III b. al-Mundhir [*q.v.*], was executed. After a Sāsānid army was defeated by the Banū Shaybān at Dhū Ķār [*q.v.*] between 604 and 611, al-Ḥīra was put under a *marzbān* and the desert frontier restored.

In 602 Maurice was deposed and killed, giving Khusraw the opportunity to regain territory ceded to the Byzantines by posing as his avenger, starting the last and greatest Sāsānid-Byzantine war. Between 604 and 610 Sāsānid armies under Shahīn, *spāhbed* of the West, and Shahrbarāz conquered Armenia and Mesopotamia, and invaded Syria and Anatolia. Byzantine weakness during this phase of the war was due to their lack of local support and the occupation of their forces putting down local disturbances and revolts, that destroyed their own manpower in Syria. The second phase started with the accession of Heraclius in 610; Khusraw now intended to conquer the entire Byzantine empire. In 611 with Shahīn's army covering in Anatolia, Shahrbarāz invaded Syria, taking Antioch, and Damascus (613). Then marching down the coast taking the towns to prevent Byzantine reinforcements by sea, he turned inland, conquered Galilee and the Jordan valley and besieged Jerusalem in May 614, joined by tens of thousands of messianic Jews. When Jerusalem fell, tens of thousands of Christians were killed, 300 monasteries and churches burned, 35,000 captives, mostly craftsmen, deported to Sāsānid territory along with the Patriarch of Jerusalem and the relic of the True Cross, and a Bahrām fire established there. The Jewish alliance broke down in 617, their administration of Jerusalem was ended and they were expelled from the city. The treatment of Christians in Palestine was moderated by the influence of Christians at the Sāsānid court; some prisoners were freed, money was sent for relief, and the rebuilding of churches and monasteries was allowed. Chalcedonian bishops were expelled from Mesopotamia and Syria, and their churches turned over to Monophysites. From 616 to 620 Shahrbarāz conquered Egypt as far as Ethiopia in the south and Libya in the west, and installed a Coptic Patriarch in Alexandria. Meanwhile, an Armenian army under Sembat Bagratuni defeated Hepthalites north of Lake Helmand and looted as far as Balkh [*q.v.*]. During this phase of the war, the Sāsānids were inconsistent in responding to local support from Jews and Monophysites, and may have played them off against each other; they also failed to develop a navy, and Khusraw II was unwilling to consider peace while he was winning.

Instead of trying to reconquer lost provinces, the Byzantines took the war to the Sāsānids in its third phase. In 622 and 624 Heraclius invaded Armenia, faced by Khusraw II himself in Ādharbaydjān. Burning towns and villages, Heraclius drove Khusraw II out of Ganzak and Shīz. Khusraw II fled to al-ʿIrāķ, while Heraclius wintered in Albania. In 625 Heraclius defeated three Sāsānid armies in Ādharbaydjān and Armenia. With the war going badly, Khusraw II turned against the Christians, executed Nestorians in upper ʿIrāķ, deported Monophysites from Edessa to Sīstān, raised taxes and took treasures from churches to finance the war.

In its fourth phase, the war escalated in 626; the Sāsānids allied with the Avars in eastern Europe, while the Byzantines allied with the Khazars [*q.v.*] north of the Caucasus. The joint Sāsānid-Avar siege of Constantinople failed in 626, as did the Byzantine-Khazar siege of Tiflis. In 627 plague broke out in Palestine, and Heraclius invaded Armenia with Greek, Laz and Iberian troops, and with Khazar

cavalry. Descending to the Tigris valley, he defeated Sāsānid forces at Nineveh, marched down the east bank of the Tigris, took and destroyed the royal palace and animal preserve at Dastagerd, and took the royal treasures. Khusraw II fled to al-Madāʾin and set up a defensive line along the Nahrawān [*q.v.*] canal. Unable to find a ford due to disastrous flooding of the Tigris and Euphrates in the winter of 627-8, Heraclius returned to Ganzak, and waited for political developments in the capital. Khusraw II suspected and feared everyone, arrested all the officers who had fled from the Byzantines and ordered them to be executed, imprisoned thousands of people and executed the workmen who failed to close the Tigris breaches. Furious at his behaviour and rejection of peace proposals, in February 628 a group of generals and high officials entered the capital, opened the prisons, proclaimed his son Kubādh II king, arrested and imprisoned Khusraw II and insisted that Kubādh execute him, because there could not be two kings at once.

Kubādh II reigned for eight months (February to September 628), was called Kubādh Fīrūz ("victorious") on his coins and was popularly called Shīrūya/Shīroe. Persians called him "the unjust", and he was identified as the Antichrist in apocalyptic literature. He was remembered as a parricide and fratricide; he killed all of his adult brothers, leaving only sisters and children, creating the subsequent dynastic problems. During his reign, one-third to one-half of the population of ʿIrāḳ perished from plague, probably brought back from Syria by Sāsānid armies. He also began peace negotiations with the Byzantines based on mutual evacuation and the freeing of prisoners of war and deportees. He reduced taxes and allowed the election of a Nestorian catholicos.

Kubādh II was succeeded by his seven-year-old son, Ardashīr III (September 628 to April 630), with Mah-Ādur-Gushnasp as regent. Shahrbarāz seems to have broken with Khusraw II by the end of 626, and had refused to recognise Kubādh II or evacuate his provinces. In the summer of 629 he negotiated with Heraclius on his own, evacuated Egypt and Syria, returned to al-Madāʾin, purged his enemies and those responsible for the death of Khusraw II, and made himself regent. He returned the True Cross to Heraclius, but was defeated by the Khazars. On 27 April 630, he killed Ardashīr III, made himself king and reigned for 42 days until he was killed by his own guard on June 9.

This was followed by an extreme dynastic crisis, with eleven rulers in two years. Būrān (630-1), daughter of Khusraw II and wife of Kubādh II, struck coins, built bridges, and completed the peace negotiations with the Byzantines before being deposed and killed in the fall of 631. In the latter part of 632, a grandson of Khusraw II, Yazdadjird III [*q.v.*] (632-51), was proclaimed king at Iṣṭakhr at the age of sixteen or twenty-one and brought to al-Madāʾin.

Yazdadjird III was the last Sāsānid monarch. The Sāsānid position in the Arabian peninsula had already been lost; their system of military colonies and tribal alliances in al-Yaman, ʿUmān, and al-Baḥrayn collapsed when defeat by the Byzantines followed by a four-year dynastic crisis (628-32) made them unable to support their garrisons and Arab protégés. The treaty of Ḥudaybiya [*q.v.*] in 628 enabled the Muslims to form their own alliances, and Sāsānid governors at Ṣanʿāʾ [*q.v.*] and Hadjar acknowledged the Prophet Muḥammad and converted to Islam, while Magians in al-Baḥrayn and coastal ʿUmān were allowed to pay tribute. The raid of Khālid b. al-Walīd [*q.v.*] in 633 destroyed most of the Sāsānid system of fortresses along the desert frontier of ʿIrāḳ, crippled their Arab allies there and provoked a major Sāsānid effort to restore the border. But they were unable to follow up their victory over the Muslims at the Battle of the Bridge in 634 because of factional conflict at al-Madāʾin. The Muslim victory at al-Ḳādisiyya [*q.v.*] in 636 resulted in the loss of ʿIrāḳ to the Sāsānids; Yazdadjird fled to Ḥulwān [*q.v.*] and then to Rayy. The fall of ʿIrāḳ affected the subsequent conflict because the Sāsānids had lost the heart of their state: the administrative centre at al-Madāʾin, the tax base, that amounted to one-third of the total revenue, the royal treasure, substantial military forces and the leadership of many nobles. The Muslims now held these resources, assisted by former Sāsānid soldiers and officials who defected to them. The caliph ʿUmar I [*q.v.*] had intended expansion to stop there, but attacks on lower ʿIrāḳ by Sāsānid forces in Khūzistān provoked the Muslim conquest of that province from 639 to 642. Yazdadjird III raised a major army and sent it to Nihāwand [*q.v.*] in order to block any Muslim advance and possibly to retake ʿIrāḳ. The defeat of this army by combined Kūfan and Baṣran forces in 642 was a second military disaster for the Sāsānids; it secured Khuzistan and ʿIrāḳ for the Muslims, ended organised resistance in the Djibāl [*q.v.*] and opened the Iranian plateau to the Muslims. Yazdadjird III fled to Iṣfahān and then to Iṣṭakhr, where he tried to organise the defence of Fārs. But the Baṣran army conquered Fārs in 649-50; Yazdadjird III fled to Kirmān and Sīstān, pursued by Muslim forces, and arrived at Marw. Resenting Yazdadjird III's financial demands, the *marzbān* of Marw allied with Nīzak Ṭarkhān [*q.v.*], the Hephthalite ruler of Bādghīs, to defeat Yazdadjird's followers. Yazdadjird III fled from Marw, and was killed by a miller nearby in 451. His son Fīrūz took refuge in T'ang China, but he and his son Narseh were unsuccessful in getting Chinese help to restore their dynasty. The fall of the Sāsānids did not mean the Muslim conquest of Persia, which took several more decades [see īrān. v. History]. The Sāsānid Book of Kings (*Xwadāy nāmag*) achieved its final form in the reign of Yazdadjird III, and, because he had no successor, his regnal years continued from 632 as the era of Yazdadjird. Magians took that year as the end of the millennium of Zoroaster and the beginning of the millennium of Oshēdar..

The significance of Sāsānid history lies in providing an example of a late antique state and society that broadens the understanding of that period, in the development of monarchic and religious institutions, and the formation of religious communities, that created precedents for religious groups as political minorities. The Sāsānids left a legacy of royal absolutism and bureaucratic administration, and Sāsānid motifs continued in the art and architecture of the Islamic period and spread to the east and west. Branches of the dynasty survived long afterward as local rulers. The Bāwandids (Bāwand [*q.v.*]) of Ṭabaristān [*q.v.*] claimed descent from Kāwūs, the son of Kubādh I, and ruled until 750/1349. The Dābawayhids (Dābūya [*q.v.*]) claimed descent from Djāmāsp, the son of Fīrūz, and ruled in Ṭabaristān and Gīlān in the 7th and 8th centuries. The Bādusbānids [*q.v.*] claimed descent from them, and branches of this dynasty lasted until 975/1567 and 984/1574.

Bibliography: The literature on subjects related to the Sāsānids is huge; only an updated selection is given here. General treatments and introduc-

tory bibls. are given by A. Christensen, *L'Iran sous les Sassanides*², Copenhagen 1944, now superseded by the *Cambridge hist. of Iran*, iii, Cambridge 1983; J. Neusner, *A history of the Jews in Babylonia*, ii-v, Leiden 1966-70; articles in *La Persia nel Medioevo*, Rome 1971; and R.N. Frye, *The heritage of Persia*, London 1962, and *The history of Ancient Iran*, Munich 1984. *Orientalia J. Duchesne-Guillemin emerito oblata*, Acta Iranica 23, Deuxième série, Hommages et Opera Minora, ix, Leiden 1984, has several contributions on the Sāsānid period. Mitchener, *The mint organization of the Sassanian Empire*, in *Numismatic Circular*, lxxxvi (1986); R. Curiel and R. Gyselen, *Monnaies des fouilles de Bishāpūr*, in *StIr* xvi (1987), 7-43. Other works on coins are given below by period.

Seals and bullae are treated by Göbl, *Der sasanidische Siegelkanon*, Brunswick 1973; idem, *Die Tonbullen vom Tacht-e Suleiman*, Berlin 1976; Gyselen, *Une classification des cachets sasanides selon la forme*, in *StIr*, v (1976), 139-46; eadem, *Le réemploi de sceaux à l'époque sassanide*, in *ibid.*, xx (1991), 203-10; D. Huff, *Technological observations on clay bullae from Takht-i Suleiman*, in *Mesopotamia*, xxii (1987), 367-90; Gignoux and Gyselen, *Bulles et sceaux sassanides de diverses collections*, Paris 1987; eidem, *Sceaux de femmes à l'époque sassanide*, in L. De Meyer and E. Haerinck (eds.), *Archaeologia Iranica et Orientalia*, Ghent 1989, 877-96. See also S. Shaked, *Jewish and Christian seals of the Sasanian period*, in M. Rosen-Ayalon *Studies in memory of Gaston Wiet*, Jerusalem 1977, 17-31; and J.A. Lerner, *Christian seals of the Sasanian period*, Istanbul 1977; corrections in H. Humbach, *ZDMG*, cxxix (1979), 189-90; critique by Gignoux, *Sceaux chrétiens d'époque sasanide*, in *Iranica Antiqua*, xv (1980), 297-314.

For institutions, see K. Erdmann, *Die Entwicklung der sasanidischen Krone*, in *Ars Islamica*, xv-xvi (1951), 87-123; F. Altheim and R. Stiehl, *Ein asiatischer Staat*, Wiesbaden 1954; Frye, *Notes on the early Sassanian state and church*, in *Studi Orientalistici in onore di Giorgio Levi Della Vida*, Rome 1956, 314-35; idem, *The Sasanian system of walls for defense*, in *Studies in Memory of Gaston Wiet*, Jerusalem 1977, 7-15; D. Metzler, *Ziele und Formen königlicher Innenpolitik im vorislamischen Iran*, Münster 1977; D.M. Goodblatt, *The poll tax in Sasanian Babylonia*, in *JESHO*, xxii (1979), 233-94; K. Mosig-Walburg, *Die frühen sasanidischen Könige als Vertreter und Förderer der zarathustrischen Religion*, Frankfurt a.M. 1982; Gignoux, *Die religiöse Administration in sasanidischer Zeit: ein Überblick*, in H. Koch and D.N. MacKenzie (eds.), *Kunst, Kultur, und Geschichte der Achämenidenzeit und ihr Fortleben*, Berlin 1983; idem, *L'organisation administrative sasanide: le cas du* marzban, in *JSAI*, iv (1984), 1-29; idem, *Le* spāhbed, *des Sassanides à l'Islam*, in *ibid.*, xiii (1990), 1-14; W. Sundermann, *Kē Čihr az yazdān. Zur Titular der Sasanidenkönige*, in *ArO*, lvi (1988), 338-40; Gyselen, *Les données de géographie administrative dans le "Šahrestānihā-i Ērān"*, in *StIr*, xvii (1988), 191-206; eadem, *La géographie administrative de l'Empire sassanide*, Paris 1989; and Shaked, *Administrative Functions of priests in the Sasanian period*, in Gnoli and A. Panaino, *Proceedings of the First European Conference of Iranian Studies*, Rome 1990.

For Magian religion, one can start with K. Erdmann, *Das iranische Feuerheiligtum*, Leipzig 1941; J. de Menasce, *Feux et fondations pieuses dans le droit sassanide*, Paris 1964; Humbach, *Ātur Gušnasp und Takht i Suleimān*, in *Festschrift für Wilhelm Eilers*, Wiesbaden 1967, 189-91; K. Schippmann, *Die iranischen Feuerheiligtümer*, Berlin 1971; J. Duchesne-Guillemin, *The religion of ancient Iran*, Bombay 1973; idem, *Art and religion under the Sasanians*, in Gignoux and A. Tafazzoli, *Mémorial Jean de Menasce*, Louvain-Tehran 1974, 147-54; M. Boyce, *A history of Zoroastrianism*, Leiden-Cologne 1975; eadem, *Iconoclasm among Zoroastrians*, in Neusner (ed.), *Christianity, Judaism and other Greco-Roman cults. Studies for M. Smith at sixty*, Leiden 1975. More recently, see Gignoux, *Pour une esquisse des fonctions religieuses sous les Sasanides*, in *JSAI*, vii (1986), 93-108; idem, *Un categorie de mages à la fin de l'époque sasanide: les* mogvēh, in *JSAI*, ix (1987); J.R. Russell, *Zoroastrianism in Armenia*, Cambridge, Mass. 1987; Gyselen, *Note de glyptique sassanide: quelques éléments d'iconographie religieuse*, in F. Vallat (ed.), *Contribution à l'Histoire de l'Iran. Mélanges offerts à Jean Perrot*, Paris 1990, 253-67; Boyce, *Some further reflections on Zurvanism*, in eadem and G. Windfuhr (eds.), *Iranica varia: papers in honor of Professor Ehsan Yarshater*, Acta Iranica 30, Leiden 1990, 20-9; A.S. Melikian-Chirvani, *Le livre des rois, miroir du destin. II. Takht-e Soleymān et la symbolique du* Shah-Nāme, in *StIr*, xx (1991), 33-148.

On art, architecture and material remains, see A.U. Pope (ed.), *Survey of Persian art*, i, iv, London 1938, repr. London 1964-5; K. Erdmann, *Die Kunst Irans zur Zeit der Sasaniden*, Berlin 1943, Mainz 1969; V.G. Lukonin, *Persia II*, Geneva 1967; W. Hinz, *Altiranische Funde und Forschungen*, Berlin 1969; S. Fukai and K. Horiuchi, *Taq-i Bustan*, Tokyo 1972; J.A. Neely, *Sassanian and early Islamic water-control and irrigation systems on the Deh Luran plain*, in Th.E. Downing and McG. Gibson (eds.), *Irrigation's Impact on Society*, Tucson 1974, 21-42; S.A. Matheson, *Persia: an archaeological guide*, London 1976; P.R.S. Moorey, *Kish excavations 1923-1933*, Oxford 1978, repr. 1979; P. Harper, *Royal hunter: art of the Sasanian empire*, New York 1978; L. Vanden Berghe, *Bibliographie analytique de l'archéologie de l'Iran ancien*, Leiden 1979; G. Herrmann and R. Howell, *The Sasanian rock reliefs at Bishapur*, Berlin 1981; R. Boucharlat and J. Salles, *The history and archaeology of the Gulf from the fifth century B.C. to the seventh century A.D.: a review of the evidence*, in *Procs. of the Seminar for Arabian Studies*, xi (1981), 65-94; K.M. Trinkaus, *Pottery from the Damghan plain, Iran: chronology and variability from the Parthian to the early Islamic periods*, in

StIr, xiv (1986), 23-88; Harper, *Parthian and Sasanian silverware: questions of continuity and innovation*, in *Mesopotamia*, xxii (1987), 341-55; Boucharlat, *Suse à l'époque sasanide. Une capitale prestigieuse devenue ville de province*, in *ibid.*, xxii (1987), 357-66; and R. Wenke and N. Pyne, *Some issues in the analysis of Sasanian Iran*, in Vallat (ed.), *Mélanges ... Jean Perrot*, 235-51.

For the third century, Shāpūr I's inscription at Naksh-i Rustām (SKZ) was published by E. Honigmann and A. Maricq, *Researches sur les Res Gestae Divi Saporis*, Brussels 1953; and Maricq, *Classica et orientalia 5. Res gestae Divi Saporis*, in his *Classica et orientalia, extrait de Syria 1955-62*, Paris 1965, 37-101; his inscription at Bīshāpūr by R. Ghirshman, *Inscription du monument de Châpour Ier*, in *Revue des Arts Asiatiques*, x (1937), 123-29; and at Ḥādjiābād by MacKenzie, *Shapur's shooting*, in *BSOAS*, xli (1978), 499-511. On the establishment of a fire temple at the beginning of Shāpūr I's reign, see Gignoux, *D'Abnūn à Māhān: étude de deux inscriptions sassanides*, in *StIr*, xx (1991), 9-22. For coins, see S.D. Loginov and A.B. Nikitin, *Sasanian coins of the third century from Merv*, in *Mesopotamia*, xxviii (1993), 225-46. For the graffiti at Dura, see B. Geiger, *The Middle Iranian texts*, in A.R. Bellinger *et al.* (eds.), *The Excavations at Dura-Europos. Final report VII, Part I*, New Haven 1956, 283-317. On the death of Mānī, see J.P. Asmussen, *Manichaean literature*, Delmar, N.Y. 1977. For Kirdīr's inscriptions, see Frye, *The Middle Persian inscription of Kartir at Naqš-i Rajab*, in *Indo-Iranian Journal*, viii (1964-5), 211-25; M.-L. Chaumont, *L'Inscription de Kartir à la "Kaaba de Zoroastre"*, in *JA* (1960); Gignoux, *L'Inscription de Kartir à Sar Mašhad*, in *ibid.* (1968), 387-418; idem, *Études des variantes textuelles des inscriptions de Kirdir*, in *Le Muséon*, lxxxvi (1973), 193-216; idem, *Les quatre inscriptions du mage Kirdir. Textes et concordances*, Paris 1991; Herrmann, MacKenzie and R.H. Caldecott, *Iranische Denkmäler*, Reihe II, *Iranische Felsreliefs*. Lieferung 13, I, *Naqsh-i Rustam 6. The Roman victory of Shapur I and the bust and inscription of Kerdir*, Berlin 1989. See also F. Grenet, *Observations sur le titres de Kirdir*, in *StIr*, xix (1990), 87-94. The best recent treatment of Narseh's inscription is by Humbach and P.O. Skjærvø, *The Sassanian inscription of Paikuli*, Wiesbaden 1978-83. Political events from the Roman point of view are given by Herodian, *History of the Empire from the time of Marcus Aurelius*, tr. C.R. Whittaker, Cambridge, Mass. 1970; Cassius Dio, *Roman History*, tr. E. Cary, Cambridge, Mass. 1955; *The Scriptores Historiae Augustae*, ed. and tr. D. Magie, London-Cambridge, Mass. 1921-32. See also A. Rösger, *Die Darstellung des Perserfeldzugs des Severus Alexander in der Historia Augusta*, in *Bonner Historia-Agusta-Colloquium 1975/76*, Bonn 1978. Inscriptions and exerpts from contemporary authors are translated in J. Gagé, *La montée der Sassanides et l'heure de Palmyre*, Paris 1964.

General works on the third century include Chaumont, *Les Sassanides et la christianisation de l'Empire iranien au IIIe siècle de notre ère*, in *RHR*, clxiv (1964), 165-202; eadem, *La christianisation de l'empire iranien des origines aux grands persécutions du 4e siècle*, Louvain 1988; Lukonin, *Iran v III veke*, Moscow 1979. For Sāsānid origins, see Chaumont, *Le culte de Anāhitā à Stakhr et les premiers Sassanides*, in *RHR*, cliii (1958), 154-75. Works on Ardashīr I include V.G. Loukonin, *Monnaie d'Ardachir I et l'Art officiel sassanide*, in *Iranica Antiqua*, viii (1968), 106-17; P. Schmitt, *Artaxerxes, Ardasir und Verwandte*, in *Incontri Linguistici*, v (1979), 61-72; V. Fiorani Piacentini, *Ardashīr ī Pāpakān and the wars against the Arabs. Working hypothesis of the Sasanian hold of the Gulf*, in *Procs. of the Eighteenth Seminar for Arabian Studies*, London 1985, 57-77; D. Potter, *Alexander Severus and Ardashir*, in *Mesopotamia*, xxii (1987), 147-57. On the fall of Hatra, see Maricq, *Les dernières années de Hatra*, in *Syria*, xxxiv (1957); Chaumont, *A propos de la chute de Hatra et du couronnement de Shapur Ier*, in *Acta Antiqua Scient. Acad. Hungarica*, xxvii (1979 [1981]); J. Wiesehöfer, *Die Anfänge der sassanidischen Weltpolitik und der Untergang Hatras*, in *Klio*, lxiv (1982), 437-47. On Shāpūr I, see also Sunderman, *Shapur's coronation. The evidence from the Cologne Mani Codex reconsidered and compared with other texts*, in *Aspects of Iranian culture, in honor of Richard Nelson Frye, Bulletin of the Asia Institute*, iv/2 (1990), 295-9; and K. Mosig-Walburg, *Shapur I. "König von Iran" - Faktum oder Irrtum?*, in *Schweizerische Numismatische Rundschau*, lxix (1990), 103-26. For the late third century, see Herrmann, *The sculptures of Bahram II*, in *JRAS* (1970), 165-71; J.K. Choksy, *A Sasanian monarch, his queen, crown prince and dieties. The coinage of Wahram II*, in *American Jnal. of Numismatics*, i (1989), 117-37; and W. Seston, *Le roi sassanide Narsès, les arabes, et le Manichéisme*, in *Mélanges syriens offerts à M. Renè Dussaud*, i, Paris 1939, 227-34. J. Cribb, *Numismatic evidence for Kushano-Sasanian chronology*, in *StIr*, xix (1990), 151-93, argues for the third and early fourth century, as does M.L. Carter, *Early Sasanian and Kushano-Sasanian coinage from Merv*, in *Aspects of Iranian cultures*, 11-16.

Primary sources for the fourth century include R. Frye, *The Persepolis Middle Persian inscriptions from the time of Shapur II*, in *AO*, xxx (1966), 83-93; Ammianus Marcellinus, *Rerum Gestarum Libri qui supersunt*, ed. and tr. J. Rolfe, Cambridge, Mass. 1950. On the latter, see also K. Rosen, *Studien zur Darstellungskunst und Glaubwürdigkeit des Ammianus Marcellinus*, Bonn 1970. Standard editions of the Acts of the Persian martyrs are by E. Assemani, *Acta martyrum orientalium et occidentalium*, Rome 1748, and P. Bedjan, *Acta martyrum et sanctorum*, Paris 1890-7, with translations by G. Hoffman, *Auszüge aus syrischen Akten persischer Märtyrer*, Leipzig 1880, and O. Braun, *Ausgewählte Akten persischer Märtyrer*, Kempten-Munich 1915. See also H. Delahaye, *Les versions greques des actes des martyrs persans sous Sapor II*, in *PO*, ii/4 (1906), 401-560; and P. Devos, *Les martyres persans à travers leurs actes syriaques*, in *La Persia e il mondo Greco-Romano*, Rome 1966, 213-25. The Armenian account of Faustus of Byzantium is now translated by Garsoian, *The epic histories attributed to Pʿawstos Buzand (Buzandaran Patmutʿiwnkʿ)*, Cambridge, Mass. 1989. For the age of Shāpūr II, see Neusner, *Aphrahat and Judaism. The Christian-Jewish argument in fourth-century Iran*, Leiden 1970; M.I. Mochiri, *Événements historiques, localisations géographiques et indice chronologique attestés par les monnaies de Shāpūr II*, in *Iran*, xxvii (1989), 39-49; idem, *Titulature de Shāpūr II*, in *Iran*, xxviii (1990), 13-22; Gignoux, *Les nouvelles monnaies de Shāpūr II*, in *StIr*, xix (1990), 195-204; S.D. Loginov and A.B. Nikitin, *Coins of Shapur II from Merv*, in *Mesopotamia*, xxviii (1993), 247-70; Gyselen and H. Gasche, *Suse et Ivān-e Kerkha, capital provinciale d'Ērān-xwarrah-Šāpūr. Note de géographie historique sassanide*, in *StIr*, xxiii (1994), 19-35. On Shāpūr III, see Chaumont, *A propos d'un édit de paix religieuse d'époque sassanide*, in *Mélanges d'Histoire des Religions offerts à H.C. Puech*, Paris 1974, 71-80.

In the fifth century, for Mihr-Narseh see W.B.

Henning, *The inscription of Fīrūzabād (Pahlavi inscription at the ruins of the Sassanian bridge)*, in *Asia Major*, n.s. iv/1 (1954), 98-102. For Christian synods from the 5th century onwards, see J.B. Chabot (ed. and tr.), *Synodicon Orientale*, Paris 1902. The martyrs of Kirkuk are in the 6th-century *History of Karka de-Bēt Selōk*, ed. P. Bedjan, in *Acta martyrum et sanctorum*, ii, 507-37, tr. G. Hoffmann, *Auszüge*, 43-60. The Armenian accounts by Elise Vardapet, *Vasn Vardanac ew Hayoc Paterazmin*, ed. E. Ter-Minasean, Erevan 1957, and Lazar of Pᶜarp, *Patuitᶜiun Hayoc*, ed. Ter-Mkrtzean, Tiflis 1904, are tr. in V. Langlois, *Collection des histoires anciens de moderns d'Arménie*, ii, Paris 1869. On the coins of Fīrūz, see W. Szaivert, *Die Münzprägung des Sasanidenkönigs Peroz. Versuch einer historischen Interpretation*, in *Litterae Numismaticae Vindobonensis*, iii (1987), 157-68. For the early Nestorians, see A. Vööbus, *History of the School of Nisibis*, Louvain 1965.

On Kubādh and Mazdak, in addition to the literature cited in the article MAZDAK, see O. Klima, *Beiträge zur Geschichte des Mazdakismus*, Prague 1977; H. Gaube, *Mazdak: historical reality or invention?*, in *StIr*, xi (1982), 111-122; Tafazzoli, *Observations sur le soi-disant Mazdak-Nāmag*, in *Acta Iranica*, xxiii (1984). For a thought-provoking reassessment, see P. Crone, *Kavad's heresy and Mazdak's revolt*, in *Iran*, xxix (1991), 21-42.

The most important Byzantine sources for the 6th century include Procopius, *History of the Wars*, ed. and tr. H.B. Dewing, London 1961; Agathias of Myrina, *Agathiae Myrinaei Historiarum libri quinque*, ed. R. Keydell, Berlin 1967, tr. J. Frendo, *The histories/Agathias*, Berlin-New York 1975, which has the earliest surviving account of Sāsānid dynastic history. For an assessment of the latter, see Averil Cameron, *Agathias*, Oxford 1970. The late Sāsānid lawbook is edited by A.G. Perikhanian, *Matigān ē hazār datestān*, Erevan 1973; and M. Macuch, *Das sasanidische Rechtsbuch "Mātakdān i Hazār Dātistān"*, Wiesbaden 1981. For late Sāsānid literature, see D. Sanjana, *Kārnāmak ī Ardashīr i Pāpakan*, Bombay 1896, tr. Th. Nöldeke, in *Bezzenberger's Beiträge zur Kunde der indogermanischen Sprachen*, iv (1879), 22-69; E.K. Antia, *Kārnāmak-i Artakhshīr Pāpakān*, Bombay 1900; Boyce, *The Letter of Tansar*, Rome 1968; and M. Grignaschi, *Quelques spécimens de la littérature sassanide conservés dans les bibliothèques d'Istanbul*, in *JA*, ccliv (1966), 1-142, which includes Arabic translations of the *Testament* of Ardashīr and the *Kār-nāmag* of Anūshirwān. See also D. Gutas, *Paul the Persian on the classification of the parts of Aristotle's philosophy: a milestone between Alexandria and Bagdad,* in *Isl.*, lx (1985), 231-67.

The most important sources for the late 6th and early 7th centuries are Theophylact Simocatta, *Historiae*, ed. C. de Boor, Stuttgart 1972, tr. M. and M. Whitby, *The History of Theophylact Simocatta*, Oxford 1986; and the Khūzistān chronicle, ed. and tr. I. Guidi, *Chronica minora I, CSCO, Scr. Syri* 1, 16-39, and 2, 13-32, Louvain 1955, tr. Nöldeke, *Die von Guidi herausgegebene syrische Chronik*, in *SB Wiener Ak. Wiss.*, cxxviii (1893), 1-48. For this period, see also M. Higgins, *The Persian War of the Emperor Maurice*, Washington, D.C. 1939; P. Peeters, *Les ex-voto de Khosrau Aparwez à Sergiopolis*, in *Analecta Bollandiana*, lxv (1947), 5-56; H.P. L'Orange, *Studies on the iconography of cosmic kingship in the Ancient World*, Oslo 1953; K. Czeglédy, *Bahram Čōbīn and the Persian apocalyptic literature*, in *AO*, viii (1958), 21-43; D. Frendo, *Theophylact Simocatta on the revolt of Bahram Chobin and the early career of Khusrau* II, in *Bull. of the Asia Institute*, iii (1989), 77-88.

A good account of the Sāsānid-Byzantine war and guide to contemporary sources is given by A.N. Stratos, *Byzantium in the seventh century*, tr. M. Ogilvie-Grant, i, Amsterdam 1968. For the late Sāsānid Book of Kings, see A.S. Shahbazi, *On the Xᵛadāy-nāmag*, in *Iranica varia: papers in honor of Professor Ehsan Yarshater*. The most important post-Sāsānid Middle Persian literature with information on the Sāsānid period includes J. Markwart, *A catalogue of the provincial capitals of Ērānshahr*, Rome 1931; D.M. Madan, *The complete text of the Pahlavi Dinkart* (DKM), Bombay 1911; B.T. Anklesaria, *Zand-Akasih, Iranian or Greater Bundahišn*, Bombay 1956. Much historical and legendary material on the Sāsānids survived translated into Arabic and Persian, but this literature must be used critically. The most informative works include the anonymous *Nihāyat al-arab fī akhbār al-Furs wa 'l-ᶜArab*, mss. Cambridge Qq225, Cairo *ta'rikh* 4505, summarised by E.G. Browne in *Some account of the Arabic work entitled "Nihâyatu 'l-irab fi akhbár 'l-Furs wa 'l-ᶜArab," particularly of that part which treats of the Persian Empire*, in *JRAS* (1900), 195-259; Thaᶜālibī, *Ghurar akhbār mulūk al-Furs wa-siyaruhum*, ed. and tr. H. Zotenberg, *Histoire des rois des Perses*, Paris 1900; *Ps.*-Djāhiz, *K. al-Tādj fī akhlāk al-mulūk*, Cairo 1322/1914, tr. Ch. Pellat, *Le livre de la couronne*, Paris 1954; Dīnawarī, *K. al-Akhbār al-ṭiwāl*, Leiden 1912; Yaᶜkūbī, *Ta'rīkh*, Leiden 1883; Ṭabarī, Sāsānid section tr. Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, Leiden 1879; Iṣfahānī, *Ta'rīkh sinī mulūk al-arḍ wa 'l-anbiyā'*, Beirut 1961; Masᶜūdī, *Murūdj*; Firdawsī, *Shāh-nāma*, Moscow 1963-71; the anonymous *Chronicle of Siᶜirt*, in *PO*, iv/3, 219-313, ii, 241-334, vii/2, 99-203, xiii/4, 437-639. The late Sāsānid period is also covered in Greek by Theophanes, *Chronographia*, ed. C. de Boor, Leipzig 1883-5, tr. H. Turtledove, *The Chronicle of Theophanes*, Philadelphia 1982; and in Syriac by Michael the Syrian, ed. and tr. Chabot, *Chronique de Michel le Syrien*, Paris 1899-1910, repr. Brussels 1963, both of which are based on earlier sources. On the Muslim conquest of Persia, see Balādhurī, tr. P.K. Hitti, *The origins of the Islamic state*, New York 1916, repr. Beirut 1966. For additional bibliography, see M. Morony, *ᶜArab. ii. Arab conquest of Iran*, in *EIr*, ii (1987), 203-10.

(M. MORONY)

SASARĀM [see SAHSARĀM].

SATALIA [see ANTALYA].

SĀTGĀ'ON, Saptagrāma in Sanskrit, a famous medieval port city and administrative centre in southwestern Bengal. Located at the junction of the rivers Bhagirathi and Saraswati and adjacent to both Triveni—a holy place to the Hindus—and Čhōṭa Pāndu'ā [see PANḌU'Ā], the city existed long before its conquest by a famous Muslim army commander Ẓafar Khān Ghāzī during the reign of Sultan Kaykāwūs Shāh (689-700/1290-1301). A thriving port city and commercial place during the Sultanate period, Sātgā'on also became an important Muslim cultural and educational centre where large number of mosques and *madrasas* (such as the Madrasa Dār al-Khayrāt dated 713/1313) were built. Epigraphic sources provide us with a few names of its celebrated governors such as Tarbiyat Khān in 861/1457, Malik Bārbak Shāh (later Sultan Bārbak Shāh) in 860/1455 and Iḳrār Khān in 860/1455.

Among its Muslim architectural remains is a mosque from the reign of Sultan Nuṣrat Shāh dated

936/1529 built by a saint Sayyid D̲j̲amāl al-Dīn Ḥusayn b. Sayyid Fak̲h̲r al-Dīn, an immigrant from the Caspian coast town of Āmul (see Shamsuddin Ahmad, *Inscriptions of Bengal*, v, Rajshahi 1960, 24-7, 28-9, 56-7, 68-70). Sātgāʾon was an important mint town since the beginning of 8th/14th century. The earliest coin discovered so far is dated 729/1328, while the latest is 957/1550.

The first European contacts with Sātgāʾon date from the 1530s when Portuguese ships started using its port. Unfortunately, due to the violence often practised by the Portuguese in the area, the population of this grand city—once called Porto Piqueño or the little Heaven by the early Europeans—started dwindling. The final ruin of Sātgāʾon seems to have been brought about by the silting of the river Saraswati, as the port almost lost its navigability towards the end of the 10th/16th century.

Bibliography: Rakhal Das Bandyopādhyāya, *Saptagrāma or Sātgānw*, in *JASB*, v/7 (July 1990), 245-62; D.G. Crawford, *Satgaon and Tribeni*, in *Bengal Past & Present*, iii (Jan.-April 1909), 18-26.

(Muhammad Yusuf Siddiq)

SAṬĪḤ b. RABĪʿA, a legendary diviner (*kāhin*) of pre-Islamic Arabia, whom tradition connects with the beginnings of Islam; in reality, we are dealing here with a quite mythical personage like the other *kāhin* in whose company he appears in most stories, S̲h̲iḳḳ al-Ṣaʿbī, who is simply the humanisation of a demoniacal monster in appearance like a man cut in two (*s̲h̲iḳḳ al-insān*: cf. van Vloten, in *WZKM*, vii [1893], 180-1, and s̲h̲iḳḳ). Saṭīḥ, whose name means "flattened on the ground and unable to rise on account of the weakness of his limbs" (*Lisān al-ʿArab*[1], iii, 312), is described as a monster without bones or muscles; he had no head but a human face in the centre of his chest; he lay on the ground, on a bed of leaves and palm branches, and when he had to change his position "they rolled him up like a carpet"; only when he was irritated or inspired did he inflate himself and stand up. His close resemblance to S̲h̲iḳḳ is accentuated by legend which makes them both be born without the intervention of a father in the night before the death of the *kāhina* Ṭurayfa (the wife of ʿAmr Muzayḳiyāʾ, ancestor of the tribe of this name, who is said to have foretold the catastrophe of the breaking of the dam of Maʾrib in the Yemen). She is said before dying to have made the two newborn monsters come to her and, after spitting in their months (the classic method of transmitting magic power), declared them her successors in the art of *kihāna*.

In spite of these characteristically mythical features, Arab genealogical tradition has not refused to give Saṭīḥ a place in its system, but gives him a name and a paternity (Rabīʿ b. Rabīʿa b. Masʿūd b. Māzin b. D̲h̲iʾb), which connect him with the G̲h̲assānid branch of the tribe of Azd (just as it connects S̲h̲iḳḳ with the Banū Ṣaʿb, a branch of the Banū Bad̲j̲īla) and more precisely with the Banū D̲h̲iʾb (Ibn Durayd, *Is̲h̲tiḳāḳ*, 286; Wüstenfeld, *Genealog. Tabellen*, 11, 16; according to others, the Banū D̲h̲iʾb belonged to the ʿAbd al-Ḳays, a tribe belonging to the Rabīʿa group); there even seems to have been in historic times an Azd clan claiming descent from Saṭīḥ (Abū Ḥātim al-Sid̲j̲istānī, *Kitāb al-Muʿammarīn*, 3, in Goldziher, *Abhandl. zur arab. Philologie*, Leiden 1896-9, ii).

Among the legends associated with the name of Saṭīḥ some are connected with the pre-history of the Arabs and represent Saṭīḥ as acting as a diviner and judge (*ḥakam*) without any regard for history or chronology, being totally fictitious; sometimes we find him dividing among the sons of Nizār (Muḍar, Rabīʿa, Iyād and Anmār) their father's estate (*ʿIḳd*, ii, 46, 4th ed., ii, 39); sometimes we find him consulted with S̲h̲iḳḳ by al-Ẓarib al-ʿAdwānī (Wüstenfeld, *Gen. Tabellen*, D, 13) regarding the real position of Ḳasī, the ancestor of the T̲h̲aḳīf, to whom al-Ẓarib had been forced to promise his daughter in marriage (*Ag̲h̲ānī*,[1] ii, 75). In al-Yaʿḳūbī (*Taʾrīk̲h̲*, i, 288-90), it is he who decides the difference that arose between ʿAbd al-Muṭṭalib, the Prophet's grandfather, and the two Ḳaysī tribes al-Kilāb and al-Ribāb, regarding the ownership of the well of D̲h̲u 'l-Harm discovered by the former in the vicinity of al-Ṭāʾif; but the parallel versions of the same story either do not mention the name of the arbitrator or give him that of another *kāhin*, Salama b. Abī Ḥayya al-Ḳuḍāʿī (al-Maydānī, *Amt̲h̲āl*, ed. 1284, i, 36 = ed. 1310, i, 30; Yāḳūt, iv, 629; *LʿA*[1], xiii, 283).

Two other legends, on the other hand, have a completely Islamic stamp; according to the first, given by Ibn Isḥāḳ, who does not give his sources, Saṭīḥ consulted—as always, with S̲h̲iḳḳ—by the Lak̲h̲mid chief Rabīʿa b. Naṣr regarding a dream which had frightened him, reveals to him that South Arabia will be invaded by the Abyssinians and that after the expulsion of the latter and the brief dominion of the Persians it will be conquered by a Prophet (Muḥammad); as a result of the oracle, Rabīʿa b. Naṣr sends his son ʿAmr at the head of the tribe to the king of Persia who settles them at al-Ḥīra; this is the "South Arabian" version of the foundation of the Lak̲h̲mid dynasty (cf. G. Rothstein, *Die Dynastie der Laḫmiden in al-Ḥīra*, Berlin 1899, 39).

The second and most widely disseminated legend goes back to a certain Hāniʾ al-Mak̲h̲zūmī, who is said to have lived to the age of 150 years and about whom Muslim historiographical tradition knows nothing (see Ibn Ḥad̲j̲ar, *Iṣāba*, vi, 279, no. 8,929). It forms part of the cycle of the *aʿlām al-nubuwwa*, that is, of the miraculous signs which confirm the truth of the prophetic mission of Muḥammad. In the night when the latter was born, remarkable phenomena occurred throughout the kingdom of Persia. The king (Kisrā Anūs̲h̲irwān), not being able to get an explanation from his magicians, asked the king of al-Ḥīra, al-Nuʿmān b. al-Mund̲h̲ir (an anachronism!), to send him someone who could explain it. Al-Nuʿmān sent ʿAbd al-Masīḥ b. Buḳayla al-G̲h̲assānī (on whom see al-Sid̲j̲istānī, *Kitāb al-Muʿammarīn*, 38; Caetani, *Annali dell' Islām*, ii, 935, 12 A.H., § 165, iv, 657, 21 A.H., § 328), who, not being able to explain these marvels himself, went to Saṭīḥ, his maternal uncle, who lived in the desert. He found him at the point of death, and his appeal was unanswered; only after his nephew had addressed him in verse, did the *kāhin* predict to him the coming fall of the Persian Empire and its conquest by the Arabs, etc. Having delivered this oracle, his uncle Saṭīḥ died.

Saṭīḥ claimed to receive his knowledge of the future from a familiar spirit (*raʾī*, see kāhin), who had overheard the conversation of God with Moses on Mount Sinai and had revealed part of it to him. Here we see the influence of the Ḳurʾānic passage (LXXII, 1) about the d̲j̲inn who overhear God's utterances.

The calculations of the Arab historians on the age reached by Saṭīḥ are naturally completely fanciful; those of them who place his birth at the time of the bursting of the dam at Mārib and his death at Muḥammad's birth, give him a life of 600 years. It should be observed that Abū Ḥātim al-Sid̲j̲istānī (see above), whose version is markedly different from the others (he does not speak of his monstrosity, puts his home in al-Baḥrayn, etc.), makes him die in the reign

of the Ḥimyaritic king Dhū Nuwās and therefore does not know of his prophecy to Kisrā Anūshirwān.

(G. Levi Della Vida-[T. Fahd])

SATPANTHĪS, adherents of a group in India that broke away from the main Nizārī Ismāʿīlī *daʿwa* in the Subcontinent in the 10th/16th century. Also called Mōmnas or Imām Shāhīs, these followers of the *Satpanth* (the true way) gave their allegiance to Muḥammad Shāh, the son of Imām Shāh, a Nizārī Ismāʿīlī *dāʿī* and son of one of the major *pīrs* of the tradition, Ḥasan Kabīr al-Dīn. They continue to preserve their own version of the *ginān*s, literary expressions of devotion and religious teaching common to the *daʿwa* tradition in India, and do not acknowledge the Imāms of the Nizārī line. Their main centres are at Pirana in Gudjārāt and Burhānpūr [*q.v.*] in Khandesh.

Khakee, *The Dasa Avatara of the Satpanthī Ismāʿīlīs and Imām Shāhīs of Indo-Pakistan*, diss., Harvard University 1972, unpubl.; Azim Nanji, *The Nizārī Ismāʿīlī tradition in the Indo-Pakistan Subcontinent*, New York 1978. (Azim Nanji)

SATYA PĪR, literally "the true saint", the name of a cult which flourished in Bengal and claimed both Hindu and Muslim adherents. Islam's entry into Bengal gave birth to some important socio-religious trends in Hindu society which expressed themselves in cults like the Vaishnavite, the Dharma and the Satya Pīr ones. According to the *Shekh Subhodaya*, many local *sadhus*, who were mostly Tantric Gurus, embraced Islam and adopted devotion to *pīrs*, to whom they attributed supernatural powers. Cults like Satya Pīr, Panč Pīr, Manik Pīr, Ghora Pīr and Madari Pīr centred round *pīrs* and attracted both Hindus and Muslims to their fold.

Tradition ascribes the origin of the Satya Pīr cult to a Brahmin youth of Mymensingh, Kanka by name, who had accepted a Muslim saint as his spiritual preceptor. At the behest of his *pīr* he composed during the reign of the Bengal Sultan ʿAlāʾ al-Dīn Ḥusayn Shāh in *ca.* 907/1502 an epic poem *Vidyasundara kahini* to pronounce the spiritual glories of Satya Pīr. Originating in northern and eastern Bengal, the Satya Pīr cult became popular all over the province. The first Bengali poet to compose verses on Satya Pīr was Shaykh Fayḍ Allāh, whose *Satya Pīr kavya* was composed at some time between 952-83/1545-75. Since Fayḍ Allāh was an expert in music and had written *Ragmala*, the first book on music in Bengali literature, the cult of Satya Pīr spread through music and song also. Later on, considerable literature appeared on Satya Pīr in Bengali. Vidyapati, a Hindu poet of the 18th century, composed his poem *Satya Pīr ančali*, which further popularised the cult in Bengal. In the later part of the 19th century, the cult lost its earlier popularity due to the opposition of Muslim reformist movements. The view that Sultan Ḥusayn Shāh (898-25/1493-1519) was the originator of the Satya Pīr cult lacks contemporary evidence, though the possibility of the sultan encouraging the cult, from mixed motives of superstition and policy, cannot be ruled out.

The followers of the Satya Pīr cult make special offerings on the day of the full moon. They place a wooden plank which they consider to be the seat of the Satya Pīr, and put food and comestibles on it and distribute them as tokens of blessing. The Satya Pīr *Bhita* (dwelling) stands on the site of the famous Buddhist monastery at Paharpur in Rādjshāhī district. Its custodian still enjoys rent-free lands, though, barring a few areas in Bengal, the Satya Pīr cult is non-existent now.

SAʾUDJ-BULĀḲ [see sāwdj-bulāḳ].

SAUL [see ṭālūt].

SĀWA (older form Sāwadj, cf. the *nisba* Sāwadjī, found at the side of Sāwī), a town of northern Persia some 125 km/80 miles to the southwest of Tehran (lat. 35° 00′ N., long. 50° 22′ E., altitude 960 m/3,149 feet). It was formerly on the Ḳazwīn-Ḳumm road used in mediaeval times but now replaced by the modern paved roads-system centred on Tehran, and on the main caravan and pilgrimage route from southwestern Persia and lower ʿIrāḳ to Rayy and Khurāsān, but this too has been replaced by the modern highway from Khūzistān to Arāk and Ḳumm and then to Tehran, bypassing Sāwa, as does also the railway. The town has thus lost importance in modern times and the agriculture of the surrounding district has been affected by decreasing water supplies and the encroachment of salt desert. Sāwa itself is situated in the northwestern corner of a plain watered by the Ḳara Čay (the mediaeval Gāwmāhā river) which rises in the mountains between Hamadhān and Sāwa and peters out eastwards into the Great Desert.

1. History.

Sāwa is not known before the Muslim period. W. Tomaschek (*Zur historische Topographie von Persien*, in *SB Ak Wien*, cii [1883], 154-7) connects its name with the Avestan word *sava*, Pahlavī *savaka*, "advantage, utility" (?). The Persian dictionaries gives "pieces of gold" for *sāwa*. According to Tomaschek, Sāwa corresponds to the Sevavicina or Sevakina of the *Tabulae Peutingerianae*.

The mediaeval geographers placed Sāwa within the province of Djibāl, but they state that it was attached administratively both to Hamadhān and to Rayy at various times. It was often linked with the town of Āba or Āwa [*q.v.*] to its south on the Gāwmāhā river. The geographers describe Sāwa as prosperous because of the transit traffic, its camels and camel-drivers

being famous, and as having a Friday mosque, baths and fortifications. The people were strongly Sunnī, hence often at odds with their neighbours in Āwa who were fervent Shīʿīs (see *Ḥudūd al-ʿālam*, tr. Minorsky, 133, § 31.22; Le Strange, *Lands of the Eastern Caliphate*, 211-13, 228-9; Schwarz, *Iran im Mittelalter*, 539-42). Ibn al-Athīr, ed. Beirut, viii, 512, mentions an attack of Kurds on the Pilgrimage caravan near Sawa in 344/955-6. In *ca.* 420/1029 the lord of Sāwa is recored as one Kāmrū al-Daylamī, who allied with the incoming bands of Ghuzz [*q.v.*] to besiege Rayy (*ibid.*, ix, 382). It suffered badly from sacking by Čingiz Khān's Mongols in 617/1220, who burnt down a library there of what Yāḳūt calls unparalleled richness and which also contained, according to al-Ḳazwīnī, scientific and astronomical instruments. By the next century, however, it had revived, and Ḥamd Allāh Mustawfī describes it as within a fertile agricultural district and as flourishing. Its walls were 8,200 ells in circumference, having been rebuilt by a local magnate, Khʷādja Ẓahīr al-Dīn ʿAlī b. Malik Sharaf al-Dīn Sāwadjī. The people of Sāwa were still Sunnīs of the Shāfiʿī *madhhab*, but the surrounding villages had become largely Shīʿī; the whole district of Sāwa produced revenue of 25,000 dīnārs (Yāḳūt, *Buldān*, ed. Beirut, iii, 179-80; al-Ḳazwīnī, *Āthār al-bilād*, ed. Wüstenfeld, 258; Mustawfī, *Nuzha*, 62-3, tr. Le Strange, 67-8).

Among the European travellers, Marco Polo mentions Sāwa ("Saba") as the town from which the three Magi kings set out for Bethlehem and where they are buried in a square sepulchre. This Persian-Christian legend must be based on a local popular interpretation of texts like "Reges Arabum et Saba dona adducent" (Psalm lxxii. 10). According to another story given by Marco Polo, the three kings are buried respectively at Sāwa, Āwa and Ḳalʿa-yi Ātashparastān, which Yule located between Sāwa and Abhar, while Tomaschek identified it with Diz-i Gabrān (one stage beyond Ḳum on the road from Kāshān).

Sāwa is mentioned by Giosafa Barbaro (1474), Figueroa (1618), etc. Chardin lamented its sterile soil and heat. In 1849 the English consul K.E. Abbot counted 300-400 houses in Sāwa with 1,000 inhabitants; he says that the soil is excellent everywhere that it is not mixed with the *kawīr*, but that the salt desert is met with at only 6 km/9 miles from the town.

At the present day the population of the district of Sāwa is wholly Shīʿī. It consists of Persians and Turks. The latter belong to the local confederation of Shāh-Sewen, which includes the remnants of the tribe of Khaladj [*q.v.*]. The district of Sāwa is frequently called Khaladjistān. There are Shāhsewen to the north-east and to the south of Sāwa. The Khaladj live more especially to the north of the Ḳum-Sulṭānābād road (Rāhgird, Tadj-Khātūn, Djahrūd, Tafrish). In several of their villages (Kundurūd, Mawdjān, Sift, Fowdjird, Kardedjan), various dialects of Turkish are spoken, making up the distinct Turkish language known as Khaladj, extensively studied by Minorsky and Doerfer; see for this, KHALADJ. 2. Language. In recent times Sāwa has formed part of various administrative combinations. Sometimes it was governed along with the districts to the south (Maḥallāt, Kazzāz), sometimes with Zarand (northeast of Sāwa) and Kharraḳān (*vulgo*: Ḳaraghān). This last mountainous district formed an enclave between the provinces of Ḳazwīn and Hamadhān. It consisted of three *bulūks*: Afshār-i Bakishlu, Afshār-i Ḳutilu and Ḳaragöz; the chief town of Kharraḳān is situated in the latter at the foot of the pass. It is called Āwa, and must not be confused with the place of the same name in the Sāwa district. About 1890 Sāwa was governed by an Austrian officer in the Persian service, von Täufenstein. At the beginning of the 20th century, it formed a kind of fief of the brigade of Persian Cossacks at Tehran. One of the higher officers of this military force acted as governor of Sāwa and controlled the Turkish natives who supplied the principal contingent to the brigade.

The modern town of Sāwa comes within the central province (*ustān*) of Persia and is the chef-lieu of the *shahrastān* of the same name. The ruins of the mediaeval town and its citadel can still be seen. In *ca.* 1950 it had a population of *ca.* 18,000 (Razmārā, *Farhang-i djughrāfiyā-yi Īrān-zamīn*, i, 109), which had risen by 1991 to 93,920 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division).

Among famous men born in Sāwa, Yāḳūt mentions Abū Ṭāhir ʿAbd al-Raḥmān b. Aḥmad, one of the principal Shāfiʿī imāms (d. 484/1091). A colleague of the great vizier of the Mongols, Rashīd al-Dīn [*q.v.*], was Saʿd al-Dīn Sāwadjī, executed in 711/1312 after his fall from power. Mustawfī mentions the tomb of Shaykh ʿUthmān Sāwadjī near the town. On the poet Salmān-i Sāwadjī (700-78/1300-76), see E.G. Browne, *LHP*, iii, 260-71 etc., and the article s.v.

2. Antiquities and architecture.

These include: (i) The barrage on the Ḳara-čay (about 12 miles south-south-west of the town), said to owe its origin to Shams al-Dīn Djuwaynī [*q.v.*], vizier of several Il-Khānid rulers of the 7th/13th century (see Mustawfī, *Nuzha*, 221). The barrage is said to have been restored under the Ṣafawids; it is known as *band-i Shāh ʿAbbās*. It occupies the passage between two hills and is about 65 feet high, 100 long and 45 thick. Beside it on the left bank, the road rises in a kind of spiral; caravans were thus able to ascend the dam, which was used as a bridge, and descend on the west side by a gradual slope on the right bank.

(ii) The fortress of Ḳīz-ḳalʿa on a rock in the centre of an amphitheatre of hills not far from the dam.

(iii) The mosques and minarets of the town itself. The Friday Mosque on the south side of the town, rebuilt in the Ṣafawid period by Shāh Ṭahmāsp I, may well occupy the site, so Minorsky thought, of the Friday Mosque mentioned by al-Muḳaddasī, 392 n. *a* ("distant from the market"); it incorporates an ancient structure, and Būyid period inscriptions (so far unpublished) have recently been uncovered there. Adjacent to it, but free standing, is a brick minaret, first described by Dieulafoy, with an inscription dated 504/1110-11 in the names of the Saldjūḳ sultan Muḥammad b. Malik Shāh and the ʿAbbāsid caliph al-Mustaẓhir [*q.vv.*]. In the town centre is the Masdjid-i Maydān with an early Ṣafawid inscription and with its minaret naming as builder a local Daylamī *amīr*, Abū Dulaf Surkhāb b. ʿImād al-Dawla, and the date 503/1109-10.

(V. Minorsky-[C.E. Bosworth])

3. The town's role in Muslim legend. Sāwa plays an important part in the legends of Muḥammad. According to a frequently quoted tradition (for details see A. Sprenger, *Das Leben und die Lehre des Moḥammad*, i, 134 ff., and Th. Nöldeke, *Geschichte der Perser und Araber*, 253 ff.), a lake (*buḥayra*) in the neighbourhood of Sāwa sank into the ground in the night in which the Prophet was born. The site was still pointed out to al-Ḳazwīnī in the 7th/13th century. As the tradition quoted shows a rather accurate knowledge of Iranian matters, we may safely seek an allusion to a definite Iranian conception in this single feature of the story. Now in Zoroastrian eschatology the lake Kansava (*Kasaoya-*) plays an important part; in the later Avesta it is located in Eastern Iran and is said to correspond to Lake Hāmūn in Sidjistān. In it is preserved the seed of Zarathushtra, from which in the end will arise the saviour Saoshyant. When we find the legend of the drying-up of a lake in Iran connected with the birth of Muḥammad, we may interpret it as an allusion to this mythical lake. The legend symbolises the destruction of the hope of a Zoroastrian saviour, just as the earthquake in the royal palace at Ctesiphon recorded in the same tradition symbolises the end of the Iranian empire and the extinction of the sacred fire the end of Zoroastrian culture.

(H.H. Schaeder)

SAWĀD, a name used in early Islamic times for ʿIrāḳ [*q.v.*]. While the name ʿIrāḳ has been proved to be a Pahlavi loanword (from *Ērag*, "low land, south land", occurring in the Turfan fragments, with assimilation to the semantically connected root *ʿrḳ*; cf. A. Siddiqi, *Studien über die persischen Fremdwörter im klass. Arab.*, Göttingen 1919, 69; H.H. Schaeder, in *Isl.*, xiv, 8-9; J.J. Hess, in *ZS*, ii, 219-23) *sawād* "black land" is the oldest Arabic name for the alluvial land on the Euphrates and Tigris given on account of the contrast to the eye between its greenness and the dazzling white Arabian desert (Yāḳūt, *Muʿdjam*, iii, 174, 14 sqq.). The name has undergone a threefold development of application. (1) It is identified with the political notion of ʿIrāḳ and thus corresponds to the Sāsānid province of Sūristān (*Dil-i Ērānshahr*). With this meaning, the historians of the Arab conquests use the name Sawād for ʿIrāḳ (see e.g. al-Balādhurī, *Futūḥ*, 241, 1; because the Muhādjirūn acquired such extensive properties there, it became known as "the Garden of Ḳuraysh"), and, especially, the compilers of monographs on taxation or political handbooks (cf. Abū Yūsuf, Yaḥyā b. Ādam, Ḳudāma and al-Māwardī; also Ibn Khaldūn). The reason for this is that in the cadastral and revenue regulations of ʿUmar I, the name Sawād was used officially. (2) It is used as the name of the cultivated area within a district, e.g. *Sawād al-ʿIrāḳ*, *Sawād Khūzistān*, *Sawād al-Urdunn*. (3) Before the name of a town, it means the systematically irrigated and intensively cultivated fields in its vicinity, e.g. the *Sawād* of al-Baṣra, Kūfa, Wāsiṭ, Baghdād, Tustar, Bukhārā, etc.

ṢAWĀFĪ [see ṢAFĪ].

SAWĀKIN, the Arabic form, in English Suakin; Beḍāwyet: u-Sok, an island and port on the west coast of the Red Sea, at 19° 07′ N. and 37° 20′ E. in the present Republic of the Sudan.

A narrow inlet from the sea, about 3 km/2 miles long, widens on the inside to form a natural harbour 11-15 m/35-50 feet deep which can easily accommodate about 20 traditional coastal vessels; growing coral reefs make it dangerous to navigate at night. In this harbour, a coral island (Djazīrat Sawākin), 360-450 m /1,200-1,500 feet in diagonal, rises *ca.* 2 m/6½ feet above high water mark. Another two small and one larger island (Djazīrat al-Shaykh ʿAbd Allāh al-Djabartī, marked on British maps variously as Condenser-, Hospital-, or Quarantine Island) are connected to the mainland today by silt and salt-pans and no longer recognised as islands. Djazīrat Sawākin is the site of the old town, a typical Arab-Islamic Indian Ocean merchant settlement. Its houses, built mainly of coral, are up to four storeys high; most have tumbled down today. A causeway built in 1878 links the island to the mainland (al-Ḳayf; Beḍāwyet: u-Gēf). There, the dwellings are mostly Bedja [*q.v.*] huts built of reed, palm mats, driftwood, and more recently, scrap metal or sackcloth. Much of al-Ḳayf is surrounded by the remnants of a fortified wall erected 1887-8. Outside the wall a number of suburbs have grown, in particular around the water storage basin al-Fūla and the salty wells at al-Shāṭa. The mainland settlement has been more populous than the island town since at least the early 19th century; in 1814, the number of its inhabitants was estimated at 5,000, compared to 3,000 on the island. The population grew only slightly during the century and fell to *ca.* 5,000 during the Mahdist wars. After a brief recovery (1904: 10,500) it dwindled to around 4,000 during 1937-67, but rose again in the 1970s. The local census of 1979 gave a figure of 13,714 inhabitants (all on the mainland). Sudanese Bedja and refugees (often from Eritrea) each constituted about 40%.

Popular etymology has inspired several legends concerning the origin of Sawākin. The best-known story tells of seven virgin slave girls sent from Ethiopia to a northern king. Upon arrival they were found to be pregnant and explained that during an overnight stay on the island of Sawākin they had been visited by "seven *djinn*" (*sabʿa djinn*), and that "the *Djinn* had done it" (*sawwā djinn* [sic]), for it was "the *djinn*'s dwelling" (*sakan al-djinn*). The king sent them back to the island where their children were born, and from them descended the inhabitants of "Sawādjin" > Sawākin. The lexicographer al-Fīrūzābādī lists the island in his *Ḳāmūs* s.v. *s-k-n*. Roper argued that the name is derived from *sūḳ* "market" (Beḍāwyet *u-suk*, construct form *i-sūkib*, which may be heard as *i-sookim*; *Correspondence*, in *Sudan Notes and Records*, xxii [1939], 293-4).

The port, one of the few sheltered anchorages with a fairly reliable supply of water on an otherwise inhospitable coast, has probably been used since Antiquity. Attempts to identify it with place names collected by Greek and Roman geographers from the heterogeneous information brought back by merchants have, however, remained inconclusive. Most likely candidates are Λιμὴν Εὐαγγελίων "port of good tidings", 'Ασπίς "round shield", and Σαχο λιμὴν (all from Ptolemy; the latter is found on Tabula XV, *Codex Urbinas Graecus* 82, fols. 87 (86)^v-88 (87)^r), and Sace/Sacae/Suche of Pliny. The name Sawākin is first mentioned in the 4th/10th century as a minor port in the country of the Bedja with trade connections to Djudda and Nubia (al-Hamdānī, 41, 133; Ibn Ḥawḳal, 55; Yāḳūt, iii, 182; Ibn Sulaym al-Uswānī, *Akhbār al-Nūba*, in al-Maḳrīzī, *K. al-Mawāʿiz*, ed. G. Wiet, Cairo 1922, iii, 257, 272). The export of grain and animal products from its hinterland to the Ḥidjāz was probably the earliest and most stable source of Sawākin's income, but its natural harbour also gave it a certain significance as an anchorage on the trade route between Egypt and the Yemen, even while ʿAydhāb [*q.v.*] was still the largest port on the Sudanese coast. This significance increased in the 6th/12th century after the decline of Bāḍiʿ, and Sawākin subsequently became involved in the struggles for control of the Red Sea trade between Dahlak [*q.v.*], Egypt, and the Meccan Sharīfs. The Fāṭimids established a special fleet to protect the ships of the Kārimī [*q.v.*] merchants threatened by pirates while travelling between ʿAydhāb and Sawākin. On occasion, Sawākin and Dahlak went to war over control of the islands lying between them. Sawākin's local rulers (Muslims since at least the 7th/13th century) collected customs from the ships calling at the port; they had, however, to acknowledge the suzerainty of the rulers of Egypt and to pay them tribute. In case of insubordination they faced punitive expeditions.

By the early 8th/14th century the Sharīfs of Mecca [*q.v.*] gained control over Sawākin (Ibn Baṭṭūṭa, ii, 161-2, tr. Gibb, ii, 362-3), perhaps driven by a desire to secure a trade route that reduced their dependence on grain imports from Egypt. They were only able to establish a foothold on the African coast by cooperating with the Bedja, whose rulers (the Ḥadārib) maintained direct control of the more important port of ʿAydhāb. Both sides had to acknowledge a measure of Egyptian sovereignty.

Following the decline of ʿAydhāb, Sawākin became the largest northeast African port north of Maṣawwaʿ [*q.v.*], serving as an entrepôt for the upper Nile basin and as the major point of embarkation for pilgrims from the Sudanic belt. Through the commercial networks of the Banyā (Hindu and Jain merchants from India) Sawākin partook in the lucrative (but fluctuating) Indian Ocean trade. Towards the end of the 8th/14th century the Ḥadārib moved their capital to Sawākin. Egyptian pressure continued; Sawākin was sacked in 843/1439-40 and had to submit to the authority of the Mamlūks (who used it as a place of banishment) until the end of their rule.

The 10th/16th century saw two major changes in the geopolitical situation. The Ottomans became the leading military power in the Red Sea after their conquest of Egypt and the defeat of the Portuguese, and they succeeded the Mamlūks as overlords of Sawākin. Their first landing there occurred around 1520, and in 962-4/1555-7 Özdemir Pasha [*q.v.*] established the Eyālet of Ḥabesh [*q.v.*], with Sawākin as its administrative headquarters. The residence of the *beylerbeyi* was transferred several times between Sawākin, Maṣawwaʿ, and Djudda until 1113/1701, when the province was finally united with the *sandjāḳ* of Djudda and the post of *shaykh al-Ḥaram* of Mecca, with Djudda as seat of the administration. The *ḳāʾimmaḳām* of the *sandjāḳ* of Sawākin was appointed by way of annual tax-farming.

Secondly, the Fundj sultanate of Sinnār [*q.vv.*], the new political centre on the Nile, tried to gain control of the port, which led to fighting with the Ottomans. Neither of these outside forces was able to maintain complete authority over Sawākin, however; they had to come to terms with the Bedja *amīr* who resided on the Ḳayf (the families monopolising this office became known as "Artēga"). In theory, the *amīr* shared the revenues of the port (customs and a poll-tax for pilgrims) with the Ottomans; in practice, he only paid if he felt they were strong enough to pose a threat.

The diversion of the trade route from India to Europe around Africa caused a depression of Sawākin's international trade in the 17th-18th centuries. But its function as a trans-shipment centre for African trade with the Arabian peninsula secured it continued importance, and when Ottoman power in the Red Sea declined at the end of the 18th century, the Sharīf of Mecca assumed control of Sawākin. During the first decade of the 19th century, the power struggles between the Sharīf, the Wahhābīs, the Ottomans and the Egyptians gave greater independence to the local leaders in Sawākin. But when Muḥammad ʿAlī [*q.v.*] defeated the Wahhābīs in 1813, Sawākin became subject to Egyptian domination (though not sovereignty) even before the conquest of the Sudan. In 1830 the Ottoman Sulṭān officially recognised this situation, but when Egypt had to evacuate most of her acquisitions in 1841, the Red Sea territories were nominally returned to the Ottomans. They were unable to exert effective control, however, leaving Sawākin and Maṣawwaʿ practically independent. Late in 1846, the Ottomans leased both ports to Muḥammad ʿAlī for the duration of his lifetime against payment of an annual tribute of 5,000 purses (the amount suggests that Egypt had strategic rather than economic interests). In 1849, they reverted to the Ottomans, though an actual Ottoman presence was not re-established until 1851. Egypt continued her efforts to gain control of Sawākin, which many regarded as an easier outlet for the increasing Sudan trade than the Nile route. In spite of protests by local traders, who feared Egyptian competition, Sawākin and Maṣawwaʿ were transferred to Egyptian administration in Dhu 'l-Ḥidjdja 1283/May 1865 (for details, see G. Douin, *Histoire du règne du Khédive Ismaïl*, iii/1, Cairo 1936, 268-77, 305-6).

Sawākin's importance grew with the increase in Red Sea trade brought about by the introduction of steam shipping (since 1829), the colonial exploitation of the interior as a source of gum, ivory, and slaves, and the marketing of European industrial goods. After the opening of the Suez Canal (1869), European merchants were able to outdo their Indian and Arab competitors; the latter were increasingly left with smuggling and the slave trade (formally illegal since 1855). Nevertheless, the export of ghee and grain to the Ḥidjāz remained the largest and most stable part of Sawākin's trade.

Political stability and the economic opportunities attracted a cosmopolitan population, and the building boom of the 1870s effaced much of the earlier architecture. The over-ambitious modernisation projects devised by the Egyptian administrators largely failed, however, and the exaction of forced labour, heavy taxation, and increasing "foreign" control did

not help the government's popularity. A significant part of the local population left the town during the Mahdiyya [*q.v.*], and from 1884-91 Sawākin, the only Sudanese town never conquered by the Mahdists, was the chief base for British military operations in the eastern Sudan. Trade was severely disrupted, though it never stopped. The important route to Berber was reopened in 1891, and for a brief time Sawākin flourished again as an import centre for the new Condominium authorities.

Natural deficiencies made it unfit for modern shipping, however, and after 1905 it was replaced by the newly-constructed Port Sudan which, apart from having more room for expansion, gave the British greater control over maritime commerce by limiting the role of Sawākin's indigenous urban population and of the Egyptians. By 1910, the administrative and economic centre of gravity had shifted to the new port, and after most merchants transferred there (1923-5), Sawākin fell into disrepair. In the mid-1940s, over 80% of its houses had collapsed. The customs were finally closed in 1946, and Sawākin was left with only the pilgrimage traffic which was officially restricted to the old port during 1908-52 and lingered on until 1973.

The relocation of the Sudan's official dhow harbour to Sawākin in 1968-72 gave the town a new function as a centre of boatbuilding, dhow trading, and fishing. Its social composition was radically altered by the influx of drought and war refugees during the 1970s; the island town remains deserted, and Sawākin now consists of a collection of villages on the mainland. A new impetus has been given by the large container port opened in 1991 to relieve pressure on Port Sudan.

(A. Hofheinz)

SAWDA BT. **ZAMᶜA** B. ḲAYYIS B. ᶜABD SHAMS, Muḥammad's second wife, was one of the early converts to Islam. She was of the noble tribe of Ḳuraysh [*q.v.*] on her father's side, and her mother al-Shamūs bt. Ḳayyis b. ᶜAmr of the Banū ᶜAdī, was from the Medinan Anṣār [*q.v.*], supporters of the Prophet. She accompanied her first husband al-Sakrān b. ᶜAmr to Abyssiniya, along with her brother and his wife, with the second party of Muslims who emigrated there. The couple returned to Mecca before the *hidjra* [*q.v.*], and al-Sakrān, who had become a Christian in Abyssinia, died there.

Sawda's marriage to Muḥammad was arranged by Khawla bt. Ḥakīm [*q.v.*], who wished to console him for the loss of Khadīdja [*q.v.*], and took place about a month after the latter's death, in Ramaḍān 10/631. There is some disagreement among Muslim scholars whether the Prophet first married Sawda, the mature widow, or the virgin bride ᶜĀʾisha [*q.v.*]. According to one tradition, he chose Sawda because of her devotion to his mission rather than ᶜĀʾisha, daughter of his closest friend. In any case, Sawda lived alone with Muḥammad for some time since ᶜĀʾisha was too young for her marriage to be consummated and remained with her parents.

In the first year of the *hidjra*, Sawda and Muḥammad's daughters were brought to join him in Medina; her dwelling was among the first to be built adjacent to the mosque area. Despite her access to the Prophet and proximity to the centre of affairs, only one or two traditions are related from or about her compared to the numerous *ḥadīth*s ascribed to ᶜĀʾisha. On two occasions when Sawda asserted herself, Muḥammad reproved her.

The most noteworthy event in Sawda's life with Muḥammad was her success in dissuading him from divorcing her, because it resulted in the revelation of sūra IV, 127: "If a woman feareth ill-treatment from her husband, or desertion ... it is no sin for them twain if they make terms of peace between themselves." Muḥammad favoured ᶜĀʾisha and (in 8/629) apparently decided to divorce Sawda, but she stopped him in the street and implored him to take her back. She offered to yield her day to ᶜĀʾisha, as "she was old, and cared not for men; her only desire was to rise on the Day of Judgement as one of his wives". The Prophet consented, and after that the verse was revealed to him.

Sawda gained a reputation for being heavy and ungainly because during a pilgrimage, Muḥammad allowed her to reach Minā for the morning prayer before the crowd's arrival, to avoid being jostled, a privilege he denied ᶜĀʾisha. Because she was an unusually tall woman, ᶜUmar recognised her from afar at night and convinced the Prophet to seclude his wives. Sawda is sometimes confused with Zaynab bt. Djaḥsh [*q.v.*] as the "longest-handed" among the Prophet's wives, i.e. the most charitable, who would be the first to join him in Heaven. She was generous

and humorous. ᶜĀʾis̲h̲a used to say: "There is no woman in whose skin I would rather be than Sawda's, except that she is somewhat envious". Sawda as well as Zaynab bt. D̲j̲aḥs̲h̲ did not take part in the last pilgrimage, implying that God and his Prophet preferred them to remain in their home.

After Muḥammad's death, Sawda received a gift of money from ᶜUmar, which she ordered to be dispersed like her share of the spoils of K̲h̲aybar. She died in Medina, in S̲h̲awwāl 54/September-October 674, during the caliphate of Muᶜāwiya, who bought her house in the Mosque precincts, together with that of Ṣafiyya, for 180,000 dirhams.

(V. Vacca-[Ruth Roded])

SAWDĀ, Mirzā Muḥammad Rafīᶜ (1125-1195/1713-1781), a highly esteemed Urdu poet, was born in Dihlī. His father came from a military family of Kābul, and he settled in Dihlī, where he became a wealthy merchant. The future poet was a spendthrift in his youth, and after his father's death he soon disposed of his inheritance by riotous living. After a spell of soldiering, he turned to a poetical career, adopting the *tak̲h̲alluṣ* of Sawdā (Ar. "melancholy, madness"), an apt name in an age when poets concentrated on *g̲h̲azal*. Perhaps it was also a pun on Persian *sawda* ("trade"), in allusion to his father's occupation (Saksena, *op. cit.*, 61). His courtly manners, due to his upbrining, enabled him to find patrons easily, and his undoubted poetic talents soon won him recognition. As was the usual custom, he concentrated largely on Persian: but the poet K̲h̲ān-i Ārzū persuaded him to change to Urdu "a momentous decision which had a far-reaching effect on his poetic career and the development of Urdu poetry" (Sadiq, 83). Saksena (*op. cit.*, 66) describes him as the "Shakespeare of Urdu"). And few will deny that he is a pioneer of Urdu poetry, and probably one of the six greatest poets of the 18th and 19th centuries.

Though he composed many *g̲h̲azal* poems—especially in his early years—he is not generally regarded as a master in the genre. Perhaps it would be more accurate to say that he does not project the accepted portrait of the *g̲h̲azal-gū* as a lover let down by a cruel beloved. Nor, at the other end of the *g̲h̲azal* spectrum, can he be regarded as a mystic poet. He was a S̲h̲īᶜī and exceedingly proud of it. This emerges in his poetry in various forms, but it is not the key to his mastery as a poet. This lies in his command of many different genres, his virtuosity in the techniques, his positive approach to his métier and his apparent pride and joy in it.

The political situation in Dihlī made life there increasingly less congenial, and an exodus of poets gathered momentum. In 1754 Sawdā moved to Farruk̲h̲ābād: then in (?) 1771 to Fayḍābād (Fayẓābād), where the Nawāb S̲h̲ud̲j̲āᶜ al-Dawla became his patron. The succeeding Nawāb Āṣaf al-Dawla founded a new capital at Lucknow in 1774, and took the poet there with him, granting him a substantial salary for the rest of his life.

Though undoubtedly an architect of Urdu poetry, he retained many features of "Persian decadence", as later critics called it, but not, however, the passion for *īhām* (*double entendre*). His vocabulary is rich, but predominantly Persian-Arabic. He revelled in difficult rhymes and metres. His poetry is full of energy, and at time vitriolic. Turning to the forms for which he is famous, he is recognised as a—possibly the—leading *ḳaṣīda-gū* (writer of odes) [see madīḥ, madḥ. 6. in Urdu]. These include religious ones in praise of the Prophet and the S̲h̲īᶜī Imāms, and secular ones in praise of nobles and rulers including Nawāb G̲h̲azī al-Dīn K̲h̲ān on his birthday, and Nawābs S̲h̲ud̲j̲āᶜ al-Dawla and Āṣaf al-Dawla. There are also numerous poems of satire (*had̲j̲ō/had̲j̲w*), which ranged from the amusing to the vulgar, and are often exaggerated. He also composed a number of *mat̲h̲nawīs* and *mart̲h̲iyas*. His poems in *murabbaᶜa* and *muk̲h̲ammas* and various other forms should be mentioned. He is also credited with introducing into Urdu verse what is termed *tamt̲h̲īliyya s̲h̲āᶜirī* ("gnomic verse"), in which the thought expressed in the first hemistich of a verse is followed by an illustrative metaphor or simile in the second; this could be used in many verse forms.

Bibliography: Among a number of published collections of his poetry, *Kulliyyāt Sawdā* by Nawal Kis̲h̲ōr, Lucknow 1936, can be recommended. Of critical studies of the poet, K̲h̲āliḳ An-d̲j̲umān, *Mirzā Muḥammad Rafīᶜ Sawdā*, Aligarh 1966, deserves mention. A useful selection of his poetry is found in Ḳadrat ᶜAlī S̲h̲awḳ, *Ṭabaḳāt al-s̲h̲uᶜarāʾ*, ed. Nad̲h̲īr Aḥmad Fārūḳ, Lahore 1968, 119-71. Unfortunately, the earlier pages, including the biographical notes are missing from the original ms. of this section. Accounts of the poet are found in two general English sources for Urdu literature, namely Muhammad Sadiq, *A history of Urdu literature*, London 1964, 82-93, with many quotations in Urdu script, often with English translations: also Ram Babu Saksena, *A history of Urdu literature*, Aligarh 1927, 60-80, which contains no quotations.

(J.A. Haywood)

al-**SAWDĀʾ**, more precisely, al-K̲h̲ariba al-Sawdāʾ "the black ruin", the ancient Nas̲h̲s̲h̲ān, an important archaeological site in the D̲j̲awf of Yemen, 102 km/63 miles to the north-east of Ṣanᶜāʾ, still inhabited today, and adjoining the north-east of the modern settlement of al-Maṣlūb, the main centre of the Banū Nawf. It lies on the left bank of the Wādī 'l-K̲h̲ārid (locally called al-Buḥayra), and the tell dominates the surrounding plain by a dozen metres. The ancient enceinte, *ca.* 1,200 m/3,940 feet long, encloses a rectangle 330 m/1,080 feet by 280 m/920 feet. It comprises a thick massif of unfired bricks on to which abut two walls faced with stone, one very carefully constructed facing the outside, and the other less so facing the interior; of these, there remains only a few stone foundations and a pile of sun-dried bricks. As in other sites of the D̲j̲awf, the curtain wall was reinforced at regular intervals with square-plan towers; several of these are still standing in the western part, the best preserved. There were four gates, all now in a very ruinous state, which can be discerned in the middle of each of the sides. Inside the town, the main visible traces are large footings of regularly-cut stone and pillars or architraves belonging to the gateways.

At 720 m/2,360 feet to the east of the town, a fine sanctuary, dedicated to the local god ᶜAt̲h̲tar d̲h̲ū Riṣāf (*ᶜṯtr ḏ-Rṣf*) has been almost wholly preserved by

the sand which has covered it. It was partially excavated by the French Archaeological Mission in the Yemen Arab Republic in the winter of 1988-9 (Breton, 1992), and is notable for the quality of its architecture and its decoration, incised on the supports of the lintel of the entrance porch, as well as the monolithic pillars supporting the stone covering. The main figures of this décor are young women on a podium (which the people in the Djawf call "Daughters of ʿĀd", referring to the mythical tribe of that name [see ʿĀD]), ibexes in movement, ostriches, snakes interwined in pairs, bulls' heads and geometric motifs. The very ancient inscriptions carved on the pillars of the entrance porch (SW/BA/I/1-4) and carbon-5 analysis of the wood found in the mortar of the enclosing wall allow us to date the oldest parts of the temple to the 8th century B.C.

The irrigated perimeter of the wall round the tell is now hardly discernible. The traces of a tamarisk thicket (*athl*) which struck the discoverer of the site, Ḥayyim Ḥabshūsh (ed. and summary tr. Goitein, Ar. text 52/7-8; Moscati-Steindler, 1976, 86) nevertheless show that a good site for agriculture and a water supply existed there. Irrigation seems to have been practiced for many centuries, judging by the thickness of the alluvium cut through by the wadis, which exceeds a dozen metres.

The site and the temple of ʿAthtar have yielded 87 inscriptions, in the two epigraphic South Arabian languages Madhābī and Sabaean (see on these, Robin, 1992, 31 ff.; for a complete list of these, see Avanzini, 1995).

Al-Sawdāʾ is the ancient Ns²n, shown by four inscriptions at the site containing this name (al-Sawdāʾ 52 = CIH 440/4; al-Sawdāʾ 75 = RES 2902 = M 126/1; SW-BA/I/5 and 6); the vocalisation of the name was probably Nashshān, if one relies on the sole mention of this toponym in Arabic, a poem of the 12th century A.D. (Madelung, 1992, 37). This last was the capital of a small independent kingdom, equally called Nashshān, in the 8th century B.C. and at the beginning of the 7th one. Only one person with the title of king is known: Sumhuyafaʿ Yasrān, son of Lubaʾān, king of Nashshān (*S¹mhyfʿ Ys¹rn bn Lbʾn mlk Ns²n*, in SW/BA/I/5 and 6; see also RES 3945/14-17 and al-Sawdāʾ 4, where the same person is mentioned without a title). The kingdom's territory included the town of Nashshān, that of Nashkᵘᵐ (*Ns²kᵐ*, modern al-Bayḍāʾ) and a district called Aykᵘᵐ (*ʾykᵐ*), with numerous settlements. At the beginning of the 7th century B.C., the kingdom of Sabaʾ, which already dominated the basin of the Adhanat (*ʾḏnt*, modern wādī Dhana) river and the northern sector of the Djawf, undertook to impose its protection over Nashshān, probably fearing that the latter would unify the Djawf and become a threat to Sabaean supremacy in South Arabia. Led by a *mukarrib* (a sovereign superior to the kings, whose name means "unifier") Karibʾīl Watār, son of Dhamarʿalī, Sabaʾ launched two successful campaigns against Nashshān, which emerged from the struggle seriously weakened, losing territory to Sabaʾ (Nashkᵘᵐ and Aykᵘᵐ) and suffering under severe conditions (destruction of the royal palace called ʿAfraw (*ʿfrw*) and the enceinte of the capital, installation of a Sabaean garrison and the building of the temple of Almaḳah (*ʾlmḳh*), the great god of the Sabaeans, in the centre of the town (see on this war, Robin, forthcoming). Its independence was thus compromised, and it was soon annexed by the kingdom of Maʿīn (attested from *ca.* 700 B.C. to 120-100 B.C., with its capital Ḳarnaw, *Ḳrnw*, in the lower Djawf), and then some decades before the disappearance of Maʿīn, by Sabaʾ (see al-Sawdāʾ 52 = CIH 440, the oldest Sabaean language text found at the site). This was the time when the Arabs, notably the tribe of Amīr (*ʾmr* or *ʾmrⁿ*) settled in large numbers in the Djawf (Robin, 1992, 59-60, 158); a Madhābī text from Nashshān, whose ductus dates from around the 2nd century B.C. (al-Sawdāʾ 80 = RES 2917 = M 139), mentions precisely "the war of Amīr" (*ḏr ʾmr*) (l. 2).

At the time of his South Arabian expedition, the Roman Aelius Gallus, who reached Mārib [*q.v.*] in 25 B.C., seems to have taken Nashshān, for amongst the towns of the Djawf which the legions took by storm, Pliny mentions Nestum (vars. Amnestum, Hanescum) (von Wissmann 1976, 317, 401). Around A.D. 80-90, Nashshān was a Sabaean stronghold with a royal garrison when the kingdom of Ḥaḍramawt invaded the Djawf during the reign of Karibʾīl Bayān, king of Sabaʾ and Dhū Raydān, son of Dhamarʿalī Dhariḥ (Ja 643/22). A 3rd-century inscription shows that one of the great Sabaean families, the Banū ʿUthkulān ʿAṣiyat, had clients (*ʾdm*) at Nashshān (Fa 76/7). Only one inscription from the site of al-Sawdāʾ goes back to this period, al-Sawdāʾ 51 = IH 604, a decree pronouncing upon, it appears, the inalienability of the crown's landed property, palm groves, vines and fields of various kinds. Nashshān passed under Ḥimyaritic control when Ḥimyar [*q.v.*] annexed Sabaʾ at the end of the 3rd century, and the last mentions of the place date from the 4th century. The site was abandoned between the end of the Ḥimyaritic period (6th century) and the 10th century, for the Yemeni scholar al-Hamdānī [*q.v.*] mentions it as a ruin (*al-khariba al-sawdāʾ bi 'l-shākiriyya*, ed. Müller, 167/12, see also tr. Faris, 1938, 64, 66, Faris, 1940, 104, 108) belonging to the Nashkiyyūn (ed. Khatīb, 12).

Our knowledge of the religion of Nashshān is confined to two lists of deities and the names of some temples. The official pantheon of independent Nashshān, given in two texts (al-Sawdāʾ 3 and 5), includes in the protocolary order ʿAthtar Shāriḳān, Wadd, Aranyadaʿ, ʿAthtar dhū Garab and ʿAthtar Nashḳ. The inscriptions further mention other gods, such as ʿAthtar Matab Khamir, ʿAthtar dhū Ḳabd and Rahs³ (al-Sawdāʾ 3 and 5). Four temples are known from the texts: Riṣāf, consecrated to ʿAthtar (this temple, whose name is attested solely in the compound ʿAthtar dhū Riṣāf, may possibly be identifiable with the one excavated by the French Mission outside the town); Saywaḍ, the temple of ʿAthtar Matab Khamir, to be located in the eastern part of the town, according to al-Sawdāʾ 3 which mentions it; Garbᵘᵐ, the temple of ʿAthtar, attested in the expression "the temple of ʿAthtar dhū Garbᵘᵐ", whose building is commemorated by al-Sawdāʾ 5 = CIH 428 but whose exact localisation is unknown; and Naṣab, the temple of Wadd, mentioned in al-Sawdāʾ 4/2, whose localisation is equally unknown. To these temples should be added that of Almaḳah, built "in the centre of the town of Nashshān", after the Sabaean victory (RES 3945/16). Finally, several dedications to ʿAthtar dhū Ḳabd from the Minaean period (al-Sawdāʾ 24-6) lead one to think that there was also a temple dedicated to this deity.

The first description of the site of al-Sawdāʾ is owed to the expedition of Joseph Halévy (a Jew from Adrianople, of Hungarian nationality, who became a naturalised French citizen after the expedition) and his Yemeni Jewish guide Ḥayyim Ḥabshūsh, in the spring of 1870 (Halévy, 1872, 82-5, 200-14, who writes the name as "Es-Soud"; Ḥabshūsh, ed. and tr.

Goitein, 45-6). Finally, the site was visited by the Egyptians Muḥammad Tawfīḳ in 1944-5 (Tawfīḳ, 1951, pl. 1, marking the itinerary followed) and Aḥmad Fakhrī in 1947 (Fakhrī, 1951, i, 147), then by the Russian P.A. Griyaznevič and the Italian Paolo Costa in December 1970 (Griyaznevič, 1978, 220-1), and finally by the French Mission from September 1980 onwards (Robin, 1980, 192-3).

(Ch. Robin)

SĀWDJ-BULĀḲ, a Persian corruption of *soghuḳ bulaḳ* "cold spring", Kurdish Sā-blāgh, the name of a district in southwestern Ādharbāydjān, to the south of Lake Urmiya, and also the former name of its chef-lieu, the modern Mahābād [*q.v.*]. The district comprises essentially Mukrī Kurdistān, inhabited by the sedentary Mukrī and Debokhrī tribes of Kurds, speaking the Kurmāndjī form of the Kurdish language (classically described by O. Mann in his *Die Mundart der Mukri-Kurden. Kurdisch-persische Forschungen*, 4th ser. vol. iii/1-2, Berlin 1906-9. Cf. Minorsky's bibliography on Kurdish in *EI*[1] art. KURDS. E. Language), and confessionally being Sunnī Muslims of the Shāfiʿī *madhhab*. There were formerly also Neo-Aramaic-speaking Jews in the town of Mahābād. For a detailed geographical and topographical description of the Sāwdj-bulāḳ district, see Minorsky's *EI*[1] art. s.v., on which the present article is based.

The history of the Kurdish tribes of the district is only really known from Ṣafawid times onwards. During the 19th/16th century, the Mukrī chiefs pursued an opportunistic policy between the rival powers of the Ottomans and Ṣafawids. Ṣārim b. Sayf al-Dīn challenged and defeated in battle Shāh Ismāʿīl I in 912/1506-7 and then later sought investiture of his lands and military help from Sultan Selīm I. His successors variously sought the aid of Shāh Ṭahmāsp I and Sultan Süleymān the Magnificent. Towards the end of the century, Ṣārim's great-great-nephew Amīrā Beg (II) adhered to Sultan Murād III, who added to his hereditary lands in Mukrī Kurdistān the *wilāyet* of Shahrizūr and the *sandjaḳ* of Mawṣil. But after the Ottoman conquest of Ādharbaydjān during the Perso-Turkish War of 986-98/1578-90, the Ottomans were in a stronger position, and Amīrā Pasha (as he now was) was made subordinate to the Ottoman governor in Tabrīz, reduced to authority only over his hereditary lands and compelled to pay an annual tribute of 15 *kharwārs* of gold. In the early 11th/17th century, the historian Iskandar Beg Munshī [*q.v.*] was an eye-witness of Shāh ʿAbbās I's expedition against the Mukrī and Brādōst Kurds (see his *Taʾrīkh-i ʿĀlam-ārā*, tr. R.M. Savory, Boulder, Colo. 1978, ii, 1009-19, years 1018-19/1609-10), and the episode of the siege of Dumdum Ḳalʿa (south of Urmiya on the Ḳāsimlu river) became a favourite theme of later Mukrī heroic ballads.

In the early 19th century, the Turkish governor for the Ḳādjārs in Marāgha, Aḥmad Khān Muḳaddam, took strong measures against the Mukrīs by massacring several of their chiefs. In the last decades of the century there was fierce sectarian fighting between the Sunnī Kurds of Sāwdj-bulāḳ and the Shīʿīs of the Marāgha district. After 1905 the Sāwdj-bulāḳ district was gradually taken over by Ottoman forces under Meḥmed Fāḍil Pasha, until in 1914 the old frontier between Turkey and Persia was restored through its delimination by Russian and British representatives. The region was the scene of fierce Russo-Turkish fighting in the First World War, beginning with the assassination of the Russian Consul at Sāwdj-bulāḳ, Colonel A. Iyas, at nearby Miyāndōāb.

After the War, under Riḍā Shāh Pahlavī [*q.v.*], the name of Sāwdj-bulāḳ town was changed to Mahābād. For the subsequent history of the modern town, and especially its role as capital of the short-lived Kurdish Republic of 1946, see MAHĀBĀD.

SAWDJĪ, SAWDJĪ, the name of three Ottoman princes.

The name would appear to originate in the Old Turkish (especially, Eastern Turkish) word *saw* "word, piece of discourse, utterance", found as early as the Orkhon inscriptions, then in the Turfan Uyghur texts, in the late 5th/11th century *Kutadghu bilig* [*q.v.*] and up to the 8th/14th century, after which it is not attested as a separate word (Clauson, *An etymological dict. of pre-thirteenth century Turkish*, 782-3). Cf. also the name of the slave commander of the Saldjūk sultan Alp Arslan, Sāwtigin. Sawdjī would accordingly be "purveyor/conveyor of a message > prophet". In the later 8th/14th century it appears in onomastic in Sawdjī Agha, head of a contingent of troops in Murād I's army against the Karamānids, and it is about this time that it is attested in the Ottoman royal house itself (see below).

(1) Sawdjī Beg, in the old Ottoman chronicles also called Ṣarî yatî or Ṣarî balî, etc. was one of the younger brothers of ʿOthmān [*q.v.*], the founder of the Ottoman dynasty, and a son of Ertoghrul. He supported his brother on his campaigns and fell (684/1285-6 is the date given) in battle against the governor of Angelokome (Ayne Göl) at Egridje south of Koladja, behind Olympus at the foot of a pine tree. The tree was still called *Kandîlî čam* "pine tree of the lamps" in later times presumably from the lights lit there, the glimmer of which was afterwards given a mystic significance. (According to Neshrī, Idrīs Bidlīsī and Saʿd al-Dīn, *Tādj al-tawārīkh*, i, 18,8 ff., a heavenly light, *nuzūl nūr*, illuminated the tree by night.) Sawdjī Beg was buried beside his father in his tomb (*türbe*) at Sögüd [*q.v.*] in northwestern Anatolia, destroyed by the Greeks in 1922.

Bibliography: J. von Hammer, *GOR*, i, 54, and following him J. Zinkeisen, *GOR*, i, 70 (from Saʿd al-Dīn, who follows Idrīs Bidlīsī, *Hesht bihisht*, and Neshrī, *Djihān-nümā*).

(2) A son of ʿOthmān was also called Sawdjī. We only know of him that he fell in battle (*Sidjill-i ʿOthmānī*, i, 37).

(3) The eldest son of Murād I [*q.v.*] who, when governor of Rumelia, made terms with a son of John V Palaeologus of Byzantium named Andronicus, and rebelled against his father. The Ottoman chroniclers give very scanty information about this conspiracy, while the Byzantine historians Chalcocondyles, Phrantzes and Ducas give very full accounts, differing only in details; cf. Chalcoc., ed. Imm. Bekker, i, 40 ff. (Σαουζῆς); Phrantzes, ed. Bekker, i, 50, where the rebel is wrongly called Μωσῆ Τζελεπῆς, i.e. Mūsā Čelebi through confusion with Bāyezīd I's son; Ducas, ed. Bekker, 22 (Σαβούτζιος), where Sawdjī is mentioned but the rebel is called Κουντούζης, i.e. Gündüz. Murād I acted jointly with John V and took the field against the two princes. After an unsuccessful battle at a place which the Byzantine writers call Ἀπικρίδιον (Chalc., 43,4), Sawdjī fled to Didymotichon, where he was surrounded and forced to surrender to his father. He was blinded and then beheaded. The execution took place in 787/1385-6 and the body was brought to Bursa and buried there. Murād I had apparently made up his mind to get rid of Sawdjī, as he had appointed his son Bāyezīd to watch his movements, cf. Murād I's letter to Bāyezīd in Ferīdūn, *Münsheʾāt-i selāṭīn*, i², 107 (of the beginning of Rabīʿ I 787/1385-6), with Bāyezīd's answer, *op. cit.*, esp. 108 above, according to which the Kāḍī of Bursa must have passed a death sentence on Sawdjī. The execution of Sawdjī was the first of a long series of similar cases, in which princes dangerous to the Ottoman heir-apparent were put out of the way.

Bibliography: J. von Hammer, *GOR*, i, 190, 599; Zinkeisen, in *GOR*, i, 237 ff.; Ḥādjdjī Khalīfa, *Takwīm al-tawārīkh*, under the year 787; Saʿd al-Dīn, *Tādj al-tawārīkh*, i, 100 (following Idrīs Bidlīsī); A.D. Alderson, *Structure of the Ottoman dynasty*, Oxford 1956, index at 157; *İA* art. *Savcı* (M. Tayyib Gökbilgin). (F. Babinger-[C.E. Bosworth])

SAWĪK (a.) is a food preparation of some antiquity, and one widely known throughout the mediaeval Middle East. Al-Thaʿālibī attributes its first appearance to Alexander the Great, and it is cited in the physicians' works of both eastern and western Islamic lands. It was recommended for travellers and was used to feed armies in the field. For all its fame, it rarely appears described in the extant culinary manuals, although some recipes are found in the earliest (4th/10th century) work by al-Warrāk (*K. al-Ṭabīkh*, ed. K. Öhrnberg and S. Mroueh, Helsinki 1987, 37-8). Preparation was chiefly from wheat and barley, the former preferred among the urban classes which could afford it. The wheat grain was first washed and then soaked in water overnight. Discarding the water, the wheat was next fried thoroughly until browned. When cooled, it was ground, sieved and then stored for use when it could be eaten by adding sugar. An alternative, more complicated method was to husk and dry the grain before frying. This basic preparation could then be used in other types; for example, in *sawīk rummān* three portions of wheat *sawīk* to one of pomegranate (*rummān*) seeds were mixed together, cooked, sieved and sugar added. *Sawīk* was also added to the dough in making the pastry, *kaʿk*. According to al-Rāzī (*K. fī dafʿ muḍārr al-aghdhiya*, Cairo 1888, 7), pomegranate and apple *sawīk* were intended only for medicinal purposes, while wheat and barley types were for nourishment. Plain *sawīk* was considered a nourishing substitute for fresh fruit when it was unavailable. Medicinal preparations made from barley are described by Isaac Isrāʾīlī (*K. al-aghdhiya*, facs. ed., Frankfurt 1986, ii, 72-8), and clearly physicians envisaged different ways in which it could be used to achieve different effects within a regimen of health.

Bibliography: In addition to the above references, see *Kanz al-fawāʾid fī tanwīʿ al-mawāʾid*, eds. M. Marín and D. Waines, Beirut-Stuttgart 1993. (D. Waines)

SAWM (a.), a term of Islamic law, denoting the bargaining involving both vendor and purchaser that occurs before a sale. *Sawm* is a classical term which, although pre-contractual, influences the formation of the contract and has a legal effect upon it. Sale is prohibited if a higher bid is offered by a third party during the negotiation leading to the sale agreement. Al-Bukhārī and Muslim record the prohibition of making an offer while another's offer is being considered. What is curious is that they also record the prohibition of sale (*bayʿ*). This has lead to some confusion among scholars. The difference between *sawm* and *bayʿ* is that the former is no more than an offer to

enter into the latter after the manifest approval of the vendor. The prospective purchaser can take the commodity home for examination, even if he proposed a lower price than the vendor requested. If, during this period, the commodity is damaged, then the full price requested by the vendor becomes liable. It is interesting to compare *bay*ʿ and *sawm* with *khiṭba* and *nikāḥ* [*q.v.*] since they represent parallel sequences. *Ḥadīth* often refers to the two types of contract together. This indicates the personal aspects of *bay*ʿ in Muslim society as well the formal dimension in marriage.

(M.Y. Izzi Dien)

ṢAWM (a.), with Ṣiyām, *maṣdar* from the root *ṣ-w-m*; the two terms are used indiscriminately. The original meaning of the word in Arabic is "to be at rest" (Th. Nöldeke, *Neue Beiträge zur sem. Sprachw.*, Strassburg 1910, 36, n. 3; see previously, S. Fränkel, *De vocab. ... in Corano peregrinis*, Leiden 1880, 20: "*quiescere*"). The meaning "fasting" may have been taken from Judaeo-Aramaic and Syriac usage, when Muḥammad became better acquainted with the institution of fasting in Medina; this is the sense of the word in the Medinan sūras.

Origin of the rite. That fasting was an unknown practice in Mecca before Muḥammad's time cannot be *a priori* assumed. Why should not the *ḥunafā*ʾ [see ḥanīf] have also used this religious custom? In the Meccan sūras, as above mentioned, there is a reference to *ṣawm* in XIX, 27: a voice commands Mary to say "I have made a vow of *ṣawm* to the Merciful, wherefore I speak to no one this day". Observing silence as a Christian fasting practice (cf. Afrāhāṭ, ed. Parisot, in *Patrol. Syriaca*, i, 97) may have been known to Muḥammad. In the year 2/623-4, according to unanimous reliable Muslim tradition (cf. A.J. Wensinck, *Mohammed en de Joden te Medina*, Leiden 1908, 136-7, *contra* e.g. A. Sprenger, *Das Leben und die Lehre des Moḥammad*, iii, 53-9), the revelation of sūra II, 179-81, abolished the *ʿĀshūrā*ʾ fast as an obligation by the institution of the fast of Ramaḍān. On the question why Muḥammad chose this particular month, various opinions have been expressed. The most plausible is that of A.J. Wensinck, who has called attention to the particularly sacred character of the month of Ramaḍān even in pre-Islamic times (on account of the *laylat al-ḳadr* in his *Arabic New-Year and the Feast of Tabernacles*, in *Verh. Ak. W. Amst.*, N.S. [1925], xxv/2, 1-13; see also M.Th. Houtsma, *Over de Israëlitische Vastendagen*, in *Versl. en Med. Ak. Wetensch.*, Afd. Letterk., Series 4, ii [Amsterdam 1898], 3 ff.).

The first regulations concerning the manner of the Muslim fasting are given in sūra II, 179-81, which probably belong together (Nöldeke-Schwally, 178, *contra* Th.W. Juynboll, *Handbuch des islāmischen Gesetzes*, Leiden-Leipzig 1910, 114, who considers v. 181 a later revelation; al-Bayḍāwī also assumes that it was revealed in separate parts). The fast is also mentioned elsewhere in Ḳurʾān II, 192; IV, 94; V, 91, 96; LVIII, 5. *Ṣāʾim* is further used in XXXIII, 35, to describe the devout Muslim, along with other epithets, while in II, 42 and 148, *ṣabr* [*q.v.*] is explained as *ṣawm*.

The ordinances of II, 179-81, 183, form the basis of the detailed regulation by the *fuḳahā*ʾ; further details were taken from Tradition. What follows here is a résumé of the law on fasting according to the Shāfiʿī school, as contained in the treatise by Abū Shudjāʿ al-Iṣfahānī (5th/11th century), *al-Mukhtaṣar fi 'l-fiḳh*.

How the fast should be observed and who is bound to fast. Fasting in the legal sense is abstinence (*imsāk*) from things which break the fast (*mufṭirāt*), with a special *niyya* (intention). The *ṣāʾim* must be a Muslim, in full possession of his senses (*ʿāḳil*), and, if a woman, free from menstruation and the bleeding of childbed. The fast is valid (*ṣaḥīḥ*) under these conditions; there is an obligation to fast on every one who is full-grown (*bāligh*) if he is able physically to sustain it (*ḳādir*).

One ought to formulate the *niyya* before dawn on each day of fasting (*tabyīt*); by *talfīḳ* [*q.v.*], however, the Shāfiʿī can follow the Mālikī *madhhab*, which allows one to formulate the *niyya* for the whole of the month of Ramaḍān.

The *mufṭirāt* are defined by the entry into the body of material substances, in so far as they are material in substance and can be prevented from entering. In order for there to be *ifṭār*, there must be deliberate action (*taʿammud*), knowledge (*ʿilm*) and free choice (*ikhtiyār*) (al-Bukhārī, *Ṣawm, bāb* 26, *Aymān, bāb* 15; Muslim, *Ṣiyām*, tr. 171).

It is recommended for the *ṣāʾim* to take the *faṭūr* (meal marking the end of the fast) as soon as he is sure that the sun has set, and the *saḥūr* (meal taken after midnight) as late as possible; to abstain from indecent talk and calumnies; to avoid actions which might stimulate the passions within one or in others; to recite the Ḳurʾān for oneself or for others; and to observe retreat (*iʿtikāf* [*q.v.*]) during the month of Ramaḍān. Al-Ghazālī adds to these the duty of charity towards others.

I. Obligatory (*wādjib*) fasting.

Fasting in the month of Ramaḍān is the fourth pillar of Islam; whoever denies the obligation to fast is a *kāfir*, except for the recent convert or one who has not been in contact with the *ʿulamā*ʾ. Whoever omits to fast without good cause, without, however, denying the compulsion to fast, may be imprisoned. The general obligation to fast (*ʿalā sabīl al-ʿumūm*) begins on 1 Ramaḍān, after 30 Shaʿbān, or after 29 if the *ḥākim* (*ḳāḍī*) has then accepted the evidence of one *ʿadl* (sc. a person worthy of credence) that he has seen the new moon. The beginning of Ramaḍān may be announced to the people in a way settled by the local custom (a cannon, the hanging of lamps on the *manāra*, in Java by beating the *bĕdug*). Days omitted in Ramaḍān have to be made good (*ḳaḍā*ʾ) as soon as possible, but not on one of the forbidden days or on one which is itself a compulsory fast day.

A distinction is made between the major and minor *kaffāra* (compensating). The first is imposed on anyone who (a) breaks the fast in Ramaḍān by sexual intercourse; (b) is guilty of illegal killing [see ḳatl]; (c) has pronounced the *ẓihār* formula but not the *ṭalāḳ* immediately after it; (d) has broken a valid oath (*yamīn*) [see ḳasam].

The minor *kaffāra* or *fidya* has to be paid when one takes advantage of one of the dispensations which are detailed below; the question of fasting does not arise.

In the case of great drought, the *Imām* may, according to the *sharīʿa*, prescribe extraordinary ceremonies which include fasting; the three days before the *ṣalāt al-istisḳā*ʾ [see istisḳāʾ, and al-Bādjūri, *Kitāb Aḥkām al-ṣalāt, faṣl fī aḥkām ṣalāt al-istisḳā*ʾ] are spent in fasting.

The law permits relaxations in the following circumstances:

(a) Such as have reached a certain age (men 40; not

exactly defined for women) and sick people for whom there is no hope of recovery, if they are unable to fast, may omit the fast without being bound to the *ḳaḍā'* should their strength or health be restored. In compensation they should give alms at the rate of one *mudd* for each day omitted.

(b) If pregnant or nursing women fear it would be dangerous for them if they should fast, *ifṭār* is *wādjib* or obligatory for them but *ḳaḍā'* is obligatory.

(c) Sick persons who are likely to recover and those who are overcome by hunger and thirst may break the fast on condition that the *ḳaḍā'* is performed. If a man is in danger of death or danger of losing a limb, *ifṭār* is *wādjib*.

(d) Travellers who set out before sunrise may, if necessary, break the fast, but not if they begin their journey during the day. In case of mortal danger, *ifṭār* is *wādjib*. Two days' journey is the minimum. *Ḳaḍā'* is obligatory on them, in this case.

(e) Those who have to perform heavy manual labour should formulate the *niyya* in the night, but may break the fast if need be.

When the justification for relaxing the rules disappears, it is *sunna* to pass the rest of the day fasting.

II. Voluntary or supererogatory fasting (*ṣawm al-taṭawwu'*).

This falls into the category of what is recommended (*mandūb ilayhi*). For a woman, it may only be done with the consent of her husband. It may be broken without any penalty. The *niyya*, which can be formulated any time up till midday, need not be explicitly made, although certain of the *fuḳahā'* consider it desirable in certain cases.

It is recommended for anyone who has to fast (as a substitution) for three days during the *ḥadjdj* and seven days afterwards, to choose as the three days the 7, 8 and 9 Dhu 'l-Ḥidjdja.

For the supererogatory fasting of six days in Shawwāl, it is preferable to choose the six consecutive days immediately after the festival, i.e. 2-7 Shawwāl (see Juynboll, *Handbuch*, 132).

The following days are further recommended for voluntary fasting: the day before *'āshūrā'* day and the one after; the *yawm al-mi'rādj* (27 Radjab); and the Monday and the Thursday (*sunna mu'akkada*, according to al-Bādjūrī), days when actions are offered to God, and others which are describable as "by way of routine".

III. Fasting is forbidden (*ḥarām*) on the days of the two great festivals, on the *tashrīḳ* days and for a woman during menstruation; also in definite cases when danger threatens, as already mentioned above.

IV. It is blameworthy (*makrūh*) to fast on Friday because it distracts the attention from the Friday worship, and on Sunday or Saturday, at least if one has no particular reason for fasting, because the Christians and Jews observe these as holy days.

The three other *madhāhib* diverge from the Shāfi'ī one on minor questions only which it would be tedious to enumerate (see 'Abd al-Wahhāb al-Sha'rānī, *K. al-Mīzān*, Cairo 1279/1862-3, ii, 20-30).

The Shī'ī prescriptions diverge from the Sunnī ones on some points of detail, of which the following are some examples (see A. Querry, *Recueil de lois concernant les Musulmans Schyites*, Paris 1871-2, i, 182-209, ii, 75-7, 197-9, 203-5, following Nadjm al-Dīn al-Muḥaḳḳiḳ, *Sharā'i' al-Islām fī masā'il al-ḥalāl wa 'l-ḥarām*): the *niyya* is not considered as a "pillar"; smoking is not considered as one of the *mufṭirāt*; it is forbidden to blaspheme against the Shī'ī Imāms; the man and woman guilty of sexual relations during the Ramaḍān fast are to be flogged for the first offence, with the death penalty for persistent offences.

Regarding the relaxations, fasting is not required for a sick person unless authorised by the physician; dispensation is only given to pregnant women if they are in final phase of pregnancy; fasting is not generally required of travellers, but compensation must be made.

Voluntary and supererogatory fasting may begin before midday. Shī'ism adds to the days recommended by the Sunnīs the great dates of Shī'ī tradition (*ghadīr Khumm*, *mubāhala*, anniversary of al-Ḥusayn's death on 10 Muḥarram; see Querry, *op. cit.*, 37, notes).

Al-Ghazālī gives, at the beginning of his *Kitāb Asrār al-ṣawm* in the *Iḥyā'*, some considerations on the value of fasting. He points out, referring to some well-known traditions, the high esteem in which fasting stands with God. He gives as a reason for this that fasting is a passive act and no one sees men fast except God; secondly it is a means of defeating the enemy of God, because human passions, which are Satan's means of attaining his ends, are stimulated by eating and drinking. Fasting is therefore "the gateway to the service of God." After having enumerated, in the manner of a *faḳīh*, the regulations regarding fasting, he declares that these do not constitute what is essential. He distinguishes three steps in the fast. The first step is that of the *fiḳh*, the third that of the Prophets, the *ṣiddīḳūn* and those who have been brought into the proximity [of God] (*al-muḳarrabūn*), whose fast separates them from all worldly desires. But the second step suffices for the pious; it consists in keeping one's organs of sense and members free from sin and from all things that detract from God. Subjection of the passions is the real object of fasting, mot mere abstinence.

The ethical conception of the fast which al-Ghazālī gives in this second *faṣl* supplements, he says, the barren law of the *fuḳahā'*. In the *Ḥadīth* we find already various traditions with ethical tendencies and al-Ghazālī does not fail to quote them in support of his view. A mass of traditions on fasting, grouped according to the various aspects of the topic, will be found in Wensinck's *Handbook of early Muhammadan tradition*, 71-6, s.v. *Fast, Fasting*.

It is a very widespread opinion today that fasting, especially during Ramaḍān, forms the most appropriate expiration for offences committed during the year. This is why the law on fasting is still in general strongly observed, in varying degrees of strictness.

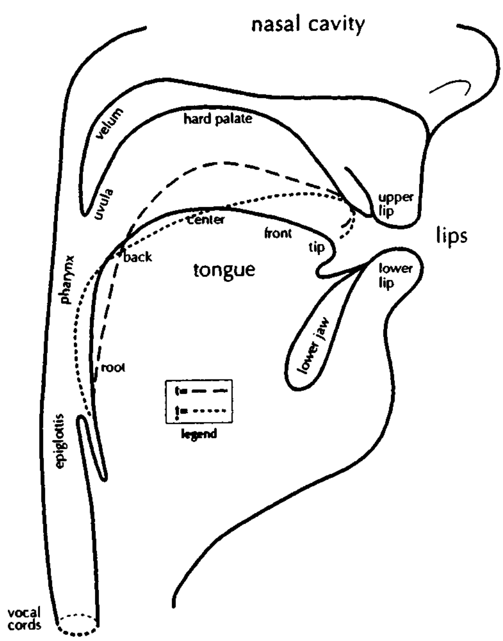
Bibliography (in addition to works cited in the article): A sketch of the legal prescriptions according to the Shāfi'ī law school was given by Th.W. Juynboll in his *Handbuch des islamischen Gesetzes*, Leiden-Leipzig 1910; see the bibl. to the 1925 ed. The main sources are the chs. on fasting in the collections of *ḥadīth*, *fiḳh* and *ikhtilāf*, to which should be added Ghazālī, *Iḥyā'*, ch. on *ṣawm*. For the traditions, see Wensinck, *op. cit.*, and idem, *Concordances et indices de la Tradition musulmane*, Leiden 1936 ff. See also K. Wagtendonk, *Fasting in the Koran*, Leiden 1968; K. Lech, *Geschichte des islamischen Kultus. i. Das ramaḍān-Fasten*, Wiesbaden 1979; and, above all, the bibls. to ḤADĪTH, ḤADJDJ, MUT'A, PUASA in Suppl., RAMAḌĀN and 'UMRA.

(C.C. BERG-[Ed.])

ṢAWTIYYA (A.), the neologism used for the modern phonetic description of Arabic.

1. *Definition and background.* The sound system of Arabic is described on the basis of its phonetics, *'ilm al-aṣwāt*, which focuses on the investigation of how

sounds are produced by speakers and perceived by listeners and on its phonology, *ʿilm al-ṣawtiyyāt*. The word *ṣawtiyya* is a relative adjective derived from the verbal noun, *ṣawt* (pl. *aṣwāt*), meaning sound or speech sound. The phonological analysis renders a description of the processes that set sounds into organised and systematic patterns. These are governed by the phonological rules operating in the system that make the distinction between the sounds. The phonemic inventory of Arabic is established, not only on the basis of detailed phonetic information, but also on the patterning of the sounds.



As a result of the impact of the Ḳurʾān on Arabic, the literary language has maintained continuity in its sound system and grammatical structure. The Arabs and Muslims have rendered a meticulous investigation of this system. Their original contributions, in theory and practice, result in precise phonetic descriptions and terminology. Pioneers in this field are such scholars as al-Khalīl and his disciple Sībawayh [*q.vv*]. However, most linguistic changes have occurred within the dialects. The description of *ṣawtiyya* here focuses on the modern *al-fuṣḥā* (literary Arabic) sound system.

2. *Description of the sound system*. There are 29 consonants and six vowel phonemes or distinctive sound units in Arabic. Consonants are produced with either partial or complete obstruction of the airstream in the vocal tract and are described by their manner and points of articulation. The vocal cords and their function also play a definite role in the classification of the phonemes into voiced or voiceless. Sounds produced with the vocal cords vibrating are called voiced while those produced without vibration are voiceless.

The major subgroups of consonants are: (1) *Stops*: These sounds involve a closure of the airstream at some point in the oral cavity. The stops are: /b/ voiced bilabial; /t/ voiceless dental; /ṭ/ emphatic voiceless postdental; /d/ voiced dental; /ḍ/ emphatic voiced postdental; /k/ voiceless velar; /q/ voiceless unaspirated uvular. (2) *Fricatives*: These sounds are produced with a partial closure of the oral cavity, where the airstream passes through a narrow passage, creating friction or a hissing sound. The fricatives are: /f/ voiceless labiodental; /θ/ voiceless interdental; /ð/ voiced interdental; /ð̣/ emphatic voiced interdental; /s/ voiceless dental /ṣ/ emphatic voiceless postdental; /z/ voiced dental; /ʃ/ voiceless palatal; /χ/ voiceless velar; /ɣ/ voiced postvelar. (3) *Affricate*: There is only one affricate /ʒ/. This sound, phonetically, is composed of two phones—a stop [d] immediately followed by a fricative "[ʒ] like" sound. (4) *Nasals*: In the production of the nasals, /m/ and /n/, two cavities, oral and nasal, are involved and it is this unique combination that distinguishes nasals from other sounds. The /m/ is voiced bilabial nasal and the /n/, voiced dental nasal. (5) *Trill*: The sound /r/ is a trill voiced alveolar or post-dental. (6) *Lateral*: The sound /l/ is a lateral voiced dental. The /r/ and /l/, when occurring in the vicinity of the vowels /a/ or /aa/, may be characterised as emphatics. (7) *Semivowels*: /w/ is a bilabial semivowel and /y/ a palatal semivowel. They form two diphthongs: /ay/ and /aw/ as in *bayt* (house) and *thawb* (dress). (8) *Pharyngeals*: The sound ʿayn /ʿ/ is described as a voiced fricative pharyngeal, however, it is also described as a voiceless stop as pronounced in ʿIrāḳ and the Arabian Peninsula. The sound /ḥ/ is a voiceless pharyngeal. (9) *Glottals*: The sound /h/ is a voiceless oral fricative and the hamza /ʾ/, a glottal stop.

3. *Emphatics*. The feature of emphasis is traditionally called *tafkhīm* ("thickness"). There are four emphatic consonants: /ṭ, ḍ, ṣ, ð̣/. These sounds, in addition to their primary points of articulation, are characterised by a secondary articulatory feature identified as the retraction of the tongue as well as the contraction of the pharynx. This phonetic phenomenon was recognised by the earliest Arab grammarians and has always been a point of attraction and fascination for Western linguists and Arabists. Emphasis is not limited only to this particular group as there are other consonants, on a marginal basis, which demonstrate emphasis or pharyngealisation. Emphatics are found in modern Arabic dialects, to varying degrees, depending on geographical areas and social levels of speaking. The emphatic consonants condition neighbouring sounds, and often dominate the whole syllable. This conditioning is referred to as "spreading", which can be either progressive or regressive and may even cover a syllable or more. The acoustic effect of the emphatics is to lower the frequency of neighbouring sounds. The dotted line of the shape of the tongue on the diagram below shows the postion of the tongue for the emphatic /ṭ/ as in the syllable /ṭi/ that contrasts with the broken line that represents the non-emphatic /t/ as in /ti/.

The sound /ð̣/ exhibits some changes in its pronunciation. It is predominantly pronounced as /ð̣/ , an interdental emphatic fricative, in ʿIrāḳ and Arabia. However, in the sedentary Levant regions, it is pronounced as /ẓ/. Likewise, the sound /ḍ/ is pronounced either as /ð̣/ in ʿIrāḳ and Arabia, or as /ḍ/ in sedentary regions (see further on this, ḌĀD).

This diagram is a tracing of a frame from an Xray sound film of the author's vocal tract. It is superimposed over a diagram of the vocal tract made by the phonetician Peter Ladefoged.

4. *Vowels*. Vowels are produced with the airstream passing fairly freely through the oral cavity. There are two types of vowels, long and short. The short are: *kasra* /i/, short high front unrounded vowel; *ḍamma* /u/, short high back rounded vowel; and *fatḥa* /a/, low short central unrounded vowel. The long vowels are: /ii/ *kasra* + *yāʾ*, long high front unrounded; /uu/ *ḍam-*

ma + *wāw*, long high back rounded and /aa/ *fatḥa* + *alif*, low long central unrounded. Length is phonemic or functional and may be indicated by writing the vowels twice as in the following minimal pairs: *kataba* ("he wrote") and *kaataba* ("he corresponded with"). The difference between long and short vowels is primarily one of quantity.

5. *The syllable and its structure*. The structure of the syllable is based on the main components of its formation. Every syllable begins with the onset, a single consonant, and may end with a coda, which can be either one or two consonants or none. The nucleus or centre of the syllable is the most prominent element and is always a vowel, short or long. There are six possible syllable types. By postulating a "C" to represent consonants and a "V" to represent vowels the syllable types are: CV, CVV, CVC, CVVC, CVCC and CVVCC. These are divided into short CV; long CVC, CVV; CVVC and heavy CVCC and CVVCC. With respect to the frequency of occurrence the first four syllable types, CV, CVC, CVV and CVVC, are considered the dynamic force behind the formation of all the grammatical phonological patterns of non-pause utterances. The last two types, CVCC and especially CVVCC, have very limited distribution. They occur only in words, phrases and sentences in final pause forms, as does CVVC.

Consonant clusters occur medially and finally. All syllables and words start with a single consonant. In the Arabic writing system whenever a word starts with an *alif*, the *alif*, which is used as a *kursī* ("chair" for the *hamza*), has no phonetic value. Consonants that are produced in the front section of the oral cavity, form bilabial to palato-alveolar, form clusters with the remaining back consonants. Restrictions exist on the formation of consonant clusters, primarily among consonants that have the same manner or adjacent points of articulation. Gemination involves the clustering of identical consonants. Lengthening of the vowels does not create vowel clusters, as it is only a quantity difference that results in phonemic length for the long vowels.

6. *Stress*. Stress placement rules are determined by the loudness or prominence of a specific syllable relative to other syllables within the utterance. Loudness is not the sole feature responsible for stress; length and pitch also contribute. Syllable structure, types and their distribution play a definite role in the placement of stress. The word-stress rule patterns that operate in Arabic are as: (1) when a word consists of a string of CV types the first syllable is stressed as in *dá-ra-sa*, CV́-CV-CV, "he studied", (2) when a word contains only one long syllable that syllable (but not the final one) is stressed as in *mu-dár-ri-su-hu*, CV-CV́C-CV-CV-CV, "his teacher"; (3) when a word contains two or more long syllables the long syllable nearest to the end (but not the final one) receives the stress as in *mu-dar-ri-sáa-tu-kum*, CV-CVC-CV-CV́V-CV-CVC, "your teachers" (fem.); and (4) final heavy syllables are stressed as in *ki-táab*, CV-CV́VC, "book". These stress rules encounter some variation depending on the geographical region that an Arabic-speaking person comes from.

Bibliography: For a description of the Arabic sounds of the classical period, see the *Bibl.* to MAKHĀRIDJ AL-ḤURŪF. Davis, *On the phonological emphasis in two modern Arabic dialects*, in *Internat. Jnal. of Islamic and Arabic Studies*, viii/2 (1991), 1-20. (SALMAN H. AL-ANI)

SAʿY (A.), from the root *s-ʿ-y*, used 30 times in the Ḳurʾān in such senses as "to work, apply oneself to, denounce, seek to earn one's living, run after s. th." etc., but in the sense concerning here denoting the pilgrim's running between al-Ṣafā and al-Marwa. These are two hills to the south and north-west of the Kaʿba respectively, linked by a *masʿā*, course, which the pilgrim follows after having made the sevenfold circuit of the Kaʿba, at his or her arrival and his or her departure. This following of the course, the *saʿy*, is likewise sevenfold; it starts in al-Ṣafā, and goes to al-Marwa, *ca*. 300 m away. In the first part of the course is a smaller course of about 80 m, marked out by four green columns, which the men—but not the women—have to make whilst running, the remainder of the course being made at a normal walking pace. From al-Ṣafā four trips are made to al-Marwa, and from this last three trips back are made, the seventh trip ending at al-Marwa, the whole amounting to a little more than two km (see M. Hamidullah, *Le pèlerinage à la Mekke*, in *Sources orientales*, iii, Paris 1960, 109).

Saʿy is the term reserved for this travelling along the course, the other ones (the *ṭawāf* around the Kaʿba and those between ʿArafa-Muzdalifa-Minā) being termed *fayḍ* or *ifāḍa* (course made in an enthusiastic manner). It is obligatory at arrival and superogatory at departure for the pilgrims who perform both the Greater (*ḥadjdj*) and Lesser (*ʿumra*) Pilgrimages [see ḤADJDJ].

The first Muslims, and especially the Anṣār, hesitated to make this sacred course, because of its pagan character. On the two hills were the idols Isāf and Nāʾila [*q.v.*], two sacred stones, on which the victims' blood was poured. They must have had a vaguely human form which, under Syrian influences and because of their proximity to each other, were assimilated to a divine pair, as with a Baʿl and a Baʿla. But an edifying legend developed round them, that they were a man and woman who had fornicated in the Kaʿba and had therefore been transformed into stone (see T. Fahd, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 103-9).

The question of this obligation of the *saʿy* was put to the Prophet, and the reply was revealed that "al-Ṣafā and al-Marwa are part of the rituals (*sharāʾiʿ*) of pilgrimage to the House of God. Whoever accomplishes it (*ḥadjdja*) or visits it (*iʿtamara*) will never commit a sin, if he makes the course between the two hills" (Ḳurʾān, II, 158). Some recent constructions have been made to facilitate the *saʿy*, involving two superimposed tracks, one for the outward journey and one for the return (see the monthly journal *al-ʿArabī*, Kuwait, no. 1971).

Bibliography: For further details on the rite, see M.M.I. ʿAbduh, *al-ʿIbādāt fī 'l-Islām*, Cairo 1954, 420-4; Hamidullah, *op. cit.*, 111. For the rites of the Pilgrimage in general, see Fahd, *Le pèlerinage à la Mekke*, in *Etudes d'Histoire des Religions*, i, Paris 1974, 65-94; idem, *Panthéon*, esp. 241-7, but the most complete work is M. Gaudefroy-Demombynes, *Le pèlerinage à la Mekke*, Paris 1923. (T. FAHD)

SAYĀBIDJA, for Sayābiga, the name given in early Islamic historical sources to a group of non-Arab emigrants, proximately from Sind in India but, most probably, ultimately from South-East Asia and established on the Arab shores of the Persian Gulf and at Baṣra in the first two centuries or so of Islam.

Arabic authors often link them with the Zuṭṭ [*q.v.*] or Jhāts [see DJĀṬ] from northwestern India (see e.g. al-Ṭabarī, i, 1961, 3125, 3134, 3181), although two distinct ethnic groups are in fact involved here.

De Goeje was the first to discuss the Sayābidja at length, in his *Mémoire sur les migrations des Tsiganes à travers l'Asie*, Leiden 1903, 18-19, 86-91, in the latter place giving a résumé of an earlier article of his devoted to them. He noted that, already in pre-Islamic times, there are mentioned Sayābidja settled on the Gulf coastlands and Zuṭṭ in lower ʿIrāḳ (al-Balādhurī, *Futūḥ*, 373), and that in Abū Bakr's time there was a garrison of Sayābidja and Zuṭṭ at al-Khaṭṭ [*q.v.*] along the coasts of al-Ḳaṭīf and Hadjar (al-Ṭabarī, i, 1961). Both these peoples must have been planted there, or induced to settle there, as guards and frontier auxiliaries, by the Sāsānid emperors. At the opening of Islam, both groups followed the example of the Asāwira or cavalrymen of the Sāsānid army (see C.E. Bosworth, *EIr*, art. *Asāwera*) and became Muslims on various favourable conditions; the Zuṭṭ and Sayābidja attached themselves as *mawālī* [see MAWLĀ] to the Arab tribe of Ḥanẓala of Tamīm, and Abū Mūsā al-Ashʿarī [*q.v.*] then settled them at Baṣra (cf. al-Balādhurī, *Futūḥ*, 373-5; al-Ṭabarī, i, 2562 ff.). Other Sayābidja elements seem to have found their way to Kūfa and possibly elsewhere, since the Kūfan forces which joined ʿAlī at Dhū Ḳār in 36/656-7 included a detachment of Zuṭṭ and Sayābidja (al-Ṭabarī, i, 3180-1).

Sayābidja troops fought in Khurāsān under ʿAbd Allāh b. ʿĀmir [*q.v.*] against the remnants of Persian resistance there and, in the time of al-Ḥadjdjādj b. Yūsuf [*q.v.*], some of them were to be found in the ranks of Ibn al-Ashʿath's [*q.v.*] rebel forces (al-Balādhurī, 374). The caliph Muʿāwiya had further transplanted Zuṭṭ and Sayābidja in the *thughūr* [*q.v.*] of northern Syria and at Antioch (*loc. cit.*). Within the *miṣr* of Baṣra, a corps of 40 or 400 Sayābidja under one Abū Sālima al-Zuṭṭī is mentioned as guarding the state treasury there in 36/656-7 (al-Balādhurī, *Futūḥ*, 375-6; al-Masʿūdī, *Murūdj*, iv, 307 = § 1629, and cf. Pellat's *Index généraux*, vi, 403), and a verse in a poem of the Baṣran poet Ibn al-Mufarrigh (d. 69/689 [*q.v.*]) mentions "the uncouthly-speaking Sayābidj barbarians who loaded me with fetters in the morning" (Ibn Ḳutayba, *Shiʿr*, 212). It would accordingly appear that the Sayābidja were a rough and tough element who were employed on police and custodial duties. The Sayābidja of Baṣra are mentioned at the time of Ibn al-Zubayr's anti-caliphate, in 64/683-4 (al-Balādhurī, *Ansāb al-ashrāf*, ivB, 106). In 159/775-6, during al-Mahdī's caliphate, 4,000 of the Asāwira and Sayābidja, together with volunteer troops (*muṭṭawwiʿa* [*q.v.*] from Baṣra, were brought together for a naval expedition against the coasts of northwestern India; in the following year, 760-766-7, this expedition reached Gudjarāt and the "town of [the river] Nārbada", probably Broach near the mouth of this river [see BHAROČ] (al-Ṭabarī, iii, 461). After this time, however, the Sayābidja fade from mention and were no doubt assimilated into the general mixture of population in the high ʿAbbāsid period.

The etymology of the term *Sayābidja*, and the ultimate origin of this group, were discussed in detail by de Goeje, *loc. cit.*, and G. Ferrand in his *EI*¹ art. s.v., and the validity of their conclusions has not subsequently been challenged. Arabic lexicographical and other sources describe the Sayābidja as mercenaries recruited from Sind, and give as the term's singular the form *Saybadjī*. De Goeje and Ferrand therefore connected this with Zābadj/Zābag, going back to a Sanskritised form Djāvaka and a South Indian/Dravidian one Shāvaka, a term used to designate the Indonesian islands of Java and Sumatra [see ZĀBADJ]. The early Islamic Sayābidja would thus be in origin Indonesians who had emigrated to western India and who then, in the late Sāsānid period, found their way to the Persian Gulf shores in company with the Zuṭṭ. The famed seafaring expertise of the Malay-Indonesian peoples would have ensured their usefulness to the Middle Eastern powers in such matters as the policing of the Gulf and the protection of its trade against piracy, etc.

(C.E. BOSWORTH)

SAYD (A.), a masc. noun and noun of action from the root *ṣ-y-d* which, as in Hebrew, evokes both the idea of the pursuit and capture of wild animals, by earth or sea, which can be eaten as game, and also these animals themselves, i.e. all game, whether caught by hunting or fishing. In all its acceptations, the root *ḳ-n-ṣ* is its exact equivalent.

The ineluctable need for daily sustenance has led mankind, like all other living beings, from the time of appearance on earth, to practise both hunting and fishing together with the gathering of wild fruits and grain, and mankind has accordingly ceaselessly exercised its ingenuity in finding the best methods here for achieving the maximum return for effort. Thus there has been a constant striving towards perfection in methods of hunting and fishing.

For hunting game by land, the methods of capture (*maṣīda, miṣyada, maṣyada*, pl. *maṣāyid*) are numerous. A passive mode costing the least effort is the setting of nets (*shabak*) and snares with draw-nets (*ḥibāla, uḥbūla*, pl. *ḥabāyil*); and there is also the covered-over pit-trap (*ḥukna, ughwiyya, mughawwāt, wadjra, dafīna*). Then comes the method of hunting with a bow (*ramy, rimāya*) or, otherwise, with a cross-bow or blow-pipe and, at present, with firearms. But out of the various methods, in the Islamic world and during mediaeval times, one of the most favoured by princes and nobles was the chase (*ṭard, muṭārada, ṭirād*), on foot or on horse-back, with the aid of domesticated or tamed carnivore animals (*ḍārī*, pl. *ḍawārī, ṣayūd*, pl. *ṣuyud*), such as the gazelle-hound or *salūḳī* [*q.v.*], the cheetah [see FAHD] and the caracal lynx (*ʿanāḳ al-arḍ*). These precious hunting auxiliaries were launched against the gazelle [see GHAZĀL], antelope [see MAHĀT], wild ass (*ḥimār al-wahsh*), ibex (*waʿl*) and ostrich [see NAʿĀM]. According to the region, they sometimes served for tracking down wild beasts with furs, such as the panther, leopard [see NAMIR] and even the fennec fox [see FANAK]. Parallel with hunting by the chase, hunting by the air, i.e. with raptors [see BAYZARA], was always a favoured pastime for all social classes in the Muslim lands, whether high-flying with falcons or low-flying with hawks for the capture of small, furry game, such as the hare [see ARNAB] and of that with feathers, such as the partridge (*ḥadjal*), sand-grouse [see ḲAṬĀ], bustard (*ḥubāra*), wild geese (*iwazz*), duck (*baṭṭ*) and teal (*ḥadhaf*). Certain falcons were also trained to tie down and blind antelopes and wild assess, thus facilitating their capture by the hunting hounds. The smallest-sized birds like blackbirds and thrushes were taken by means of snares and nooses (*sharak*, pl. *ashrāk*) placed in line on a taut cord.

For fishing and fish, both in sweet waters and in the seas, see SAMAK.

According to Islamic law, the hunter and fisher

(*ṣayyād, ḳannāṣ*) were subject to rules regarding the ritual slaughter of captured game in order to preserve the lawfulness of their consumption; all these rules are set forth in detail by al-Damīrī in his *K. al-Ḥayawānāt al-kubrā* (ed. Cairo 1356/1937, ii, 70-5, s.v. *ṣayd*). From it, there results that, in order for it to be lawful, game should not be killed on the spot and picked up dead, so that its throat can be ritually cut.

Out of all the Arabic authors, lexicographers and writers on natural history, there is almost only Kushādjim (4th/10th century [*q.v.*]) who has exhaustively treated all the methods of hunting and fishing, in his remarkable *K. al-Maṣāyid wa 'l-maṭārid* "Trapping and hunting down" (ed. A. Talas, Cairo 1954). Four centuries later, Ibn Manglī took up again and completed the topic in his substantial *K. Uns al-malā᾽ bi waḥsh al-falā* "Relations of the leading men of this world with the wild beasts of the endless deserts" (tr. F. Viré, Paris 1984).

Hunting and fishing have inspired most of the great poets, such as Abū Nuwās, ʿAntara, al-Buḥturī, Dhu 'l-Rumma, al-Ghassānī, Ibn al-Muʿtazz, Ibn al-Rūmī, Imru᾽ al-Ḳays, Labīd, al-Nāshi᾽, Ru᾽ba b. al-ʿAdjdjādj, al-Ṣanawbarī, al-Shammākh and Zuhayr. Kushādjim cited the most noteworthy of these compositions, adding his own ones which had been well-received.

ṢAYDĀ, the Arabic name of Sidon, the ancient commercial city of the Phoenicians. It was captured by the Arabs *ca.* 6/637 by Yazīd b. Abī Sufyān. The Arab geographers mention the fact that, when fortified, it was the military port of Damascus. But it was not until the period of the Crusades that the city achieved any kind of prominence. The Crusaders corrupted the Arabic name into the form of Sagitta (Sagette, Sayette); besieged in 501/1107, it was relieved either through the payment of a ransom, or, as the Arab authors maintain, as a result of the intervention of reinforcements from Damascus. But the city was occupied by the Franks in 504/1110 or 505/1111, after a siege lasting 47 days.

After the departure of the Franks, in 583/1187, Ṣalāḥ al-Dīn (Saladin) took possession of the city, and had the greater part of its fortifications destroyed. They were rebuilt by the Franks, who returned in 625/1228. Recaptured in 647/1249 by the Muslims, then in 651/1253 by St. Louis, king of France, who fortified it afresh, the city was sacked in 658/1260 by the Mongols. The same year, it passed until 691/1291 into the hands of the Knights Templar. It was then occupied definitively by the Muslims. The Druze *amīr* Fakhr al-Dīn (1003-43/1595-1634) did much that was beneficial for the city; the market which he caused to be constructed for European traders, the Khān Fransāwī, still exists today. In 1791, the governor Djazzār Pasha expelled the French merchants. Then, in 1840, Ṣaydā was bombarded by British and Austrian warships.

The city was incorporated into Greater Lebanon under French mandate in 1920, but it was to suffer during this period as a result of the monopoly which the French accorded to Beirut in respect of maritime and commercial traffic. The population, with its Sunnī Muslim majority, vociferously demanded affiliation with Syria, until the negotiations of March 1936 between France and its mandated territories; given renewed confidence by the arrangements then set in place, it participated more actively in national life, under the aegis in particular of Riyāḍ al-Ṣulḥ, the Prime Minister after Independence, who was to be assassinated in 1951. It was at the same time responsive to the calls of Djamāl ʿAbd al-Nāṣir advocating Arab unity, and it took part in May 1958 in the revolt against President Shamʿūn.

The population, which had reached a total of 5,000 inhabitants in the 18th century but was little more than 15,000 in 1946, the same number as in 1914, was to experience a veritable explosion in 1948, with the influx of Palestinian refugees. It quadrupled in 15 years, reaching a total of 117,000 in 1980, half of these being Palestinians. With this reinforcement the share of the Sunnī Muslims in the population of the city exceeded 80%.

From 1970 onward, Ṣaydā and its camps were to become a nucleus of Palestinian resistance to Israel. The civilian population paid a very high price, enduring aerial and naval bombardments, even before the Israeli invasion of June 1982, which had the object of destroying the camps and driving the Palestinians towards the north. In February 1985, Israel was obliged to withdraw, but its role was taken over by the Lebanese forces, the militia of the Christian Right, which pounded the camp of ʿAyn al-Ḥalwa for a whole month. The Christians of Ṣaydā were then forced to abandon the city.

Palestinian organisations administered the camps, and it was not until June 1991 that the Lebanese Army took over control of their access points. But while the Palestinians have lost their capacity for political and military intervention, the Sunnī community of Ṣaydā has found itself in a position of strength on the Lebanese chess-board, with the choice of one of its own, the multi-millionaire Rafīḳ Ḥarīrī, as Prime Minister in 1993.

The current conurbation is composed of numerous very distinct areas:

The old town occupies the site of ancient Sidon, sheltered by a peninsula which encloses the port. Near the entry a small island, linked to land by a stone bridge, bears the castle of St. Louis. To the south of the town, on an artificial hill, stands the Citadel, Ḳalʿat al-Muʿizza. Overcrowded and insalubrious, the old town has been in an advanced state of delapidation since the earthquake of 1956; it accommodates 20% of the population, the poorest, Lebanese or Palestinian, and immigrant workers from Syria and Egypt.

A new town, with modern concrete buildings, containing 46% of the population of Ṣaydā, extends beyond the ramparts: the al-Dekerman quarter, where public services are concentrated and which is the centre of cultural life, and the al-Wasṭānī residential quarter, to the north, interspersed with green spaces.

The Palestinian camp of ʿAyn al-Ḥalwa, opened in 1949 by the Red Cross 3 km to the south of the city, accounts for 34% of the population of the conurbation: more than 40,000 people are crammed in there.

The city has expanded alongside arterial routes, particularly towards the east, and it has obliterated the orange groves which used to surround it. In fact, it has benefited from the fate which dogged Beirut between 1975 and 1990, establishing itself as regional centre of the south.

Ṣaydā's influence extends over the entire region between the rivers of Damūr and of Līṭānī. Its 362,000 inhabitants (in 1980), are divided, besides Ṣaydā, between three small towns and 140 villages.

The coastal plain has been devoted since the 1950s to market gardening and citrus production, irrigated by the al-Ḳasmiyya canal, which serves 3,700 ha from its starting-point at the mouth of the Līṭānī, and by

hundreds of individual wells and bore-holes. Since the 1980s plastic greenhouses have proliferated, as a result of the capital funds invested by citizens of Ṣaydā and of Beirut and by emigrés.

The mountain suffers, however, from lack of water, especially to the south. Various irrigation projects have been examined, such as that of the Awālī, in abeyance since 1987, or that of the Dj̲ūn tunnel, which uses a diversion of the Līṭānī for hydro-electric production. A pilot project has already succeeded in irrigating 1,000 ha in the region of Lebaa, above the small Palestinian camp of Miyé wa-Miyé.

Cereals and olives are cultivated everywhere, on the plains and on the mountain. But this agricultural activity has not obviated the need for daily work journeys to Ṣaydā or Beirut, nor has it prevented large-scale emigration. During the 1970s, many inhabitants left for Arabia and the Gulf, following the example of the Palestinians from the camps.

The wholesale market of Ṣaydā takes a third of this agricultural production, but currently it is industry which is the motive force behind the regional economy. Its development has been aided since 1978 by the influx of Palestinian manpower expelled from the south, by the closure of the port of Beirut, which led to the diversion of some traffic to the illegal port of Ṣaydā, and by the investments of emigrés.

The principal units are the oil refinery, which treats Saudi crude, 9 km/5 miles to the south, the power-station of Dj̲iye, 10 km/6 miles to the north, the match factory of Dj̲iye, the cement-works of Siblīn, and the textile factories of ʿAdlūn and of Kfar Dj̲arra.

The construction sector is active, and light industry very diversified: plastics, nylon, cardboard boxes, lavatory paper, oils, soap and leather. The local sculpted marble, worked by Egyptian craftsmen, is renowned.

This economic development depends on a young population, at a rapid rate of growth, and Ṣaydā contained in 1980 some thirty educational establishments, public and private. As a result of the policy of partition which was powerfully advocated during the war, four centres of higher education have been opened in Ṣaydā : a branch of the Lebanese University in 1977, of the University of Saint-Joseph in 1978, a Maḳassad Centre of Advanced Studies in 1979 and the University of Kfar Falūs in 1980. There was a total of 3,400 students in 1981-2.

The city, although no more than 40 km/25 miles from Beirut, is thus well equipped to play the role of a regional centre. But the potential instability resulting from the presence of more than 100,000 Palestinian refugees continues to cast a dark shadow over the future.

AL-**ṢAYDANA** (al-Ṣaydala) (a.) is pharmacology, in the meaning of pharmacognosy. The druggist is called *al-ṣaydalānī* or *al-ṣaydanānī*. Al-Bīrūnī defines him as follows: "He is someone who occupies himself with gathering medicaments according to their most commendable sorts and with selecting their best kinds, both simple ones and those which have been prepared according to the most excellent compositions, which have definitely been determined for that purpose by medical authors". Elsewhere he says "*al-ṣaydana* therefore is the knowledge of simple drugs according to their selected sorts, kinds and forms, as well as the knowledge of the mixture of medicaments composed in conformity with their written prescriptions or on the basis of what the trustworthy and righteous researcher strives for. The highest rank, however, is held by the knowledge of the effects of the simple medicaments and their specific qualities" [see adwiya]. Besides, *ṣaydana* indicates the druggist's actual store of drugs, and also (with or without a preceding *kitāb*) the handbook of drugs, the pharmacopeia. *Al-ṣaydalānī* is practically synonymous with *al-ʿaṭṭār* [*q.v.*; almost everything said there is also valid for *al-ṣaydalānī*]. Since healing powers are ascribed to many perfumes, both terms indicate also the merchant of spices and aromas [see afāwīh, in Suppl.].

The classical definition of pharmacology is found in al-Bīrūnī's [*q.v.*] highly important Preface to his unfinished *K. al-Ṣaydana* [*fi 'l-ṭibb*], written in his old age. He classifies *al-ṣaydana* as a sub-discipline in the field of medicine. According to him, it is the first of the stages of the medical art and for many it counts only as the latter's preliminary stage because it is a tool for practising medicine, not a part of it. As far as the word *ṣaydana* is concerned, al-Bīrūnī first refers to the well-known fact that the Arabic *ṣād* corresponds with Indo-Iranian *čīm*. He approvingly quotes Ḥamza al-Iṣfahānī [*q.v.*], who is said to have explained *ṣaydanānī* as an Arabisation of *čandanānī* "merchant of sandalwood". Sandalwood is not a medicinal plant *par excellence*, but one may assume—al-Bīrūnī continues—that the Persians, when looking for sandalwood, came in contact with the Indians and called their merchant of perfume *čandanānī*; the Arabs would then have taken over this term, and Arabised it because they did not know a name for it. And since sandalwood was not counted among their perfumes, and since they were hardly able to distinguish between a perfume merchant and a drug merchant, they identified the two words. For the peculiar scent of sandalwood, see ṣandal. There exist, therefore, in this case the same transitions of meaning as those found in the case of *ʿaṭṭār*. The second consonant of *č/ṣandanānī*, the *nūn*, would then have been miswritten or misread into *yāʾ*. The fact that the word *ṣaydala/ṣaydalānī*, as far as is known to the writer of these lines, is completely unknown in the western Muslim world, may be explained from its Indian origin; in the West, the corresponding terms are [*ʿilm*] *al-adwiya al-mufrada* or *al-murakkaba*, in quotations often abbreviated to *al-adwiya* [see adwiya] or [*ʿilm*] *al-ʿuṭūr/al-ʿaṭṭār* (see above).

As an oriental synonym of *al-ṣaydalānī*, al-Bīrūnī also mentions *al-dārī*, with which the Arabs in the old days indicated the perfume merchant, because the ships from India brought their goods to the port of Dārīn, lying in the area of al-Baḥrayn. Al-Bīrūnī substantiates the meaning of the word with examples taken from ancient Arab poetry.

A general theory of pharmacology is given by al-Mad̲j̲ūsī [see ʿAlī b. al-ʿAbbās al-Mad̲j̲ūsī] in his *Kāmil al-ṣināʿa al-ṭibbiyya*, Būlāḳ 1294/1877, ii, 84-100. The section is comprehensively analysed by M. Ullmann, *Islamic medicine*, Edinburgh 1978, 104-6.

Bibliography: The most important study on *ṣaydana* is that by M. Meyerhof, *Das Vorwort zur Drogenkunde des Bērūnī*, in *Quellen und Studien zur Geschichte der Naturwissenschaften und der Medizin*, iii, Berlin 1932, fasc. 3, esp. Arabic text 3-8, tr. 25-37. Meyerhof took the Arabic text from the unique manuscript Bursa, Kurşunluoğlu (composed 678/1278). A Turkish translation of the Preface was made by Şerefeddin Yaltkaya, *Birunlu Eba Reyhan Kitabussaydele fittibb mukaddimesi*, in *İstanbul Üniversitesi Tib Tarihi Enstitüsü*, x, Istanbul 1937. An edition of the complete Arabic text, with an English tr., has been given by Muḥammad Saʿīd, *Bīrūnī. K. al-ṣaydana fi ʾl-ṭibb. Al-Bīrūnī's Book on Pharmacy and Materia medica*, Karachi 1973. There exist a Russian tr. by U.I. Karimov, *Abu Raykhan, Farmakognoziya v medicine (K. al-Ṣaydana fi ʾl-ṭibb), issledovaniye, perevod, primečaniya i ukazateli*, and a Persian tr. by ʿAbbās Zaryāb, *Bīrūnī, Kitāb al-Ṣaydana fi ʾl-ṭibb*, Tehran 1369/1949. (A. DIETRICH)

AL-**ṢAYDĀWĪ**, Shams al-Dīn Muḥammad al-Dimashkī, outstanding musician and writer on music in Syria in the second half of the 9th/15th century. Born in Ṣaydā at an unknown date, he later lived in Damascus where he died on 16 Dhu ʾl-Kaʿda 911/10 April 1506.

Al-Ṣaydāwī composed an extensive didactic *urdjūza* of nearly 250 verses on the musical modes (*anghām*) of the Syrian tradition, entitled *K. al-Inʿām* (or *Anʿām*) *fī maʿrifat al-anghām*. In addition to the twelve main modes (four labelled *aṣl* and eight *farʿ*) and the six so-called *āwāz* modes he describes another seven secondary modes called *buḥūr* (sing. *baḥr*). To illustrate their melodic development, al-Ṣaydāwī uses stave systems of seven coloured lines representing the degrees of one octave. Within the stave he marks the principal notes, the direction of melodic motion and some other details of performance by using coloured symbols and abbreviations derived from musical terms such as *maʾkhadh* and *rakz* (initial and final note), *ṣuʿūd* and *hubūṭ* (ascending and descending motion), slow motion (*bi ʾl-tartīb*; "step by step"), quick motion (*surʿatan*), sustaining of notes (*madd*), and places of "jumping" towards higher notes (*maṭāfira*, sing. *maṭfara*). The whole range of three octaves is represented by *abdjad* letters in the colours of the basic octave. As far as we know at present, al-Ṣaydāwī's musical notation is unique in Arabic (and also Persian and Turkish) music literature. It has, however, cognates in the stave systems of the Graeco-Latin *Musica enchiriades* (9th century) and in those given by Vincenzo Galilei (1581) and Athanasius Kircher (1650). The "little Arabic book on music" aroused considerable excitement when it reached Paris in 1634. It figures in Diderot's *Encyclopédie* (*Planches*, vii, 3-4) and in d'Herbelot's *Bibliothèque orientale* (ii, 758), and it was partly translated, around 1780, by Pigeon de Saint-Paterne on behalf of de La Borde.

Besides the *K. al-Inʿām*, al-Ṣaydāwī left some religious poetry, mostly *muwashshaḥāt*, including a so-called *nāṭik*, a didactic poem in which each verse is sung to another mode. The *nāṭik* was popular in the 16th and 17th centuries and still appears in the song text collection (ms. Berlin, or.oct. 1027) of the Syrian littérateur Ibn al-Khāl (d. 1117/1705).

SAYF IBN DHĪ YAZAN, SĪRAT, an Arabic popular romance of an epico-fantastical nature, inspired in a very remote fashion by the life of the eponymous individual [*q.v.*]

Known in numerous manuscript versions, of which the earliest dates from the 11th/17th century, the story was probably composed in Mamlūk Egypt between the 9th/15th and 10th/16th centuries; the identity of the hero's principal antagonist, Sayf (Sayfa) Arʿad, emperor of Ethiopia from 1344 to 1372, rules out an earlier date. As for the attribution of the story to Abu ʾl-Maʿālī (Muḥammad b. ʿAbd al-Bāķī, d. 991/1583-4), mentioned in numerous versions, this should be treated with caution, even though this author may have played a role in the composition of the work. The narrative material seems very composite; contrary to what might be expected, the old Yemenite historico-legendary tradition is in fact not much in evidence. On the other hand, a number of themes are perceptible which belong to the Midrashic tradition centred especially on the figure of Moses (A. Chraibi, *Dialectique de la surdétermination dans le* Sirat Sayf ibn Ḏī Yazan, in *Arabica*, forthcoming), also themes and motifs relating to international folklore, as well as foundation legends which seem typically Egyptian; also to be observed are convergences with shorter stories belonging to the genre of the *Thousand and One Nights*, in particular the *Tale of Adjīb and Gharīb*. It should be stressed that, until the present time, a meticulous narratological study of the novel in its entirety has yet to be undertaken; the same applies to a systematic comparison of the different manuscript versions, which might give a clearer impression of the process of composition of the story. The present article will be based essentially on the analysis of the printed version, which is characterised by the abundance of fantastic and marvellous themes, often with a parodic intention.

Unlike other major Arabic popular romances, such as the *Sīrat ʿAntara*, the *Sīrat Dhāt al-Himma*, the *Sīrat Baybars*, even up to a point the chronicle of the *Banū Hilāl*, which are all located in a definite and recognisable historical framework in spite of numerous anachronisms, the *Sīrat Sayf* is situated from the outset in the mythical primordial universe, where men and *djinns* associate together on familiar terms, where sorcerers, wizards and enchanters engage in dogged combat, competing for power or for the mastery of natural forces. This universe is steeped in impiety and the worship of false gods; only a few sages and a few anchorites observe and cherish the "Law of Abraham", which it will be the hero's task to propagate among the *djinn* of Mount Ķāf. From the point of view of structure, the romance consists of two major parts, a "Yemenite cycle" and an "Egyptian cycle", between which are interspersed various advantures following the classical pattern of the "quest". The Yemenite cycle, after a prologue evoking the conquests of Dhū Yazan, the father of the protagonist, and the foundation by his vizier Yathrib of what is to become Medina, destined to be the refuge of the future Prophet, follows a familiar theme. Sayf, abandoned in the desert on the orders of his mother, the sorceress Ķamariyya, who intends to take power into her own hands, is rescued by the king Afrāḥ. Falling in love with the latter's daughter, the beautiful princess Shāma, he is obliged to undergo various tests, in the course of which he establishes himself as the greatest warrior of his time, discovers the secret of

his birth, converts to monotheism and regains the throne of his fathers, having obtained the hand of his beloved (this marriage being only the first of a long series, the "Law of Abraham" being considered to allow unlimited polygamy). As well as to the courage of the hero, his success is owed to the help which he receives from a small group of loyal companions, among whom there appear numerous female characters, in particular the *d̲j̲inniyya* ʿĀḳiṣa, daughter of the White King and foster-sister of the protagonist, as well as the sage and magician ʿĀḳila. Among the enemies of Sayf, besides Ḳamariyya, who is executed after committing innumerable treacheries, figure the powerful Abyssinian emperor Sayf Arʿad and the two wizards Saḳardīs and Saḳardiyūn. The latter recognise in Sayf the hero whose destiny it is to implement the curse laid by Noah upon Ham and his descendents, dooming them to fall under the domination of the sons of Shem; however, the conflict seems to be primarily religious, with the Yemenite "Muslims according to the religion of Abraham" opposing the Abyssinian "worshippers of stars" and, more generally, pagans of all allegiances.

The first of the two "quests" serving as a link to the second cycle takes up the familiar folkloric theme of the search for a supernatural spouse who has disappeared (J.E. Bencheikh, Cl. Bremond and A. Miquel, *Mille et un contes de la nuit*, Paris 1991, 193-233). The second is constituted by an amalgam of various adventures, linked by a somewhat tenuous theme: to fulfil a promise made to the *d̲j̲inn* ʿAyrūḍ, who has fallen in love with ʿĀḳiṣa, Sayf sets out in search of the wedding jewellery of the Queen of Sheba, preserved among Solomon's treasure. A secondary "mini-cycle", possibly of Syrian origin and evoking the adventures of Dummar, elder son of Sayf, leads into the second section of the novel: returning from his quest, Sayf finds that his capital has been destroyed by Sayf Arʿad during his absence. On the advice of ʿĀḳila, he decides to lead his people into Egypt, which is still a desert and inhospitable land: the Nile, halted by a powerful spell, is blocked at the level of the Cataracts. Thanks to numerous supernatural helpers, Sayf succeeds in "liberating" the waters of the river. The remainder of the story recounts the foundation and the organisation of the new kingdom (numerous foundation legends), then the hero's final revenge on Sayf Arʿad as well as on Saḳardīs and Saḳardyūn; in the printed version, this is pursued through various episodes which are clearly later additions.

Despite some tedious passages and occasional clumsiness of style, the romance, which is of great interest for the study of Arabic narrative traditions, is not without appeal on account of its unrestrained exploitation, not devoid of irony, of marvellous and fantastic themes, which form the basis of a genuine literary work.

SAYF B. ʿUMAR, a compiler of historical narrations on early Islamic history. Virtually nothing is known about Sayf or his life, except that he lived in Kufa and probably belonged to the Usayyid clan, part of the ʿAmr branch of the tribe of Tamīm. Various sources, however, attach him—probably erroneously—to other tribal groups; accounts stating that he was of the Asad tribe stem from misreading his *nisba* "al-Usayyidī" as "al-Asadī", but he is also said to have belonged to the tribes of Ḍabba and Ḍubayʿa, or to the Barād̲j̲im, a group of five Tamīm clans (not, however, including Usayyid). According to the 8th/14th-century scholar al-D̲h̲ahabī, Sayf died in the time of al-Ras̲h̲īd (r. 170-193/786-809), but this may be merely al-D̲h̲ahabī's guess, deduced from Sayf's position in various *isnāds*.

Sayf's importance rests on the fact that his *Kitāb al-futūḥ al-kabīr wa 'l-ridda* was chosen by the famous historian al-Ṭabarī (d. 310/923) as his main source for the *ridda* and the early Islamic conquests. Sayf is also one of the few sources of information about the structure of the early Muslim armies, early Muslim government, and settlement in the garrison towns. The reliability of Sayf's narrations has long been contested, however, beginning already with the mediaeval *ḥadīt̲h̲* specialists and their biographers, who noted the suspect character of his *ḥadīt̲h̲*s; some accused him of *zandaḳa*, others simply noted that he put fabricated accounts (*mawḍūʿāt*) in the mouths of trustworthy transmitters. Many modern scholars, after examination of both the content and the *isnāds* of Sayf's accounts, have expressed similar doubts. Already de Goeje and Wellhausen pointed out the implausible chronology of Sayf's accounts when compared to those of Ibn Isḥāḳ, al-Wāḳidī, etc. The fanciful quality of many of Sayf's narrations, which are frequently fitted out with gratifying but suspect detail, and the tribal chauvinism of many accounts, in which leaders of his tribe of Tamīm engage with suspicious frequency in battlefield heroics, have also provoked critical comment. Sayf's *isnāds* have also been seen as problematic; his informants frequently cannot be traced in the available literature on traditionists. This has led at least one modern scholar, Murtaḍā al-ʿAskarī, to condemn Sayf as a subversive who invented his accounts and the names of his informants with the intent of spreading confusion and doubt in the bosom of the Muslim community.

On the other hand, Landau-Tasseron has pointed out that Sayf's accounts frequently do not contradict other accounts, but merely provide different information, and has argued that we cannot expect many of Sayf's informants to appear in the traditionist literature since most were not specialists in *ḥadīt̲h̲*. Furthermore, Sayf retails not only pro-Tamīm traditions, but also accounts that highlight other tribes, suggesting that he may have collected various tribal traditions from Kūfa. Many of his accounts display syntactic and lexical peculiarities that may be reflections of archaic tribal dialects. Close inspection of Sayf's accounts conveyed from Abū ʿUt̲h̲mān Yazīd b. Asīd al-G̲h̲assānī, an informant identifiable in no other source, suggests that they are not fabricated wholesale by Sayf, but represent selections from two different written sources, one compiled by Abū ʿUt̲h̲mān himself, the other by an intermediary informant who drew on Abū ʿUt̲h̲mān, each work having a different topical focus.

Comparison of the accounts from Sayf found in al-Ṭabarī with those found in Ibn ʿAsākir's *Taʾrīk̲h̲ madīnat Dimas̲h̲ḳ* suggests that Sayf's original compilation on the *ridda* and conquests may have consisted of a long, sustained narrative with occasional *isnāds*

(rather than the short pieces, each prefaced by an *isnād*, that are found in al-Ṭabarī's and Ibn ʿAsākir's selections). Comparison also reveals that the original work of Sayf featured frequent poems, most of which have been edited out of al-Ṭabarī's extracts.

Sayf's information on institutional matters has been virtually indispensable to historians. Yet uncertainty persists about the reliability of his narrations of the *ridda* and conquests, which raises the question why al-Ṭabarī, who is generally praised for his sober historical judgment, favoured Sayf's narrations of these events over others that seem less dubious. Humphreys attributes al-Ṭabarī's choice to the eirenic and moralising qualities of Sayf's interpretation of Islamic history, which smoothed over the conflicts that historically divided the Companions of the Prophet. A definitive study of the historiographical complexities of all Sayf's traditions remains an important desideratum.

SAYF AL-DAWLA, ABU 'L-ḤASAN ʿALĪ b. Abi 'l-Haydjāʾ ʿAbd Allāh b. Ḥamdān b. Ḥamdūn b. al-Ḥārith Sayf al-Dawla al-Taghlibī (17 Dhu 'l-Ḥidjdja 303-24 Ṣafar 356/22 June 916-9 February 967), *amīr* of Aleppo and of northern Syria, also of Mayyāfāriḳīn and of western Djazīra (Diyār Bakr and Diyār Muḍar), from 333/945 until his death. From his time until the present day, he has personified the Arab chivalrous ideal in its most tragic aspect. A peerless warrior, magnanimous vanquisher of rebellious Syrian tribes, he led with audacity, and for a long time with success, the *djihād* against the Byzantine enemy. A prince of great wealth, he spent large sums of money on the ransom of Muslim prisoners. An enlightened poet and philologist, he maintained a literary court more brilliant than that of any other Islamic sovereign. A man of Shīʿī leanings, he suffered terrible ordeals towards the end of his life, defeat at the hands of the Byzantines, the brutal killing of members of his family, debilitating illness and the treachery of his most trusted lieutenants. This individual has inspired an abundant literature, mythical as well as historical, of which a full account cannot be given here. Al-Dhahabī appends to his name the following qualificatives: *maḳṣad al-wufūd, kaʿbat al-djūd, fāris al-islām, ḥāmil liwāʾ al-djihād* (*Sīrat aʿlām al-nubalāʾ*, ed. Arnaʾūṭ and al-Būshī, Beirut 1983, xvi, 187, henceforward abbreviated to *Sīra;* Abu 'l-Faḍl Bayhaḳī, *Taʾrīkh*, Arabic tr., Cairo 1956, 408, a long eulogy by al-Thaʿālibī; Ibn Khallikān, *Wafayāt al-aʿyān*, ed. Iḥsān ʿAbbās, iii, 401).

The poetic circle

Among the men of letters, the majority of them from ʿIrāḳ or from Djazīra, whom he invited to his court or who praised him in order to benefit from his generosity, certain names are worth mentioning: the *khaṭīb* of the *djihād* Ibn Nubāta al-Fāriḳī, the philosopher Abū Naṣr Muḥammad b. Tarkhān al-Fārābī, the poets Abū Firās al-Ḥamdānī (various accounts of his captivity, A.-M. Eddé, *Description de la Syrie du nord d'Ibn Shaddād*, Damascus 1984, 288, henceforward abbreviated to *Description*), Abu 'l-Ṭayyib al-Mutannabī (on the last-named, see Ibn al-ʿAdīm, *Bughyat al-ṭālib*, ed. Zakkār, henceforward abbreviated to *Bughya*, 639-86), Abu 'l-Ḳāsim Naṣr b. Khālid al-Shayzamī, the *amīr*'s foil, Abu 'l-ʿAbbās Aḥmad b. Muḥammad al-Nāmī al-Miṣṣīṣī, Abu 'l-Faradj ʿAbd al-Wāḥid al-Babbaghāʾ, Abu 'l-Faradj Muḥammad al-Waʾwaʾ, Abū Bakr al-Ṣanawbarī, Abu 'l-Nadjīb Sadād b. Ibrāhīm al-Djazarī al-Ẓāhir, Abu 'l-Ḥasan al-Sarī b. Aḥmad b. al-Sarī al-Kindī al-Raffāʾ al-Mawṣilī, the two brothers al-Khālidī Abū Bakr Muḥammad and Abū ʿUthmān Saʿīd, sons of Hāshim b. Waʿula al-ʿAbdī al-Mawṣilī, al-Ṭarsūsī al-Nadjrānī, Abū Muḥammad al-Mawṣilī, Abū ʿAbd Allāh al-Ghamr b. Abi 'l-Ghamr al-Khalīʿal-Shāmī, Ibn Baṭṭa, al-Waṣṣāf, the Kilābī poet al-Aʿsar b. Muhārish, the *Sharīf* poet Abū ʿAbd Allāh Aḥmad b. al-Ḥusayn al-Afṭasī al-Sakrān, the composer of despatches and poet Abu 'l-Fadl b. Sālim al-ʿUṭāridī al-Manbidjī, the *kātib* Abū ʿAlī Aḥmad b. Naṣr al-Bāziyār, the astrologer Abū ʿAbd Allāh al-Baghdādī, Abu 'l-Ḥasan al-Karkhī, Abū ʿAbd Allāh al-Baṣrī, Abū Muḥammad al-Tinnīsī, Abu 'l-Ḥusayn ʿAli b. Muḥammad al-Shimshāṭī, Ibn Ṣadaka al-Mawṣilī al-Naḥwī, Abū ʿAlī al-Ḥasan b. Aḥmad al-Fasawī al-Fārisī al-Naḥwī al-Lughawī, Abu 'l-Ṭayyib ʿAbd al-Wāḥid b. ʿAlī al-Ḥalabī al-Lughawī, Abū ʿAlī Muḥammad b. al-Ḥasan al-Lughawī al-Ḥātimī, the Ḥanafī *ḳāḍī* Abū Saʿīd al-Ḥasan b. ʿAbd Allāh b. al-Marzubān al-Ṣayrafī al-Naḥwī, the *ʿāmil* of Antioch Abū ʿAbd Allāh al-Ḥusayn b. Muḥammad b. al-Ṣaḳr al-Maʿlathāwī al-Mawṣilī, the *kātib* al-Ḥusayn b. ʿAlī al-Maghribī and his son ʿAlī, the Ṣūfī Abu 'l-Ḳāsim Aḥmad b. Ḥumaydān al-Rummānī, Ibn al-Khashshab and the Muʿtazilī *mutakallim* Abū Bakr Aḥmad b. ʿUbayd Allāh Ibn Bint Ḥāmid, who conducted a theological controversy regarding the Ḳurʾān with Abū ʿAbd Allāh al-Ḥusayn Ibn Khālawayh, tutor to the sons of Sayf al-Dawla, in the latter's presence. The accounts concerning them demonstrate that all topics were apparently dealt with, religious—*ḥadīth, kalām*, the Ḳurʾānic readings—as well as linguistic, historical, philosophical, astronomical, astrological or purely literary. Poetical contests were particularly frequent. The index of *Bughya*, 5212, under ʿAlī b. ʿAbd Allāh Sayf al-Dawla, makes it possible to trace the biography of the majority of the individuals who adorned the literary soirées of the *amīr* at Aleppo or at Mayyāfāriḳīn (see also M. Canard, *Histoire de la dynastie des Hʾamdanides*, henceforward abbr. to *Hʾamd.*, 18, 33; Brockelmann; Sez-

gin; and *EI*[2], under the writers mentioned). The accounts concerning al-Sarī, *Bughya*, 4202-10, 4403, describe in a number of instances the assemblage of poets waiting in the vestibule, *al-dihlīz*, to be received at the court of Sayf al-Dawla, in the hope of being awarded a few hundred dirhams. The influence of this court extended far afield. The poet Sarī, having been obliged to leave Sayf al-Dawla on account of the jealousy of the al-Khalīdī brothers, lived miserably in Baghdād, hounded by their hatred; hence his jubilation, recounted by Ibn al-ʿAdīm, when he received much later from a *wazīr* a gift of 3,000 dirhams. He felt able to show himself in the street, wearing fine clothing and a turban five cubits in length, followed by magnificent slaves, then he died of happiness. In all the Islamic capitals of the time, the parasitism of the courtier-intellectuals was justified by the propaganda which their works disseminated to the advantage of the local prince. The poets, in particular, competed fiercely for the attainment of glory and wealth, bearing witness to the glory and the wealth of the prince. At Aleppo, the major official poets such as al-Mutanabbī maintained in their turn a court of secondary poets around them (*Bughya*, 4514-15), which did not prevent the latter from abandoning Sayf al-Dawla for Kāfūr in 346/957, the year of the great conspiracy.

On the other members of the family, see ḤAMDĀNIDS. The *nisba* al-Taghlibī links this family to an Arab tribe, living in Djazīra in the ʿAbbāsid period. Ibn Ḥazm is the only one who describes the Banū Ḥamdān as *mawālī* of the Banū Asad. The family always maintained very close ties with the Kurdish tribes, and was possibly itself of Kurdish origin (*H*ʾ*amd.*, 287-8, 305-6).

Early military career of the young Ḥamdānid

While in Baghdād, the political authority of the ʿAbbāsid caliph was subordinated to that of the *amīr al-umarāʾ* Ibn Rāʾiḳ, in Diyār Rabīʿa and at Mawṣil the governor was al-Ḥasan b. ʿAbd Allāh b. Ḥamdan, later renowned under the *laḳab* of Nāṣir al-Dawla. In 324/936, the latter promised his brother, ʿAlī b. ʿAbd Allāh, the future Sayf al-Dawla, aged 21 lunar years, the gift of Diyār Bakr in exchange for his aid in confronting the Daylamī ʿAlī b. Djaʿfar, governor of Mayyāfāriḳīn, who was in revolt. ʿAlī b. ʿAbd Allāh succeeded in preventing ʿAlī b. Djaʿfar from receiving the assistance of the feudal chiefs of Armenia and obtained from his brother the *amān* appointing him governor (*H*ʾ*amd.* 478). Then he intervened at Diyār Muḍar, in the region of Sarūdj, against the Ḳaysī tribes of Numayr and Ḳushayr which were creating disorder, and in 325/937 he took official possession of this province. In 328/939-40, ʿAlī b. ʿAbd Allāh summoned the princes of the region, Armenians and Georgians, Christian or Muslim Arabs, to a meeting on the shore of Lake Van. He obtained their submission and their assistance in assuring the security of the Djazīra by means of a network of fortresses, along the routes linking Persia, ʿIrāḳ and Syria with Byzantine Anatolia, the Black Sea, the Caucasus and the Caspian.

In 330/942, on behalf of his brother who had acceded in his turn to the post of *amīr al-umarāʾ* and had received the *laḳab* of Nāṣir al-Dawla, ʿAlī b. ʿAbd Allāh victoriously confronted Abu ʾl-Ḥusayn al-Barīdī near al-Madāʾin, and received on this occasion the *laḳab* of Sayf al-Dawla. For the first time, *laḳabs* in the form of *-dawla* were awarded to persons who did not occupy the post of *wazīr*, head of the caliphal civil administration, but were soldiers, one of whom exercised no supreme authority (*H*ʾ*amd.*, 426, Hilāl al-Sābiʾ, *Rusūm dār al-khilāfa*, ed. Mikhāʾīl ʿAwwād, 127-8).

Sayf al-Dawla was then apparently appointed to the post of *walī al-ḥarb wa ʾl-ṣalāt* at Wāsiṭ, which led to his confrontation with Aḥmad b. ʿAlī al-Kūfī, formerly the *wazīr* in practice of Ibn Rāʾiḳ and fiscal administrator of the same province, in regard to the duty to be levied on a barge. The attitude of the two protagonists reveals the depth of the corruption which was then rife in ʿIrāḳ, involving financiers, private sector traders and the holders of civil or military power. In 331/943, Sayf al-Dawla encountered opposition on the part of Turkish officers and soldiers under his command over the issue of pay; this opposition was led by Tūzūn. Nāṣir al-Dawla was powerless to rescue him, being himself in difficulties in Baghdād, the Sāmānid *amīr* of Transoxiana and the Ikhshīd of Egypt, who coveted Mawṣil (*H*ʾ*amd.*, 445), having refused to help him. Sayf al-Dawla reached Baghdād and then joined his brother, who had taken refuge at Mawṣil after the nomination of Tūzūn as *amīr al-umarāʾ*.

The seizure of Syria

In 328/939-40, Ibn Rāʾiḳ had detached northern Syria from the control which the Ikhshīd of Egypt had exercised there since 324/935-6, but in 329/941 he left Damascus with the aim of regaining supreme power in Baghdād and in Radjab 330/April 942, he was assassinated at Mawṣil. Nāṣir al-Dawla wanted to return to northern Syria, which the Ikhshīd was intent on re-occupying, to the direct control of the ʿIrāḳī caliphate. His troops easily took possession of the valley of the Balīkh, from Ḥarrān to Raḳḳa, but certain of his officers sided with the Ikhshīd, and the Ḥamānids who had remained loyal were confronted, in the region of Khābūr, by the governor of Raḥba, ʿAdl al-Bakdjamī, and by the Banū Numayr. With the surreptitious support of the Ikhshīd, and supplied with Turkish and Daylamī contingents, ʿAdl marched on Naṣībīn, where he took possession of the treasure of Sayf al-Dawla. Abū ʿAbd Allāh al-Ḥusayn b. Saʿīd b. Ḥamdān, the brother of the poet Abū Firās, captured ʿAdl, who was executed in Baghdād in Shaʿbān 331/May 943. Nāṣir al-Dawla then entrusted this cousin, Abū ʿAbd Allāh b. Saʿīd, with the task of taking control of northern Syria, of Diyār Muḍar and of the frontier posts. Having been obliged to take Raḳḳa by assault, Abū ʿAbd Allāh occupied Aleppo without difficulty in Radjab 332/943-4.

Sayf al-Dawla was quite prepared at this time to take control of Syria himself; it was an idea born of resentment when, having returned to Naṣībīn, he found himself under-employed and badly paid. He campaigned against the Banū Numayr in the region of al-Dāliya but, betrayed by his Arab troops, he was defeated in the winter of 332/943-4 on a number of occasions by Tūzūn, and he joined the caliph al-Muttaḳī at Raḳḳa, hoping to have himself recognised in his turn as *amīr al-umarāʾ*; but he encountered the caliph's hostility in this matter and had his rival, Muḥammad b. Īnāl al-Turdjumān, assassinated (various accounts concerning this topic, *H*ʾ*amd.*, 497). Having agreed to recognise Tūzūn's sovereignty over ʿIrāḳ, from Sinn to Baṣra, his brother Nāṣir al-Dawla had officially renounced his claim to the title *amīr al-umarāʾ* in exchange for recognition of his authority over Djazīra and northern Syria, from Mawṣil to the limits of Syrian territory.

During the summer of 332/944, the Ikhshīd arrived at Aleppo, which was hastily abandoned by al-Ḥusayn b. Saʿīd. In Muḥarram 333/September 944, the Ikhshīd presented himself in his turn at Raḳḳa before the caliph al-Muttaḳī, to whom he offered his services; obtaining no definite response, he returned to Egypt.

Nāṣir al-Dawla was alleged then to have said to Sayf al-Dawla, with whom he was reconciled: "Syria lies before you, there is no one in this land who can prevent you taking it." His cousin Ḥusayn b. al-Saʿīd having renounced his Syrian ambitions in his favour, Sayf al-Dawla decided to take control of Aleppo and Damascus.

Sayf al-Dawla made his entrance into Aleppo in Rabīʿ I 333/October 944, in the company of Abu 'l-Fatḥ ʿUthmān b. Saʿīd b. al-ʿAbbās b. al-Walīd al-Kilābī, a tribal chieftain whose brother Abu 'l-ʿAbbās Aḥmad was then governor of the city and who had himself previously held the post on behalf of the Ikhshīd. Having regained the capital of northern Syria, the Ḥamdānid and the Kilābī toured the region from the crossing of the Euphrates riding in the same *ʿammāriyya*, with the aim of observing at first-hand the condition of the villages.

The Ikhshīd was not readily prepared to accept the loss of northern Syria and of the frontier towns facing the Byzantines. He opposed Sayf al-Dawla when the latter revealed his aspiration to bring Ḥimṣ into his domain. The Ḥamdānid routed an Ikhshīdid army commanded by Kāfūr at Rastan and occupied Ḥimṣ. From ʿAyn al-Djarr, last stage in the Biḳāʿ before the crossing of the Anti-Lebanon, he sent to the inhabitants of Damascus a letter which was read on the *minbar* of the Great Mosque (Th. Bianquis, *Les derniers gouverneurs ikhshidides à Damas*, in *BEO*, xiii [1970], 186). The Ikhshīd left Egypt at the head of an army in Ramaḍān 333/April 945. He proposed to accept Sayf al-Dawla's authority over northern Syria, the *djunds* of Ḥimṣ and of Ḳinnasrīn, and over the frontier sites. Sayf refused, but was obliged to leave Damascus as a result of the hostility of the populace, and joined battle with the Ikhshīd in Shawwāl 333/May-June 945. Defeated by means of a strategic ruse, Sayf al-Dawla withdrew to Raḳḳa. The Ikhshīd army ravaged the neighbourhood of Aleppo and maltreated the population. In Rabīʿ I 334/October 946, a treaty on the basis of the Ikhshīd's former proposals was negotiated by the intermediary of the Ḥusaynid *sharīf* Abū Muḥammad al-Ḥasan b. Ṭāhir b. Yaḥyā al-Nassāba (*Hʾamd.*, 584, details of the negotiations in *Bughyā*, 2408-12, and Ibn Saʿīd al-Andalusī, *al-Mughrib fī ḥulā al-Maghrib*, Cairo 1953, 194). A partition of Syria was agreed: to the south of the new frontier, Ṭarābulus, Baʿlabakk, Labwa (*Bughya*, 371) and Damascus remained attached to Ikhshīdid Syria; to the north of this line, ʿArḳa, Djūsiya and Ḥimṣ formed part of the principality of Aleppo. The Egyptian leader also committed himself to paying an annual tribute to compensate for the renunciation of claims to Damascus on the part of Sayf al-Dawla, who was obliged to marry the daughter of ʿUbayd Allāh b. Ṭughdj, the Ikhshīd's brother. The signing of the ceremony gave the caliph al-Muṭīʿ the opportunity to ratify the amirate of northern Syria and the *laḳab* of Sayf al-Dawla by means of the sending of ceremonial attire which arrived in Aleppo in the spring of 335/946 (al-ʿAẓīmī, *Taʾrīkh Ḥalab*, ed. Zaʿrūr, 291, henceforward abbr. to al-ʿAẓīmī).

In Dhu 'l-Ḥidjdja 335/July 947, the Ikhshīd died in Damascus. Sayf al-Dawla immediately marched on this city where he tried in vain to confiscate the minor estates of the Ghūṭa (Ibn al-ʿAdīm, *Zubda*, ed. Sāmī Dahhān, IFEAD, Damascus 1951, i, 116-17, henceforward abbr. to *Zubda*). He left for Palestine, but defeated by Kāfūr, the black eunuch leading the armies of Unūdjūr b. al-Ikhshīd, in Djumādā I 335/December 946, the Ḥamdānid withdrew to the region of Damascus, where he was unobtusively reunited with his mother, then retreated towards Ḥimṣ, following the eastern route by way of Ḳarā, a difficult route in winter. In the spring of 335/947, having rallied troups among the Arab tribes of ʿUḳayl, Numayr, Kalb and Kilāb, Sayf al-Dawla advanced on Damascus and was once more defeated by the Ikhshīd army which entered Aleppo in Dhu 'l-Ḥidjdja 335/July 947. In the autumn of 336/947, Sayf al-Dawla re-occupied Aleppo, this time definitively.

Pursuing the Ikhshīd's policy of appeasement, Kāfūr negotiated with Sayf al-Dawla. The previous treaty was ratified but the Egyptians retained Damascus definitively and no longer paid tribute to the Hamdānids (topographical details of the Ḥamdānid possessions in northern Syria, *Zubda*, i, 164-5, on the occasion of the signing of the armistice between Ḳarghūya and the Byzantines in 359/968). This frontier between northern Syria, inclined towards ʿIrāḳ, the Djazīra and Anatolia, and southern Syria, closely linked to Egypt and Arabia, was to function in an almost continuous manner until the Mamlūk seizure of the province in 658/1260.

During the remainder of his life, Sayf al-Dawla had no further confrontations with the Ikhshīds. The Egyptian power, threatened at this time by the Fāṭimids installed in Ifrīḳiya, gave up its claims to northern Syria, according to the judicious principle whereby abandoning a peripheral province was less costly than maintaining an army on a war-footing and less dangerous for the authority of the *amīr*. Master of a large territory, the traditional glacis of Egypt, comprising the Mediterranean coast from Ṭarābulus al-Gharb to Ṭarābulus al-Shām, and the Red Sea as far as Yemen, the son of the Ikhshīd retained the greater part of his father's former power and wealth, leaving to the Ḥamdānid the costly defence of the frontier facing resurgent Byzantium.

Sayf al-Dawla was henceforward the master of northern Syria, of the western and eastern frontier posts of the Diyār Muḍar and Diyār Bakr. Mayyāfāriḳīn, at the junction between these two western provinces of the Djazīra, was his second capital. The embellishment of the city and the reinforcement of its defences were to be continued under the Kurdish Marwānid dynasty [*q.v.*] which made it its capital, in the 5th/11th century. Sayf al-Dawla built at Mayyāfāriḳīn municipal and defensive constructions, on a considerably larger scale than his earlier buildings in Aleppo (on the Palace of Ḥalba constructed by Sayf al-Dawla outside Aleppo and traversed by the Ḳuwayḳ, *Bughya*, 349-50, 4489, Canard, *Sayf al Daula, recueil de textes*, henceforward abbr. to *Recueil*, 204-5, *Hʾamd.*, 642-4).

For Diyār Muḍar and Diyār Bakr, Sayf al-Dawla remained theoretically the delegate of his brother, the prince of Djazīra, resident at Mawṣil. For northern Syria and the frontier regions, a less clearly defined chain of vassality existed since the ʿAbbāsid caliphate, despite the sending of an envoy to Sayf al-Dawla in 335/946, seems from 332/943-4 onward to have recognised only one provincial authority, Nāṣir al-Dawla, receiving "in appanage" all the territories to the north and north-west of ʿIrāḳ as far as the Mediterranean and the Byzantine frontier. On the other hand, functioning in a Kurdish and Daylamī environment, the Ḥamdānid family had embraced the rule of primogeniture, and Sayf al-Dawla always showed great respect towards his elder brother, although the latter's real power was much inferior to his own (well known "unbooting" episode, *Zubda*, i, 128-9, *Bughya*, 2433-7, *Hʾamd.*, 621-2). Furthermore, he appointed numerous Ḥamdānids, including sons of

Nāṣir al-Dawla, to posts of authority in his states (*H'amd.*, 595-7, supplies the list).

After 336/947 he visited Djazīra on several occasions. The first time, in 338/950 he travelled by way of Rakka to Mayyāfārikīn, where in turn his mother, Nuᶜm and his son, Abu 'l-Haydjā' ᶜAbd Allāh had recently died, and returned to Aleppo via Āmid. This expedition, at the head of 7,000 troops, was an opportunity to display his wealth and the power of his army.

Since 332/943, the Kurd Daysam had resided in Aleppo as a guest of Sayf al-Dawla. In 344/955 he left for Adharbāydjān, where he established the *khuṭba* on behalf of the Ḥamdānid but, defeated by Marzūbān and handed over to the latter by the Armenian prince of Vaspurakan, Derenik/Ibn al-Dirānī, he was put to death. Sayf al-Dawla lost his influence in Armenia until 354/965 when, following the revolt of his *ghulām* Nadjā, he inherited the Armenian places which the latter had appropriated from Abu 'l-Ward/Apelbart II b. Abī Sālim, in the region of Lake Van. The fate of these places when Abū Taghlib, the nephew of Sayf al-Dawla, took possession of Diyār Bakr, is unknown.

Suppression of the tribes

Sayf al-Dawla was obliged to assert his authority in northern Syria by confronting the Arab tribes, whose aggressiveness had been increased by a very positive demographic situation. At the time of his arrival, the region of Ḥimṣ had been controlled since the Umayyad period by the Yemeni tribes of Ṭayyi' and Kalb, semi-sedentarised. To the north, the Ḳaysī tribes, ᶜUḳayl, Numayr, Kilāb, Kaᶜb and Ḳushayr, still nomadic, held the plain between the Orontes and the Euphrates and beyond the river, in Diyār Muḍar, threatening longer-established Arab communities. Taghlib had been repulsed to the north and east of the Djazīra (attempt at devising a map of the tribes in Bianquis, *Raḥba et le Diyar Muḍar*, ... in *BEO*, xli-xlii [1989-90, publ. 1993], 23-53). The region of Maᶜarrat al-Nuᶜmān was the fief of the Yemeni Tanūkh, formerly converted to Christianity and entirely sedentary. The coastal positions between Ṭarābulus and al-Lādhiḳiyya were inhabited by the Yemeni Bahrā' and by Kurdish groups.

In 336-7/947-8, after a difficult siege, Sayf al-Dawla took possession of the fortress of Barzūya, held by a Kurdish brigand who controlled the lower valley of the Orontes and the route joining Aleppo to al-Lādhiḳiyya. He campaigned throughout the littoral range and on the coast, as well as on the slopes of the valley of the Orontes where his primary objectives were to defend the interests of the Bahrā' and to protect the Kalb, who were his allies against the Kilāb. At the end of the winter of 337/949, a Ḳarmaṭī agitator by the name of Ibn Hirrat al-Ramād al-Khāridjī, who had claimed the titles of *al-Hādī* and of *Ṣāḥib al-khāl al-Mubarka'*, incited the Kalb and the Ṭayyi' of central Syria to revolt, and imprisoned Abū Wā'il, the governor of Ḥimṣ (*H'amd.*, 603). Sayf al-Dawla crushed the rebels, killed the Ḳarmaṭī and freed Abū Wā'il. The following year, another revolt associated with the Ḳarmaṭīs took place in the region of Damascus; this time, the rebels were ᶜUḳaylids, i.e. Ḳaysīs.

The Ḳaysī tribes regularly caused instability in northern Syria between 338/950 and 343/954, provoking limited campaigns of repression on the part of the Ḥamdānids (*H'amd.*, 602-18). The Bedouin refused to return to the arrangement whereby they were kept away from the cultivated zones, where they wanted to pasture their cattle and extort ransoms from the villagers. The revolt of winter and of spring 344/955 erupted to the south-east of Aleppo, in the region of the lake of Djabbūl and of Ḳinnasrīn. This was not a tribal movement but a protest against social conditions since it united Bedouin, Yemenis, Kalb and Ṭayyi', and Ḳaysīs, ᶜĀmir b. Ṣaᶜṣaᶜa, Kaᶜb b. Rabīᶜa, ᶜAdjlān b. ᶜAbd Allāh, Kilāb, Numayr and Ḳushayr, thus prefiguring the great uprisings against the Fāṭimids of the following century. The repression imposed by Sayf al-Dawla in the course of June of the same year is known to the smallest detail, as a result of the analysis by Canard of the poems of al-Mutanabbī and of Abū Firās, as well as of commentaries on their work. This was a desert policing operation perfectly planned and rigorously executed. It could have ended with the total extermination, through warfare and thirst, of all the tribes, women and children included, between Salāmiyya, Tadmur and the Euphrates, if Sayf al-Dawla had not been influenced by his feelings of solidarity and his sense of Arab honour. Later, the heavy armies of the Fāṭimids, composed of Berber horsemen and Turkish *ghulāms*, had neither the same ability to win battles with minimal loss of life nor the same sensitivity in avoiding unnecessary civilian casualties.

Sayf al-Dawla never again had to face Bedouin revolts. The Numayr had been expelled to the north of the Euphrates, to the Diyār Muḍar around Ḥarrān, where they were to form a principality in the following century, the Kalb migrated towards Tadmur and into the plain between Ḥimṣ and Dimashḳ, the Ṭayyi' took refuge in the Djawlān and on the plateaux of Transjordania. The small Ḳaysī tribes having been either eliminated or banished to the north of the Euphrates, the Banū Kilāb were left as the only powerful formation of northern Syria. Wisely, they became reconciled to the Ḥamdānid and sent armed contingents to serve under him. They pursued a policy of assistance to the official power and of peaceful penetration of the urban milieu which was to assure the success in the following century of the principality of the Banū Mirdās [*q.v.*]. Once security had been restored, Sayf al-Dawla entrusted to relatives or to close associates the delegation of local powers based on fortified sites (al-ᶜAẓīmī, 192). The central administration at Aleppo and at Mayyāfāriḳīn was limited, being confined to fiscal issues and the conduct of war.

The war against Byzantium

Sayf al-Dawla was motivated throughout his life by the desire to be a *ghāzī*, a knight of the *djihād*, who confronted the Byzantines in more than forty battles. Numerous texts, prose or poetry (*Bughya*, 4682; *Recueil, passim*) reveal the extent to which the period was marked by a well-founded fear of a Byzantine offensive against the Muslim lands of Cilicia and of Djazīra and by a militaro-religious brand of piety which induced professional soldiers and young civilians, from all over the Muslim East, to risk their lives on the frontier facing Byzantine troops. The significant role of Tarsus in the ideology of religious asceticism and of the military efficacy of the frontier *djihād* against the Byzantines, is developed in *Bughya*, 180-1, which mentions Sayf al-Dawla (see also C.E. Bosworth, *The city of Tarsus and the Arab-Byzantine frontiers in early and middle ᶜAbbāsid times*, in *Oriens*, xxxiii [1992], 268-86).

A detailed description of the frontier military operations of Sayf al-Dawla having no place here, mention of the most important dates will suffice. In fact, Canard has compiled a complete account of combats between Ḥamdānids and Byzantines, based on the detailed analysis of a very large corpus of Arabic, Greek, Syriac and Armenian texts, as well as on his vast erudition regarding historical geography (*H'amd.*,

715-862, including for the period of Sayf al-Dawla, 741-828). Few new texts have been published since then, although recent works dealing with the strategy, tactics, arms and military training of the Byzantines deserve mention (G. Dagron, *Guérilla, places-fortes et villages ouverts à la frontière orientale de Byzance vers 950*, in *Castrum*, iii [Madrid-Rome 1984]. In the Arab domain, no comparable recent study exists to this writer's knowledge.

Unlike the Byzantine *basileis* who, supported by the substantial resources of an extensive empire were equipped to pursue, after 314/926, a project of reconquest of eastern Anatolia, of Cilicia and of northern Syria, Sayf al-Dawla, *amīr* of a reduced principality, had no strategy other than a policy of defence of the frontier, reinforcement of the towns which were threatened, and reconstruction and repopulation of the latter after their destruction by the Byzantines. This defensive activity was interspersed with raiding expeditions into the interior of Byzantine territory: "they threw themselves against al-Ṣafṣāf and Wādī Sābūr, they burned the towns, took the children into captivity, they slaughtered the parents, they took fortresses by assault; this was a terrible and glorious expedition" (*Bug̲h̲ya*, 4293; *Recueil*, 87). Such attacks provided booty and facilitated the exchange of prisoners, but no mention is made of a predetermined plan for the methodical conquest of new towns and new territories. However, studies ought to be made concerning tactics, preparation for battle, placing of ambushes, the use of a variegated army made up of diverse ethnic groups, Daylamīs, no doubt the most numerous, Turks, Kurds, Arabs, negroes, and their respective weapons, as well as the cost of recruitment, maintenance and operations of the army, the cost of the damage caused by occupations and revolts, and the relationship between this cost and the various fiscal measures which financed the war. The corpus of sources should make it possible to go even further than Canard went in this domain.

The Byzantines continued with their effort at breaking through on the Armenian front. Even before becoming *amīr* of Aleppo, in 324/936 the future Sayf al-Dawla had led an expedition against the Byzantines and in support of Sumaysāṭ [*q.v.*], which was to fall soon afterwards. His first victory dates from the autumn of 326/938, confronting the Domesticus John Corcuas, who commanded a large army. In 328/939-40, he conducted operations in Armenia in order to secure the allegiance of the Armeno-Arab *amīrs*, and he acquired on this occasion renown as a champion of the *d̲j̲ihād* in the Muslim world. Once installed in Aleppo, Sayf al-Dawla engaged in limited operations against the Byzantines in the winter of 333/945, followed in autumn 335/946 by an exchange of prisoners, but real hostilities did not begin until 336/947, when the treaty with Kāfūr acknowledged Sayf al-Dawla's domination of northern Syria and responsibility for the frontier with Byzantium.

The triumphant years

In the thirty years which followed, Sayf al-Dawla was frequently at war, and the theatre of operations was situated at this time in the southern sector of the frontier, between Diyār Bakr and the Mediterranean, principally in Cilicia; although master of the coastal region of northern Syria, he never engaged in naval warfare. It was the Egyptian fleet which scored naval victories against the Byzantines at this time (al-ʿAẓīmī, 298-9). The wars conducted after his installation at Aleppo and Mayyāfāriḳīn may be divided into two periods. From 336/947 to 346/957, Sayf al-Dawla enjoyed overall success, then, from 350/961 to his death in 356/967, he faced with fortitude a series of grave defeats and saw even Aleppo briefly occupied by the Byzantines, then threatened again. He had to deal first with the Domesticus Bardas Phocas, already an old man, then with his three sons Nicephorus, Leo and Constantine, formidable strategists.

In 336-8/947-50 the Byzantines had taken Marʿas̲h̲, then Ḳālīḳalā, threatening Tarsus. Sayf al-Dawla organised the response. After some success, his campaign ended in the autumn of 339/950, near Buḥayrat al-Ḥadat̲h̲, with total defeat, the *g̲h̲azwat al-muṣība*, the calamitous expedition, from which he personally escaped by a miracle. To strengthen his base of operations, in 341/952 Sayf al-Dawla rebuilt numerous Cilician strongholds, including Marʿas̲h̲, and was thus able to repulse a Byzantine offensive. Constantine Porphyogenitus sent a delegation to Aleppo with the offer of a treaty, but in vain. During the summer of 342/953, near Ḥadat̲h̲, commanding a reduced cavalry force, Sayf al-Dawla crushed the army of the Domesticus, who was wounded and one of whose sons died in captivity at Aleppo. With the same eloquence with which they had bemoaned his defeat, the poets immortalised the victory of Sayf al-Dawla, who once again refused to negotiate a treaty (on the complex relationship between Byzantium and Aleppo, see *Hʾamd.*, 778-9). Another victory over the ponderous army of the Domesticus in the autumn of 343/954 allowed Sayf al-Dawla to complete the reconstruction of Ḥadat̲h̲, which successfully withstood a Byzantine expedition during the summer of 344/955. The old Domesticus Bardas Phocas, a miser and a poor tactician, was then replaced by his son, the future *basileus* Nicephorus II Phocas, *Patricius* and *Strategus* of the Anatolica, Domesticus of the Schola, assisted by his younger brother Leo and by the Armenian John Tzimisces. In the spring of 345/956, when Tzimisces tried to intercept him on his return, laden with spoils, from an expedition towards Ḥiṣn Ziyād and Tall Biṭrīḳ, Sayf al-Dawla won another victory, having crossed a stream on material furnished by the engineer corps of the army. In the autumn, he made his way to Cilicia to support Tarsus, threatened by the advancing fleet of the Theme of Cibyrrheotes.

The successful Byzantine response under Nicephorus Phocas

However, his fortunes changed, and Sayf al-Dawla was unable to avenge the capture and destruction by the Domesticus of the fortress of Ḥadat̲h̲ during the summer of 346/957 because he discovered a conspiracy of his senior officers in Aleppo to deliver him to the Byzantines in the course of a campaign; he ordered the execution of 180 *g̲h̲ulāms* and more than 200 others had hands, feet and tongues amputated and torn out (*Zubda*, i, 127-8). The summer and autumn of 347/958 saw near Āmid a victory of Tzimisces over Nad̲j̲ā, the Circassian *g̲h̲ulām* who was a favourite of Sayf al-Dawla, and the fall of Sumaysāṭ and of Raʿbān, places defended by Sayf al-Dawla in person. With the reorganisation of the Byzantine army, the Muslim front was entrusted to Leo Phocas, who in the winter of 348/959 inflicted a bloody defeat on Sayf al-Dawla and occupied numerous fortresses between Cilicia and Diyār Bakr. Nicephorus Phocas having commited himself from the summer of 960 to the spring of 961 to the occupation of Crete, Sayf al-Dawla seized the opportunity to launch a raid in company with the inhabitants of Tarsus. On his return, Leo Phocas inflicted on him a terrible defeat in Ramaḍān 349/November 960. The Arab *amīrs* of the frontier regions sided with Byzantium, and Ibn Zayyāt made the *k̲h̲uṭba* at Tarsus in the name of the caliph, not mentioning Sayf al-Dawla, whose power

was challenged even at Aleppo. From the autumn of 350/961 to the spring of 963, Nicephorus Phocas, returning victorious from Crete, led the offensive into Muslim territory. ʿAyn Zarba and some fifty villages were taken in the winter of 350-1/961-2. Nicephorus massacred part of the civilian population and destroyed the fruit trees, inaugurating the policy of terror which he conducted against the Arabs until his death. During the summer of 351/962, Sayf al-Dawla managed partially to reconstruct ʿAyn Zarba. In Dhu 'l-Ḳaʿda 351/962, Nicephorus Phocas marched on Aleppo; Sayf al-Dawla did not become aware of the Byzantine advance until they were approaching ʿAzāz. He had few troops with him, his army being far away under the command of Nadjā, hence was defeated under the walls of Aleppo. Nicephorus forced his way into the city, which was pillaged and devastated. He did not succeed in taking the citadel (or rather the height defended by a Daylamī garrison on which the citadel was later to be built), since towards the end of the year 351/962 he was obliged to leave the city and return hastily to Constantinople, where he was proclaimed emperor. He had taken away with him 10,000 young captives, and Sayf al-Dawla, in order to repopulate and rebuild his capital, installed there the inhabitants who had fled Ḳinnasrīn and used the subsidies sent to him by his sister. After a few minor successes during the summer of 352/963, at the end of the same year the Muslims suffered a crushing defeat at the hands of the new Domesticus, Tzimisces, at the Hill of Blood near Adana. The year 353/964 saw little military activity. Sayf al-Dawla, a sick man, was confined to his own territory by revolts, and famine raged in Cilicia, making the land unsuitable for large-scale operations. The Byzantine offensive was resumed during the winter of 353-4/964-5 and, again on account of the famine, did not end until the following summer with the fall of Miṣṣīṣa/Mopsuesta and of Tarsus. Despite a rescue attempt by the Egyptian fleet which arrived too late, the latter city experienced in Shaʿbān 354/August 965 an honourable capitulation; the inhabitants were allowed to leave for Muslim territory with their property. Cilicia was henceforward methodically re-Christianised. An exchange of prisoners was negotiated in 355/966; the Muslims were obliged to ransom a further 3,000 men at a cost of 200,000 gold pieces. Byzantine operations were now directed against Syria, and Nicephorus Phocas marched on Manbidj, and then on Aleppo and on Antioch before returning to Byzantine territory at the end of 355/966. Two months later, Sayf al-Dawla died in Aleppo.

Military reverses, domestic revolts and physical weakness

Since 346/957, Sayf al-Dawla had not had to contend with internal revolt. In 350/961, the rebellion of Muḥammad b. al-Ḥusayn Ibn al-Zayyāt, *amīr* of Tarsus, in favour of the Ikhshīdid Unūdjūr, was quickly suppressed (*Bughya*, 1490, 3419-21). In 351/962, the brief occupation of Aleppo by the Byzantines cost him his military prestige, at a time when he had recently been stricken by hemiplegia. From this time onwards, handicapped by the after-effects of this attack, aggravated by increasingly serious intestinal and urinary disorders, Sayf al-Dawla remained bedridden. He was transported on a litter, but he retained his reason and continued to direct the policies of the principality and, when necessary, to conduct warfare. However, his political position was fragile. The leading *ghulāms* were impregnated with the notion dominant in the Muslim East, according to which political power was legitimised solely by success in battle. In 352/963, Hibat Allāh b. Nāṣir al-Dawla, governor of Ḥarrān, whence he had been expelled by a populace resentful of his fiscal greed, killed at Aleppo Abu 'l-Ḥusayn Ibn Danḥā, a Christian secretary of Sayf al-Dawla who had the latter's absolute trust, then attempted to incite his administrative charge to rebel in favour of Nāṣir al-Dawla (Miskawayh and Ibn al-Athīr, cited in *Recueil*, 247-52). At the approach of Nadjā, whom Sayf al-Dawla had sent to oppose him, Hibat Allāh sought refuge with his father. On his own account, Nadjā extorted compensation of a million dirhams from the inhabitants of Ḥarrān and set out, in his turn, to attack Mayyāfāriḳīn with the intention of placing Diyār Bakr under the control of Muʿizz al-Dawla, the Būyid *amīr* of Baghdād. The wife of Sayf al-Dawla defended the city successfully, Nadjā took possession of towns in Armenia, around Lake Van, and in the autumn of 353/964 he was obliged to abandon a second siege of Mayyāfāriḳīn, a revolt having broken out in his Armenian dominions. Having returned to Mayyāfāriḳīn, Sayf al-Dawla set out for Armenia, where personally and without fighting he obtained the spectacular submission of his favourite lieutenant (moving scene in *Zubda*, i, 145); Nadjā was killed at the end of winter 354/965 in Mayyāfāriḳīn, no doubt at the orders of Sayf al-Dawla's wife whom he had publicly insulted. He was buried in the Ḥamdānid mausoleum.

Sayf al-Dawla had suffered a personal blow in 352/953 with the death of his sister, Khawla Sitt al-Nās, a woman of considerable political skill. She bequeathed to him 500,000 dīnārs which he is said to have devoted to the ransom of prisoners (*Sīra*, 16, 188). In 354/965 his sons Abu 'l-Makārim and Abu 'l-Barakāt died. He was affected then by depression but continued to defend his power. During the last phase of his life, he resided mainly in Mayyāfāriḳīn, entrusting the defence of the western frontier to his senior *ghulāms*. Ḳinnasrīn was abandoned by its inhabitants, and commerce, the principal source of revenue of this cross-roads region, was hampered. The civilian populations of the region of Aleppo accepted their fiscal burdens with increasing reluctance, while the armies of the *amīr* proved themselves incapable of protecting them from the Byzantine enemy. In 354/964, to prevent the acquisition of iron by the Ḳarmaṭīs of al-Aḥsāʾ, who intended to re-arm themselves in preparation for eventual action in Syria and Egypt, he did not hesitate to dismantle the gates of the town of Raḳḳa, which were constructed of armour-plated wood. An alliance with the Ḳarmaṭīs, opposed to the Būyid of Baghdād, contributed at the same time to the maintenance of stability on the Syrian plain among the Arab tribes, Yemeni or Ḳaysī, over whom they had retained strong influence. The Ḳarmaṭīs were furthermore hostile to Kāfūr. The latter, based on Fusṭāṭ, continued to take an interest in Syria, intent on protecting Damascus from any Ḥamdānid interference.

In 354/965 there erupted the far more dangerous revolt of the former prefect of the littoral, the Ḳarmaṭī Marwān al-ʿUḳaylī, who took possession of Ḥimṣ, defeated a Ḥamdānid army commanded by the *ghulām* Badr and reached Aleppo but was wounded and died shortly afterwards (different versions, *Hʾamd.*, 649, and *Zubda*, i, 148). In the autumn of 354/965 (dated incorrectly in *Hʾamd.*, 651), Abu 'l-Ḥasan Rashīḳ b. ʿAbd Allāh al-Nasīmī, former governor of Tarsus, a town henceforward in the possession of Nicephorus Phocas, impelled by a tax-farmer, al-Ḥasan b. al-Ahwāzī, took possession of Antioch and assembled an army which enabled him for three months to besiege Aleppo, defended by Ḳarghūya and Bishāra. (On this

revolt, see *Bughya*, 3656-8, 4592-3; *Descr.*, 240-1.) After partially occupying the lower town, Rashīḳ was killed in battle. He was replaced as leader of the rebellion by a Daylamī, Dizbar, who defeated Ḳarghūya and entered Aleppo but then abandoned the town with the intention of taking control of all northern Syria. Sayf al-Dawla was then carrying out an exchange of prisoners with the Byzantines at Sumaysāṭ, and he saw the Muslims, ransomed by him, joining the ranks of the Daylamī rebel. At the beginning of the summer of 355/966, Sayf al-Dawla had himself carried in a litter to Aleppo, where he spent the night and then set out to crush the troops of Dizbar, in which he was helped by the defection to his side of the Banū Kilāb. Reprisals were severe, although the new governor appointed to Antioch by Sayf al-Dawla, Taḳī al-Dīn Muḥammad b. Mūsā, joined the ranks of the Byzantines with the public funds of the city. The attack by Nicephorus Phocas on northern Syria forced Sayf al-Dawla to take refuge at Shayzar, until Ṣafar 356/February 967, the date of his death in Aleppo to which he had just returned (according to al-ʿAẓīmī, 303, he died at Mayyāfāriḳīn). The *sharīf* Abū ʿAbd Allāh al-Aḳsāsī prayed over his body, pronouncing five *takbīrs* in the Shīʿī fashion (*Bughya*, 4517).

The Shīʿī sympathies of Sayf al-Dawla are demonstrated by the al-Dakka *mashhad* which he had built on the Djabal Djushān alongside the Christian monastery of Māra Marūthā (*Bughya*, 412, 2726). After the murderous invasion of Aleppo by the Byzantines in 351/962, he invited *sharīfs* from Ḥarrān or from Ḳum to take up residence in Aleppo. The replacement of Sunnism by Twelver Shīʿism as the official and popular religion of Aleppo may thus be dated from the mid-4th/10th century. Some of their descendants, notably the Banū Ibn Abi 'l-Djinn (*Bughya*, 2415-16; Bianquis, *Damas et la Syrie sous la domination fāṭimide*, IFEAD, Damascus, index, henceforward abbr. to *Damas et la Syrie*) played an important role in the Fāṭimid period. The delimitation of the judicial *madhhab* applied at Aleppo in the 4th-5th/10th-11th centuries whether Ḥanafism or Imāmism, seems difficult to identify precisely (oral indication of Anne-Marie Eddé). On the relationship between Sayf al-Dawla and Ismāʿīlism and the diffusion of Nuṣayrism in Syria in the 4th/10th century, the role of al-Ḥusayn b. Ḥamdān al-Khaṣībī, of Muḥammad b. ʿAlī al-Djillī and of Surūr al-Ṭabarānī, see Canard, *H'amd.*, 634, Halm, art. NUṢAYRĪ, and Bianquis, *Damas et la Syrie*, 375-6.

His embalmed body was transported to Mayyāfāriḳīn to be laid to rest in a mausoleum, beside his mother and his sister. A brick containing the dust removed from his cuirass on his return from operations against the Byzantines was placed under his cheek; this was almost the interment of a *shahīd*. He left only two living offspring: a daughter, Sitt al-Nās, and a son, Abu 'l-Maʿālī Sharīf, to whom he had had the *bayʿa* made before his death (*Sīra*, 16, 188) and who as prince of Aleppo bore the *laḳab* of Saʿd al-Dawla.

Sayf al-Dawla was served in the office of *wazīr* by Abū Isḥāḳ Muḥammad b. Ibrāhīm al-Karārīṭī, formerly in the service of the chief *amīr* Ibn Rāʾiḳ, then of the caliph al-Muttaḳī; subsequently, he dismissed him, appointing in his place Abū ʿAbd Allāh Muḥammad b. Sulaymān b. Fahd. Finally, Abu 'l-Ḥusayn ʿAlī b. al-Ḥusayn al-Maghribī [see AL-MAGHRIBĪ, BANŪ] was an efficient and loyal *wazīr*, no doubt working with his father, al-Ḥusayn b. ʿAlī. At the time of Sayf al-Dawla's installation at Aleppo, the *ḳāḍī* was Abū Ṭāhir Aḥmad b. Muḥammad b. Māthil. Finding him insufficiently obsequious, Sayf al-Dawla replaced him with a friend of the poet Abū Firās, Abū Ḥusayn ʿAlī b. ʿAbd Allāh (or b. ʿAbd al-Malik) al-Raḳḳī, whom Sayf al-Dawla later accused of having induced him to commit iniquitous acts. He was killed by the Byzantines in 349/960, and his son Abu 'l-Haytham was to be *wazīr* of a descendant of Sayf al-Dawla. The same year, Sayf al-Dawla awarded the charge to Ibn Māthil. Abū Djaʿfar Aḥmad b. Isḥāḳ al-Ḥanafī was to succeed the latter, and was exercising this function at the time of the death of the *amīr* of Aleppo (*Zubda*, i, 112, 113, 131, 152).

Confiscation of land by the Ḥamdānids

On the basis of the information given by the chroniclers as well as by the geographers, it should be possible to reconsider the balance-sheet of the Ḥamdānid dynasty. The wars between Sayf al-Dawla and the Ikhshīd had led to the destruction of the olive-groves and orchards surrounding Aleppo. The agricultural landscape was permanently altered (*Bughya*, i, 415-16, Bianquis, *Le pouvoir politique à Alep au V^e/XI^e siècle*, in *REMMM* [1992], no. 62, 49-59). Furthermore, this prince as well as his brother, Nāṣir al-Dawla and later, his nephew al-Ghaḍanfar, princes of Mawṣil, had a policy of monopolising fertile agricultural lands and appropriating extensive domains, with the aim of devoting them to monoculture, in particular the growing of cereals, a decidedly profitable enterprise in view of the demographic growth of Baghdād. Combining these territorial confiscations with oppressive fiscal policies, they became the wealthiest *amīrs* of the Islamic world (Ibn Ḥawḳal, *Ṣūrat al-arḍ*, 111/12, 177-89/174-86, 200-24/207-30, in particular 211-14/205-8; *Bughya*, 1, 59, 10, 4237, 4593). They thus acquired lasting glory by showering with precious gifts their kinsmen and the poets who eulogised them, but they seriously destabilised agriculture and crafts, commercial exchanges and the equilibrium between towns and countryside, on the plains and plateaux of Djazīra and of northern Syria. Ibn Ḥawḳal, followed by Ibn al-ʿAdīm, dates from the confiscations of Sayf al-Dawla the ruin of the city and the commerce of Bālis. By destroying orchards and peri-urban market gardens, by enfeebling the once vibrant polyculture and by depopulating the sedentarised steppe terrain of the frontiers, the Ḥamdānids contributed to the erosion of the deforested land and to the seizure by semi-nomadic tribes of the agricultural lands of these regions in the 5th/11th century (*H'amd.*, 397, 436).

Bibliography: Given in the text; for Arab as well as Christian sources, see M. Canard, *Sayf al-dawla, recueil de textes*, Algiers 1934; *Histoire de la dynastie des H'amdānides de Djazīra et de Syrie*, i, Algiers 1951, index; *Arabica*, xviii (1971), 279-319; to be supplemented by the bibliography at the end of ʿIzz al-Dīn Ibn Shaddād, *al-Aʿlāḳ al-khaṭīra fī dhikr umarāʾ al-Shām wa l-Djazīra, Description de la Syrie du Nord*, tr. Anne-Marie Eddé, IFEAD, Damascus 1984; edited text, in *BEO*, xxxii-xxxiii (1980-1), 265-402. The principal texts which have appeared since 1951 had been used in manuscript form by M. Canard; these are al-ʿAẓīmī, *Taʾrīkh Ḥalab*, ed. Ibrāhīm Zaʿrūr (unreliable), Damascus 1984, and especially Ibn al-ʿAdīm, *Zubdat al-ḥalab min taʾrīkh Ḥalab*, i, ed. Sāmī Dahhān, IFEAD, Damascus 1951, and *Bughyat al-ṭalab fī tāʾrīkh Ḥalab*, i-x and index, ed. Suhayl Zakkār, Damascus 1408/1988. For source material regarding Sayf al-Dawla in the *Bughya*, Ibn al-ʿAdīm used a great many works, including a *Sīrat Sayf al-Dawla*, or *Akhbār Sayf al-Dawla*, a work of Abu 'l-

Ḥasan ʿAlī b. al-Ḥusayn al-Daylamī, see *Bughya*, 2531. The sources used by Ibn al-ʿAdīm for the 4th/10th century have not been listed to this writer's knowledge, see Eddé, *Sources arabes des XIIe et XIIIe siècles d'après le dictionnaire biographique d'Ibn al-ʿAdîm*, in *Itinéraires d'Orient. Hommages à Claude Cahen*, Bures-sur-Yvette 1994, 293-307. A few volumes of Ibn ʿAsākir, *Taʾrīkh madīnat Dimashk*, have also appeared, but the rate of publication by the Arabic Academy of Damascus remains regrettably slow. See also Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ fī ṭabaqāt al-aṭibbāʾ*, ed. Ṭaḥḥān, Cairo. The editions of Sibṭ Ibn al-Djawzī, *Mirʾāt al-zamān*, for the years 350-450 and of Dhahabī, *Taʾrīkh al-islām*, for the 4th/10th century, have not been available for consultation.

Of modern references, very numerous, see Cl. Cahen, *La Syrie du Nord a l'époque des Croisades et la principauté franque d'Antioche*, Paris 1940; J. Sauvaget, *Alep: essai sur le développement d'une grande ville syrienne des origines au milieu du XIXe siècle*, Paris 1941; Ulla S. Linder Welin, *Sayf al-dawlah's reign in Syria and Diyârbekr in the light of the numismatic evidence*, in *Sueca Repertis*, i, Lund 1961; H. Busse, *Chalif und Grosskönig*, Wiesbaden 1968; and esp. (TH. BIANQUIS)

SAYF AL-DĪN, the honorific title of two members of the Shansabānid or Ghūrid [*q.v.*] dynasty which ruled in Afghānistān and adjoining lands during the 6th-early 7th/12th-early 13th centuries:

1. Sayf al-Dīn Sūrī b. ʿIzz al-Dīn Ḥusayn, succeeded his father as ruler in Ghūr 540-3/1145-8, killed in battle with the Ghaznavid Bahrām Shāh [see GHŪRIDS. 1. at II, 1100].

2. Sayf al-Dīn Muḥammad b. ʿAlāʾ al-Dīn Ḥusayn, ruler in the Ghūrid capital of Fīrūzkūh [*q.v.*] 556-8/1161-3 [see *ibid.*, at II, 1101].

SAYF AL-DĪN BĀKHARZĪ, ABU 'L-MAʿĀLĪ SAʿĪD b. Muṭahhar b. Saʿīd b. ʿAlī (586-659/1190-1261), known honorifically as Shaykh-i ʿĀlam and, more familiarly, as Khwādja-yi Fatḥābādī, in reference to the Bukhāran suburb of Fatḥābād where he established a *khānakāh*, a leading disciple of Nadjm al-Dīn Kubrā (d. 618/1221), eponym of the Kubrawī order [*q.v.*].

After elementary education in his birthplace of Bākharz, a town in the Ḳuhistān region of Khurāsān, Sayf al-Dīn studied jurisprudence and the recitation and exegesis of the Ḳurʾān in Harāt and Nīshāpūr before proceeding to Khwārazm, the seat of Nadjm al-Dīn Kubrā. According to Niẓām al-Dīn Awliyāʾ (cited in Amīr Ḥasan Sidjzī, *Fawāʾid al-fuʾād*, Bulandshahr 1275/1855, 268-9), Bākharzī was initially hostile to Kubrā, and even to Ṣūfism as such, but this is not confirmed by any early source. Even before going to Khwārazm, Bākharzī had received at least one Ṣūfī cloak of initiation, from a certain Shaykh Tādj al-Dīn Maḥmūd in Harāt, and there can be no doubt that he went to Khwārazm expressly to join Kubrā's circle. Thanks to an exemplary degree of devotion, he advanced swiftly in the esteem of the master. In celebration of his bedding a newly-acquired concubine, Kubrā once instructed his disciples to dispense with their usual austerities and select some pleasurable activity instead; the indulgence chosen by Bākharzī was to stand all night outside Kubrā's chamber with a pitcher of water ready for his master's post-connubial ablutions. By way of reward, Kubrā prophesied that one day rulers would run respectfully alongside Bākharzī's horse, a prediction that is said to have come true. Not long after, Kubrā interrupted Bākharzī's second quadragesimal retreat to tell him that his training was complete, and he dispatched him to Bukhārā in order to propagate the Kubrawī path (ʿAbd al-Raḥmān Djāmī, *Nafaḥāt al-uns*, ed. Maḥmūd ʿĀbidī, Tehran 1370 *Sh*./1991, 433-4).

Bākharzī was to spend the rest of his life, amounting to some forty years, in Bukhārā; his only absences were annual visits to Shaykh Nūr al-Dīn Baṣīr in Samarḳand, timed to coincide with the ripening of the highly esteemed *khalīlī* grapes of the region (Muḥammad b. ʿAbd al-Djalīl Samarḳandī, *Ḳandiyya*, ed. Īradj Afshār, Tehran 1367 *Sh*./1988, 98-9). He soon gained considerable prestige and influence, and his eminence was acknowledged by Ṣūfīs of other lineages, such as Khwādja Gharīb and Ḥasan Bulgharī of the Khwādjagān (Fakhr al-Dīn ʿAlī Ṣafī, *Rashaḥāt ʿayn al-ḥayāt*, ed. ʿAlī Asghar Muʿīnīyān, Tehran 2536 imperial/1977, i, 54-5). When Sorḳaḳtani, mother of Möngke, the Mongol Great Khān, donated 100 silver *bālish* for the construction of a *madrasa* in Bukhārā, despite her own allegiance to Christianity, it was to Bākharzī that she entrusted its supervision, as well as the administration of the endowments she settled on it (ʿAṭā Malik Djuwaynī, *Tārīkh-i Djahān-gushā*, ed. Ḳazwīnī, iii, 8-9). Sorḳaḳtani further provided for the establishment of Bākharzī's *khānaḳāh* at Fatḥābād; the statement of Maʿṣūm ʿAlī Shāh (d. 1344/1926) that the *khānaḳāh* was built by Tīmūr in 788/1386 must be taken to refer to a restoration or expansion (*Ṭarāʾiḳ al-ḥaḳāʾiḳ*, ed. Muḥammad Djaʿfar Maḥdjūb, Tehran n.d., ii, 242-3). Bākharzī evidently regarded himself as obliged, by virtue of his prominence, to influence the Mongol rulers in favour of Islam; this is suggested by the versified letter he addressed to Ḳuṭb al-Dīn Ḥabash ʿAmīd, vizier to Čaghatay Khān, one line of which reads, "You are entrusted, in this government, with promoting the truth (*nuṣrat-i ḥakk*); should you fail to do so, what will be your excuse on the Day of Gathering?" (cited in V.V. Bartol'd, *Turkestan v épokhu mongol'skogo nashestviya*, in *Sočineniya*, i, Moscow 1963, 541). Bākharzī was visited in Bukhārā by Berke, the future ruler of the Golden Horde, and either converted him to Islam or strengthened him in the affirmation of the faith (J. Richard, *La conversion de Berke et les débuts de l'islamisation de la Horde d'Or*, in *REI*, xxxv [1967], 173-84). For all his prestige, Bākharzī's zeal for Islam sometimes led him into conflict with the Mongols; thus he was once abducted while praying to the Mongol camp outside Bukhārā and detained for a while (Abū 'l-Mafākhir Yaḥyā Bākharzī, *Awrād al-aḥbāb wa-fuṣūṣ al-ādāb*, ed. Īradj Afshār, Tehran 1358 *Sh*./1979, 270). Similarly, one of his disciples, Burhān al-Dīn Bukhārī, sent to Ḳubilay's capital of Khān-Bālīḳ to propagate Islam, found himself expelled to Māčīn, i.e. the realm of the southern Sung, where he soon perished (Khwāndamīr, *Ḥabīb al-siyar*, ed. Djalāl al-Dīn Humāʾī, Tehran 1333 *Sh*./1954, ii, 64).

Bākharzī's influence extended beyond Bukhārā to Kirmān. Ḳutlugh Turkān Khātūn, the Ḳutlugh-

Khānid ruler of Kirmān (r. 658-81/1258-82) requested him to send her one of his sons, and he accordingly dispatched Burhān al-Dīn Aḥmad (d. 696/1297), his middle son, bearing with him the gift of a tooth allegedly from the Prophet. The *khānaḳāh* she established for him in Kirmān became a centre for the temporary expansion of Bākharzī's branch of the Kubrawī order in southern and south-eastern Persia. The prestige Bākharzī thus acquired in Kirmān is reflected in the panegyric *ḳaṣīda* addressed to him by Khwādjū Kirmānī (*Dīwān*, ed. Aḥmad Suhaylī Khwānsārī, Tehran 1336 *Sh*./1957, 598-600). Bākharzī sent his youngest son, Maẓhar al-Dīn Muṭahhar, to Konya, not, however, to spread the Kubrawī path, but to pay homage to Djalāl al-Dīn Rūmī, samples of whose verse had reached Bākharzī from a follower in Shīrāz (Aḥmad Aflākī, *Manāḳib al-ʿārifīn*, ed. Tahsin Yazıcı, Ankara 1959, i, 143-5).

Bākharzī's *khānaḳāh* at Fatḥābād flourished for at least a century after his death and burial there in 659/1261. His eldest son, Djalāl al-Dīn Muḥammad—the only son to have remained in Bukhārā—cannot have played a significant role in this regard, for he was killed a mere two years after the death of his father, in the course of factional strife among the Mongols. It was rather Abu 'l-Mafākhir Yaḥyā (d. 736/1335-6), the son of Burhān al-Dīn Aḥmad, who, coming to Bukhārā from Kirmān in 712/1312-3, succeeded in consolidating the affairs of the *khānaḳāh* (Aḥmad b. Maḥmūd Muʿīn al-Fuḳarāʾ, *Tārīkh-i Mullā-zāda dar dhikr-i mazārāt-i Bukhārā*, ed. Aḥmad Gulčīn-i Maʿānī, Tehran 1339 *Sh*./1960, 43). Still-extant documents from 726/1326 and 734/1333 record an augmentation of the endowments settled on the *khānaḳāh*; of particular interest is the earmarking of funds for the purchase and manumission of slaves who, converted to Islam, were to work on the lands belonging to the *waḳf* (O.D. Čekhovič, *Bukharskie dokumentî XIV veka*, Tashkent 1965). Ibn Baṭṭūṭa visited the *khānaḳāh* during Abū 'l-Mafākhir's tenure; he remarks on the lavish hospitality which he received and on the singing of poems in Persia and Turkish by the assembled dervishes (*Riḥla*, iii, 27-8, tr. Gibb, iii, 554). The esteem in which rulers continued to hold Bākharzī is illustrated by the burial in his proximity of the Čaghatayid Buyan (or Bayan) Ḳulī Khān in 760/1359 (E. Knobloch, *Turkestan*, Munich 1973, 212). Indeed, gifts by rulers continued to enrich the *waḳf* as late as the 12th/18th century, but by the time the Persian dervish Maʿṣūm ʿAlī Shāh visited Fatḥābād in 1316/1898-9, the shrine was in an advanced state of dilapidation, many of its tiles having been stolen for sale in the markets of Bukhārā (*Ṭarāʾiḳ al-ḥaḳāʾiḳ*, ii, 242).

Long before this architectural decay set in, the Bākharzī line of the Kubrawiyya had vanished from Bukhārā, supplanted—like all other Central Asian branches of the order—by the Naḳshbandiyya. The tomb of Bākharzī came to function simply as a site for popular pilgrimage (as happened also with the shrine of Nadjm al-Dīn Kubrā in Kuhna Ūrgandj). Genealogical descendants of Bākharzī can be traced in Bukhārā as late as the 13th/19th century, and in 1255/1839 one of them, ʿAbd al-Ḳayyūm Khōdja, wrote a biography of his great forebear (*Manāḳib-i Sayf al-Dīn Bākharzī*, mss. Institute of Oriental Studies of the Academy of Sciences of the Uzbek Republic, 6965, 10,802); none of them, however, were practitioners of the Kubrawī path. A similar development took place in Kirmān. Burhān al-Dīn Aḥmad's *khānaḳāh* fell into disuse after Abu 'l-Mafākhir's departure for Bukhārā, and although other members of the family remained in Kirmān, being honorifically known as *shāhān-i Bukhārā* and occupying positions of importance, none of them perpetuated the Bākharzī initiatic lineage.

The only extended prolongation of the Bākharzī branch of the Kubrawiyya took place in India. From Badr al-Dīn Samarḳandī (d. 716/1316) went forth a line that crystallised after two generations as the Firdawsiyya of Bihār, a sub-order, of which the most eminent representative was Sharaf al-Dīn Manērī (d. 782/138 [see MAKHDŪM AL-MULK SHARAF AL-DĪN]) (S.A.A. Rizvi, *A history of Sufism in India*, Delhi 1978, i, 226-40; B.B. Lawrence, *Notes from a distant flute: Sufi literature in pre-Mughal India*, Tehran 1978, 72-8).

Bākharzī's surviving literary corpus is quite meagre. It consists of *Waḳāʾiʿ al-khalwa*, an Arabic account of visions experienced while in Khwārazm, only a fragment of which is extant (Brockelmann, S I, 810); a Persian treatise on love (*Risāla-yi ʿIshḳ*, ed. Saʿīd Nafīsī, in *Madjalla-yi Dānishkada-yi Adabiyāt-i Dānishgāh-i Tihrān*, viii/4 (1340 *Sh*./1961), 11-24); and a number of quatrains, including some of uncertain attribution (S. Khuda Bakhsh, *Saifuddīn Bākharzī*, in *ZDMG*, lix (1905), 345-54; Saʿīd Nafīsī, *Rubāʿiyyāt-i Bākharzī*, in *MDADT*, ii/4 (1334 *Sh*./1955), 3-15; Dhabīḥullāh Ṣafā, *Tārīkh-i Adabiyāt dar Īrān*, Tehran 1339 *Sh*./1951, ii, 856-8). Bākharzī also kept a journal (*rūz-nāma*) in which he recorded such matters as the gifts that were brought to him and the prayers he made on behalf of the donors; the adversaries in Bukhārā for whose redemption and guidance he prayed; and the menstrual cycles of his wives and concubines. The journal is lost but portions of it were included by Abu 'l-Mafākhir Yaḥyā in his *Awrād al-aḥbāb wa-fuṣūṣ al-ādāb*, an account of the litanies and practices of the Bākharzī branch of the Kubrawī order.

(HAMID ALGAR)

SAYFĪ ʿARŪḌĪ BUKHĀRĪ, a Persian prosodist and minor poet at the Tīmūrid court in Harāt during the second half of the 9th/15th century. He is remembered for his text-book of Persian prosody *ʿArūḍ-i Sayfī*, which he completed in 896/1491; this has been published several times in India, notably with an English translation and extensive commentary in H. Blochmann's *The prosody of the Persians according to Saifi, Jami, and other writers*, Calcutta 1872, a work which played an important role in making Persian poetical theory accessible to European students. But now that older and more detailed works on the same subject are available (especially the early 7th/13th-century *Muʿdjam* of Shams-i Ḳays) Sayfī's largely derivative work is only of limited interest.

"Sayfī" was the pen-name of several other Persian poets, the earliest being ʿAlī b. Aḥmad al-Sayfī al-Naysābūrī, whose poems are quoted by ʿAwfī, Shams-i Ḳays and Djādjarmī and of whom Dawlatshāh says that he flourished under the Khwārazm-shāh ʿAlāʾ al-Dīn Tekish (568-96/1172-1200).

Bibliography: Sayfī ʿArūḍī is mentioned in Mīr ʿAlī Shīr Nawāʾī's *Madjālis al-nafāʾis*, Bābur's autobiography, Dawlatshāh and later authorities.

(F.C. de Blois)

SAYFĪ HARAWĪ (Sayf b. Muḥammad b. Yaʿḳūb), poet and historian of Harāt in the Mongol period. Born in *ca.* 681/1282, he gained access to the court of Fakhr al-Dīn Muḥammad (d. 706/1307), the third *malik* of the Kart [*q.v.*] dynasty of Harāt, in whose honour he claims to have written 80 *ḳaṣīdas* and 150 *ḳiṭʿas*. In 706/1306, when Harāt was besieged by the Mongol army of the Īl-Khān Öldjeytü, led by Dānishmand Bahādur, Sayfī composed a *mathnawī*, the *Sām-nāma*, in praise of Djamāl al-Dīn Muḥammad Sām, who conducted a vigorous defence on behalf of the absent *malik*. On the city's fall, Sayfī narrowly escaped execution by Dānishmand Bahādur's son Bödjey, whose father had been treacherously killed by Sām; and for a time his fortunes underwent an eclipse. It was some years before he gained the favour of the new *malik*, Ghiyāth al-Dīn Muḥammad (d. 729/1328-9), to whom he had presented a work on ethics, the *Madjmūʿa-yi Ghiyāthī*, and who commissioned him to write a chronicle of Harāt. Sayfī's *Taʾrīkh-i Harāt* (or *Taʾrīkh-i mulūk-i Kart*), his only surviving work, covers the period from the city's capture by Chinggis Khan in 618/1221 down to 722/1322, in all probability the date of composition. It was originally intended to comprise two *daftars* totalling 400 discourses (*dhikrs*); but only the first *daftar*, of 138 *dhikrs*, has come down to us. Although Sayfī's chronology for the first half-century or so must be treated with caution, the *Taʾrīkh*, as the earliest extant history of Harāt, is extremely valuable: Sayfī cites lost sources, notably the *Kart-nāma* of Rabīʿī-yi Būshandjī (*ca.* 702/1302-3), and utilises documents in the Kartid chancery. Both Ḥāfiẓ-i Abrū, in his historical works and in his geography, and Isfizārī (d. 903/1498), the later chronicler of Harāt, made extensive use of Sayfī's *Taʾrīkh*.

Bibliography: Storey, i, 354-5; Storey-Bregel', ii, 1042-4; Abdul Muktadir, *Notes on a unique history of Herat*, in *JASB*, N.S., xii (1916), 165-84; I.P. Tehran 1352/1973.

(P. Jackson)

SAYḤĀN, the ancient Saros, the western twin river of the Djayḥān [*q.v.*] in the Çukurova (Cilician plain) in eastern Turkey; both were identified with two of the Ḳurʾānic rivers from Paradise (Ḳurʾān XLVII, 15, etc.) by the early Muslim border warriors. Its total length is 560 km/348 miles with the two spring rivers, the western Zamantı Irmağı (325 km/200 miles), originating in the Uzun Yayla, and the eastern Göksu (200 km/125 miles) coming from Binboğa and the Tahtalı mountains. The Zamantı flows through the meadows and gorges of the Taurus, and below Faraşa Köyü (Ariarameia) it unites with the Göksu. The latter, in its upper part preserves the ancient name as Sarız Suyu near the town of Sarız. The main right-bank tributaries of the Sayḥān are the Görgün Suyu and the Çakıt Suyu (Hafız Suyu, flowing down from Ulukışla through the famous Pozantı Deresi) just above Adana [*q.v.*], the original mouths of which are now immersed in the artificial lake of the Seyhan Toprak Barajı (begun in 1956). The riverbed had meandered through the Çukurova, causing enormous inundations and often enough mixing with the Djayḥān. It now flows westwards into a delta, one arm of which is the Tarsus Çayı, and into the sea at Deli Burnu. Avoiding the bad climate of the flood plain, the main harbour of the region, Mersin [*q.v.*], lies 25 km/15 miles to the north. Health and agriculture have been greatly improved by the construction of the dam, though cotton production was known in the Cilician plain from the Middle Ages and, together with orchards, had already been organised on industrial lines under Mīṣīrlī Ibrāhīm Pasha (*mutaṣarrif* in Adana on behalf of Meḥemmed ʿAlī 1833-40) and during the 1860s. The first railway connection of Adana with Mersin was built in 1886.

The only antique monument preserved along the river is the old bridge in Adana with 14 of its originally 21 arches still in use (length 319 m/1,046 feet), erected under Hadrian, with restorations, according to inscriptions and literary sources, in the 4th century, under Justinian (Procopius, *De aedif.*, 5 § 5); under al-Mahdī in 165/781-2; in 225/840; by Meḥemmed IV in 1072/1661-2 (Ewliyā Čelebi, ix, 338); by Aḥmed III; twice in the 19th century; and in 1949. It is wrongly described as having only one arch by Yāḳūt (i, 179). It should probably not be identified with the Djisr al-Walīd [II], constructed between al-Maṣṣīṣa (on the Djayḥān) and Adana in 125/743 (al-Balādhurī, 165), though the latter was situated on the western bank. But the region to the west of the Djayḥān remained a no-man's-land between Arabs and Byzantines until the early ʿAbbāsid period, when under al-Manṣūr in 141 or 142/758-9 Adana was "founded" (rebuilt) and populated by Khurāsānians, and in 165/781-2 a fort was begun next to the bridge by Hārūn al-Rashīd as governor of the *thughūr*; according to another tradition the city was [re]erected only in 194/809-10 (al-Balādhurī, 166-7). The early history is retailed by Ibn al-ʿAdīm (d. 660/1262, *Bughya*, i, 169-71, also quoting several *ḥadīths* for identifying the Sayḥān with that river of Paradise having water (against three others with honey, wine and milk), 381-8, 389-92; cf. al-Masʿūdī, *Murūdj*, i, 145 § 289, ii, 66 § 775; Ḥamd Allāh Mustawfī, *Nuzha*, ed. Le Strange, 209, tr. 201-2, explicitly states that these rivers were intended, and not the parallel Sayḥūn and Djayḥūn of Transoxania). He adds valuable geographical and historical information on this region (Byzantine occupation, from the end of the 9th century until around 1172, with the intrusion of the Lesser Armenian Kingdom of Sis 1080-1375 and the Crusaders), and mentions that the river flowed in Byzantine territory until Ḳalʿat Samandū (recalled in the modern Zamantı, see Honigmann, *Ostgrenze*, 65-6), then in Armenian territory (*bilād al-Arman*) until Adana (i, 379-80).

From Saldjūḳ times onwards Turkish tribes occasionally pushed into the Taurus region, occupying the *yaylas* or summer pastures and valleys; the Ramaḍān-oghullarī [*q.v.*] were later prominent here. Remnants of nomadic life have survived down to the recent past, and the *ʿāshiḳs* and popular poets (*ozan*) of the 19th century in this region were famous, including Dadaloghlu and Ḳaradjaoghlan, singing of social tensions and of the natural beauties of the mountains and riverside.

The region and the geography of the river were forgotten in Mamlūk and Ottoman times, in spite of the continuing use of routes via the Cilician pass (Gülek Boğazı) and along parts of the Zamantı and Sayḥān, so that Ewliyā Čelebi confuses the rivers (Adana on the Djayḥān, but not consistently, ix, 333, 336-40, already like the Byzantine sources, see al-Maṣṣīṣa). Foreign travellers like Marco Polo in 1270, Bertrandon de la Broquière 1432, Kātib Čelebi, Paul

Lucas 1706, Kinneir 1813 and Texier 1835, rarely mention more than the route stages and towns.

(C.P. HAASE)

ṢĀYIGH, FATḤ ALLĀH (1790-?, still alive in 1847), son of Anthony, a Christian of the Latin rite who was a native of Aleppo and was the clerk, dragoman and biographer of Lascaris de Vintemille, Napoleon Bonaparte's agent. In Lascaris's company, he made a "commercial" tour through different regions of Syria and ʿIrāḳ. This trip concealed what was in reality a plan involving high politics, which Ṣāyigh was unaware of at the beginning of the travels. It was a question of getting to know the desert, its itineraries, resources and watering places, of unifying its tribes, of placing them under a single chief, of organising their rebellion against both the Turkish occupying power and also the Wahhābīs, and of preparing the way for a French military expedition which would block the route to India for British commerce.

Ṣāyigh and Lascaris left Aleppo on 18 February 1810. They succeeded in reaching Palmyra and in placing themselves under the protection of Muhannā Fāḍil, the *shaykh* of the Ḥisana. But the policy of Muhannā's elder brother, Nāṣir, was contrary to Lascaris's aims. The latter therefore set his sights on the *amīr* Durayʿ b. Shaʿlān, the *shaykh* of the Ruwāla [*q.v.*]. It was at that point that he revealed to his companion the journey's real aim, and Ṣāyigh henceforth threw all his energy into realising Lascaris's projects. The exploration of the deserts of the Arab East occupied the two of them for several years. Ṣāyigh made by himself a journey to Dirʿiyya [*q.v.*] in 1813, and the Odyssey only came to an end after Napoleon's fall.

After Lascaris's death at Cairo in 1817, the result of being poisoned, the survivor Ṣāyigh went back to his mother at Lattakia, where he found a minor job with a merchant. He spoke with his friends about his numerous adventures and told them of a collection of notes which he had put together, at Lascaris's request, during his life as a Bedouin. At the time of his travels in Syria, Alphonse de Lamartine became interested in Ṣāyigh's memoirs (written in a semi-dialectal Arabic), negotiated their purchase, had them translated into French and published them in vol. iv of his *Voyage en Orient* (1835 ed.). Ṣāyigh made a trip to Paris in 1847, where he was the guest of Lamartine, and thanks to the latter, he was nominated consular agent of France in Aleppo.

Studded with errors as it was, Lamartine's version of Ṣāyigh's memoirs was condemned to oblivion by the Arabists of the 19th century, who accused the Syrian traveller of having put together a romance out of assorted pieces. It is probably true that one can find in Ṣāyigh's account numerous historical and geographical errors. But the *Journal Asiatique*'s severe judgement, which claims to have reduced the historicity of this account to nothingness, is only true in regard to the written parts deformed in translation or completely foreign to the original text, as is shown on the evidence of the new French version.

(J. CHELHOD)

ṢĀYIGH, TAWFĪḲ (1923-1971), Christian Palestinian Arab poet, born at Khirbā (southern Syria) as the son of a Presbyterian minister. In 1925, his family moved to Palestine, then, in 1948, to Beirut. Ṣāyigh was educated at the Arab College in Jerusalem and the American University in Beirut (B.A. in English literature in 1945), and studied literature at Harvard, Oxford and Cambridge. He taught Arabic language and literature in Cambridge and London. He was the editor in chief of the new Beirut cultural magazine *Ḥiwār* from 1962 through 1967. From 1968 until his death from a heart attack on 3 January 1971, Ṣāyigh lectured at the University of California at Berkeley.

Ṣāyigh's poetry, which is devoid of rhyme and metre, comprises the following volumes: *Thalāthūn ḳaṣīda* (1954), *al-Ḳaṣīda kāf* (1960) and *Muʿallaḳat Tawfīḳ Ṣāyigh* (1963) (all of them republished in *al-Madjmūʿāt al-shiʿriyya*, London 1990). His poetry, much of which was originally published in the Beirut literary magazines *Shiʿr* and *Ḥiwār*, has been called "a supreme example of an early modernity achieved because of the poet's particular qualities of vision and technique." (Salma Jayyusi, in M.M. Badawi (ed.), *Modern Arabic literature* (= *The Cambridge history of Arabic literature*), Cambridge 1992, 152).

His other writings include essays on Arabic and English literature and translations of English verse (e.g. *50 ḳaṣīda min al-shiʿr al-amīrikī al-muʿāṣir*, and T.S. Eliot, *Rubāʿiyyāt arbaʿ* (= *Four Quartets*), both ²London 1990).

(W. STOETZER)

ṢAYMARA, a town of mediaeval Persia, in what later became known as Luristān [*q.v.*], and the chef-lieu of the district of Mihradjānkadhaḳ. A tributary of the Karkhā, which flows into the Kārūn river [*q.v.*], is still today known as the Saymareh.

The district passed peacefully into the hands of Abū Mūsā al-Ashʿarī's Arab troops (al-Balādhurī, *Futūḥ*, 307), and in mediaeval times prospered as a meeting-place of Arab, Persian and Lur ethnic elements, apart from the devastations of a severe earthquake in 258/872 (al-Ṭabarī, iii, 1872-3). The valley which comprised the district was fertile and could even produce dates, but by Ḥamd Allāh Mustawfī's time (8th/14th century), Ṣaymara was falling into ruins (which can still be seen today). A notable scholar and

humorist from the town was Abu 'l-ʿAnbas al-Ṣaymarī, d. 275/888 [*q.v.* in Suppl.].

Bibliography: Le Strange, *Lands of the Eastern Caliphate*, 202; Schwarz, *Iran im Mittelalter*, 470-3.

(C.E. Bosworth)

al-**ṢAYMARĪ**, Abu 'l-ʿAbbās Yaʿḳūb b. Aḥmad, scholar and writer, probably a Shīʿī, of whom we unfortunately know very little.

The Shīʿī authors of the 5th/11th century, in particular, al-Sharīf al-Raḍī, compiler of the *Nahdj al-balāgha* [*q.v.*] (d. 405/1015 [*q.v.*]), and biographers like Ibn al-Nadīm (d. 438/1046), al-Nadjāshī (d. 450/1058) and al-Ṭūsī (d. 460/1067), do not have a single word about al-Ṣaymarī or his work. Moreover, there were occasions for this. As far as is known, the sole piece of information about him which we possess is owed to Ibn Abi 'l-Ḥadīd, commentator on the *Nahdj* (d. 656/1258 [*q.v.*]). This leads us to conclude that he lived after al-Sharīf al-Raḍī and al-Ṭūsī but before Ibn Abi 'l-Ḥadīd, if indeed he was not the latter's contemporary. If this is the case, he must have lived in the period of the 5th-6th/11th-12th centuries.

Thanks to Ibn Abi 'l-Ḥadīd, we also know of the existence of one of his works, the *Kalām ʿAlī wa-khuṭabuhu* ("Words and speeches of ʿAlī"). But this work is completely unknown to the older Arab biographers. Its title, however, enables one easily to deduce its nature, and it was probably a collection of ʿAlī's discourses and letters. Following other writers who came after al-Sharīf al-Raḍī (cf. Kh. al-Ḥusaynī, *Maṣādir Nahdj al-balāgha*, Baghdād 1966-8, i, 68-92, at 70), al-Ṣaymarī probably wished in his own book to fill in some of the gaps left by the compiler of the *Nahdj*. But the extract from his text given by Ibn Abi 'l-Ḥadīd—a correspondence between ʿAlī and Muʿāwiya, apparently at the outset of their quarrel, in which the latter invites his opponent to prepare for war (*Sharḥ Nahdj al-balāgha*, Cairo 1965-7, xv, 82)—does not appear in the *Nahdj*; in the present state of our knowledge, no more can be said.

Bibliography: Given in the article.

(Moktar Djebli)

al-**ṢAYMARĪ**, Abu 'l-ʿAnbas [see abu 'l-ʿanbas al-ṣaymarī, in Suppl.].

al-**ṢAYRAFĪ**, Muḥammad b. Badr, a prominent judge in Ikhshīdid Egypt. Abū Bakr Muḥammad b. Badr b. ʿAbd Allāh (or ʿAbd al-ʿAzīz) al-Ṣayrafī was born in Egypt in 264/877-8. His father was a client of Yaḥyā b. Ḥakīm al-Kinānī and was a prosperous money changer (*ṣarrāf*) for whom Abū ʿUmar al-Kindī composed his *Kitāb al-Mawālī*. A Ḥanafī by *madhhab* and a reporter of traditions, al-Ṣayrafī studied under Abū Djaʿfar al-Ṭaḥāwī as a Ḥanafī jurist and heard traditions from ʿAlī b. ʿAbd al-ʿAzīz al-Baghawī in Mecca and from other Meccan and Egyptian teachers. Ibn ʿAsākir briefly refers to al-Ṣayrafī in his *Taʾrīkh madīnat Dimashḳ*, stating that he stayed in Damascus for a while and transmitted *ḥadīth* there, as well as in Egypt, on the authority of ʿAlī b. ʿAbd al-ʿAzīz al-Baghawī.

Al-Ṣayrafī held different judicial posts before succeeding to the judgeship of Egypt (*ḳaḍāʾ Miṣr*) under the Ikhshīdids. For a while he was a deputy to Muḥammad b. al-Ḥasan b. Abi 'l-Shawārib, who had been designated as the chief judge of Egypt by the ʿAbbāsid caliph al-Rāḍī. According to Ibn Ḥadjar al-ʿAsḳalānī, al-Ṣayrafī himself held the judgeship of Egypt on three occasions, from Shawwāl 322/October 934 to Shaʿbān 324/July 936, and secondly from Dhu 'l-Ḥidjdja 327/October 939 to Ṣafar 329/December 940. Muḥammad b. Ṭughdj al-Ikhshīd appointed al-Ṣayrafī for the third and last time to that office in Shawwāl 329/July 941, a post he held until his death in Shaʿbān 330/May 942. Abū ʿUmar al-Kindī reports, on the authority of Ibn Zūlāḳ, that Muḥammad b. Badr al-Ṣayrafī wore fine clothes and had a sumptuous house in Fusṭāṭ.

Bibliography: Kindī, *Kitāb al-wulāt wa-kitāb al-ḳuḍāt*, ed. R. Guest as *The governors and judges of Egypt*, London 1912, 486-7, 488, 489-90; Ibn Ḥadjar al-ʿAsḳalānī, *Rafʿ al-iṣr*, in *The governors and judges of Egypt*, 533, 540, 542, 543, 546-7, 550, 551, 552, 557-62, 564, 566, 570, 572, 573; idem, *Rafʿ al-iṣr*, ed. Ḥāmid ʿAbd al-Madjīd *et alii*, Cairo 1957-61, i, 72, 76, ii, 265-6, 269, 270, 273, 278, 386.

(F. Daftary)

SAYRĀM (also Ṣayram, etc.), the name of a town in present-day Kazakhstan, some 7-8 miles east of Čimkent, on the Arïs river, a tributary of the Syr Darya. Kāshgharī (ed. and tr. Dankoff, ii, 241; repeated in the *Taʾrīkh-i Rashīdī*, tr. Ross, 171), in the earliest reference to it under this name, identifies it as the "White City which is called Isbīdjāb" [see isfīdjāb, in Suppl.]. In Kāshgharī's day (i, 84) its inhabitants spoke "both Soghdian and Turkic." It is to be distinguished from a city of the same name in Eastern Turkistan (located between Kuča and Aḳsu) which, according to local tradition, was founded by captives brought thither by the Kalmyks (Barthold, rev. of *Taʾrīkh-i Amniyya*, in *Sočineniya*, viii, 213); the great Turkish Ṣūfī, Aḥmad Yasawī (d. 562/1166-7 [*q.v.*]) was claimed as a native of this town (Barthold, *Hist. des Turcs d'Asie Centrale*, 111). Ch'ang Ch'un, who visited "Sai-lan" in the early 1220s, noted that its ruler was a Muslim. Subsequent Chinese travellers of the Yüan and Ming eras describe it as a well-populated Muslim town with extensive agriculture (see Bretschneider, *Researches*, for references). The agricultural productivity, based on irrigation canals, is remarked on by later Muslim authors as well (see Pishčulina, *Pis'mennie*, 167-72). Rashīd al-Dīn (*Djāmiʿ*, ed. Romaskevič, i/1, 72-3) places it in a listing of Eurasian toponyms between "Talās" and "Ibīr and Sībīr" and cites it (i/1, 101) as one of the regions conquered by the legendary Oghuz Khān. He also mentions (i/1, 91) it as "Ḳārī Ṣayram" (Turk. "Old Sayram") as an "old and great city", one day's journey in length, with 40 gates, inhabited by Muslim Turks. It is frequently noted in Tīmūrid (Tīmūr gave it to his grandson, Ulugh Beg, see Yazdī, ii, 449) and Shaybānid sources, with often-shifting overlordship according to the fortunes of war (Barthold, *Hist. of the Semirechyé*).

SAYʾŪN, a town in Wādī Ḥaḍramawt [*q.v.*], situated about 16 km/10 miles east of S͟hibām [*q.v.*] and 24 km/15 miles west of Tarīm [*q.v.*] and approximately 480 km/300 miles north of the port of Ḥaḍramawt, al-Mukallā [*q.v.*] (see H. von Wissmann and R.B. Serjeant, map of Southern Arabia, Royal Geographical Society, 1958). The town was within the boundaries of the Fifth Governorate of the People's Democratic Republic of Yemen and now in the unified Republic of Yemen. Landberg (*Etudes sur les dialectes de l'Arabie méridionale*, iii, *Daṯînah*, Leiden 1913, 1820) discusses the spelling of the name, Sayʾūn and Saywūn, etc., concluding that the former is the more ancient spelling and that the *-ūn* ending is Mahri (cf. names like K͟hudūn, Dammūn, Ḳaydūn etc.).

The area is famed for its fertility and, in particular, for its date growing. Although it has nothing like the renown of Tarīm in this regard, some accounts of Sayʾūn mention the town as a centre of Islamic scholarship (*hid͟jrat ʿilm*) (Ibrāhīm Aḥmad al-Maḳḥafī, *Muʿd͟jam al-buldān wa 'l-ḳabāʾil al-Yamaniyya*, Ṣanʿāʾ 1988, 335). Landberg, at the turn of the century (*Etudes*, i, *Ḥadramoût*, Leiden 1901, 451), writes of the temporary decline of Tarīm as a centre of scholarship and religion with the closure of its school (*ribāṭ*) and the resultant rise of the discipline in Sayʾūn. Here a rich benefactor of the school, *al-Ḥabīb* (the usual Ḥaḍramī title of a *sayyid*) ʿAlī al-Ḥabs͟hī Bā ʿAlawī, was its rector, providing for all the needs of poor students entirely free.

Sayʾūn, it should be said, is not of great antiquity. The name of the town appears along with the Kat͟hīrī sultans from about the 9th/15th century. They conquered Ḥaḍramawt from the east, from Ẓafār [*q.v.*] from where they originally hailed. The town continued in their hands and was the capital of the Kat͟hīrī sultanate in 1967 when the British left the Aden Protectorates and independence was granted.

(G.R. Smith)

SAYYID, Sāʾid (a., pls. *asyād, sāda, sādāt*, abstract nouns *siyāda, suʾdad*, etc.), originally, chief, e.g. of an Arabian tribe, and then, in Islamic times, a title of honour for descendants of the Prophet Muḥammad, being in this respect in many ways coterminous with the term *s͟harīf*.

Sayyid was used in ancient South Arabian, where it appears as *s¹wd* "chieftain" (A.F.L. Beeston, etc., *Sabaic dictionary*, Louvain-Beirut 1982, 129), but the root seems to be largely absent from North-Western Semitic, being only dubiously attested in Elephantine Aramaic (J. Hoftijzer and K. Jongeling, *Dictionary of the North-West Semitic inscriptions*, Leiden 1995, ii, 779-80). In early Arabic usage, it could be applied to animals, with the wild ass called the *sayyid* of his female, and to the leaders of the Jinn (Lane, *Lexicon*, 1462-3).

1. In early Arabic tribal usage.

Though *sayyid* is the most common and the most general term, there are many other designations for the tribal chief: *ʿamīd, ʿimād* "pillar, support"; *rābiʿ* or *sayyid al-mirbāʿ* (from the chief's entitlement to a quarter of captured booty); *raʾīs, ḳāʾid* (referring to the chief's leadership in war); *k͟haṭīb* and *zaʿīm* (referring to his oratorical powers); and *s͟hayk͟h* and *kabīr* (designating chiefs who were veterans, with long and glorious careers). Less common in ancient times, *s͟hayk͟h* has become in recent centuries the standard title for the Bedouin tribal chief, since both *sayyid* and *s͟harīf* (referring to the chief's nobility of lineage) have tended to acquire specialised Islamic religious senses (see below, 2.).

The chief's authority in his tribe was based in the first place on his *nasab* or ancestry, from inheritance (*irt͟h^an*) and from a chain of noble (*s͟harīf*) and free (*ḥurr, ṣarīḥ*) predecessors (*kabīr^an ʿan kabīr^in*) (see Bichr Farès, *L'honneur chez les Arabes avant l'Islam*, Paris 1932, 52; and ʿirḍ). He had to possess such qualities and practice such skills as *ḥilm* [*q.v.*], magnanimity; *dahāʾ*, shrewdness and diplomatic finesse; and liberality and hospitality (a chief might be described as *ʿaẓīm al-ḳudūr* "having large cooking pots" or *kat͟hīr al-rimād* "having a large pile of ashes [outside his tent]"). He had to act as spokesman and orator for the tribe, so that many chiefs were famed also as poets, such as Imruʾ al-Ḳays of Kinda and Mālik b. Nuwayra of Yarbūʿ of Tamīm [*q.vv.*, and see for other such poet-chiefs, s͟hāʿir. 1. a]. Such abilities as being able to read and write and being able to swim are recorded as being amongst those possessed by the chief of the K͟hazrad͟j in Medina, Saʿd b. Ubāda [*q.v.*]. Because of an emphasis on seniority within the leading family, chiefs tended to be men of mature age and experience rather than youths; they might be bald, but could not be beardless. Certain of the chief's functions might on occasion be exercised by others of his kinsmen or by tribal notables, and in early modern times, Jaussen noted the existence at the side of the chief of a specific leader of raids, *ʿaḳīd al-g͟hazw*, amongst the Jordanian tribes (*Coutumes des Arabes au pays de Moab*, Paris 1948, 132).

A chief might succeed to the headship by an act of bequest (*waṣiyya*) of his predecessor. Imruʾ al-Ḳays succeeded his father Ḥud͟jr; Ḥātim al-Ṭāʾī's [*q.v.*] son succeeded him; and Durayd b. al-Ṣimma [*q.v.*] succeeded his brother. Although chiefs usually came from what would later be called a shaykhly house, this lineage had to be allied to proven competence if the tribe were to flourish and survive in a harsh and lawless environment. Hence because of the overriding necessity for continuing success, the chief's authority was fragile and could be impaired in times of adversity. That of ʿĀmir b. al-Ṭufayl [*q.v.*] was challenged within his tribe of D͟jaʿfar b. Kilāb of ʿĀmir b. Ṣaʿṣaʿa after setbacks in battle, but later restored. Unless the chief was one of the minority of outstandingly forceful figures regarded as uncontested in their authority (*muṭāʿ, g͟hayr mudāfaʿ*), such as Muḥammad's contemporary ʿUyayna b. Ḥiṣn of Fazāra, his authority rested to a considerable extent on the tacit consent of

his peers within the tribe, underpinned by his unflagging ability to preserve his people's fighting reputation and to secure pasture for its herds. Hence chieftainship could often be more a burden than a source of exploitation, reflected in the popular saying *sayyid al-kawm khādimuhum* "the chief is the tribe's servant".

Whether, as Chelhod surmised, the chief originally had a sacral role, one effaced by the advent of Islam, is uncertain, but in his function as tribal orator and spokesman one might conjecture an attribution of magical powers similar to those attributed to the ancient poets [see SHĀʿIR. 1. A].

See for this, SHARĪF, especially section 3.

SAYYID ḤASAN GHAZNAWĪ, Abu 'l Muḥammad b. Muḥammad al-Ḥusaynī al-Ashraf, Persian poet who died presumably in 556/1161. He spent the greater part of his life in Ghazna as a panegyrist of the Ghaznawid Sultan Bahrām Shāh (512-47/1118-52), to whose campaigns into India he dedicated several *kaṣīdas*. During the latter's reign he made the *Ḥadjdj*, in all probability prompted by problems with this *mamdūḥ* and intended as a search for a new one. Our oldest source on Ḥasan, the Persian polymath Ẓahīr al-Dīn Abu 'l Ḥasan al-Bayhaḳī [*q.v.*], mentions in his (Arabic) *Lubāb al-ansāb* (written in 555/1160) that he met the poet, who was on his way to Mecca, in Nīshāpūr in 544/1149 (Mudarris-i Raḍawī, introd. to the *Dīwān*, 357). During his journey he associated with members of the Saldjūḳ dynasty: he mourned sultan Masʿūd's death in a *tardjīʿ-band* (in 546/1151) and dedicated a *ḳaṣīda* to the accession to the throne of Malik Shāh III (in 547/1152). After this journey he seems to have resided in Khurāsān at the court of Sandjar. Following Sandjar's capture by the Ghuzz in 548/1153, he attached himself to the latter's protégé and nephew, the Ḳarakhānid Maḥmūd Khān, who had become ruler of Khurāsān. It is not completely certain whether *ḳaṣīdas* dedicated to the Khwārazm Shāh Atsïz (d. 551/1156) and to the Saldjūḳ Sulaymān Shāh on the occasion of his enthronement in 555/1160 were only sent to, respectively, Khwārazm and Hamadhān or refer to an actual stay at those places. The *ḳaṣīda* for Sulaymān Shāh gives the last date of his life, which came to an end before 557/1162, the date of the deposition of Maḥmūd Khān (see below). A tomb of the poet can be seen in Āzādwār near Djuwayn.

The only work which has survived is a Persian *dīwān* of about 5,000 *bayts*. This *Dīwān* is preceded by an introduction written by a companion who asserts that, in accordance with the author's wish in his testament, he collected it to dedicate it to the Ḳarakhānid Maḥmūd Khān. Although no ms. of the *Dīwān* older than the late 10th/16th century survives, several of Ḥasan Ghaznawī's poems have come down to us in a ms. from 636/1238 from another text, namely, Rāwandī's [*q.v.*] history of the Saldjūḳs *Rāḥat al-ṣudūr* (completed in 603/1206-7). In this text he is, after Mudjīr al-Dīn Baylaḳānī [*q.v.*], the *dīwān* author most cited; it contains seven complete poems (*ḳaṣīdas* and *tarkīb-bands*), which, in accordance with the nature of the text, are all intended for Saldjūḳ *mamdūḥs*, and some odd verses as well. Moreover, Rāwandī cites an anecdote wherein Ḥasan advises another poet to learn by heart "modern" poets like Anwarī [*q.v.*] and himself and leave aside the great classics like Sanāʾī [*q.v.*] whose talent would inhibit a poet (57-8).

The *Dīwān* consists of *ḳaṣīdas*, strophic poems, *ghazaliyyāt, ḳiṭaʿāt* and *rubāʿiyyāt*. The *ḳaṣīdas* are mostly panegyric, and more than half of them lack a *nasīb* and begin directly with the *madḥ*. A large part of the remaining *ḳaṣīdas* have a *nasīb* devoted to a description of spring and *taghazzul*. Some *ḳaṣīdas*, however, stand out both by subject matter and quality. Memorable are no. 57, a complaint *ḳaṣīda* with the title *ṣafīr al-ḍamīr*; no. 59, which echoes a *ḳaṣīda* by Masʿūd-i Saʿd-i Salmān [*q.v.*] combining complaint with *fakhr*, and no. 60, an ascetic *ḳaṣīda*. In no. 72, a *sawgand-nāma* ("oath-poem"), the poet tries to repudiate an accusation. Some *ḳaṣīdas* have long passages devoted to *waṣf*. A case in point is the original no. 46, which has a description of fourteen lines of the eyes, which leads to a *gurīzgāh* where the gaze is oriented towards the *mamdūḥ*. Other examples are the description of the night in nos. 62 (as well as of the horse) and 67 (with separate attention to each of the planets).

Already in 1958 Braginski paid attention to the *ghazaliyyāt* of Ḥasan. More than a third of them end with a panegyrical dedication; in this he follows Masʿūd-i Saʿd-i Salmān and Muʿizzī [*q.v.*] and prefigures his later contemporary Sanāʾī and ultimately Ḥāfiẓ.

(ANNA LIVIA BEELAERT)

AL-**SAYYID** AL-**ḤIMYARĪ**, ABŪ HĀSHIM ISMĀʿĪL b. Muḥammad b. Yazīd b. Rabīʿa b. Mufarrigh, a Shīʿī poet and a grandson of the poet Ibn Mufarrigh al-Ḥimyarī [*q.v.*]. He was born to Ibāḍī parents about 105/723, grew up in Baṣra, and died in Baghdād or Wāsiṭ between 173/789 and 179/795. At a young age, he adopted with great fervour the doctrine of the Kaysāniyya [*q.v.*] Shīʿa, believing in the imāmate and occultation of Muḥammad b. al-Ḥanafiyya [*q.v.*] and his return as the Mahdī [*q.v.*]. Twelver Shīʿī authorities, both mediaeval and modern, claim that he later converted to Imāmism (*tadjaʿfara*), but the proof-stories they cite are anachronistic, contradictory, or legendary, and his *tadjaʿfur* poems have been judged of old as forgeries. Despite his well-known Kaysānī Shīʿī beliefs, though, he maintained good relations with the ʿAbbāsid caliphs al-Saffāḥ, al-

Manṣūr, al-Mahdī and al-Rashīd, whose praises he sang and whose gifts he accepted.

Al-Sayyid is considered a leading and prolific *muḥdath* poet of the class of Bashshār b. Burd and Abu 'l-ʿAtāhiya [*q.vv.*]. Although several known people (including four daughters) transmitted his poems, no one could collect them all, due to their large number—allegedly over 2,300. Of these, only 221 poems and fragments have survived; and, of the many books written about his *akhbār*, only one is extant also. Clearly, his poetry was shunned very early, since it contained vehement invectives against the Companions, the Prophet's wives, and the enemies of the Shīʿīs, notably the Umayyads. Most of his poetry praises the Banū Hāshim and recounts ʿAlī's virtues and extraordinary exploits. Though this poetry is generally lyrical, melodious, easy-flowing, and idiosyncratically narrative in style, al-Sayyid's most tender are perhaps his Kaysānī poems, depicting Ibn al-Ḥanafiyya's state and his long-awaited return to earth. These latter poems have been a major source for the heresiographers on the Kaysāniyya and have often been attributed to the earlier Kaysānī poet, Kuthayyir ʿAzza [*q.v.*].

SAYYID ḲUṬB, Ibrāhīm Ḥusayn Shādhilī, Egyptian writer, prominent member of the Muslim Brotherhood and main ideologue of modern Muslim Sunnī fundamentalism, born 9 October 1906 in Mūsha near Asyūṭ, executed 29 August 1966 in Cairo.

Life. In 1920 Sayyid Ḳuṭb moved from his native village to Cairo for his secondary education. From 1929 till 1933 he studied at *Dār al-ʿUlūm*. He worked as a teacher for approximately six years, became a functionary in the Ministry of Education (*Wizārat al-Maʿārif*), and was sent on an educational mission to the United States where he spent two years. He returned to Egypt in August 1950.

Sayyid Ḳuṭb joined the Muslim Brotherhood [see AL-IKHWĀN AL-MUSLIMŪN] probably only after his return from the United States. The exact date on which he joined is still disputed. It is usually assumed that he became a Brotherhood member in 1951.

In October 1952 he left the Ministry of Education after nineteen years of service. When the July 1952 revolution took place, he was in close contact with the Free Officers. He served, so we are told by several sources, as the cultural adviser to the leaders of the revolution. Nevertheless Sayyid Ḳuṭb parted with the new leaders because of ideological differences, for he believed that Islam should serve as the basis for the new Egyptian régime.

He became the editor of the newspaper of the Muslim Brotherhood just before he was arrested for the first time, together with the leadership of the Muslim Brotherhood, in early 1954, and remained behind bars for three months.

His second arrest took place on 26 October 1954 in the wake of the Manshiyya incident, supposedly an attempt to assassinate the then President, Djamāl ʿAbd al-Nāṣir [*q.v.* in Suppl.], in Alexandria's Manshiyya Square. In 1955 he was sentenced to fifteen years in prison.

Thanks to mediation by the ʿIrāḳī president ʿAbd al-Salām ʿĀrif, Sayyid Ḳuṭb was released from prison in 1964. In November 1964 he published his *Maʿālim fi 'l-ṭarīḳ* "Landmarks". In this book he accuses present Muslim societies of being not Islamic but *djāhilī*. This word originally simply means "pre-Islamic", but in this new context it has no limitations to a period but means first of all "pagan", "barbaric", "anti-Islamic", "vicious" and "wicked". The accusation of being *djāhilī* implies apostasy from Islam, which is punishable by death.

On 9 August 1965, Sayyid Ḳuṭb was arrested again. He was accused of attempting to assassinate Djamāl ʿAbd al-Nāṣir, of treason, and of planning a coup d'état. His trial was presided over by the notorious military judge Fuʾād al-Didjwī who, in the words of Gilles Kepel, "offered the accused all the guarantees of fairness characteristic of a military court in a dictatorial state trying defendants broken by torture." Sayyid Ḳuṭb was sentenced to death on 21 August 1966 and executed one week later.

Autobiographical writings. Two of Sayyid Ḳuṭb's novels are generally believed to be largely autobiographical: *Ṭifl min al-ḳarya* "A child from the village", 1946, and *Ashwāk* "Thorns", 1947, a moving work which explains why its hero never married.

At the end of the year 1965, in prison, Sayyid Ḳuṭb wrote a detailed statement on his activities within the Muslim Brotherhood. This statement was published under the title *Li-mādhā aʿdamūnī?* "Why did they execute me?". Moreover, several letters, autobiographical articles, and court or police proceedings have been preserved.

Literary works and literary criticism. The first book Sayyid Ḳuṭb published was his *Mahammat al-shāʿir fi 'l-ḥayāt wa-shiʿr al-djīl al-ḥāḍir*, "The task of the poet in life and the poetry of the present generation", 1933.

Sayyid Ḳuṭb's first and last volume of poetry appeared in 1935. It is entitled *al-Shāṭiʾ al-madjhūl*, "The unknown shore". The articles of literary criticism which he published in the periodicals *al-Risāla, al-Muḳtaṭaf, al-Kitāb* and *al-Kātib al-Miṣrī* between 1942 and 1946 have been collected in his *Kutub wa-shakhṣiyyāt*, 1946. In the same year his novel *al-Madīna al-masḥūra* "The enchanted city", appeared.

Writings on Islam. Ideas. Sayyid Ḳuṭb's most important work is without doubt his commentary on the Ḳurʾān, *Fī ẓilāl al-Ḳurʾān*, literally "In the shadows of the Ḳurʾān", in 30 volumes. When Sayyid Ḳuṭb was arrested in 1954, 16 volumes had appeared. The remaining volumes were written from prison, with Shaykh Muḥammad al-Ghazālī acting as government-appointed censor.

In 1960, a revised edition of this commentary

started to appear. Volume xiii of the revised edition (up to sūra XIV) appeared in 1964. Arrest and execution prevented the revised edition from being completed. It is this revised edition which is often characterised as *tafsīr ḥarakī* "activist exegesis".

In the general introduction to this commentary, the layman Sayyid Ḳuṭb carefully explains that he "had heard God speaking to [him] in this Ḳurʾān", even though his training had been literary, non-theological, and even though he had never been a recognised Azhar-trained "man of religion".

His *al-ʿAdāla al-idjtimāʿiyya fi 'l-Islām*, "Social justice in Islam", April 1949, revised ed. 1964, was originally written as an answer to the leftist ideas with which Egypt was permeated in the late nineteen-forties. It contains much that would come back in more rigidly-argued forms later on. It appears to be the first work in Arabic that employed the phrase "social justice" instead of "socialism".

The *djāhiliyya* theory developed in *Maʿālim fi 'l-ṭarīḳ*, 1964, became the ideological nucleus of modern Sunnī fundamentalism. It has the grim consequence of *takfīr*, the act of identifying someone as a *kāfir*, unbeliever, or, even, when born a Muslim, as an apostate who deserves the death penalty.

Sayyid Ḳuṭb's *djāhiliyya* theory has roots in traditional Islam and in traditional Islamic law. It appeals to the traditional dislike which the inhabitants of the Middle East feel for their rulers. It reflects the feeling, common in the Middle East, of being overwhelmed by a modernity that penetrated the Muslim world from the West.

There is, however, more to fundamentalism than a mere rejection of modernity. The non-fundamentalist Ṣūfīs, as well as other groups, equally reject modernity, but they do not accept the grave political consequences which the fundamentalists attach to this rejection.

Amongst the collections of articles that appeared as separate books under the name of Sayyid Ḳuṭb, *Maʿrakatunā maʿa 'l-Yahūd*, "Our struggle with the Jews", deserves individual mention. The essay which gave this volume its title was probably written in 1950-1. In its present form, it contains footnotes referring to the spurious document known as *The Protocols of the elders of Zion* that were added in 1970 by a Saudi editor, one Zayn al-Dīn al-Rakkābī. There is an English translation of the essay by Ronald L. Nettler, including an elaborate introduction and commentary, see *Bibl.* below.

A complete list of Sayyid Ḳuṭb's writings can be found in Ṣalāḥ ʿAbd al-Fattāḥ al-Khālidī, 1991, 517-80. This valuable list supplies ample information on the origins, first date of appearance, reprints etc. of Sayyid Ḳuṭb's articles and books.

All books on modern Islam discuss Sayyid Ḳuṭb, but see especially: G. Kepel, *The Prophet and Pharaoh*, London 1985, 26-67 (Gilles Kepel, *Le Prophète et Pharaon: les mouvements islamistes dans l'Egypte contemporaine*, Paris 1984, 30-67); E. Sivan, *Radical Islam*, New Haven 1985, 21-28; J.O. Voll, *Fundamentalism in the Sunni Arab world*, in M.E. Marty and R. Scott Appleby (eds.), *Fundamentalisms observed*, i, Chicago 1991, 368-72.

(J.J.G. Jansen)

SAYYIDS, a dynasty of Indo-Muslim kings in Dihlī which followed the Tughluḳs and preceded the Lodīs [*q.vv.*] and ruled over Dihlī for about 37 years (817-55/1414-51). Four rulers, Khiḍr Khān (817-24/1414-21), Mubārak Shāh (824-37/1421-34), Muḥammad b. Farīd (837-47/1434-43) and ʿAlāʾ al-Dīn ʿĀlam Shāh (847-55/1443-51), belonged to this dynasty. Their claim of Sayyid descent seems to have been shrewdly fabricated in order to buttress their position in the absence of any racial or oligarchic support. The contemporary author of *Taʾrīkh-i Mubārak-Shāhī*, 182, gives two reasons for this claim: firstly, because Sayyid Djalāl al-Dīn Bukhārī, an eminent Suhrawardī saint of Multān, had once referred to Khiḍr's father, Malik Sulaymān, as a Sayyid; and secondly, because Khiḍr possessed the moral qualities of a Sayyid. Both are flimsy arguments. Significantly enough, the author of *Taʾrīkh-i-Muḥammadī* is silent on this point.

Khiḍr Khān, the founder of the dynasty, was the son of Malik Sulaymān, an adopted son of Malik Naṣīr al-Mulk Mardān Dawlat, an influential *amīr* of Fīrūz Shāh Tughluḳ. Under the later Tughluḳs, Khiḍr became the *muḳṭaʿ* of Multān, but was removed in 798/1395-6 when he quarrelled with Sarang Khān, brother of Mallū Iḳbāl Khān [*q.v.*]. Fortune smiled upon him when Tīmūr occupied Dihlī and conferred its government on him. On the eve of his departure, Tīmūr entrusted to him the government of Multān and Dipalpūr also. This gave Khiḍr an initial leverage over other Tughluḳ *maliks* who were struggling for supremacy in the state, but he had to struggle hard to reach the throne. After a number of battles and skirmishes at Adjodhan, Sirhind, Rōhtāk, Mēwāt and Dihlī and in the Doʾāb, Khiḍr entered Sirī on 17 Rabīʿ I 817/6 June 1414 and ascended the throne. His seven years of rule were spent mostly in quelling rebellions and dealing with recalcitrant groups of the nobility. He made determined efforts, though without any lasting success, to reunite under the Sultanate the whole tract of the country from Multān in the west to Ḳannawdj in the east and from the foot of the Himalayas in the north to the borders of Mālwā. He was, however, reluctant to assume sovereignty and was content with the title of *Rāyat-i aʿlā*, pretending to rule on behalf of Tīmūr. Abu 'l-Faḍl remarks: "Khiḍr Khān in gratitude (to Tīmūr) did not assume the regal title but styled his court 'the Sublime Standards', and adorned the *khuṭba* with the name of that illustrious monarch and afterwards with that of Mīrzā Shāh Rukh, but it concluded with a prayer for himself" (ii, 312). The text of the *khuṭba* is given in the *Madjmaʿ al-inshāʾ* and *Taʾrīkh-i Muḥammadī*. Khiḍr Khān died on 17 Djumādā I 824/20 May 1421 and, according to Firishta, people mourned him by wearing black garments.

Mubārak Shāh, who succeeded his father, dealt with the rebellions of Djasrath Khōkar and Tughan Raʾīs, garrisoned Lahore and undertook campaigns against Katehr and Kampil. Developments in Etāwa, Multān, Bayana, Gwāliyār and Mēwāt disturbed him throughout his reign. He also had to deal with Sultan Ibrāhīm Sharḳī of Djawnpur [*q.v.*], undertake cam-

paigns against the Khōkars and face the revolt of the sons of Sayyid Salīm (Shawwal 833/June-July 1430). In Djumādā II 834/February-March 1431, he had to deal with the incursion of Shaykh ʿAlī of Kābul.

On 9 Radjab 837/19 February 1434, Sultan Mubārak Shāh was assassinated when he was preparing to go for his Friday prayers. During the 17 years of his reign, he had to undertake ceaseless military operations in Katehr, Mēwāt and the north-eastern region, and had to deal with rebellious *maliks* in and around the capital. Corrupt and treacherous officers added to his problems and pervaded the entire administrative machinery. His administrative shortcomings apart, he was (as Firishta says) a "cultured prince".

Immediately on his father's death, Muḥammad Shāh (son of Farīd b. Khiḍr) ascended the throne "with the assent of the *amīrs*, *maliks*, *imāms*, Sayyids, grandees, people, *ʿulamāʾ* and the *ḳāḍīs*" (*T.-i Mubārak-Shāhī*, 236). The next day he called the high *amirs* and slaves of Mubārak, who enjoyed the privilege of the *mahī marātib* (fish banner), on the pretext of giving *bayʿat* (allegiance), and had some of them killed and put others in confinement; he thus brought many of the regicides to book. At a time when anarchical tendencies were getting out of control, some *ʿulamāʾ* and *amīrs* invited Maḥmūd I Khaldjī [*q.v.*] from Mālwā. In utter distress, Muḥammad Shāh sent for Bahlūl Lodī and his troops from Sāmāna. The stern battle of the first day convinced Maḥmūd that the conquest of Dihlī would not be an easy task. He therefore readily accepted Muḥammad Shāh's proposal for peace and turned back. When he was on his return journey, Bahlūl Lodī plundered some of his equipage. Pleased at this, Muḥammad Shāh addressed Bahlūl officially as his son.

In 845/1441 Muḥammad Shāh handed over Dipalpūr and Lahore to Bahlūl and commissioned him to chastise Djasrath Khōkar. But Bahlūl turned hostile and marched against Dihlī. This undermined the position of Muḥammad Shāh, whose nobles "even within twenty *karohs* of Dihlī" turned against him. On Muḥammad Shāh's death in 847/1443, his son ʿAlāʾ al-Dīn ʿĀlam Shāh was raised to the throne. According to Abu 'l Faḍl, he "possessed no share of rectitude and abandoned himself to licentious gratifications" (ii, 313). Reports of Sharḳī attacks and the disloyal attitude of the nobles created a difficult situation for him. In 1448 he abandoned Dihlī and settled in Badāʾūn, where earlier he had lived as governor. Bahlūl Lodī took possession of Dihlī but allowed him to rule over Badāʾūn till his death (883/1478). Subsequently, Sulṭān Ḥusayn Sharḳī integrated Badāʾūn into his kingdom of Djawnpūr. Families which traced their origin to him were known in Badāʾūn as *Khiḍr-Khānī Sayyids* (Faḍl Akram Ṣiddīḳī, *Āthār-i Badāʾūn*, Badāʾūn 1915, 70).

Emerging as the principality of Multān, the Sayyid dynasty ended as the principality of Badāʾūn. Looked at in the context of the Dihlī Sultanate, the Sayyid dynasty forms a watershed in the history of mediaeval India, indicating a stage in the dismemberment of centralised monarchy. Its rulers were devoid of any ideal of establishing an empire; their political vision was confined to a radius of some 200 miles round Dihlī. Their writ worked only from "Dihlī to Pālam" (*az Dihlī tā Pālam*), as the saying went. They undertook innumerable punitive campaigns but these were mainly directed against their own *maliks*. There was neither administrative coordination nor uniformity in the areas under their control. Even in the agrarian sphere there was "diversity of practice in assessment and collection" (Moreland, 67). Group assessment seems to have gained ground at the expense of Sharing or Measurement. In reality, the Sayyid kings of Dihlī—with their nebulous title of *rāyat-i aʿlā*—were nothing more than glorified *iḳṭāʿ-dārs* and, as Tripathi has remarked, "were never seriously considered as Sovereign rulers". Their political outlook, their theory of kingship, and even their ethnic origin, was born of the exigencies of the situation. The numismatic evidence on which E. Thomas and Nelson Wright based their conclusions about inscriptions on the Sayyid currency is not borne out by information recorded by Bihāmid Khānī and other Persian chroniclers. According to Bihāmid Khānī, the orders of Shāh Rukh were enforced here for about 40 years. Robes of honour and standards were received from Harāt, while the *sikka* (currency) was issued and the *khuṭba* was recited in the name of Tīmūr and his son. It appears from the *Tāʾrīkh-i Muḥammadī* and the *Maṭlaʿ al-saʿdayn* that the Sayyid rulers regularly paid tribute to them. Mubārak Shāh's claim to be *Nāʾib-i Amīr al-Muʾminīn* should be interpreted in the context of Shāh Rukh's "ambition of being recognised as *Khalifa* and overlord of other Muslim princes" (Arnold, *The Caliphate*, 12).

Despite all the political turmoil and unstable conditions that prevailed in their shrunken kingdom, the Sayyid rulers displayed a keen interest in the founding of new cities. Khiḍr Khān founded Khiḍrābād and Mubārak Shāh Mubārakābād on the banks of the Djumnā (Sir Sayyid Aḥmad Khān, *Āthār al-sanādīd*, ed. Khalīḳ Andjum, Delhi 1990, i, 102). No archaeological remains of these cities have survived. ʿAlāʾ al-Dīn is said to have populated Aʿlāpūr in the Badāʾūn district (Raḍī al-Dīn Bismil, *Kamz al-taʾrīkh*, Badāʾūn 1907, 232). He laid out a pleasure garden also (Manzoor Badaoni, *Āthār awliyā-i shahr-i Badāʾūn*, Āgra 1338/1920, 25). The architecture of the Sayyid period is, however, expressive of dissolution. Only the tombs of the period have survived; it has been rightly designated as the *Maḳbara* architecture. According to Percy Brown, 26, "in the course of time the country around the capital was converted into a vast necropolis". More than fifty tombs of considerable size and importance belonged to nobles. No large congregational mosques were built during this period.

(K.A. Nizami)

SAZ, Ottoman form *sāz*, the Turkish lute. *Sāz*, with various meanings in Persian, including "musical instrument" in general, may be applied to stringed instruments (the *çöğür* in Adharbaydjān, the viol, *sorud*, in Balūčistān), to wind instruments (the *zurna* in Persia) or to the musical band itself; in effect, in Balūčistān (where the local language often reflects the ancient stages of Persian), this word also means the tuning of instruments.

If in Turkey *saz* still denotes, in a rural environment, any musical instrument, the term is generally applied to the lute with a long neck and a semi-pyriform belly, with three groups of strings comprising two or three strings, and this has become over the course of the 20th century a real symbol of national unity.

1. *History and structure of the instrument.*

There are representations of lutes with long necks on Akkadian cylinder seals of the third millennium B.C. The same type of instrument was spread, in the second millennium B.C., all over western Asia and Egypt. Later, there are Byzantine pictures of long-necked lutes (*pandoura*), attesting the presence of such instruments in Anatolia before the Turkish conquest. The question of the origin of these lutes can be discussed at length, but it is clear that, although such stringed instruments may have existed in Western Asia before the Turks' arrival, it nevertheless seems that the Oghuz brought into Asia Minor their own lute, the ancestor of the present *saz*, with the name of *kopuz*. In descriptions of the 14th-15th centuries A.D. (in Yūnus Emre and the Dede Korkut epic), it seems to have been a lute with three strings, with a long neck and a sound-board of hide. The present form of the *saz* could thus be the result of a synthesis between the autochthonous, Anatolian instrument and the Turkish *kopuz*.

In our time, the *saz* has several names, corresponding to different sizes respectively; thus, in increasing order, *cura* (between 50 and 70 cm), *cura-bağlama* or *tambura* (*ca.* 95 cm), *bağlama* (*ca.* 110 cm), *bozuk* (115-20 cm), *divan sazı* (130 cm) and *meydan sazı* (140 cm or more). The length of the neck compared with the sound-board is such that one can play an octave and a fourth. One should mention a final variant, originally from eastern Turkey and Ādharbaydjān, characterised by a shorter neck (an octave + a tone) and with a total length of about 100 cm; this is called *çöğür*, or *kısa saplı* (*bağlama*). It is not impossible that the most archaic *saz* may be the little *cura* with three strings, called in the western parts *üçtelli bağlama* or *kopuz*, and by the nomads of the Taurus, *bulgarı*.

Each fret is a nylon thread (in former times a piece of gut or a copper thread), wrapped three times round the neck and tied at the back; this may be the origin of another name currently used for the *saz*, sc. *bağlama* (from *bağlamak* "to attach").

The strings, of metal since the 18th century, are in origin two (*ikitelli*, corresponding to the Persian *dotār*) or three (*üçtelli, setār*). On the biggest *saz*, the cords are doubled or tripled in unison, in order to increase the dynamic or to create sympathetic resonances (*dörttelli, altıtelli*, etc.). At the present time there is added a deep-toned threaded string, tuned to an octave. The strings at the top and at the base are of a similar trim (.18 or .20 mm), and that or those of the middle is/are lower (.30 mm). In our context, we shall speak about the lower, middle or top string in the singular, even though a group of strings may be involved.

2. *Evolution and playing techniques.*

It is important to distinguish instruments of rural origin from those of musical instrument workshops of the towns. The latter, meant for playing in all styles, have 24 frets and can sometimes claim the same perfection as the classical lutes. A *saz* made by a peasant or nomad, with 10 to 18 frets, will be adapted to a particular regional or tribal style.

In the countryside, the *saz* is still played with the fingers, with trimmed finger nails; with one finger, or with *rasgueados*; but a plectrum may also be used, now made of a piece of plastic with an equivalent flexibility.

The different sizes of instruments, the placing of the frets and the numerous strings of the three groups display the main traits of the Anatolian musical system. At the outset, the longer the instrument, the more the left hand is forced to make long movements, played on the first string, with the other strings acting as a drone. The *saz* is in this case essentially a monodic instrument, subordinated to the voice which it accompanies. If it is of small or medium size, it will be played on the three strings; the slenderness of the neck allows in effect the thumb to block the upper string, whilst the other fingers press indifferently the lower or middle string. If the hand grips round the neck, the third finger may even press the upper string at the same time as the thumb. From this there results the possibility of varying the drones and of producing chords of three sounds, so that the art of the rural *saz* is often characterised by a tendency to polyphony, which sustains an invariably monodic melody.

As many as 14 different tunings (*düzen*) of the *saz* are enumerated. The ones most used today are:

(from top to bottom)

G-D-A (*kara düzen* or *bozuk düzen*)

E-D-A (*aşık düzeni* or *bağlama düzeni*)

The first allows all the modes of rural Anatolian music to be played, and leaves the choice between several base notes (A, G, B or D). For this reason, it is considered as the most suitable to represent the logical and systematic coherence put forward by the teachers in the conservatories of traditional music in contemporary Turkey. The second, the tuning of the minstrels (*aşık* [see ʿĀshiḳ]), is more limited since it only allows one base note (E), but is nevertheless very esteemed, and considered as more "hot" (*yanık*). Since the base note is situated on the middle string, the polyphonic tendency mentioned above is displayed there necessarily, in the shape of chords of parallel fifths very characteristic of minstrels' art.

Other tunings are meant for a more limited number of modes, and are practiced either in a special region (e.g. *misket düzeni*, F#-D-A, in the region of Ankara) or by a group (e.g. *abdal düzeni*, G-A-A, characteristic of the Abdal Turkmens).

3. *Ideology and society.*

In present-day Turkey, after the coming of modern ways of transmitting music—radio, tape recorders—

and taking into account the more frequent movements of population and migration to the big towns, several practices of the *saz* exist together.

Despite the change brought about by modern life, for marriage celebrations, *saz* musicians of the village, knowing the traditional and local repertoire, are still resorted to. They often play in small groups e.g. *saz*, viol and a wind instrument. They are gradually being replaced by youths playing the urban repertoire on an electric *saz*.

The *saz*, then, continues to accompany the singing of the *aşıks* or *ozans* [*q.v.*]. These poet-musicians come either from the mainly Sunnī regions of Kars and Erzurum, or from the Alevi-Bektaşi communities of the Sivas and Erzincan regions. In this latter case, internal emigration, to Istanbul or Ankara, or external, to Germany, has perpetuated the tradition of the *aşık*, which owes its popularity in the urban milieu to the political echoes of the texts of the songs, as expressions of a minority often persecuted in Ottoman history, and to a social ideal and art of living. Furthermore, the *saz* is the essential instrument for the ceremony of the Alevi *samāʿ* [*q.v.*]. For all these reasons, it has become the main symbol of Alevi culture, in contemporary Turkey and in the diaspora, in the form of the *çöğür* tuned according to the *bağlama* or *aşık düzeni*.

In addition to these practices, of a local or religious nature, since the first years of the Republic there has come into being a national music, whose diffusion has been assured by the Turkish radio and the state conservatoires. The repertoire is collected from all the provinces of Turkey and interpreted by orchestral groups using traditional instruments. In this framework, the *saz* embodies the national identity in more than one way: at the outset by its suitability for representing all the regional styles; then by the fixedness of its system fretting and the proportions which dertermine its making; and finally, by the inherent system and logic in learning the practice of the *saz* and often underlined by its teachers; these last give pride of place to the *kara düzen*, in fifths, assimilated to the "rational" order. From this point of view, one can say that the two tunings mentioned above are seen today as entailing two distinct ideological contents: the *bağlama düzeni* is associated with the voice of the *aşık*, to what is secret and to the heterodoxy of Bektashism [see BEKTĀSHIYYA], or even with social confrontation, in the eyes of official circles, who set up against it the "rational" *kara düzen*, the expression of the logical laws of the national music.

SEBASṬIYYA [see SABASṬIYYA].

SEBKHA [see SABKHA].

SEBÜKTIGIN (Tkish. *sevük tégin* "beloved prince"), Abū Manṣūr, Turkish slave commander of the Sāmānids [*q.v.*] and founder of the Ghaznawid dynasty [*q.v.*] in eastern Afghānistān.

What little is known of his early life stems mainly from his alleged *Pand-nāma* or testament of advice to his successor (preserved in a later Persian historian; see SHABĀNKĀRAʾĪ) and from Djūzdjānī's quotations from a lost part of the *Mudjalladāt* of Abu 'l-Faḍl Bayhaḳī [*q.v.*] which dealt with Sebüktigin's governorship. He came from the Barskhān district of the Semirečye [see YETI SU], was enslaved and taken to Transoxania, thus beginning a career in the Sāmānid army as a slave of Alptigin [*q.v.*]. After Alptigin withdrew to the far eastern periphery of the Sāmānid dominions at Ghazna [*q.v.*], a series of his fellow-Turkish commanders succeeded him as governor there, culminating in Sebüktigin's assumption of power in 366/977, beginning a twenty years' reign, nominally as governor for the Sāmānids, in fact as an independent ruler. From his base at Ghazna, he began the policy of expansion which his son Maḥmūd was to continue, adding Bust and Ḳuṣdār [*q.vv.*] to his kingdom, launching expeditions towards north-western India against the Hindūshāhī [*q.v.*] king Djaypāl and annexing the Kābul river valley down to Peshāwar. He gave military aid to the last Sāmānid *amīrs* against their rebellious generals (384-5/994-5), but just before his death in 387/997 himself intervened in Transoxania and established his influence in the capital Bukhārā. He was succeeded in Ghazna, after a brief succession struggle, by his eldest son Maḥmūd [*q.v.*].

After his death, Sebüktigin acquired a reputation amongst the Ghaznawids as the just ruler, *amīr-i ʿādil*, but little of his real personality in fact emerges from the sources.

Nazim, *The Pand-Nāmah of Subuktigīn*, in *JRAS* (1933), 605-28. Of studies, see Barthold, *Turkestan down to the Mongol invasion*, 261-5; M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 28-33; Bosworth, *The Ghaznavids*, 36-44. (C.E. BOSWORTH)

SEFĀRETNĀME [see SAFĪR].

SEGBĀN [see Suppl.].

SEGESTĀN [see SĪSTĀN].

SEGOVIA [see SHAḲUBIYYA].

SEGU or Segou, a town of the present Mali, situated on the banks of the Niger and the historic capital of the Bambara kingdom of Segu from the 18th century onwards, and then of the empire of al-Ḥādjdj ʿUmar.

There exist four villages with the name Segu, all on the river's right bank, at more than 200 km/124 miles to the north-east of Bamako. These are, from upstream to downstream, over a distance of a dozen kilometres, Segu-Koro ("old Segu"), Segu-Bugu (the village of agricultural cultivation), Segu-Kura ("new Segu") and Segu-Sikoro, transformed into a royal residence by Ngolo Jarra (*ca.* 1750-87).

It was around 1710 that Biton Mamari Kulibali asserted his power, as war leader and founder of a new system of authority, over the Bambara peoples, who were sedentaries, animists and users of the Mandingo language, of this part of the Niger valley. Having become the leader of a group of young men, all in the same age band (*ton*), he built up his power through the extensive acquisition of slaves from all origins, who became "slaves of the *ton*" (*ton jon*). In this way, a centralised, military state, based on Segu, developed, which spread out in all directions. Over two centuries, two dynasties succeeded each other at the head of this empire, the Kulibali and the Jarra.

The basic social institution of the Bambara empire of Segu was the *ton jon* or group of subject persons, who made up the army and a good part of the bureaucracy. Through loyal service and acts of bravery, certain *jon* could attain to positions of command. It was these *ton jons* who, in the middle of the 18th century, exterminated the Kulibali family and raised to power one of their own number, Ngolo Jarra, founder of the new dynasty.

The bases of Segu's prosperity rested on the lasting

alliance between an industrious (cotton, indigo, food production) Bambara peasantry, the military régime of the *ton jon*, who accumulated captives and booty, and the Marka, a specialist Muslim merchant group, who lived in certain towns and controlled commercial operations. The Bambara themselves were strongly attached to animist cults (the dynasty protected a whole network of temples and priests), but tolerated the practice of Islam in the quarters of the town-enclaves of the Marka.

At the approach of al-Ḥādjdj ᶜUmar, in the midst of the 19th century, the ruler of the time, Bina ᶜAli Djarra, tried in vain to ally with the Dīna of Māsina, the neighbouring Islamic Fulani power. Al-Ḥādjdj ᶜUmar entered Segu on 26-7 Shaᶜbān 1277/9-10 March 1861, and proceeded immediately to the gathering-together of all the idols and their destruction. Designated as *khalīfa* by his father, Aḥmadu (Aḥmad al-Kabīr), ᶜUmar's son, took over the succession on his father's death in 1864. It was at this time (1864-6) that the French traveller Mage lived in Segu, of which he has left a lively and well-informed description, estimating the population of Segu-Sikoro at that time at 10,000 persons. Aḥmad al-Kabīr reigned in this town for almost thirty years, at grips with the opposition of some of his brothers and with the conquered population. In this same period, the French advanced progressively from Senegal. On 6 April 1890 Colonel Archinard entered Segu, whilst Aḥmadu fled eastwards. In the course of the ensuing months, Archinard sent to the Bibliothèque Nationale in Paris—which has preserved them ever since—the rich library of al-Ḥādjdj ᶜUmar and of Aḥmadu.

SEHĪ BEY, Ottoman poet and biographer of poets of the 10th/16th century, b. 874/1470-1 and died 955/1548-9.

1. Life.

His original name is unknown, and the historian ᶜĀlī dubbed him "ᶜAbd Allāh" and considered him as stemming from the Dewshirme [*q.v.*]. He was certainly from Edirne and a close associate of the poet Nedjātī Bey (d. 914/1508-9 [*q.v.*]), also from that town. Already when Bāyezīd's son Maḥmūd (d. 913/1507) was appointed governor of Manisa, Sehī was the companion of Nedjātī and several other poets in the Prince's entourage (see Laṭīfī, *Tedhkire*, Istanbul 1314, 196, 329; ᶜĀshiḳ Čelebi, ed. Meredith Owens, London 1971, fols. 130b-131a; *İA* art. s.v. (F. Akün); Mehmed Çavuşoğlu, *Necati Bey Divani'nin tahlili*, Istanbul 1971, 11; Fāʾiḳ Reshād, *Tedhkire-yi Sehi*, ed. Mehmed Shükrī, Istanbul 1325, 76, 41; Günay Kut, *Heşt bihişt, the Tezkire by Sehī Beg. An analysis of the first biographical work on Ottoman poets, with a critical edition based on Ms. Süleymaniye Library, Ayasofya O. 3544*, Sources of Oriental Languages and Literatures 5, Cambridge Mass. 1978, pp. 423, at p. 1).

Through a misunderstanding of ᶜĀlī's *Künh al-akhbār*, Ewliyā Čelebi wrongly states that Sehī was Nedjātī Bey's son-in-law, and that he married Nedjātī's daughter in order to lay claims to his poems after Nedjātī's death (*Seyāḥat-nāme*, Istanbul 1314, i, 343, 347), a mistake later repeated by F. Babinger in his *EI*¹ art.; it was corrected by Reshād, in *op. cit.*, 316, see also Akün, *op. cit.*, and Kut, *op. cit.*, 2. Also, Babinger, following Leunclavius and *Sidjill-i ᶜOthmānī*, iii, 115, also wrongly states, according to Akün and Kut, that Sehī was the secretary (*kātib*) of Bāyezīd's youngest sons Meḥmed, and accompanied this last to Kaffa [*q.v.*], where he became for a time *sandjaḳ beg*; most sources, however, connect Sehī with Prince Maḥmūd and Manisa (see above). Sehī's close connection with Nedjātī continued till the latter's death, and on Sehī's own tomb is a chronogram couplet of his mourning Nedjātī's death (see Akün and Kut).

Later, Sehī served as a secretary to the prince Süleymān in Manisa and also with the latter at Edirne when Süleymān was commander there for Rumelia. After Süleymān's accession as sultan, Sehī recalled in his poems former favours no longer vouchsafed, but he seems in fact, from other poems, to have remained in favour with the royal family, and held office in the Morea [see MORA]. Finally, he served as administrator (*mütewellī*) of various ᶜ*imārets* in Edirne and Ergene, dying at the former place; it was whilst acting as administrator of a *waḳf* there he wrote his *Tedhkire* (see below).

2. Works.

Encouraged by the *Ḳāḍī ᶜAsker* Muḥiyy al-Dīn Čelebi Fenārī [see FENĀRĪ-ZĀDE], Sehī put together his poems into a *dīwān*, the unique ms. of which is in Paris, B.N. suppl. turc 360. This contains *ḳaṣīdas*, *ghazals* and other lesser genres of poetry, but Sehī does not seem to have been considered in his own time as a noteworthy poet. This may explain why he is hardly quoted in the anthologies of the 10th/16th and 11th/17th centuries and why only one ms. of his *dīwān* survives. On the basis of chronograms in some poems, Akün concluded that Sehī completed the collection between 942/1535 and 944/1537. The dedicatees of his poems include the sultans from Bāyezīd II to Süleymān and a large number of Grand Viziers, and there are three poems (*naᶜt*) dedicated to ᶜAlī b. Abī Ṭālib and two to Ṣūfī *dedes*, indicating a possible connection of Sehī with a dervish order.

Sehī's real fame sprang from his *Tedhkire*, finished in 945/1538 and called *Hesht bihisht* "Eight paradises", the first literary biographical work in Ottoman literature (for detailed discussion, see Kut, *op. cit.*, 17-18). Sehī states in his preface that he followed the examples of the collections of biographies by Djāmī, Dawlat Shāh and ᶜAlī Shīr Newāʾī, and following their example, divided his own work into eight *ṭabaḳas*. These include (1) the life of Sultan Süleymān; (2) the other sultans and the princes who wrote poetry; (3) high officials like viziers, *nishāndjīs*, etc.; (4) poets from the ᶜ*ulemā*ʾ; (5) the poets who had died by the time Sehī was writing (for which he seems to have gathered his own research; he has valuable details about early poets such as Aḥmedī [see AḤMADĪ], Aḥmed-i Dāᶜī and Sheykhī [*q.v.*]); (6) poets whom Sehī knew personally in his youth, some still alive; (7) his contemporaries and the newcomers (including two poetesses); (8) young and talented poets who had just started on their careers. An epilogue eulogises Sultan Süleymān.

Following his Persian and Čaghatay Turkish

predecessors, Sehī gives concise information about his poets, with full details of names and education, but rarely giving dates of birth or death; he then ends with selections from his subject's poetry. This procedure was adopted as a model by future biographers. His work clearly fulfilled a need as pioneer of the genre, for shortly afterwards came the similar works of Laṭīfī, ʿĀs̲h̲ik̤ Čelebi and several others.

There exist 18 mss. of the *Tedhkire* scattered through the library collections of Turkey and Europe (see Kut, *op. cit.*, 16-37). Ms. Ayasofya 3544 is the basis for Kut's edition; it was probably presented to Sultan Süleymān and was subsequently owned by Prince Meḥmed. An earlier print was issued by Meḥmed S̲h̲ükrī, Istanbul 1325/1907, with the title *Āt̲h̲ār-i eslāfdan ted̲h̲kire-yi Sehī* (but his printed version contains only 218 poets, see Kut, 12-14), to which is appended a study on Sehī by Fāʾik̤ Res̲h̲ād; this print was based on ms. Millet, Ali Emiri, Tarih 768, copied by ʿAlī Emīrī himself. Finally, the *Ted̲h̲kire* was translated into German by Necati Lugal and O. Reşer as *Sehi Bey's Tezkere. Türkische Dichterbiographien aus dem 16. Jahrh.*, Tübingen 1942. Kut's critical edition is based on six mss.; see her *Heşt bihişt* and also her *Heşt Bihişt'in yeni bir nüshası ve bir düzeltme*, in *Jnal. of Turkish Studies*, vii (1984), 243-301. In recent years, Dr. Müjgân Cumbur and a group of scholars have been working on a serial edition of all Ottoman biographical works, starting with Sehī's.

Bibliography: Given in the article. For the older bibl., see F. Babinger's *EI*[1] art. (G.A. Tekin)

SELĀMLİK̤ (t.), the Ottoman Turkish term for the outer, more public rooms of a traditionally-arranged house, used e.g. for the reception of guests and non-family members; it thus contrasted with the inner rooms which constituted the *ḥaram* or harem for the womenfolk. The term *selāmlïk̤ dāʾiresi* is also found. A further use of the word *selāmlïk̤* is in the expression *selāmlïk̤ ālāyï* to denote the sultan's ceremonial procession from the palace to the mosque for Friday worship, a practice kept up by the Ottomans up to and including Meḥemmed V Res̲h̲ād [*q.v.*] in the second decade of the 20th century.

Bibliography: Pakalın, iii, 153-5. (Ed.)

SELĀNĪK, the Ottoman Turkish name for classical and early Byzantine Thessalonike, modern Greek Thessaloniki, conventional form Salonica; the largest city of Macedonia, on the gulf of the same name, to the east of the Vardar river mouth. The city has always possessed a large and secure port, and was located on the Via Egnatia connecting Durazzo (Durrës) with Byzantium. In the 5th/11th century, it is first named Salonikion, from which all variant names derive: Ṣalūnīk or Ṣalūnīk̤ in Arabic, Solun in Bulgarian, Selānīk in Turkish and Salonica in English. In the 6th/10th century, the town was an important centre of Mediterranean trade, with ties to the Islamic world; but apart from al-Idrīsī, the mediaeval Arab geographers do not mention it. An attack on the city by a naval force based upon Tripoli in Syria (289/902) supposedly netted the attackers a total of 22,000 captives. In 581/1185 Salonica was taken by the Normans; the textile artisans, for whom the town was famous, were transferred to the royal workshops in Sicily. In the early 7th/13th century, Salonica was ruled as an independent kingdom by the Marquis of Montferrat; but after the reconquest of Constantinople by the Byzantines, the Palaeologi recovered Salonica as well. Serbian conquests in the area resulted in the isolation of the Byzantine exclave of Thessaloniki by the middle of the 8th/14th century, which was then linked to Constantinople only by sea.

Ottoman activity in the area began under Murād I, with nomads from the western Anatolian principality of Ṣaruk̲h̲ān [*q.v.*] settling in the area. Ottoman forces once conquered the city, but returned it to the Emperor Manuel. Sultan Yïldïrïm Bāyezīd reconquered it in 796/1394, but after his defeat and capture in the battle of Ankara (804/1402), his son Süleymān returned it to the Byzantines (805-6/1403). Many details of this sequence remain unclear. However, after the siege of Constantinople by Murād II in 826/1423, the governor of Thessaloniki, Andronikos Palaeologos, sold the city, which then supposedly held about 40,000 inhabitants, to the Venetians. While the sultan recognised this transfer in the capitulations granted to the Venetians in 830-1/1428, in 833/1430 he conquered the city nonetheless. In the meantime, many inhabitants had abandoned the city because of the prevailing insecurity. Johannes Anagnostes, a Byzantine chronicler, has left a detailed account of these events. He claims that 7,000 persons, including himself, were taken prisoner. Yet in some cases, the sultan himself paid the ransoms of the captives and promised that those who had fled the city would have their properties restored in case they returned. Two or three years later, Turkish settlers were brought into Selānīk from Yeñid̲j̲e-i Vardar, and the church of the Acheiropoietos and the monastery of the Prodromos were turned into mosques.

A tax register (*taḥrīr*) was also prepared at this time, but has not survived. We do, however, possess a tax register dating from 883/1478 and a fragment from the reign of Bāyezīd II (r. 886-918/1481-1512) (Başbakanlık Arşivi Osmanlı Arşivi, Istanbul Tapu Tahrir 7, and Bibliothèque Nationale Cyrillos and Methodios, Sofia, Oriental section, SN 16/35, publ. in Bistra Cvetkova (ed.), *Fontes turcici historiae bulgaricae*, xvi, Sofia, 1972). There exist two further *mufaṣṣal* registers covering Selānīk; one from about 967-8/1560 and another from 1022/1613 (Tapu Tahrir 403 and 723). The earliest *taḥrīr* enumerates 862 Muslim and 1,275 Christian householders. From their regular distribution among the pre-existing town quarters, it can be assumed that the Muslim inhabitants had been settled in the city by order of the sultan (*sürgün*). By the beginning of the 10th/16th century, Selānīk had about doubled in size, as apart from 1,715 Muslim households, there were now 1,688 Christians and 754 Jews. A high point was reached in 925/1519, when an abbreviated register (*id̲j̲māl*) recorded 1,374 Muslim, 1,387 Christian and 3,143 Jewish households. By about 967-8/1560, a significant drop in population had occurred (773 Muslim, 1,047 Christian and 2,645 Jewish households). This decline was even more pronounced by 1022/1613, when the relevant figures were 1,090, 561, and 2,033, showing a relative increase of the Muslim and a decline of the Christian element. Thus Selānīk seems to have held about 10,000 inhabitants in 883/1487 and to have oscillated between 18,000 and 30,000 thereafter. Ewliyā Čelebi claims 33,000 houses for 11th/17th-century Selānīk, which would give a population of over 150,000. But European travellers indicate that during its years of prosperity in the second half of the 12th/18th century, Selānīk possessed a population of about 60,000 to 70,000, 28,000 to 30,000 of whom were Turks.

Among the revenue sources of Selānīk and other towns of the area which the 9th/15th-century Ottoman state attempted to exploit, were the salt pans, supplemented by a fishing weir in the vicinity of Selānīk itself. Accounts begin in 873/1468-9, but show that the enterprise was in constant difficulties. Several

tax farmers were executed for their failure to pay, while the most prominent of them, a member of the Palaeologi family, managed to escape. The early tax farmers were Christians; but a Muslim *mültezim*, recorded in 881/1476-7, equally owed a major sum. This situation indicates considerable disorganisation among sheepbreeders and fishermen, and possibly a crisis in the Macedonian village economy as a whole.

Among the Ottoman monuments of the city, the most prominent is the White Tower, built probably in 942/1535-6 upon the order of Sultan Süleymān; Miʿmār Sinān may have been responsible for its construction. Ewliyā Čelebi, who visited Selānīk about 1078-9/1668, has left a detailed description of the fortifications, including the castle of Kalamarya; he was greatly impressed by their size, but felt that they had recently been neglected. Among the mosques that were built by Ḥafṣa Khāṭun, the daughter of Ḥamza Beg, was a new building (872/1467-8, enlarged in 1000-1/1592 and repaired in 1029/1620). This structure had come to be known by the late 10th/16th century as the mosque of Ḥamza Beg. It is one of the very few mosques not founded by a sultan to possess a colonnaded courtyard, albeit of irregular shape. The reconstruction around 1029/1620 is documented by a *waḳif-nāme* penned by the stylist Meḥmed Nergisī, while the donor was a *ḳapudjī* by the name of Meḥmed Beg son of Seyyid Ghāzī. The second mosque constructed at this time is known as the Aladja ʿImāret; it was built by the former Grand Vizier Inegöllü Isḥāḳ Pasha in 892/1486-7. It is of the T-shaped type, and its side chambers originally may have been meant to house dervishes. The mosque was associated with a public kitchen. Next to the building there once stood a minaret ornamented in multi-coloured stone, which gave the whole complex its name. Other major mosques were converted Christian churches; since Selānīk had been taken by assault, the transformation of churches into mosques was legally possible at any time. Many churches were taken over either around 905-6/1500, when refugees from Spain caused a wave of anti-Christian feeling, or in the tense years surrounding the millenium of 1000/1591-2. The church of St Demetrius was converted into a mosque in 898/1492-3 and thenceforth known as the Ḳāsımiyye, while in 927/1521 local conflicts resulted in the confiscation of the Hagia Sophia, at that time the metropolitan church of Selānīk. The funerary monument of Galerius, converted into a church in Byzantine times, was turned into a mosque on the initiative of the dervish *shaykh* Khortadji, with the support of the Grand Vizier Sinān Pasha (998 or 999/1589-90 or 1590-1).

In 883/1478, the Selānīk tax register had not shown any Jewish inhabitants, probably because the city's Romaniote community had been transferred to Istanbul by Sultan Meḥemmed II (r. 848-50/1444-6 and 855-86/1451-81). This move probably formed a part of the latter's programme of forced settlement (*sürgün*) to repopulate his new capital. But after the Jews had been driven out of Spain in 1492, and out of Spanish possessions in Italy shortly afterwards, Bāyezīd II invited them to settle in the Ottoman Empire. Many of these refugees were established in Selānīk. A summary (*idjmāl*) register of 925/1519 records the presence of about 16,000 individuals; this figure included refugees from Germany and Italy as well.

The Jewish immigrants continued to use Spanish in vernacular communication; when the language was committed to writing, the Hebrew alphabet was employed. A small number of Judaeo-Spanish speakers exists to the present day; but centuries' long isolation from Spain has resulted in many expressions archaic in standard Spanish. A number of Hebrew, Ottoman and Greek loanwords have also been incorporated, and at one time there existed a second more "literary" version of Judaeo-Spanish, often called Ladino, which contained many expressions closely modelled on Hebrew.

The new settlers engaged in the manufacture of woollen cloth, using water-powered fulling mills located outside the city. This manufacture of medium-quality cloth (*čuḳa*) supplied the market as well as the Janissaries. According to samples sent from Istanbul, the cloth was woven, dyed and fulled. Originally this service was paid for; but after the middle of the 10th/16th century, the Salonica Jews were required to pay part of their taxes in the shape of woollen cloth. Their supply of raw wool was ensured by the privilege of purchasing whatever they needed from Balkan producers before any other customers could be supplied. A rabbinical regulation, pronounced around 946-7/1540, threatened all Jews who exported raw wool and the indigo needed for dyeing with excommuniction. However, the cloth manufacture, prosperous in the early 10th/16th century, ran into trouble thereafter. Raw wool prices increased, first because of Venetian demand, and when the Venetian woollen industry steeply declined after 1008/1600, French purchasers prevented a fall in prices. Civilian demand for the finished product also fell away as English cloth appeared on the Ottoman market in large quantities after the 990s/1580s. Due to the need to supply the Janissaries, the manufacturers were not able to change their trades. In consequence, a large number of Salonica Jews emigrated in the 11th/17th century; some went to other Rumelian towns, but the burgeoning Anatolian port of Izmir was a favourite destination.

Nevertheless, at the same time, immigrants continued to arrive, particularly from Livorno and other Italian commercial centres. Due to the contacts which these immigrants (Francos) brought with them, many of the most prosperous Jewish merchants of Selānīk down to the 13th/19th century came from this group. But even though certain traders continued to be successful, on the whole Jewish merchants and financiers were eclipsed by other groups. An increasing orientation of Balkan trade toward Europe facilitated the rise of Christian merchants, and as the Jewish traders of Selānīk found fewer business opportunities, the community in the 12th/18th century increasingly consisted of petty traders and artisans.

In the 10th/16th century, the Jewish community of Selānīk possessed a considerable scholastic activity, as local rabbis grappled with the religious and legal problems ensuing from life in a new environment. In addition, arrangements had to be devised to accommodate those people who had been converted to Christianity in Spain or Portugal but wished to return to Judaism. Responses to legal questions (*responsa*) were at times committed to print, the first printing press in Selānīk being established in 915-16/1510. Yet there were few contacts with either Muslim or Christian scholars, and isolation in the long run resulted in a certain sclerosis of intellectual life.

For the Jewish community of Selānīk, the major event of the 11th/17th century was the movement of Shabbatay Ṣebi (1036-7-1087/1626-76 [*q.v.*]), a rabbi from Izmir who claimed to be the Messiah. He found adherents in Jewish communities all over the eastern Mediterranean and even in eastern Europe, but due to the concentration of Jews and institutions of Jewish learning in Selānīk, his partisans in this city were of strategic significance. Complaints from rabbis unwill-

ing to regard Shabbatay Ṣebi as the Messiah led to the involvement of the Ottoman authorities, and Ṣebi was assigned to forced residence in Gelibolu (1076-7/1666). But after continuing effervescence among Ottoman Jewish communities, Shabbatay Ṣebi was brought to the sultan's court in Edirne and offered the choice between death and conversion to Islam. He chose the latter (1077/1666). While some of his adherents returned to the established communities, others followed his example and were converted; this process continued over a number of years and led to the formation of a group known as the *dönme* [*q.v.*] (converts). *Dönme* used Muslim names and followed Muslim ritual including the pilgrimage to Mecca; but down into the present century, they married only among themselves and had the basic features of rabbinic law taught to their children. Certain well-known rabbis of Selānīk who did not convert also retained sympathies for the movement of Shabbatay.

In the 12th/18th century, Selānīk's trade expanded after a period of relative stagnation, as the port became the centre of a lively import and export trade, particularly with France and various Italian states. Foreign consuls and vice-consuls became more numerous (at the beginning of the century, the French consul had been the only foreign representative), and an increasing number of non-Muslim merchants purchased the "protection" of foreign consuls, often acquiring more or less fictitious positions as translators. In local administration, one of the key personages was the principal customs farmer. Both the wealthy *aghas* of the area and European merchants maintained good relations with him, often lending money to a person of their confidence so that he could acquire the position. Another powerful figure was the commander of the local Janissaries, who controlled a force of about 7,000 men.

Among the goods exported, wheat occupied an important place, even though this was mostly contraband, *aghas* with *čiftliks* in the Macedonian countryside supplying the exporters. Grain speculation was widespread, landholders holding back supplies until prices had increased or else making deals with exporting merchants. Grain riots were not unknown. Raw wool often went to France, while cotton and cotton thread gained in importance with the growing mechanisation of cotton-weaving in England, and also supplied looms in Germany. Tobacco and raisins were also exported. Imports consisted of manufactured goods, particularly French woollen fabrics, but also of Venetian silks, which all but monopolised the local market until, during the last quarter of the 12th/18th century, silks from Lyons became important. With the increasing production of coffee on the Caribbean islands, *le café des îles* began to compete with Arabian coffee, and sugar brought in by European merchants with Egyptian sugar.

For distribution, the pre-existing network of Balkan fairs was available, at which even rural consumers were able to purchase the cheaper imported goods. An active internal trade existed, linking Selānīk with Izmir, Egypt, Crete and the Aegean islands. Soap, linens and citrus fruits were brought to the city from these areas, while luxury goods often came from Istanbul. Greek merchants were particularly active on the overland route linking Selānīk to Vienna and the fair of Leipzig. Greek merchants, often based in Selānīk, were so active in the Hapsburg Empire that Maria Theresa and Joseph II took measures to limit their business, forcing rich Greeks established in the Hapsburg domains to concentrate on banking. But due to the foreign "protection" which many wealthy merchants had acquired and to the resulting tax evasion, the payment of taxes and dues was often a heavy load on the "ordinary" Greeks of Salonica, and the community owed large sums of money to wealthy Ottomans.

The decline of Selānīk as an international port toward the end of the 12th/18th century was due partly to political conflict within the city, but also to international conjunctures, as the revolutionary and Napoleonic wars interrupted established trade routes. The general downturn in the Ottoman economy during the last decades of the 12th/18th century probably constituted a contributing factor. The abolition of the Janissary corps in 1241/June 1826 had political and economic repercussions on the local level; the Jewish accountant of the Janissary *odjak* was even one of the victims of anti-Janissary repression. The disappearance of the Janissaries led to the final eclipse of woollen cloth manufacture by Jewish artisans, and aggravated pauperisation.

In the course of the 13th/19th century, certain notables from the Jewish community developed an interest in the creation of new enterprises, particularly the processing of tobacco and later the manufacture of cigarettes. Due to the overall expansion of trade, the need for commercial employees with training in accounting and foreign languages also made itself felt. In the eyes of the notables it was necessary to train both a literate blue-collar workforce and specialist white-collar employees. This meant a thorough restructuring of the established Talmud-Torah schools, which down to this period had imparted basic literacy to boys only. Reform of the school system became a major bone of contention in the struggle for control of the community between the established rabbinical élite and the lay notables, a struggle not without its parallels in other Ottoman minority communities of the 13th/19th century. After 1276-7/1860, the notables were able to muster the support of the Alliance Israélite Universelle, an association based in France by which mainly francophone Jews supported French-language schooling among Jewish communities of the Mediterranean basin. The Alliance sponsored not only schools for both boys and girls, but also (no more than partially successful) efforts to apprentice children, in addition to a network of social organisations. In the early stages, the Alliance schools also organised the teaching of Turkish to their students, and in the early 20th century, when the annexation of Selānīk by Greece was increasingly viewed as a possibility, began to teach Modern Greek as well. The reports of the Alliance schoolteachers to their employers in Paris constitute a valuable source for the social history of late Ottoman Selānīk.

At the beginning of the 20th century, Selānīk was one of the centres of the Committee for Union and Progress (*Ittiḥād we Terakkī Djemᶜiyyeti* [*q.v.*]). The backbone of this group were officers frustrated by the manner in which the war against Macedonian rebels was conducted—in 1903 there had been a series of attacks against public buildings in Salonica itself. Muṣṭafā Kemāl (the later Atatürk), a native of Salonica but at the time stationed in Syria, visited his home town and helped found a branch of the *ᶜOthmānlī Ḥürriyyet Djemᶜiyyeti*. This organisation, based on small cells, under the leadership of the Salonica telegraph official Ṭalᶜat Bey, expanded rapidly among officers and bureaucrats in Macedonia. Contacts were established with the *Ittiḥād we Terakkī* exile group in Paris, but the Salonica group retained its political and organisational independence and played a key role in the events which led to the restoration of the Ottoman Constitution in 1908.

Around 1900, Selānīk possessed one of the largest

concentrations of factory labour in the Ottoman Empire. Much of this labour force, particularly in the tobacco industry, was female, and consisted of teenage girls put to work by their families in order to earn their dowries. But among the male labourers, organisations midway between guilds and trade unions began to appear at this time. Particularly among the minority group of Bulgarian labourers, socialist tendencies showed themselves. A local group was recognised by the Second International. In 1909 Abraham Benaroya brought out a socialist paper in Ottoman (Ottoman Turkish title: *ʿAmele Ghazetesi*), Greek, Bulgarian and Judaeo-Spanish. While the Ottoman and Greek versions soon had to be given up due to lack of reader interest, the Bulgarian and Judaeo-Spanish versions did attract readers. Official repression followed, including Benaroya's banishment to Bulgaria (1911).

The Ottoman history of Selānīk ended with the First Balkan War, which began with an occupation of northern Albania by Montenegro, followed by an ultimatum on the part of several Balkan states against the Ottoman Empire (October 1912). While the Bulgarian army advanced as far as Çatalca on the outskirts of Istanbul, the Serbian and Greek armies entered Macedonia, with the Greeks occupying Selānīk on 8 November 1912. The Ottoman government ceded Selānīk in a peace treaty with Greece in March 1914, to the great distress of the city's Jewish population, whose spokesmen had strongly favoured the continuance of Ottoman rule. Salonica was rapidly transformed into a Greek city, particularly through emigration of the Turkish-speaking population, the reconstruction following the great fire of 1917 and the settlement of large numbers of Anatolian Greeks entering the country as a result of the Turco-Greek population exchanges of 1923.

(SURAIYA FAROQHI)

SELĀNĪKĪ, MUṢṬAFĀ EFENDI (d. *ca.* 1008?/1600?), Ottoman official and historian.

Almost nothing is known of his early life or family background, or when he was born and died, but he identified himself with Salonica [see SELĀNĪK] and called himself *Selānīklü* and apparently reached old age. What is known stems almost entirely from his *History* (see below), in which he details his official appointments, his presence at various military events during the reign of Süleymān Ḳānūnī (e.g. during the Szigetvar campaign in Hungary of 1566) and his suc-

cessors and his own views on affairs. Amongst the many official posts which he held were *muḳāṭaʿad̲j̲ī* of the Ḥaramayn (till 988/1580); he was a *dawādār*; he was secretary of the *silaḥdārs* and then of the Sipāhīs [*q.v.*] (till 996/1589); in 999/1591 the Grand Vizier Ferhād Pas̲h̲a appointed him *rūznāmed̲j̲i* [*q.v.*]; he became *muḥāsebed̲j̲i* of Anatolia (1007/1599); and shortly thereafter he disappears from recorded history.

The *Taʾrīk̲h̲-i Selānīkī* begins with events of 971/1563 and closes with the escape of the Voivode Ḳāsim from custody in S̲h̲awwāl 1008/May 1600, thus touching on four reigns up to that of Meḥemmed III. It is more a diary of events which came to the writer's notice than a formal chronicle, the composition of which he might have intended to do later. It becomes progressively more detailed from the end of Murād III's reign (1003/1595). Rather than consulting other histories, Selānīkī seems to have relied on his contacts with the leading men of state and on official documents from the *Dīwān-i Humāyūn* and elsewhere for his information; as well as mentioning the viziers of the time, he mentions also the poet Bāḳī [*q.v.*] and the *S̲h̲eyk̲h̲ ul-Islām* Ṣunʿ Allāh Efendi. Although the *History* is a prime source for the period, it does not seem to have been widely used or copied (yet over 25 ms. copies of it exist today) until the early 12th/18th century. The treatment of common events in e.g. Pečewī, Kātib Čelebi and Naʿīmā is quite different, but Ṣolaḳ-zāde clearly used it, without making acknowledgement. A feature of Selānīkī's work is that he not only relates events but also includes criticisms of these events and of what he perceived as the general decline of the Ottoman state; the ups-and-downs of his own official career, with its frequent appointments and dismissals, may have affected his attitude here.

The *History* was partially printed at Istanbul in 1281/1864-5, but no complete, critical edition existed till that of Mehmet İpşirli, pp. LXXXV + 1,008, Istanbul 1989.

Bibliography: Von Hammer, *GOR*, iii, 750, iv, 168, 181, 185d, 243, 435; Babinger, *GOW*, 136-7; İpşirli, *Mustafa Selaniki and his History*, in *Tarih Enstitüsü Dergisi*, ix (1978), 417-72; *İA*, art. *Selaniki* (Bekir Kütükoğlu).

(Mehmet İpşirli, shortened by the Editors)

SELČUḲ [see aya solūk].

SELĪM I, in official documents Selīms̲h̲āh, nicknamed Yavuz or the Grim, ninth Ottoman sultan (reigned from 7 Ṣafar 918/24 April 1512 to 8 S̲h̲awwāl 926/21 September 1520), conqueror of eastern Asia Minor, Syria and Egypt, and the first Ottoman sultan entitled K̲h̲ādim al-Ḥaramayn al-S̲h̲arīfayn or Servitor of Mecca and Medina.

The struggle for the throne, 1509-13.

To comprehend the circumstances and nature of the fierce struggle for the throne between Bāyezīd's three sons Ḳorḳud, Aḥmed and Selīm, we have to keep in mind that Turco-Mongol peoples firmly believed that sovereignty was granted exclusively by God and no human arrangement could determine who is going to be next on the throne.

In fact, when the throne became vacant, the prince who was able first to reach the capital city and take control of the treasury had the best chance to be recognised as ruler. So each of the sons of the reigning sultan tried to get the governorship nearest to Istanbul. Although respected as an intellectual versed in Islamic law and the fine arts, Ḳorḳud was thought to be less apt for an Ottoman ruler. Described as just and generous in Ottoman sources, Aḥmed was at the beginning the most popular of the princes, and the many of the great men of state, including the Grand Vizier ʿAlī and the *ʿulemāʾ*, wanted him to succeed. The youngest of the three princes, Selīm was born in 875/1470-1 in Amasya from prince Bāyezīd (Bāyezīd II) and ʿAys̲h̲e (ʿĀʾis̲h̲e), the daughter of the D̲h̲u 'l-Ḳadrid ruler ʿAlāʾ al-Dawla. When the rivalry for the throne began in 1509, Aḥmed was governor of Amasya, nearest to Istanbul while Ḳorḳud was the governor of the distant *sand̲j̲aḳ* of Antalya and Selīm that of Trebizond, the farthest of all.

In 1509 Bāyezīd II [*q.v.*], an ailing old man, was believed incapable of leading the empire's armies against S̲h̲āh Ismāʿīl I [*q.v.*] of Persia, who had become a serious threat to the Ottomans, not only on the eastern frontiers of the empire but also within Anatolia through the activities there of his Turcoman sympathisers.

In 1507, the S̲h̲āh's invasion of the D̲h̲u 'l-Ḳadr [*q.v.*] principality, during which he passed over the Ottoman lands and enrolled in his army Turcomans who were Ottoman subjects, was considered a daring violation of Ottoman sovereignty. While Bāyezīd avoided any open conflict, Selīm from Trebizond took the initiative and in retaliation raided the S̲h̲āh's territory as far as Bayburd and Erzincan. In Istanbul, this was interpreted as insubordination and caused the first rift between the sultan and his son. While, by his submissive attitude, Prince Aḥmed was favoured by the sultan and the Grand Vizier, Selīm became the symbol of an aggressive policy. Selīm, however, declared that his concern was not to secure the throne but to save the empire from the havoc in which it had fallen. Openly criticising his father's inactivity, he showed himself as a champion of the warfare against heretics as well as Christians. Already from Trebizond he had organised raids into the neighbouring Georgia. His *g̲h̲azā* activities, used as political propaganda, won him the favour of the Janissaries, the timariot Sipāhīs and Aḳīnd̲j̲is [*q.v.*] in Rumeli. It was the military campaigns that gave opportunity to these military classes to get promotion, more valuable *tīmārs* or booty. In reality, for Selīm this was a struggle for survival since his and his son Süleymān's lives would be at stake should one of his brothers become sultan. Since there was little chance for him to reach Istanbul when the throne became vacant, he insisted that his governorship be exchanged for one in Rumeli.

In this strategy, his first success was to secure the governorship of Kefe [*q.v.*] or Caffa for Süleymān (August 1509). When the news reached him that Bāyezīd was ill and was prepared to abdicate in favour of prince Aḥmed, Ḳorḳud and Selīm suddenly left their seats, the former moving from Tekke to Manisa and the latter from Trebizond to Caffa. In fact, Bāyezīd favoured Aḥmed as his successor, and openly expressed this at a meeting. From Caffa, Selīm insisted that he be appointed to a *sand̲j̲aḳ* on the Danube, ostensibly to fight against the "unbelievers". When this was denied, he crossed the Danube at the head of about 3,000 men and marched toward Adrianople (March 1511). ʿAlī Pas̲h̲a had the sultan declare Selīm a rebel, and Bāyezīd led an army of 15,000 to Adrianople, ordering at the same time all the Rumelian troops to join him there. At this juncture, one of the *k̲h̲alīfes* of S̲h̲āh Ismāʿīl in Tekke [*q.v.*], taking advantage of the anarchical conditions in the empire, rose up and with his fanatical Ḳïzïlbās̲h̲ [*q.v.*] followers and others, defeated the imperial troops sent against him (early March 1511). Ḳorḳud and Aḥmed were held responsible for this critical situation, which strengthened further Selīm's position. Under these conditions, Bāyezīd eventually yielded and agreed to

give Selīm the governorship of Semendere [*q.v.*] or Smederovo. The sultan also vowed that "while he was alive he would not allow any of his sons to replace him in the sultanate and said that, at his death, it will be God's decision who would succeed him." Believing that he had pacified Selīm, Bāyezīd returned to Istanbul (24 August 1511). When Aḥmed learned of the agreement between his father and Selīm, he feared that Selīm would become powerful enough to seize the throne, so he himself threatened to rebel in Anatolia. In Rumeli, Selīm, trying to muster under his banner the troops of Rumeli at Eski-Zagra, heard that Bāyezīd and ʿAlī had actually decided to invite Aḥmed to Istanbul and place him on the throne. But the Grand Vizier then had to cross in haste over to Anatolia, with 4,000 Janissaries (May 1511), in order to suppress Sh̲āh-Ḳulu, who was threatening to capture Bursa. Confident in eliminating Sh̲āh-Ḳulu, the Grand Vizier and Aḥmed deliberated how, after victory, they would go to Istanbul and proclaim Aḥmed sultan. Informed of this plan, Selīm suddenly turned and occupied Adrianople (Rabīʿ I 917/June 1511) at the head of the Rumelian army of 30,000, acting there as sultan. This was open rebellion, which could not be tolerated, and at the head of an army of 40,000 men and artillery, Bāyezīd hastened to confront his rebellious son on the battlefield near Çorlu (8 D̲j̲umādā I/3 August 1511). Selīm, defeated, joined his son Süleymān at Caffa. Almost at the same time, both ʿAlī Pas̲h̲a and Sh̲āh-Ḳulu fell in a bloody combat in central Anatolia. With the death of the Grand Vizier, Aḥmed lost his principal supporter for the sultanate. Aḥmed now threatened to occupy Bursa with the Anatolian troops and to confront Selīm. The empire was on the brink of a civil war. Aḥmed's supporters pressed the sultan to invite him as soon as possible to Istanbul. However, the new Grand Vizier Hersek-og̲h̲lu Aḥmed [*q.v.*] did not agree. Angry with Selīm, the old sultan invited Aḥmed to Istanbul, to march at the head of the army against Selīm (26 D̲j̲umādā II 917/21 September 1511). But the Janissaries rebelled in favour of Selīm, and the sultan had to yield, ordering Aḥmed to return back to his *sand̲j̲aḳ*. Now in open rebellion, Aḥmed occupied the governorship of Ḳaramān, where the anti-Ottoman Turcoman tribes were promising their support. Pro-Ṣafawid Turcomans, now under the commander Nūr-ʿAlī sent by the Sh̲āh (March 1512), rebelled in the Tokat area. Under pressure, Bāyezīd now decided to invite Selīm to Istanbul (March 1512), since he was now considered by all as the only leader to cope with the critical situation. Confident of the support of the Ḳapî Ḳulu [*q.v.*] element of the troops, and of the Rumelian army, Selīm was already on his way from Caffa to Istanbul. In the meantime, encouraged by Selīm's opponents Ḳorḳud arrived in Istanbul, hoping to ascend the throne with the support of the Janissaries, although the majority of these last were favouring Selīm (early April 1512). In Istanbul, Selīm was greeted by all dignitaries, including Ḳorḳud, on 2 Ṣafar 918/19 April 1512. The old sultan still had no intention to abdicate; but when Selīm arrived at the court with a contingent of Janissaries, Bāyezīd was compelled to relinquish power. The deposed sultan, on his way to Dimetoḳa, died at the village of Abalar near Hafsa (25 Rabīʿ I 918/10 June 1512). The cause of his death was reported as suspicious by Menavino and D̲j̲ennābī, but there is no hint confirming this in Venetian sources (von Hammer, *GOR*, iv, 86).

Now, having received the formal *bayʿa* of the *ʿulemāʾ* and dignitaries and in control of the treasury and the Ḳapî Ḳulu troops, Selīm became the only legitimate ruler of the empire. Aḥmed, recognising the reality of Selīm's power, requested from him the governorship of Anatolia and actually began to appoint governors in his own name, ordering the soldiery to rally under his banner, and turning to the rebellious Turcoman tribes in the Tokat-Sivas area and in the Taurus mountains. Passing over to Anatolia at the head of his army, Selīm expelled Aḥmed's son ʿAlāʾ al-Dīn from Bursa (15 D̲j̲umāda 918/29 July 1512) and moved to Ankara, from where his forces expelled Aḥmed and his sons, who then fled to Sh̲āh Ismāʿīl for aid.

Now, in order to be able to confront the Sh̲āh in a major campaign in the east, Selīm had to eliminate in his rear all possible rivals for the sultanate. Hence he ordered the execution of all of the five sons of his deceased brothers between the ages of 7 and 21 who had taken refuge in Bursa. Next, at the head of 10,000 men, Selīm surprised his brother Ḳorḳud in his palace in Manisa, finally capturing and killing him. In the meantime, Aḥmed had returned to Amasya, and in the winter of 1512-13, confronted Selīm's army on the plain of Yenişehir (27 Muḥarram 919/15 April 1513). Aḥmed was defeated, captured and strangled. His son ʿOth̲mān shared the same fate, while his other son Murād was with the Sh̲āh Ismāʿīl in Persia preparing to recover his father's patrimony.

The campaign against Sh̲āh Ismāʿīl.

Before he marched against Ismāʿīl, Selīm had first to deal with the Ḳîzîlbās̲h̲ in his territory, who had already risen in the eastern provinces, while Selīm was busy against his brother Aḥmed. Aḥmed's son Murād was ready to invade the area with the Sh̲āh's support. Selīm conducted a purge of suspected Ḳîzîlbās̲h̲, and 40,000 suspects were jailed or executed.

Selīm also took unusual measures for the period to deprive the Sh̲āh of the main cash revenue from the Persian silk trade. In the spring of 1514, he ordered an extensive embargo on all silk traffic from Persia to the Ottoman lands and Europe. Later, he extended the embargo to include the Arab lands, which caused an additional friction with the Mamlūks. He declared that any Persian, Arab or Turk found with Persian silk in his possession was subject to having his cargo seized, and in 1518, the sale of raw silk was altogether banned in Ottoman territory.

On his way against the Sh̲āh, in Erzincan, the Janissaries began to mutter, but Selīm did not hesitate to send to the executioner their mouthpiece, Hemdem Pas̲h̲a, a governor. Sh̲āh Ismāʿīl was convinced that the Turcoman Ḳîzîlbās̲h̲ and the anti-Selīm governors of Anatolia would join him, hence he moved from the pasture lands of Tabriz to confront Selīm at Čāldirān [*q.v.*] in mid-August 1514. The two armies met at the plain there (2 Rad̲j̲ab 920/23 August 1514); in a furious assault with his forty thousand heavy cavalry, the Sh̲āh overpowered the *ʿazebs*, Ottoman light infantry in the first line, and routed the Rumelian divisions on the left wing of the Ottoman army, then turning, attacked the centre where Selīm was standing with his Janissaries. The stiff resistance of the Janissaries, decimating the Sh̲āh's cavalry with salvos of fire, and the war chariots tied with chains forming an impregnable stronghold, determined the outcome of the battle. Wounded by a bullet, the Sh̲āh barely escaped capture. His defeat has been attributed to a lack of firearms in his army (the earliest reference to his possession of muskets dates back to the year 1515: TKSA 6320; Tansel 88). After the victory, Selīm's plan was to pass the winter at Ḳarābag̲h̲ and to resume the campaign against the Sh̲āh next spring (for *fatḥ-nāmes*, see Ferīdūn, i, 386-9; Ibn Ṭūlūn, ii,

47-53). But the insurgent Janissaries forced the sultan to return to Istanbul (for the Shāh's embassies to Selīm after Čāldīrān and his attempts to find allies against the Ottomans, see Bacqué-Grammont, 73-145). On 15 Radjab 920/5 September 1515, Selīm entered Tabrīz. After nine days, he left the city, taking with him about one thousand citizens, artists, artisans and rich merchants for Istanbul. On his way back to Amasya, where he spent the winter, Selīm annexed the cities of Bayburd, Erzincan, Karahisar and Canik.

One important consequence of the Ottoman victory was the Turkish conquest of all of the Shāh's possessions in eastern Asia Minor, from Erzincan southwards to Diyārbakr and northern ʿIrāḳ. The Ḳīzīlbāsh fortress of Kemah [see KEMAKH], a key stronghold on the crossroads of Erzincan and the Euphrates valley was taken by Selīm on 5 Rabīʿ I 921/19 May 1515. The Shāh's Ḳīzīlbāsh Turcoman governors and garrison commanders put up a stiff resistance to the Ottomans, while most of the Sunnī Kurdish beys, who under the Ḳīzīlbāsh domination had lost their hereditary patrimonies, submitted. Through the activities of Idrīs Bidlīsī [*q.v.*], a former Aḳ Ḳoyunlu state secretary with close acquaintance of the Kurdish beys, Selīm followed a conciliatory policy to attach these Kurdish lords to his side, recognising with official diplomas their hereditary rights. Idrīs's list of the submitted Kurdish lords included those of Soran, ʿImādiyye and Bukthī, who now began to attack the Persians and their allies. In the same regions, the Aḳ Ḳoyunlu princes expelled by Ismāʿīl also co-operated with the Ottomans. The population of Diyārbakr rose against the Shāh, offering submission to Selīm and appealing to him for aid, which he was only able to provide after the campaign against the Dhu 'l-Ḳadrids (summer 1515) under the able command of Bīyīḳlī Meḥmed Pasha [*q.v.*], who entered Diyārbakr in Shaʿbān 921/mid-September 1515. Following Bīyīḳlī's unsuccessful siege of Mārdīn [*q.v.*], the Persian forces came back and besieged Diyārbakr; Ottoman control over the Diyārbakr region was only achieved after Bīyīḳlī, reinforced with the army of Anatolia, had won a decisive victory over the Turcomans at Ḳargın-Dede. Thereupon, the fortresses of Ergani, Sindjār, Čermik and Birecik surrendered, whilst Mārdīn, Ḥiṣn Kayfā, Ruhā, Raḳḳa and Mawṣil fell later in 1516.

The conquest of the Dhu 'l-Ḳadrids.

While advancing against the Shāh in 1514, Selīm's rear was threatened by the Mamlūk sultan, who mustered forces in Aleppo, and by his vassal, the Dhu 'l-Ḳadrid ʿAlāʾ al-Dawla. ʿAlāʾ al-Dawla, on Sultan Ḳānṣūh al-Ghawrī's [*q.v.*] instructions, intercepted food supplies from his territory to the Ottoman army. ʿAlī b. Shāhsuwār, the son of the former ruler of the Dhu 'l-Ḳadrid principality, now in Selīm's service, began to invade his father's lands after Čāldīrān and with Selīm's support (winter 1514-15). Ḳanṣūh protested against this as an infringement of Mamlūk territory, but after the fall of Kemah, Selīm decided to annex this Turcoman principality to his empire. ʿAlāʾ al-Dawla was killed by ʿAlī (29 Rabīʿ II 921/12 June 1515), and Selīm sent his head to the Mamlūk sultan. This strategically important region, inhabited by Turcomans who had joined ʿAlī b. Shāhsuwār during the Ottoman invasion, was left under his control. Ottoman law was only imposed under Süleymān I, when Sipāhīs of Ḳaramān were granted *tīmār*s on the lands of the local Turcoman military élite.

The campaign against the Mamlūks.

During Selīm's campaign against the Persians, Ḳānṣūh had remained neutral, and Selīm was careful on his part not to offend him. But after Čāldīrān, the Mamlūk promised the Shāh to attack Selīm from the rear if he attacked the Shāh again. Ottoman activities against the Dhu 'l-Ḳadrids made hostilities unavoidable. Before war began, Selīm took a series of measures to win over to his side the Arabs and some of the leading *amīr*s, declaring that the Mamlūks were a foreign caste of Circassians, dominating and oppressing the great mass of Arab population. In fact, the Aleppo citizens promised to welcome the Ottomans in their city. The Syrian cities had become commercially dependent on the Bursa market, whilst it had become evident that the Mamlūks were powerless to protect Arab merchants in their trade with India against the Portuguese, who now were in the Red Sea threatening to capture Mecca and Medina. In 1510 Ḳānṣūh himself had appealed to the sultan for aid to build a fleet at Suez, and Ottoman experts and mercenaries [see RŪMĪ] were already in Suez, Djidda and Yemen. Khāʾir Bey, governor of Aleppo and Djānberdī Ghazālī, governor of Damascus, both established secret relations with the Ottomans, and later, Selīm won over by promises of rewards many other Mamlūks with promises of employment in the future Ottoman administration.

The Mamlūks feared that the Ottomans were going to invade Egypt from the sea. In fact, Ottoman activities for the construction of new warships at arsenals were intensified in 1515. Always declaring that his preparations were aimed at the heretic Shāh, Selīm claimed that by allying himself with Ismāʿīl, Ḳānṣūh was attempting to impede the Ottoman sultan in his efforts to extirpate heresy in Persia. The *fatwā* sought by Selīm to legitimise his campaign against this Sunnī Muslim ruler laid emphasis on Mamlūk oppression and injustices committed against Muslims. Ḳānṣūh countered that the Ottoman sultan was using Christian soldiery in his army against Muslims. Upon Ḳānṣūh's formal demand for the evacuation of Dhu 'l-Ḳadrid territory by the Ottomans, war was declared. Selīm entered Mamlūk territory in Malatya (end of July 1516), and the two armies confronted each other at the plain of Mardj Dābiḳ [*q.v.*] 40 km north of Aleppo on 25 Radjab 922/24 August 1516.

Here, too, the Ottoman *wagenburg* tactics with the 300 chained war chariots and their superiority in firearms determined the outcome of the battle. Ḳānṣūh was among the dead. Khāʾir Bey surrendered Aleppo and served the Ottomans faithfully, dying as Ottoman governor of Egypt in 1522. Selīm left Aleppo after eighteen days, and reached Damascus on 1 Ramaḍān 922/28 September 1516, where he spent the winter months. Although his viziers were not in favour of a campaign against Egypt, Selīm was urged on by Khāʾir Bey and other Arab leaders against the newly-elected Mamlūk sultan, Ṭūmānbāy, and he ordered preparations for the invasion of Egypt. An order was sent to Istanbul for the imperial fleet's departure for Egypt. The crucial problem was how to get the Ottoman army through the Sinai desert to Egypt, and to provide a water supply, 30,000 water bags carried by 15,000 camels were prepared. Declaring his decision to take all Muslim lands under his protection, Selīm invited Ṭūmānbāy to recognise him as his suzerain; this was naturally refused. On their drive to Egypt, the Ottomans won their first victory near Ghazza against the Mamlūk forces under Djānberdī (27 Dhu 'l-Ḳaʿda 922/21 December 1516). Leading Bedouin chiefs submitted to Selīm. To confront the Ottoman army, Ṭūnānbāy had prepared a strong line of defence reinforced with artillery and ditches at al-

Raydāniyya. On 29 Dhu 'l-Ḥidjdja 922/22 January 1517, while his main forces attacked in front, Selīm surprised the Mamlūks by circumventing Ṭūmānbāy's fortified encampment. In the first hours of the combat, the vehement attack of the heavy Mamlūk cavalry shook the Ottoman lines. But here, too, the outcome of the battle was determined by Ottoman superiority in fire-arms, foiling Mamlūk cavalry attacks. The first Ottoman forces entered Cairo on 3 Muḥarram 923/26 January 1517. Ṭūmānbāy and those Circassians who were able to escape resumed fighting in the streets of Cairo, refusing an offer of *amān* [*q.v.*] by Selīm. Ṭūmānbāy mustered his troops on the west bank of the Nile, until Selīm decided to cross the Nile and crush resistance. Ṭūmānbāy was captured and executed (15 April 1517). The Cairenes recognised Selīm as their legitimate ruler, but only when he believed it was safe did he enter the city (23 Muḥarram 923/15 February 1517). In the clashes in Cairo and outside the city, the number of Circassians killed or executed was estimated at 50,000 to 60,000 (see *fatḥ-nāmes* in Ferīdūn, i, 427-49; Ibn Ṭūlūn, ii, 44-7).

Following the fall of the Mamlūk sultanate, the dependent Arab lands, including the Sharīfs of Mecca and the Yemen, recognised Selīm.

Selīm appointed Khā'ir Bey as Ottoman governor of Egypt, who succeeded in reconciling the remaining Mamlūks and Arab *shaykhs* with the Ottoman administration. Before his departure from Cairo on 26 Shaʿbān 923/13 September 1517, Selīm sent by sea to Istanbul 800 Cairenes who were thought "to cause trouble", including the last ʿAbbāsid caliph al-Mutawakkil and many artisans. During long stays in Damascus and in Aleppo, he busied himself with organising Syria as a typical Ottoman province. He appointed governors and surveyors to register the population and revenues. He appointed Djānberdī governor of al-Shām (5 Ṣafar 924/16 February 1518), and Nāṣir al-Dīn Muḥammad Ibn al-Ḥanash was given a *sandjak* along with various *iḳṭāʿ*s; his control of Lebanon had been confirmed when Selīm was on his way to fight against Ṭūmānbāy, but he later came into conflict with the Ottoman governors, leading to his elimination.

Selīm's claim to pre-eminence in the Islamic world.

The title of *khalīfa* [see KHILĀFAT] was in common use among Muslim rulers when the Ottoman dynasty first emerged. It did not then represent dominion over the *umma* [*q.v.*] of all Muslims in the world, as was the case under the ʿAbbāsids. However, the Mamlūk sultans, taking under their protection Mecca and Medina and also the ʿAbbāsid caliphs after 1258, claimed a primacy among Muslim rulers. Already after his victory at Mardj Dābiḳ, Selīm began to consider himself as the successor of the Mamlūks, and assumed their title of *Khādim al-Ḥaramayn al-Sharīfayn*. The historian Ibn Ṭūlūn witnessed this at a Friday *khuṭba* in Damascus. Selīm's name was mentioned with the titles of *al-Imām al-ʿādil* and of *Sulṭān al-Ḥaramayn al-Sharīfayn*. But no contemporary source has confirmed the alleged account that, in a ceremony, al-Mutawakkil officially transferred his caliphal rights to Selīm. In contemporary Arab sources, al-Mutawakkil is always mentioned as *al-Khalīfa, Amīr al-Muʾminīn*, and Selīm only after him as *Malik al-Rūm* (in 926/1519: Ibn Ṭūlūn, ii, 78, 91). According to the tradition and the interpretation of the *ʿulemāʾ*, the Mamlūk sultan or Selīm himself could not claim to replace al-Mutawakkil because they did not descend from the Prophet's tribe Ḳuraysh. However, as successor to the last Mamlūk sultan, Selīm claimed primacy in the Islamic world; in a letter to the Shīrwānshāh [*q.v.*] he claimed that God had charged him to fight against heresy, to bring order to the true laws of Islam and to protect the Pilgrimage routes for Muslims (Ferīdūn, i, 439-45). At a time when the Portuguese had entered the Red Sea and were threatening possibly to capture Mecca and Medina, the protection of Islam had become a crucial issue for all Muslims and the Arabs in particular. Presenting themselves as the "foremost of *ghāzī*s" Selīm, and his successor Süleymān, claimed to be the protectors of all Muslims in the world. In 1526, the latter used the title *wārith al-khilāfa al-kubrā* "inheritor of the supreme caliphate".

At the time when developments in the east kept him busy, Selīm was careful to maintain peace with Christian nations in the west, in particular with Venice and Hungary. On 17 September 1517 he renewed the Venetian capitulations in Cairo, with the additional stipulation that the Venetian tribute to the Mamlūks of 8,000 gold ducats for Cyprus was to be paid thereafter to the Ottoman sultan. Selīm's diplomacy toward Christian nations was altogether successful; but Pope Leo X's increased efforts to organise a European crusade, and the Shāh's and Ḳānṣūh's diplomatic relations with Western states against the Ottomans, did not in the end result in any hostile activity (K.M. Setton, *The Papacy and the Levant*, ii; Bacqué-Grammont, 135-45, 168).

The outbreak of a new Ḳizilbāsh Turcoman rebellion in the Amasya province in the spring of 1519 under a dervish called Djelāl, declaring himself Shāh Welī and a Mahdī [*q.v.*], showed that Shāh Ismāʿīl was still the principal threat to the empire. The rebellion was suppressed with difficulty (April 1519). At the time of his accession to the throne, Selīm was advised to make the conquest of the islands of Rhodes and Chios one of his most urgent tasks. In 1519 extraordinary naval preparations, the construction of one hundred galleys, were believed in Venice to be the signal of a campaign against Rhodes (von Hammer, iv, 247-9). But the following year, Selīm died on his way from Istanbul to Edirne near Çorlu on 8 Shawwāl 926/21 September 1520. His only son Süleymān [*q.v.*] succeeded him without difficulty.

Well-educated, the author of a collection of poems in Persian, an admirer of Muḥyī al-Dīn Ibn al-ʿArabī [*q.v.*], Selīm was at the same time an uncompromising autocrat, and a quick-tempered, merciless man.

(HALİL İNALCIK)

SELĪM II, the eleventh Ottoman sultan (r. 974-82/1566-74), the third son and the fourth of the six children of Ḳānūnī Süleymān I and Khürrem Sulṭān [*q.vv.*]. He was born in Istanbul on 26 Radjab 930/30 May 1524, during the festivities accompanying the marriage of Süleymān's Grand Vizier Ibrāhīm Pasha [*q.v.*]. Together with his elder half-brother Muṣṭafā and his elder brother Meḥmed, Selīm was one of the three princes in whose honour was held the *sünnet düğünü* (circumcision feast) of 1530, one of the major dynastic spectacles of Süleymān's reign. He remained in Istanbul until appointed in 1542, at the age of 18, to his first provincial post in Ḳonya as *sandjaḳ begi* of Ḳaramān. In 951/1544, following his brother Meḥmed's death, Selīm was transferred to the latter's more prestigious *sandjaḳ* of Ṣarukhān [*q.v.*] at Manisa, remaining there until his transfer back to Ḳonya in 1558. In 955/1548 Selīm was temporarily assigned to Edirne to guard the European front, whilst Süleymān was on campaign in the east against Ṣafawid Persia.

Following the deaths in 960/1553 of Muṣṭafā and another brother Djihāngīr, Selīm and his younger brother Bāyezīd were the only surviving sons of Süleymān. On the death of their mother Khürrem in 965/1558, rivalry between Selīm and Bāyezīd broke out into an open succession struggle. With the aid of troops sent by Süleymān and led by the third vizier Ṣoḳollu Meḥmed Pasha [*q.v.*], Selīm defeated Bāyezīd's provincial forces at the battle of Ḳonya in 966/1559, forcing Bāyezīd to take refuge in Persia. After lengthy negotiations between Süleymān and Shāh Ṭahmāsp I [*q.v.*], Bāyezīd and his sons were assassinated at Süleymān's bidding in 969/1562 (Ş. Turan, *Kanunî'nin oğlu şehzade Bayezid vak'ası*, Ankara 1961, *passim*). Now Süleyman's sole heir, Selīm was transferred to the *sandjaḳ* of Kütahya, where he remained until Süleymān's death at Szigetvar in 974/September 1566 whilst on campaign in Hungary.

The Grand Vizier Ṣoḳollu Meḥmed Pasha kept Süleymān's death secret for several weeks, enabling Selīm to be safely enthroned in Istanbul after a hurried, secret journey from Kütahya. Selīm then proceeded to Belgrade to be acclaimed by the army and to escort Süleymān's bier. His reign began in confusion. Initially refusing to pay accession donatives at the level demanded by the Janissaries and household troops, Selīm was forced to do so by rioting on his return from Belgrade to Istanbul. He was also obliged to grant *tīmārs* or other awards to *ca.* 8,000 provincial troops recruited to his side in the 1559 fight against Bāyezīd. Thereafter, he took little part in government, retiring to the *ḥarem* and delegating virtually all responsibility to Ṣoḳollu Meḥmed Pasha, who remained Grand Vizier throughout his reign.

During Selīm's eight-year sultanate, naval activities took precedence over land campaigns, and ac-

tion in the extreme north and south of the empire replaced the prominence given in Süleymān's reign to east-west, Ṣafawid-Habsburg campaigns. Relations with Persia remained subdued in the wake of the assassination of Bāyezīd, whilst an eight-year treaty was signed in 1568 with the Austrian Habsburgs, stipulating an annual payment by the latter of 30,000 ducats in respect of those parts of north-west Hungary claimed by the Ottomans and still under Habsburg control.

In the eastern Mediterranean, the island of Ṣaḳīz [*q.v.*] (Chios) was captured from the Genoese by the *ḳapudan pas̲h̲a* Piyāle Pas̲h̲a [*q.v.*] in 1566 (technically while Süleymān was still sultan, but notified to Selīm at the time of his accession), and Ḳïbrïs (Cyprus) from the Venetians by Lālā Muṣṭafā Pas̲h̲a [*q.v.*] in 1570-1, thus increasing the safety of Ottoman sea routes to Egypt. Together with proximate areas on the mainland of Anatolia, Cyprus was formed into a new *beglerbegilik* (province) and received a large influx of Turkish settlers. In the ensuing naval battle off Inebak̲h̲tī (Lepanto) the Ottoman fleet was defeated (979/October 1571) by a Papal-Venetian-Spanish fleet commanded by Don Juan of Austria, but was rebuilt rapidly over the winter of 1571-2 and Ottoman naval supremacy in the area restored. In the western Mediterranean, the fortress at Tunis (K̲h̲alḳu 'l-waᶜad, or Goletta) was lost to Spain in late 1572, but recaptured by Ḳod̲j̲a Sinān Pas̲h̲a [*q.v.*] in 982/1574 and Tunis and its dependencies formally established as a new *beglerbegilik*. Elsewhere, an Ottoman fleet was sent from the Red Sea in 1568 at the request of the Muslim ruler of Sumatra to aid him against the Portuguese in the Indian Ocean, but this achieved little.

On land, successful military operations were conducted against Arab tribal revolts in the Baṣra region (1567), and against Zaydī threats to Ottoman control in Yemen, which culminated in the loss of Ṣanᶜāʾ (1567). During 1568-70, under the command first of Özdemir-og̲h̲lu ᶜOt̲h̲mān Pas̲h̲a [*q.v.*] and then of the governor of Egypt, Ḳod̲j̲a Sinān Pas̲h̲a, Yemen was in effect reconquered and set up as a single province, rather than two as previously.

The most ambitious project of Selīm's reign, the building of a canal between the rivers Don and Volga (attempted 1569-70), was unsuccessful. It was promoted by Ṣoḳollu Meḥmed Pas̲h̲a with the three-fold object of protecting the pilgrimage route from Central Asia, of curtailing the southward advance of Muscovy (which had captured Kazan in 1552 and Astrakhan in 1556), and of establishing the potential to attack Persia from the north. It would also have served to extend Ottoman control over the k̲h̲āns of the Crimea. Adverse weather conditions, unrest amongst the troops involved, and over-extended lines of communication led to the abandonment of the project with only a third of the canal excavated (cf. H. İnalcık, *The origin of the Ottoman-Russian rivalry and the Don-Volga canal (1569)*, in *Annales de l'Université d'Ankara*, i [1946-7], 47-110).

Selīm II died aged 50 on 28 S̲h̲aᶜbān 982/13 December 1574 in Istanbul (the first sultan to die there) following a fall in the palace *ḥammām*, and was succeeded by Murād III (982-1003/1574-95 [*q.v.*]), his eldest son by his Venetian *k̲h̲āṣṣekī* Nūr Bānū [*q.v.*]. Five younger sons were executed and buried with him in his tomb in the courtyard of the Aya Sofya mosque. Three daughters were married to prominent viziers in a triple wedding in 1562: İsmik̲h̲ān to Ṣoḳollu Meḥmed Pas̲h̲a, Gewherk̲h̲ān to Piyāle Pas̲h̲a, and S̲h̲āh to Ḥasan Pas̲h̲a (re-married later to Ḍāl Maḥmūd Pas̲h̲a). This network of *dāmād* (son-in-law) connections, and Selīm's reliance upon Nūr Bānū and his sister Mihrimāh, encouraged the growth of the much-maligned "harem politics" (cf. L.P. Peirce, *The imperial harem: women and sovereignty in the Ottoman empire*, Oxford 1993, *passim*).

Known to Ottomans as Ṣarï Selīm, "Selīm the Sallow", and to Europeans as "Selīm the Sot" because of his love of wine, Selīm was skilled in archery and particularly fond of hunting, for which he spent much time in Edirne. He was also an accomplished poet, under the *mak̲h̲laṣ* Selīmī (although no *dīwān* of his survives), and a discriminating patron of, amongst others, the historian Muṣṭafā ᶜĀlī, the poet Bāḳī [*q.v.*], and the *s̲h̲āhnāmed̲j̲i* Loḳmān (see e.g. F. Çağman, *Şahname-i Selim Han ve minyatürleri*, in *Sanat tarihi yıllığı*, v [1972-3], 411-43). He was the first Ottoman sultan to honour members of the *ᶜulemāʾ* with accession donatives. Among his major architectural projects were the repair of the Mecca water supply system and the re-roofing of the great mosque, the addition of two minarets and extra buttresses to the Aya Sofya mosque, and the construction of the Selīmiyye complex by the architect Sinān [*q.v.*] in Edirne.

(Christine Woodhead)

SELĪM III, the twenty-eighth sultan of the Ottoman empire (1203-22/1789-1807), first son of Muṣṭafā III and grandson of Aḥmed III [*q.vv.*], was born in Istanbul on 27 D̲j̲umādā I 1175/24 December 1761.

Considered one of the ablest of the 18th century sultans, Selīm III's early upbringing may account for his later perseverance in reforming the empire. His father's more liberal outlook allowed Selīm considerable freedom of action, including the observation of the training of Baron de Tott's new Ottoman rapid-fire artillery corps, which was sent to the Danube battlefield in the last year of the 1768-74 Russo-Turkish war. Selīm's childhood entourage included many individuals such as Abū Bakr Rātib Efendi and Küčük Ḥusayn Pas̲h̲a [*q.v.*] who would serve him and influence his thinking upon his accession. An abortive coup to replace Sultan ᶜAbd al-Ḥamīd I [*q.v.*] with Selīm, reputedly plotted by the Grand Vizier K̲h̲alīl Ḥamīd Pas̲h̲a in 1785, forced the Sultan to restrict the young prince's movements, but that did not prevent Selīm from maintaining contact with the world beyond the palace. His culpability in the events of 1785 has never been effectively demonstrated. The French ambassadors Saint-Priest and Choiseul-

Gouffier encouraged Selīm to correspond with Louis XVI, letters which demonstrate his powerful anti-Russian sentiments and wish for revenge. Choiseul-Gouffier supported the sending of Isḥāḳ Bey, one of Selīm's companions, to France, in an effort to encourage the French link with the Ottoman heir-apparent.

On 11 Radjab 1203/7 April 1789, at the age of 27, Selīm III was proclaimed Sultan, ascending the throne at one of the most difficult moments in the history of the dynasty, succeeding to an empire at war with both Russia and Austria and riven by internal rebellions. The previous autumn, the Austrians had made deep inroads into Ottoman territory, capturing Khotin [*q.v.*] on 9 September and routing the Ottoman army at Slatina later that same month. In spite of the evidence of Ottoman military exhaustion, Selīm vigorously supported the war effort, immediately confirming Khodja Yūsuf Pasha in his position as Grand Vizier and Commander-in-Chief of the battlefront, glorifying past Ottoman successes, reinstating the accession bonus to the Janissaries [see YEÑI-ČERI], which had lapsed with ʿAbd al-Ḥamīd I, and generally boasting the morale of his people (Enwerī; Shaw, 32).

Khodja Yūsuf, the bellicose initiator of the war, had demonstrated some success in maintaining the Ottoman position on the southern shores of the Danube, and in winning the loyalty of his soldiers, in spite of the Ottoman losses. He was opposed by Djezāʾirli Ghāzī Ḥasan Pasha [*q.v.*], sole hero of the 1770 Česhme [*q.v.*] naval disaster, reformer, critic of the war, and Grand Admiral of the Navy upon Selīm's accession. Selīm replaced the experienced admiral Ḥasan with his boyhood friend Küčük Ḥusayn Pasha, ordering Ḥasan to command the fortress of Ismāʿīl [*q.v.*] in an effort to recapture Özü [see ÖZI], placating the advocates for continuing the war, consolidating his own power base, and managing to maintain the services of a valued commander. The new campaign season proved a disaster, however, culminating in the battle of Martineshti on 22 September 1789 against combined Austrian and Russian forces, a total rout for the Ottomans. Thereafter, the Austrians occupied Belgrade [*q.v.*] and Bucharest [see BÜKRESH], and the Russians Aḳ Kirmān [*q.v.*] and Bender [*q.v.*].

An Ottoman treaty with Sweden to distract Russia, which was concluded on 11 July 1789, resulted in little, but an alliance with Prussia dating from 31 January 1790, and the death of Joseph II of Austria in February, led to the conclusion of an Ottoman-Austrian treaty mediated by Prussia, England and The Netherlands, at Zistowa, on 4 August 1791, but only after Prussia and Austria had settled their differences in the Convention of Reichenbach the previous summer. By the stipulations of the Zistowa treaty, the Ottomans retained the territories in Wallachia [see EFLĀK] and Moldavia [see BOGHDĀN] which had been occupied by Austria, essentially a recapitulation of the 1739 Treaty of Belgrade, ceding only Old Orsowa as part of a new definition of the Austro-Ottoman border.

Hostilities continued with the Russians, with disastrous results for the Ottoman forces, Russia occupying many of the important Danube fortresses, notably Ismāʿīl, the Ottoman base of operations, after a long struggle on 22 December 1790. After the winter hiatus, the Russians resoundingly beat the Ottoman forces south of the Danube at Mačīn in April 1791, the fortress itself capitulating on 9 July. Selīm was ill-served by his commanders, especially after the death of the newly-reappointed Grand Vizier Djezāʾirli Ghāzī Ḥasan Pasha on the battlefield in March of 1790. His successor, Sherīf Ḥasan Pasha, after allowing the Russians to overrun Budjāk [*q.v.*], was executed at Shumla in February, 1791, and replaced once again by Khodja Yūsuf Pasha, who could no longer contain the complete breakdown of Ottoman defences. A truce was arranged by mid-summer, and followed by the treaty of Jassy [see YASH], 9 January 1792, recapitulating most of the articles of the 1774 Küčük Ḳaynardja [*q.v.*] treaty, but establishing the new Ottoman-Russian border at the Dniester and the Ḳuban rivers and ending conclusively Ottoman claims to the Crimea [see ḲIRIM].

Selīm faced a demoralised, practically bankrupt and highly decentralised empire, conditions exacerbated by the costly and fruitless campaigns. Rebellions in Arabia, the Balkans and the Caucasus continued while he undertook to reform his administration, pursuing an energetic programme designed and carried through by his advisors. His intentions were clear from the early days of his succession, when he summoned a council of 200 men of state in May 1789 to discuss the condition of the empire. (Djewdet, ²vi, 6-7; Shaw, 73). During the war, Selīm pursued the re-ordering of the Ottoman military machine as best he could, but with little practical results. Immediately following the peace at Jassy, the Grand Vizier was ordered to solicit a number of written reform proposals. By far the most comprehensive was that of Abū Bakr Rātib Efendi, Ambassador to Vienna following the Zistowa peace treaty, whose analysis of Austrian institutions served as a recipe for the Ottoman reform programme, *Niẓām-i Djedīd* [*q.v.*] or "New Order," the same term used to refer to the new army corps.

Addressing military reform meant facing powerful opposition, as the Janissary privileges in the form of pay and rations (*esāme*) were deeply entrenched in all levels of Ottoman society. Significant reform was undertaken after 1793 in the artillery corps, with the introduction of new troops, new schools and training by foreign officers. Selīm's energy, however, also extended to the traditional Janissary and Sipāhī [*q.v.*] corps, instituting discipline, introducing new weaponry, and undertaking to see that they were regularly paid and comfortable in rebuilt barracks in Istanbul, but to no avail. Establishing the *Niẓām-i Djedīd* army proved more productive, an outgrowth of the irregular Lewend [*q.v.*] organisation, with separate barracks, the Lewend Čiftelik, located outside the centre of Istanbul, and training and discipline styled along western lines. Selīm felt confident enough to issue regulations concerning the new corps only in 1794, a single regiment of 1,602 officers and men, attached to the old imperial Bostāndjī corps [*q.v.*], as its riflemen branch. By 1800, as a result of the threat posed by the Napoleonic invasion of Egypt, a second regiment was installed in the new Selīmiyye barracks in Üsküdār, a force drawn largely from the unemployed of the streets of Istanbul, and Turkish peasants from Anatolian villages, whose enlistment was encouraged by high salaries and tax exemptions. By 1801, the force numbered 9,263 men and 27 officers, increasing to three regiments and almost 23,000 by the end of Selīm's reign (Shaw, 131-4). During the 1798-1801 confrontations with France in Egypt and against ʿOthmān Paswan-oghlu [see PASWAN-OGHLU] of Vidin [*q.v.*], the new troops acquitted themselves with some small successes, hampered always by the refusal of the Janissaries to serve with them. Reform in the navy was more successful, under the direction of Grand Admiral Küčük Ḥuseyn Pasha, who saw to the construction of new warships and technical schools during the same period.

To finance his reorganisation of the military and

navy, Selīm established the *Īrād-i Djedīd*, a new attempt at a centralised budget, with revenues from state tax farms set aside for its use. At the same time, vacant, absentee or poorly managed military fiefs of the long disfunctional *tīmār* system were seized and added to the new treasury. While significant revenue was generated, the provincial upheaval such measures induced exacerbated the growing disaffection of local notables, one of the significant causes of Selīm's downfall.

The War of the Triple Alliance (1799-1802) pitted the Ottomans against Napoleon, and forced a reluctant Selīm into agreements with Britain and Russia to counter the French invasion of Egypt. During these confrontations, the sultan was forced to rely on the private armies of local notables such as Aḥmad Djazzār Pasha [*q.v.*] in Acre [see ʿAKKA] and Sidon [see ṢAYDĀ], ʿAlī Pasha of Yanina and ʿOthmān Paswanoghlu, which both extended their power and increased the privations of the countryside, especially in the Balkans. The Treaty of Amiens in 1801, negotiated without an Ottoman presence, so angered the sultan that he signed a separate peace with France on 25 June 1802, restoring that country to all its pre-war privileges and ignoring the question of war indemnities which both Russia and Britain were demanding.

Peace, however, meant the renewal of internal revolt, often encouraged by the empire's erstwhile allies, especially the Russians, who had made tremendous gains in the Treaty of Amiens. A serious revolt in Serbia against Janissary and the auxiliary Yamaḳ abuses broke out in 1802, developing rapidly into a revolution under the leadership of Kara George after 1804, and influencing much of the diplomatic manœuvring of the period. War between France and England broke out again in 1803, and intense diplomatic pressure by the resurrected Anglo-Russian alliance in Istanbul forced Selīm to sever relations with France in 1805. Further French victories over the European allies, however, persuaded Selīm to grant formal recognition to the emperor in 1806, and to declare war on Russia in December after the Tsar ordered the occupation of the Principalities and was continuing to support the Serbian rebellion. Britain sent warships through the Dardanelles [see ČANAḲ-ḲALʿE BOGHAZĪ] to the capital in February, demanding the expulsion of Sebastiani, French ambassador to the Porte after 1805, and compliance with Russian demands *vis-à-vis* the Principalities. Selīm's refusal to comply, and his orders to fortify the city and the Straits, let to the British withdrawal to Tenedos [see BOZDJA-ADA], a last moment of victory and accord between the sultan and his people. The British fleet occupied Alexandria in 1807, but found that Muḥammad ʿAlī Pasha [*q.v.*], governor of Egypt since 1805, had subdued the Mamlūks [*q.v.*], forcing the British to withdraw.

Selīm's failure to create a broad coalition of supporters for his reform agenda, however, finally overwhelmed him. A general call to arms for *Niẓām-i Djedīd* troops in March 1805 had precipitated an open revolt among the Yamaḳs in the Balkans, beginning the final series of confrontations between the traditional forces and Selīm's reformers. Quelled temporarily by Selīm's capitulation to the conservatives, the rebellion moved to Istanbul in May 1807, when another attempt to force new uniforms on the unruly Yamaḳs stationed on the Bosphorus incited an overt call for Selīm's removal, a conspiracy spearheaded from the palace itself by the *Ḳāʾim-maḳām* [*q.v.*] Mūsā Pasha and the *Shaykh al-Islām* ʿAṭāʾ Allāh Efendi. The Janissaries joined in the revolt, forcing Selīm to abandon the *Niẓām-i Djedīd* programme and sacrifice its architects and partisans to their demands, rather than testing the mettle of the new troops, who were confined to their barracks. Selīm was deposed on 22 Rabīʿ I 1222/29 May 1807 and as he had no children, he was replaced by Muṣṭafā IV [*q.v.*], eldest son of ʿAbd al-Ḥamīd I. Retiring into the palace, he was executed by Muṣṭafā a year later on 4 Djumādā II/28 July 1808 during the attempt by Muṣṭafā Bayraḳdār Pasha [*q.v.*] of Rusčuk and the Grand Vizier Čelebi Muṣṭafā Pasha [*q.v.*] to rescue and restore him to the throne. In the confusion, Maḥmūd, brother of Muṣṭafā IV, escaped the same fate as Selīm, and was brought out of hiding by Muṣṭafā Bayraḳdār as Maḥmūd II [*q.v.*], proving later to be an apt student of his cousin in the matter of reform.

While it is generally conceded that Selīm faltered in the matter of leadership and continuity, changing Grand Viziers ten times in the course of his reign, he inaugurated a process of reform which could no longer be halted if the Empire was to survive. Other initiatives include his appointment of the first permanent Ottoman ambassadors to Europe, to London in 1793 and Berlin, Vienna and Paris in 1795, an avenue for information on European affairs, although diplomacy of the period continued to be conducted largely by the influential foreign presence in Istanbul (Kuran). A notable poet and musician, many of Selīm's compositions are still performed. He was a frequent visitor to the Mawlawiyya [*q.v.*] *tekke* in Galata [see GHALAṬA in Suppl.], and friend and patron of Shaykh Ghālib Dede [*q.v.*], the well-known poet-mystic and partisan of the reform programme of the young sultan. Aside from the new buildings constructed for the *Niẓām-i Djedīd*, Selīm completely restored the mosque of Fātiḥ.

Bibliography: The *Taʾrīkh* of Wāṣif as well as those of Enwerī and ʿĀṣim Aḥmed [*q.v.*] form the chief historical sources on Selīm's reign. For general information on the period of Selīm III, see the work of one of his advisors, Mouradgea d'Ohsson, *Tableau de l'empire othoman*, Paris 1788-1820. The diary kept by his private secretary, Aḥmed Efendi, from 1791-1807, is a unique source by an individual who accompanied Selīm almost everywhere, *III. (VIRGINIA AKSAN)

SELĪM GIRĀY I, son of Bahādur Girāy, four times Khān of the Crimea between 1671 and 1704

(1671-7, 1684-91, 1692-9, 1702-4). In his childhood he lost his father and was committed to the care of Mirzash Agha, of the Ablan family. At the same time, ʿĀdil Girāy tried to kill him, but Selīm sought refuge among the Shīrīn family and escaped being killed. In 1671 he became Khān of the Crimean Tatars. The Tatars living in Poland asked Selīm for protection and help to settle in the Budjaḳ [*q.v.*] region, i.e. southern Bessarabia. Their request was not granted by the Ottoman authorities and sultan Meḥemmed IV called upon Selīm to help in the battle for Ḳamāniča [*q.v.*] (Kamieniec), as a result of which the Polish army was defeated. Soon Selīm was again summoned to war against Poland, and after a siege, Ḳamānića and nearby fortresses were conquered by the Muslims. After the fighting, Selīm became the mediator in peace negotiations between Poland and the sultan; then he fought against Russia and Poland for possession of the fortress of Čihrin, but after his failure here, the sultan accused him of ineffectualness, and he was deprived of power and deported to the island of Rhodes. In 1684 Selīm was again raised to the throne of the Khāns of Crimea in Bāghče Sarāy because of the ineffectiveness of Ḥādjdjī Girāy II, who had reigned after him. During this time, the Russians approached the Crimean territory and surrounded fortresses situated on the shores of the Sea of Azov and the Black Sea. Selīm defeated superior Russian forces, preventing the Russians from entering the Crimea. In 1689 Selīm was called upon to help Turkey in the war against Austria, and the Muslim forces won a battle near Skopje. In 1691, after receiving the information that Polish and Russian forces were about to attack, and after being informed of his son's death, Selīm abdicated the throne.

He then went on the Pilgrimage to Mecca and obtained the honorific title of *Ḥādjdjī*. The sultan assigned him estates at Silivri. Due to the efforts of the nobles of the Girāy dynasty, faced with a rebellion of Tatar troops, in 1692 Selīm was appointed to the throne for the third time. At that time, the war against Russia and Austria started. In 1695 Peter I launched an expedition against the Crimea, and in 1696 the Russians conquered the fortress of Azov. Because of that Selīm could not properly help the sultan in his war against Austria. He was a signatory to the 1699 peace treaty of Karlowitz (Karlovci [see KARLOFČA]) on the Danube. By virtue of this treaty, the Crimea obtained a greater independence, and was relieved of paying tribute to the sultans. In the same year, 1699, Selīm, by now very old, abdicated in his son Dewlet Girāy's favour, and the sultan awarded Selīm a pension of 8,000 gold coins per year. Intrigues at the sultan's court and the necessity of pacifying the rebellious Tatars led to Dewlet Girāy's dethronement and Selīm was for the fourth time appointed to the throne of the Crimea in 1702, but, after a short reign, died in December 1704 aged 73. Despite his preoccupations with state affairs, he was interested in literature and the sciences, and left behind a precious library.

SELMĀN REʾĪS (d. 923/1527), a Turkish mariner and naval commander in the Red Sea and Indian Ocean.

Apparently a native of Lesbos [see MIDILLI] and thus a countryman and contemporary of another famous seaman, Khayr al-Dīn [*q.v.*], he became active as a corsair in the Central Mediterranean (J.-L. Bacqué-Grammont and Anne Kroell, *Mamlouks, Ottomans et Portugais en Mer Rouge. L'affaire de Djedda en 1517*, Cairo 1988, 76). At an unspecified date (at the latest in 1514) he entered the service of the Mamlūk sultan Ḳānṣawh al-Ghawrī [*q.v.*] who was endeavouring to resist the recently-arrived Portuguese in the Indian Ocean. This may have happened in the framework of Ottoman succour to Egypt, well-documented between 1507 and 1514. This ceased, however, by July 1514, the year in which the Mamlūk sultan launched a major campaign to build up the arsenal and fleet in Suez, with Selmān Reʾīs as its director and commander of 2,000 *lewend*s or marines (Ibn Iyās, *Badāʾiʿ al-zuhūr fī waḳāʾiʿ al-duhūr*, ed. M. Muṣṭafā, Cairo 1960, iv, 466-7; Bacqué-Grammont, *op. cit.*, 5). Under what seems to have been a joint command of Selmān Reʾīs and Ḥusayn al-Kurdī, this new fleet sailed late in 921/1515 on a campaign launched partly in response to the appeals of Muẓaffar Shāh II of Gudjarāt [*q.v.*], and which was thus meant to succeed where the first Mamlūk expedition of 914/1508-9 under the same Ḥusayn had failed; instead of combatting the Portuguese in the Indian Ocean, however, the expedition concentrated on building a stronghold on the Red Sea island of Ḳamarān [*q.v.*] near the Bāb al-Mandab [*q.v.*] against an expected Portuguese irruption into the Red Sea and on operations in Yemen, culminating in a siege of Aden or ʿAdan [*q.v.*] held by the governor of the ruler of Zabīd (Bacqué-Grammont, 8). The siege failed, and Selmān Reʾīs withdrew to Djudda [*q.v.*] in anticipation of a Portuguese attack on that port. Meanwhile, the Ottoman sultan had conquered Egypt, and immediately after his triumph he summoned Selmān to appear before him in Cairo. In a reply dated 25 Rabīʿ I 923/17 April 1517, the Turkish captain pleaded for a delay on the grounds that he could not in good conscience leave the port just as the infidel was going to attack and while the inhabitants were beseeching him to defend them. A marginal note added one day later states that the attack has occurred, Selmān has repulsed it, but that it might be renewed and he still cannot leave under these circumstances (S. Tekindağ, *Süveyş'te Türkler ve Selman Reis'in arızası*, in *Belgelerle Türk Tarihi Dergisi*, ix [1968], 77-80; the same document published by M. Yakub Mugul, in *Belgeler*, ii/3-4 [1967], 37-48).

The events of the next several months are of crucial importance not only for our understanding of Selmān's career, but also for our interpretation of the Ottoman sultan's attitude towards the struggle against the Portuguese and towards the more specific place the defence of Islam's sanctuaries received in Selim's mind. Lopo Suares, the Portuguese viceroy of India, withdrew with his fleet by the end of April 1517, but Selmān kissed the sultan's hand only on 10 Shaʿban 923/28 August 1517 (Ferīdūn Beg, *Münsheʾāt*, i, 491). He seems at this point to have suffered arrest and imprisonment in Cairo and Damascus.

Eventually pardoned, Selmān Reʾīs returned from Istanbul to Suez, which now was the base of what would become the "Ottoman Indian Ocean Fleet" and of which he may have been the first commander. The fleet accomplished little in the period of his tenure. In 1525, after an undetermined cruise outside the Bāb al-Mandab strait, a second attempt was made to seize Aden, but a report that a Portuguese fleet was approaching persuaded the Turks to raise the siege and sail back.

These failures may have been due to the low priori-

ty which the Ottoman government attached to the Suez base and fleet. This policy contradicts Selmān's own efforts to alert Istanbul to the challenges from the Portugese and possibilities in the Indian Ocean; his efforts received an eloquent expression in a *lāyiḥa* or memorandum dated 10 S̲h̲aʿbān 931/2 June 1525 (Topkapı Palace archive, N.E. 6455; see M. Lesure, *Un document ottoman sur l'Inde portugaise et les pays de la Mer Rouge*, in *Mare luso-indicum*, iii [1976], 137-60). Although anonymous, the report's internal evidence strongly argues for Selmān's authorship. It is an analysis of the strength of the Ottoman fleet in the Red Sea, a description of the main ports in the Arabian Sea and the Indian Ocean, and an assessment of Portuguese strength in those waters and of the chances for an Ottoman fleet to oust them from there.

In the final year of his life, Selmān Reʾīs was charged with the mission to eliminate Muṣṭafā Beg, an insubordinate governor of Yemen; he did so and assumed the administration of the province himself. Shortly afterwards, K̲h̲ayr al-Dīn Beg, an aide who had assisted him in the assignment, gained the local *lewends* to his side, rebelled in his turn and assassinated Selmān Reʾīs towards the end of 1527.

Selmān Reʾīs's career has received conflicting interpretation. Some historians view him as proof of Ottoman intentions to assume a leading role in the defence of thé Indian Ocean and the Muslim world whose trade and pilgrims' routes were under assault by the Portuguese (Palmira Brummett, *Ottoman seapower and Levantine diplomacy in the Age of Discovery*, Albany 1994, 115-21); others draw the opposite conclusion, based on such circumstances as the treatment he received in Cairo despite his merit of saving D̲j̲udda—and thus averting a danger to Mecca—from the infidels, and the limited encouragement and means he received after his rehabilitation (Bacqué-Grammont, 19-20).

SELWI, the Ottoman Turkish name for the Bulgarian town of Sevlievo, now in the Gabrovo province of Danubian Bulgaria (population in 1985, 26,440). From the 16th century till 1878 it was the centre of the *nāḥiye*, later *ḳāḍīlīk*, of Hutalič/Selwi in the *sand̲j̲aḳ* of Nigbolu. In the 17th and 18th centuries, the town and its district were predominantly inhabited by Muslims of Turkish, as well as of Bulgarian, origin. The town is situated in a vast plain 200 m/656 feet above sea level on both sides of the little river Rositsa, a tributary of the Yantra. Most of the 33 villages of the *ḳaḍāʾ* are situated in the hills around the plain. The town is the indirect successor of the mediaeval Bulgarian castle of Hutalič, the ruins of which were discovered in the 1980s, 9 km/5 miles to the south-east of the present town at the edge of the plain, in the formerly wholly Turkish village of Hisar Beyli (later, Serbeglii, since 1934, Javorets). The Hutalič castle is mentioned in a 13th-century inscription.

The *nāḥiye* of Hutalič is first mentioned in the *Icmal Defter* from 884/1479, having 24 villages with Bulgarian names and Christian inhabitants besides two villages with Turkish names and Muslim inhabitants (Čadîrlî and ʿAlī Faḳîhler). Selwi itself is mentioned for the first time in 922/1516, as a newly-founded place "not mentioned in the previous register" and having 18 Muslim Turkish households. In the course of the 16th century, this village, due to its central location, became the centre of the district and in the course of the late 17th century developed into a town. In 922/1516 there were, next to the old villages, eight new Muslim villages with Turkish names and in 1579-80 fourteen. At this time, the number of the Muslim population rose from 214 to 838 households, whereas the Christians largely remained stagnant because an important part of the population of the old villages gradually Islamised. In 1751 Selwi was a small town of 301 households, with two mosques and a weekly market. Through further Islamisation, 71% of the district was now Muslim.

In the course of the late 18th and early 19th centuries, the town as well as the district slowly lost its predominantly Muslim character, the Christians having markedly large families. In 1845, 52% of the district was Muslim, in 1873 46%, the town then having 2,345 Muslim inhabitants and 3,864 Christians. Selwi had in 1873 ten mosques, a few *ḥammāms* and dervish convents and a large and monumental church for the Christian community, rebuilt in 1834 on older foundations, with the support of the local Muslim notables and written permission of Sultan Maḥmūd II. After Bulgaria became independent, most of the old Turkish colonists, as well as the bulk of the Muslims of local origin, left the villages of Selwi and migrated to Anatolia. Those remaining in the town more than halved in numbers by 1887. According to the census of 1928, only 811 Muslims were still living in the town. After the Second World War, during which time the town saw a rapid development, almost all Muslims left, and their mosques and other buildings were all demolished. The church from 1834 and the Clock Tower, first erected in 1777, remain standing as officially recognised monuments of culture.

Only in the large village of Aḳînd̲j̲îlar (now Petko Slavejkov), until 1878 wholly Turkish, a majority of the population remained Turkish-speaking Muslims, having one small mosque. The same is valid for the village of mixed origin, Rahova (Rahovčite). In Malkoçlar (now Burja) and Adiller (Idilevo), some families remain, partly with ʿAlevī inclinations.

Throughout the Ottoman period, the *nāḥiye*/*ḳaḍāʾ* was known by both the names of Selwi and Hutaliç.

SEMĀ^c KH̲ĀNE [see SAMĀ^c].

SEMEDIREK, SEMADIREK, the Ottoman Turkish name for Samothrace, modern Greek Samothraki, a mountainous island of the Thracian Sporades group in the northeastern part of the Aegean Sea, now part of the Greek Republic and at present included in the *nomos* or department of Evros. Its area is 178 km^2/69 sq. miles, and in 1981 the declining population stood at 2,871. In mediaeval times it was famous for its honey and its goats, and the Latins called it *Sanctus Mandrachi*.

As part of the Thracian and Macedonian themes, Samothrace suffered from Slavonic and Arab raids in early mediaeval times. After *ca.* 1335 it passed from Byzantine hands to the Genoese Gattilusi house of Lesbos [see MIDILLI]. The Aydîn Turkmen beg Umur had raided it in 1330, and the Ottoman onslaught on it began soon after the capture of Constantinople (see E. Malamut, *Îles de l'empire byzantin, 8^e-12^e s.*, Paris 1988, index; T. Gregory, in *Oxford dictionary of Byzantium*, Oxford 1991; A. Savvides, *Notes on medieval Samothrake until the Turkish conquest*, forthcoming). The first Ottoman attack, by Meḥemmed Fātiḥ's fleet (on 4 June 1456, according to a Byzantine short chronicle), provoked a western counter-attack by a papal fleet under Cardinal Scarampo, but in 1459 the sultan recovered Samothrace, Lemnos (Limni [*q.v.*]) and Thasos (Tas̲h̲öz [*q.v.*]), and their revenues were amongst those granted by Meḥemmed to his father-in-law, the vanquished Despot of Morea Demetrius Palaeologus [see MORA]. Apart from a brief Venetian occupation, Samothrace and the neighbouring islands passed by the Turco-Venetian treaty of 1479 definitively into Ottoman hands; by 1470, the island had been left with barely 200 inhabitants because of the incessant raiding.

The Ottoman period (1479-1912) is insufficiently documented. A Venetian raid is recorded in 1502. Soon afterwards, Pīrī Re'īs [*q.v.*] called the island *welīler maḳāmi* "abode of saints", perhaps echoing earlier descriptions of it. In 1698 the Venetian admiral Dolfin forced the Ottoman fleet to retreat to the Dardanelles, so that the Italians could gather taxation from the northeastern Aegean islands. In the early stages of the Greek National Revolt (1821), the island was raided by the fleet of Ḳara ^{c}Alī, which slaughtered almost all the male Greek population and enslaved the women and children (see Finlay, *History of Greece*, i, 192), and only after 1827 did the survivors begin to resettle the island from neighbouring areas. Archaeological excavations were begun on Samothrace in the 19th century by the French and the Austrians, and in 1863 the French consul Champoiseau was allowed by the Ottoman authorities to transport the statue of the Winged Victory to the Louvre. The island was occupied by the Greek navy on 19 October 1912 in the course of the First Balkan War; during World War II it was under Bulgarian occupation from Western Thrace 1941-4.

SENEGAL, the name of a former French colony, an independent republic since 1960. Senegal takes its name from the river which rises in Guinea and discharges into the Atlantic Ocean near Saint-Louis after describing a broad curve, a section of which constitutes the frontier with Mauritania [see MŪRITĀNIYĀ].

The origin of the word "Senegal" is disputed. According to some, the term is said to derive from the name of the Ṣanhād̲j̲a (or Zenaga), a Berber people who occupied the northern bank of the lower reaches of the river. The first forms of these names are to be found in the accounts of travellers of the 16th century. Duarte Pacheco Pereira uses the phrase "rio de Çanagua" to denote the river; Zurara, Valentim Fernandes, Ca da Mosto and Diogo Gomes call the Berber people "Azenegues", "Azanaghes" or "Cenegii". Other interpretations find in the name of Sung̲h̲āna, a town in the river valley mentioned by al-Bakrī in the 5th/11th century, another possible origin. According to a popular etymology, which has no historical basis, Senegal would be derived from the Wolof *sunu gaal* ("our canoe"). Whatever the case, the name of Senegal, which had long been applied to the region of Saint-Louis alone, was not extended to the whole country until the 19th century.

1. Geography, population and languages.

Senegal is the most westerly country of the African continent. It is situated between latitudes 12° and 17° N., and between longitudes 11° and 17° W. Its surface area is 196,722 km^2. The most significant elevation, in the extreme south of the country, is less than 500 m in altitude. Anomalies exist in the drawing of frontiers, a legacy of the colonial division. The valley of the Gambia (approximately 300 km in length by 20 km in breadth), formerly colonised by the British, constitutes an enclave which impedes communications between Casamance and the rest of the country. In terms of climate, Senegal is a region of transition between the Sahel [see SĀḤIL] to the north and the tropical forests to the south, with an Atlantic littoral to the west introducing a maritime dimension. The major part of the centre and the east (Ferlo) is semi-desert.

Three principal ethnic groups share the land of contemporary Senegal: the Wolof, who constitute between 35% and 38% of the total population, and who principally inhabit the north-west of the country, the Sereer, settled to the south of the former (region of Sine-Saloum), who, with 19% of the population, represent the second largest race of Senegal, and the Fuutanke (pl. Fuutankobe) of Fuuta Tooro (called "Toucouleurs" by the French), a sedentary people inhabiting the central section of the river valley (13% of the total), the product of large-scale racial intermingling, which over the course of its history has adopted the language of the Peul or Fulbe nomads (hence their name of *hal-pulaaren*, "those who speak *pulaar*/peul"). Wolof, Sereer and Hal-Pulaaren are related through language and culture. The final third of the Senegalese population is composed of the Soninke, Maninka/Malinke and other kindred groups (8.5%), historically associated with the mediaeval empires of G̲h̲āna and of Mali [*q.vv.*], the Peul or Fulbe (8%), the Joola/Diola of Casamance (7%), the Balantes, Mandjak, Mankagne and Bassari of Casamance and the south-east of the country (2%), and the Lebu of the Cape Verde peninsula (less than 2%).

French, the official language of the Republic, is

known by approximately one-third of the population. Since 1978, the constitution has furthermore recognised six national languages: Joola, Malinke, Pular, Sereer, Soninke and Wolof. Due to its centrality, the number of its speakers, and its historical and political role, Wolof, although little used in the press and in literature, has tended to become, in fact, the principal national language of Senegal. On the other hand, the existence of a public and private network engaged in the teaching of Arabic, and the use of Arabic characters in the transcription of certain national languages, have tended to confer upon Arabic, for religious reasons, the status of a major cultural language, in spite of the relatively small number of those who use it.

The total population of Senegal was 7 million in 1988, representing a density of 35.7 inhabitants per km². The capital, Dakar [*q.v.* in Suppl.], has a population of over a million. The scale of urbanisation is one of the highest in sub-Saharan Africa: more than a third of the inhabitants. In 1988 the G.N.P. was $510 per head of population, and the overseas debt, in 1989, was $288.25 per head of population. The vast majority of the population is Muslim. There also exists a Catholic minority (about 5%) in the south of the country ("Little Coast").

2. Economy.

The economy of Senegal, which depends for almost half of its exports on a single agricultural product, the ground-nut, is fragile. Despite efforts towards liberalisation, the Senegalese state remains the principal employer, importer and investor, a fact which increases the risks of corruption and nepotism in the administrative apparatus. The Senegalese economy is, furthermore, deeply dependent on foreign nations for the provision of capital and of technology. For a long time France, the former colonial power, has occupied a dominant position, which is currently shared by the U.S.A.

Since independence, the value of ground-nuts on the international market has declined considerably (in competition with the oils of the soy-bean and the cole-seed). The ground-nut, which represented 80% of the value of exports until 1967, represented no more than one-half fifteen years later. This collapse is also accounted for by the development of new products for export: phosphates, fresh and preserved fish, cotton. On the other hand, the state has given priority to the extension of rice-producing land. Besides Casamance, the region traditionally associated with this crop, rice has been introduced into the valley of the Senegal river, as a result of major projects sponsored by the (inter-states) "Organisation pour la Mise en Valeur du Sénégal" (O.M.V.S.), which, by means of the construction of a dam at Diama (near Saint-Louis), intends to modify the hydraulic disposition of the river and to combat the salination of soils.

Although Senegal does not belong among the least prosperous nations of West Africa, its economy shows few signs of growth. The poor quality of its soil and the scarcity of natural resources, in addition to the effects of the condition of international markets in primary materials, constitute this country's principal handicap. The recent devaluation of the C.F.A. franc (January 1994) has rendered still more perceptible the problems of an economy which has yet to extricate itself from the ties of external dependence.

3. History.

(1) *Earliest historical times.*

The history of the settlement of Senegal dates back at least to the start of the current era: the presence of tumuli in the valley of the Senegal, impressive artificial mounds of sea-shells on the coast, numerous megalithic monuments, dating from the first millennium of this era, between Gambia and Ferlo (in particular the stone circles of Sine-Saloum) and metallurgical sites prove the antiquity of human occupation in these regions.

In the earliest stages of its history, Senegal was a cul-de-sac, backed by an ocean which, until the 15th century, played no part. Essentially, what constitutes its current territory was outside the zone of domination of the kingdom of G͟hāna, the first political formation of any size in the region. It was also situated at the furthest limits of the Muslim world of the time. It is precisely from this zone of contact with Arabo-Muslim trans-Saharan commerce, at the approaches to the valley of the Senegal river, that the first information filters through, beginning in the 9th century A.D.

The history as such of Senegal really begins with the description of sub-Saharan itineraries by the Andalusian geographer al-Bakrī (writing in 460/1068). Proceeding along the course of the river, he describes successively the towns of Sung͟hāna (or Sang͟hāna), of Takrūr and of Sillā (or Sillī). Situated some 200 km from the estuary of the Senegal river ("six days journey between it and the land of the Godala"), Sung͟hāna is composed of two towns, located on either side of the river. Down-stream, between Sung͟hāna and the Atlantic Ocean, "the inhabited places follow on from one another". This zone corresponds to the lower valley of the river, known historically by the name of Waalo. Up-stream, at a distance which is not given precisely, are located Takrūr, then Sillā, itself situated at "twenty stages" (more than 600 km) from G͟hāna. Sillā, too, is composed of two towns, separated by the river.

The middle valley of the Senegal represents the first centre of Islamisation of the entire region. The king of Takrūr, Waar Diaabe (d. 432/1040) was converted, calling on his subjects and on the neighbouring city of Sillā to accept the new religion. His son, Labī, supported Yaḥyā b. ʿUmar in 448/1056 in the first conflicts of the Almoravid movement [see AL-MURĀBIṬŪN]. The king of Sillā, for his part, made war on his non-Muslim neighbours, such as those of "Ḳalanbu" (Galam), another city on the river.

From this period onward, the sources of gold, which constituted the principal magnet for Arabo-Berber merchants, were logged by travellers and geographers. The best gold was then obtained from a site known as G͟hiyārū (Gunjuru ?), situated at "eighteen days' journey" (less than 600 km) to the south of G͟hāna. This is in the major auriferous region of Bambuk, which is located on the right bank of the Faleme (a tributary of the Senegal) and is divided today between the modern states of Senegal and Mali. In the following century, according to al-Idrīsī (writing in 549/1154), Takrūr, which seems to have gained by the enfeeblement of G͟hāna, possibly by the Almoravids, exerted its authority as far as the approaches to Bambuk, thus controlling exchanges between the salt of the coast and the gold of the interior.

The kingdom of Takrūr was subsequently supplanted by other regional political formations, but the toponym survived and was to acquire great significance. In all probability it is the origin of the name "Tucurooes" (Duarte Pacheco Pereira, Valentim Fernandes, in the 16th century), then, in French writing, of "Toucouleurs". On the other hand, until the 19th century, the word Takrūr denoted in a loose fashion, throughout the Arab East, the Muslim regions of the extreme west of Western Africa, more

specifically, the lands which are currently Senegal and Mali.

(2) *A Senegalese political matrix: the Grand Jolof.*

Besides the participation of Takrūr in the Almoravid movement, the exploits of the *Murābiṭūn* had few repercussions in the region of Senegal. On the other hand, their memory has been magnified to the point of representing the birth of the Islamic history of the land. This sense of identification with the Almoravid *djihād* finds its best known expression in the genealogy of the kings of the Jolof, the first great historical Senegalese kingdom. The oral sources, which concentrate on the achievement of the founding hero, claim, in anachronistic fashion, that the first sovereign of the Jolof, Njajaan Njaay, was the son of the Almoravid Abū Bakr b. ʿUmar, or one of his descendents and successors. But this is a late genealogy, no doubt fabricated after the 12th/18th century by Muslim scholars anxious to validate the Islamic legitimacy of the dynasty, in competition with other traditions according to which the founder was, on the contrary, renowned for his animist powers.

The "Grand Jolof" was, between the 13th and 16th centuries, the crucible of new Senegalese political identities, more particular those of the Wolof language. But the reconstruction of the process remains in part conjectural. After the legendary account of the foundation of the kingdom by Njajaan Njaay, the oral sources remain virtually silent regarding the latter's successors, only providing dynastic lists without commentaries. These unclear materials make it impossible to establish a firm chronology. At the most, by means of connections and cross-checking it is legitimate to locate the origins of the kingdom at the earliest towards the end of the 13th century. In the Jolof as in the Waalo, the dynasty claimed descent from Njajaan Njaay: these were in all probability the central territories of the new hegemony. On the other hand, the other dynastic unities, Kajoor (Cayor) and Bawol (Baol) are given distinct, even earlier origins (references to the Soninke of G̲h̲āna) and therefore needed to be attached subsequently to the great totality. Similarly, the "Wolofisation" of these two countries was accomplished, after some delay, under the influence of the Grand Jolof. Later still, there took place the integration of the southern kingdoms of Sereer language, of Siin (Sine) and of Saalum (Saloum).

The process of extension of the political range of the Jolof was overshadowed by the expansion of the empire of Mali [*q.v.*]. At its zenith (first half of the 14th century), this empire gained a foothold in the valleys of the Senegal and the Gambia, defeated the sovereign of the Jolof, if the Malinke tradition, and it alone, is to be believed, and radiated, in a fashion difficult to determine, over the rest of the region. Political titulature bears numerous traces of this period of Malinke control. The titles of *fara* (chief) or of *far-ba* (great chief), which came to be widely used in Wolof hierarchies, are directly borrowed from the Malinke language. Genealogical connections with the dynasty of Mali also appear throughout the Senegambian zone. At the time of the arrival of the Portuguese, the Jolof was at its zenith, its territory extending as far as Ferlo, to the east, and Gambia, to the south, while Takrūr continued to exert its power further to the east, from the central valley of the Senegal to Bambuk. At the same time, Mali, in a process of decline, nevertheless maintained its pressure, particularly in the Gambian valley.

But the empire of the Jolof was weakly centralised and the subsidiary kingdoms enjoyed considerable autonomy, sometimes engaging in dissidence. The sovereign (*buurba*) directly governed only the province of Jolof as such, an inland region separated from maritime traffic. As a means of surmounting this handicap the Crown Prince (*buumi*) Jelen, ousted in a war of succession, made his way, in 1488, to Lisbon, converted to Catholicism and having regained his throne, played an active part in the control of imports (horses, iron, weapons, fabrics, leather and glass objects, etc.).

The coasts of Senegambia were discovered by the Portuguese around 1445. The Wolof lands represent in this context the first "morsel" of Black Africa explored by the Portuguese. The testimonies of these navigators, superseding the somewhat limited Arab sources, provide considerable new material for the understanding of Senegalese societies in the 15th century.

By combining these elements of information with those assembled later, it is possible to trace the essential character of these societies. They are first of all marked by a very strict hierarchisation of social classes: the *geer* (free men), the *ñeeño* (considered inferior, of low "caste", consisting of members of endogamic groups specialising in the practice of certain artisanal occupations, smiths, millers, etc.) and the *jaam* (slaves and dependents). Power belonged to members of the ruling *geer* families. In the Senegambian zone, kinship is established both in the maternal and the paternal line; matrilineages are called *meen* and patrilineages *geño*. The inheritance of goods and positions exposes, in variable proportions according to dynasties and periods, this double filiation. Thus transmission in the dynasty of the Jolof, from the outset until the end, is predominantly patrilineal. On the other hand, the Waalo, the Kajoor and the Bawol practised a bilineal system from the 16th to the 19th century, and previously, in certain cases, possibly a matrilineal system. In the entourage of these Wolof kings, a lady of the Court (mother, aunt or elder sister), the *lingeer*, exercises a substantial authority which underlines the role of matrilinearity in these complex systems.

The diffusion of Islam in these kingdoms is still very uneven. The Portuguese texts speak of animist practices and evoke the propensity of the Wolof for the abuse of alcohol. They also illustrate the important role played by foreign preachers, the majority of them from neighbouring Zanaga groups (contemporary Mauritania). These are known by the name of *bisserin* or *bixerin* (in contemporary Wolof, *seriñ*, equivalent of *s̲h̲ayk̲h̲*). From the early 17th century onwards, the term "marabout" comes into general use and is substituted for the latter. As in the rest of western Sudan in the same period, Islam is the faith of élites and of merchants, an Islam of the court, which does not exclude, on the part of the sovereign, at his subjects' behest, recourse to instruments of legitimacy borrowed from ancestral cults (feasts, dancing, sacrifices etc.).

(3) *The turning-point of the 16th century: a new political landscape.*

The years following 1500 saw a significant turning-point in the history of the region: the accession to power of a Peul or Fulbe dynasty in neighbouring Takrūr, and the autonomy of the subordinate kingdoms, destabilised the unity of the Jolof.

The history of the interior of Senegambia is marked, during the second half of the 15th century, by a hostile campaign of great breadth instigated by Peul originating from the border regions of the Sahel, in a double movement, north-south and then south-north. Between 1460 and 1480 the Peul crossed the central

valley of the Senegal in the direction of the Gambia. Soon afterwards, a Peul state was founded by Tengela in the Fuuta Jaaloo (Fouta Djalon, currently in Guinea [see FŪTA DJALLON]), while Peul forces confronted those of Mali. From 1490 onward, Tengela and his son Koli campaigned along the current eastern frontier of Senegal. Tengela was killed in 1512 in a confrontation with troops of the Songhay empire (an empire centred on the loop of the Niger) and Koli (son of) Tengela undertook the occupation of Takrūr, where he founded a new dynasty, that of the Deniyanke (pl. Deniyankoobe). The Peul power exerted pressure on the eastern frontier of the Jolof, in particular through the occupation of the Ferlo.

The same period witnessed the increasing power of the Kajoor, annexing the peninsula of Cape Verde, a strategic commercial area, between 1482 and 1515, then, between 1530 and 1550, defeating the Jolof in battle (the victory of Danki). The Kajoor seceded, followed by all the other tributary kingdoms.

After the dislocation of the Grand Jolof, provisional equilibrium was established between the four Wolof kingdoms (Jolof, Waalo, Kajoor, Bawol) and, more broadly, between the Senegambian states (besides the afore-mentioned, the Fuuta of the Deniyankoobe—formerly Takrūr—to the north, and the Siin and the Saalum, to the south). A new disposition of forces was progressively brought into being, marked by the ambitions of the Fuuta, the power of the Kajoor and the economic growth of the Saalum.

In the second half of the 16th century, the *buurba* of the Jolof passed for some time under the protectorate of the Fuuta. The *brak* of the Waalo followed, after some delay, and in its turn paid tribute to the Fuuta. The Deniyanke dynasty reached its zenith at the beginning of the 17th century under the reign of the *satigi* Samba Lamu. In confrontation with this regional power, a new hegemony was established under the leadership of Amari Ngoone, the architect of the victory over the Jolof, who united the Bawol and the Kajoor under his authority, but this union collapsed at the end of the 16th century. Henceforward, the Wolof found themselves divided on a lasting basis between the four independent political entities, which were to continue in operation, within virtually stable frontiers, until the colonial conquest, although the memory of their lost unity was not to disappear. For all the Senegambian powers, access to the coast or to the two major rivers of the region, represented a vital asset. European commerce, dictated, in fact, to an increasing extent, not only the trade but also the political and social life of the region.

(4) *The period of the slave trade.*

The first Portuguese incursion took place, around 1445, at Arguin, on the coast of what is now Mauritania. From there, the Portuguese proceeded along the courses of the Senegal and the Gambia with the object of reaching the sources of gold, thus diverting the internal commercial routes towards the Atlantic. From this time onwards, the traffic in slaves began to flourish. Senegambia constituted in fact the primary source of slaves embarked directly for Europe by sea and it continued to be the principal exporter throughout the 16th century, until the Gulf of Guinea and Angola took over this role in the following century.

At the beginning of the 17th century, the Portuguese commercial monopoly was shattered by the successive arrival of the Dutch, the British and the French. The new powers divided the coast into rival zones of influence. The Dutch established themselves on the island of Gorea in 1621. After temporary Portuguese re-occupations (in 1629 and 1645), they were obliged to cede the territory to the British (1667), then to the French (1677). In 1659, the French built the fortress of Saint-Louis, at the mouth of the Senegal river, and organised an active network covering the whole of the river valley. For their part, the British established themselves, in 1651, at the mouth of the Gambia.

This European implantation had profound effects on political and social dispositions. The hunt for slaves led to violence and exacerbated the tensions between Senegalese kingdoms and European traders, and within the Senegalese kingdoms themselves. A social revolution was created, under the flag of Islam, as a reaction against the extortions of the ruling aristocracies. It is known in the European texts of the period as the "war of the marabouts" or "Toubenan movement" (from Arabic *tawba* "conversion, repentance").

Initially, a *djihād* born among Berbers of Mauritania, at the initiative of a religious utopian and reformer named Nāṣir al-Dīn, as a reaction against the double pressure of Arab Ḥassānī warriors moving towards the south and of the Europeans installed at the mouth of the Senegal river, erupted in the river valley, where it acquired aspects of supplementary significance. The desire to convert the populace to Islam was combined here with opposition to the European slave trade. Between 1673 and 1677, the *djihād* was victorious in the Waalo, in the Fuuta, in the Jolof and in the Kajoor. But this victory was everywhere ephemeral. In Mauritania (where this war was known by the name of *Shar Bubba*), the men of religion (*zwāya*) were forced to recognise the supremacy of the warriors. On the Senegalese side, the local dynasties re-established their authority everywhere, with the military and material aid of the French traders of Saint-Louis. This restoration was accompanied by an anti-Islamic reaction on the part of the warrior aristocracies, who delivered the defeated survivors into slavery. In these circumstances, adherence to Islam took on a different meaning: from being the distinguishing sign of an élite in mediaeval Sudanese societies, it became the symbol of an ideology of dissidence and revolt against pagan tyrannies (in particular the power of the *ceddo* warriors, "slaves of the crown" in the service of the ruling families) and the foreign occupation. "Islam which had hitherto been an Islam of the court, the monopoly of the powerful, was to an increasing extent rejected by this aristocracy, which was to be more or less hostile to it until the time of the colonial conquest" (B. Barry, 1972, 157). In these circumstances of repression, the Muslim communities became pacific and minority enclaves, which periodically attracted to themselves dispossessed and exploited peasants.

The 18th century witnessed the consolidation of these tendencies. The development of the cultivation of sugar-cane, cotton and tobacco in America led to an expansion of slave traffic and its geographical extension beyond Senegambia. European demand was henceforward extended to gum, a resin of acacia which was to be found in the Saharo-Sahelian zone of the region. In the Senegalese kingdoms, the exacerbation of competition for access to European products gave the advantage to militarised groups, in particular to the *ceddo* warlords who imposed their will on the ruling dynasties. In confrontation with the powers of the *ceddo*, Islamic teaching was seen as a possible response to the general crisis.

Within the Senegalese states, the Muslim communities consolidated themselves under the leadership

of influential religious families, who were not averse to invoking occult means to intimidate their adversaries. These Muslim enclaves, linked together by regular contacts and expressions of solidarity, organised themselves, either to snatch an ever more extensive autonomy, or to unleash Islamic revolutions. Their leaders, "graduates" trained in the same schools, in particular the religious centres of Pir and of Kokki in the Kajoor, in direct contact with the Berber *zwāya* masters, shared the same culture and exchanged information and plans.

Since the end of the 17th century, around 1690, the Bundu, a zone situated to the south of the Senegal river in the east of the country, which had attracted numerous Muslims of the Fuuta Tooro fleeing from repression, had been the epicentre of a Muslim revolution led by a Fuutanke scholar by the name of Malik Sii (Sy), who had studied at Pir and was directly inspired by the model of Nāṣir al-Dīn. The Muslim party was thus assured of control of the valley of the Faleme, doubly rich on account of agricultural resources and gold deposits (Bambuk). Like Nāṣir al-Dīn, Malik took the title of *almami* (*al-imām*) and laid the foundations of a régime which was to evolve in dynastic fashion.

The Bundu was a ladder towards the Fuuta Jaaloo, a mountain range recently colonised by the Peul, where other partisans of Nāṣir al-Dīn fleeing repression had also taken refuge. In 1725, a second Islamic revolution erupted in this region of what is now Guinea. In its turn it was to serve as the model for a movement of the same nature which was victorious in 1776 in the Fuuta Tooro and led to the fall of the Deniyanke dynasty. The religious party, known by the name of *toorodo* (from a Peul root which signifies, according to the hypotheses proposed, "to beg" or "to pray") was led by two former pupils of the schools of Pir and of Kokki, Sulaymān Bal and ʿAbd al-Ḳādir, the first *almami* and *amīr al-muʾminīn* of the Fuuta. ʿAbd al-Ḳādir opposed the sale of Muslims at Saint-Louis and blocked the communications and the supply-routes of the French fortress.

The *toorodo* party attempted at the same time to extend Islamic power to the neighbouring Wolof kingdoms, but it encountered determined resistance on the part of the sovereign (*damel*) of the Kajoor, Amri Ngoone Ndeela, whose forces crushed the Fuutanke army at Bungoy in 1790. The Islamic revolution was brought to a definitive halt. In the Fuuta, the new aristocracy of the Toorodo appropriated land and dominated the country, while the régime of the *almami*, consumed by internecine rivalry and struggles over succession between families, was in dire need of stability (between 1806 and 1854, 20 candidates came to power on 45 occasions, which, taking account of interregnums, represents an average of less than a year per reign). As in the Bundu and Fuuta Jaaloo, the leaders of the victorious party, trained originally as scholars, progressively yielded power to a new warrior aristocracy which had no direct links with religious studies. However, the Islamic character of the state was reinforced by a network of schools and of *ḳāḍīs*, which had the function of diffusing and promoting the *sharīʿa*.

In the Wolof kingdoms, the Muslim groups maintained their cohesion and, sometimes, emigrated towards more hospitable regions (such as those from the province of Njambur, to the north of the Kajoor, who went into exile in huge numbers in the peninsula of Cape Verde.)

(5) *The rivalry between the three powers: the warriors, the religious, the French of Saint-Louis.*

At the Congress of Vienna (1814), Britain imposed on the European powers the suppression of the slave trade. Although "illicit commerce" continued for some time, the entire balance of Atlantic trading was comprehensively overturned. The Congress of Vienna also restored to French its warehouses in Senegal, which had been occupied by the British.

After lengthy research, the ground-nut was identified by the French as the product providing the best substitute for the slave-trade (the British opting, for their part, for palm-oil). From 1840 onwards, the ground-nut was seen as the miracle crop which could rescue French commerce in Senegal from stagnation. This choice led in its turn to a policy of intervention and more resolute territorial expansion. It was Faidherbe, governor of Senegal between 1854 and 1865, who inaugurated this process of colonial conquest: occupation of the Waalo (1855), construction of new posts in the valley of the Senegal river, political and military interference in the Kajoor, and victorious intervention in the Saalum (1859). These campaigns accentuated the fragility of the Senegalese kingdoms.

There was only one force, originating in the east, which could represent an alternative to the French hegemony. It was embodied by a *toorodo* of the Fuuta, a veteran of the Pilgrimage, endowed with the title of *k͟halīfa* of the new Tid͟jāniyya brotherhood, named al-Ḥād͟jd͟j ʿUmar al-Fūtī. The latter, also inspired by the model of the caliphate of Sokoto (northern Nigeria) where he had lived for several years and taken a wife, sought to revive the *toorodo* tradition of Islamic reform. Establishing himself to the north of the Fuuta Jaaloo, he attracted to his cause thousands of "social juniors" from his native territory, in search of adventure and social advancement, and anxious to escape the crisis of power in the Fuuta Tooro. In 1846, ʿUmar undertook his first tour of preaching and recruitment in eastern Senegambia and in the Fuuta Tooro. He was faced by the opposition both of the existing hierarchies in the Fuuta and of the French, worried by this new source of instability.

ʿUmar proclaimed the *d͟jihād* in 1852. At the end of 1854 he occupied the Bambuk, invaded the Bundu and established himself in the upper valley of the Senegal. In 1857, he instigated a siege of the French fortress of Medine, situated in the upper valley, but was unable to complete it successfully and suffered heavy losses. Henceforward, al-Ḥād͟jd͟j ʿUmar withdrew from Senegal and directed his efforts against the Bambara animist hegemonies which then dominated the entire western zone of what is now Mali. But he continued to draw the bulk of his forces from the human reservoir of the Fuuta Tooro, thus contributing to the phenomenon of *fergo* (emigration), which had profound effects on the riparian societies.

Taking up the legacy of al-Ḥād͟jd͟j ʿUmar (who died in 1864 and whose empire survived for a further generation on the territory of what is now Mali), some Senegambian leaders, influenced by the ʿUmarī *d͟jihād* or by the *toorodo* model, revived in their turn a militant and radical programme. In Senegambia, the principal figure was a disciple of al-Ḥad͟jd͟j ʿUmar by the name of Ma Bā Jaaxu, who dominated the stage in Senegal from 1861 to 1867. He took the title of *almami* and founded a state covering the land between the Saalum and the Gambia and extending, for a brief period, as far as the Senegal river. Ma Bā Jaaxu was killed in 1867 while attempting to subdue the Siin, who remained resolutely animist.

Some of his companions were to persist in the struggle for Islamic reform and against French expan-

sionism. These included Lat Joor (Lat Dyor), *damel* of the Kajoor, and al-Būrī Njay, his nephew, *buurba* of the Jolof. Other lieutenants of Ma Bā maintained positions of power along the entire length of the Gambia. But the most significant figures in the long term were to be non-combattant marabouts. The change in emphasis was embodied in particular, a little later, by Amadu Bamba, founder of Murīdism, whose father, Momar Anta Sali, had been the tutor of Ma Bā's son and an adviser to Lat Joor.

Parallel developments took place in the Fuuta. Confronted by a warlord, Abdul Bokar Kan, who, between 1860 and 1890, attempted to re-establish the unity and the independence of the Fuuta and to oppose the large-scale drain of the human resources of the region in the direction of the post-ᶜUmarī empire, other religious figures called for the restoration of *toorodo* ideals: these were Cerno Brahim, a pupil of the Moorish *Zwāya* of Trārza, in the eastern Fuuta, and Amadu Seexu, son and disciple of an influential religious personage, closely linked to the school of Kokki, who was proclaimed Mahdī in the western Fuuta in 1828 (whence the name of Madiyankoobe "followers of the Mahdī", given to the movement). Cerno Brahim, for his part, was defeated by allies of Abdul Bokar Kan, in the upper valley of the Senegal, in 1869. The same year, at the time of a devastating cholera epidemic, Amadu Seexu followed his father's example in calling for a movement of reform and of purification. The mobilisation of forces, and the tension which ensued, led to a direct confrontation with the French. Amadu Seexu allied himself temporarily with Lat Joor, the former companion of Ma Bā, and pretender to the throne of the Kajoor, and won numerous victories over the French. For his part, Abdul Bokar Kan avoided any direct confrontation with the Madiyankoobe whose leader, powerless to rally the entirety of the Fuuta and being much more respected in Wolof circles, emigrated with all his forces to the Jolof. Having become a threat to the Wolof dynasties, Amadu Seexu found himself progressively isolated. Along with hundreds of his supporters he was killed by a French expeditionary force in a bloody battle in 1875.

A final large-scale religious movement was launched, in the upper valley of the Senegal river, by Mamadu Laamin Daraame, a Soninke of the Gajaaga, from a religious family, who had made the Pilgrimage to Mecca and who, having expressed criticisms with regard to the ᶜUmarī régime, was temporarily imprisoned by Amadu Seexu (S͟hayk͟hu), sovereign of Segou, son and successor of al-Ḥād͟jd͟j ᶜUmar. In 1885 Mamadu Laamin launched a *d͟jihād* which united the majority of the heterogenous populations of the Upper River, especially those of the Soninke, Jaxanke, Maninka and Xasonke ethnic groups, in what is now the frontier region between Senegal and Mali. He occupied the Bundu and Upper Gambia, threatening the rearguard of the French troops engaged in the conquest of the ᶜUmarī empire. He was finally killed in 1886.

Thus Senegambia was, throughout the 19th century, the scene of complex confrontations involving protagonists of three types: the warriors and monarchs, defenders of the traditional order, the religious zealots who, since the end of the 17th century, had pursued a programme of social and political reform based on the Islamic *s͟harīᶜa*, and the French who, having started out as ordinary commercial partners paying fees to their African middlemen, were constantly gaining territory and acting like conquerors. On the confrontation between warriors and religious zealots, both groups being themselves wracked by internal divisions, there was superimposed to an ever-increasing extent that between African and French interests. This situation accounts for the instability of alliances and counter-alliances. Caught between two fires—the French of Saint-Louis and the religious reformers—the monarchs, who were also dependent on their *ceddo* entourages, made alliances, according to circumstances, with one party or the other. Following the suppression of religious initiatives, in which they collaborated in numerous cases, they hoped to find some common ground with Saint-Louis, but were in their turn eliminated at the end of the century: Lat Joor was killed in battle in 1886, al-Būrī Njaay was forced into exile in 1890, and Abdul Bokar, powerless to prevent the occupation of the Fuuta, was killed by Moors acting on behalf of the French in 1891.

The last efforts at resistance were those mounted, in the non-Islamised south, by the Joola of Lower-Casamance, to the south of the Gambia. The French administration, reduced to a few coastal warehouses, sought to take possession of maritime Casamance with the aim of developing there the production of rubber. But the Joola took advantage of the inaccessibility of their villages and of the localised nature of their power to impede French penetration. From 1885 onward, organised on a village-based structure, they resisted the French with some success, and their movement was to remain active until the First World War.

(6) *The Colony of Senegal.*

The conquest of Senegal by France responded to a double objective: strategic, providing a base of departure for the advance on the Sudan (Segou, the ᶜUmarī capital on the Niger, fell in 1890), and economic, for the development of the cultivation of the ground-nut, especially in the Kajoor. In 1885, the ground-nut represented 70% of the colony's exports and was poised to become its sole crop.

Beyond the various legal constructs, the true founder of the colony of Senegal, reduced to a few isolated trading posts at the time of the French return in 1817, was the governor Faidherbe (1854-1865, with a brief interruption in 1861). At his own initiative, and with the active support of the commercial community of Bordeaux, Faidherbe, who had been trained in the Arab Bureaux in Algeria, directed his efforts towards the interior of the country and the Senegal river. He was diverted from operations nearer the coast by the separation of Goree into a distinct entity belonging to the "Marine". Protected by the Parisian administration, Faidherbe received the necessary funds and reinforcements. He also knew how to cultivate an image of distinction in influential French circles, showing himself receptive to scholars, publicists and journalists. Like Bonaparte in Egypt, Faidherbe surrounded himself with young officers, graduates of military schools. Combining diplomacy with firmness, he encouraged the signing of treaties of protectorate with African chiefs, but he also organised the Senegalese *Tirailleurs*, an African force in the service of the colonial power, later to enjoy a great fortune. To train an African élite for the role of intermediary between the Senegalese people and the French authorities, he founded for this purpose the "Ecole des Otages" (1855-1871), which was later to become the "Ecole des Fils des Chefs et des Interprètes" (1893). With the annexation of the Waalo (1856), a collection of dispersed trading posts was replaced by a single and continuous tract of occupied territory, the first of its kind for the French in West Africa. On 26 February 1859, the island of Goree and

the southern trading posts were placed under the authority of the governor of Senegal. The Kajoor, the major source of ground-nuts, all the outlets for which were controlled by French commerce, was progressively encircled. A display of force in the Kajoor and the replacement of the *damel* (January-May 1861) overcame all resistance. The retreat of al-Ḥādjdj ʿUmar (Treaty of Medina, August 1860), removed the threat of *djihād* and consolidated the structure. If these impressive achievements are supplemented by the organisational work conducted on the ground (administrative infrastructures, French and Franco-Muslim schools, Muslim tribunals, modernisation of Saint-Louis, foundation of the Bank of Senegal, etc.) it is evident that, without substantial means, Faidherbe had transformed—twenty-five years before the great colonial partition of Africa—a network of trading posts of mediocre importance into a colony of 50,000 km², to which should be added the zone of influence created in the interior by the various treaties of protectorate and by settlements along the river or on the southern coast. Guided by the Algerian experience, Faidherbe conducted a rather Islamophile policy, using Muslim institutions as an arm of the French domination. This period saw the beginnings of a phenomenon which was to persist for several generations, the privileged status enjoyed by representatives of Muslim élites of the region of Saint-Louis and of the river: Shaykh Sidiyya Baba (1862-1926), a Ḳādirī Moorish dignitary of Trārza, Shaykh Saʿad Būh (1850-1917), another Ḳādirī (and Fāḍilī) Moorish figure, the interpreter Būh al-Mogdad, drawn from the same circles, Amadu Mukhtār Sakho, *ḳāḍī* of Boghe (Fuuta) from 1905 to 1934, and a number of prominent citizens and merchants of Saint-Louis (Hamat Njaay/Ndiaye, etc.).

A decree of 16 June 1895 created the "Gouvernement Général de l'Afrique Occidentale Française" (A.O.F.), whose titular head, based at Saint-Louis, combined his duties with those of governor of Senegal. A decree of 1902 separated the two functions: the Governor-General took up residence in Dakar, while the Lieutenant-Governor of Senegal remained in Saint-Louis. A decree of 18 October 1904 established the definitive organisation of the A.O.F. and presented Senegal as a colony composed of "territories of direct administration" (the four communes of Saint-Louis, Goree, Rufisque and Dakar, with their suburbs, and the coastal zone traversed by the Dakar-Saint-Louis railway) and the "protectorate lands" of the interior.

The "Four Communes" represented an exceptional case in the French colonial system in Africa. A decree of 10 August 1872 had accorded to Saint-Louis and Goree-Dakar the status of fully functional communes. In 1880, this status had been extended to Rufisque, while, in 1887, Goree and Dakar had been separated into two distinct communal entities. Between 1872 and 1887, the Four Communes were endowed with an organisation copied from the French model. The decree of 4 February 1879 created an elected General Council, on the model of the practice followed in the French departments. On the other hand, since 1848 (with an interruption under the Second Empire) the inhabitants of Saint-Louis and of Goree had elected a deputy to the French Chamber of Deputies. This right was extended to nationals of the Four Communes. This example of very close assimilation to the metropolitan régime was not extended further; until the Second World War, it never covered more than 5% of the Senegalese population. The other nationals of the territory were, as in the other colonies, "French subjects", subordinated, by a decree of 20 September 1887, to the local colonial régime, by which they could be regularly requisitioned for works in the public interest, while at the same time their right of movement was limited and they were subject to the discretionary power of the administrators.

The Four Communes, on account of their privileged status, witnessed the emergence of the first black élites, whose claims, throughout the early years of the century, were directed towards total assimilation. The first land-mark event took place in 1914 with the election, on a huge majority (1,900 votes against 671) of a negro customs official, Blaise Diagne, competing with a candidate of mixed parentage supported by the administration. Blaise Diagne had benefited, especially, from the support of the Murīd brotherhood. For the first time a Black African sat in the French Parliament. A law, sponsored by Blaise Diagne and promulgated in 1915, enlarged the constituency of French citizens, stipulating that all the nationals of the Four Communes and their descendants should enjoy citizen status. As a valued representative of the French government, with the title of Commissioner of the Republic and the rank of Governor-General, Blaise Diagne contributed actively to the recruitment of African troops for the battlefields of the First World War. He was convinced at this time that the shedding of blood would accelerate progress towards assimilation. After the war, he became Under-Secretary of State for the colonies, the first African to serve a French government in a ministerial capacity. On his death in 1934, Galandou Diouf was elected deputy and pursued the same programme, of populist oratory and co-operation with France, although with less skill. The founding of the Senegalese Socialist Party in 1935 and its affiliation to the French Socialist Party (S.F.I.O.) in 1938 marked a new phase. The leader of the new party, Lamine Gueye, was defeated by Galandou Diouf in the elections of 1934 and 1936, but he dominated Senegalese political life after the Second World War.

Senegal was affected in numerous ways by the global conflict. Pierre Boisson, Governor-General of the A.O.F., remained loyal to the government of Vichy and offered military resistance to an attempted landing by General De Gaulle, supported by British naval forces, at Dakar (13-25 September 1940). After the Allied landing in North Africa, Boisson negotiated an accord with Admiral Darlan and with General Eisenhower (7 December 1942) which brought the A.O.F. back into the war, but not into alliance with Free France (this was not to be achieved until June 1943).

(7) *Progress towards Independence.*

After the war, two figures belonging to two different generations, whose rivalry was to dominate the political life of the country over the next ten years, emerged on the public scene: Lamine Gueye, a lawyer of Saint-Louis, a citizen of the Four Communes, and Léopold Sédar Senghor, a Sereer Catholic, a school-teacher, who had promulgated in 1939, with the Martiniquese Aimé Césaire, the concept of "Négritude". The two men collaborated at first within the S.F.I.O., which established itself as the dominant party in the elections of 1945. Both were elected as deputies to the French National Assembly in 1945 and 1946, Lamine Gueye as representative of the first constituency (the citizens of the Four Communes) and Senghor as representative of the second constituency (that of the "French subjects"). It was a law promoted by Lamine Gueye (7 May 1946) which conferred French

citizenship on all nationals of the overseas colonies. In 1948, Senghor resigned from the S.F.I.O., which he considered too assimilationist, and founded his own party: the Bloc Démocratique Sénégalais (B.D.S.). Henceforward, the two organisations were to compete for control of the electorate, actively solliciting the religious leaders (the marabouts), who now enjoyed the status of electoral brokers and were the recipients of all kinds of favours from politicians. In spite of his Catholic allegiance and the attacks levelled at him on account of it, Senghor emerged from this confrontation the victor. Lamine Gueye, as a city-dweller from Saint-Louis, was not at all familiar with rural issues. Intellectual though he was, Senghor paid more attention to the problems of the "bush" and gained the support on this basis of numerous "marabouts" who had a direct interest in agricultural problems. He also manipulated with skill the internal conflicts within the brotherhoods. Thus he supported the head *khalīfa* of the Murīds, Falilou M'Backé, against his nephew and rival Cheikh M'Backé, a friend of Lamine Gueye. Taking equal advantage of the blunders of the militant socialists, he won over to his side one of the great historical figures of the Tidjāniyya, Seydou Nourou Tall, grandson of al-Ḥādjdj ʿUmar, a man of influence who, from his stronghold in the Fuuta Tooro, had served all the administrations and now put his considerable expertise at Senghor's disposal.

Senghor won the elections of 1951, and continued to consolidate his power at subsequent polls. The frame law of June 1956 (the "Defferre Law") established a régime of internal autonomy and gave rise to an autonomous executive and a "Republic of Senegal". Elections intended to put this autonomy into effect took place on 15 March 1957. The party of Senghor (which had become, through the unification of small parties, the "Bloc Populaire Sénégalais") secured 78.1% of the votes, as against 11.1% for the Socialists (limited essentially to Dakar and Saint-Louis). Senghor's principal assistant, Mamadou Dia, became Vice-President of the Council of Government (the functions of President being reserved for the French representative, the territorial chief), while Senghor continued to sit in the French National Assembly. The Council of Government was to be established in Dakar, promoted to the status of capital of Senegal, to the detriment of Saint-Louis and the old political class of that city. This victory of Senghorian political strategy was consolidated by the fusion of the Socialist Party and the B.P.S., forming the Union Progressiste Sénégalaise (U.P.S.) in April 1958.

The year 1958 was dominated by the referendum on the "Communauté", which gave the African electors a choice between independence by stages, within a "Commonwealth" retaining unified defence and foreign policy ("Yes" vote) and immediate independence ("No" vote). The question of the referendum provoked deep internal dissension, within the U.P.S. as well as other organisations. At this time of indecision, the adoption of a public position by the religious establishment, constituted, since the end of 1957, as a "Committee of Islamic Organisation", under the honorary presidency of Seydou Nourou Tall, proved crucial in tipping the balance. These religious dignitaries expressed their support for the action of General De Gaulle on 5 September 1958. This mobilisation of marabouts weighed heavily in the final decision of the policy committee of the U.P.S. which, two weeks later, despite the opposition of a powerful minority, called in its turn for a "Yes" vote. In the end, the "Yes" won by a landslide victory (officially at least) when the referendum took place on 27 September 1958: 870,362 "Yes" votes (97.2% of the votes cast) against 21,904 "No" votes, out of a registered electorate of 1,110,823.

After the referendum, Senghor, who was hostile to the "Balkanisation" of Black Africa, differing in this respect from the ruler of the Ivory Coast Houphouët-Boigny, attempted to found a West African federation, the Federation of Mali, which came into existence in early January 1959, and succeeded in uniting only two countries, the formerly French territory of Sudan and Senegal. The independence of the Federation of Mali was proclaimed on 20 June 1960, but the experiment came to an end two months later when, on 20 August, the Senegalese government withdrew unilaterally and proclaimed Senegalese independence. The two countries were too different, and their political directions incompatible. On 26 August 1960, the Senegalese National Assembly adopted the Constitution of the independent Republic of Senegal, which was composed in the spirit and, often, in the letter, of the French Constitution of 1958. On 5 September 1960, the electoral college appointed by this Constitution unanimously elected Léopold Sédar Senghor as first President of the Republic of Senegal.

In 1962, there was discord between Senghor and his Prime Minister, Mamadou Dia, who favoured an economic policy of a planned and socialist tendency. The trial of strength took place on 17 December and ended with the arrest of Dia the following day, his trial in May 1963 and his sentence to a long period of detention. In the event, the majority of the religious leaders, uneasy at the direction proposed by Dia, expressed public support for Senghor. A new constitution, abolishing the bicephality of the executive and paving the way for the change to a presidential régime, was adopted by referendum on 3 March 1963 (99.4% of the votes cast). The consolidation of power was pursued with the establishment, through the integration of some and the exclusion of others, of the U.P.S. as a "unified", i.e. single party. This aggressive policy of presidentialisation, in a context of economic stagnation, provoked movements of discontent and strikes. On 22 March 1967, supporters of Mamadou Dia attempted to assassinate Senghor as he was leaving the Great Mosque, on the occasion of the feast of Tabaski (*ʿĪd al-Kabīr*). In the face of increasing pressure and tension (labour strikes, 1 May 1968; strikes in schools and universities, 27 May; and call for a general strike by the official trades union leadership, 31 May), a constitutional revision restored in 1970 the functions of Prime Minister and extended the powers of the Assembly. Four days after the referendum which confirmed the revision with 94.9% of the votes cast, on 26 February 1970, Senghor called upon one of the younger senior civil servants, Abdou Diaf, to serve as Prime Minister.

A new constitutional revision took place in 1976, restoring, on a distributive basis, the multi-party principle: three parties were authorised, on condition that one was to espouse "liberal democracy", another Marxism-Leninism, and the third "socialist democracy". The U.P.S., claiming the latter label for itself, was admitted to the Socialist International in November 1976 and adopted the name of Parti Socialiste in December. This "democratic awakening" of 1976 was accompanied by a veritable explosion of new titles in the press. This burgeoning of a press catering for political discussion in the French language, which had no equivalent in the rest of Francophone Africa, was to continue throughout the 1980s.

On 31 December 1980, President Senghor took a decision of a kind hitherto unknown in sub-Saharan Africa, resigning from his functions and withdrawing entirely of his own accord from public life. He thus illustrated once again the extent to which he differed from the leaders of other African régimes, among others President Houphouët-Boigny who, encouraged by the results of the "Ivory Coast economic miracle" of the 1970s, was eager to wrest from Senegal its former role as the leading nation of Francophone West Africa. In conformity with the Constitution, Abdou Diouf, in his capacity as Prime Minister, was elected President of the Republic on 1 January 1981. On 24 April 1981, on the recommendation of the new President, a law was introduced, abolishing the limit on the number of parties. On 27 February 1983, Abdou Diouf was elected President with more than 83% of the votes cast, while the Parti Socialiste obtained some 80% of the votes in the legislative elections. Out of fourteen officially recognised parties, eight participated in the legislative elections and five submitted candidates to the presidential elections: Abdou Diouf (P.S.): 83.5%—one percentage point higher than the vote obtained by Senghor in 1978; Abdoulaye Wade (Parti Démocratique Senegalais—right-wing liberal): 14.79%; Mamadou Dia, the former detainee (Mouvement Démocratique Populaire—internal autonomy): 1.39%; Oumar Wone (Parti Populaire Senegalais—nationalist): 0.20% and Mahjmout Diop (Parti Africain de l'Indépendance—communist): 0.17%. The results were vigorously disputed by all the defeated parties, with allegations of corruption, as had previously happened in 1978. Shortly after his retirement, Léopold Senghor was elected a member of the Académie Française (May 1983).

As regards the most recent period—which has been marked, internally, by a consolidation of socialist power (in spite of recurrent political crises, in particular with the P.D.S. of Abdoulaye Wade), an extension of freedom of opinion, but also an aggravation of economic and social problems, further accentuated by the devaluation of the C.F.A. franc—the principal events to be noted are the failure of the Senegambian confederation (Senegal + Gambia) which had been proclaimed on 1 February 1982 and was dissolved in September 1989, the gravity of the crisis which for several months pitted Senegal against Mauritania (a frontier incident degenerating into pillage and the murders of nationals of both countries, being resolved with massive mutual repatriations in September 1989), and the emergences of an independence movement in the isolated southern region of the country, the Casamance, whose indigenous populations (Joola and others) showed themselves hostile to agricultural colonisation by Wolof migrants (armed confrontations in September 1989 and September 1990, provisional cease-fire in July 1993). In the course of the 35 years which have followed independence, Senegal deserves credit for having been in the vanguard of democratic evolution in Francophone Black Africa, but the paucity of its natural resources and the circumscription of its territory, since it ceased to be the "centre" of French West Africa, render its position fragile. The laboratory of African democracy (it is one of the few countries of sub-Saharan Africa which has not experienced a coup d'état or a military régime) Senegal is also, and even more so, a laboratory for the study of contemporary Islamic trends.

4. Religious and intellectual life.

Islam is both an ancient and a recent phenomenon in Senegal. The first contacts date back to the 11th century, with the conversion of the king of Takrūr (before 1040), then the rise of the Almoravid movement in the second half of this century. But Islamisation was a long-term process which, under the triple influence of Soninke dynasties, inheritors of the empire of G̲h̲āna, pioneers of Sahelian commerce and first transmitters of the faith, of institutions originating in the empire of Mali, and of the education conveyed by learned Moorish *zwāya* hailing from the right bank of the Senegal, henceforward to be the guides of Senegalese Islam, developed very slowly from north to south,.

In the 15th century, the Portuguese noted the general presence of religious Muslims (the "*bixerins*" or "*bisserij*") in the entourages of chieftains. But the same authors also report the existence of altars and of animist sacrifices. Adherence to Islam, when it took place, was therefore superimposed upon more ancient cultural and religious traditions, still very much alive. As in the other Sudano-Sahelian formations of the period, Islam was at first a sign of social distinction, valued by the aristocracy, associated as it was with literacy and with trans-Saharan commerce. Islam was thus a superior knowledge reserved for élites. The lower classes, for their part, adhered to ancestral traditions. European observers thus had difficulty establishing a firm distinction between Muslims and non-Muslims.

This "Islam of the court", complaisant towards princes and wealthy merchants, which did not disappear entirely, was succeeded, following the "war of the Marabouts" (1673-7), by a militant Islam, more aware of itself and taking advantage of major social issues, in particular, the extension of the Atlantic slave trade, to question the legitimacy of the ruling dynasties and to call for an Islamic revolution, presented as the reign of the law and of justice. After the defeat of the "marabouts", Islam tended to be concentrated in enclaves partially exempt from the direct authority of the sovereigns and attracting pupils and students, pilgrims and travellers, as well as refugees anxious to escape from exploitations practised by those in power. The scholastic centres of Pir and Kokki, in the Kajoor, illustrated this new brand of Islam which laid emphasis on the higher education of students drawn from all the neighbouring regions. This "populist" Islam, nourished periodically by Mahdist aspirations, and committed to the triumph of the *s̲h̲arīʿa*, established a firm tradition, with recurrent manifestations, in the Senegambian regions.

The success of the Islamic revolution in the Fuuta Tooro (1776) and the pioneering role then adopted by Peul and Toucouleur scholars, as a new "chosen people" bearing the divine word ("Arabs of Black Africa" as they called themselves), reinforced the hopes of the Muslims of the region, but the Wolof monarchies resisted all attempts at extension of the movement. Only the colonial conquest was to put an end to the repression exercised by the Wolof aristocracies and their *ceddo* military slaves. It was thus under colonial domination that, through reaction or through accommodation, the Islamic movement was to experience its most rapid progress.

It has been stated above to what an extent, in the wake of al-Ḥād̲j̲d̲j̲ ʿUmar and under the influence of various local preachers (Ma Bā, Cerno Brahim, Amadu Seexu and Mamadu Laamin Darame), the 19th century was a century of religious effervescence, with competition between different types of claimant to political power: military, religious, and foreign. The French feared, in what they called the "Tid̲j̲ānī league", a "holy alliance" of all the Muslim forces opposing their penetration. However, not all the

religious actors were necessarily Tidjānī or ʿUmarī.

This "djihādist" 19th century also saw an intensification of Muslim pressure on the southern regions of Senegal (Sereer kingdoms of Siin-Saalum/Sine-Saloum, Joola societies of Casamance), which had remained largely animist. For centuries, the Wolof had been moving towards the south, in search of better irrigated land. In these foreign regions, they willingly united around religious figures. It was in fact in a zone of Wolof colonisation situated to the north of the Gambia (the Badibu, or Rip), that the movement of Ma Bā first flourished. Saloum, caught between French and Islamic threats, fell into a state of total instability and experienced widespread conversion to Islam in the following decades. Finally, it was the other Sereer kingdom, that of Siin, politically stable and far less receptive to Islam, which brought about the downfall of Ma Bā (1867). However, the lieutenants and companions of Ma Bā subsequently continued his policy in their respective districts. Ma Bā had failed to establish a lasting empire, but he had dislocated the existing traditional societies and opened the way for a southern campaign of Islamisation which, on the basis of the occupation of land, has continued into the present day. In the following generation, further to the south, yet another Malinke "marabout" and warrior chieftain, Fode Kaba, appeared on the scene, and between 1877 and 1893 he defeated and forcibly converted the Bainuk and made war against the Joola. When he concluded a peace treaty with the French, in 1893, more than half of the population between Saalum and Casamance, had, as a result of his exploits, embraced the Muslim faith either voluntarily or under duress.

At the turn of the 19th and 20th centuries, another phenomenon, much further to the north, is observable in the border regions between Senegal and Mauritania, which, as noted above, had maintained privileged connections between France and a series of Muslim dignitaries, sc. the emergence of a whole galaxy of scholar-personalities, such as Sire Abbas Soh, Yoro Dyao (1847-1919) and shaykh Musa Kamara (1864-1945), a native of Ganguel (Fuuta), a gifted and prolific writer and historian (the author, in particular, of *Zuhūr al-basātīn fī taʾrīkh al-sawādīn*), who contributed in a very active fashion, in French, in Arabic or Peul, to the creation of a Senegalese historiography.

But the most characteristic movement of this period was the emergence of the major Senegalese dervish brotherhoods or Ṣūfī orders, which began to establish themselves at this time. By filling in a very visible fashion the political void created by the defeat of the princes and the collapse of the Senegalese states, the orders presented themselves as structures of substitution and of refuge. They were the catalyst for the promotion of a Muslim élite which had long been obstructed and frustrated by the exactions of political authorities. On the other hand, they gave the signal for a radical change of strategy: frontal attack upon the colonial occupier was superseded by an attitude of prudent restraint, where the emphasis was on the peaceful rallying of the faithful around their charismatic leaders. The formation of these new associations was at first a cause of concern to the French power, but a series of negotiations ensued, progressively transforming the brotherhoods into influential elements of the colonial, and later the post-colonial state.

The *ṭarīḳa* which best illustrates this new trend is the Murīdiyya [*q.v.*] or Murīdism. At the end of the previous century, Aḥmad b. Muḥammad b. Ḥabīb Allāh, better known by the name of Amadu Bamba, whose father Momar Anta Sali, a regular frequenter of the courts of the Wolof princes, was affiliated to the Ḳādiriyya, broke with the warlike methods of the past and proposed to the faithful a different approach, based on peaceful assembly and prayer. Persecuted at first by the French authorites (deportation to Gabon in 1895-1902, house-arrest in Mauritania, then in northern Senegal, in 1902-12) Amadu made the necessary gestures of conciliation, at a time when certain French specialists in Muslim affairs in Dakar, among them Paul Marty, envisaged the emergence of a "Black Islam", in other words, an Islam impregnated with African practices and cut off from the Arab world, which they hoped would prove more malleable. The Murīd system, which became firmly established in the 1920s, with the colonisation of the new territories of the Baol, was partially to fulfil their hopes. Taking on the role of an economic motivator, the Murīd confraternity, which preached "sanctification through toil", committed its adherents on a massive scale to the cultivation of the land and the production of ground-nuts. Its sense of hierarchy and discipline and the decisive support thus given to the administration's policy of agricultural development for the purposes of export, made it an indispensable intermediary. Enjoying favours bestowed by the authorities and a broad delegation of powers, it constituted from this time on a veritable state within a state. At the same time, it gave to the Wolof Muslims, grouped in "*daaras*", a spiritual framework which protected them from the "watch of the Whites". With the independence of the country this position was reinforced, and the electoral power of the Murīds confirmed. When the exodus from the countryside towards the major cities gathered pace in the 1970s, the order was seen to adapt itself to the social changes, creating urban *dahiras* "circles" and investing on a large scale in property, in import-export, and in small business ventures. On his death, in 1927, Amadu Bamba had been buried at Touba, the site of his first divine inspirations. Henceforward, Touba became the headquarters of the brotherhood and the focus of a spectacular annual pilgrimage, the "Grand Magal". The doctrine of Murīdism is orthodox, although the eccentric manifestations of its team of stewards, the "Bay Fall", the populist nature of the movement and the emotional aspects of certain practices (singing, etc.) have contributed to its unconventional image. With its tenacious proselytism, the *ṭarīḳa* has sought, in recent years, to be accepted as the pre-eminent Senegalese order.

However, in spite of its million members, the Murīdiyya is outstripped numerically by the Tidjāniyya, which remains the predominant Senegalese confraternity, but does not represent an organism as centralised as that of Murīdism. It is appropriate in fact to distinguish between a "developed" and modernist Tidjānism in the large cities, and a rural Tidjānism, marked by the ʿUmarī heritage, which holds hegemonic positions in the Fuuta. Distinction should also be drawn between two principal "Houses", each representing a share of the body of adherents. The first of these Houses is that of Tivaouane, founded in 1904 by al-Ḥādjdj Malik Sy (*ca.* 1855-1922), reformer of the brotherhood, whose intellectual energy contributed significantly to the flowering of the Tidjāniyya under French domination. Coming to terms with colonial constraints in the interests of establishing an associative and pedagogic space tolerated by the administration, al-Ḥādjdj Malik Sy devoted his efforts in particular to a "grass-

roots Islamisation". He was especially committed to the struggle against what he considered the deviations of Ṣūfism and adopted the stance of a defender of a "Sunnī *taṣawwuf*" in the tradition of al-Ghazālī. After the First World War, he was joined by Seydou Nourou Tall, grandson of al-Ḥādjdj ᶜUmar, who pledged him his allegiance and proceeded to develop useful contacts with the authorities. After the death of al-Ḥādjdj Malik Sy in 1922, the Sy family retained control of Tivaouane, while an annual pilgrimage (the *gamu*), gave the fraternity an opportunity to advertise the scale of its membership. The Tidjāniyya of Tivaouane has been distinguished, since the colonial period, by the level of its social recruitment: free peasants, senior bureaucrats and officials.

The second "House" is that of the Niasse family, at Kaolack. Although without the local network of the Tivaouane branch, the "Niassene" *zāwiya* of Kaolack has ramifications throughout West Africa and beyond. It was founded by a former disciple of Ma Bā Jaaxu, named Abdoulaye Niasse (*ca.* 1840-1922). Initially a refugee in the Gambia, before coming to terms with the French and establishing himself at Kaolack in 1910, Abdoulaye Niasse had performed the Pilgrimage at an early stage (1887) and he enjoyed close contacts with the "mother-houses" of the Tidjāniyya (ᶜAyn Madi in Algeria; Fez in Morocco; and the tribe of the Idāw ᶜAlī in Mauritania). In his lifetime, a kind of separation of tasks was operated with al-Ḥādjdj Malik Sy, with whom excellent relations were maintained. Al-Ḥādjdj Abdoulaye Niasse exerted the most influence in the Sine-Saloum, where he encouraged the cultivation of the ground-nut, laying more emphasis than did the Murīds on small-holding and free agricultural enterprise. On his death, his younger son Ibrahima Niasse (b. 1902) who showed himself a better religious "entrepreneur" than the elder, Muhammad, the official heir, gave a new impetus to the Kaolack branch, conferring on it an autonomy and a particularism which both distinguished and detached it from Tivaouane. On account of his close links with the North African centres of the order, the Niassene House henceforward claimed primacy: around 1930, Ibrahima Niasse declared himself *ghawth al-zamān* ("saviour of the age"), a major title which placed him directly in the line of succession of Aḥmad al-Tidjānī, the founder, and of al-Ḥādjdj ᶜUmar al-Fūtī. A spiritual vision, accompanied by an emanation of divine grace (*fayḍa*), consolidated this claim. At the end of 1936, Ibrahima Niasse performed the Pilgrimage to Mecca. This was the opportunity, on his part, for a new leap forward in his quest for primacy and influence. In Fez, he was recognised by the Moroccan dignitaries of the Way as the *khalīfa* of the Tidjāniyya and, in Mecca, he had his first encounter with the *amīr* of Kano, Abdullah Bayero, who was to become his most fervent supporter. Henceforward, limited in its influence over Senegal by the power of Tivaouane, the *zāwiya* of Kaolack was to find its most productive area of activity, especially after the Second World War, at Kano and in northern Nigeria, and on the axes leading to these regions. Al-Ḥādjdj Ibrahima Niasse became a prominent personality, a visitor to heads of state and to international Islamic conferences (he was for a time Vice-President of the World Islamic League), compensating for his relatively limited following in Senegal with a high "media-profile". The death of the master, in 1975, in London, deprived the movement of exceptionally charismatic leadership which has yet to be effectively replaced. The Niassene Tidjāniyya is set apart by a more esoteric doctrine, where notions of *fayḍa* (emanation of grace) and of *tarbiya* (initiation through teaching) correspond to different levels in mystical transmission. It functions in such a way as to appear more "occultic" than that of Tivaouane.

But a group exists which is still more exclusive and sectarian in nature, that founded in 1936 at Madina-Gounass, in the south-east of the country, by a Futanke marabout named Tierno Mamadou Seydou Ba. A kind of "holy enclave" living apart from the world under an austere and rigorous régime, the community of Madina-Gounass, renowned for its absolute probity, in which respect it compared favourably with the lax standards applied by some religious figures, was committed to the agricultural exploitation of the inhospitable valleys of Upper Casamance. But, since the mid-1970s, the "communal ideal" of Madina-Gounass, divided by conflicts between Toucouleur and Peul adherents, has been gradually absorbed by the surrounding Senegalese society.

Other Ṣūfī tendencies exist in Senegal, such as the Ḳādiriyya, but they are of less importance. Mention should be made of a small brotherhood, strongly ethnic in membership and, at the outset, syncretist, that of the Layennes of the Cape Verde peninsula, principally belonging to the Lebu ethnic group. Although it numbers no more than 20,000 to 30,000 adherents, its powerful presence in Dakar ensures its disproportionate visibility. The founder of this order, Limamou Laye (1843-1909) was an illiterate from a fishing village who, unlike the founders of the other groups, left no written legacy. Beginning to preach in 1883, and for a brief time suppressed by the French administration, he claimed to be a Mahdī and a black reincarnation of the Prophet Muḥammad (while his son and successor was that of ᶜĪsā/Jesus). In spite of its syncretist aspects (iconography celebrates the legend of alliance with a djinn-fish), the new order marks a departure from Lebu traditions (alcohol, dancing, cults of possession, etc.) and manifests the conversion of the majority of the group, men in particular, to Ḳurʾānic monotheism. The later evolution of the movement in an orthodox direction was to confirm this trend.

Outside the domain of the brotherhoods, the most significant movement is the Union Culturelle Musulmane, of reformist tendency, which was influential in some parts of West Africa. Founded in Dakar in 1953 by Cheikh Touré (b. 1925), on his return from the Ben Bādīs Institute of Constantine where he had been studying for a year, the U.C.M. adopted positions of the *salafī* reformist type [see SALAFIYYA], was discreetly opposed to the brotherhoods, and took a vigorously anti-colonial stance. After independence, the Senegalese branch of the U.C.M. gradually passed under the control of the state, and this resulted in the departure of Cheikh Touré and his colleagues in 1979.

The 1970s saw an acceleration of the trend towards the establishment of Islamic associations. The Fédération des Associations Islamiques du Sénégal (F.A.I.S.), founded in 1977, and the Union pour le Progrès Islamique au Sénégal, created in 1973, itself a member of the F.A.I.S., both of them closely associated with the state, united a number of them. Also to be found are the "Al-Falāḥ" movement (created in 1956), more entrenched among the commercial classes, close to Wahhābī positions, which laid stress upon Arabo-Islamic education; the "Jamaatou Ibadou Arrahman" (founded in 1978 by a companion of Cheikh Touré), composed primarily of intellectuals

and young graduates of the Francophone school; the "Cercle d'Etudes et de Recherches Islam et Développement" (C.E.R.I.D.), representing a western-trained intelligentsia; and the Organisation pour l'Action Islamique, created in 1985 by Cheikh Toure, formerly the reformist leader of the Union Culturelle Musulmane, now expressing more fundamentalist attitudes. Other associations, often called *dahiras* or "circles", unite the adherents of confraternities in terms of professions, age-groups or locality; associations of young people and students are especially active. Significant among the latter is the *dahira* of the Moustarchidines, born at the end of the 1970s in a Tidjānī ambience, which later inspired the development of a militant and activist organisation, at one stage accused of conspiring against the security of the state (1994).

These associations have played an important role in the development of the teaching of Arabic, which has proved to be quite popular over the past fifteen or so years. In 1985-6, 16,000 pupils from the public sector attended Arabic classes. During this time, the U.P.I.S. established approximately 1,000 schools, attended by more than 40,000 pupils. In Dakar, the Institut Islamique offers evening courses pursued by members of the intellectual élite, while every year scholarship holders return from the universities of the Near East and contribute to the diffusion of Arabic cultural models: thus between 1978 and 1986, the number of Senegalese teachers of Arabic grew from 32 (for all secondary education) to more than 150 (for the middle level alone). This progress has not since been interrupted.

On account of the influence of the Ṣūfī orders, which have never lost their popular base, political Islam has not made a strong impact in Senegal, despite the existence of militant associations and publications (*Etudes Islamiques*, founded in 1979; *Wal Fadjri* and *Djamra* founded in 1983). A "Ḥizbullāhī" experiment launched by Ahmed Niasse in August 1979 foundered rapidly. But broader Islamising political leanings exist, permeating the brotherhoods and expressing themselves in particular in certain national debates: against the legal reform giving women equal rights in regard to divorce in 1971; against secularism and freemasonry in the 1980s; and in the denunciation of Salman Rushdie in 1989 (with the public support of the head *khalīfa* of the Tidjāniyya al-Ḥādjdj Abdoul Aziz Sy). In this land tested by the droughts of the 1970s and the disillusionments and economic stagnation of the 1980s, Islamist utopianism has a deep appeal, and this is reflected by the brotherhoods, which sometimes take over the leadership of the movements as the best means of controlling them.

5. Conclusion.

Senegal owes its strong identity to a long past and a singular history. In contact with the French since the 17th century, "headquarters" of French West Africa for two generations, Senegal has retained from these privileged links a substantial Francophone legacy. The ancientness of Islamic culture and the power of the Ṣūfī orders represent another recognisable element, making this country a model for the study of Islamic phenomena to the south of the Sahara. Despite periodic internal crises, Senegal is remarkable both for constitutional stability and for a freedom of discussion and debate which has existed for a longer time than in any other part of Francophone Africa. The prestige and the influence of this country, which has produced numerous men and women of cultural distinction, are thus considerably greater than would be expected, on the basis of its demographic and economic resources alone.

SENKERE, Sankara, a village of ʿIrāḳ on the lower Euphrates, between al-Samāwa and al-Nāṣiriyya [*q.vv.*] (lat. 31° 12′ N., long. 45° 52′ E.), at present in the *liwāʾ* of al-Muthannā.

It is famous as the site of Larsa, one of the most important Sumero-Akkadian cities of ancient times. Then it would have been much closer to the waters of the Euphrates than it is now and would have had Ur (40 km/25 miles to the south) and Uruk (20 km/12 miles to the west) as its equally illustrious neighbours. The archaeological importance of the site was noted by members of the British Euphrates Expedition in the early 1830s and in 1854, on the highest points of the tell, Loftus began to excavate building bricks bearing inscriptions of several now famous New

Sumerian, Old Babylonian and New Babylonian kings. Up to the recent intervention of the United Nations into ʿIrāḳī affairs, the site has been regularly excavated.

The two largest buildings to have been identified are the "White House" which was the temple of the god Shamash, and the royal palace of Nur-Adad, an Amorite ruler of the 19th century B.C. The early chapters of the Bible refer to the site as Ellarsa, and it is clearly an example of a very important ancient city abandoned after Hellenistic control was imposed on the area and never revived.

SENNA [see SANANDADJ].

SERʿASKER [see BĀB-I SERʿASKERI].

SERVET [see ṬĀHIR BEY].

SETH [see SHĪTH].

SEVENERS [see SABʿIYYA].

SEYCHELLES, a group of islands in the Indian Ocean to the north of Madagascar and east of Tanzania and Kenya, successively a French and British colony (1756-1976), and an independent republic since then (Republic of Seychelles, République des Seychelles, and Repiblik Sesel in its three languages, English, French and Creole). The population of over 80,000 souls is mainly of African descent (brought there by French and British colonists as slaves), the minority consisting of Indian, Chinese and European elements. The prevailing religion is Roman Catholic, while Muslims form a minute portion of other confessions. The archipelago received its name in 1756 after Moreau de Séchelles, one of Louis XV's ministers.

Unlike the Comoros [see ḲUMR] and Maldives [*q.v.*], the closest comparable archipelagos, the Seychelles had received little attention from Muslims, and were uninhabited when the Portuguese began to notice them in the first years of the 16th century. It seems, though, that the islands called Zarīn in the sailing directions by Sulaymān al-Mahrī [*q.v.*], dated 866/1462, were the Seychelles (G. Ferrand, *L'Empire Sumatranais de Çrīvijaya*, Paris 1922, 141-45; see facs. of the ms., B.N. Paris, fonds arabe 2292, published by Ferrand as *Instructions nautiques et routiers arabes et portugais des XVᵉ et XVIIᵉ siècles*, Paris 1925, fols. 22b, 73b). This suggests that Muslim mariners did occasionally visit these islands situated not far from their routes between eastern Africa and western India; the etymology of the name of the westernmost island, Aldabra, is believed by some to be a distortion of the Arabic word al-Khaḍrāʾ ("The Green [Island]"), while Zarīn (Pers. *zarrīn* "golden") may go back to the legend of a gold-bearing island in the Indian Ocean ultimately identified with Sumatra (Ferrand, *L'Empire*, 145). The small Muslim cemetery at Anse Lascar on Silhouette Island reported by P. Vine (see *Bibl.*) probably dates from recent centuries, but only a closer examination of the tombstones may answer this question.

SEYFĪ (d. probably after 998/1590), Ottoman historian.

Practically nothing is known about Seyfī aside from the fact that he compiled a unique historio-geographical work on the rulers of Asia and China contemporary with Murād III, and the possibility that he may have been a *defterdār* in the Ottoman bureaucracy. Neither he nor his work is mentioned in the standard Ottoman bio-bibliographical sources.

Seyfī's history has been published by J. Matuz, *L'ouvrage de Seyfī Čelebi: historien ottoman du XVIᵉ siècle; édition critique, traduction et commentaires*, Paris 1966. Its title, added posthumously to the earlier of only two surviving manuscripts, reads: *Kitāb-i tewārīkh-i pādishāhān-i wilāyet-i Hindū we Khitāy we Kishmīr we wilāyet-i ʿAdjem we Kashkār we Kalmak we Čīn we sāʾir pādishāhān-i pīshīn az ewlād-i Čingiz Khān we khāḳān we faghfūr we pādishāhān-i Hindūstān der zamān-i Sulṭān Murād ibn Sulṭān Selīm Khān min teʾlīfāt-i defterdār Seyfī Čelebī el-merḥūm fī sene 990 taʾrīkhinde* ("History of the kings of India, Khitay and Kashmir, of Iran, Kāshgar, the Kalmucks, and China, and of earlier kings descended from Čingiz Khān, and of the Khāḳān [of the Turks], of the Chinese emperor and the rulers of Hindūstān in the time of Sultan Murād b. Sulṭan Selīm Khān, composed by the late *defterdār* Seyfī Čelebi in [or who died in?] the year 990/1582").

This title appears misleading in two respects. First, the date 990/1582 is almost certainly a copyist's error for 998/1590, the date clearly given in the colophon for completion of the work (which contains at least two references to events after 1582), and after which Seyfī must have died (cf. Matuz, *op. cit.*, 13-15, 156-7). Second, the author identifies himself in the text simply as Seyfī, without mention of his profession. The later title gives *defterdār* Seyfī Čelebi", suggesting possible identification with Seyfullāh Seyfī Čelebi (d. after 1006/1597), *defterdār* of Anatolia in the 1580s, and author of a *Szigetvar-nāme* on Ḳānūnī Süleymān's 1566 campaign (cf. *GOW*, 69, n. 1). However, according to ʿĀshīḳ Čelebi (*Meşāʿir uṣ-ṣuʿarā*, ed. G.M. Meredith-Owen, London 1971, fols. 164b-165a) and Ḳīnalīzāde Ḥasan Čelebi (*Tezkiretü'ş-şuarâ*, ed. İ Kutluk, Ankara 1978, i, 498-500), Seyfullāh Seyfī Čelebi was an accomplished prose writer. By contrast, Seyfī's history is written in an unpretentious, colloquial style. It seems unlikely that the two authors were the same person, and therefore doubtful that Seyfī was a *defterdār*. There are no further clues to his profession, except that the *makhlaṣ* Seyfī would be appropriate for a writer of military origin, and that the linguistic style of the work does not suggest a highly-educated author.

Seyfī's "history" is largely a survey of contemporary rulers, arranged geographically. No major written sources are clearly identifiable. The anecdotal style suggests mainly oral informants, probably merchants and travellers; there is no evidence in the text of Seyfī himself having travelled. The work includes much social, economic and ethnographical information, as well as historical detail to corroborate other sources (Matuz, *op. cit.*, 19-37). It was not a source for later Ottoman writers and remained unknown until used by C. Schefer and W. Barthold in the late 19th century (e.g. Barthold, art. *Kučum Khān*, in *EI²*, V, 314, with reference to Schefer).

Bibliography: Given in the text.

(Christine Woodhead)

SEZĀʾĪ, Ḥasan Dede (or Efendi) (1080-1151/1669-1738), also known as Sheykh Ḥasan Efendi or Ḥasan b. ʿAlī Gülshenī, Ottoman poet and founder of the Sezāʾiyya *ṭarīḳa*, an offshoot of the Gulshaniyya [see GULSHANĪ, IBRĀHĪM], a branch of the Khalwatiyya [*q.v.*]. He was born in Morea [see MORA] where his paternal grandfather Ḳurtbey-zāde Ḥasan was a well-known figure. Tahsin Yazıcı (*İA*, art. *Sezâʾi*) disagrees with Björkman (*EI*[1], art. *Sezāʾī*) that he was of Greek origin. He was brought up in Morea, his later achievements indicating a good education. In 1097/1685, after the Venetians conquered Morea, he migrated to Istanbul, but leaving the capital he moved on to Edirne, from where Meḥemmed IV was attempting to stem Austrian and Venetian attacks on the Ottoman Empire, and entered the Sultan's service in the *muḳābele ḳalemi*.

Many details about his life and thinking, and of his opinions concerning his contemporaries, emerge from a collection of his letters published, with a six-page biography, under the title *Mektūbāt-ı Sezāʾī* (Istanbul 1289/1872). Those to whom they were written include family and followers, as well as statesmen and leading figures of the day.

Sezāʾī's interest in mysticism is shown to have developed from an encounter with a *sheykh* of the Khalwatiyya aboard the ship going to Istanbul and, in Edirne, he was to become a *murīd* first of Meḥmed Ṣirrī at the *khānḳāh* of Sheykh ʿĀshiḳ Mūsā (a follower of Ibrāhīm Gülsheni) and on Meḥmed's death, of Meḥmed Laʾlī Fenāʾī (Shemseddīn Sāmī, *Ḳāmūs al-aʿlām*, iv, 2562). The latter charged Sezāʾī with the collection of rents from the *khānḳāh*'s *waḳf* properties, gaining him the *laḳab* of Djābī (rent collector) Dede Efendi. He then became *pūst-nishīn* of the Sheykh Welī Dede Efendi *khānḳāh*, but when Meḥmed Laʾlī Fenāʾī died in 1112/1700-1 (and his successor in turn died shortly afterwards), Sezāʾī took his place. The *khānḳāh* became known as the Sezāʾī *tekke*, and on his death he was buried at his own wish close to it in a shop (later converted into a *türbe*) alongside that of his predecessors. His son Meḥmed Ṣādīḳ succeeded him at the Sheykh Welī Dede Efendi *khānḳāh*. Sezāʾī's writing, his letters and poetry in both *dīwān* and folk style (see Vasfi Mahir Kocatürk, *Tekke şiiri antolojisi*, Ankara 1968, 400-2), show him as a man of religion first and a poet second. The main tenor of his *dīwān* is mystical, and although he has been labelled the Ottoman "Ḥāfiẓ of Shīrāz" (Yazıcı, 549) he is not generally considered very highly, lacking the occasional burst of poetic inspiration as regards mystical thinking or style (*loc. cit.*). Kocatürk (*Türk edebiyatı tarihi*, Ankara 1970, 554-5) points to a resemblance between him and both Nesīmī and Yūnus Emre [*q.vv.*] in addressing the wider folk masses rather than the upper, intellectual classes, a trait that Sezāʾī shares also with Niyāzi Miṣrī [see *İA*, art. *Niyâzî* (Abdülbâkî Gölpınarlı)], by whom he is said to have been given the *makhlaṣ* Sezāʾī, and on one of whose *ghazals* Sezāʾī wrote a short commentary that was included in the edition of his *dīwān* printed at Būlāḳ in 1258/1842.

Bibliography: This article follows closely that of Tahsin Yazıcı in *İA*, where the sources are named.

(KATHLEEN BURRILL)

SEZĀʾĪ, Sāmī Pasha-zāde (modern Turkish Sami Paşazade Sezai), late Ottoman fiction writer and essayist (*ca.* 1859-1936), noted for his synthesis of "art for art's sake" and "art for society's sake" and of romanticism and realism. Son of the statesman-author Sāmī Pasha, Sezāʾī was born in Istanbul, tutored in the family mansion and encouraged by visiting prominent writers. He started publishing journalistic articles when aged 14, learned Arabic, Persian, French and German, and came under the influence of Nāmıḳ Kemāl [*q.v.*]. In 1879 he published *Shīr* ("The lion"), a prose tragedy meant more for reading than staging. From 1880 to 1884 he served as Second Secretary at the Ottoman Embassy in London and later in the Foreign Ministry in Istanbul.

Sezāʾī's principal opus *Sergüdhesht* ("The adventure"), his only novel, came out in 1889. Influenced by Victor Hugo and Alphonse Daudet, it broke new ground with its realism notwithstanding its ornate, maudlin and occasionally poetic style. The tragic story of a slave girl, it is an indictment of slavery and of injustice against women. In 1892 Sezāʾī published *Küčük sheyler* ("Little things"), a collection of eight stories notable for his mastery of the genre and for a new sophistication in psychological analysis. *Rumūz ul-edeb* ("Symbols of literature"), a compilation of his essays, critical pieces, short stories, recollections and travel notes, came out in 1898.

Sezāʾī fled the Ḥamīdian oppression in 1901 and lived in Paris, working for the Committee for Union and Progress and writing for its periodical *Shūrā-yı ümmet* ("Council of the nation") until 1908 when, with Constitutional government proclaimed, he returned to Istanbul. In 1909 he was appointed Ambassador to Madrid, serving until 1921. His last work *Idjlāl*, a threnody for his beloved niece, to which he appended a miscellany of articles, letters, short stories, discourses, etc., appeared in 1923. He died in Istanbul in 1936.

Sezāʾī's literary work is generally viewed as significant in the transition of Turkish fiction into its realist phase.

(TALAT SAIT HALMAN)

SHAABAN ROBERT (1909-1962) was the foremost Swahili poet of his generation, if not of the past three centuries. He also had a profound influence on contemporary Swahili prose writing. He was born at Machui, a village south of Tanga on the Tanzanian coast, the son of a Yao settler from Malawi and a local Digo mother. His only formal education in the western sense was in Dar es Salaam from 1922 to 1926, which enabled him to gain employment as a government clerk. He had also attended Ḳurʾānic schools, and, as truly an autodidact, classes in traditional Swahili poetry, of which he had an encyclopaedic knowledge. A.C. Gibbe (see *Bibl.*) gives a bibliography of his collected poetry and of his prose works. His preoccupations centre round the Islamic religion and its moral teaching, in a manner that a European critic found comparable to the work of Dante. He is greatly concerned with the teaching of morally upright conduct, of a proper attitude to marriage, of the education of children, and particularly of girls. The Second World War was to him essentially a struggle between the forces of good and evil; he had little or no interest in politics.

Bibliography: A.G. Gibbe, *Shaaban Robert, Mshairi*, Tanzania Publishing House, Dar es Salaam 1980; Kitula G. Kingei, *Mwongozo wa Kusadikika-Shaaban Robert*, Nairobi 1988, with numerous references to other writers.

(G.S.P. FREEMAN-GRENVILLE)

SHAʿB. 1. In pre-Islamic South Arabia this term (spelt s^2*ʿb* in the *musnad* script) denotes a unit of social organisation for which there has grown up among specialists a convention of using the translation "tribe"; but this can be misleading for non-

specialists. The South Arabian $s^2{}^cb$ was antithetic on one hand to the term $^cs^2r$ (= Arabic *ᶜa<u>sh</u>āʾir*) applied by the South Arabian sedentary communities to the nomad bedouin of central Arabia; and on the other hand, within the South Arabian sedentary culture itself, to the "house" (*byt*), a family group based on kinship whether real or fictitious. The former of these dichotomies was still current in ᶜAbbāsid Arabic usage, when (as exemplified by al-<u>Dj</u>āḥiẓ in his *R. al-Atrāk*) *<u>sh</u>uᶜūb al-ᶜA<u>dj</u>am* denoted Persian sedentary communities and contrasted with *ᶜa<u>sh</u>āʾir al-ᶜArab*, the Central Arabian nomads. The South Arabian $s^2{}^cb$ was in no way kinship based, but was an artificial functional entity engaged in some common enterprise. The term has a certain fluidity, to the extent that it had no fixed place in an ordered hierarchy of comprehensiveness: in one instance, that of Maᶜīn [*q.v.*] it was co-extensive with the kingdom, its subdivisions there being termed *ʾhl*. It seems probable too that in some cases it designated a group based on membership of a profession, or on religion (in the 4th century A.D. the Ḥimyarite Jewish community is called $s^2{}^cb$). But by far the commonest application was to a territorially-defined group of agriculturalists, whose functional unity rested on having shared responsibility for the irrigational installations of the specific area. A typical feature of these territorial groups was the possession of a "town" (*hgr*) as centre for local trade, communal business, and a communal cult. In a few cases, such as <u>Gh</u>aymān to the south-east of Ṣanᶜāʾ, town and "tribe" had the same name. Another feature of the $s^2{}^cb$ is that the *nisba* formation, with terminal *-y-n* (pl. always of the pattern *ʾfᶜl-n*, e.g. *Ṣrwḥ-y-n*/*ʾṣrḥ-n* "the Ṣirwāḥite(s)") tends to imply "tribal" membership, not membership of a *byt*. But it has been pointed out that in the 5th-6th centuries A.D. the plural *nisba* could denote the vassals of an influential family whose actual members were *a<u>dh</u>wāʾ* [*q.v.*]: thus *ʾzʾn-n* are vassals of the Yazan (*Yzʾn*) family [*q.v.*], while a family member was <u>Dh</u>ū Yazan.

(A.F.L. BEESTON)

2. In modern political parlance.

<u>Sh</u>aᶜb is one of many Arabic terms which, used in modern social and political contexts, acquired new meanings alongside or instead of the old. On the eve of the modern era, however, the term was still devoid of such novel implications, retaining the old meaning of a tribal confederacy, an ethnic group, or a people. When applied to Muslims, *<u>sh</u>aᶜb* sometimes carried a slightly negative sense, recalling separatist trends from early Islamic periods [see <u>SH</u>UᶜŪBIYYA]. Used with reference to non-Muslims, it was often tinged with the disparagement reserved for unbelievers. A pliant term, comparable to "people" in the broadest sense, *<u>sh</u>aᶜb* was applicable to groups of different scope and nature, an application it would retain even after assuming more specific connotations.

As so often, it was in references to developments in Europe that the notion of "people" first took on a new political sense. In early Arabic accounts of the French Revolution and Napoleonic era, *<u>sh</u>aᶜb* was used to denote the ruled—as opposed to the rulers—struggling to attain their deserved political rights. Evidently inspired by foreign sources, these reports referred to the *<u>sh</u>aᶜb* "rising in total revolt" against Louis XVI, and to the "French people's will" (*irādat <u>sh</u>aᶜb faransā*) which subsequently brought Napoleon down (Nikūlā al-Turk, *Mu<u>dh</u>akkirāt*, ed. Gaston Wiet, Cairo 1950, 2-5, 11-12, 195-6; Ḥaydar al-<u>Sh</u>ihābī, *Lubnān fī ᶜahd al-umarāʾ al-<u>sh</u>ihābiyyīn*, Beirut 1933, 214-15, 218-19, 320, 430, 602). Such usage became more frequent with the emergence of private Arabic newspapers which, reporting international affairs from the late 1850s on, discussed such ideas as "public opinion" (*raʾy al-<u>sh</u>aᶜb*), "people's will" (*irādat al-<u>sh</u>aᶜb*), and the relationship between the government (*hukūma*) and the *<u>sh</u>aᶜb*. The modern concept of popular sovereignty was also reflected in the compound *wukalāʾ al-<u>sh</u>aᶜb* "people's representatives" (and *ma<u>dj</u>lis wukalāʾ al-<u>sh</u>aᶜb* "assembly of people's representatives"), in texts discussing parliamentary life in the West (cf. many examples and references in A. Ayalon, *Language and change in the Arab Middle East*, Oxford and New York 1987, 49 and n. 22). In the same vein, the Lebanese-Egyptian journalist Adīb Isḥāḳ [*q.v.*] in 1877 defined "republic" as *ḥukūmat al-<u>sh</u>aᶜb bi ʾl-<u>sh</u>aᶜb* "government of the people by the people", echoing Abraham Lincoln's phrase (*al-Durar*, Alexandria 1886, 49).

Being largely irrelevant to Ottoman political realities for much of the 19th century, the idea of popular sovereignty was at first discussed in foreign contexts only. But as the century drew to a close, it began to appear in association with Ottoman and Egyptian politics as well. Thus in 1896 Salīm Sarkīs, owner of the Egyptian weekly *al-Mu<u>sh</u>īr*, proudly defined himself as "one of the *<u>sh</u>aᶜb*", warning the Ottoman sultan, "Woe to him who tries to withstand the *<u>sh</u>aᶜb* once it unites, makes a decision and sets out to achieve a noble goal" (*al-Mu<u>sh</u>īr*, Alexandria, 2 May 1896). Muṣṭafā Kāmil [*q.v.*], the eloquent leader of early Egyptian nationalism, stated around the turn of the century that "every *<u>sh</u>aᶜb* has sacred rights in its homeland, which no one can infringe ... the *<u>sh</u>aᶜb* is the only true power" (*Muṣṭafā Kāmil fī 34 rabīᶜan*, ed. ᶜAlī Fahmī Kāmil, Cairo 1910, 288-91). Such application of the term, recurring with increasing frequency, gradually turned the word into a battle cry in the community's rightful struggle against those seen as encroaching on it, whether the government at home or a foreign force.

By the end of World War I, *<u>sh</u>aᶜb* had become a common item in Arabic political vocabulary, particularly that of nationalism, along with (but somewhat less frequent than) *umma* and *waṭan* [*q.vv.*]. Capable of evoking strong popular emotions, it appeared in names of political parties (*ḥizb al-<u>sh</u>aᶜb*)—in Syria (1925, 1947), Iraq (1925, 1946), Egypt (1930) and Lebanon (1945)—as well as of newspapers throughout the Arab countries, implying a claim for public legitimacy by those leading the struggle for national independence and other political battles. In another part of the former Ottoman Empire, the Republic of Turkey, populism (Turkish *halkçılık*) was adopted as a central principle in the state's official ideology, signifying recognition of the people's sovereignty. Thus it was incorporated in the 1924 Turkish constitution by Mustafa Kemal Atatürk [*q.v.*], who had established the "People's Party" (*<u>Kh</u>alḳ Firḳasī*) the previous year as a vehicle of popular mobilisation. The notion's growing public attraction gave birth to another phenomenon: its abuse by autocratic or aristocratic politicians seeking to benefit from alleged popular support. Egypt's rigid Prime Minister Ismāᶜīl Ṣidḳī, who in 1930 founded a party and a paper bearing the name *al-<u>Sh</u>aᶜb*, offers a conspicuous example of this cynical practice, which continued in later years there and elsewhere.

During the first half of the 20th century, reference to "the people" was also made in a different sense, by thinkers advocating socialist and communist ideas. In their teachings, *<u>sh</u>aᶜb* (and its equivalents) signified the common people, the deprived lower classes, rather than the whole community. This was its sense in the

parlance of such leftist organisations as the ʿIrāḳī Ahālī group of the early 1930s [see ḤIZB], which labelled its ideology *shaʿbiyya* (Majid Khadduri, *Independent Iraq*, London 1951, 72-4), and the Egyptian Marxist splinter groups calling themselves *taḥrīr al-shaʿb* ("people's liberation") and *al-ṭalīʿa al-shaʿbiyya li 'l-taḥarrur* ("popular vanguard for liberation"), which formed in the following decade (Rifʿat al-Saʿīd, *Taʾrīkh al-ḥaraka al-shuyūʿiyya al-miṣriyya*, Cairo 1987, iii, 196-9, 203 ff.). At that stage, however, the discussion of such notions in Islamic countries was still on the sidelines of public political debate, and the application of "the people" with such meaning was marginal.

By mid-century, with the struggle for national independence in most Arab countries won, the focus of political discourse had begun to shift to other issues, primarily sociopolitical reform. New leaders—in Egypt, Syria, ʿIrāḳ, Algeria, Yemen, Sudan, Libya—having seized power, claimed to be acting on the people's behalf in their bid to transform the old, corrupt order. In the revolutionary ideologies which they preached, leftist ideas, hitherto marginal, came to play a major rôle, and "the people" were given a prominence unprecedented in their societies' tradition. The *shaʿb* was now identified as the common masses, primarily workers and peasants (equally often referred to as *djamāhīr* "masses"), those who previously had been outside the circle of power, and were now hailed as the mainstay of reform. Thus in the Egyptian National Pact (*al-mīthāḳ al-waṭanī*) of 1962, the *shaʿb* was the hero whose wit and resolve accounted for the success of the 1952 revolution and guaranteed its future. Its objectives were social justice, military might and "healthy democratic life"; its enemies were imperialism, tyranny, feudalism and monopolism (al-Djumhūriyya al-ʿArabiyya al-Muttaḥida, *Mashrūʿ al-mīthāḳ, 21 māyū 1962*, Cairo n.d., 3-6 *et passim*). Likewise, in Baʿth ideology, which the régimes in Syria and ʿIrāḳ adopted in the 1960s (if in different versions), the *shaʿb* is regarded as the leader of renaissance, combatting domestic and foreign oppression, and striving for socialism and popular democracy (Mīshāl ʿAflaḳ, *Fī sabīl al-baʿth*, Beirut 1959, 172-85; Ḥizb al-Baʿth al-ʿArabī al-Ishtirākī, *al-Manhadj al-marḥalī li-thawrat al-thāmin min Ādhār fī 'l-ḳuṭr al-ʿarabī al-Sūrī*, Damascus 1965, esp. 3-9, 21-9). This is also the sense of the notion in the construct *madjlis al-shaʿb* "People's Assembly", used to designate legislative bodies in the revolutionary régimes of Egypt, Syria, South Yemen and several other places. Two states even incorporated the word, in adjectival form (*shaʿbiyya*), in their official names: "The People's Republic of South Yemen" (1967, renamed as "The People's Democratic Republic of Yemen" in 1970), reflecting its leftist doctrine and pro-Soviet orientation; and "The Arab Libyan People's Socialist *Djamāhīriyya*" (1976, to which the adjective "the Great" was added in 1986), underscoring the popular nature of its political structure. Leftist ideas also inspired the foundation of many "popular fronts" of political action, fashionable in the late 1960s and the 1970s, namely, groups purporting to advocate social reform along with other, often more important objectives—e.g. "The Popular Front for the Liberation of Palestine", "The Popular Front for the Liberation of Oman and the Arab Gulf", etc.

Shaʿb has thus come to imply a variety of concepts. In addition to its use in the broad sense of "people" or "nation", it also means the governed people as opposed to the government and, still more narrowly, the lower classes striving to recover their deserved political rights. The distinction between these meanings is often blurred, sometimes intentionally so, as in the rhetoric of revolutionary leaders who, appealing to "the *shaʿb*", seek at once to speak for the whole nation and to voice concern for the deprived classes' grievances. In the second half of the 20th century, this last phenomenon had become a prominent aspect of the application of *shaʿb*.

Bibliography: Given in the text.

(A. AYALON)

SHABA [see KATANGA].

SHAʿBADHA, SHAʿWADHA (also with final *d* for *dh*) (A.), prestidigitation, sleight of hand, and from it, *mushaʿb/widh*, magician, trickster. The word is paraphrased by the lexicographers, following al-Layth (b. al-Muẓaffar) [*q.v.*], by *khiffat al-yad* and *ukhadh* (pl. of *ukhdha*), see al-Azharī, *Tahdhīb*, i, 405. *Fihrist*, 312, mentions as "the first to perform *shaʿbadha* in Islam" a certain ʿAbīd/ʿUbayd al-Kayyis who also wrote a *Kitāb al-Shaʿbadha*, and another *mushaʿbidh* nicknamed "Mill Shaft" (Ḳuṭb al-raḥā), about both of whom unfortunately nothing further seems to be known.

According to al-Djawbarī [*q.v.* in Suppl.], among all the fraudulent practices of the large underclass of crooks and swindlers, the activity of the *mushaʿbidh* is distinguished by its innocuousness; his tricks are performed as harmless entertainment. Ibn Khaldūn, *Muḳaddima*, iii, 126 ff., tr. Rosenthal, iii, 158 ff., uses the term in a more general manner and understands it scientifically as characterising one of three kinds of sorcery [see SIḤR]. He explains the underlying process as the transformation, by the power of the imagination, of something imaginary into imagined existence in the world of the senses; for the religious law, it would fall under forbidden sorcery, but since it is not real (and, therefore, presumably incapable of doing actual evil) and something irrelevant that is easily avoided, it was, certainly in the eyes of Ibn Khaldūn, not as bad as the other kinds of sorcery (and not really forbidden).

The term's etymology has interested philologists ancient and modern. The Arabic lexicographers stress that it is not true Arabic (see Lane, 1559a). The suggested derivation from Aramaic/Syriac *shaʿbedh* "to subdue" is linguistically adequate (both *b/w* and *dh/d* are not inconsistent with this assumption) and conceptually possible ("subduing [ʿ-*b*-*d*, form X] devils" is a sorcerer's task, see *Fihrist*, 309, l. 2). An Arabisation of Persian *shabbāz* seems less likely, as does a conflation with the root ʿ-*w*-*dh*; the lexicographers' derivation from a supposed meaning "quickness" and *shaʿwadhī* "express courier" if anything reverses the actual process.

Bibliography: Djawbarī, *al-Mukhtār fī kashf al-asrār*, ch. 23, tr. R. Khawam, *Le voile arraché*, Paris 1979-80, ii, 135-142; the promised scholarly edition by S. Wild has apparently not yet appeared. See further, C.E. Bosworth, *The mediaeval Islamic underworld*, Leiden 1976, i, 128, ii, 51, 299, 333, with the older literature.

(F. ROSENTHAL)

SHABAK, a heterodox religious community living in several dozen villages east of Mawṣil, in a triangle bounded by the Tigris and the Greater Zāb. Their numbers were in 1925 estimated at around 10,000; the 1960 ʿIrāḳi census enumerated 15,000, living in 35 villages (Vinogradov 1974: 208). Recent estimates tend to be considerably higher.

The Shabak commonly consider themselves as Kurds, but have since the 1970s been subject to concerted efforts at Arabicisation, culminating in the destruction of around 20 Shabak villages in 1988. The

language of their prayers and religious ritual is Turkish. Most Shabak are multilingual, which has given rise to claims that they are really Turcomans or Kurdish speakers or even Arabs; their mother tongue, however, or at least that of most Shabak, is a dialect of the Gūrānī branch of Iranian languages. Their religion is closely related to that of the Anatolian ʿAlewīs (Ḳîzîlbāsh); one of their invocations, as given by al-Ṣarrāf, explicitly refers to Ḥādjdjī Bektāsh and the adepts of Ardabīl (*Erdebīl erenleri*, i.e. the Ṣafawids) as the founders of their spiritual path. Some of the religious poems sung in their ritual meetings are attributed to Shāh Ismāʿīl and to the Anatolian ʿAlewī saint Pīr Sulṭān Abdāl. A basic tenet, expressed in several poems and invocations, is the Shabak's belief that Allāh, Muḥammad and ʿAlī constitute a trinity, in which ʿAlī appears as the dominant manifestation of the divine.

The "sacred book" of the Shabak, known as *Kitāb al-Manāḳib* or *Buyuruḳ* (*Burukh*, in the local pronunciation) and published integrally in al-Ṣarrāf's monograph, consists of two parts. The first part is a question-and-answer dialogue between Shaykh Ṣafī al-Dīn and his son Ṣadr al-Dīn on the *ādāb* of the *ṭarīḳa*, in which there is no indication of extremist Shīʿī influences; the second part, the *buyuruk* proper, resembles in content the texts of the same title found among the Anatolian ʿAlewī communities. It consists of various teachings and instructions associated with the imāms ʿAlī and Djaʿfar al-Ṣādiḳ and discusses the relationship between teacher (*mürebbī*) and disciple (*ṭālib*), and the institution of ritual brotherhood (*muṣāḥiblik*).

Their Ṣafawī-Ḳîzîlbāsh affiliation distinguishes the Shabak from neighbouring heterodox communities, the Yezīdīs [*q.v.*] to their north and the Ṣārlī [see ṢĀRLIYYA] to their southeast. The latter are, like the Kākāʾī, a branch of the Ahl-i Ḥaḳḳ [*q.v.*]; they speak a Gūrānī dialect very similar to that of the Shabak. Another neighbouring Gūrānī-speaking community, the Bādjwān or Bādjalān, are often said to be a section of the Shabak or vice-versa. The Bādjwān, however, are tribally organised and led by tribal chieftains, whereas the Shabak are non-tribal peasants, share-cropping on land belonging to urban-based *sayyid* families who have great moral authority over them due to their descent from the Prophet and ʿAlī. The Shabak intermarry freely with Bādjwān, Ṣārlī, Kākāʾī and Shīʿī Turcomans of the region, resulting in the boundaries between these religious communities becoming fuzzy.

The Shabak community is structured by a spiritual hierarchy similar to that of the ʿAlewīs. Each adult person is affiliated with a *pīr*, his spiritual elder. This is a hereditary function, and each family tends to continue its affiliation with a particular *pīr* lineage from generation to generation. All rituals have to be led by a *pīr*. In most of them he has to be assisted by a *rehber* or guide, and in the major annual celebrations, twelve functionaries have to be present: *pīr*, *rehber*, lamp-bearer (*ḥāmil al-djirāgh*), broom-bearer (*ḥāmil al-miknasa*), cup-bearer (*ṣakkā*), butcher, four attendants (*khādim*) and two gate-keepers (*bawwāb*). The ʿAlewī communities of Anatolia also knew these twelve functionaries (*on iki hizmet*), although the names given to each vary. The Shabak *pīrs* are themselves hierarchically ordered, and there is a supreme spiritual authority known as the *bābā*.

The Shabak have regular ritual meetings in the house of the *pīr*. There are three major annual celebrations, one at New Year's Eve (celebrated in December), another in the night of *ʿāshūrā*. The third is the "night of pardon" (*ʿödhür gedjesi*), during which public confessions of guilt are made and conflicts in the community settled. It is these three nightly celebrations, in which both sexes take part, that in the early literature on the Shabak and Ṣārlīs are referred to as the *laylat al-kafsha*, with the usual accusation of unspeakable abominations (the verb *kafasha* meaning, in the local Arabic dialect "to grab"). Minorsky's suggestion to derive the name from more innocent Persian *kafsh* "footwear", has been adopted by several later authors, such as Moosa, who sees the taking off of slippers as the origin of the name. The Shabak themselves do not appear to use the name at all, however.

Pilgrimages are another important part of the ritual calender. Two important local shrines, visited at the *ʿīd al-fiṭr* and *ʿīd al-aḍḥā*, are named ʿAlī Rash ("Black ʿAlī") and ʿAbbās. Shabak identify the former with the Imām ʿAlī Zayn al-ʿĀbidīn b. Ḥusayn, the second with Ḥusayn's younger brother ʿAbbās, who died at Karbalā. A different type of *ziyāra* consists of the stoning of the alleged grave of ʿUbayd Allāh b. Ziyād, the Umayyad governor of ʿIrāḳ who was responsible for the drama at Karbalā. This takes place throughout the year.

Bibliography: Père Anastase Marie al-Karmali's misleading but influential articles in *al-Mashriḳ*, ii (1899) and v (1902) have now been superseded; the only serious work on Shabak beliefs and practices is Aḥmad Ḥāmid al-Ṣarrāf, *al-Shabak min firaḳ al-ghulāt fi 'l-ʿIrāḳ*, Baghdād 1373/1954. M. Moosa, *Extremist Shiites: the ghulat sects*, Syracuse 1987, is largely based on al-Ṣarrāf and a few less important ʿIrāḳi authors. A useful anthropological study is A. Vinogradov, *Ethnicity, cultural discontinuity and power brokers in northern Iraq: the case of the Shabak*, in *Amer. Ethnologist*, i (1974), 207-18. Information on recent events, along with some language samples, is given in M. Leezenberg, *The Shabak and the Kakais: dynamics of ethnicity in Iraqi Kurdistan* (technical note, Inst. for Language, Logic and Computation, University of Amsterdam, 1994; also to appear in *Studia Kurdica*, Paris).

(M. VAN BRUINESSEN)

SHABAKHTĀN, the name given in several mediaeval Arabic sources to an area east of present-day Turkish Urfa (Arabic al-Ruhā [*q.v.*], Frankish Edessa), and north of Ḥarrān. We can perhaps identify it with the range of hills known as the Tektek Dağ. Shabakhtān apparently comprised a number of strongholds, each with its dependant fief or *ʿamal*. Fiefs (*aʿmāl*) of Shabakhtān referred to in the sources include Djumlayn, al-Ḳurādī, Tall Mawzan and al-Muwazzar. References to Shabakhtān, or to strongholds within it, begin with the Crusades. Some or all of Shabakhtān formed part of the short-lived Frankish County of Edessa, but by 538/1144 the area was in the hands of ʿImād al-Dīn Zangī. With his death begins a confused story of frequent changes of overlordship, successively the Artuḳids of Āmid (Diyarbakır) and Mārdīn; several different Ayyūbid princes, including al-ʿĀdil, al-Ashraf, al-Afḍal and al-Kāmil; briefly, the Khʷārazmians and the Mongols; and then, towards the end of the 7th/13th century, the Artuḳids again, at which point references cease. Of the known *aʿmāl* of Shabakhtān, only Djumlayn, the most frequently mentioned, has so far been located, at the site of Çimdine Kalesi on the eastern side of the Tektek Dağ. It consists of a fortified outcrop ringed by a wall overlooking a rock-hewn fosse, and bears traces of several different mediaeval occupations.

SHAᶜBĀN, name of the eighth month of the Islamic lunar year. In classical *ḥadīth* it has already its place after Radjab Muḍar. In Indian Islam it has the name of *Shab-i barāt* (see below), the Atchehnese call it *Kandūri bu* and among the Tigrē tribes of Eritrea it is called *Maddagēn*, i.e. who follows upon Radjab.

In early Arabia, the month of Shaᶜbān (the name may mean "interval") seems to have corresponded, as to its significance, to Ramaḍān. According to the *ḥadīth*, Muhammad practised superogatory fasting by preference in Shaᶜbān (al-Bukhārī, *Ṣawm, bāb* 52; Muslim, *Ṣiyām*, trad. 176; al-Tirmidhī, *Ṣawm, bāb* 36). ᶜĀʾisha recovered in Shaᶜbān the fast days which were left from the foregoing Ramaḍān (al-Tirmidhī, *Ṣawm, bāb* 65).

In the early Arabian solar year, Shaᶜbān as well as Ramaḍān fell in summer. Probably the weeks preceding the summer-solstice and those following it, had a religious significance which gave rise to propitiatory rites such as fasting. This period had its centre in the middle of Shaᶜbān, a day which, up to the present time, has preserved feature of a New Year's day. According to popular belief, in the night preceding the 15th, the tree of life on whose leaves are written the names of the living is shaken. The names written on the leaves which fall down, indicate those who are to die in the coming year. In *ḥadīth* it is said that in this night God descends to the lowest heaven; from there he calls the mortals in order to grant them forgiveness of sins (al-Tirmidhī, *Sunan, bāb* 39).

Among a number of peoples, the beginning or the end of the year is devoted to the commemoration of the dead. The connection can also be observed in the Muslim world. For this reason Shaᶜbān bears the epithet of *al-muᶜaẓẓam* "the venerated". In the Indo-Muslim world in the night of the 14th people say prayers for the dead, distribute food among the poor, eat *ḥalwa* (sweetmeats) and indulge in illuminations and firework. This night is called *laylat al-barāʾa*, which is explained by "night of quittancy", i.e. forgiveness of sins.

In Atcheh, this month is likewise devoted to the dead; the tombs are cleansed, religious meals (*kandūri* [*q.v.*]) are given and it is the dead who profit from the merits of these good works. The night of the middle of Shaᶜban bears a particularly sacred character, as is attested by the *kandūri*s and the *ṣalāt*s which are called *ṣalāt al-ḥādja* or, on account of certain eulogies, *ṣalāt al-taṣābīḥ*. During the last days of the month, a market is held in the capital.

At Mecca, Radjab, not Shaᶜban, is devoted to the dead. Here, in the night of 14th Shaᶜbān, religious exercises are held; in the mosque, circles are formed which under the direction of an *imām* recite the prayer peculiar to this night.

In Morocco, on the last day of Shaᶜbān a festival is celebrated called the Shaᶜbāna which resembles a carnival. A description of it is to be found in L. Brunot, *La mer dans les traditions et les industries indigènes à Rabat et Salé*, Paris 1921, 98-9.

(A.J. Wensinck)

SHAᶜBĀN, the name of two Mamlūk sultans.

1. al-Malik al-Kāmil, (son of al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*]), who succeeded his full brother, al-Ṣāliḥ Ismāᶜīl, on the latter's death on 4 Rabīᶜ II 746/4 August 1345.

His accession was brought about by a faction headed by his stepfather, Arghūn al-ᶜAlāʾī, who had been in effect regent for Ismāᶜīl. A rival faction led by the vicegerent of Egypt, Almalik, supporting his half-brother Ḥādjdjī, rapidly lost power, and Arghūn became the dominant magnate throughout the reign. His sound political advice to the sultan served as a moderating influence, but was frequently disregarded. Shaᶜbān's authority deteriorated rapidly from the beginning of 747/April 1346. Almalik and his colleague, Ḳumārī, were sent to prison in Alexandria, and their property was sequestrated. The death of Yūsuf, another son of al-Nāṣir Muḥammad, in Rabīᶜ II/July-August, gave rise to suspicions that the sultan was implicated. The final crisis of the reign resulted from Shaᶜbān's determination to make a state visit to the Ḥidjāz, which led to heavy demands on the peasantry of Egypt for grain, and on the Arabs of Syria for camels, while it would have involved the Mamlūk military aristocracy in ruinous expenditure. A conspiracy to overthrow the sultan was hatched by the governor of Damascus, Yalbughā al-Yaḥyāwī. When Shaᶜbān seized two of his remaining brothers, Ḥādjdjī and Ḥusayn, and placed them under guard (29 Djumādā I/18 September), revolt broke out among the Mamlūks of Cairo. The sultan, accompanied by Arghūn al-ᶜAlāʾī, went out to confront them with a small loyal force. His offer to abdicate was rejected, and in the ensuing skirmish Arghūn was wounded and captured. Shaᶜbān fled, but was captured and put to death (3 Djumādā II/21 September), while Ḥādjdjī had been released and proclaimed sultan two days previously.

Bibliography: Notices of some leading personalities of the reign are given by their contemporary al-Ṣafadī; e.g. Shaᶜbān, Arghūn al-ᶜAlāʾī, Almalik (*Wāfī*, xvi, 153-5; viii, 355; ix, 372-3, respectively). There are detailed accounts of the reign by the 9th/15th-century chroniclers, Maḳrīzī, *Sulūk*, ii/3, 680-713; and Ibn Taghrībirdī, *Nudjūm*, x, 116-41.

2. al-Malik al-Ashraf, Mamlūk sultan (grandson of al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*]), who succeeded his cousin, al-Manṣūr Muḥammad, when the latter was deposed on 15 Shaᶜbān 764/30 May 1363.

Owing to Shaᶜbān's youth (he was born in 754/1353-4), a series of high Mamlūk *amīrs* held power in the early years of his reign. Yalbughā al-ᶜUmarī and Ṭaybughā al-Ṭawīl, originally Mamlūks of al-Nāṣir Ḥasan [*q.v.*], at first shared the regency, until Ṭaybughā was ousted in Djumādā II 767/March 1366, when Yalbughā assumed sole power. In the meantime, a Crusading expedition under King Peter I of Cyprus briefly occupied Alexandria (Muḥarram

767/October 1365), but withdrew as Yalbug̲h̲ā and the sultan advanced to relieve the city. The regent thereupon set on foot the construction of a war-fleet for, he asserted, a counter-offensive. An appeal from the king of Dongola [*q.v.*] for aid against his usurping nephew led to the organisation of an expeditionary force (Rabīᶜ I 767/December 1365), and action against Arab tribesmen who were ravaging the Aswān frontier-region. In Rabīᶜ II 768/December 1366 S̲h̲aᶜbān, resenting Yalbug̲h̲ā's domination, colluded with the regent's mutinous Mamlūks to overthrow him. The sultan did not, however, finally free himself from the control of the Mamlūk magnates until 769/1367-8, when the period of his autocratic rule began. There was an ineffectual attack on Tripoli by Peter I in Muḥarram 769/September 1367, but otherwise the sultanate was in no danger from any foreign power. S̲h̲aᶜbān's quiet reign was disturbed in Muḥarram 775/June 1373 by a dispute with his step-father, the *atābak* Uld̲j̲āy al-Yūsufī, over the inheritance from the sultan's mother, K̲h̲awand Baraka, who had died in the previous month. Uld̲j̲āy was defeated in a brief armed conflict, and drowned as he fled across the Nile. The end of the reign was sudden and disastrous, suggesting long-suppressed covert resentments, perhaps linked with the sultan's greed for wealth and unprecedented grants to his kinsfolk. The hostility had its focus in the Mamlūks of the sultan's household. Disregarding advice, and in spite of his recent recovery from a severe illness, he insisted on making a state pilgrimage to the Ḥid̲j̲āz. When he was encamped at the pass of Ayla [*q.v.*], his Mamlūks revolted, demanding fodder and pay. The situation got out of hand, and he fled with a few companions towards Cairo (2 D̲h̲u 'l-Ḳaᶜda 778/13 March 1377). While they were on their way, Mamlūk rebels gained control of the Citadel, and proclaimed S̲h̲aᶜbān's infant son, ᶜAlī, as sultan. Al-Maḳrīzī and Ibn Tag̲h̲rībirdī disagree as to whether the two risings were concerted. On reaching Ḳubbat al-Naṣr outside Cairo, S̲h̲aᶜbān's companions were discovered and killed. He himself was found and strangled two days later (4 D̲h̲u 'l-Ḳaᶜda/15 March). His son succeeded him as al-Malik al-Manṣūr ᶜAlī (778-83/1377-81).

S̲H̲AᶜBĀNIYYA, a mystical brotherhood arising out of the K̲h̲alwatiyya [*q.v.*] at Kastamonu in northern Anatolia towards the middle of the 10th/16th century. Its *pīr*, S̲h̲aᶜbān Welī, born at Tāshköprü in this same region, was initiated into the K̲h̲alwatiyya precepts by the *s̲h̲ayk̲h̲* K̲h̲ayr al-Dīn Tokadī of Bolu on his return from a period of study in Istanbul, and died in 976/1568-9 at Kastamonu, where he directed a group of his disciples after spending twelve years at the side of his spiritual master. The main source on the origins of the S̲h̲aᶜbāniyya is the work of one of S̲h̲aᶜbān Welī's successors, ᶜÖmer Fuʾādī (d. 1046/1636), the *Menāḳib-i s̲h̲erīf-i Pīr-i K̲h̲alwetī ḥaḍret-i S̲h̲aᶜbān Welī*. This work on the life and miracles of the founder was printed at Kastamonu in 1294/1877 in a volume also containing the same author's *Risāle-yi türbe-nāme*, which deals with the building of S̲h̲aᶜbān Welī's tomb at the beginning of the 11th/17th century. ᶜÖmer Fuʾādī is also said to have written an enlarged version of the *Menāḳib-nāme*, unfortunately lost. S̲h̲aᶜbān Welī himself left behind no works.

For almost a century, the new order's network seems to have remained an Anatolian one. However, in the capital, one of the founder's *k̲h̲alīfas*, S̲h̲ayk̲h̲ S̲h̲ud̲j̲āᶜ (d. 996/1588) exercised a great influence, much criticised by the sultan's entourage, over Murād III [*q.v.*], who had become his disciple. According to a still extant *kitābe* of 988/1580, this same S̲h̲ud̲j̲āᶜ had the mosque-*tekke* of S̲h̲aᶜbān Welī at Kastamonu renovated. We know many details about the building of the saint's tomb, completed in 1020/1611, thanks to the work of ᶜÖmer Fuʾādī mentioned above.

The order was at various times given fresh impetus by the great *s̲h̲ayk̲h̲s* who were regarded as founders of the branches of the S̲h̲aᶜbāniyya, and from the latter half of the 11th/17th century enjoyed a vast expansion throughout the Ottoman empire. At an early date, there was ᶜAlī ᶜAlāʾ al-Dīn Ḳarabās̲h̲ Welī (b. ᶜArabgīr, 1020/1611, d. on returning from the Pilgrimage in 1097/1686), founder of the Ḳarabās̲h̲iyya, called al-Aṭwel "the very tall" on account of his height and Ḳarabās̲h̲ "black head" because of the order's characteristic black cap. Initiated at Kastamonu, he was *s̲h̲ayk̲h̲* at Çankırı in central Anatolia, and then, from 1079/1669, at Üsküdār (he also spent some time in exile on Lemnos). Ḳarabās̲h̲ Welī left behind numerous works on mysticism. One may note a commentary on Ibn al-ᶜArabī's *Fuṣūṣ al-ḥikam* (the *Kās̲h̲if-i esrār al-Fuṣūṣ*); a *ṭarīḳat-nāme*; a treatise on the interpretation of dreams (*taᶜbīr-nāme*); a treatise on the 40 days' retreat (*Risāle-yi uṣūl-i erbaᶜīn*); and one on the *d̲h̲ikr* made by whirling (*R. fī d̲j̲ewāz-i dewrāni 'l-ṣūfiyye*). He is said to have had many *k̲h̲alīfas* who spread the S̲h̲aᶜbāniyya in his new form. This last affected not only Anatolia but also Rumelia and the Arab provinces. The networks issuing from the order which took shape in the Arab provinces from the end of the 12th/18th century under the impetus of the spiritual successors of Muṣṭafā Kamāl al-Dīn al-Bakrī, notably the Kamāliyya, Ḥinfiyya, Dardīriyya and Sammāniyya branches and their ramifications, can be considered as independent of the S̲h̲aᶜbānī networks of Anatolia and Rumelia, even if certain of their members preserved the common mystical tradition (see F. de Jong, *Mustafa Kamal al-Din al-Bakri (1688-1749). Revival and reform of the Khalwatiyya tradition*, in N. Levtzion and J.O. Voll (eds.), *Eighteenth century renewal and reform in Islam*, Syracuse-New York 1987, 117-32).

Four other personalities mark the evolution of the S̲h̲aᶜbāniyya up to the middle of the 19th century. The first was Muḥammad Naṣūḥī (d. 1130/1718), one of Ḳarabās̲h̲ Welī's *k̲h̲alīfas*. He was *s̲h̲ayk̲h̲* of a *tekke* built for him by the Grand Vizier Dāmād Ḥasan Pas̲h̲a at Üsküdār in the Dog̲h̲and̲j̲ïlar quarter, an establishment considered at the close of the Empire as the *āsitāne*, main centre, of the order in Istanbul. He was also the author of several works, including a Ḳurʾān commentary and a *dīwān* of poetry. The second was Muṣṭafā Čerkes̲h̲ī (d. 1229/1814), disciple of a *s̲h̲ayk̲h̲* of the region of Safranbolu, who exercised his functions at the little town of Čerkes̲h̲, to the south-west of Kastamonu. More than Muḥammad

Naṣūḥī, he seems to have set his mark on the brotherhood. He lightened the burden of the rules made by Ḳarabāsh Welī, reducing the precepts for members from twenty to three: to be linked with a spiritual master, committing oneself to him totally; to accept from this master pardon (*tawba*) and initiation (*talḳīn*); and to perform *dhikr* unceasingly. Čerkeshī was also the author of an epistle said to have been written at the request of Sultan Maḥmūd II (*R. fī taḥḳīḳ al-taṣawwuf*), and he appears moreover in recent works as the second *pīr* of the Shaᶜbāniyya. The third person mentioned as the founder of a branch of the *ṭarīḳa* was a *khalīfa* of the preceding person, one Ḥadjdjī Khalīl Geredelī (d. 1247/1831-2 and buried in the village of Gerede, near Bolu). He is said to have been illiterate (*ummī*) and to have been invited by the sultan to install himself in the capital, where he assumed direction of the *tekke* of the Zeyrek mosque. The fourth and last person considered as founder of a branch of the Shaᶜbāniyya was Ibrāhīm Ḳushadalī (d. 1845), *khalīfa* of Beypāzārlī Shaykh ᶜAlī, a disciple of Muṣṭafā Čerkeshī. He had numerous disciples (including some provincial governors and some women) and gave a particular imprint to the order, notably by rejecting residence in a *tekke*, a mode of life which he considered to be in a state of degeneration (when the *tekke* which he headed in Istanbul was burnt down in 1833, he refused to rebuild it and settled down in a simple *ḳonaḳ*). He was certainly influenced by *malāmī* doctrine, but equally, he placed the *sharīᶜa* in the forefront, insisting on the practice of *rābiṭa* (liaison of the disciple's heart, in imagination, with that of his *shaykh*) and on that of *khalwa*.

Under the impulse of these different persons, the Shaᶜbāniyya gradually became that branch of the Khalwatiyya with the most centres in the Ottoman capital. It even exceeded those of the Sunbuliyya [*q.v.*] in the last decades of the 19th century, with 25 *tekkes*, of which about ten were on the Asiatic shore, mainly at Üsküdār. The *ṭarīḳa* likewise spread vigorously in northern Anatolia, in a zone extending from Istanbul to Tokat, above all in the triangles Kastamonu-Bolu-Ankara and Kastamonu-Yozgat-Tokat. In Rumelia, where it had spread strongly since the 11th/17th century (Ewliyā Čelebi mentions its presence in the Bulgarian lands *ca.* 1650), it had a special spurt of growth in the second half of the 19th century, notably in Bulgaria (at Nevrokop/Goce Delčev and Trnovo), at Iskeçe/Xanthi in Thrace, at Bitola in Macedonia, and also in Bosnia-Hercegovina, where *tekkes* were founded from *ca.* 1865 onwards at Sarajevo, Severin, Bijeljina, Donja Tuzla and Višegrad under the stimulus of the *shaykh* Muḥammad Sayf al-Dīn Iblizović. It may be noted that Yaᶜḳūb Khān Kāshgharī, who was one of the disciples of Muḥammad Tewfīḳ Bosnewī, *khalīfa* of Ibrāhīm Ḳushadalī (as well as being also affiliated to the Naḳshbandiyya and Ḳādiriyya), is said to have contributed to spreading the order in India; but it does not seem to have put down durable roots there.

Today, the Shaᶜbāniyya, which has not survived in the Balkans, is represented uniquely in Turkey, where it is the most active branch of the Khalwatiyya. In Istanbul itself, there are at least fifteen mosques where Shaᶜbānī dervishes meet for *dhikr*, generally on Thursday or Sunday evening. For the ceremony, each adept wears a *khirḳa* and a fine-textured white turban falling on to the back. The *dhikr* unfolds in three phases: seated in a circle, in darkness, the dervishes first recite the brotherhood's *wird*, then the *dhikr* properly speaking, characterised by repetition of the three formulae *Lā ilāh illā 'llāh, Allāh* and *Hū*, and then ending by standing up in a *ḥalḳa*. According to recent publications attesting the activities of the Shaᶜbāniyya in Turkey (see *Bibl.*), these belong to the Čerkeshiyya branch and consider Muṣṭafā Čerkeshī as their second *pīr*. In Kastamonu there exists a "Şa'ban-i Veli Association of Kastamonu" which looks after the ancient centre of the order. This consist of a much-visited complex, including a mosque which until 1925 served als as a *tekke* and in which one can still see a series of small cells intended for spiritual retreat, a *türbe* enshrining Shaᶜbān Welī's tomb and those of his successors, a library, and ablutions fountain, a kitchen, two houses, a cemetery and a spring whose water is sought after for curative purposes.

(Nathalie Clayer)

SHABĀNKĀRA, the name of a Kurdish tribe and of their country in southern Persia during mediaeval Islamic times. Ibn al-Athīr spells the name Shawānkāra, whilst Marco Polo rendered it as Soncara.

According to Ḥamd Allāh Mustawfī, the Shabānkāra country was bounded by Fārs, Kirmān and the Persian Gulf. At present, it falls within the *ustān* or province of Fārs, and there are still two villages, in the *shahrastāns* of Djahrum and Bū Shahr respectively, bearing the name Shabānkāra (Razmārā (ed.), *Farhang-i djughrāfiyā-yi Īrānzamīn*, vii, 139).

Mustawfī says that the capital was the stronghold of Īg or Īdj; other localities of the province, which was divided into six districts, were: Zarkān (near Īg), Iṣṭabānān (or Iṣṭabānāt), Burk, Tārum, Khayra, Nayrīz [*q.v.*], Kurm, Rūnīz, Lār [*q.v.*] and Darābdjird [*q.v.*]. As for particulars and identifications it suffices to refer to the notes of G. le Strange on his translation of Mustawfī's *Nuzhat al-ḳulūb*, 138, tr. 139; see also P. Schwarz, *Iran im Mittelalter*, ii, 92. As for climate, Shabānkāra was reckoned among the warm countries (*garmsīr*); but it enclosed also regions of a moderate temperature (*hawā-i muᶜtadil*). The products of Shabānkāra consisted chiefly in corn, cotton, dates, (dry) grapes and other fruits; at Darābdjird, mineral salt was found. Among the most fertile districts were those of Zarkān and of Burk. The revenues (*ḥuḳūḳ-i dīwānī*) during the Saldjūḳ rule amounted to more than 2,000,000 dīnārs, but at the time Mustawfī wrote (740/1340) they only came to 266,100 dīnārs. The country abounded in strong places, e.g. Īg, Iṣṭabānān (destroyed by the Saldjūḳ Atābeg of Fārs Čawulī,

rebuilt later on) and Burk. At the time of Mustawfī, the fortifications of Darābdjird were ruinous, but the mountain-pass of Tang-i Ranba, to the east of the town, had a strong castle. In the chapter on the Muẓaffarid dynasty, intercalated in the manuscript of Mustawfī's *Tārīkh-i guzīda*, facs. ed. Browne, 665-6, there is also mention of the fortifications of Shabānkāra, the fertility of that country ("beautiful and cultivated like the garden of Iram"), its mills, bāzārs, etc.

The Shabānkāra tribe were Kurds; in Ibn al-Balkhī's time (early 6th/12th century) there were five subdivisions of them, viz. the Ismāʿīlī, the Rāmānī, the Karzuwī, the Masʿūdī and the Shakānī. They were herdsmen, but also intrepid warriors, who more than once, in the course of history, became a power to be reckoned with. Their chiefs boasted descent from Ardashīr, the first Sāsānid, or even from the legendary king Manūčihr. Leaving aside the exploits of the Shabānkāra in Sāsānid times (as e.g. the fact that Yazdadjird III is said to have taken refuge among them at the time of the Muslim invasion), the history of the Shabānkāra begins at the epoch of the decline of Būyid power.

The Ismāʿīlīs were regarded as the most noble in descent; their chiefs are said to descend from Manūčihr and to have held in Sāsānid times the function of Ispāhbads. The first time, so far as we know, this tribe came into collision with a great Muslim power was in the days of the Ghaznawid Masʿūd b. Maḥmūd (421-32/1030-41 [*q.v.*]), whose general Tāsh Farrāsh drove them from the environs of Isfahān, so that they were compelled to remove southward. But now they came within the sphere of Būyid influence. The Būyids not suffering their presence, they had to migrate once more, until they settled in the Darābdjird district. Ibn al-Balkhī gives the history of their ruling family at some length. It may be sufficient to state that in the course of the quarrels which arose among the kinsmen one of them, Salk b. Muḥammad b. Yaḥyā, called to his aid the mighty Faḍlūya of the Rāmānīs [see FAḌLAWAYH]; at the time Ibn Balkhī wrote, Salk's son Ḥusūya was the ruler of the Ismāʿīlīs, but his kinsmen contested his supremacy.

The Karzuwī Shabānkāra, taking advantage of the decline of the power of the Būyids, obtained Kāzarūn [*q.v.*], but were driven out of it by Čāwulī when he made his expedition in Fārs. The Masʿūdīs also came to some power in the days of Faḍlūya; the Karzuwī chief Abū Saʿd had also served under that Rāmānī ruler. For some time, the Masʿūdīs possessed Fīrūzābād and part of Shāpūr Khūra, but they were no match for the Karzuwīs, whose chief, Abū Saʿd, defeated and put to death Amīrūya, the Masʿūdī prince. When, later on, Čāwulī ruled Fārs, he installed Amīrūya's son Vishtāsf as ruler of Fīrūzābād. The Shakānīs, rapacious mountaineers of the coastland, present no historical interest. They also were subdued by Čāwulī.

Historically, the most important tribe was the Rāmānīs, to whom belonged Faḍlūya (Ibn al-Athīr, x, 48, calls him Faḍlūn), the mightiest *amīr* of the Shabānkāra. This man, the son of a certain ʿAlī b. al-Ḥasan b. Ayyūb, who was the chief of his tribe, rose to the rank of *Sipāhsalār* in the service of the Ṣāḥib-i ʿĀdil Muhadhdhib al-Dawla Hibat Allāh, the *wazīr* of the Būyid ruler of Fārs. Even before this time, the Būyids had been troubled by the Shabānkāra. The *Taʾrīkh-i guzīda*, 432, mentions an insurrection of a certain Ismāʿīl of Shabānkāra against ʿImād al-Dīn Abū Kālīdjār Marzubān (415-40/1024-48). This prince was succeeded by his eldest son al-Malik al-Raḥīm Khusraw Fīrūz [*q.v.*], who died in 447/1055 and left the throne to his younger brother Fūlād Sutūn, the royal master of the Ṣāḥib-i ʿĀdil. Fūlād Sutūn put to death this *wazīr*, whereupon Faḍlūya rose in rebellion. He succeeded in capturing the prince himself and his mother, the Sayyida Khurāsūya. Fūlād Sutūn was confined in a stronghold near Shīrāz, where he was murdered in 454/1062; the Sayyida was, by order of Faḍlūya, suffocated in a bath. The Shabānkāra chief, now ruler of Fārs, soon came into collision with the Saldjūḳ power. After fighting without success against Ḳāwurd, the brother of Alp Arslan, he submitted to the latter, from whom he received the governorship of Fārs. Faḍlūya afterwards revolted; the stronghold of Khurshah, to which he had betaken himself, was besieged and taken by the great Niẓām al-Mulk, and Faḍlūya, after many vicissitudes, captured and executed (464/1071). Such is in substance the account of Ibn al-Balkhī, a younger contemporary. Ibn al-Athīr represents these events somewhat differently (x, 48-9; the Kurd Faḍlūn, who, according to Ibn al-Athīr, ix, 289, held part of Ādharbaydjān and raided the Khazars in 421/1030, cannot, of course, be identified with the Shabānkāra chief and was, in fact an *amīr* of the local line of the Shaddādids [*q.v.*]). With the Faḍlūyā affair is connected without any doubt, the expedition of Alp Arslān to Shabānkāra of the year 458/1066, mentioned by al-Rāwandī, *Rāḥat al-ṣudūr*, ed. Iqbāl, 118.

The Shabānkāra were to be for many years a nuisance to the provinces of Kirmān and Fārs. In 492/1099, supported by the Saldjūḳ prince of Kirmān, Īrān-Shāh b. Ḳāwurd, they defeated the Amīr Unar, who was *wālī* of Fārs for Sultan Berk-yaruḳ. About this time, the struggles of the Atabeg Čāwulī with the Shabānkāra begin. This commander, Fakhr al-Dīn Čāwulī, who died in the year 510/1116 (the *Taʾrīkh-i guzīda* wrongly places his death under the rule of Masʿūd b. Muḥammad b. Malik Shāh), governed Fārs on behalf of the Saldjūḳ ruler of ʿIrāḳ, Muḥammad b. Malik Shāh. The Shabānkāra Amīr al-Ḥasan b. al-Mubāriz Khusraw refused to pay homage; thereupon, Čāwulī attacked him suddenly. Khusraw had a narrow escape, being saved by the help of his brother Faḍlū. Now Čāwulī subdued Fasā and Djahrum in Fārs; he then besieged for some time the stronghold where Khusraw had taken refuge, but perceiving that the siege would be a long and hard one, he came to terms with the Shabānkāra chief. Later, Khusraw accompanied the Atabeg on his expedition to Kirmān, the ruler of which had sheltered the prince of Darābdjird, Ismāʿīl. In this connection, Ibn al-Athīr mentions the fact that Čāwulī requested the ruler of Kirmān to hand over some Shabānkāra forces who had taken refuge to him.

After these events, the Shabānkāra seem to have kept quiet during the rule of Muḥammad b. Malik Shāh, but new troubles arose when, under the following sultan, Maḥmūd b. Muḥammad (511-25/1118-31), the *wazīr* Nāṣir b. ʿAlī al-Dargazīnī began to ill-treat these tribes also. This caused a revolt, during which the Shabānkāra wrought great damage. For the time up to the Kirmān affair, there may be noted the following data. In the service of the Salghurid Atabeg Sunḳur [see SALGHURIDS], the Kurd Muḥammad Abū Ṭāhir, who afterwards became the first independent sovereign of the Greater Lūr dynasty (he died in 555/1160 [see LUR-I BUZURG]), made himself meritorious by a victory over the chiefs (*ḥukkām*) of Shabānkāra. In 564/1168 the Shabānkāra sheltered Zangī b. D.klā, who was expelled from Fārs by the ruler of Khūzistān.

We now enter on the most glorious period of

Shabānkāra history, which, however, lasted only a few years. The Shabānkāra chief Ḳutb al-Dīn Mubāriz and his brother Niẓām al-Dīn Maḥmūd, *amīrs* of Īg, availed themselves of the disturbances which arose in Kirmān after the extinction of the ruling Saldjūḳ dynasty of that country. They responded to the call of the *wazīr* Nāṣiḥ al-Dīn, who solicited their aid against the Ghuzz. Contrary to the intention of the *wazīr*, but assisted by the citizens, they occupied, before giving battle to the Ghuzz, the capital Bardasīr and so secured the dominion of Kirmān (507/1200-1). The two *amīrs* now defeated the Ghuzz, but the strained relations between these rulers of Īg and the Atabeg of Fārs compelled them to return to their realm after having appointed as their *nāʾib* one of the nobles of Kirmān. At this point, the Ghuzz appeared once more to repeat their ravages. One of the Kirmānī *amīrs*, Hurmuz Tādj al-Dīn Shāhānshāh, concluded a treaty with them. Niẓām al-Dīn marched against him from Īg; in the battle which ensued Hurmuz fell and his Turkish allies were routed. Shortly after, Niẓām al-Dīn entered Bardasīr again. He made himself, however, by his debauchery and his rapacity odious to such a degree that a plot was laid against him. In the night, the conspirators took him prisoner with his sons (600/1203-4). They intended thereby to compel the commanders of Mubāriz's garrisons to surrender. These commanders, however, remained in their strongholds and the latter had to be besieged. Meanwhile, a new actor made his appearance on the political stage, viz. ʿAdjam Shāh b. Malik Dīnār, a protégé of the Khʷārazm-shāh ʿAlāʾ al-Dīn Muḥammad [*q.v.*]. ʿAdjam Shāh had concluded an alliance with the Ghuzz, who assisted him in his attempts to secure the realm of Kirmān. In short, the course of events was as follows. The prisoner Niẓām al-Dīn was sent to the Salghurid Atabeg of Fārs, but if ʿAdjam Shāh expected to remain in the quiet possession of Kirmān, he was disillusioned by a polite message from the Atabeg, Saʿd b. Zangī, to the effect that Saʿd was sending his general ʿIzz al-Dīn Faḍlūn to accelerate the reduction of the garrisons mentioned above (600/1203-4). The troops of Fārs duly arrived and delivered Kirmān definitively from the Shabānkāra. An expedition which Mubāriz undertook in revenge had no results except bringing about once more sore devastations.

In 658/1260 the Mongol Hülegü or Hūlāgū [*q.v.*] destroyed Īg and killed the Shabānkāra *amīr* Muẓaffar Muḥammad; afterwards, in the year 694/1295, we find Shabānkāra among the regions which, according to the treaty between Baydū Khān and Ghāzān Khān, fell to the lot of Ghāzān. For the year 712/1312, mention is made of a revolt of the Shabānkāra against the authority of the Il-Khānid Öldjeytü. It was repressed by Sharaf al-Dīn Muẓaffar, who later became the first historically important member of the Muẓaffarid dynasty. It was the princes of that house who definitely put an end to the power of the Shabānkāra. In the year 755 or 756 (1354 or 1355), the last Shabānkāra ruler, the Malik Ardashīr, refused to obey the orders of the Muẓaffarid Mubāriz al-Dīn. The latter sent his son Maḥmūd with an army to chastise the Kurdish prince. Maḥmūd subdued the country and obliged Ardashīr to fly. From this time onwards, Shabānkāra formed a part of the Muẓaffarid lands; incidentally, in the year 765/1363-4, we hear of a *ḥākim* of Shabānkāra on behalf of the Muẓaffarid princes (*Taʾrīkh-i guzīda*, 698). In the later 9th/15th century, Shabānkāra is mentioned as one of the fiefs of the Aḳ Ḳoyunlu prince Baysonḳor (Dawlat-Shāh, *Tadhkirat al-shuʿarāʾ*, ed. Browne, 351).

The Shabānkāra tribe produced a historian during the 8th/14th century, Muḥammad b. ʿAlī Shabānkāraʾī [*q.v.*], author of a general history which brings considerable near-contemporary and contemporary information on Fārs during the Mongol and Il-Khānid periods (*Madjmaʿ al-ansāb*, ed. Mīrzā Hāshim Muḥaddith, Tehran 1363/1984, 220 ff.).

(V.F. Büchner-[C.E. Bosworth])

SHABĀNKĀRAʾĪ, Muḥammad b. ʿAlī, Persian poet, littérateur and historian, of Kurdish origin (*ca.* 697-759/*ca.* 1298-1358), who wrote during the last decades of the Īl-Khānid era. His general history, the *Madjmaʿ al-ansāb fi 'l-tawārīkh*, exists in a number of versions. The first redaction, dedicated to the Īl-Khānid Abū Saʿīd's vizier Ghiyāth al-Dīn Muḥammad b. Rashīd al-Dīn, was produced in 733/1332-3 but was lost in the destruction of the vizier's house in 736/1336. Shabānkāraʾī completed a second redaction on 22 Djumādā I 738/17 December 1337; this is found in the best ms., Istanbul, Yeni Cami 909, and in the printed edition. Yet a third version, dedicated to the Čūpānid Pīr Ḥusayn and finished in 743/1343, is represented by the Paris ms. Supp. pers. 1278 and by a ms. in Tabrīz. An abridgement of this third recension, extant in several mss. (e.g. B.L. Add. 16,696), probably originated at a considerably later date, since none of the mss. is earlier than the 10th/16th century.

The *Madjmaʿ al-ansāb* is of importance for its original material on the Ghaznawids, being the sole source to supply the alleged *Pand-nāma* of Sebüktegin [*q.v.*]. It is also the first general history to incorporate chapters on the local dynasties of Shabānkāraʾī's native region of southern Persia, with sections *inter alia* on the rulers of the Shabānkāraʾī Kurds [see SHABĀNKĀRA], the atabegs of Fārs, and (most detailed) the princes of Hurmuz [*q.v.*] and the atabegs of Luristān [see LUR-I BUZURG].

After Shabānkāraʾī's death, and not later than 783/1381, a certain Ghiyāth al-Dīn b. ʿAlī Faryūmadī wrote, apparently in Gurgān or Khurāsān, a brief *dhayl* or continuation of the *Madjmaʿ al-ansāb*, dealing with the Sarbadārs [*q.v.*] and the local dynasties of Khurāsān during the mid-to-late 8th/14th century: this is extant only in the Istanbul ms.

(C.E. Bosworth and P. Jackson)

SHĀBĀSHIYYA, the name of a sect of extreme Ḳarmaṭians in the region of Baṣra and al-Aḥsā led by hereditary chiefs, the Banū Shābāsh *shaykhs* (the *rubūbiyya* was handed down from father to son). Their political activity lasted over a century (about 380 to 480/990-1090) in the Persian Gulf region. (The form *Shabbāsiyya* should be dropped.)

Two of them, in spite of their excommunication by orthodox writers, were viziers to the Būyid governor of Baṣra: Abu 'l-Ḥasan ʿAlī b. Faḍl (or Ḥasan) Ibn Shābāsh (d. 444/1052) and his son Salīl al-Barakāt (mentioned in 487/1094 by al-Ghazālī). It is remarkable that the Druzes regarded them as followers of their religion, for we have in the Druze canon an epistle of al-Muḳtanā [*q.v.*] of 428/1037 which is dedicated to them. We know also that in the 9th/15th century there were still links between the Druzes and the islands of the Persian Gulf (cf. Poliak, in *REI* [1934], 255).

AL-SHĀBB AL-ẒARĪF [see AL-TILIMSĀNĪ].

SHABBATAY ṢEBĪ, a Jewish mystic, pseudo-Messiah and the inspiration for a Judaeo-Muslim sect.

Born at Izmir in 1035/1626, where his father, originally from the Peloponnese, was a trader, he showed a precocious propensity for the religious sciences, and was dedicated to a rabbinical career. From his adolescence, he devoted his time to the esoteric study of the Ḳabbālāh and led a life of abstinence and solitude. Thanks to his remarkable charisma, he became surrounded by a group of adepts whose extravagant practices ended up by attracting the censure of the rabbinical authorities. He was banished from his native city in *ca.* 1061/1651, and became a wandering ascetic travelling in turn from Salonica to Istanbul and then from Jerusalem to Cairo. There, during 1663-5, he was the protégé of the mystical circle of Raphaël Joseph Čelebi, head of the Egyptian Jewish community and director of the Ottoman treasury (*ṣarrāf bashî*) until the time when, visiting Gaza, he was hailed as the Messiah by Nathan Ashkenazi, who also took himself for the Prophet Elijah. The tireless efforts of this latter person to spread the messianic faith in the form of circular letters and pamphlets provoked a real frenzy in the Jewish world, from Kurdistān to Morocco via Europe. He was denounced to the *ḳāḍī* of the town through the rabbis' opposition in Dhu 'l-Ḥidjdja 1075/June 1665. Ṣebī, mounted on a horse and clad in green, despite Muslim prohibition, made a triumphal entry into Jerusalem after having circumambulated it seven times. From there he returned via Aleppo to his natal city, where he was hailed enthusiastically by the populace. In an eschatological atmosphere of penitence and aseticism, the messianic movement, favoured by socio-religious factors, increased in fervour. Whilst certain rumours related the story of the miraculous conquest of Mecca by the ten tribes of Israel, manifestations of "Jewish pride" were cruelly repressed in certain Muslim lands, involving a breaking of the contract of *dhimma*, notably in Yemen.

Henceforward called by the Hebrew acrostic *amīrāh*, evoking Arabic *amīr* "prince", Ṣebī, accompanied by his "ministers", set sail in Djumādā II 1076/December 1665 for Istanbul where, according to Nathan's predictions, he was to seize the crown of the "Grand Turk" without having to strike a blow. Meanwhile, the Ottoman government, perhaps alerted by the Jewish pseudo-Messiah's own Jewish opponents, decided to put an end to this ferment of activity, considered to be seditious. The fate of the agitator, intercepted on the high seas, was decided by the Grand Vizier Aḥmed Köprülü [see KÖPRÜLÜ], who, unwilling to create a martyr, imprisoned him in the fortress of Gallipoli (Shaʿbān 1076/February 1666). With an aura of prestige for having escaped death, Ṣebī continued to receive, in prison, delegates from all over. These included Nehemiah Cohen, a Polish Kabbalist, who feigned conversion to Islam in order to gain access to the Grand Vizier, to whom he denounced Ṣebī as an imposter. Ṣebī was brought to Edirne and to Sultan Meḥemmed IV's *dīwān* on 16 Rabīʿ I 1077/16 September 1666.

Ṣebī escaped capital punishment by "adopting the turban", on the advice of the apostate Muṣṭafā Ḥayātī-zāde, *alias* Gidʿōn, the sultan's physician. On his conversion to Islam, he took the name of ʿAzīz Meḥmed Efendi, saw himself receive the honorific title of *ḳapîdjî bashî* "chief doorkeeper of the palace", and received a royal pension. Had the Turks spared him in order for him to act as a missionary for Islam? If the majority of his followers abandoned him, his apostasy was in fact followed by numerous of his faithful followers, including his wife Sarah, who, after arriving in Gallipoli, took the name of Fāṭima Ḳadîn. Seeking a theological justification for the paradoxical mystery of his defection—it could allegedly be considered as a deliberate act with an esoteric aim—Ṣebī's partisans continued to believe in him, adopting for themselves the Hebrew name of *maʾamīnīm* "believers". Ṣebī kept up secret contacts with them and with Nathan of Gaza during his stays in now Edirne and now Istanbul, during which he led a double life, observing the Muslim religion externally whilst practicing certain Jewish rites. He is described as going now to the mosque and now to the synagogue, holding a Ḳurʾān in one hand and a Tōrāh scroll in the other. The Shabbatayan tradition holds that, despite this duplicity, Ṣebī enjoyed the favour of Meḥmed Wānī Efendi, the sultan's favourite preacher, who is said to have been assigned to him as his teacher of the precepts of Islam. It seems also that during this period Ṣebī had contacts with Muslim sectaries like the Bektāshīs, and perhaps also with the Khalwatī mystic Meḥmed Niyāzī [*q.v.*]. According to certain pieces of evidence, he reportedly frequented in Edirne the Bektāshī *tekke* of Khîḍîrlîḳ and took part in *dhikr* sessions. He was again arrested in Rabīʿ II 1083/August 1672 on charges of licentious conduct, and finally deported in Shawwāl 1083/January 1673 to Ulčindj in the distant province of al-Bassān (Albania). Despite visits from certain of his followers, apparently disguised as Muslims, Ṣebī died in solitude on 9 Radjab 1086/17 September 1676 at Ulčindj, where his unmarked tomb is still venerated by the local Muslim population.

Coming as it did at a time of eschatological expectation in the Muslim environment, where he was seen as the Dadjdjāl [*q.v.*], Ṣebī's death stimulated the appearance of Mahdī claimants.

However, the demise of its founder did not mean the end of his messianic movement. Accepting Nathan's teaching, according to which Ṣebī had gone into a phase of occultation—one thinks of the Shīʿī concept of *ghayba*—and whilst awaiting his return, several hundreds of his followers embraced Islam *en masse* in 1095/1683 at Salonica, which henceforth became an active centre for propaganda. Under the direction of Jacob Querido (ʿAbd Allāh Yaʿkūb), the brother of Jochebed-ʿĀʾisha, Ṣebī's last wife, these apostates assumed the shape of a sect known as the *dönmes* [*q.v.*] (Tk. "convert"). Querido was proclaimed by his sister as Ṣebī's reincarnation; he preached the pious performance of the Islamic obligations and died at Alexandria or at Būlāḳ in *ca.* 1102/1690 when returning from the Meccan Pilgrimage. The *dönmes* split into various factions, the most radical of them being headed by ʿOthmān Baba (*alias* Berukhyah Russo, d. 1721), who also claimed to be a reincarnation of Ṣebī. They borrowed certain practices and also liturgical chants from the Bektāshī circles whose *tekke* was in the neighbourhood of their cemetery at Salonica. Whilst practising Islam externally, they considered themselves the "true community of Israel". They observed a messianic form of Judaism based on eighteen precepts, whilst continuing to believe in the return of Ṣebī. By marrying amongst themselves, they maintained themselves as an independent community living in a special quarter until 1912. At the time of the exchange of populations between Greece and Turkey in 1924, the majority of them, estimated at between 10,000 and 15,000 families, left for Istanbul, where their descendants continue to reside.

AL-SHĀBBĪ, Abu 'l-Ḳāsim b. Muḥammad b. Abi 'l-Ḳāsim Ibrāhīm, modern Tunisian poet (1909-34).

There exists no legal registration of his birth, but according to information published in his lifetime (al-Sanūsī, 1927, 202) and confirmed in a posthumous letter (*Complete works*, ii, *Correspondence*, 269), he was born on 3 Ṣafar 1327/24 February 1909 in the village of al-Shābbiyya, near Tozeur in southern Tunisia, whence his *nisba*, the eldest of a numerous family. His father, who had studied at al-Azhar 1901-8 and then at the Zaytūna of Tunis, was appointed in 1910 as *ḳāḍī* at Siliana. The family henceforth had various moves, to Gafsa, Gabès, Thala, Madjāz al-Bāb, Raʾs al-Djabal and Zaghouan; it led a comfortable life from having as its head an official certain of secure employment under the French Protectorate established in 1881.

Abu 'l-Ḳāsim did his primary studies entirely in Arabic, after a straightforward entry to the Franco-Arabic school at Gabès, whilst his three younger brothers were to become bilingual; he felt frustration from this lack all his life. In October 1920 he entered the Zaytūna, where he received a traditional education: Arabic language and literature, and Islamic theology. The teaching at the Zaytūna, and his frequenting the nearby libraries, ensured for him a wide literary culture, but one badly assimilated since he lacked direction from a preceptor. It included the classical world, modern Egyptian and Syro-Lebanese literature, as well as European literature through translations, in this latter case given a misleading bias by the dominance of the trio of Goethe, Lamartine and Ossian.

The literary cafés, study circles and cultural societies enabled him to form some firm friendships and to give him a consciousness of the problems posed by modern life: trade unionism, educational reform and the emancipation of women. Already, when he was only 14, al-Shābbī composed his first poem *al-Ghazāl al-fātin* (1923). In 1927 al-Sanūsī published 27 selected poems of his (in *al-Adab al-tūnisī fi 'l-ḳarn al-rābiʿ ʿashar*, 202-54).

In 1928 he obtained his diploma of secondary education (*al-taṭwīʿ*), and enrolled at the Higher Law College. In February 1929 he delivered a resounding lecture on *al-Khayāl al-shiʿrī ʿind al-ʿArab* "Poetic imagination among the Arabs", published the same year and dedicated to his father, who died a few months later in September aged 50. He finished his legal studies in 1930, was married the next year and had two sons (1932, 1934). He himself died on 9 October 1934 at the Italian Hospital in Tunis from heart disease of rheumatic origin.

Al-Shābbī was a born poet. Having a presentiment that his life would not be long, he was seized by an avid desire for reading and writing. In the considerable corpus of his verse and prose works, the reader finds here and there the imperishable message of the young inspired poet. In a musical language, with an assured sense of form, he sings of life and love, and expresses his confusedness and his unsatisfactory way of life. Al-Shābbī shows himself as a young bourgeois disturbed and aroused by modernism. Modernity was, for him, Europe; but he only knew Europe at second-hand. What was ancient, completed and outmoded, was Arabic literature; but he knew that directly. It was thus a question for him of either implanting himself firmly in his own culture and renouncing the call of the new, or else of hurling himself into the quest for modernity, thereby cutting himself off from his roots.

Amongst the 132 pieces in the 1984 edition of his poems, the autograph manuscript has only 83, with him rejecting in his definitive version poems which he considered repetitive, rough sketches which he adjudged poorly-executed and containing shallow lyricism. The longest poems comprise a hundred or so verses, the shortest are mere couplets. Al-Shābbī used a large spread of metres, since he employed ten out of the sixteen, in descending order of frequency, 1. *khafīf*; 2. *kāmil*; 3. *mutaḳārib*; 4. *ramal*; 5. *basīṭ*; 6. *ṭawīl*; 7. *sarīʿ* and 8. *mudjtathth*; 9. *mutadārik*; 10. *munsariḥ*.

Most of his poems are in the classical mode, with a single metre and monorhyme; in this, al-Shābbī remained a conservative. Nevertheless, he moved forward timidly towards innovation, following the Syro-Lebanese and New World poets, with some strophic poems in which he plays on the number of poetic feet and by alternating the rhymes. A varied typology opened up for him, e.g. seven possibilities for a single

ramal. Thus we have a strophic schema for the seven attested combinations:

one foot, rhyme A
one foot, rhyme A
four feet, rhyme B
four feet, rhyme B
two feet, rhyme C.

The young poet's death, at the age of 25, in a Tunisia where poets had been very few, gave him a romantic halo and a popularity verging on the mythic. This infatuation with him has engendered, for over 60 years, erroneous, contradictory or fantastic biographical statements, and peremptory, verbose or extravagant literary judgements. Whilst he was published as a literary critic at the age of 20, his collected poetry had to await publication 21 years after his death.

Bibliography: 1. Works. Shābbī, *al-Aʿmāl al-kāmila*, 2 vols., Tunis 1984: i. (a) *Aghānī 'l-ḥayāt*, 330 pp.; (b) *al-Khayāl al-shiʿrī ʿind al-ʿArab*, 140 pp.; ii. (a) *al-Dumūʿ al-ḥāʾira*, 122 pp.; (b) *Rasāʾil*, 316 pp.; (c) *Mudhakkirāt*, 76 pp.—in fact, an intimate journal going from 1 January to 6 February 1930.

2. Studies. Abu 'l-Ḳāsim b. Kirrū, *al-Shābbī, ḥayātuhu wa-shiʿruhu*, Beirut 1952 (by other works, this author clearly shows himself as the person who knows al-Shābbī best); *Poèmes de Chabbi*, French tr. A. Ghédira, Paris 1959; idem, *Chabbi ou le mal de vivre*, Tunis 1986; *Songs of life. Selection of poems*, Eng. tr. Lena Jayyusi and Naomi Shibab Nye, Carthage 1987; *Journal*, French tr. Mongi Chemli and Mohamed Ben Ismaïl, Tunis 1988; *Camb. hist. of Arabic literature. Modern Arabic literature*, ed. M.M. Badawi, Cambridge 1992, 126-30.

(A. GHÉDIRA)

SHABBĪR ḤASAN KHĀN DJOSH, modern Urdu poet, born 5 December 1898, died 22 February 1982.

He was born in Malīḥābād, a town in present-day Uttar Pradesh (formerly United Provinces) in India. His parents gave him the name of Shabbīr Aḥmad Khān, but subsequently he adopted his existing name of Shabbīr Ḥasan Khān as a token of his Shīʿī sympathies. He descended from a line of poets reaching back to his great-grandfather, Nawwāb Faḳīr Muḥammad Khān, who composed poetry under the pen-name Goyā. Djosh received his early education at home. About 1914 he went to ʿAlīgaṙh, where he joined the school attached to the Muhammadan Anglo-Oriental College. He attended various institutions one after the other, but failed in the end to complete his formal education, in part because of his father's death. Among those whom he mentions by name as his teachers was the famous Urdu novelist Mīrzā Muḥammad Hādī Ruswā (d. 1931 [*q.v.*]), who taught him Arabic.

In 1924 Djosh went to Ḥaydarābād (Deccan) and was appointed in the Translation Bureau of Osmania University, his duty being to supervise the translations of literary works from English into Urdu. Through his poetry he won access to higher social circles, and seemingly enjoyed a pleasure-loving life. He stayed in Ḥaydarābād for some ten years, when he was expelled for reasons which are unclear but probably resulted from official disapproval of his dissolute conduct. Whatever the case may be, he was dismissed and made to leave the state summarily.

In January 1936 Djosh started a monthly magazine from Delhi, *Kalīm*. Although the magazine was well received in literary circles, it came up against financial difficulties and ceased in 1939 as an independent publication. Thereupon it became merged with the journal *Nayā adab* ("New literature"), and appeared for some time under the title *Nayā adab awr Kalīm*, with Djosh acting as its chief editor. Soon after the outbreak of World War II it published in its August-September 1939 issue an inflammatory poem by Djosh, entitled *East India Company ke farzandoṅ ke nām* ("To the children of East India Company"), which received wide prominence, but was banned by the government for its strong anti-British content.

From 1943 till the beginning of 1948 Djosh was associated with Indian films as a songwriter, most of this time with Shālīmār Pictures in Pune (Poona). In 1948 he became the editor of *Ādj kal* ("Now"), a literary magazine published from Delhi under the auspices of India's Ministry of Information and Broadcasting, continuing in that capacity until 1955.

Djosh had strongly supported the cause of Indian nationalism. This, together with his outstanding contribution to literature, assured him a privileged place in the new set-up after India became independent in 1947. The Indian government rewarded him with one of its highest honours, the Padam Bhushan. Given all the prestige that he enjoyed in India, it came as a shock when he suddenly migrated to Pākistān towards the end of 1955. From the Indian point of view, his action amounted to a betrayal of trust, the more so because of the strained relations existing between India and Pākistān. According to Djosh's own admission, he made the choice (which he seemed to have regretted afterwards) in anticipation of better economic prospects for himself and his family. In Pākistān he was appointed in 1958 as literary consultant in the *Taraḳḳī-yi Urdū* Board ("Urdu Development Board"), a Karachi-based, government-sponsored body, which was entrusted with the task of preparing a comprehensive dictionary of Urdu on the pattern of the *Oxford English dictionary*. Later, the Board also assumed the work of reissuing standard Urdu writings which had been out of print for a long time. Djosh was connected with the Board until the beginning of 1968, when his contract was not renewed by the military government of President Ayub Khan, supposedly because the poet was reported to have spoken against Pākistān while on a tour to India during the previous year. In 1972 Djosh moved from Karachi to Islamabad where, in 1973, the government of Prime Minister Zulfiqar Ali Bhutto provided him with a job in the Ministry of Education. He continued in this position under President Zia-ul-Haq, but in 1981 his health began to fail and he died in February 1982, being buried in Islamabad.

Djosh remained a controversial figure throughout his life. He was outspoken both in his personal dealings as well as in his poetry. His habits were provocative; thus his taste for drinking shocked orthodox sentiments, and he seemed irreverent where religious matters were concerned, yet, at the same time, he displayed deep feelings for the Prophet Muḥammad and for ʿAlī and his son Ḥusayn.

Djosh claimed to have begun composing poetry when he was nine years old, eventually using as his pen-name Djosh. He was a prolific writer and has left numerous publications in verse and prose (see *Bibl.*). His first collection, *Rūḥ-i adab* ("The spirit of literature"), which contained his work composed since the age of nine, was published in 1920, and the entire edition quickly sold out. His other poetical works followed in quick succession, and a posthumous volume of his unpublished poems appeared in 1993 under the title *Miḥrāb u miḍrāb* ("The niche and the plectrum"). He was also a prose-writer with a distinctive style, his best-known book here being his

autobiography *Yādoṅ kī barāt* ("The wedding procession of memories"), which is perhaps one of the most interesting works of modern Urdu literature.

Djosh's earliest adventures in poetical composition were represented by the *ghazal*. About 1914 he took up the writing of *naẓm* (thematic poem) at the instance of Mawlawī Waḥīd al-Dīn Salīm (d. 1928), of Pānīpat, a follower of the literary reformer, Alṭāf Ḥusayn Ḥālī (d. 1915 [*q.v.*]), and one of the architects of modern Urdu literature. The subjects of most of Djosh's early *naẓms* were love and nature. Soon, however, politics also entered his verse, and became ultimately one of his most frequently employed themes. Superficial and devoid of any sustained effect, these inflammatory and topical poems were nevertheless important because they articulated the prevalent political mood of the country, and may be said to have laid the foundation of militant poetry in Urdu. One of the best-known poems reflecting this tendency, *Shikast-i zindāṅ kā khʷāb* ("The dream of the breaking down of the prison"), was composed in the 1920s, and reflected the revolutionary fervour of the period against British domination.

The predominant note of Djosh's verse is its romanticism. His poetic outlook is largely traditional, and he employs set forms for his compositions. One of his favourite verse forms is the *rubāʿī*, in which his mastery is evidenced by the skilful treatment of varied subjects. He has also revived the traditional *marthiya* by using it as a medium for conveying a new social and political sensibility. Another significant aspect of his poetry is his protest against religious hypocrisy, social injustice and political expediency, though his command over language often translates itself in his poems into a mere exercise in words, adding little to the development of the thought and its content.

Djosh undoubtedly ranks among the foremost Urdu poets of modern times. In fact, he is regarded by his admirers as next only to Iḳbāl (d. 1938 [*q.v.*]) in importance. He has left a lasting effect on modern Urdu poetry, and his influence is seen most vividly in the works of such poets as Iḥsān Dānish (1911-82), Asrār al-Ḥaḳḳ Madjāz (1911-55), Makhdūm Muḥyī al-Dīn (1908-69) and ʿAlī Sardār Djaʿfarī (b. 1913).

Bibliography: 1. Poetical works. *Rūḥ-i adab*, Bombay 1920; *Naḳsh u nigār*, Delhi 1936; *Shuʿla u shabnām*, Delhi 1936; *Fikr u nashāṭ*, Delhi 1937; *Djunūn u ḥikmat* (collection of *rubāʿīs*), Delhi 1937; *Ḥarf u ḥikāyat*, Lahore 1938; *Āyāt u naghmāt*, Lahore 1941; *ʿArsh u farsh*, Bombay 1944; *Rāmish u rang*, Bombay 1945; *Sunbul u salāsil*, Bombay 1947; *Sayf u sabū* (selection of Djosh's poems made by him), Bombay 1947; *Surūd u khurosh*, Delhi 1952; *Samūm u ṣabā*, Karachi 1955; *Ṭulūʿ-i fikr*, Karachi 1957; *Mūdjid u mufakkir*, Lucknow n.d.; *Ilhām u afkār*, Karachi 1967; *Nudjūm u djawāhir*, Karachi 1967; *Djosh Malīḥābādī ke marthiye*, ed. Ḍamīr Akhtar Naḳwī, Karachi 1980; *Miḥrāb u midrāb*, Lahore 1993.

2. Prose works include *Ishārāt* (collection of articles published in *Kalīm*), Delhi 1942; *Yādoṅ kī barāt* (autobiography), Lucknow 1972; *Maḳālāt-i Djosh*, ed. Saḥar Anṣārī, Karachi 1982.

3. Studies. These are fairly extensive. Only selected items may be mentioned here: *Afkār* (special issue on Djosh), xvii/122 and 123, Karachi 1962; *ibid.* (special issue on Djosh), xxxviii/148, Karachi 1982; *Sāḳī* (special issue on Djosh), lxviii/4, Karachi 1963; Iḥtishām Ḥusayn, *Djosh Malīḥābādī: insān awr shāʿir*, Lucknow 1983; Iḥtishām Ḥusayn and Masīḥ al-Zamān (eds.), *Intikhāb-i Djosh* (introd.), Allahabad 1967 (?); Sardār Djaʿfarī, *Taraḳḳī pasand adab* (138-63), Aligarh 1951; Naresh Kumār Shād, *Djosh awr us kī shāʿirī*, Delhi n.d.; ʿIṣmat Malīḥābādī, *Djosh kī rūmānī rubāʿiyyāṅ*, Lucknow 1976; idem, *Rūmānī shāʿirī meṅ Djosh kī khidmat*, Lucknow 1984; idem, *Kitāb-i Djosh*, Lucknow 1991; Faḍl-i Imām, *Shāʿir-i ākhir al-zamāṅ Djosh Malīḥābādī*, Delhi 1982; Māʾil Malīḥābādī, *Djosh awr diyār-i Dakan*, Lucknow 1984; Ṣibghat Allāh Baranī (ed.), *Haḍrat Djosh Malīḥābādī: shakhṣiyyat, fann u afkār*, Karachi 1984; Kāẓim ʿAlī Khān (ed.), *Djosh shināsī*, Lucknow 1986; Ẓafar Maḥmūd, *Djosh Malīḥābādī: shakhṣiyyat awr fann*, Delhi 1989; Khalīḳ Andjum (ed.), *Djosh Malīḥābādī: tanḳīdī djāʾiza*, Delhi 1992; ʿAḳīl Aḥmad, *Djosh kī shāʿirī kā tanḳīdī tadjziya*, Delhi 1993; Ḳamar Raʾīs (ed.), *Djosh Malīḥābādī: khuṣūṣī muṭālaʿa*, Delhi 1993; ʿĀliya Imām, *Shāʿir-i inḳilāb* (*Djosh Malīḥābādī*), Karachi n.d.

(MUNIBUR RAHMAN)

AL-**SHAʿBĪ**, ʿĀmir b. Sharāḥīl b. ʿAbd al-Kūfī, Abū ʿAmr, famous early legal expert and transmitter of *ḥadīth* [*q.v.*].

He is said to have been a descendant of a kinglet (Ar. *ḳayl*) of Yemen. He was a member of the Shaʿb clan of the tribe of Hamdān. In *isnāds* [*q.v.*] he is either referred to as al-Shaʿbī or (less often) as ʿĀmir (without patronymic), but there are no other men called ʿĀmir, at least not in that early slot of *isnāds*, immediately preceding a Companion or the Prophet, with whom he could have been confused. As is the case with many other leading figures of the first two centuries of Islam, the year of his birth is shrouded in mystery. He stated himself that he was born in the year of the battle of Djalūlāʾ, but for that battle two years are mentioned: 16/637-8 and 19/640 (cf. F.M. Donner, *Early Islamic conquests*, 212, while al-Ṭabarī, i, 2646, indicates his birth in the year 21/642). His mother is said to have been captured after that battle and to have been allotted to his father as part of the booty. Al-Shaʿbī is said to have died sometime between 103/721 and 110/728. His age at death may be reconstructed on the basis of other data, which seems to suggest that he was born *ca.* 40/660, cf. G.H.A. Juynboll, *Muslim tradition* etc., 20.

Al-Shaʿbī is said to have lived most of his life in Kūfa where, with Ibrāhīm b. Yazīd al-Nakhaʿī [see AL-NAKHAʿĪ, IBRĀHĪM], with whom he often is compared, he was the most influential legal expert of his day. He claims that he met numerous Companions of the Prophet, which entitles him to be classed in the generation of the Successors. Although he is supposed to have spurned the use of *raʾy* (i.e. one's personal judgement which is not based upon *sunna māḍiya* i.e. precedent, cf. Ibn Saʿd, vi, 176), hundreds of his legal opinions (Ar. *ḳawl*, pl. *aḳwāl*) have survived in several pre-canonical tradition collections, cf. especially the indices of the *Muṣannaf* works by ʿAbd al-Razzāḳ al-Ṣanʿānī (d. 211/827) and Abū Bakr b. Abī Shayba (d. 235/849); see also *Concordance*, viii, s.n. It is hard to establish which of these individual *aḳwāl* are historically ascribable to Shaʿbī and which are not. But the mere fact that *aḳwāl* of Successors have survived at all in such numbers, while traditions with more "sophisticated" *isnāds*, the *mawḳūfāt*, *marāsīl* and *marfūʿāt* [see MURSAL and RAFʿ. 2], were already in the process of being put together, thus making these *aḳwāl* redundant, may perhaps be taken as an indication of the overall tenability of their historicity, cf. Juynboll, *Some notes on Islam's first* fuqahāʾ *distilled from early* ḥadīt *literature*, in *Arabica*, xxxix (1992), esp. 299-302. Taken together, they describe him as an all-round *faḳīh* who seemed to have been well-versed in every *fiḳh* chapter. His advice (*fatwā*) on juridical and ritual matters was

allegedly sought by many, and the trends he set in fashion and cosmetics, such as his habit to wear clothes of silk and dye his hair with henna, are extensively dealt with in Ibn Saᶜd, vi, 176. Furthermore, al-Shaᶜbī's recorded skill in arithmetic, cf. *ibid.*, 173, l. 3, made him especially expert in the solving of inheritance problems, as is attested in Ibn Abī Shayba's *Muṣannaf* and al-Dārimī's *Sunan*, chs. on *farāʾiḍ*. An explanation for Shaᶜbī's supposedly frequent resorting to *raʾy*, as set off against his vehement rejection of it on other occasions, may be sought in plain *jalousie de métier*: we may assume that he barely suffered trespassing on his patch by recently converted *mawālī* who, with the exception of the Ḥidjāz, were everywhere in the majority in the Islamic domain. In their desire to find out what their new religion stood for, and, where necessary, to give it substance, they were presumably also engaged in the giving of *fatwās* and the dissemination of *akwāl* and *ḥadīth*. Their mere presence in the mosque where al-Shaᶜbī himself held court may have prompted him to call them by highly derogatory appellatives, such as *Ṣaᶜāfika* (= "penniless merchants"), cf. *LA*, s.n. On the whole, he seems to have mistrusted *mawālī*, as may be reflected in a remark attributed to him: after the *mawālī* have mastered the rules of Arabic grammar, they are surely the first to corrupt them, cf. Ibn ᶜAbd Rabbihi, *ᶜIkd*, ed. Cairo 1948-53, ii, 478; al-Djāḥiẓ, *Bayān*, ii, 69. *Mawālī* mentioned as the butt of al-Shaᶜbī's vitriol were among others Ḥammād b. Abī Sulaymān, the celebrated teacher of Abū Ḥanīfa [*q.v.*], Ḥakam b. ᶜUtayba, Abū Ṣāliḥ Bādhām, and the self-styled Ḳurʾān exegete al-Suddī.

Moreover, al-Shaᶜbī figures in the *isnād* strands of innumerable historical *akhbār* the majority of which deal with the early conquest history of ᶜIrāḳ as recorded by Sayf b. ᶜUmar [*q.v.*] and a few other historians. Among these, the disproportionately large number of reports of the *awāʾil* [*q.v.*] genre is particularly striking. Appointed *ḳāḍī* by the governor of ᶜIrāḳ Ibn Hubayra [*q.v.*] (according to al-Ṭabarī, ii, 1347, in the year 100/718), he is said to have refused to combine his judgeship with nocturnal conversation (Ar. *samar*) with his employer. Besides, Shaᶜbī is recorded to have composed unusual rhymes (*awābid*), as well as high-class poetry. He allegedly boasted that he could recite poetry for a month without having to resort to repeats. The Umayyad caliph ᶜAbd al-Malik, who had sent his children to al-Shaᶜbī to be educated (Wakīᶜ, *Akhbār al-ḳuḍāt*, ii, 421-2; al-Djāḥiẓ, *Bayān*, ii, 251) invited him to Damascus to engage in poetic contests with al-Akhṭal [*q.v.*], and allegedly gave him and twenty members of his household and children each 2,000 dirhams annually; it is recorded that he also sent him to his brother ᶜAbd al-ᶜAzīz, the then governor of Egypt (cf. *Aghānī*[3], xi, 20-6) as well as to the emperor of Byzantium, who is said to have been greatly impressed by al-Shaᶜbī (*Taʾrīkh Baghdād*, xii, 231).

As far as Shaᶜbī's use of *isnāds* is concerned, a case could be made for crediting him with an innovative device: in response to the *isnād* requirement instituted in the course of his life, he was the first man who thought of attributing reports which were in need of an *isnād* strand back to the Prophet to particularly long-lived informants, thus giving rise to the widely imitated *muᶜammar* [*q.v.*] phenomenon. One of the very few Companions in the technical sense of the term whose age at death "qualified" him as a *muᶜammar* and whose name was inserted in *isnād* strands back to Muḥammad was ᶜAdī b. Ḥātim [*q.v.*], and more extensively than anybody else, it was al-Shaᶜbī who relied heavily on ᶜAdī *isnād* strands, as ᶜAdī's *musnad* in the *Tuḥfat al-ashrāf* of al-Mizzī [*q.v.*] makes abundantly clear (cf. vii, 274-80). But a final analysis of al-Shaᶜbī's role in the proliferation of prophetic *ḥadīth* is something that still needs to be tackled.

All accounts of his life agree that al-Shaᶜbī became deeply involved in politics. Al-Ṭabarī, ii, 609-13 has preserved his eyewitness account of how al-Mukhtār b. Abī ᶜUbayd [*q.v.*] began his rebellion, which al-Shaᶜbī espoused. Later, he took fright and left for al-Madāʾin or Medina, as it says elsewhere. Here he is said to have met ᶜAbd Allāh b. ᶜUmar [*q.v.*], who allegedly praised al-Shaᶜbī's knowledge of the *maghāzī* [*q.v.*], which he called greater than his own. His flirtation with Shīᶜī ideology is supposed to have come to an end because of the Shīᶜīs' *ifrāṭ* or exaggeration in religion, which he abhorred. In Ibn ᶜAbd Rabbihi, *ᶜIkd*, ii, 409, he is depicted as scathingly inveighing against the Rāfiḍīs. Eventually, having returned to ᶜIrāḳ, he is also described as having participated with the *ḳurrāʾ* [*q.v.*] in the insurrection of Ibn al-Ashᶜath [*q.v.*] against al-Ḥadjdjādj [*q.v.*] in 80/699. This governor had reportedly always held al-Shaᶜbī in great esteem, so that he had appointed him the *ᶜarīf* [*q.v.*] of his clan and the *mankib* (= superintendent) of the Hamdān tribe. After this insurrection was put down, al-Shaᶜbī fled from the governor's revenge to the court of Ḳutayba b. Muslim [*q.v.*], where he enjoyed asylum for a time. Later, he allegedly returned to al-Ḥadjdjādj, apologised for his role in the rebellion and was subsequently pardoned. His confrontation with the governor has given rise to a long range of flowery anecdotes, which receive broad mention in historical as well as *adab* sources.

Bibliography: More or less extensive sections on al-Shaᶜbī are given in Ibn Saᶜd, vi, 171-8; Balādhurī, *Ansāb al-ashrāf*, v, index s.n.; *Taʾrīkh Baghdād*, xii, 227-34; Dhahabī, *Siyar aᶜlām al-nubalāʾ*, ed. Arnaʾūṭ, iv, 294-319; idem, *Tadhkirat al-ḥuffāẓ*, i, 79-88; Ibn Khallikān, *Wafayāt*, ed. I. ᶜAbbās, iii, 12-5; Ibn Manẓūr, *Mukhtaṣar taʾrīkh madīnat Dimashk*, xi, 249-63; Ibn Ḥadjar, *Tahdhīb al-tahdhīb*, v, 65-9. Abū Nuᶜaym, *Ḥilyat al-awliyāʾ*, iv, 310-38, contains a long series of traditions most of which are spuriously ascribed to al-Shaᶜbī. He is, furthermore, credited with numerous bon mots and aphorisms which are scattered over early historical and *adab* works, cf. the indices s.n. of such sources as Fasawī, *K. al-Maᶜrifa wa 'l-taʾrīkh*; Djāḥiẓ, *Bayān* and *Ḥayawān*; Ibn Ḳutayba, *ᶜUyūn al-akhbār*; Ibn ᶜAbd Rabbihi, *ᶜIkd*; Iṣfahānī, *Aghānī*; Mubarrad, *Kāmil*; etc. For al-Shaᶜbī's *awāʾil* reports, see the indices s.n. of Abū Hilāl al-ᶜAskarī, *K. al-Awāʾil*, ed. M. al-Miṣrī and Walīd Ḳaṣṣāb, Damascus 1975, and Djalāl al-Dīn al-Suyūṭī, *al-Wasāʾil ilā musāmarat al-awāʾil*, ed. Asᶜad Talas, Baghdād 1950. For his use of *muᶜammarūn* in his *isnāds*, see *WZKM*, lxxxi (1991), 155-75. For his role in *ḥadīth*, see G.H.A. Juynboll, *Muslim tradition. Studies in chronology, provenance and authorship of early* ḥadīth, Cambridge 1983, index s.n. (G.H.A. JUYNBOLL)

SHABĪB B. SHAYBA, Abū Maᶜmar al-Minḳarī al-Tamīmī, orator, narrator of *akhbār* and author of many maxims preserved in various works of *adab* literature, was a man of high lineage of the Saᶜd b. Zayd Manāt branch of the Banū Tamīm at Basra. Khālid b. Ṣafwān [*q.v.*], the famous orator of the late Umayyad and early ᶜAbbāsid periods, also belonged to the same family as Shabīb. According to al-Djāḥiẓ (*al-Bayān wa 'l-tabyīn*, ed. ᶜAbd al-Salām M. Hārūn, i, 355), they were cousins, but biographers also note a different lineage (e.g. al-Khaṭīb, *Taʾrīkh Baghdād*, ix,

274). In any case, they are often mentioned together, and it is noted that their relationship, dictated by the ties of family and profession, was not always friendly (*Bayān*, i, 340; *Aghānī*, xx, 404-5). After serving for a short time as head of the *shurṭa* at Baṣra (Wakīʿ, *Akhbār al-ḳuḍāt*, ii, 60), Shabīb went to the new capital Baghdād, where he was admitted at court as companion and *littérateur* of the caliphs al-Manṣūr and al-Mahdī. He is said to have had some influence, and he reports himself that he was regularly invited to meetings with al-Mahdī (Thaʿlab, *Madjālis*, ed. Hārūn, 413), who held him in esteem for his wise and witty statements. His acquaintance with the inner circles of power made him an authority for some historical *akhbār*. After about two decades, he returned to Baṣra. Ibn al-ʿImād includes Shabīb among the names of the deceased of the year 162/778-9, but it is more likely that he died some years later, "in the sixties" as al-Dhahabī (*Taʾrīkh al-Islām*) notes.

As a pious man, Shabīb included prophetic *ḥadīth* into his sayings. However, when the specialists of Islamic Tradition developed their criteria of censure, his testimony did not find approval, although his merits in the literary field were aknowledged by Ibn Ḥibbān and others (*K. al-Madjrūḥīn*, ed. Zāyid, i, 363 and Ibn Ḥadjar, *Tahdhīb at-tahdhīb*, xxxiv, 307). These merits are expressed by al-Djāḥiẓ in clear terms: in addition to his competent knowledge of style, Shabīb was distinguished by the dissemination of his sayings among the literati (*Bayān*, i, 317-18). The reason for this was, as it is witnessed by the quotations preserved in our sources, his mastery of the short sententious expression. This art was for him the true perfection of speech (*Bayān*, i, 112). *Adab* literature preserves examples of his eloquence in the oratory genres of admonition (*mawʿiẓa*), condolence (*taʿziya*) and general ethical topics. His repeated recommendations for the quest of *adab* are early references to this literary and social concept (e.g. *Madjālis Thaʿlab*, 257; Ibn ʿAbd al-Barr, *Bahdjat al-madjālis*, ed. al-Khūlī, i, 112; *Taʾrīkh Baghdād*, ix, 276). Besides maxims of his own, older examples of aphorisms and speeches appear in literature on his authority. A considerable number of the texts quoted from Shabīb show parallels which testify to a widespread and varied transmission of his sayings. Brockelmann already mentions him as a precursor of *adab* literature (Suppl. I, 105), and in spite of the fact that Shabīb did not compose books—Ibn al-Nadīm only names him among the *khuṭabāʾ* (*Fihrist*, ed. Tadjaddud, 139)—this view is confirmed by the materials preserved.

Werkmeister, *Quellenuntersuchungen zum Kitāb al-ʿIqd al-farīd*, Berlin 1983, 385-7; Yāḳūt, *Irshād*, ed. Margoliouth, iv, 260; Dhahabī, *Taʾrīkh al-Islām*, ed. Tadmurī, 257-9, years 161-70. For quotations from Shabīb, see also al-Zubayr b. Bakkār, *Akhbār al-Muwaffaḳiyyāt*, ed. al-ʿĀnī; Ibn Ḳutayba, *ʿUyūn al-akhbār*; Zamakhsharī, *Rabīʿ al-abrār*, ed. al-Nuʿaymī; etc. (S. LEDER)

SHABĪB B. YAZĪD b. Nuʿaym al-Shaybānī, Khāridjite leader of the early Umayyad period. A tribesman of the Banū Hammām b. Murra b. Dhuhl lineage of the Shaybān, Shabīb's father Yazīd b. Nuʿaym emigrated from al-Kūfa to the region of al-Mawṣil, and participated in Salmān b. Rabīʿa al-Bāhilī's raids along the northern frontier; during one of these Nuʿaym is said to have taken a wife, and the union produced Shabīb in Dhu 'l-Ḥidjdja of year 25 (September/October 646) or 26 (September/October 647). Shabīb seems to have grown up in al-Mawṣil, perhaps in the town of Sātīdamā (on this toponym, see J. Markwart, *Südarmenien und die Tigrisquellen*, Vienna 1930, 274 ff.). Shabīb also served in the army, since he is said to have received a stipend and fought the Kurds, but at some undetermined time his name was dropped from the *dīwān*; the account preserved in al-Balādhurī's *Ansāb* and credited to al-Haytham b. ʿAdī says this was by reason of his absence from the muster call. In any case, several sources (al-Balādhurī, Ibn Aʿtham and al-Baghdādī) explain Shabīb's rebellion with reference to ʿAbd al-Malik's refusal to grant (or restore) his stipend.

Little specific is said about Shabīb's Khāridjite ideas, but his rebellion was certainly one of the most spectacular of the Umayyad period; it caught the fancy of Muslim and Christian historians alike, who portray Shabīb as a fearless guerrilla leader. His fighting men were drawn largely, but not exclusively, from the Banū Shaybān. According to Abū Mikhnaf, as preserved in al-Ṭabarī, in Djumādā I 76/September 695, Shabīb succeeded the pious and ascetic Ṣāliḥ b. Musarriḥ (less frequently, Musarraḥ), when Ṣāliḥ was killed in battle against al-Ḥārith b. ʿUmayra al-Hamdānī at the village of al-Mudabbadj; Ṣāliḥ had earlier rebelled in the region of Dara, and Shabīb is counted among his men. However, other sources cast some doubt on Abū Mikhnaf's reconstruction of the events, presenting Ṣāliḥ's rebellion as separate from that of Shabīb's. Be this as it may, according to Sayf, Shabīb then led the remnants of Ṣāliḥ's force through al-Mawṣil and central ʿIrāḳ, scoring victories at Khāniḳīn and al-Nahrawān, and even appearing in al-Kūfa with 200 men; he then defeated Zāʾida b. Ḳudāma at Rūdhbār, and ʿUthmān b. Ḳaṭan al-Ḥārithī near the village of al-Batt, which lay on the southern borders of the province of al-Mawṣil, in Dhu 'l-Ḥidjdja 76/March 696. After 3 months of manoeuvring in early 77/mid-696, Shabīb eventually took al-Madāʾin, and now with perhaps 600 men, defeated ʿAttāb b. Warḳāʾ al-Riyāḥī, and threatened al-Kūfa. But his luck finally turned when a force of several thousand Syrians under the command of Sufyān b. al-Abrad al-Kalbī routed him near al-Kūfa; after an indecisive battle at al-Anbār, he marched through Djūkha, Kirmān, and moved into al-Ahwāz. There, crossing the Dudjayl before the Syrians, he was drowned sometime near the end of 77/early 697. Other reports put his death in 78/697-8.

Despite Shabīb's defeat, the Khāridjites of al-Djazīra and al-Mawṣil continued to draw on the region's restive tribesmen, and the sources record a nearly unbroken succession of rebellions against the Umayyads and early ʿAbbāsids; among these later Khāridjites the sources identify Shabīb's son Ṣuḥārī, who rebelled against the governor Khālid al-Ḳasrī [*q.v.*] in 119/737.

SHABISTARĪ [see maḥmūd shabistarī].

SHABṬŪN, an Andalusian *faḳīh* who was the grandson of a Syrian Arab who had entered the Iberian Peninsula either during the conquest or shortly after and who had left descendants in Cártama, Sidonia and Rayya. Abū ʿAbd Allāh Ziyād b. ʿAbd al-Raḥmān b. Ziyād b. ʿAbd al-Raḥmān b. Zuhayr al-Lakhmī (d. 204/819) was the first member of the family to devote himself to *ʿilm*. He was known as Shabṭūn or Shabaṭūn, a word apparently of Romance origin and a *laḳab* given to other Andalusī scholars.

During his *riḥla* to the East, probably begun in 173/789, he studied with Ibn ʿUyayna and al-Layth b. Saʿd among others, although he is especially remembered as Mālik b. Anas's pupil. He is in fact credited with having been the first to introduce Mālik's *fiḳh* into al-Andalus, as before him Andalusians would have followed al-Awzāʿī's *madhhab*. According to another version, he was the first to introduce material of *ḥalāl wa-ḥarām*. Although he is said to have actually introduced Mālik's *Muwaṭṭaʾ*, this is clearly a later assumption. What he transmitted was his "audition" of Mālik's teachings, known as *samāʿ Ziyād*. This *samāʿ* was incorporated by al-ʿUtbī in his *Mustakhradja* and can be partially found in Ibn Rushd al-Djadd's commentary on the *Mustakhradja* entitled *K. al-Bayān* (see M. Fierro, in *Al-Qanṭara*, vi [1985], 576-8). It deserves to be studied as one of the earliest surviving legal transmissions in al-Andalus, especially important for the introduction of Medinan *fiḳh* into the Iberian Peninsula.

Once back in al-Andalus, he was offered the post of judge which he refused (possibly a *topos* to stress his asceticism and piety). The same refusal is attributed to Shabṭūn's most famous pupil, Yaḥyā b. Yaḥyā al-Laythī, whose transmission of the *Muwaṭṭaʾ* originates directly from Mālik (but see now N. Calder, *Studies in early Muslim jurisprudence*, Oxford 1993, 20-38), except for some chapters of the *kitāb al-iʿtikāf* that Yaḥyā b. Yaḥyā transmitted from Shabṭūn (Shabṭūn's contribution can be checked in the existing editions of Yaḥyā b. Yaḥyā's *riwāya* of the *Muwaṭṭaʾ*).

Shabṭūn is also credited with having been the first to introduce the practice of wearing his cloak inside out during the prayer for rain (*al-istisḳāʾ*), a practice which was censured as magical. Shabṭūn was connected by marriage with the Andalusī judge and traditionist Muʿāwiya b. Ṣāliḥ al-Ḥaḍramī al-Ḥimṣī. His descendants became one of the *buyūtāt al-ʿilm* of Cordova. As scholars, some of them fulfilled religious offices such as *ṣāḥib al-ṣalāt*, judge and *faḳīh mushāwar*. Another branch of the family was connected with Rayya (Málaga), the most important member being the judge ʿĀmir b. Muʿāwiya. The last-known member of the family died in 430/1038. The Banū Ziyād Shabṭūn in fact disappear, at least from public life, with the end of the Umayyad caliphate. These Banū Ziyād are sometimes confused in the sources with a family of judges also known as the Banū Ziyād who were not of Arab origin (on them see Fierro, *Tres familias*, 115-30).

Bibliography: All references can be found in Mª I. Fierro, *Tres familias andalusíes de época omeya apodadas "Banū Ziyād"*, in *Estudios onomástico-biográficos de al-Andalus. V*, ed. M. Marín and J. Zanón, Madrid 1992, 89-102, and 102-15 for the rest of the family (for the statements made at 99, see now M. Fierro in *Al-Qanṭara*, xiii [1992], 473, n. 34).

(Maribel Fierro)

al-**SHĀBUSHTĪ**, Abu 'l-Ḥasan ʿAlī b. Muḥammad, littérateur of the Fāṭimid period, and librarian and boon-companion to the caliph al-ʿAzīz (365-86/975-96 [*q.v.*]), died at Fusṭāṭ in 388/988 or possibly in the succeeding decade. Ibn Khallikān explains the unusual cognomen Shābushtī as being a name of Daylamī origin, and not a *nisba*; an origin in *shāh pushtī* "he who guards the king's back" has been somewhat fancifully suggested.

Al-Shābushī's works included a *K. al-Yusr baʿd al-ʿusr*, a *Marātib al-fuḳahāʾ*, a *K. al-Tawḳīf wa 'l-takhwīf*, a *K. al-Zuhd wa 'l-mawāʿiẓ*, and collections of epistles and poetry. All these are lost, and his fame stems from his *K. al-Diyārāt* "Book of monasteries", extant in a Berlin ms. and now ed., with a good introd., by Gūrgīs ʿAwwād, ²Baghdād 1386/1966. This forms part of a minor genre of writing about monasteries, in which the author had been preceeded by the Khālidiyyānⁱ brothers, Abu 'l-Faradj al-Iṣfahānī and al-Sarī al-Raffāʾ [*q.vv.*]. It deals with 37 Christian monasteries in ʿIrāḳ, plus a smaller number of those in al-Djazīra, Syria and Egypt, and is of high importance for cultural history, historical geography and literature. There emerges from it that the monasteries were places to which caliphs and other high men of state could retire for recreation, above all, for drinking parties, since the monasteries were leading centres for wine-making [see dayr]. A considerable amount of poetry is cited, including verses otherwise unknown.

SHABWA, the name of the ancient capital of the South Arabian kingdom of Ḥaḍramawt [*q.v.* in Suppl.].

The name of this town appears in classical sources as Sabata (Strabo, *Geographica*, XVI, 4.2, according to Eratosthenes), Sabatha (Ptolemaios, *Geographia*, VI, 7.38), Sabbatha (*Periplus maris Erythraei*, 27) and Sabota (Pliny, *Natural history*, VI, 155; XII, 52). Ptolemaios calls the town a metropolis, and the *Periplus* additionally calls it the residence of the king, for whom silverware, horses, statues, and clothing of fine quality are imported. Pliny mentions as the chief place of the Atramitae Sabota a walled town containing sixty temples (*ibid.*, VI, 155), built on a high hill and situated a march of eight days away from the incense-producing region (*ibid.*, XII, 52). That the capital was also the religious and cultic centre of the kingdom seems to be confirmed by epigraphic evidence.

Shabwa, the geographical co-ordinates of which are lat. 15° 22′ N. and long. 47° 01′ E., is located about 700 m/2,300 feet above sea-level at the eastern border of the Ramlat al-Sabʾatayn on a hill at the mouth of the Wādī ʿAṭf, the lower course of the Wādī ʿIrma. The area was already inhabited during the Stone Age, and in the middle of the second millenium B.C. a settlement existed at the southern part of the later town. Shabwa was situated at the meeting-point of important caravan routes leading from the port of Ḳanaʾ at the Indian Ocean in the south and from the Djawl and the Wādī Ḥaḍramawt in the east to Timnaʿ, the capital of Ḳatabān [*q.v.*], and Mārib [*q.v.*], the capital of Sabaʾ [*q.v.*], as well as through the Ramlat al-Sabʾatayn and the Yemeni Djawf to

Nadjrān [*q.v.*] in the west and to al-ʿAbr further to the north.

The first epigraphic attestation of Ḥaḍramawt is to be found in the Old Sabaic inscription *RES* 3945, a record of Karibʾil Watar, from the 7th century B.C., in which the Ḥaḍramite king Yadaʿʾil is mentioned as an ally of the Sabaean king.

In the 5th century B.C. the first buildings on stone bases were erected in Shabwa and inscriptions in monumental script were set up. The cultural and political heyday of Shabwa was in the period between the 2nd century B.C. and the 1st century A.D. The mention of Shabwa in the epigraphic form *shbwt*, Shabwat, in Ḥaḍramitic inscriptions found outside of the capital (e.g. *Khor Rori* 1, 3, from the ancient town of Samārum at the coast of Ẓafār; *Jamme* 892 from Saʾnūn, the present-day Hānūn in the Ḳarāʾ Mountains of Ẓafār; *RES* 4912 from al-ʿUḳla, a fortress to the west of Shabwa) give evidence to the importance of the town.

The extensive research work carried out by the French Archaeological Mission in the ruins of the ancient town showed that, inside the fortified walls, tower dwellings were the most common architectural type of building in Shabwa. Materials for the construction of the houses were stone slabs, wooden beams and bricks of dry mud. A complex fortress with high foundations, a window-less base, many floors and with a courtyard surrounded by columns, turned out to be the royal castle. Its name *shkr*, Shaḳīr, was already known from Ḥaḍramitic and Sabaic inscriptions and from legends of coins, since the royal castle was also the mint of the Ḥaḍramite kingdom. Later, parts of the town and the royal castle were rebuilt, and the palace was splendidly decorated with sculptures and ornaments manifesting local traditions as well as Hellenistic influences. During the first decades of the fourth century A.D., the Ḥimyarite kings put an end to the independent kingdom of Ḥaḍramawt, and at the beginning of the 5th century the town of Shabwa began to decay.

The Arabic geographers of the Middle Ages knew of the ruins of the former metropolis only an insignificant settlement still called Shabwa, a name which has survived until today. Al-Hamdānī speaks of a province (*mikhlāf*) Shabwa, the inhabitants of which are the Ashbāʾ (the supposed descendants of a certain Shabāʾ, a grandson of Ḥaḍramawt; cf. *Iklīl*, ii, ed. M. al-Akwaʿ, Cairo 1966, 372, l. 5-373, l. 1), the Ayzūn (i.e. the Yazanids), and also Ṣudāʾ and Ruḥāʾ (*Ṣifa*, ed. Müller, 98, 20). According to the same author, Shabwa is situated between Bayḥān and Ḥaḍramawt and is a town belonging to the Ḥimyar. One of the two mountains of salt lies in its neighbourhood. When the Ḥimyar waged war on the Madhḥidj [*q.v.*], the people of Shabwa emigrated from their town and settled in the Wādī Ḥaḍramawt, where Shibām was allegedly named after them (*Ṣifa*, 87, ll. 23-5). The fact that Shabwa is considered as belonging to the Ḥimyar may reflect the situation of late pre-Islamic times when Ḥaḍramawt had become part of the Ḥimyarite realm. In another passage, al-Hamdānī enumerates Shabwa among the strongholds of Ḥaḍramawt (*Iklīl*, viii, ed. al-Akwaʿ, Damascus 1979, 157, l. 5). Until today, salt of good quality is mined from two mountains to the north of Shabwa, called Milḥ Maḳʿa and Milḥ Khashʿa, and from two mountains to the south-west of it, called Milḥ Kharwa and Ḥayd al-Milḥ near ʿAyāḍ. Yāḳūt writes that Shabwa is a station on the main road from the Wādī Ḥaḍramawt to Mecca (*Muʿdjam*, iii, 257, l. 14), and in another passage he mentions that it is the place where the grave of the prophet Ṣāliḥ is supposed to be (iv, 184, ll. 17-18). The notice that in Shabwa one sells a load of dates for one dirham (Ibn ʿAbd al-Munʿim al-Ḥimyarī, *al-Rawḍ al-miʿṭār*, ed. I. ʿAbbās, Beirut 1975, 347) indicates that the surroundings of the town must still have been fertile in the Islamic Middle Ages.

H. Helfritz was the first European who succeeded in reaching Shabwa during an adventurous journey in 1934. In 1936 H.St.J.B. Philby, coming from the north-west, visited the ancient town, gave a detailed report on the existing ruins and drew a plan of Shabwa. The first small excavation in the ruins of Shabwa was undertaken in 1938 by R.A.B. Hamilton. In December 1974 a French Archaeological Mission under the direction of Jacqueline Pirenne and subsequently of J.-Fr. Breton started excavations at the site of Shabwa which have given a deep insight into the two millennia of the ancient history of this important settlement.

The ruins of Shabwa are so extensive that, within the area of the ancient town, there are the three villages of Hadjar, Mathnā and Maywān, which are inhabited by members of the tribes of the Karab and Āl Burayk. In the former People's Democratic Republic of Yemen and in the present Republic of Yemen, Shabwa has given its name to a governorate (*muḥāfaẓa*) which reaches from the Saudi Arabian border to the Indian Ocean and includes an area of 37,910 km². The governorate of Shabwa is divided into four administrative districts (*mudīriyyāt*), and its capital city is ʿAtaḳ. In the recent past, the region around Shabwa has become economically important because of the exploitation of the oilfields which have been discovered there.

(W.W. Müller, shortened by the Editors)

SHADD (a.) either the act of girding with an initiatic belt or girdle, as practised by the chivalrous sodalities (the exponents of *futuwwa* [*q.v.*]), the trade guilds (*aṣnāf*, see below, 2., and ṣinf), and certain Ṣūfī orders, or the belt or girdle itself. To the Arabic *shadd* in its verbal meaning correspond the Turkish expressions *ṣedd kuṣatmak*, *kuṣak kuṣatmak*, and *bel bağlamak*, and the Persian *kamar bastan*. The origin of the custom has been attributed to the *kustī*, the sacred girdle of the Zoroastrians, for whom, however, girding on the *kustī* was a rite of passage into manhood, not of initiation into a closed society; moreover, the

symbolism attributed to this girdle—a separation of the noble from the ignoble parts of the body—found no reflection in any of the groups practising *shadd* (J. Duchesne-Guillemin, *La religion de l'Iran ancien*, Paris 1962, 114-15). In Islam, the initiatic belt was regarded pimarily as a symbol of steadfastness and submissiveness (Süleyman Uludağ, *Tasavvuf terimleri sözlüğü*, Istanbul 1991, 447-8).

1. In futuwwa and in Ṣūfism.

Handbooks of *futuwwa* assert that the first initiatic belt was that which Adam girded on at the behest of Gabriel as a token of fidelity to his terrestrial mission as divine viceregent (Neşet Çağatay, *Bir Türk kurumu olan ahilik*, ²Konya 1981, 181). By way of reaffirming this primordial covenant, Gabriel wound a similar belt around the waist of the Prophet Muḥammad, and he in turn girded it on ʿAlī. Next, those of the Companions who came to be regarded as the patrons of various crafts and trades were invested with a *shadd*, either directly by the Prophet or by ʿAlī acting under his instructions. As an honorary member of the Prophet's household, Salmān al-Fārisī [*q.v.*] is also said to have participated in this activity (Abdülbaki Gölpınarlı, *İA*, art. *Şedd*). No Ḳurʾānic reference could be adduced to vindicate the practice of girding; however, the words of Moses referring to Aaron in XX, 31, *ashdud bihi azrī* ("strengthen my back by means of him") are sometimes cited as alluding to the *shadd* (F. Taeschner, *Zünfte und Bruderschaften im Islam*, Zurich and Munich 1979, 162).

Among the *fityān*, the girding on of the *shadd* was accompanied by the recitation of various prayers that always included mention of ʿAlī, who was regarded as the fountain head of the tradition; mention of all Twelve Imāms was also common, particularly from the 8th/14th century onwards. A further echo of the putative ʿAlid origins of *futuwwa* was the practice of associating one end of the belt with Ḥasan and the other with Ḥusayn; the latter was to be kept longer than the former, as an indication of the primacy of the Ḥusaynid over the Ḥasanid line of descent (Çağatay, 45-7). At the time of initiation, the belt would be handed to the candidate for *futuwwa* by a companion (*rafīḳ*), whose duty it was to assist him in his further progress; and the ceremony of girding would be concluded with the drinking of salted water (*shurb*), water signifying wisdom and salt, justice (Taeschner, 139).

The *shadd* was usually knotted, rather than being held together by a buckle, and it would be wound around the waist a varying odd number of times. It was usually made of wool, although other materials such as leather, rope and cloth were also acceptable; the only condition was that the *shadd* should not resemble the *zunnār*, the distinctive girdle *dhimmīs* were required to wear (Murtaḍā Ṣarrāf, *Rasāʾil-i Djawānmardān*, Tehran and Paris 1973, 77). It is worth noting that despite this stipulation, Jews and Christians were permitted to join the *futuwwa* brotherhoods, particularly if there was reason to hope they might come to accept Islam, conversion being, in fact, a condition of their proceeding beyond the stage of girding on the belt (Taeschner, 116).

The novice girded with a belt was known as *mashdūd* ("girded") or, more fully, *mashdūd al-waṣt* ("girded of waist"), and counted as a probationary member of the brotherhood; full initiation, referred to as *takmīl* ("completion") and symbolised by the putting of ritual trousers (*sirwāl*/*shalwār*) [see SIRWĀL], came later. The ceremony of *shadd* was said to correspond to *nikāḥ*, the conclusion of a marriage contract, and that of *takmīl* to the consummation of marriage (Taeschner, 141; Sarrāf, 77).

Similar procedures accompanied the girding on of the initiatic belt in the craft guilds, except that in the accompanying prayers mention would generally be made of a Companion of the Prophet believed to have practised the craft in question. Although Jews and Christians sometimes organised their own guilds, they were also admitted to those established by Muslims; in 19th-century Syria, they would recite the Ten Commandments or the Lord's Prayer respectively as the *shadd* was bound on (Taeschner, 585). Each guild, especially in Ottoman Turkey, had its own distinctive form of *shadd* and method of folding and knotting it (Çağatay, 156-7; Gölpınarlı, 380).

The fraternities of brigands known as *ʿayyār* [*q.v.*] which may be designated as a degenerate manifestation of *futuwwa* also resorted to the girding on of initiatic belts. This is apparent from the advice given in 532/1138 by Abu 'l-Karam, the governor of Baghdād, to his nephew, Abu 'l-Ḳāsim, that as a precautionary measure he should have himself girded with a belt by Ibn Bakrān, an *ʿayyār* chieftain then threatening the city (Ibn al-Athīr, xi, 24).

The custom of *shadd* was relatively uncommon among Ṣūfīs, for whom the major initiatic garment was the cloak or *khirḳa* [*q.v.*]; in fact, an explicit parallel was sometimes drawn between the belt and trousers of the *fityān* and the *khirḳa* of the mystics (see e.g. Ibn al-Djawzī, *Talbīs Iblīs*, Cairo 1340/1922, 241). Nonetheless, certain Ṣūfī orders did use the binding on of a girdle as part of their initiatic rites, undoubtedly as a borrowing from the traditions of *futuwwa*. It is tempting to suppose that this borrowing first took place under the auspices of Shihāb al-Dīn Abū Ḥafṣ ʿUmar al-Suhrawardī (d. 632/1234 [*q.v.*]), for he was simultaneously a Ṣūfī and an initiate of the caliph al-Nāṣir's courtly *futuwwa* (the assumption is made by J.S. Trimingham, *The Sufi orders in Islam*, Oxford 1971, 35). However, al-Suhrawardī's only reference to *shadd* in his celebrated manual of Ṣūfī practice comes in the context of travelling, where he remarks that binding up the waist (*shadd al-waṣt*) before setting out on a journey forms part of the Prophet's *sunna* (*ʿAwārif al-maʿārif*, printed as a supplement to Abū Hāmid al-Ghazālī, *Iḥyāʾ ʿulūm al-dīn*, Beirut n.d., v, 95). The connection between *shadd* and travelling is confirmed by Ibn Baṭṭūṭa's description of travelling Ṣūfīs arriving at the *khānaḳāhs* of Cairo as *mashdūd al-waṣt* and carrying with them other essential appurtenances of a journey: a staff, a jug for ablutions, and a prayer mat (*Riḥla*, ed. Karam al-Bustānī, Beirut 1384/1964, 38, tr. Gibb, i, 45). Another passage in Ibn Baṭṭūṭa confirms that the girdle generally had a utilitarian not a ritual function in Ṣūfism; he recalls meeting in Hurmuz with a certain *shaykh* from Anatolia who gave him a belt—here the Persian word *kamar* is used—that supported the body of the wearer "as if he were leaning against something", and adds that "most Persian dervishes" (*akthar fuḳarāʾ al-ʿadjam*) wore such belts (*Riḥla*, 274).

The principal Ṣūfī orders using belts or girdles for cultic purposes were the Mewlewīs and the Bektāshīs, a circumstance accounted for by the ubiquity of *futuwwa* (or of *akhilik*, its Turkish equivalent) in Anatolia during the period of their genesis in the 8th/14th century. The Mewlewīs wore a woollen girdle known as the *elifi nemed*, so called because with its tapering end when laid out flat it resembled the letter *alif*. A cord long enough to be twisted around the waist twice was attached to the end of the *elifi nemed* (Gölpınarlı, *Mevlevî âdâb ve erkânı*, Istanbul 1963, 16-17). A second type of woollen girdle, known as the *tīghbend* (literally, "swordbelt"), was worn only

during the Mewlewī dance, in order to hold in place during its initial stages the ample skirt of the garment known as the *tennūre* (*ibid.*, 44).

The *tīghbend* held a central place in Bektāshī ritual and belief. According to their tradition, the caliph Hishām wished to hang the Imām Muḥammad al-Bāḳir [*q.v.*], but the first time the rope was twisted around his neck he invoked the name of God and was saved, only a knot remaining in the rope. The second and third times the Imām invoked the names of the Prophet and ʿAlī respectively, giving rise to two further knots. When preparations were being made for a renewed attempt to hang the Imām, one of his followers by the name of Muʾmin ʿAyyār suggested that a rope made from the wool of a freshly slaughtered ram would be more effective, as he then demonstrated by hanging himself in front of the Imām's cell. Duly impressed, the caliphal agents went to hang the Imām using the same rope, but the Imām had peacefully breathed his last at precisely the moment Muʾmin ʿAyyār had hung himself. The Bektāshī *tīghbend*, also fashioned from ram's wool, was intended to be a replica of this rope, and it thus served as a symbol of self-sacrifice and commitment. Its girding on was the second element (after the donning of a skullcap) in the Bektāshī ceremony of initiation known as *iḳrār*. The three knots tied into the *tīghbend* symbolised both the names of the Bektāshī trinitarian scheme (God, the Prophet and ʿAlī) and the threefold ethical injunction of Bektāshism (restraining the hand from stealing, the tongue from lying and the loins from sexual transgression) (Aḥmed Rifʿat, *Mirʾāt ul-maḳāṣid fī defʿ il-mefāsid*, Istanbul 1293/1876, 268-70; J.K. Birge, *The Bektashi order of dervishes*, London 1937, 170, 181, 192, 234-5).

Other Ṣūfī orders said to have practised the *shadd* in Ottoman Turkey and—under Turkish influence—the Arab lands, include the Wafāʾiyya, Rifāʿiyya, Saʿdiyya, and Badawiyya (Trimingham, 185, n. 1; Pakalın, iii, 314). In Persia, the girding on of an initiatory belt is recorded for the Khāksār dervishes. The seven folds of the Khāksār girdle (*kamar*) signified the discarding of seven "instinctual fetters" (*band-i nafsānī*), i.e. vices, and the fixing in their place of seven "divine fetters" (*band-i raḥmānī*), i.e. virtues. The fact that the Khāksār, like the Bektāshīs, slaughtered a ram as part of their initiatic ceremonies points to the likelihood of a common source for the practices of both groups (Sayyid Muhammad ʿAlī Khwādja al-Dīn, *Kashkūl-i khāksārī*, Tabriz 1360 Sh./1981, 69-75; R. Gramlich, *Die schiitischen Derwischorden Persiens. Erster Teil, die Affiliationen*, in *AKM*, XXXVI 1, 80, *Dritter Teil, Brauchtum und Riten*, in *AKM*, XLV 2, 95-6).

It should be noted that the Ottoman practice of having a Ṣūfī *shaykh* gird a sword-belt on a newly-installed sultan, first documented for Murād II (824-48/1421-44 and 850-5/1446-51) was a reflection of *shadd* as practised both in *futuwwa* and in Turkish Ṣūfī orders (Çağatay, 45; Mustafa Kara, *Din, hayat, sanat açısından tekkeler ve zaviyeler*, ²Istanbul 1980, 166-8). It may finally be observed that the tradition of *shadd* may have predisposed certain Turkish Ṣūfīs to adopt freemasonry, with its comparable custom of initiatic girdling (Th. Zarcone, *Mystiques, philosophes et franc-maçons en Islam*, Paris 1993, 312).

(Hamid Algar)

2. In the trade guilds.

Under its corporate aspect, the practice of *shadd* is attested from the 16th to the 19th century in the Arab lands of the Near East; the guilds in the Maghrib did not apparently know this initiation rite.

There have been numerous descriptions of the *futuwwa* and the *shadd* ceremony (with divergencies over details) all through the period of the Ottoman empire. The main ones are to be found in the *K. al-Dhakhāʾir* (ms. Gotha 903, studied by Goldziher, Thorning and Baer) and in four mss. of the *K. al-Futuwwa*, all closely related to each other and concerning, like the preceding work, Egypt (Gotha ms. 906, used by Thorning, and three B.N. mss., arabe 1375-7, used by Massignon), whose dates of copying extend between 1653 (Gotha 906) and 1733 (B.N. 1377) and which relate to the situation in the 16th and 17th centuries. These texts give lists of the guilds and their masters (*pīr*), tracing the history of the *shadd*, received by Muḥammad from Djibrīl, handed on to ʿAli, and then handed on by ʿAlī to seventeen masters in the first place, beginning with Salmān al-Fārisī, who then proceeds to the *shadd* of other masters (whose number varies in the texts from 50 to 58). The texts then describe the initiation ceremony. Ewliyā Čelebi gives information on the guilds and the *futuwwa* at Istanbul and Cairo. Al-Djabartī mentions a very similar ritual (without mentioning the term *shadd*). The ceremony itself is described in detail, in an essentially similar form, by Jomard (*Description de l'Egypte*) and Lane (*Modern Egyptians*), and, for Damascus at the end of the 19th century, by Qoudsī.

The ceremony of the *shadd* took place at the point of reaching the status of master of a craft (*muʿallim*). It is unclear whether there was a *shadd* ceremony for the entry of the apprentice into his profession (mentioned by the *K. al-Dhakhāʾir*); it may be that the usage fell into disuse. When the apprentice was considered expert enough in his trade to open a workshop or shop, he was brought to the *shaykh* of the guild, who examined him and, if he found him qualified, summoned a meeting, through the *naḳīb* (his assistant and the master of ceremonies), of the masters of the trade. On a fixed day, those invited gathered together. The *naḳīb* brought forward the petitioner to the *shaykh* who, after reciting the *Fātiḥa*, proceeded to instal him according to a ritual laid down in minute detail. He tied a girdle round the upper part of the neophyte's body, making in it knots, between three and six or seven in number, in the accounts of the various authors, according to the number of important master craftsmen of the trade who were present. Each knot had a symbolic meaning and was untied by the candidate's master, the *shaykh* and one of his assistants. When the ceremony, punctuated by recitations of the *Fātiḥa*, was over, the young man was considered to be *mashdūd*. The *shaykh* gave him various pieces of advice. Then a feast (*walīma*) was given, at the expense of the petitioner. There may perhaps have been a similar ceremony for the elevation of someone to the office of *shaykh*.

This ceremony (*shadd al-walad*) was the corporate usage which lasted longest, but in a more and more restricted number of trades. Lane, in *ca.* 1830, mentions it for the carpenters, the wood-turners, the barbers, the tailors and the bookbinders. ʿAlī Pasha cites the barbers, the keepers of baths and the shoemakers. It was, in fact, amongst the shoemakers (*ṣarmātiyya*) (Mahmoud Sedky, *La corporation des cordonniers*, in *Revue Egyptienne* [1912]) and the coppersmiths (*naḥḥāsīn*) (Mohamed Cherkess el-Husseine, *Images*, Cairo 1947) that the last echoes of it, well into the 20th century, were to be found. The inevitable decline of the trade guilds, because of the modernisation of the Egyptian economy, explains the progressive disappearance of these traditions. The same thing happened in Syria, where the very detailed picture given by E. Qoudsī in 1885 of these usages (largely similar to

those of Cairo) clearly reflects a situation largely outdated.

SHADDĀD b. ʿĀD, a personage associated with the legendary town of Iram Dhāt al-ʿImād, to whom is attributed its foundation. For information on him, see ʿĀD and IRAM. (T. Fahd)

SHADDĀD b. ʿAMR b. Ḥisl b. al-Adjabb ... al-Ḳurashī al-Fihrī, Companion of the Prophet (*ṣaḥābī*), as also his son AL-MUSTAWRID, who transmitted on the authority of his father.

It is unknown when he was born or when he died. But since his son was also a Companion, he must have been of a certain age in the earliest Islamic period. But contrariwise, there is known a tradition of his from the Islamic period, transmitted by his son from Shaddād and going back to the Prophet Muḥammad himself, "I went along to the Prophet's side ... took his hand, and lo, it was softer than silk and colder than snow" (see Ibn Ḥadjar, *Iṣāba*, ii, 141 no. 3855; on the vocalisation of the name Ḥisl (*sic*) and of Fihr, see Caskel-Strenziok, *Ǧamharat an-nasab*, ii, 324, 246, and Kaḥḥāla, *Muʿdjam ḳabāʾil al-ʿarab*, ⁵Beirut 1985, i, 271, iii, 929).

SHADDĀDIDS or Banū Shaddād, a minor dynasty of Arrān and eastern Armenia which flourished from the 4th/10th to the 6th/12th century (*ca.* 340-570/*ca.* 951-1174), with a main line in Gandja and Dwīn [*q.vv.*] and a junior, subsequent one in Ānī [*q.v.*] which persisted long after the end of the main branch under Saldjūḳ and latterly Ildeñizid suzerainty.

There seems no reason to doubt the information in the history of the later Ottoman historian Münedjdjim Bashī that the Shaddādids were in origin Kurdish. Their ethnicity was complicated by the fact that they adopted typically Daylamī names like Lashkarī and Marzubān and even Armenian ones like Ashot, but such phenomena merely reflect the ethnic diversity of northwestern Persia and eastern Transcaucasia at this time.

Around 340/951 the adventurer Muḥammad b. Shaddād b. Ḳ.r.ṭ.ḳ established himself in Dwīn whilst the Musāfirid Daylamī ruler of Ādharbaydjān Marzubān b. Muḥammad was pre-occupied with various of his enemies, including Kurdish and other Daylamī rivals, the Arab Ḥamdānids, the Rūs [*q.v.*] and the Būyids (who eventually captured and imprisoned Marzubān) [see MUSĀFIRIDS]; but Ibn Shaddād was unable to hold on to Dwīn and had to flee into the Armenian kingdom of Vaspurakan. Muḥammad's eldest son Lashkarī (d. 368/978-9) in 360/971 seized Gandja and made the Shaddādids an independent power, ending Musāfirid influence in Arrān and expanding northwards into Shamkūr in Transcaucasia and eastwards to Bardhaʿa [*q.v.*]. After the short reign of Muḥammad's second son Marzubān, the third son Faḍl (I) began a long reign (375-422/986-1031) and, in general, expanded the Shaddādid territories from his base in Arrān. He combatted neighbouring Armenian princes, recovered Dwīn from them in *ca.* 413/1022, and occupied the territories of the Armenicised Hungarian Sevordikʿ to the west of Shamkūr. His campaigns against the Armenian Bagratids of Tashir, who had styled themselves "kings of [Caucasian] Albania", Ałvankʿ, and the Georgians, met with varying fortunes, but in 421/1030, after a successful foray into Georgia, he was intercepted by the Georgian king Liparit and the Armenian one David Anhołin of Tashir and his forces disastrously defeated. He had in 418/1027 constructed a fine bridge over the Araxes river [see AL-RASS], possibly in anticipation of an incursion into the Rawwādids' [*q.v.*] territory of Ādharbaydjān.

By this time, the whole region was becoming confused and unstable, with strong Byzantine pressure on the Armenian princes and with increasing raids from the Turkmen Oghuz bands, who were eventually to establish Saldjūḳ suzerainty over Ādharbaydjān and Arrān; thus the chroniclers record an attack on Shaddādid Gandja by Ḳutlumush b. Arslan Isrāʾīl [see SALDJŪḲIDS. III. 5] in 437/1045-6 or 438/1046-7. ʿAlī Lashkarī b. Faḍl (I) (425-40/1034-49) had a successful and prosperous reign; he was praised by the Persian poet Ḳaṭrān [*q.v.*], who frequented his court at Gandja, amongst other things for a major victory over the joint forces of the rulers of Armenia and Georgia; but towards the end of his reign, he was besieged in Gandja by the Oghuz, mentioned above, and relief only came from the imminent approach of a Byzantine and Georgian army.

Lashkarī's brother Abu 'l-Aswār Shāwur (I) had ruled in Dwīn as a vassal of the elder members of the Shaddādid family—in effect as an autonomous prince—since 413/1022, in the face of increasing Greek pressure on the region which culminated in Byzantine operations against Dwīn and Ānī. In 441/1049-50 he took over power in Gandja also, and ruled as the last great independent Shaddādid until 459/1067. Although married to a sister of the Armenian king of Tashir David Anhołin (whence, doubtless, the name Ashūṭ given to his second son), Abu 'l-Aswār achieved a great contemporary reputation as a *ghāzī* against the infidels and he restored the Shaddādid principality to much of its former glory in Arrān and Shamkūr. But after the Saldjūḳ Ṭoghrïl Beg had made the Rawwādids of Ādharbaydjān his tributaries at Tabrīz, the sultan came to Gandja in 446/1054 and Abu 'l-Aswār became his vassal also. In the latter part of his reign, he participated in the Turkmen expansion into Armenian and eastern Anatolia, and he further combatted his kinsmen the Yazīdī Shirwān-Shāhs [*q.v.*] in Shirwān to the north of Arrān and repelled raids by the Alans or Ās [see ALĀN] of the central Caucasus.

But in the end, the Saldjūḳs imposed direct rule over Arrān and brought about the end of Shaddādid power there. Abu 'l-Aswār's son Faḍl (II) was captured by the Georgians, and the Shirwān-Shāh Farīburz b. Sallār invaded Arrān. When sultan Alp

Arslan's eunuch commander Sāwtigin passed through Arrān in 460/1068, the dissensions within the Shaddādid ruling family were apparent to the Saldjūk ruler, and when Sāwtigin appeared for a second time in 468/1075, the rule of Faḍl (III) b. Faḍl (II) was ended and the Shaddādids' territories were annexed to the Great Saldjūḳ empire.

However, the branch installed by the Saldjūḳs at Ānī continued for another century or so. Ānī, the capital of the Armenian Bagratids, had been taken over from them by the Byzantines, but in 456/1064 was conquered by Alp Arslan. Certainly by 464/1072, and probably before then, the Shaddādid Abū Shudjā' Manūčihr b. Abi 'l-Aswār (I) (d. *ca.* 512/1118?) was governing the city. The history of the Shaddādids of Ānī is known only sketchily. We no longer have for them an Islamic source comparable to the information on the main line in Gandja found in Münedjdjim Bashî and going up to 468/1075-6. We do know that Manūčihr, with help from his Great Saldjūḳ suzerains, had to fight off attacks by the Artuḳid Il Ghāzī of Mārdīn [see ARTUḲIDS] and by the latter's vassals such as Ḳîzîl Arslan (sometimes called in the Arabic sources al-Sabuʿ al-Aḥmar "the Red Lion"), of the region to the south of Lake Van; but the Shaddādids seem to have held on to Dwīn till 498/1104-5. In the reign of Manūčihr's son and successor Abu 'l-Aswār Shāwur (II), the Georgian king David the Restorer (1089-1125) recaptured Ānī for the Christians and replaced the Muslim crescent emblem on the Armenian cathedral there by the cross, but it was recovered for the Muslims by Abu 'l-Aswār (II)'s son Faḍl or Faḍlūn (III) (d. 524/1130), who also retook Dwīn and Gandja. Nevertheless, the Shaddādid pricipality of Ānī remained under Georgian overlordship, and few facts are known about the Shaddādid *amīrs* of the middle decades of the century. After internal unrest within Ānī itself the Georgians occupied the city in 556/1161, carrying off Faḍlūn (IV) b. Maḥmūd b. Manūčihr, and shortly afterwards sacked Dwīn and Gandja also. It was Eldigüz or Ildeñiz [*q.v.*] who regained Ānī in 559/1164, and the historian of Mayyāfāriḳīn al-Fāriḳī records that its governorship was given by him to a Shaddādid, Shāhanshāh (b. Maḥmūd) b. Manūčihr; he ruled there until the Georgians once again conquered Ānī in 570/1174-5. Thereafter, the Shaddādids fade from mention, except that a Persian inscription in Ānī of 595/1198-9 was apparently made by "Sulṭān b. Maḥmūd b. Shāwur b. Manūčihr al-Shaddādī", whom Minorsky identified with the brother of Faḍlūn (IV), Shāhanshāh (= Sulṭān in Arabic).

The family thus disappears from history; the Anī branch, at least, had been notable for its beneficent rule over both Muslims and Christians of this ethnically and religiously very mixed region, echoing the similar, generally just treatment of the Muslims in their own lands by the Georgian kings.

Bibliography: The passages of the anonymous *Taʾrīkh Bāb al-Abwāb* preserved in Münedjdjim Bashî's *Taʾrīkh al-Duwal* (for the main branch of the Shaddādids) and of Fāriḳī's *Taʾrīkh Mayyāfāriḳīn* (for the Ānī branch) were translated, with a copious and penetrating commentary, by V. Minorsky in his *Studies in Caucasian history*, London 1953, 1-10 (survey of earlier literature at 2-3, genealogical table of the main line at 6 and of the Ānī branch at 106); see also his *A history of Sharvan and Darband*, Cambridge 1958. AL-**SHĀDHILĪ**, ABU 'L-ḤASAN ʿALĪ b. ʿAbd Allāh b. ʿAbd al-Djabbār (*ca.* 593-656/*ca.* 1196-1258), one of the great figures in the Ṣūfism of the brotherhoods. His teachings launched a *ṭarīḳa* which gave birth to numerous, dynamic ramifications. These developed and have constituted a mystical tradition very widespread in North Africa and equally present in the rest of the Islamic world, as far as Indonesia.

Al-Shādhilī's life is known to us through the texts compiled by his disciples, often late and in a clearly hagiographical mould. It is thus hard to distinguish the historic personage from what pious legend or the archetype of the *walī* has brought forward. Yet one can sketch out the course of life of one of the most famous saints of Maghribī Islam. The most important sources here are the *Laṭāʾif al-minan* of Ibn ʿAṭāʾ Allāh (d. 709/1309; ed. ʿA.Ḥ. Maḥmūd, Cairo 1974) and the *Durrat al-asrār* of Ibn al-Ṣabbāgh (d. 724/1323; Brockelmann, S II, 147, which places his work *ca.* 751/1350, to be corrected; ed. Tunis 1304/1886). There is also the synthesis of Ibn ʿIyād (sometimes written Ibn ʿAyyād and even Ibn ʿAbbād), the *Mafākhir al-ʿaliyya fi 'l-maʾāthir al-shādhiliyya*, Cairo 1355/1937, much later than the previous two sources since it cites al-Suyūṭī, Zarrūḳ (9th/15th century) and al-Shaʿrānī (10th/16th century).

Al-Shādhilī was born in northern Morocco, in the Ghumāra country between Ceuta and Tangiers in *ca.* 583/1187 or ten years later, according to the sources. He claimed descent from the Prophet via al-Ḥasan. He studied the various religious sciences in Fās, was tempted for some time to follow alchemy, but abandoned it for the mystical way in its proper sense. Seeking instruction from the great masters of his time, and seeking especially to meet the Pole [see ḲUṬB], he left for the East, sc. ʿIrāḳ, in 615/1218, where he continued his education, notably with the *shaykh* Abu 'l-Fatḥ al-Wāsiṭī (d. 632/1234), disciple and *khalīfa* of Aḥmad al-Rifaʿī [see RIFĀʿIYYA]. One master (*baʿḍ al-awliyāʾ*, according to *Durra*, 4), nevertheless suggested that he should return to the Maghrib to seek out the Pole of the age. Back in his homeland, Morocco, al-Shādhilī recognised the Pole in the person of the hermit of the Rīf, ʿAbd al-Salām b. Mashīsh (d. 625/1228 [*q.v.*]). He stayed with the latter for several years, until ʿAbd al-Salām suggested that he should travel to Ifrīḳiya; it is not impossible that al-Shādhilī's departure was motivated by local disturbances, in the course of which ʿAbd al-Salām was murdered. We do not know exactly why he decided to settle precisely in the village of Shādhila, half-way between Tunis and Ḳayrawān, nor why he henceforth began to be called by the *nisba* of al-Shādhilī—which a flash of divine inspiration offered him the interpretation of *al-Shādhdh lī* "the man set apart for My service and My love" (*Durra*, 10). But his teaching and personal influence speedily acquired a great fame in the land. Numerous miraculous happenings were attributed to him; he is said to have been in touch with al-Khaḍir. His influence displeased the *ʿulamāʾ* of Ḳayrawān, who launch-

ed against him a campaign of denigration, accusing him of proclaiming himself a "Fāṭimid"—an allegation which was possibly not entirely alien to al-Shādhilī's conviction (since, as we have seen, he was of Sharīfian origin) that he was the Pole of his age. He finally decided to leave Ifrīḳiya when a Pilgrimage caravan was departing. He settled in Egypt, an attractive and welcoming land for Ṣūfīs, at Alexandria in 1244 or perhaps only as late as 1252. The success of his teaching and his prestige grew unceasingly, including in the eyes of the *ʿulamāʾ*, and numerous pupils came to Alexandria from distant parts of the Islamic world to gain a spiritual and ascetic training from him. As a fervent observer of the duties of Islam, Abu 'l-Ḥasan al-Shādhilī made the Pilgrimage as often as he could, and it was in the course of a journey to the Holy Places that in 656/1258 he died at al-Ḥumaythirā in the Upper Egyptian desert.

Al-Shādhilī left behind no writings on doctrinal matters (deliberately thus, according to *Laṭāʾif*, 37-8). The only writings which we have from him are some letters, litanies and prayers. The essential core of his teachings was transmitted by his pupils (see above, and in *Bibl.*) in the form of collections of "sayings", words of wisdom and edifying and miraculous anecdotes. In these he develops the themes of a moderate Ṣūfism, attentive to the material life of his disciples and respectful of social cohesion. Basically, it is a question of a strict and unequivocal Sunnī spirituality. The putting into practice of the *Sharīʿa* is here the indispensable framework of the faith, equally valid for Ṣūfīs and for ordinary believers; by the practice of the virtues, the Ṣūfī purifies the mirror of his soul and becomes fit to undertake the mystical pilgrimage. The *faḳīr* who is a bad practitioner of these requirements is *ipso facto* severely blamed. In a more general way, the mystic should keep a deep humility in face of what has been provided by revelation. "If your mystical unveiling (*kashf*) diverges from the Ḳurʾān and Sunna, hold fast to these last two and take no notice of your unveiling; tell yourself that the truth of the Ḳurʾān and Sunna is guaranteed by God Most High, which is not the case with unveiling inspiration and mystical perceptions" (al-Shaʿrānī, *al-Ṭabaḳāt al-kubrā*, Cairo 1954, ii, 4; see also *Durra*, 34).

Al-Shādhilī's counsels on spiritual orientation likewise recall traditional Ṣūfism. Recurrent themes of them are the abandonment of earthly concerns, the struggle against the carnal soul and acceptance of the fate which befalls one. These counsels are not directed at ascetics but at pious believers engaged in the social life; "the Way does not involve monastic life (*rahbāniyya*), nor living off barley or flour-siftings; the way involves patience in the accomplishing of the divine commands and the certainty of being well-guided" (al-Shaʿrānī, *op. cit.*, ii, 6; *Durra*, 86). Numerous of the master's locutions stress the necessity of a detachment essentially internal and without ostentation (see e.g. *Durra*, 138), at times displaying *malāmatī* overtones. Begging (*Laṭāʾif*, 143) and even wearing special clothing are condemned by al-Shādhilī, who moreover himself chose to dress with a certain elegance. He showed himself circumspect in the use of *samāʿ* [*q.v.*] (*Durra*, 104) and did not take part in sessions which induced trances or spectacular phenomena (walking on fire, piercing the flesh), as with the Rifāʿiyya [*q.v.*]. The core of his Ṣūfī practice was the constant remembrance of God by means of jaculatory prayers and litanies, plus spiritual firmness in the face of the material trials and hardships of the individual life.

The mystical experience towards which al-Shādhilī endeavoured to guide his disciples was laid out in a practical way and not an abstractly doctrinal one. Although he himself had been trained in theology, he saw no spiritual value in the speculative and independent exercise of reason (see e.g. *Durra*, 34, 91), and the hagiographical sources show us al-Shādhilī combatting and converting Muʿtazilī disputants (*ibid.*, 23). God is the original source of the conscience, not an object of knowledge; how could He be approached through concrete things, when it is only through Him that these things are known? (*Laṭāʾif*, 92). Al-Shādhilī develops very little the doctrinal consequences of the experience of *fanāʾ*—unity of existence, identification of the devotee with his Lord—but goes back to the actual spiritual experience itself: "The Ṣūfī sees his own existence as being like dust (*habāʾ*) floating in the air—neither as existence nor as annihilation, just as it is in the knowledge of God" (al-Shaʿrānī, *Ṭabaḳāt*, ii, 8; *Durra*, 90). He recommends to his disciples the greatest possible discretion concerning their spiritual conditions, so as not to become at the same time puffed up with pride in regard to others and uselessly to hurt the susceptibilities of ordinary believers: "If you wish to reach the irreproachable Way, speak like someone who is apart from God, at the same time keeping union with Him present in your secret heart" (al-Shaʿrānī, *op. cit.*, ii, 7; see also *Durra*, 30).

Another aspect of the spiritual teaching of al-Shādhilī is the number and the important function of prayers (*adʿiya*) and litanies (*aḥzāb*) which he left to his disciples. These prayers often relate to specific situations, e.g. spiritual or material distress (cf. *Durra*, ch. iii; al-Shaʿrānī, *op. cit.*, ii, 6, 9). The *aḥzāb* most often recited are the very popular *ḥizb al-baḥr* (inspired directly by the Prophet, cf. *Durra*, 51), the *ḥ. al-kabīr* (or *ḥidjāb sharīf*), the *ḥ. al-barr*, the *ḥ. al-nūr*, the *ḥ. al-fatḥ* and the *ḥ. al-Shaykh Abi 'l-Ḥasan*. Their texts are given by Ibn al-Ṣabbāgh, Ibn ʿIyād and, more recently, ʿA.Ḥ. Maḥmūd, *al-Madrasa al-shādhiliyya al-ḥadītha wa-imāmuhā Abu 'l-Ḥasan al-Shādhilī*, Cairo 1969). The boundary between the liturgical recitation of a prayer taught by the Pole and the magical usage of these texts is not always easy to trace; certain of these litanies include formulae of a theurgical or talismanic nature, and numerous of the faithful attribute inherent virtues to these texts, independent of whatever understanding of it the one reciting it may have. But al-Shādhilī is in any case guiltless regarding all the forms of superstition surrounding the cult of saints, which he condemned as a form of idolatry (al-Shaʿrānī, *op. cit.*, ii, 10). If saints' prayers are answered, it is because they are the theophanic locus of the divine mercy, and not because they themselves have any authority for intercession. In his own lifetime, al-Shādhilī already acquired a reputation as a miracle worker; marvellous happenings took place round his tomb and amongst his close disciples, for whom the Master remained, even after his death, the person for whom God answers prayers.

A more esoteric teaching of al-Shādhilī's concerns the concept of sainthood. It revolved round *walāya* as a prophetic inheritance (see e.g. al-Shaʿrānī, *op. cit.*, ii, 10; or *Durra*, 132-3), here again taking up an earlier Ṣūfī doctrine. The fully-accomplished saint reaches the degree of knowledge of the prophets (*anbiyāʾ*) and the messengers (*rusul*), but he is inferior to them on two counts: on the one hand, his knowledge is, in the great majority of cases, less complete than theirs, and on the other, he is not sent to bring a more correct version of a *sharīʿa* (*Laṭāʾif*, 59-60). Al-Shādhilī's teaching was nevertheless perceived by his followers as an actual, living continuation of Muḥammad's mission (cf.

e.g. *Durra*, 154). The vision of a hierarchy of saints, which is implied here, is fundamental. As we have seen, al-Shādhilī was preoccupied since his youth by the meeting with the Pole of the universe. His disciples considered him fairly soon as being himself this *ḳuṭb* (*Laṭāʾif*, 139), and he personally openly strengthened them in this conviction (*ibid.*, 141, 146, 165; *Durra*, 13-14, 111). He designated his main disciple Abu 'l-ʿAbbās al-Mursī as his successor in this function, and Shādhilī tradition confirms that the *ḳuṭb* would be a member of their brotherhood, until the Judgement Day. This *ḳuṭbāniyya* is here to be understood in the absolute sense (or even, cosmic, cf. *ibid.*, 9, 105-6) and not relative to a specific community; al-Shādhilī himself enunciated the fifteen remarkable features or charismas which this office of the Pole involves (amongst these are the guarantee of inability to err, and knowledge of the past, present and future; cf. *Laṭāʾif*, 163, and *Durra*, 71). But otherwise, it is a delicate task to isolate the original doctrine of al-Shādhilī regarding the formulations of the Masters of the following generations. Ibn ʿAṭāʾ Allāh relates (*Laṭāʾif*, 163-4) that Abu 'l-Ḥasan received a visit from Ṣadr al-Dīn al-Ḳūnawī [*q.v.*] at a time when his master Ibn ʿArabī was still alive. "[Ṣadr al-Dīn] expatiated on a multiplicity of sciences. The Shaykh kept his head bowed until Ṣadr al-Dīn had finished talking. Then he raised his head and said to him, Tell me who is at this moment the Pole of our age, who is a veracious successor (*ṣiddīḳ*) and what is his knowledge? Shaykh Ṣadr al-Dīn was silent and gave no reply". P. Nwiya (*Ibn ʿAṭāʾ Allāh et la naissance de la confrérie shadhilite*, Beirut 1972, 26) sees in this tale an affirmation of the pre-eminence of the Shādhilī way—proceeding from the direct teaching of and inspired by the Pole—over that represented by Ibn ʿArabī. But this opinion is rejected by M. Chodkiewicz (*Le sceau des saints*, Paris 1986, 173), for whom the function of the Seal, claimed by Ibn ʿArabī, cannot coincide with that of the Pole—whence al-Ḳūnawī's silence.

Even if al-Shādhilī never envisaged the formation of a *ṭarīḳa* in the strict sense of the term, his teaching nevertheless marks the evolution of Ṣūfism towards its manifestation in the brotherhoods and in maraboutism. There are several disciples of far-reaching influence—the Andalusian Abu 'l-ʿAbbās al-Mursī (d. 686/1287) and the Egyptian Ibn ʿAṭāʾ Allāh (d. 709/1309) from amongst his immediate successors—who at the same time continued his teaching, codified the ritual of the *dhikr*, founded *khānaḳāhs* and in turn instructed disciples in the spirit of the school. This moderate form of Ṣūfism corresponded to a profound need in the Muslim society of the age; Shādhilī *khānaḳāhs* spread and flourished in Egypt, Ifrīḳiya, Morocco, as well as in Syria and the Ḥidjāz. Numerous branches and sub-branches more or less attached to the Shādhiliyya saw the light in the course of succeeding centuries [see SHĀDHILIYYA]. As for the master's memory, it is perpetuated by the annual festivals on the very spot of his burial in the eastern desert of Upper Egypt, as well as in Ifrīḳiya, at Sidi Belhassen (in the outskirts of Tunis), Menzel Bouzelfa (Cape Bon) and on the mount Zaghwān.

Mackeen, *The rise of al-Shadhili*, in *JAOS*, xci (1971). (P. LORY)

SHĀDHILIYYA, one of the most important currents of Ṣūfism, associated with the teaching and spiritual authority of the great Moroccan mystic of the 7th/13th century, Abu 'l-Ḥasan al-Shādhilī [*q.v.*].

This last, originating from northern Morocco, where he benefited from the spiritual teaching of ʿAbd al-Salām b. Mashīsh [see ʿABD AL-SALĀM], lived in Ifrīḳiya and, above all, in Egypt, where his preaching and spiritual precepts enjoyed an immense success [see AL-SHĀDHILĪ]. It does not seem that he himself had the idea of founding a structured Ṣūfī brotherhood. But the fervour of his disciples, who considered him as the Pole (*ḳuṭb*) of the universe for his age, and who therefore saw in his words a direct divine inspiration, was transferred to his successor, the Andalusī Abu 'l-ʿAbbās al-Mursī (d. 686/1287). The latter's authority and spiritual breadth knew how both to maintain the cohesion of the Shādhilī group and to instill into it a lasting dynamic of expansion. Al-Mursī's work was completed by the enthusiastic work of an Egyptian scholar, Tādj al-Dīn Ibn ʿAṭāʾ Allāh al-Iskandarī (d. 709/1309 in Cairo; see IBN ʿAṬĀʾ ALLĀH). Whereas neither his own master nor Abu 'l-Ḥasan al-Shādhilī left behind any written work, Ibn ʿAṭāʾ Allāh wrote, notably, numerous treatises of a doctrinal nature, as well as collections of prayers, which played a decisive role in the constituting of a genuine Shādhilī spirituality (see Brockelmann, II, 143-4, S II, 145-7; A.W. al-Ghunaymī al-Taftazānī, *Ibn ʿAṭāʾ Allāh al-Sikandarī wa-taṣawwufuhu*, Cairo 1389/1969, i, 3). His *Laṭāʾif al-minan* forms one of the main sources regarding the teachings of the two first masters of the Shādhilī school; as for his collection of dicta, the *Ḥikam*, it had an immense diffusion all over the Islamic world and attracted several commentaries, notably by Ibn ʿAbbād of Ronda (8th/14th century), Aḥmad Zarrūḳ (9th/15th) and Ibn ʿAdjība (12th-13th/18th-19th). See the study and Fr. tr. by P. Nwyia, *Ibn ʿAṭāʾ Allāh et la naissance de la confrérie shadhilite*, Beirut 1972; Eng. tr. V. Danner, *Ibn Ataillah's Sufi aphorisms*, Leiden 1973.

We know only imperfectly the formative period of the brotherhood. During the 8th/14th century it spread through Egypt and the Maghrib, where from the 9th/15th century it enjoyed a considerable success. One should stress that it never assumed the form of a centralised order, but early spread out into a multitude of ramifications with very relaxed links, of sub-branches energised by spiritual masters whose strong personality often raised up a specific strain amidst the generality of the Shādhilī tradition. Certain of these ramifications had a limited implantation within a determined region, whilst others formed much wider groupings. But in all cases, the flexibility of a tradition presenting itself more as a school of spirituality than as a structured organisation allowed its adaptation to very diverse historical and local contexts. It could thus avoid the rigidity and degeneration which often awaited mystical groups which were over-institutionalised. The Shādhiliyya was born in an ur-

ban milieu (Alexandria, Cairo, Tunis), and counted within its ranks a good number of well-known intellectuals, such as the great 9th/15th-century polygraph Djalāl al-Dīn al-Suyūṭī [*q.v.*]. But it also found a ready audience in rural areas, especially in the Maghrib. The affiliation to the order of the ecstatic popular saints of the 10th/16th-century ʿAlī al-Ṣanhādjī and his pupil ʿAbd al-Raḥmān al-Madjdhūb is characteristic in this regard (see A.L. de Premare, *Sîdî ʿAbd-er-Rahmân el-Mejdûb*, Paris-Rabat 1985, ch. III). In the Maghrib properly speaking, but equally in the Nile valley, the Shādhiliyya accompanied the development of a Ṣūfism which tolerated—and even encouraged—cults around saints' tombs, in which the efficacy of the *baraka* of the master counted for more and more.

We shall not deal here with the Ṣūfī currents which sometimes attached themselves to the Shādhilī spirit in a purely mythical or lateral manner, such as the Badawiyya or Dasūḳiyya; nor with those which, despite being impregnated with the Shādhilī spirit, developed into new and independent orders (the Tidjāniyya and orders derived from the Idrīsiyya). But one should mention, amongst the brotherhoods of the Shādhilī tradition which affirmed their personality during that time, that, in Egypt, the Wafāʾiyya, founded by the Ifrīḳiyan Shams al-Dīn Muḥammad Wafāʾ al-Bakri (d. 760/1359) and his son ʿAlī (d. 807/1404; on him, see al-Shaʿrānī's notice, in *Ṭabaḳāt*, ii, 22-65), enjoyed a solid implantation and an undoubted spiritual and intellectual diffusion. The Ḥanafiyya were founded by Muḥammad al-Ḥanafī (d. 847/1443), a highly charismatic personality who left a strong mark on his age (cf. ʿAlī b. ʿUmar al-Battanūnī, *K. Sirr al-ṣafī fī manāḳib al-sulṭān al-Hanafī*, Cairo 1306/1888). In Syria, the Shādhiliyya spread under the impulse of the Moroccan ʿAlī b. Maymūn al-Fāsī (d. 917/1511) and his disciples, affiliates of the Madyaniyya branch.

In the Maghrib, the Shādhilī presence was even more widespread. One may mention, in particular, the Zarrūḳiyya, which arose out of the teaching of Abu 'l-ʿAbbās Aḥmad al-Burnusī, called al-Zarrūḳ (d. 899/1494). This Moroccan scholar had a stay in Egypt, where he became a disciple of the Wafāʾī master Aḥmad al-Ḥaḍramī and probably of another Hanafī one. Then he returned to the Maghrib and travelled in various regions. He left behind an important body of written work (cf., especially, his *Ḳawāʿid al-taṣawwuf*, Damascus 1968) and breathed fresh life into the Shādhilī heritage there, raising up a fresh impulse (see A.F. Khushaim, *Zarrūq the Sufi*, Tripoli 1976). Several Maghribī brotherhoods claimed connections with his teaching: the Darḳāwiyya (see below), the Rashīdiyya and its own branches, the Shaykhiyya, Karzāziyya and Nāṣiriyya (on these groups, see Depont and Coppolani, *Les confréries religieuses musulmanes*, Algiers 1884, 457 ff.; G. Drague, *Esquisse d'histoire religieuse du Maroc*, Paris 1951, 185 ff.). Another dynamic movement of Shādhilī inspiration was stimulated by the figure of Abū ʿAbd Allāh Muḥammad al-Djazūlī, a Ṣūfī master originally from southern Morocco. This last travelled to Fez, then had a long stay in the East (40 years?) and finally returned to Morocco. After a period of hermit-like seclusion, he spread his teachings, which had such popular repercussions that he was persecuted by the political authorities and died—perhaps from poison—in *ca.* 869/1465, the year of the fall of the Marīnid [*q.v.*] dynasty [see AL-DJAZŪLĪ]. Later, his body was interred at Marrakech, and he became one of the seven patron saints of the city. This thaumaturge *walī* marks the origin of a new form of mass Ṣūfism. Membership was no longer conditional upon personal initiation rites (*ṣuḥba, talḳīn*), and did not necessarily take place within a structured brotherhood, but resulted from a simple act of allegiance to a *shaykh* shown by a rite of transmission of *baraka* and devotional practice centred round reading a collection of litanies, the *Dalāʾil al-khayrāt*. This last became extremely popular, notably because of the miraculous benefits which certain people connected with its recitation. Several later *ṭawāʾif* attached themselves to the movement of al-Djazūlī, including the ʿArūsiyya, widespread in Ifrīḳiya (see Brunschvig, *Ḥafṣides*, ii, 341 ff.), the Ḥanṣaliyya (see Depont and Coppolani, 492 ff.; Drague, 163 ff.) or also the ʿĪsāwiyya. The latter, which owed its name to Muḥammad b. ʿĪsā al-Mukhtār (d. 931/1524), added to the Shādhilī-Djazūlī tradition shamanistic practices reminiscent of those of the Rifāʿiyya: initiates were endowed with a totem animal, practised spiritual healings and, in a trance, devoured snakes or pierced their bodies with sword blades (see R. Brunel, *Essai sur la confrérie des Aïssaouas au Maroc*, Paris 1926). Analogous practices are also found in the related Moroccan order of the Ḥamdūshiyya (see V. Crapanzano, *The Hamadsha—a study in Moroccan ethnopsychology*, Berkeley, etc. 1973).

The historic success of the Shādhilī Way probably depended on several factors of a historical nature. Within a North Africa engulfed in a permanent economic and political state of crisis, grouping in the bosom of a community based on initiational solidarity had a certain attraction. The political authorites, such as the Marīnids in Morocco or the Ḥafṣids in Ifrīḳiya, often actively favoured the creating or expansion of the *zawāyā* in their territories, and the integration of moderate Ṣūfism in the teaching of the *madrasas*—or conversely, of *fiḳh* in the *zawāyā*. It is true that these last also at times played the role of centres of dissidence against the central power, as with that of al-Dilāʾ in Morocco, which almost succeeded in seizing the sultanate power towards the middle of the 11th/17th century (see M. Hadjdjī, *al-Zāwiya al-Dilāʾiyya*, Rabat 1384/1964, and AL-DILĀʾ in Suppl.). Nevertheless, they were more often regarded as centres of social stability by virtue of the allegiance given by complete tribes or villages to the *shaykh*. They were often organised on a "dynastic" manner of functioning, and to some extent regulated local and tribal particularisms. But the especial success of the Shādhiliyya was due to the factors peculiar to itself. Its strictly orthodox Sunnism and the respect for all exoteric tradition which it professed, its social discreetness (absence of distinctive garb or of spectacular public festivals or of begging), all of these aroused confidence and fervour. Finally, the active role played by the brotherhoods in attempting to resist European encroachments in the Muslim lands—as e.g. that of the Shādhiliyya-Djazūliyya in Morocco in the warfare against the Portuguese in the 9th-10th/15th-16th centuries—accelerated the process of cohesiveness of Ṣūfism and the social fabric in the Maghrib.

More recently, currents of revival attached to the Shādhilī tradition have appeared. This is the case with the Darḳāwiyya [see DARḲĀWA]. It goes back to Abū Ḥāmid al-ʿArabī al-Darḳāwī (d. 1823), who is to be placed in the Zarrūḳī tradition without there being any new elements added, except for a reforming zeal in combatting the material and spiritual corruption of the surrounding maraboutic Ṣūfism. The great moral (and political) influence which he exercised from his

zāwiya in the region of Fez was prolonged after his death; new branches of the order then came into being, with a remarkable vitality extending right through the 19th century. Thus there was the Bū-Zīdiyya, of which Ibn ᶜAdjība, prolix author and head of an active *ṭarīḳa* (d. 1809; *q.v.* and J.-L. Michon, *Le Soufi marocain Ahmad ibn ᶜAjiba et son miᶜraj*, Paris 1973), was a member. One should also mention the Yashruṭiyya branch, founded by the Tunisian ᶜAlī al-Yashruṭī (d. 1891), which became especially rooted in Syria, Palestine and Jordan; his history is known to us from the compendious *Riḥla ilā 'l-ḥaḳḳ* written by the master's daughter, Fāṭima al-Yashruṭiyya (see J. van Ess, *Die Yaśruṭīya*, in *WI*, xvi [1975]). Finally, there is the ᶜAlāwiyya, founded in 1914 in the Darḳāwiyya-Bū-Zīdiyya tradition by Aḥmad b. ᶜAlīwa (d. 1934; see IBN ᶜALĪWA). His reforming dynamism and his new presentation of Islamic esotericim—which he spread forth in his journal *al-Balāgh al-djazāʾirī* and in many publications—attracted numerous disciples, including a certain number of Westerners (see M. Lings, *A Moslem saint of the twentieth century*, London 1961, Fr. tr. *Un saint musulman du 20ᵉ siècle, le cheikh Ahmad al-ᶜAlawi*, Paris 1967).

It is not easy to trace the contours of such movements as these, since their attachment to the Shādhilī *silsila* is sometimes very loose and blurred. It often happened that a Master would be brought up in several traditions, and multiplicity of affiliations by the simple attributing of a *khirḳa* became a custom more and more widespread over the lapse of centuries. Nāṣir al-Darᶜī, founder of the Nāṣiriyya, had received the double Zarrūḳī and Djazūlī initiation; Muḥammad b. ᶜArūs, who had frequented Shādhilī and Ḳādirī masters, did not claim kinship with any well-defined *ṭarīḳa*. At that time, the historic correctness and authenticity of the *silsila*s was visibly less important than the efficacious presence of a master whose charisma authenticated his mission. This rather diffuse character of the brotherhoods' affiliations is illustrated and analysed for the eastern regions by E. Geoffroy in his *Le soufisme en Egypte et en Syrie sous les derniers Mamelouks et les premiers Ottomans: orientations spirituelles et enjeux culturels*, Damascus 1995, part 3.

The present position of the Shādhiliyya can be delineated as follows. The order is mainly represented in North Africa, where it forms, with the Ḳādiriyya and the Khalwatiyya the chief living Ṣūfī school. The Shādhilī branches remain equally active in Egypt and also in the Sudan. But it would be erroneous to see in the Shādhiliyya an exclusively North African order. Branches of it have in effect spread throughout almost the whole Muslim world, see A. Popovic and G. Veinstein (eds.), *Les ordres mystiques dans l'Islam—Cheminements et situation actuelle*, Paris 1986, index s.n.: most certainly in Syria and the Arab Near East (see F. de Jong, *Les confréries mystiques au Machreq arabe*, in Popovic and Veinstein, *op. cit.*), but also in Turkey and the Balkans, in the Indo-Pakistan subcontinent, in Indonesia and as far as China.

How, then may one characterise Shādhilī spirituality as it has been formed, propagated and modified in the course of the centuries? First of all, one should note its attachment to orthodoxy and its carefulness not to give any appearance of contravening either the letter or the spirit of the *Sharīᶜa*; it is only in confident submission to the Law and total obedience to the *shaykh* that the novice can grasp the nature of his relationship with God. It gives little attention to phenomena of a miraculous appearance (*karāmāt*), and commends a mystical cult of sobriety (*ṣaḥw*) which is circumspect regarding the states of mystical inebriation. In general, it tolerates the practices of music and dancing (*samāᶜ* [*q.v.*]), but with a clear display of prudence. The excesses of ceremonies involving conditions of trance amongst the ᶜĪsāwiyya and Ḥamdūshiyya are in any case marginal phenomena, and it is likely that the respective founders of these orders did not play any role in them. The Shādhiliyya advocate an attitude of action of continual gratitude (*shukr*), and try to avoid an asceticism involving renunciation which might lead to despising part of God's blessings and beauty; the Ṣūfī who sees nothing else but God is spiritually less perfect than the one who sees God in everything (*Laṭāʾif al-minan*, Cairo 1974, 89-90). In this spirit, al-Shādhilī and other great masters after him (ᶜAlī Wafāʾ and Muḥammad al-Ḥanafī) deliberately dressed themselves in an elegant fashion.

It is not an "intellectual" order, in the sense that a greater accent is placed on practice than on doctrine. This does not mean, as some have written, that the Shādhiliyya have no structured doctrine; the Wafāʾiyya branch, in particular, provoked the production of an important corpus of texts which is still poorly explored. The work of Ibn ᶜArabī was moreover spread within the Shādhilī milieu as elsewhere within the fabric of Ṣūfism. Indeed, the Shādhiliyya wished to make itself an order accessible to all Muslims, at whatever level of culture they might be, but reading is recommended to those with access to it (see e.g. Ibn ᶜIyād or ᶜAyyād, *al-Mafākhir al-ᶜaliyya fi 'l-maʾāthir al-shādhiliyya*, Tunis 1986, 116). However, by far the most used books are the collections of prayers and litanies. For Shādhilī spirituality is seen mainly through readings made out loud and the cantillation of various texts: *aḥzāb* composed by the founding masters (al-Shādhilī and al-Mursī), collections like al-Djazūlī's *Dalāʾil al-khayrāt* and poems in honour of the Prophet (al-Būṣīrī, author of the celebrated *Burda* ode, was a Shādhilī). An important part of the popular work *al-Mafākhir al-ᶜaliyya* is thus consecrated to *dhikr* texts. These are those prayers and litanies recited congregationally which best represent Shādhilī mysticism, based on deep immersion in the state of service to God (*ᶜubūdiyya*) in humility and on the action of grace.

SHĀDĪĀBĀD [see MĀNḌŪ].

SHADIRWĀN, also *shadhirwān*, is an Arabised Persian word which originally meant a precious curtain or drapery suspended on tents of sovereigns and leaders and from balconies of palaces and mansions. But in mediaeval sources it often occurs as an architectural term designating either a wall fountain or its most important element—the inclined and carved marble slab upon which water flows—perhaps in reference to the fabric-like texture of water rippling down the oblique surface (Laila Ibrahim and M.M. Amin, *Architectural terms in Mamluk documents*, Cairo 1990, 66, 68-9; G. Marçais, *Salsabīl et Šadirwān*, in *Études d'Orientalisme dédié à la mémoire de Lévi-Provençal*, Paris 1962, ii, 639-48). In this second sense, it usually alternates with *salsabīl*, an Arabic word which appears in the Ḳurʾān (LXXVI, 18) as the name of a particular spring in heaven. In Muslim India, large water chutes, called *ābshārs* and made of inclined and carved marble slabs similar to *shadirwāns* or *salsabīls*, intercepted the flow of water in the long channels that run the entire length of gardens, especially in the Mughal gardens of Kashmīr, and provided the transition from one level to the next below [see on this MĀʾ. 12].

The origin and first appearance of *shadirwān* or *salsabīl* in Islamic architecture are not known. Nor is its place of appearance, although there are some indications that it might have been Sāmarrāʾ [*q.v.*], the transient and opulent ʿAbbāsid capital (221-79/836-92), where a large number of palaces with gardens, fountains, and pools were constructed. Modern excavations and contemporary panegyric poetry describing these palaces suggest that the monumental water works in Sāmarrāʾ anticipated the later and more intimate *shadirwān* systems (Yasser Tabbaa, *Towards an interpretation of the use of water in Islamic courtyards and courtyard gardens*, in *Journal of Garden History*, vii/2 [July-Sept. 1987], 198-9). The earliest datable remains of a *shadirwān*, a marble slab (1.3 m by .37 m and .14 m thick), carved with a chevron pattern with three fish in low relief at one end, was discovered during the excavation of the Zīrid Ḳalʿat Banī Ḥammād in Algeria, built in the middle of the 5th/11th century (L. Golvin, *Recherches archéologiques à la Qalʿat des Banī Ḥammād*, Paris 1965, 122-7, and pls. 43-4). Several *shadirwāns* from the 6th/12th century, complete with scalloped or carved *salsabīls*, small basins, and channels emptying in central pools exist in various regions, Palermo in Sicily, al-Fusṭāṭ in Egypt, and a number of sites in Syria and Djazīra, proving the diffusion of the type over the entire Islamic world. The earliest and best preserved among them is the *shadirwān* of the La Ziza (ʿAzīza) Palace at Palermo, built between 1165 and 1175 for William I and William II, Norman kings of Sicily, undoubtedly by Muslim craftsmen. Located in an alcove at the centre of the main hall under a *muḳarnas* [*q.v.*] vault, it consists of a nozzle in a niche in the wall from which water gushes over a multi-coloured marble *salsabīl* with a chevron deep carving to a channel cut in the paving which flows into two aligned shallow square pools before emptying in a large pool outside (G. Caronia, *La Zisa di Palermo: storia e restauro*, Rome 1982, 53-6, 64-7, figs. 71-3, 142-3, 164-5). A painting of a *shadirwān* with a lion head for a spout and a chevron-patterned *salsabīl* emptying in a quadrilobed pool appears among other paintings into the ceiling of the Cappella Palatina in Palermo built by Roger II in the 1140s (R. Ettinghausen, *Arab painting*, Geneva 1962, 48). This representation and a number of references to the *shadirwān* in contemporary Sicilian Arabic eulogistic poetry, addressed both to Norman and Muslim Ḥammādid patrons, suggest that the type was widespread in palatial architecture all over the Maghrib (Tabbaa, 202).

This is further confirmed by the remains of large houses excavated in al-Fusṭāṭ. The plans of at least two of them (nos. iii and vi), dated to the Fāṭimid period (4th-5th/10th-11th centuries), exhibit arrangements similar to the Ziza *shadirwān*. They each have a big basin in the centre of the courtyard connected with a small basin in the middle of a side hall via a shallow channel. The small basin is set under a wall recess with a spout attached to pipes in the wall from which most probably water ran over a no-longer-extant *salsabīl* (K.A.C. Creswell, *Muslim architecture of Egypt*, Oxford 1952, i, 124-6, figs. 58, 61). Whether the *salsabīl* had any *muḳarnas* hood above it is impossible to know.

The next example of *shadirwān* comes from Damascus. In the Madrasa al-Nuriyya (of Nūr al-Dīn, 567/1172), in the īwān [*q.v.*] facing the entrance and under a *muḳarnas* hood, "water pours from a *shadirwān* into a pool, which opens into a long channel until it falls into a central pool in the courtyard" (Ibn Djubayr, *Riḥla*, Beirut 1964, 256). It was recently cut off and its channel paved over, but the 1920s plan made by Herzfeld shows a typical *shadirwān* system (Creswell, ii, 109-10, fig. 56). The appearance of this *shadirwān* can be considered a novelty, since this is the first time we encounter it outside the realm of residential or palatial architecture. A little later in date is a series of Ayyūbid and Artuḳid palaces built in the citadels of Syria and Djazīra with elaborate water systems consisting of fountains, channels, and pools. At least three of them, the early 7th/13th-century Artuḳid palace at Diyārbakir, the Ayyūbid palace in Aleppo (built between 617/1220 and 658/1260) and the Artuḳid al-Firdaws palace in Mārdīn (636-58/1239-60), have *shadirwāns* occupying the centre of an īwān's back wall and flowing via a narrow channel into a large pool in the courtyard (Tabbaa, 208-11, figs. 11-17).

In Ayyūbid and Mamlūk Cairo, *shadirwān* arrangements became a salient feature in reception halls, known as *ḳāʿas*. Several Cairene *shadirwān* slabs with various patterns engraved on their surfaces are on display at the Islamic Art Museum in Cairo and the Dār al-Āthār al-Islāmiyya in Kuwait, while few are still *in situ*. The most notable among them are the two *shadirwāns* in two opposite īwāns of the *bīmāristān* of Sultan Ḳalāwūn (683/1284), which may have belonged to the four-īwān *ḳāʿa* of the Fāṭimid Western Palace, or its Ayyūbid replacement that was appropriated by Ḳalāwūn to build his complex (Creswell, ii, 208-10, pl. 63). *Waḳf* [*q.v.*] documents furnish a number of descriptions of Mamlūk *shadirwāns* which provide information on their various uses, composition, and terminology (Mona Zakarya, *Deux palais du Caire médiéval, waqfs et architecture*, Marseilles 1983, 148). Thus, for example, we learn that the small receptacle in which water falls before flowing over the *shadirwān* had an onomatopoeic name, *ḳarḳal*; the channel was called *silsal* (Ibrahim and Amin, 66). The *bīmāristān* of al-Muʾayyad Shaykh (821-3/1418-20) repeated the model of the *bīmāristān* of Ḳalāwūn with two *shadirwāns* in two opposite īwāns (*waḳf* of al-Muʾayyad Shaykh, Dār al-Wathāʾiḳ, no. 938 ḳ, 7, l. 24-5). Cairene *sabīls* [*q.v.*] too had *shadirwāns* from which water collected into small basins (*fasāḳī*, pl. of *fisḳiyya*) (*waḳf* of Amīr Khāyir Bek, Dār al-Wathāʾiḳ,

no. 292/244, 5, l. 5-13). Some *shadirwāns* had two flanking colonnettes which supported the *muḳarnas* hood above, an arrangement probably inspired by the development of Mamlūk *miḥrābs* which had two or four flanking colonnettes as well (*waḳf* of Sultan Barsbāy, Dār al-Kutub, no. 3390, 5, l. 5-13).

Because Cairene *ḳāʿas* developed into smaller enclosed units with either two īwāns and a space in the middle called *durḳāʿa*, or one īwān and a *durḳāʿa*, or, in the rarest of cases, four īwāns in a cruciform plan around a *durḳāʿa*, water moving from *shadirwāns* to collecting pools no longer played a role in linking the interior and exterior spaces. Furthermore, the shrinking of the central space precluded the possibility of having a large pool in its centre which could receive a constant flow of water from a *shadirwān*. In fact, it seems that enclosing *ḳāʿas* ultimately sealed the fate of *shadirwāns*. Later Mamlūk and Ottoman *ḳāʿas* had central small fountains but no *shadirwāns* and no connecting channels. Many, however, retain a strong reminder of the missing *shadirwān* in the form of a niche in the centre of their īwān's back wall, called *ṣadr*, with an ornate hood, and sometimes flanking colonnettes but no water flowing.

(NASSER RABBAT)

SHADJAR AL-DURR, Wālidat Khalīl al-Ṣāliḥiyya, also called Umm Khalīl, the famous sultana of Egypt (ruled 648/1250).

Shadjar(at) al-Durr (the oldest sources prefer the former, modern Arab authors the latter), a strong-minded Turkish slave, started her career as al-Ṣāliḥ Ayyūb's favourite concubine (hence al-Ṣāliḥiyya). In 637/1239-40, during their imprisonment in al-Karak, she bore him a son, Khalīl (hence Umm/Wālidat al-Khalīl), after which al-Ṣāliḥ freed and married her. The sultan loved his wife, now queen of Egypt, dearly and ranked her next to his commander Fakhr al-Dīn. When in 647/1249 al-Ṣāliḥ, expecting the French Crusaders' advance, died in al-Manṣūra, she formed part of the council of three that mastered the crisis. They agreed to conceal his death and entrust rule to one of them, Fakhr al-Dīn, until al-Ṣāliḥ's son and heir al-Malik al-Muʿaẓẓam Tūrānshāh arrived from Ḥiṣn Kayfā three months later. It was only after disgruntled Baḥrī *amīrs*, perhaps with the threatened widow's consent, had killed the new sultan, that Shadjar al-Durr stepped into the centre stage: Al-Ṣāliḥ's *amīrs* and Mamlūks appointed her sultana on 30 Muḥarram 648/4 May 1250 with ʿIzz al-Dīn Aybak al-Turkumānī as commander. Though women had exercised power as royal spouses and regents before, her formal recognition as ruler in her own right was unheard-of in the Muslim Near East, the only precedent being the sultanate of Raḍiyya [*q.v.*] of Dihlī from 634/1236 to 637/1240. Her claim to legitimacy rested on her status as wife of the late sultan and, what is more, mother of their dead son, as seen in her regnal name Wālidat al-Khalīl. Her election by Mamlūks marks the transition from Ayyūbid to Mamlūk rule. Their choice of a woman, unusual as it may seem, was considered. Al-Ṣāliḥ himself had recommended her as chief advisor to his son, and she had proven worthy of his trust after his death. The enthronement of their female compatriot may have been facilitated by a less restrictive view of élite women's roles among tribal Turks and a general propensity to hold women in high esteem. Her coin titulature reads "al-Mustaʿṣimiyya, al-Ṣāliḥiyya, Malikat al-Muslimīn, Wālidat al-Malik al-Manṣūr (i.e. Khalīl)". The loyalty to the ʿAbbāsid caliph al-Mustaʿṣim herein declared was never rewarded by his investiture of her. Although late reports about a caliphal letter objecting to a woman's sultanate and a similar pronouncement by a leading jurist are questionable, Shadjar al-Durr's claim to the Ayyūbid throne could be and was repudiated by the Syrian Ayyūbid al-Nāṣir Yūsuf on several counts, including her sex and slave origin. Loath to lose the Syrian provinces the Baḥrī Mamlūks felt compelled to replace her by a man. Shadjar al-Durr therefore ceded the throne to her as yet undistinguished commander Aybak on 28 Rabīʿ II 648/30 July 1250. However, her formal abdication did not put an end to her pre-eminent part in ruling the country, as is attested by all sources; in fact, she still signed royal decrees as late as 653/1255. Aybak married her either the day after his tentative promotion or sometime after he deposed the child al-Ashraf Mūsā, of Yemenite Ayyūbid descent, in 651/1254, who had replaced him as nominal sultan five days after his installation. Having dealt with the Syrian enemy and internal Baḥrī opposition, he thought to challenge his wife's position by contracting a marriage with the Zangid princess of Mawṣil. Shadjar al-Durr heard of his plans and had him killed on 23 Rabīʿ I 655/10 April 1257. But her attempts to retain influence as kingmaker came to nothing. On 11 Rabīʿ II/28 April, her naked corpse was found lying outside the Citadel. She was buried in the tomb she had built for herself. The "*dāhiyat al-dahr* whom no woman rivalled in beauty and no man in determination" (Barhebraeus) had finally lost the struggle for power. Her posthumous career as historical and literary character exemplifies the transformation of fragmentary evidence into ever more readable stories, into history and her story.

(L. AMMANN)

SHADŪNA, the Arabic name of one of the *kūras* or provinces of al-Andalus. It stems from Latin Asido, a Roman and then Visigothic town also called Madīnat Ibn Salīm in Muslim times, the modern Medina Sidonia. It was bounded on the north by the *kūras* of Seville and Morón; on the east by that of Algeciras; and on the south and west by the sea. There is no clear information about the *kūra*'s capital, since the sources mention at times Jerez (Sharīsh), Medina Sidonia, Arcos or a certain Ḥāḍirat Ḳalsāna and Ḳādis or Djazīrat Ḳādis. According to contem-

porary authors, Shadūna was divided into numerous districts, including villages, towns and fortresses (*huṣūn*). Amongst these last are mentioned in the *Dhikr bilād al-Andalus* Tota, Arcos, Ibn Salīm, Nablab, Sanlúcar, Galyāna, al-Ḳanāṭīr, al-Aḳwās and Ḳalʿat Ward. Concerning the towns, this work distinguished especially Cadiz and Jerez. Algeciras, a major centre of al-Andalus all through its long history, formed part of this *kūra* at an early period but soon became the chef-lieu of an independent province. According to Ibn Ghālib and al-Ḥimyarī, Shadūna was bountifully endowed with the gifts of land and sea, and covered 25 square miles.

Ibn al-Shabbāṭ relates that Ṭāriḳ [*q.v.*] disembarked in al-Andalus and marched on the Wādī Lakko, where he confronted the troops of King Roderic. After defeating the Visigothic ruler, the Muslims besieged Madīnat Shadūna. In 125/743, the *djund* of Filasṭīn (i.e. Palestine) settled in the province; this is the first reference to Shadūna as a *kūra*. Towards 127/745 the Ḳaysī rebels led by al-Sumayl assembled there against the Kalbīs of Abu 'l-Djaṭṭār. The Madjūs [*q.v.*] or Northmen landed on the coast of Shadūna in 229/844 and occupied the port of Cadiz, although the greater part of their fleet sailed up the Guadalquivir towards Seville. Being highly fertile and productive, as noted above, the district paid tribute of 50,600 dīnārs in the time of al-Ḥakam I, and it furthermore furnished almost half the 20,000 cavalry which could be mobilised in ʿAbd al-Raḥmān II's time.

The sources are sparse about the succeeding period up to the constituting of the taifas. It was at Shadūna that the Banū Djazrūn, Berbers who had come over to reinforce al-Manṣūr's army in the Peninsula, overran a land in the grip of civil warfare. Set apart in the *kūra* of Shadūna, they formed a taifa around the stronghold of Arcos, and their authority was recognised by Jerez and Cadiz. Shadūna had three rulers before being absorbed by the ʿAbbādid of Seville, al-Muʿtaḍid: Muḥammad b. Djazrūn (402-20/1011-29), ʿAbdūn b. Muḥammad (420-45/1029-53) and Muḥammad b. Muḥammad al-Ḳāʾim (445-51/1053-9). It belonged to the taifa of Seville until the Almoravids took over al-Andalus in 483/1090. In the middle of the 6th/13th century, ʿAlī b. ʿĪsā b. Maymūn led a rising in Cadiz, as part of the generalised anti-Almoravid movement which split the country into fragments, which are called the "second taifas". From 540/1145 onwards he proclaimed the Almohads, and the territory of the ancient *kūra* remained under the new dynasty's aegis, although soon menaced by the Castilian armies of the Reconquista. Thus *ca.* 572/1176 Ferdinand II attacked Arcos and Jerez. It was there that the tentative movements for expansion of Ibn Hūd were halted, defeated by Castile at Jerez in 627/1230. The Muslims remained in the region, but once Seville fell in 646/1248, they found themselves defenceless. Then Castile seized Cadiz in 660/1262. Two years later came the Mudéjar rebellion against Alfonso X, supported from Granada, as a result of which the Castilians decreed the expulsion of the Mudéjars from this region, thus subduing the populations of Jerez, Medina Sidonia, Vejer, Sanlúcar, Arcos, etc. Shadūna became henceforth the political and military frontier with the Naṣrid kingdom of Granada [see NAṢRIDS].

(F. ROLDAN-CASTRO)

SHAFĀʿA (A.), intercession, mediation. He who makes the intercession is called *shāfiʿ* and *shafīʿ*. The word is also used in other than theological language, e.g. in laying a petition before a king (*LʿA* s.v.), in interceding for a debtor (al-Bukhārī, *Istiḳrāḍ*, 18). Very little is known of intercession in judicial procedure. In the *Ḥadīth* it is said: "He who by his intercession puts out of operation one of the *ḥudūd Allāh* is putting himself in opposition to God" (Ibn Ḥanbal, *Musnad*, ii, 70, 82; cf. al-Bukhārī, *Anbiyāʾ*, 54/11; *Ḥudūd*, 12).

1. In official Islam.

The word is usually found in the theological sense, particularly in eschatological descriptions; it already occurs in the Ḳurʾān in this use. Muḥammad became acquainted through Jewish and more particularly Christian influences with the idea of eschatological intercession. In Job xxxiii, 23 ff. (the text is corrupt), the angels are mentioned who intercede for man to release him from death. In Job v, 1, there is reference to the saints (by whom here also angels are probably meant), to whom man turns in his need. Abraham is a mortal saint whom we find interceding in the Old Testament (in the story of Sodom and Gomorrah).

In the apocryphal and pseudepigraphical literature, we again find the same classes of beings with the same function: the angels (*Test. Adam*, ix, 3) and the saints (2. *Maccab.*, xv, 14; *Assumptio Mosis*, xii, 6). In the early Christian literature the same idea repeatedly occurs, but here we have two further classes of beings: the apostles and the martyrs (cf. Cyril of Jerusalem in Migne, *Patrologia Graeca*, xxxiii, 1115; patriarchs, prophets, apostles, martyrs; cf. xlvi, 850; lxi, 581).

In the Ḳurʾān, intercession occurs mainly in a negative context. The day of judgment is described as a day on which no *shafāʿa* will be accepted (sūra II, 48, 254). This is directed against Muḥammad's enemies as is evident from X, 18: "they serve not God but what brings them neither ill nor good and they say these are our intercessors with God"; cf. also LXXIV, 48: "the intervention of those who make *shafāʿa* will not avail them".

But the possibility of intercession is not absolutely excluded. XXXIX, 44 says: "Say: the intercession belongs to God, etc.". Passages are fairly numerous in which this statement is defined to mean that *shafāʿa* is only possible with God's permission: "Who should intervene with Him, without His permission?" (II, 255, cf. X, 3). Those who receive God's permission for *shafāʿa* are explained as follows: "The *shafāʿa* is only for those who have an *ʿahd* with the Merciful" (XIX, 87) and XLIII, 86: "They whom they invoke besides God shall not be able to intercede except those who bear witness to the truth". XXI, 26-8 is remarkable where the power of intercession is evidently credited to the angels: "they say the Merciful has begotten offspring. Nay, they are but His honoured servants who ... and they offer not to intercede save on behalf of whom it pleaseth Him". It appears that

the angels are meant by the honoured servants. XL, 7 (cf. XLII, 5) is more definite: "Those who bear the throne and surround it sing the praises of their Lord and believe in Him and implore forgiveness for those who believe (saying), Our Lord; who embracest all things in mercy and knowledge; bestow forgiveness on them that repent and follow Thy path and keep them from the pains of Hell".

Such utterances paved the way for an unrestricted adoption by Islam of the principle of *shafāʿa*. In the classical *Ḥadīth* which reflects the development of ideas to about 150 A.H., we already have ample material. *Shafāʿa* is usually mentioned here in eschatological descriptions. But it should be noted that the Prophet, even in his lifetime, is said to have made intercession. ʿĀʾisha relates that he often slipped quietly from her side at night to go to the cemetery of Baḳīʿ al-Gharḳad [*q.v.*] to beseech forgiveness of God for the dead (Muslim, *Djanāʾiz*, 102; cf. al-Tirmidhī, *Djanāʾiz*, 59). Similarly, his *istighfār* is mentioned in the *ṣalāt al-djanāʾiz* (e.g. Ibn Ḥanbal, *Musnad*, iv, 170) and its efficacy explained (*ibid.*, 388). The prayer for the forgiveness of sins then became or remained an integral part of this *ṣalāt* (e.g. Abū Isḥāḳ al-Shīrāzī, *Kitāb al-Tanbīh*, ed. T.J.W. Juynboll, 48) to which a high degree of importance was attributed. Cf. Muslim, *Djanāʾiz*, 58: "If a community of Muslims, a hundred strong, perform the *ṣalāt* over a Muslim and all pray for his sins to be forgiven him, this prayer will surely be granted"; and Ibn Ḥanbal, iv, 79, 100, where the number a hundred is reduced to three rows (*ṣufūf*).

Muḥammad's intercession at the day of judgment is described in a tradition which frequently occurs (e.g. al-Bukhārī, *Tawḥīd*, 19; Muslim, *Īmān*, 322, 326-9; al-Tirmidhī, *Tafsīr*, sūra XVII, 19; Ibn Ḥanbal, i, 4), the main features of which are as follows. On the day of judgment, God will assemble the believers; in their need they turn to Adam for his intercession. He reminds them, however, that through him sin entered the world and refers them to Nūḥ. But he also mentions his sins and refers them to Ibrāhīm. In this way, they appeal in vain to the great apostles of God until ʿĪsā finally advises them to appeal to Muḥammad for assistance. The latter will gird himself and with God's permission throw himself before Him. Then he will be told "arise and say, intercession is granted thee". God will thereupon name him a definite number to be released and when he has led these into Paradise, he will again throw himself before his Lord and the same stages will again be repeated several times until finally Muḥammad says, "O Lord, now there are only left in hell those who, according to the Ḳurʾān, are to remain there eternally".

This tradition is in its different forms the locus classicus for the limitation of the power of intercession to Muḥammad to the exclusion of the other apostles. In some traditions it is numbered among the charismata allotted to him (e.g. al-Bukhārī, *ṣalāt*, 56).

Muḥammad's *shafāʿa* then is recognised by the *idjmāʿ*; it is based on XVII, 79: "Perhaps the Lord shall call thee to an honourable place"; and on XCIII, 5: "and thy Lord shall give a reward with which thou shalt be pleased" (al-Rāzī's commentary on sūra II, 48, 2nd *masʾala*; cf. earlier, Muslim, *Īmān*, 320). Muḥammad is said to have been offered the privilege of *shafāʿa* by a message from his Lord as a choice; the alternative was the assurance that half of his community would enter paradise. Muḥammad, however, preferred the right of intercession, doubtless because he thought he would get a considerable result from it (al-Tirmidhī, *Ṣifat al-Ḳiyāma*, 13; Ibn Ḥanbal, iv, 404).

The traditions describe very vividly how the "people of hell" (*djahannamiyyūn*) are released from their fearful state. Some have had to suffer comparatively little from the flames; others on the other hand are already in part turned to cinders. They are sprinkled with water from the well of life and they are restored to a healthy condition (e.g. Muslim, *Īmān*, 320).

In another class of traditions it is said that every prophet has a "supplication" (*daʿwa*) and that Muḥammad keeps his secret in order to intercede with God for his community on the day of judgment (cf. e.g. Ibn Ḥanbal, ii, 313; Muslim, *Īmān*, 334).

In accordance with the Christian conception mentioned above, Islam was not content to make Muhammad the sole conveyor of intercession. At his side, we find angels, prophets, martyrs and even simple believers (al-Bukhārī, *Tawḥīd*, 24/5; Ibn Ḥanbal, iii, 94; Abū Dāwūd, *Djihād*, 26; al-Ṭabarī, *Tafsīr* on Ḳurʾān, XIX, 87). But it is Muḥammad who will be the prime intercessor (Muslim, *Īmān*, 330, 332; *Faḍāʾil*, 3; Abū Dāwūd, *Sunna*, 13). For the Shīʿa, naturally, the power of intercession after the Prophet falls above all to the Imāms (see e.g. M.J. McDermott, *The theology of al-Shaikh al-Mufīd*, Beirut 1978, 254-5).

Finally, one should examine the question of those for whom intercession will be efficacious. In classical Tradition, the response in principle which is given there is that *shafāʿa* is valid for all those who do not associate anything with God (cf. al-Bukhārī, *Tawḥīd*, 19; al-Tirmidhī, *Ṣifat al-ḳiyāma*, 13), even if they have nevertheless been guilty of grave sins (of which they have not repented). A famous *ḥadīth* makes the Prophet say, "My intercession will be for the grave sinners of my community (*li-ahl al-kabāʾir min ummatī*)" (Abū Dāwūd, *Sunna*, 21; al-Tirmidhī, *loc. cit.*, 11; Ibn Mādja, *Zuhd*, 37). Such is the position of the Sunnī theologians (cf. al-Ashʿarī, *Maḳālāt*, Wiesbaden 1963, 474), including the Ḥanbalīs (cf. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 100 of tr.). For them, the Prophet's intercession will concern all those believers who, because of their sins, would have merited divine punishment, with God either admitting them to His Paradise immediately or else bringing them forth from Hell at the end of a period of time more or less protracted (see al-Rāzī, *Tafsīr* on Ḳurʾān, II, 48, beginning of the second *masʾala*, ed. Tehran n.d., iii, 56). The Muʿtazila, on the other hand, as well as the Khāridjites, reject this interpretation (see al-Baghdādī, *Uṣūl al-dīn*, Istanbul 1928, 244; Ibn Ḥazm, *Fiṣal*, Cairo 1317-21, iv, 63). For the Muʿtazila, prophetal intercession can only operate in favour of sinners who have already repented (see Mānkdīm = Ps. ʿAbd al-Djabbār, *Sharḥ al-uṣūl al-khamsa*, Cairo 1965, 688, 691); they consider it to be, on God's part, an extra act of favour (*faḍl*) (see al-Ashʿarī, *Maḳālāt*, 474; Mānkdīm, *op. cit.*, 691; al-Rāzī, *Tafsīr*, iii, 56). Against the Sunnī position, the Muʿtazila invoke certain of the Ḳurʾānic verses cited above, notably XL, 18, and XXI, 28 (cf. Mānkdīm, 689; al-Rāzī, *op. cit.*, iii, 56).

Bibliography (in addition to works cited in the article and older *bibl.* in *EI*[1]): Ibn Khuzayma, *Tawḥīd*, Cairo 1968, 241-325; Ādjurrī, *Sharīʿa*, Cairo 1950, 331-52; Ibn Fūrak, *Mudjarrad maḳālāt al-Ashʿarī*, Beirut 1987, 167-70; Bāḳillānī, *Tamhīd*, Beirut 1957, 365-77; idem *Inṣāf*, Cairo 1963, 168-76; Djuwaynī, *Irshād*, Paris 1938, 222; Abū Yaʿlā, *Muʿtamad*, Beirut 1974, § 375; Abu 'l-Muʿīn al-Nasafī, *Tabṣira*, ii, Damascus 1993, 792-7; L. 2. In popular piety.

Although the Throne Verse (surā II, 155) asks, "Who could intercede with Him except by His permission?" many Muslims believed that the Prophet was granted this permission, as XVII, 79 speaks of his "special rank". Another Ḳurʾānic verse that seems to allow intercession was XL, 7, where "those who carry the divine throne" are mentioned as constantly asking divine forgiveness. Thus the belief developed that even pious acts could serve as intercessors: the Ḳurʾān will intercede for those who have studied and recited it devoutly, and this hope is often expressed in prayers written at the end of manuscripts of it. Other religious works could be imagined as interceding, such as the profession of faith; even mosques were thought to be transformed into white camels or boats to carry to Paradise those who had regularly performed their prayers in them, just as Friday might appear as a beautiful youth to intercede for people who had honoured him by attending the Friday worship. It was also believed that martyrs could intercede on behalf of family and friends, and that children who had died in infancy would intercede for their parents to have them brought to Paradise, because otherwise they would feel lonely.

But the most important intercessor is Muḥammad, and the numerous people in the Muslim world who are called "Muḥammad Shafīʿ" bear witness to this belief, which is based on the legend that at Doomsday, all prophets (including the sinless Jesus) will call out *nafsī nafsī* "I myself [want to be saved]" while Muḥammad calls out *ummatī ummatī* "my community, my community [should be saved]". Innumerable folk-songs and also high-flown poetical descriptions tell how he will lead his community to Paradise carrying the green "banner of praise" (*liwāʾ al-ḥamd*), for his *shafāʿa* is meant, it is believed, for the grave sinners of his community.

Many prayers contain the request that God may grant His prophet the position of honour in which he can intercede for his community; typical is the prayer in al-Djazūlī's *Dalāʾil al-khayrāt*, "O God, appoint our lord Muḥammad as the most trusted of speakers and the most prevailing of requesters and the first of intercessors and the most favoured of those whose intercession is acceptable ... etc.". There is barely a poet—"heretic, drug addict (*bhāngī*) or wine-bibber" (as a Sindhi bard sings in the 19th century)—who has not relied upon the Prophet's intercession, and to recite blessings over him was believed to attract his special help. Poetry in which hope for *shafāʿa* is expressed is found abundantly in all the languages of the Islamic world, whether one turns to a scholar like Ibn Khaldūn in North Africa or to a folk poet in the Khowar language in the Karakorum. The Urdu poet Mīr Muḥammad Taḳī Mīr (d. 1223/1810 [*q.v.*]) claims:

"Why do you worry, O Mīr, thinking of your black book?
The person of the Seal of Prophets is a guarantee for your salvation!"

and the Mamlūk Sultan Ḳāyitbāy of Egypt was as convinced of the Prophet's intercession as were poets in Sind, who loved to enumerate dozens of countries over which the Prophet's *shafāʿa* stretches (mostly in alliterating groups of names). All of them claimed that their "hand was on his skirt" to implore his help, and some, like the Urdu poet Muḥsin Kākōrawī (d. 1905) expressed the hope that the poetry written in his praise might be recited at Doomsday to make the Prophet intercede on his behalf (although the *Ḥadīth* expressedly emphasises the *umma*, not an individual, as recipient of intercession.) Even Hindu poets wrote poetry in the hope of the Prophet's intercession, and the believers' fear of the terrible Day of Judgment was more and more tempered by adding the element of hope, represented by the Prophet's loving care for his community.

AL-**SHAFAḲ** (A.), morning or evening twilight, the periods between daybreak (*al-fadjr* or *ṭulūʿ al-shafaḳ*) and sunrise (*ṭulūʿ al-shams*) and between sunset (*ghurūb al-shams*) and nightfall (*mughīb al-shafaḳ*). These are of special importance in Islamic ritual because they relate to three of the prayers [see ṢALĀT and MĪḲĀT, i]: the *fadjr* prayer is to be performed as soon as possible after daybreak and must be completed before sunrise, the *maghrib* prayer begins as soon as possible after sunset, and the *ʿishāʾ* prayer as soon as possible after nightfall. Al-Bīrūnī [*q.v.*] gives an excellent description in *al-Ḳānūn al-Masʿūdī* (Ḥaydarābād 1954-6, ii, 948-50), here summarised. In the morning a long thin column of light appears first, which is more or less inclined to the horizon according to the latitude of the locality. This is called the "false dawn" (*al-ṣubḥ al-kādhib* or *al-fadjr al-kādhib*) or, because of its shape, "the tail of the wolf" (*dhanab al-sirḥān*). Prayer at this time is forbidden. This is followed by the "true dawn" (*al-ṣubḥ al-ṣādiḳ*), first as a faint white light which gradually extends in the form of a crescent along the horizon; it marks the time for the beginning of the *fadjr* prayer. Next comes the "red dawn" (*al-shafaḳ al-aḥmar*). The same phenomena occur in the evening but in the reverse order, although "the wolf's tail" is not seen so frequently in the evening. The "wolf's tail" in the morning corresponds in fact to the phenomenon known as the zodiacal light, already mentioned in Ḳurʾān, II, 183. Redhouse (1878 and 1880) has gathered numerous references from Arabic, Persian and Turkish sources.

The Shāfiʿīs, Mālikīs and Ḥanbalīs are in accord that the disappearance of the red glow (*mughīb al-shafaḳ al-aḥmar*) in the evening sky should mark the end of the interval for the *maghrib* prayer and the beginning of that for the *ʿishāʾ* prayer. Abū Ḥanīfa, on the other hand, favoured the time of the disappearance of the white glow, and his pupils Abū Yūsuf and Muḥammad al-Shaybānī followed other schools in this question. The various definitions have been collected by Wiedemann and Frank (1926), and al-Bīrūnī's discussion in his *Ifrād al-maḳāl fī amr al-ẓilāl* has been studied by E.S. Kennedy (1976).

Various Muslim astronomers determined the angle of solar depression below the horizon at the times of daybreak and nightfall, which are not identical to each other. The actual values depend on atmospheric conditions and the influence of moonlight as well as on the sharpness of the eyes of the observer. Ḥabash [*q.v.*], for example, used 18° for both, as did Ibn Yūnus [*q.v.*]. Al-Bīrūnī [*q.v.*] suggested both 18° and 17°, and al-Ḳāyinī (*ca.* 400/1000) based his calculations on 17°. Ibn Muʿādh (see below) mentioned 18° and 19° but used 19° in his calculations. In the corpus of tables for time-keeping used in Cairo from the

7th/13th to the 13th/19th century, some of which go back to Ibn Yūnus, 19° is used for morning and 17° for evening twilight. Naṣīr al-Dīn al-Ṭūsī [*q.v.*] assumed 18° for both phenomena. Al-Marrākus͟hī [*q.v.*] favoured 20° and 16°, but al-K͟halīlī (*ca.* 760/1360), who otherwise relied heavily on him, used 19° and 17° in the corpus of tables that was used in Damascus from the 8th/14th to the 13th/19th century.

The duration of twilight (*ḥiṣṣat al-s͟hafaḳ*) is a function of the solar longitude and terrestrial latitude and hence varies throughout the year as well as from one latitude to another. Its determination is a trivial extension of the general problem of determining time from solar altitude, a problem that was extremely popular amongst Muslim astronomers. The earliest table displaying this interval is due to Ḥabas͟h and is based on an approximate Indian formula for timekeeping (as well as on the parameter 18°); the time is given in seasonal hours and the table serves all latitudes (up to *ca.* 45°). Later tables, based mainly on exact formulae, are found in the various corpuses of tables used for time-keeping in various localities [see MĪḲĀT. ii]. These corpuses sometimes contain in addition a table of the duration of total darkness (*d̲jawf al-layl* or *mā bayn al-s͟hafaḳ wa 'l-fad̲jr*), simply determined by subtracting morning and evening twilight from the time between sunset and sunrise. The 10th/16th-century Cairene astronomer Muḥammad b. Abi 'l-K͟hayr al-Ḥusnī prepared a set of tables displaying the duration of morning and evening twilight at the equinoxes and solstices for a series of latitudes.

The duration of twilight may also be determined with an astrolabe [see ASṬURLĀB], whose markings sometimes include a curve representing the solar depression at daybreak/nightfall below the horizon, enabling the user to measure the time taken from that depression to the eastern or western horizon. In the case of the astrolabic quadrant (*rubʿ al-muḳanṭarāt*) [see RUBʿ], two curves are often included whose distance from the meridian measures the duration of morning and evening twilight throughout the year (the meridian being cleverly substituted for the horizon).

To explain the varying phenomena at twilight, it is assumed by Naṣīr al-Dīn al-Ṭūsī and Ḳuṭb al-Dīn al-S͟hīrāzī [*q.v.*] and others that the spherical earth is surrounded by a layer of vapour that contains earthy and watery components, thicker in the lower strata than in the upper ones. Around the veil of vapour is a layer of pure air. The sun's rays cast a shadow of the earth into these layers, the parts outside the shadow reflect the light and appear to shine. The earliest attempt to measure the height of the atmosphere was by the late 5th/11th-century Andalusian *ḳāḍī* Ibn Muʿād͟h. His work, lost in the original, was published as *Liber de crepusculis* in 1542 and, falsely associated with Ibn al-Hayt͟ham [*q.v.*] (the correct authorship was first established in Sabra, 1967), it was influential in Europe in the 16th and 17th centuries. Ibn Muʿād͟h "deserves credit for bringing together diverse views in meteorology and astronomy to form a coherent method for determining the height of the atmosphere" (Goldstein, 1977), even though his result, namely, 50 miles, was not satisfactory. More practical considerations of twilight are found in *zīd̲j*s [*q.v.*] and in works on time-keeping and on instrumentation.

Cluzan *et alii* (eds.), *Syrie, mémoire et civilisation*, Paris 1993, 438, 442-3.

(E. WIEDEMANN-[D.A. KING])

S͟HĀFIʿ B. ʿ**ALĪ** AL-ʿASḲALĀNĪ, Nāṣir al-Dīn, historian of Mamlūk Egypt (born D͟hu 'l-Ḥid̲jd̲ja 649/February-March 1252, died 24 S͟haʿbān 730/ 12 June 1330).

The son of a sister of the chancery clerk Ibn ʿAbd al-Ẓāhir [*q.v.*], he served as clerk first Baraka K͟hān b. Baybars, then Ḳalāwūn [*q.v.*]. His official career ended when he was blinded by an arrow at the battle of Ḥimṣ (680/1281) [*q.v.*], although he claimed to have

played a significant part in the abrogation of the truce with the Latin kingdom (689/1290). He spent his long retirement as a *littérateur* and bibliophile. His numerous writings in verse and prose included a biography of Baybars, covertly critical both of the late sultan and of his previous biographer, Ibn ʿAbd al-Ẓāhir (*Kitāb Ḥusn al-manāḳib al-sirriyya al-muntazaʿa min al-sīra al-Ẓāhiriyya*, ed. ʿAbd al-ʿAzīz al-Khuwayṭir, al-Riyāḍ 1396/1976); and also biographies of Ḳalāwūn and his two sons, al-Ashraf Khalīl and al-Nāṣir Muḥammad. The first is probably *al-Faḍl al-maʾthūr min sīrat al-Malik al-Manṣūr* (Bodleian, ms. Marsh 424), which appears to be a compilation of pieces finally put together *ca.* 693/1293.

Bibliography: The earliest biographical notice of Shāfiʿ was by his personal acquaintance, Ṣafadī, *al-Wāfī bi 'l-wafayāt*, xvi, 77-85 (no. 97). Kutubī, *Fawāt al-wafayāt*, ii, 93-5 (no. 187), gives a somewhat inaccurate abridgement of this. The notice by Ibn Ḥadjdjar, *al-Durar al-kāmina*, ii, 234-7 (no. 1922), is partially drawn from Ṣafadī but gives more precise data on his relationship to Ibn ʿAbd al-Ẓāhir and his birth- and death-dates. See also P.M. Holt, *Some observations on Shāfiʿ b. ʿAlī's biography of Baybars*, in *JSS*, xxix/1 (1984), 123-30; idem, *A chancery clerk in medieval Egypt*, in *Eng. Hist. Review*, ci, no. 400 (1986), 671-9; idem, *The presentation of Qalāwūn by Shāfiʿ b. ʿAlī*, in C.E. Bosworth *et alii* (eds.), *The Islamic world from classical to modern times. Essays in honor of Bernard Lewis*, Princeton 1989, 141-50. (P.M. Holt)

SHAFĪʿĀ YAZDI, Dānishmand Khān, a high noble in the Mughal Empire. A Persian by birth, he studied both rational and traditional sciences in the country of his birth. He came to India as a merchant and traded at Aḥmadnagar. He entered imperial service in 1060/1650 under Shāh Djahān and was given the rank of 1,000/100. In 1065/1654-5 he was given the title of Dānishmand Khān which suggested the Emperor's high opinion of his intellectual talents (*dānishmand*, lit. "scholar, sage") and in 1068/1657-8 he was appointed Mīr Bakhshī but he resigned the same year. In 1070/1659-60 Awrangzīb, the new Emperor, raised his rank to 4,000/2,000, and in 1076/1665-6 to 5,000/2,500. He was appointed Governor of Dihlī, but soon afterwards, in 1078/1667-8, a central administration minister (Mīr Bakhshī). He died in 1081/1670.

Dānishmand Khān is also known to us from the letters of François Bernier who had taken his service in the 1660s. Dānishmand Khān showed great interest in European sciences, and had Bernier expound to him the discoveries of Harvey and Pacquet and the philosophy of Gassendi and Descartes. The Italian traveller Manucci shares Bernier's high opinion of Dānishmand Khān's wisdom and learning.

AL-**SHĀFIʿĪ**, al-Imām Abū ʿAbd Allāh Muḥammad b. Idrīs b. al-ʿAbbās b. ʿUthmān b. Shāfiʿ b. al-Sāʾib b. ʿUbayd b. ʿAbd Yazīd b. Hāshim b. al-Muṭṭalib b. ʿAbd Manāf b. Ḳuṣayy al-Ḳurashī, the eponym, rather than the founder, of the Shāfiʿī school (*madhhab*) [*q.v.*].

1. Life.

The biographers are all agreed in dating the birth of al-Shāfiʿī in 150/767, the year of the death of Abū Ḥanīfa [*q.v.*], a tradition, related by al-Āburī (d. 363/974) and often disputed, placing the two events on the very same day. According to the most ancient preserved source (Ibn Abī Ḥātim al-Rāzī (d. 327/939), *Ādāb al-Shāfiʿī wa-manāḳibuhu*, Aleppo n.d., 21-3), al-Shāfiʿī was born either at ʿAsḳalān, a town on the southern coast of Palestine, or in the Yemen, while most biographers incline rather towards Ghazza, likewise in southern Palestine (also mentioned, less frequently, is Minā near Mecca).

His genealogy was one of the most prestigious since, while being a Ḳurashī, he was a Muṭṭalibī on his father's side, thus a distant relative of the Prophet (al-Muṭṭalib was the brother of Hāshim, paternal great-grandfather of Muḥammad). His mother was, according to different sources, either of the Yemeni tribe of Azd [*q.v.*], or a direct descendent from ʿAlī b. Abī Ṭālib [*q.v.*], cousin and son-in-law of the Prophet. This latter hypothesis, disputed by Fakhr al-Dīn al-Rāzī but retained by al-Subkī (*Ṭabaḳāt al-Shāfiʿiyya al-kubrā*, Cairo n.d., i, 193-5) merits consideration for the extent to which it could partially account for the attitude of al-Shāfiʿī at the time of his *miḥna* (see below).

This genealogy, which has been disputed, is always cited in connection with various *ḥadīth*s of the Prophet—"The Imāms are of Ḳuraysh", "Learn from the Ḳurashīs and do not seek to teach them anything", etc.—with the evident intention of stressing the fundamental superiority of al-Shāfiʿī, and thereby of the school which claims him, over the other Imāms. Similarly, it is often considered that al-Shāfiʿī was the renewer (*mudjaddid*) of religion (who, according to another *ḥadīth*, is sent by God "at the beginning of each century") of the 2nd century A.H.

At the age of two (or ten according to the source which places his birth in the Yemen), orphaned of his father, al-Shāfiʿī was taken by his mother, who seems to have been totally without means, to Mecca where they had relatives. Living in humble style in the *Shiʿb al-Khayf*, the young al-Shāfiʿī seems to have become avidly interested in activities appropriate to his status as a member of the tribal aristocracy: poetry and, in particular, archery. His eloquence and his knowledge of the Arabic language—acquired, it is said (Ibn Farḥūn, *al-Dībādj al-mudhahhab*, Cairo n.d., ii, 157), in the course of prolonged wanderings with Hudhayl [*q.v.*], a tribe of northern Arabia renowned for the beauty of its speech—have remained highly respected and are said to have been praised by al-Djāḥiẓ [*q.v.*]; a collection of poems (*dīwān*) attributed to him has also survived (numerous editions in Cairo). Having furthermore become an excellent archer—"hitting the bull's-eye nine (or ten) times out of ten"—he seems to have composed a treatise on archery, an extract from which was to be reproduced in a section of the *Kitāb al-Umm* (ed. Dār al-Shaʿb (photomechanical reprod. of the Būlāḳ edition, 1321-5/1902-6), Cairo n.d., iv, 149-55; a (manuscript) *K. al-Sabḳ wa 'l-ramy* is attributed to al-Shāfiʿī, cf. F. Sezgin, *GAS*, i, 490).

At a very early age, al-Shāfiʿī was torn between the pursuit of these very mundane activities and the "quest for knowledge" (*ṭalab al-ʿilm*). According to an anecdote related by the biographers, one day, after al-

Shāfiʿī had demonstrated his talents as an archer, one of the spectators, ʿAmr b. Sawwād, told him that he was a better scholar than an archer (*anta fi 'l-ʿilm akbar minka fi 'l-ramy*); a compliment which apparently persuaded him to devote himself entirely to study (Ibn Abī Ḥātim, *Ādāb*, 22-3).

In Mecca, the principal masters of al-Shāfiʿī were Muslim b. Khālid al-Zandjī (d. 179/795 or 180/796), of whom little is known other than that he was the jurisconsult (*muftī*) of the city, and Sufyān b. ʿUyayna (d. 198/813) who was also, later, the master of Ibn Ḥanbal. At fifteen (or eighteen) years old, al-Shāfiʿī is said to have received his master's permission to issue judicial decisions (*fatwās*) in his own right. At the same time, the reputation of a master of Medina, the Imām Mālik b. Anas (95-179/715-95 [*q.v.*]) was in the ascendant and it was to him that al-Shāfiʿī resolved to turn in order to complete his legal education.

According to Ibn Abī Ḥātim al-Rāzī, while still in Mecca al-Shāfiʿī obtained a copy of the *Muwaṭṭaʾ*—the principal work of Mālik—and learned it by heart before introducing himself to Mālik in *ca.* 170/786, persistently asking his permission to recite it to him. After initial hesitation, Mālik agreed and was very pleasantly surprised by the eloquence of the other, who was to become one of his disciples (Ibn Abī Ḥātim, *Ādāb*, 27-8).

Al-Shāfiʿī remained in Medina as a pupil of Mālik until the latter's death, a period of about ten years (Fakhr al-Dīn al-Rāzī, *Manāḳib al-Imām al-Shāfiʿī*, Cairo 1986, 45). Al-Shāfiʿī was always to consider Mālik his supreme master but, being of a resolutely independent spirit, he was later to allow himself an extremely critical *K. Ikhtilāf Mālik wa 'l-Shāfiʿī*, in fact a refutation of Mālik which, in the form in which it has survived, is the work of al-Rabīʿ al-Murādī (d. 270-884), an Egyptian disciple of al-Shāfiʿī, a book for which the Mālikīs, of Egypt especially, were not to forgive him (ed. with the *K. al-Umm*, vii, 177-249; see in this connection R. Brunschvig, *Polémiques médiévales autour du rite de Mālik*, in *Etudes d'Islamologie*, ii, 65-101). In consequence, the Mālikī school was to issue a polemical literature aimed directly at al-Shāfiʿī himself (the *K. al-Radd ʿalā 'l-Shāfiʿī* by Abū Bakr Muḥammad b. al-Labbād al-Ḳayrawānī, d. 333/944, published Tunis 1986), which definitely deserves to be studied to the same degree as the better-known debates between Shāfiʿīs and Ḥanafīs.

At Medina, al-Shāfiʿī had other masters including in particular, a disturbing fact for his Sunnī biographers, Ibrāhīm b. Abī Yaḥyā (d. 184/800 or 191/807) of whom the heresiographers maintain that he was a follower of the Muʿtazila [*q.v.*]; but according to Fakhr al-Dīn al-Rāzī (*Manāḳib*, 44), this master is said to have taught him only Law (*fiḳh*) and Tradition (*ḥadīth*) and nothing in relation to theology (*uṣūl al-dīn*).

On account of the contradictions presented by the biographers, it becomes difficult to trace with precision the life of al-Shāfiʿī after this first Ḥidjāzī episode of his existence. Was he already in ʿIrāḳ between 177/793 and 179/795, and did he compose there the *K. al-Ḥudjdja* (lost), as stated by Fakhr al-Dīn al-Rāzī? In which case, how can he also write that al-Shāfiʿī remained as a pupil of Mālik at Medina until the latter's death, i.e. until 179/795? According to al-Bayhaḳī (d. 458/1066), al-Shāfiʿī's first period of residence in ʿIrāḳ dated from 195/811 to 197/813; which seems improbable since he is reckoned when there to have visited al-Shaybānī, who died in 189/805. The following events, widely attested, in the life of al-Shāfiʿī, may however be accepted as genuine, although they cannot be dated with precision (all dates given here, with the exception of that of the death of al-Shāfiʿī, are hypothetical).

It appears certain that it was shortly after having completed his education that al-Shāfiʿī was summoned to perform some official function at Nadjrān (in the north of Yemen) and that it was during this period that he compromised himself by joining the partisans of the Ḥasanid Yaḥyā b. ʿAbd Allāh (regarding him and the revolt which he led, see H. Laoust, *Les schismes dans l'Islam*, Paris 1983, 76-7). According to Ibn al-Nadīm (d. 385/995 [*q.v.*]), al-Shāfiʿī was a fervent Shīʿī (*wa-kāna al-Shāfiʿī shadīdan fi 'l-tashayyuʿ*: *Fihrist*, Beirut 1978, 295); if this was genuinely the case, it can only be understood in a strictly political sense. This episode, which the biographers call the "test" (*miḥna*) or the "crisis" (*fitna*) of al-Shāfiʿī, ended, at some point in the decade following 180, with his appearance before the caliph Hārūn al-Rashīd at Raḳḳa. It was through the intervention of the eminent jurist Muḥammad b. al-Ḥasan al-Shaybānī [*q.v.*]—a much favoured courtier and himself a former pupil of Mālik and of Abū Ḥanīfa—that al-Shāfiʿī was pardoned, perhaps after a spell in prison, by the caliph (although the other nine co-defendants were executed). According to the hagiographic version of this *miḥna*, al-Shāfiʿī's salvation was entirely his own achievement, obtained by his re-affirmation of loyalty to al-Rashīd and by "the strength of his argument" (*ḳuwwat ḥudjdjatih*). Al-Shāfiʿī was not subsequently to occupy any official function, refusing the caliph's offer of the post of judge (*ḳāḍī*) of Yemen.

Al-Shāfiʿī took up a first period of residence (of two years?) in ʿIrāḳ (either before, or just after his *miḥna*), during which he furthered his acquaintance with the school of *fiḳh* which had developed there, at the initiative of Abū Ḥanīfa in particular, and which continued to flourish there largely through the efforts of his two disciples Abū Yūsuf [*q.v.*] and al-Shaybānī (the text of the *disputatios* (*munāẓarāt*) between the latter and al-Shāfiʿī is preserved in the *Manāḳib* of Fakhr al-Dīn). Al-Shāfiʿī was a regular frequenter of the latter's circle and was later to devote a refutation to him, the *K. al-Radd ʿalā Muḥammad b. al-Ḥasan* (*K. al-Umm*, vii, 277-303).

After this first period in ʿIrāḳ, al-Shāfiʿī returned to Mecca where, moving gradually from the status of disciple to that of master, he stayed for some nine years. *Ca.* 195/811, he is again found in Baghdād for a period of approximately two years during which he composed the first version of the *Risāla* (lost) and various texts containing what the Shāfiʿīs call "the ancient (doctrine)" (*al-ḳadīm*) of al-Shāfiʿī. In 198/813, probably after another visit to the Ḥidjāz, he is once again in Baghdād, but for only a few months. It was during this period, probably in Mecca, that al-Shāfiʿī met Ibn Ḥanbal (d. 241/855 [*q.v.*]), but despite the abundance in the biographies of anecdotes linking the two, it does not seem that they were well acquainted.

Little is known of the reasons which induced al-Shāfiʿī to emigrate and to settle definitively at Fusṭāṭ in Egypt (according to certain sources he had already spent time there in 188/804). He was probably invited there by the governor al-ʿAbbās b. ʿAbd Allāh (according to Yāḳūt) but it seems probable that it was in fact the isolation imposed on him, in the Ḥidjāz, by the predominance of the disciples of Mālik and, in Baghdād, by that of the disciples of al-Shaybānī, which persuaded him to attempt the foundation of a school elsewhere.

At Fusṭāṭ, he was initially well received, regarded probably as a disciple of Mālik, by the major Mālikī

family of the Banū ʿAbd al-Ḥakam. Before writing a refutation of al-Shāfiʿī and returning to the ranks of the Mālikīs, Muḥammad b. ʿAbd Allāh b. ʿAbd al-Ḥakam (d. 268/881) was one of his most fervent disciples. However, al-Shāfiʿī very soon became a target for the criticism of the Egyptian Mālikīs, who sought without success to have him banished by the authorities. The life of al-Shāfiʿī was clearly that of an undesirable.

It was however in Egypt—he lectured in the mosque of ʿAmr—that al-Shāfiʿī's teaching had its greatest impact; his principal disciples were Egyptians and subsequently Shāfiʿism competed successfully with Mālikism for supremacy in Egypt [see SHĀFIʿIYYA]. It was here that al-Shāfiʿī composed the new version of his *Risāla* (the one which has survived) and the majority of the texts collected in the *K. al-Umm*.

The circumstances of his death, at 54 years old, the last day of Radjab 204/20 January 820, remain uncertain: according to some, he died as a result of a violent assault at the hands of a fanatical Mālikī while others speak of sickness. He was buried in the tomb of the Banū ʿAbd al-Ḥakam at the foot of the Muḳaṭṭam Hills. The architectural complex, frequently altered and restored, which surrounds his mausoleum, was erected under the Ayyūbids. His tomb is today the object of particular veneration (along with the nearby tombs of the Imām al-Layth and of others, it forms part of a "tour" which takes place on Thursdays), and every year his *mawlid*, one of Cairo's most important dates, is lavishly celebrated (one aspect of the popular devotion surrounding al-Shāfiʿī is studied in S. ʿUways, *Ẓāhirat irsāl al-rasāʾil ilā ḍarīḥ al-Imām al-Shāfiʿī*, Cairo 1978).

Married twice, al-Shāfiʿī had four children: two sons, Abū ʿUthmān (who was *ḳāḍī* of Aleppo) and Abu 'l-Ḥasan, and two daughters, Fāṭima and Zaynab.

Reference may be made to SHĀFIʿIYYA for a list of the principal disciples of al-Shāfiʿī.

2. Doctrine.

a. Theology (*uṣūl al-dīn, ʿilm al-kalām*). Over the years, a considerable quantity of ink has been expended in addressing the question of the theological views of al-Shāfiʿī. In reality, the interest accorded to this question in the post-al-Shāfiʿī period seems to be inversely proportional to the interest in the subject shown by al-Shāfiʿī himself; the few references to the *ahl al-kalām* (an expression which, at the time, denoted the Muʿtazilīs) in his work are always linked to issues of a legal and not of a theological nature (J. Schacht, *The origins of Muhammadan jurisprudence*, Oxford 1950, 258-9).

It is therefore appropriate to treat with great caution (1) the various professions of faith attributed to al-Shāfiʿī which give the impression that his thinking was in some ways a prefiguration of Ashʿarism (*al-Ashʿariyya* [*q.v.*]), (the *K. al-Fiḳh al-akbar fi 'l-tawḥīd*, Cairo 1324/1906, is clearly apocryphal and the authenticity of the *K. Waṣiyyat al-Shāfiʿī*, ed. Kern in *MSOS*, xiii [1910], 141-5, is doubtful), and at other times a prefiguration of Ḥanbalism (cf. the creed (*ʿaḳīda*) attributed to al-Shāfiʿī in the *Ṭabaḳāt al-Ḥanābila* of Ibn Abī Yaʿlā, Beirut n.d., i, 283-4); and (2) the observations related by Ashʿarī Shāfiʿīs, such as Fakhr al-Dīn al-Rāzī or al-Subkī, depicting al-Shāfiʿī as favouring the exercise of *ʿilm al-kalām* and those, related by traditionalist Shāfiʿīs, which show him hostile to this discipline (e.g. Ibn Abī Ḥātim, *Ādāb*, 182-9). In this context, the literature as a whole derives largely from retrospective projection, and the debates to which it refers were not to become crucial in Islam until after the death of al-Shāfiʿī (more precisely, after the *miḥna* [*q.v.*] revolving round the question of the creation of the Ḳurʾān, which began in 218/833).

A recent interpretation of the work of al-Shāfiʿī, open to objection on the grounds that it, too, borrows from this dubious retrospection on the part of biographers, depicts him as a traditionalist whose primary purpose was to oppose the development of so-called "rationalist" theology (G. Makdisi, in *SI*, lix [1984], 5-47).

b. *Uṣūl al-fiḳh*. It was, allegedly, at the request of ʿAbd al-Raḥmān b. Mahdī, a traditionist of Baṣra who died in 198/813, that al-Shāfiʿī composed the *Risāla* (numerous editions since 1894, of which the best is that of A.M. Shākir, Cairo 1940 with numerous re-issues; Eng. tr. M. Khadduri, repr. Cambridge 1987; partial Fr. tr. Ph. Rancillac, in *MIDEO*, xi [1972], 127-326) and thus instituted the science of *uṣūl al-fiḳh* which was later to be elevated to a privileged position in the classical canon of Islamic scholarship (statements denying to al-Shāfiʿī the credit for having founded this science should be regarded as strictly polemical). The text which is currently available, in the form of two manuscripts, was very likely composed in Egypt and reflects the final stage in the legal thinking of al-Shāfiʿī, who had composed a substantially different version (*al-risāla al-ḳadīma*) while resident in ʿIrāḳ.

As a result of the works of I. Goldziher, who had no knowledge of the *Risāla* (*Die Ẓahiriten. Ihr Lehrsystem und ihre Geschichte*, Leipzig 1884, Eng. tr. *The Ẓāhiris*, Leiden 1971) and of J. Schacht (*Origins*, and *An introduction to Islamic law*, Oxford 1964, Fr. tr. *Introduction au droit musulmane*, Paris 1983), the contribution of al-Shāfiʿī to Islamic legal thought—which he raised to the status of a science—is customarily regarded as a synthesis between the two major directions hitherto followed in terms of the elaboration of *fiḳh*, with which he was thoroughly familiar: on the one hand, that of his master Mālik and on the other that of Abū Ḥanīfa, as represented by al-Shaybānī. In the depth of its inspiration, the Shāfiʿian synthesis would nevertheless be more faithful to the spirit of the former and could be placed under the rubric of traditionalism.

The fundamental idea around which the entire legal thought of al-Shāfiʿī is developed in the *Risāla* is that, to every act performed by a believer who is subject to the Law (*mukallaf*) there corresponds a statute (*ḥukm*) belonging to the revealed Law (*sharīʿa*). This legal statute is either presented as such in the scriptural sources (the Ḳurʾān and the Sunna), which al-Shāfiʿī calls "the foundation" (*al-aṣl*), or is it possible, by means of analogical reasoning (*ḳiyās* [*q.v.*]) to infer it from the *aṣl*, the latter being the bearer of a latent "rationally deducible content", the *maʿḳūl al-aṣl*?

All the efforts of al-Shāfiʿī—and herein lies his originality in comparison with his predecessors—were subsequently to be applied to defining with precision, establishing critically and ranking in order of priority these different sources (*aṣl* and *maʿḳūl al-aṣl*) and to determining the modalities of their usage. It is no doubt the critical effort characterising Shāfiʿian legal thought which explains to a large extent the open hostility or the indifference with which the *Risāla* was initially received among *fuḳahāʾ* of all persuasions. Furthermore, the simple fact that al-Shāfiʿī had chosen to write a treatise on this subject entailed a systematisation, a codification and, up to a point, a rationalisation of understanding the Law, the *fiḳh*, which were soon to provoke tensions which would not be resolved until much later.

The principal attainments of the legal thought of al-

Shāfiᶜī consist in (1) the definition of the Sunna [*q.v.*], and (2) the systematisation of analogical reasoning. As regards the Sunna, it is appropriate, according to al-Shāfiᶜī, to identify it strictly with the sayings (*akwāl*), the acts (*afᶜāl*) and the tacit acquiescence (*ikrār*) of the one Prophet as related in solidly established traditions; in other words, it is no longer possible to suppose naïvely that the various existing local traditions faithfully reflect the practice of the Prophet. The argument, reinforced by a radical critique of conformism (*taklīd* [*q.v.*]), was principally directed against Mālik and his disciples, who tended to assimilate the practice (*ᶜamal*) of Medina to that of the Prophet for the reason, theoretically indefensible, that the Medinans had directly inherited the tradition of the Prophet because he had lived there.

As for analogical reasoning, identified with *idjtihād* [*q.v.*], the function of which is to fill gaps left by the Kurʾān and the Sunna, al-Shāfiᶜī distinguishes between two types: "analogy by cause" (*kiyās al-maᶜnā*)—the *kiyās al-ᶜilla* of the post-Shāfiᶜian theoreticians—and the less authoritative "analogy by resemblance" (*kiyās al-shabah*). Common to both of them is the imperative obligation to rely upon a legal proof (*dalīl sharᶜī*), which may sometimes be difficult for the jurist to trace but of which, through postulating, the existence is certain. The argument, this time, is directed rather against Abū Ḥanīfa and his partisans who were reputed to rely on *raʾy* and *istiḥsān* [*q.v.*], i.e. on freer forms of reasoning, less closely tied to the revealed datum. In using such reasoning, al-Shāfiᶜī was to claim that man introduces arbitrariness (*taḥakkum*) into the comprehension of the Law and that in so doing he substitutes himself for God and the Prophet (al-Ghazālī attributes to him the maxim *man istaḥsana fa-kad sharaᶜa*), the only legitimate legislators of the community.

It is evident that al-Shāfiᶜī maintains his distance from Mālik, as from Abū Ḥanīfa and his successor al-Shaybānī, and that in fact he has placed the two parties side-by-side in formally addressing to them the same message "Return to the proof". Considering his work from this perspective, al-Shāfiᶜī was anything but a traditionalist, since he profoundly modified the notion, hitherto predominant among jurists, that the community was still in direct and immediate contact with the Revelation. After the passing of al-Shāfiᶜī, on the other hand, the jurists would be obliged to interpret the reception of the revealed Law by referring to a legal theory which became ever more complex.

It should be noted that the *Risāla* remained a dead letter for more than a century and that the science of the *uṣūl al-fikh*, inherited from al-Shāfiᶜī, was not really developed until after the 4th/10th century. But it is not certain, on the other hand, that this means that the importance traditionally accorded to this work is exaggerated (a thesis recently propounded by W.B. Hallaq in *IJMES*, xxv [1993], 587-605, in reply to N.J. Coulson, *A history of Islamic law*, Edinburgh 1964, 53-61, Fr. tr. *Histoire du droit islamique*, Paris 1995, 52-60).

In addition to the *Risāla*, two other texts of al-Shāfiᶜī's legal theory have been preserved, and these have yet to receive the attention that they deserve: the *K. Ibṭāl al-istiḥsān* (published with the *K. al-Umm*, vii, 267-77), and the *K. Djimāᶜ al-ᶜilm* (in *ibid.*, 250-62, another ed. by A.M. Shākir, Cairo 1940).

c. *Fikh*. In the absence of any monograph devoted to the practical law elaborated by al-Shāfiᶜī, the present writer is obliged to confine himself to indicating the texts which could serve as a basis for such a study (the later Shāfiᶜī texts of *fikh*, some of which have been translated, are the work of the major *mudjtahids* and do not necessarily reflect the *fikh* of al-Shāfiᶜī).

Great confusion prevails among the biographers in regard to the works of *fikh* of al-Shāfiᶜī (see, in this context, the attempt at clarification of the Shāfiᶜian bibliography by Muḥammad Abū Zahra, *al-Shāfiᶜī*, Cairo n.d., 134-49). Just as in the field of legal theory, two distinct periods in the activity of al-Shāfiᶜī are to be identified here. The first took place in the Ḥidjāz and in ᶜIrāk and led to the production of a book intitled *K. al-Ḥudjdja*, probably a compilation, of which the transmitter reputed to be the most reliable was Abū ᶜAlī al-Ḥasan al-Zaᶜfarānī (d. 260/874), a Baghdādī disciple of al-Shāfiᶜī. This work has not survived.

The "new (doctrine)" (*al-djadīd*) was elaborated in Egypt during the last years of al-Shāfiᶜī's life and is to be found recorded in the monumental *K. al-Umm*, the edition of which cited above also contains, in vol. vii, numerous other texts of al-Shāfiᶜī, some, according to J. Schacht (cf. *Origins*, 330), dating from the ᶜIrākī period. In the current state of knowledge it is impossible to determine with certainty whether the *Mabsūṭ*, mentioned by al-Bayhakī in particular as belonging among the works of al-Shāfiᶜī, is, as seems probable, the same book as the *K. al-Umm*.

Also available is an *Aḥkām al-Kurʾān* (ed. al-Kawtharī, 2 vols., n.d.), a treatise dealing with the legal statutes present in the Kurʾān which is not the one, now lost, composed by al-Shāfiᶜī himself. It is in fact a work of compilation undertaken by the great Shāfiᶜī al-Bayhakī (d. 458/1066) on the basis of different texts of al-Shāfiᶜī.

d. *Ḥadīth*. A promoter of the introduction of the critique of traditions into the legal sciences (J. Schacht, *Introduction*, 36), inasmuch as, for him, prophetic traditions are the only means of access to knowledge of the Sunna, al-Shāfiᶜī, as a traditionist (*muḥaddith*), is the author of a *Musnad* and of a *K. Ikhtilāf al-ḥādīth* (ed. with the *K. al-Umm*, respectively, vi, in the margins, 2-277, and vii, in the margins, 2-414).

In this domain, al-Shāfiᶜī was the object of numerous criticisms both on the part of the Mālikīs and, subsequently, of the disciples of Ibn Ḥanbal. He was reproached in particular for having been an unreliable transmitter (*rāwī*) (neither al-Bukhārī, nor Muslim accepted traditions transmitted by him), for having argued certain points of doctrine on the basis of dubious traditions, while being himself very rigorous on this point, in theory, and for having placed his trust in unacceptable transmitters such as Ibrāhīm b. Abī Yaḥyā. The *Bayān khaṭaʾ man akhṭaʾa ᶜalā 'l-Shāfiᶜī* "Revelation of the error of those who tax al-Shāfiᶜī with error" (Beirut 1986) of al-Bayhakī seeks to exonerate al-Shāfiᶜī from these accusations.

A list, incomplete, of the *ruwāt* on whose authority al-Shāfiᶜī transmitted *ḥadīth* and of those who relied upon his authority for transmission in their turn, is supplied by Ibn Farḥūn (*al-Dībādj*, ii, 157).

e. Others. The biographers make frequent mention of al-Shāfiᶜī's extensive knowledge in the fields of medicine (*ṭibb*), of physiognomy (*firāsa*), also stating that, before turning away from it, he was interested in astrology (*al-nudjūm*).

Bibliography (in addition to the works and articles cited in the text): 1. Biography. A. Arabic sources: 1. All *Ṭabakāt* works: al-ᶜAbbādī (*Ṭabakāt al-fukahāʾ al-shāfiᶜiyya*, Leiden 1964, 6-7), al-Shīrāzī (*Ṭabakāt al-fukahāʾ*, Beirut n.d., 60-2), etc., include a brief notice concerning al-Shāfiᶜī; 2. Among the hagiographies, the ones most often cited, with those of Ibn Abī Ḥātim and of Fakhr al-Dīn al-Rāzī, are those of al-Bayhakī (*Manākib al-Shāfiᶜī*, Cairo 1970)

and of al-ʿAsḳalānī (*Tawālī al-taʾsīs bi-maʿālī Ibn Idrīs*, Cairo 1883); 3. Among biographical dictionaries, that of al-D͟hahabī (*Siyar aʿlām al-nubalāʾ*, Beirut 1981-88, x, 5-99) assembles a mass of information, as does the shorter work of al-Nawawī, *Tahd͟hīb al-asmāʾ wa 'l-lug͟hāt*, Beirut n.d., i, 44-67; 4. Among modern works, besides that of Muḥ. Abū Zahra (above), ʿAbd al-Rāziḳ, *al-Imām al-S͟hāfiʿī*, Cairo 1945; al-Bag͟hdādī, *Manāḳib al-Imām al-S͟hāfiʿī*, Mecca 1910; M. Muṣṭafā, *K. al-D͟jawhar al-nafīs fī taʾrīk͟h ḥayāt al-Imām Ibn Idrīs*, Cairo 1908. B. In western languages: E.F. Bishop, *Al-S͟hāfiʿī...*, in *MW*, xix (1929), 156-75; J. Schacht, *On S͟hāfiʿīs life...*, in *Stud. or. Pedersen*, Copenhagen 1953, 318-26; F. Wüstenfeld, *Der Imām al-S͟hāfiʿī...*, Göttingen 1890-1. Supplementary references in Sezgin, *GAS*, i, 485-6.

AL-**S͟HĀFIʿIYYA**, a legal school (*mad͟hhab*) of Sunnī Islam whose members claim to follow the teachings of the Imām al-S͟hāfiʿī (d. 204/820 [*q.v.*]).

Origins (first half of the 3rd/9th century).

The issue of the institution of the S͟hāfiʿī *mad͟hhab* remains poorly understood, and it poses a series of problems, fundamental as well as chronological, which are not confined to this school alone, applying in an identical manner to the emergence of other legal schools within the Islamic legal system.

In reference to the S͟hāfiʿī school, the fundamental problem is essentially the following: the Imām al-S͟hāfiʿī is the author of a radical criticism of judicial conformism (*taḳlīd* [*q.v.*]), developed in his celebrated *Risāla* (ed. S͟hākir, Cairo 1940; numerous re-editions in Cairo and in Beirut), which sought, on the one hand, to discredit the living local traditions as a source of religious Law, and on the other, to insist that the doctrines of the Imāms could no longer be invoked in legal issues without additional proof of the authority attributed to these great masters. Furthermore, the biographers credit al-S͟hāfiʿī with a series of solemn declarations strictly forbidding others to claim him as a teacher or to make his doctrine, after his death, the object of a new conformism. If reference is to be made to S͟hāfiʿī thought, the very existence of a school thus appears contradictory from the outset. There can be no doubt that this fundamental anomaly at the very heart of the institution of judicial schools was very soon perceived by Muslim jurists, who sought to resolve it in various manners (ranging from the refusal, rare and soon inadmissible, to belong to any school whatsoever, to the most blind acceptance of the undisputed superiority of the Imāms, with various intermediate solutions seeking to legitimise the existence of the schools while avoiding the danger of *taḳlīd*). Unfortunately, this issue has yet to be examined in depth.

As a general rule, the question of adherence to one *mad͟hhab* or to another should be further sub-divided according to the nature of the adherent: whether the case of a scholar-jurist (*ʿālim*), or of one who is secular in religious matters (*ʿāmmī*). Every secular person is obliged to refer himself to a recognised scholar (recognition depending on a number of criteria, some of them controversial) of his choice when a question relating to the *S͟harīʿa* [*q.v.*] is put to him and it behoves him to act in conformity (*ḳallada*) with the opinion which he has sollicited. For him, the only means of access to the knowledge of legal statutes is *taḳlīd*. Theoretically, the adherence of a secular Muslim to a specific judicial school is thus consequent upon the choice to act in conformity with one scholar rather than with another: he will be called a "S͟hāfiʿī" if he appeals to the authority of a jurist claiming the legacy of S͟hāfiʿism and the only personal effort which is (sometimes) required of him is to decide upon the relative worth of the Imāms and subsequently to choose, in a logical and sincere manner, the school to which he will belong (hence the existence, in each school, of a literature, yet to be studied, directed towards a broad public which is educated, but insufficiently, or not at all, versed in legal matters, which seeks to prove the superiority of such an Imām over such another; thus there is, among the S͟hāfiʿīs, the unedited *Mug͟hīt͟h al-k͟halḳ fī bayān al-aḥaḳḳ* of al-D͟juwaynī). However, the adherence of a secular person to a *mad͟hhab* is not necessarily definitive or strict; he may, on the one hand, change his school, and on the other, according to certain authors, he has the right, in a particular matter, to refer in an exceptional fashion to a scholar belonging to a school other than that whose doctrine he normally follows.

The question of the chronology of the emergence of the *mad͟hhabs*, and in particular of the S͟hāfiʿī one, is likewise imperfectly resolved. According to J. Schacht (*Introduction to Islamic law*, Oxford 1964, 58), the inception of a school laying claim to al-S͟hāfiʿī and seeking to propagate his doctrine ("doctrine" is, alongside "way", one of the senses of the word *mad͟hhab*), is to be credited to the very first generation of disciples of al-S͟hāfiʿī and, more specifically, to al-Muzanī (see below), who, in compiling a "summary" (*muk͟htaṣar*) of the doctrines of al-S͟hāfiʿī (text edited in the margins of the *K. al-Umm* of al-S͟hāfiʿī, Cairo n.d., i-vi) would allegedly have laid the foundations of the institutionalisation of this doctrine. This hypothesis is confirmed by the history of judicial science (*fiḳh* [*q.v.*]) in the Islamic community presented by a S͟hāfiʿī author of the very first rank, Abū Isḥāḳ al-S͟hīrāzī (d. 479/1083 [*q.v.*]). In his "list of jurists", the latter classifies the first Muslim jurists according to geographical criteria (jurists of Medina, of Mecca, of Yemen, of Syria, of Egypt, etc.). On the other hand, the geographic criterion is not retained for the immediate disciples of the Imāms al-S͟hāfiʿī, Abū Ḥanīfa (d. 150/767 [*q.v.*]), Ibn Ḥanbal (d. 241/845 [*q.v.*]), Mālik (d. 179/795 [*q.v.*]) and Dāwūd b. ʿAlī b. K͟halaf

(d. 270/884 [*q.v.*]): "Then, subsequently", writes al-Shīrāzī, "in all the lands where Islam was present, the judicial science (*fiḳh*) passed into the hands of the disciples of al-Shāfiᶜī, of Abū Ḥanīfa, of Mālik, of Aḥmad [b. Ḥanbal] and of Dāwūd and was propagated by them in the regions. Imāms claiming allegiance to them—to the five above-mentioned Imāms—were eager to demonstrate the superiority of their *madhhab*s and their doctrines (*aḳwāl*)" (al-Shīrāzī, *Ṭabaḳāt al-fuḳahāʾ*, Beirut n.d., 108). It seems, however, quite probable that Isḥāḳ al-Shīrāzī was proceeding here towards an *a posteriori* reconstruction and that the birth of the Shāfiᶜī *madhhab* in the sense of a genuine institution is probably later than he indicates (the evolution of the institution of *madhhabs* definitely deserves more attentive study).

It is thus appropriate to locate the birth of these so-called "personal" schools (as opposed to the former schools known as "local") during the first half of the 3rd/9th century. In the current state of knowledge, it is difficult to establish precisely what adherence to a particular school meant to a jurist. Whatever the hypothesis, recent studies (W.M. Watt, in *Orientalia Hispanica*, i, 1974, 675-8, and W.B. Hallaq, in *IJMES*, xvi [1984], 3-41) have shown, in opposition to an opinion which is still widely diffused (expressed in its classic form by J. Schacht, *Introduction*, 69-75), that the birth of the personal schools could not be identified with the "closure of the door of *idjtihād* [*q.v.*]", which, while it never took on the form of an institution, was a much later phenomenon.

Development.

A preliminary remark is required before addressing the question of the development of the Shāfiᶜī school in history; it concerns the modalities of its diffusion in the Muslim world. Two theses are opposed on this point, although in fact it is doubtless more realistic to consider them as complementary. If credence is to be given to the authors of the *Ṭabaḳāt* and, more generally, to ancient and contemporary Muslim authors (with the exception of a few historians), the diffusion of the Shāfiᶜī *madhhab* is to be laid to the exclusive credit of a certain number of eminent personalities who emerged from its ranks and who, principally on account of their pedagogic ability and powers of persuasion (but also of their morality, their spirituality, etc.) drew to themselves an often considerable number of pupils and disciples sometimes coming from distant places. The latter, on completion of their education, returned to their homes where they pursued an academic career and/or occupied official functions in the judiciary, and it was through diffusion of this sort that the Shāfiᶜī *madhhab* developed in different regions of the *Dār al-Islām*. This thesis has an undoubted tendency towards idealisation of the issue, ignoring the fact that education and, more particularly, the magistrature, were not genuinely independent of political power, nor of its crises. It appears difficult, however, with G. Makdisi (*The rise of colleges*, Edinburgh 1981, 1-9), to subscribe entirely to the theses by C. Snouck Hurgronje and revived by Schacht which tend rather to place the development of the *madhhabs* under the heading of state policy. Numerous works (see, for example, A.K.S. Lambton, *State and government in medieval Islam*, Oxford 1981, ch. *The* Fuḳahāʾ *and the holders of power*, 242-63) have in fact shown that in Sunnī Islam the relations between the body of scholars, jurists in particular, and the circles of power were not expressed as one voice, so that while it is certain that official policy was capable of influencing the development of judicial schools by favouring sometimes one and sometimes another on the institutional level, this influence remained limited; it was to some extent a process of identification—more or less efficacious according to the times—with the activity of the jurists of a certain school, without, however, conferring secondary status on others (in relation to the interaction between political régime and judicial scholarship, see K.S. Salibi, *The Banū Jamāᶜā. A dynasty of Shāfiᶜite jurists in the Mamluk period*, in *SI*, ix [1958], 97-109 or idem, art. BANŪ DJAMĀᶜĀ in this Encyclopaedia).

The first Shāfiᶜīs.

Although the career of al-Shafiᶜī also included phases in the Ḥidjāz and in Baghdād, it was principally towards the end of his life, at Fusṭāṭ in Egypt, that his teaching was most favourably accepted, and that he had the greatest number of disciples, who played a significant role in the diffusion of his doctrine.

It is furthermore appropriate to recall that there are two distinct bodies of doctrine in the work of al-Shāfiᶜī: the first, known as "the ancient" (*al-ḳadīm*) having been developed before his arrival in Egypt (in 198/814, according to al-Maḳrīzī, *Khiṭaṭ*, Cairo n.d., ii, 334) and the second, known as "the new" (*al-djadīd*), during his residence at Fusṭāṭ. Now the Shāfiᶜī *madhhab* has definitively retained only the "new" Shāfiᶜī doctrine (with considerable modifications over the course of the centuries), in such a way that its diffusion could only be accomplished by these Egyptian disciples.

The first ᶜIrāḳi Shāfiᶜī transmitters of the ancient doctrine.

Two direct disciples of al-Shāfiᶜī are renowned for having transmitted his earlier doctrine: Abū ᶜAlī al-Ḥasan al-Zaᶜfarānī (d. 260/874; on him, see al-Subkī, *Ṭabaḳāt al-shāfiᶜiyya al-kubrā* (= *Ṭ.Sh.K.*), Cairo n.d., ii, 114-17) and Abū ᶜAlī al-Ḥusayn al-Karābīsī (d. 245/859 or 248/862), see *ibid.*, ii, 117-26, the former being reckoned the more reliable. A late biographer, Djamāl al-Dīn al-Asnawī (d. 772/1370), claimed that he still had in his possession a copy of the book transmitted by al-Karābīsī after al-Shāfiᶜī (al-Asnawī, *Ṭabaḳāt al-shāfiᶜiyya*, Beirut 1987, i, 26). According to various authors, including Ibn Kathīr (d. 774/1373) (*Ṭabaḳāt al-fuḳahāʾ al-shāfiᶜiyyīn*, Cairo 1994, i, 39), Ibn Ḥanbal [*q.v.*] was also an assiduous disciple of al-Shāfiᶜī during the latter's second period in Baghdād in the years following 195/811. The "new" doctrine of al-Shāfiᶜī was only introduced into ᶜIrāḳ by Abu 'l-Ḳāsim ᶜUthmān al-Anmāṭī (d. 288/901) who was the pupil of two Egyptian Shāfiᶜīs, al-Muzanī and al-Rabīᶜ (see below).

The first Egyptian Shāfiᶜī transmitters of the new doctrine.

Three names stand out among the direct disciples of al-Shāfiᶜī in Egypt: Abū Yaᶜḳūb Yusūf al-Buwayṭī (d. 231/846), Abū Ibrāhīm Ismāᶜīl al-Muzanī (d. 264/877) and Abū Muḥammad al-Rabīᶜ al-Murādī (d. 270/883). Of the first, al-Shāfiᶜī said that he was "[his] tongue" (*lisānī*), of the second that he was "the one who made [his] doctrine triumph" (*nāṣir madhhabī*) and of the third that he was "the transmitter of [his] books" (*rāwiyat kutubī*).

Al-Buwayṭī, a native of Buwayṭ in Upper Egypt, was, evidently, al-Shāfiᶜī's favourite disciple; it is he whom the latter is said expressly to have appointed his successor. Having contributed significantly to the diffusion of his master's *madhhab*, al-Buwayṭī suffered persecution at the time of the so-called "*miḥna* [*q.v.*] of the Ḳurʾān", was arrested and imprisoned in Baghdād, where he died in detention. He is the author of a "summary of the books of al-Shāfiᶜī" (*Mukhtaṣar min kutub al-Shāfiᶜī*), praised by the Shāfiᶜī biographers (see al-ᶜAbbadī, *Ṭabaḳāt al-fuḳahāʾ al-shāfiᶜiyya*, Leiden 1964, 8; the work is preserved in

manuscript form, see F. Sezgin, *GAS*, i, 491). Historically, the importance of al-Buwayṭī and of his work seems, however, to be of rather secondary importance (unless Abū Ṭālib al-Makkī (d. 386/996) is correct in his assertion, repeated by al-Ghazālī in the *Iḥyāʾ ʿulūm al-dīn*, that al-Buwayṭī was the real author of the *K. al-Umm*, which is attributed to al-Shāfiʿī).

Al-Muzanī, whose sister also followed the teaching of al-Shāfiʿī, is renowned, and sometimes criticised, for having been al-Shāfiʿī's most independent disciple. His *Mukhtaṣar*, the subject of numerous commentaries (see Sezgin, i, 493), was at the same time considered by some, e.g. al-Nawawī (d. 676/1277), as one of the seminal works of reference of the school, and by others, e.g. al-Rāfiʿī (d. 628/1230), as diverging too often from the teachings of al-Shāfiʿī, to such an extent that the "singularities" (*tafarrudāt*) of his *fiḳh* could no longer be counted, according to him, among the doctrines of the school. His "strange points of view and [his] numerous positions which are contrary to the *madhhab*" (*wa-lahu wudjūh gharība wa-ikhtiyārāt kathīra mukhālifa li 'l-madhhab*: Ibn Kathīr, *Ṭabaḳāt al-fuḳahāʾ al-shāfiʿiyyīn*, i, 123) were often refuted by Abū Isḥāḳ, al-Shīrāzī in the *Muhadhdhab*, another, later, work of reference of the school. As indisputable evidence of the tenuity, or the laxity, which then characterised the links between a disciple and his master, al-Muzanī was also, according to al-Asnawī (*Ṭabaḳāt al-shāfiʿiyya*, i, 28), the author of a book in which he completely renounced the doctrine of al-Shāfiʿī and expounded a *madhhab* of his own.

Quite unlike al-Muzanī, al-Rabīʿ al-Murādī, the "servant of al-Shāfiʿī" (*khādim al-Shāfiʿī*), owes his reputation to his role as a faithful transmitter of al-Shāfiʿī—it was he whom jurists trusted (see Ibn al-Nadīm, *al-Fihrist*, Beirut n.d., 297)—rather than as a major jurist; in legal matters, he was reputedly "slow of comprehension" (*baṭīʾ al-fahm*). Al-Rabīʿ al-Murādī was in effect the principal transmitter of the "new" doctrine of al-Shāfiʿī and of the books propounding it, i.e. the *K. al-Umm* and the *Risāla* (of which one of the two surviving copies may be his own work). Furthermore, he was himself the author of a summary (*Mukhtaṣar*) of the doctrines of al-Shāfiʿī which did not enjoy the success of that of al-Muzanī (see al-Bayhaḳī, *Manāḳib al-Shāfiʿī*, Cairo n.d., i, 255).

The major Shāfiʿīs and the expansion of the madhhab.

As a result of the zeal of the first Egyptian Shāfiʿīs, Egypt, with the exception of the Ṣaʿīd [*q.v.*] which remained Mālikī, was the cradle of Shāfiʿism and rapidly became its "fief" (*markaz mulk al-shāfiʿiyya*: *Ṭ.Sh.K.*, i, 326). Syria (*al-Shām*), hitherto Awzāʿī, was soon to follow the movement. Until the institution, in 665/1228, of the system of the four judges by Sultan al-Ẓāhir Baybars al-Bunduḳdārī, practically all official judicial functions in Egypt and in Syria were exercised by Shāfiʿīs (except, naturally enough, during the Fāṭimid period, from 358-567/969-1171). However, even when the four "orthopraxic" rites were thus officially represented in the institutions, Shāfiʿism retained, in Egypt and in Syria, various prerogatives; it lost them definitively with the Ottoman conquest of 1517, which rapidly imposed Ḥanafism as the legal doctrine of the state (see Schacht, *Introduction*, 89-93; for a history of Shāfiʿism in Egypt, see al-Maḳrīzī, *Khiṭaṭ*, ii, 331-44).

To the west of Egypt, Shāfiʿism did not succeed in establishing itself and, from the 4th/10th century onward, only a very few Shāfiʿīs are to be observed in the Maghrib and in Andalusia. In terms of legal theory (*uṣūl al-fiḳh*), Shāfiʿism nevertheless exerted a significant influence on the Mālikism of North Africa and Andalusia, through the intermediary of Mālikī scholars who travelled to the East, and were sometimes taught there by Shāfiʿī masters; such was the case of Abu 'l-Walīd al-Bādjī (d. 474/1081), whose *uṣūl al-fiḳh* are virtually indistinguishable from those of Abū Isḥāḳ al-Shīrāzī, his Shāfiʿī teacher in Baghdād.

In the Ḥidjāz, Mecca and Medina included, the Shāfiʿīs were broadly in the majority, while the Yemen was shared between Shāfiʿism and the Zaydiyya; tensions between representatives of the two tendencies have persisted into the present day (for a history of Shāfiʿism in the Yemen, see al-Djaʿdī (d. 586/1190), *Ṭabaḳāt fuḳahāʾ al-Yaman*, Beirut 1981).

In ʿIrāḳ, and more particularly in Baghdād, the role of al-Anmāṭī (see above) seems to have been decisive in the diffusion of the *fiḳh* of al-Shāfiʿī: "It was through his inspiration, and in tribute to his memory, that the people of Baghdād set themselves with such zeal to writing the *fiḳh* of al-Shāfiʿī" (al-Shīrāzī, *Ṭabaḳāt al-fuḳahāʾ*, 114). In fact, al-Anmāṭī stands at the head of a line of very eminent jurists who were concerned with theorising and codifying Shāfiʿī *uṣūl al-fiḳh* and *fiḳh*. His principal disciple was the *ḳāḍī* Abu 'l-ʿAbbās Ibn Suraydj (d. 306/918 [*q.v.*]), whose activity was probably even more important for the diffusion of the *madhhab*. He had a considerable number of disciples who are still renowned: Abū Isḥāḳ al-Marwazī (d. 340/951), Ibn Abī Hurayra (d. 345/956), al-Ḳaffāl al-Shāshī (d. 336/947), etc. It is also in the line of Ibn Suraydj that it is appropriate to locate the works of other important authors, such as Abū Ḥāmid al-Isfarāyīnī (d. 406/1015), Abu 'l-Ṭayyib al-Ṭabarī (d. 450/1058 [*q.v.*]), Abū Isḥāḳ al-Shīrāzī (d. 476/1083 [*q.v.*]), etc. The extraordinary development of Shāfiʿī literature in Baghdād, for as long as this city retained its full importance, should no doubt be attributed to the fact that in the city numerous *madhhabs* remained well represented, thus creating a climate of competition which was a catalyst for, in the best case, the fine intellectual creativity to which Shāfiʿism and the other schools owed some of their major works and, in the worst case, doctrinal fanaticism (*al-taʿaṣṣub al-madhhabī*) from which serious violence sometimes resulted.

In Khurāsān, and more particularly at Nīsābūr and at Marw, the Shāfiʿīs were so numerous that they constituted, according to al-Subkī, "half of the *madhhab*" (*Ṭ.Sh.K.*, i, 326). It is with the Khurāsānian branch of Shāfiʿism, as a general rule more speculative than its ʿIrāḳi branch, that are associated the names of Abū Isḥāḳ al-Isfarāyīnī (d. 418/1027), of Abu 'l-Maʿālī al-Djuwaynī (d. 478/1085) or indeed of the illustrious Abū Ḥāmid al-Ghazālī (d. 505/1111 [*q.vv.*]). As a result of serious politico-religious disorders, the 6th/12th century saw the demise of the Shāfiʿī presence in Khurāsān in favour of the Ḥanafī *madhhab*, and an exodus of Shāfiʿī scholars towards the west, especially towards Syria, is observable at this time (see J. Sublet, in *Arabica*, xi/2 [1964], 188-95; for more details regarding the diffusion of the Shāfiʿī *madhhab* in the rest of the Muslim world, see H. Halm, *Die Ausbreitung der šāfiʿitischen Rechtsschule...*, Wiesbaden 1974; A. Taymūr, *Naẓra tārīkhiyya fī ḥudūth al-madhāhib al-fiḳhiyya al-arbaʿa*, Beirut 1990, 70-80; M. Abū Zahra, *Tārīkh al-madhāhib al-islāmiyya*, Cairo n.d., 477-82 and *Ṭ.Sh.K.*, i, 324-9; for the geographical distribution of *madhhabs* in the contemporary period, see L. Massignon, *Annuaire du monde musulman*, Paris 1955).

An author of the 8th/14th century, al-Subkī (*Ṭ.Sh.K.*, i, 199-202), gives the following list, which cannot be considered canonical on account of the

theological views of its author, of the Shāfiᶜīs who, according to him, are the most important in the history of the *madhhab*, each of them being the «renewer» (*mudjaddid*) of religion, whose coming each century is prophesied by a statement of the Prophet : al-Shāfiᶜī, Ibn Suraydj, Abū Ḥāmid al-Isfarāyīnī, Abū Ḥāmid al-Ghazālī, Fakhr al-Dīn al-Rāzī (d. 606/1209) and Taḳī al-Dīn Ibn Daḳīḳ al-ᶜĪd (d. 702/1302). (Regarding the major Shāfiᶜīs, see also M.H. Hītū, *al-Idjtihād wa-ṭabaḳāt mudjtahidī al-shāfiᶜiyya*, Beirut 1988 and F. Wüstenfeld, *Der Imām el-Schafiᶜī, seine Schüler und Anhänger bis zum J. 300 d. H.*, Göttingen 1890-1).

The principal works of reference of the madhhab.

1. Legal theory (*uṣūl al-fiḳh* [*q.v.*]). Although Shāfiᶜīs often took pride in the fact that their Imām, al-Shāfiᶜī, was the founder of the science of the *uṣūl-al-fiḳh*, this science was, in fact, hardly practised at all during the first two centuries of the existence of the *madhhab*, even if it was not totally neglected (on this point, see W. B. Hallaḳ in *IJMES*, xxv [1993], 587-605). On the other hand, during the 4th/10th century and, subsequently, throughout the classical period, the science of *uṣūl al-fiḳh* experienced an extraordinary development. It is only in the last few years that a close interest has been taken in this literature and that it has been published. In regard to the Shāfiᶜī *uṣūl al-fiḳh*, the paucity of works dealing with them demands a very schematic approach. As a general rule, all the Shāfiᶜī *uṣūlīs* claim their adherence to the *Risāla* of al-Shāfiᶜī, but this claim is often very formal; it impinges upon various currents of legal thought.

The first is characterised by its very strictly legal nature and its representatives were in fact "pure" jurists; most often, they were renowned also for the quality of the treatises on *fiḳh*, as correctly defined, which they composed. This current is principally represented by Abū Isḥāḳ al-Shīrāzī (d. 476/1083) whose books *al-Lumaᶜ fī uṣūl al-fiḳh* (numerous editions since Cairo 1326/1907) and *Sharḥ al-Lumaᶜ* (ed. ᶜA.-M. Turkī, Beirut 1983) served for a long time as models and were the subjects of frequent commentaries (see. M.H. Hītū, *al-Imām al-Shīrāzī*, Damascus 1980, 209).

This current, today once again highly valued, was supplanted by the works of *uṣūlīs* who were definitely Shāfiᶜīs, but who were often not jurists but theologians of generally Ashᶜarī allegiance. The classical texts of this current of theologico-legal thought are: *al-Burhān fī uṣūl al-fiḳh* by Imām al-Ḥaramayn al-Djuwaynī (ed. al-Dīb, Cairo 1980) and, by the same, the short and much commentarised *Waraḳāt* (numerous editions; French tr. I. Bercher, Tunis 1930), *al-Mustaṣfā min ᶜilm al-uṣūl* by Abū Ḥāmid al-Ghazālī (Beirut n.d., repr. Būlāḳ 1322-4/1904-6; text partially analysed by H. Laoust, *La Politique de Gazālī*, Paris 1970, 152-82), *al-Iḥkām fī uṣūl al-aḥkām* by Sayf al-Dīn al-Āmidī (d. 631/1234) (ed. al-Djamīlī, Beirut 1984; on him, see B.G. Weiss, *The search for God's law. Islamic jurisprudence in the writings of Sayf al-Dīn al-Āmidī*, Salt Lake City 1992), and in particular *al-Maḥṣūl fī ᶜilm uṣūl al-fiḳh* by Fakhr al-Dīn al-Rāzī (ed. al-ᶜAlwānī, Beirut 1992).

In the post-classical period, these texts were tirelessly commentarised and glossed and they served as the basis for numerous "original" texts which in fact are compilations. The best known of the latter is the *Djamᶜ al-djawāmiᶜ* of Tādj al-Dīn al-Subkī (d. 771/1369 [*q.v.*]) (Cairo 1316/1898) which, accompanied by various later commentaries, principally that of Djalāl al-Dīn al-Maḥallī (d. 864/1459 [*q.v.*]), served as a basis for the teaching of the science of the *uṣūl al-fiḳh* among Shāfiᶜīs for centuries. These late texts are mistrusted by contemporary Muslim scholars, who prefer to go directly to the great classical works of a more distant past, reckoned to be more authentic and more prestigious.

2. Law (*fiḳh* [*q.v.*]). In the 7th/13th century, the great Shāfiᶜī al-Nawawī (d. 676/1277) compiled a list of the works of *fiḳh* of those of his predecessors who had exerted the greatest influence in the *madhhab*; he mentions the *Mukhtaṣar* of al-Muzanī, *al-Tanbīh* and *al-Muhadhdhab* of Abū Isḥāḳ al-Shīrāzī (respectively: 1. Cairo 1901, Fr. tr. by G.H. Bousquet, *Le Livre de l'Admonition*, Algiers 1949; and 2. Dār-al-Fikr, n.p., n.d.), *al-Wasīṭ* and *al-Wadjīz* by Abū Ḥāmid al-Ghazālī and the *Sharḥ al-wadjīz* of Abu 'l-Ḳāsim ᶜAbd al-Karim al-Rāfiᶜī (d. 623/1226) (cf. al-Nawawī, *Tahdhīb al-asmāʾ wa 'l-lughāt*, Beirut n.d., i, 3). It will be noted that none of the works of al-Shāfiᶜī himself feature in this list and, judging by the number of commentaries which they engendered, it is doubtless no exaggeration to say that the *Mukhtaṣar* of al-Muzanī had definitively greater importance than the *K. al-Umm* of al-Shāfiᶜī himself in the development of the Shāfiᶜī doctrine (concerning the divergence between the *fiḳh* of al-Shāfiᶜī himself and classical Shāfiᶜī *fiḳh*, see Schacht, *Sur la transmission de la doctrine...*, in *AIEO Alger*, x [1952], 401-19).

The works of al-Shīrāzī are associated with the ᶜIrāḳī element of the Shāfiᶜī school: *al-Tanbīh* takes its inspiration from the commentary, *al-Taᶜlīḳ*, by Abū Ḥāmid al-Isfarāyīnī on the *Mukhtaṣar* of al-Muzanī, while in *al-Muhadhdhab*, al-Shīrāzī devised his *fiḳh* around another commentary on the same *Mukhtaṣar*, also intitled *al-Taᶜlīḳ* but the work of his master, the *Ḳāḍī* Abū Ṭayyib al-Ṭabarī (d. 450/1058). On the other hand, the work of al-Ghazālī is associated with the Khurāsānian element of the school; *al-Wadjīz* is a summary of *al-Wasīṭ*, which is itself a summary of *al-Basīṭ* by the same al-Ghazālī, in which he derived inspiration from the *Nihāya al-maṭlab* of his master Abu 'l-Maᶜālī al-Djuwaynī. Of a somewhat later date is *al-Taḳrīb* (ed. T. Keijzer, Leiden 1859, Fr. tr. G.H. Bousquet, *Abrégé de la loi...*, in *R.Afr.* [1935]), another summary of the *Nihāya* of al-Djuwaynī, by Aḥmad b. al-Ḥasan Abū Shudjāᶜ (still living in 500/1106 [*q.v.*]) which was the object of glosses and commentaries until the 13th/19th century.

In the *Fatḥ al-ᶜazīz fī sharḥ al-wadjīz*, a commentary on *al-Wadjīz* of al-Ghazālī, Abu 'l-Ḳāsim al-Rāfiᶜī (628/1230) is reputed to have made the connection between the two elements of the school and, after him, there is barely any distinction between the two. Al-Rāfiᶜī is also the author of *al-Muḥarrar*, likewise inspired by *al-Wadjīz*, which was to be critically summarised by Muḥyī al-Dīn al-Nawawī in his *Minhādj al-ṭālibīn* (much-criticised tr. by L.W.C. van den Berg, *Le Guide des zélés croyants*, Batavia 1882-4), which was in its turn highly regarded in the *madhhab*. The same al-Nawawī composed two important works based on the *Sharḥ al-wadjīz* of al-Rāfiᶜī, the *Rawḍa al-ṭālibīn* and the *Zawāʾid al-rawḍa*.

Two commentaries on the *Minhādj al-ṭālibin* of al-Nawawī, the *Tuḥfat al-muḥtādj* by Ibn Ḥadjar al-Haytamī (d. 975/1567) and the *Nihāyat al-muḥtādj* by Shams al-Dīn al-Ramlī (d. 1006/1596), as well as a commentary on *al-Taḳrib* of Abū Shudjāᶜ, the *Fatḥ al-ḳarīb* by al-Ghazzī (d. 918/1512) (again, a much criticised tr. by L.W.C. van den Berg, *La Révélation de l'Omniprésent*, Leiden 1895), constituted works of reference for the teaching of Shāfiᶜism in later periods. A gloss (*ḥāshiya*) on the last-named text by Ibrāhim al-Bādjūrī (d. 1276/1860) has been partially summarised by E. Sachau (*Muhammedanisches Recht*

nach schafiitischer Lehre, Stuttgart-Berlin 1897; for a more exhaustive bibliography of the school, see al-Ḥusaynī (d. 1014/1605), *Ṭabaḳāt al-shāfiʿiyya*, Beirut 1979, *Bāb fī dhikr kutub al-madhhab*, 245-51).

Shāfiʿism, theology and Ṣūfism.

Throughout its long history, the Shāfiʿī school generally maintained good relations, in terms of theology (*ʿilm al-kalām* [*q.v.*]), with Ashʿarism [*q.v.*] and, in regard to Ṣūfism, with its reputedly "moderate" tendency. Scholars such as Abu 'l-Ḳāsim al-Ḳushayrī (d. 465/1072 [*q.v.*]), renowned Khurāsanian author of the *Risāla fī ʿilm al-taṣawwuf*, who combined the qualities of Shāfiʿī jurist, of Ashʿarī theologian and of Ṣūfī, are plentiful among the Shāfiʿī ranks; Abū Ḥāmid al-Ghazālī remains the most eminent representative of this trend, although he is neither the most original nor the most interesting.

In regard to Ṣūfism, envisaged as an interior struggle (*mudjāhada*) towards the comprehension and realisation of the injunctions of the Law addressed to the consciousness of the believer (*fiḳh bāṭin al-sharīʿa*), Shāfiʿī legal doctrine has strictly speaking nothing to dispute; the contrary is the case, insofar as, on the one hand, Ṣūfism does not eliminate the importance of *fiḳh* as such by seeking to act as a substitute for it, and insofar as, on the other hand, it does not engender practices, "spiritual exercises", which, from the viewpoint of *fiḳh*, could be seen as reprehensible. But, as a more general rule and in a more essential manner, the majority of the spiritual and moral virtues—the spirit of scrupulousness (*al-waraʿ*), asceticism (*al-zuhd*), etc.—which *fiḳh* refuses, on principle, to take into consideration in its work of demonstration and application of legal statutes and which have been codified in the framework of Ṣūfism, are highly valued by, in particular, the majority of biographers who do not hesitate, when the occasion arises, to attribute them to such-and-such a *faḳīh*. Among renowned Ṣūfīs who were Shāfiʿīs (or at least, whom Shāfiʿism claims), the most significant names are: al-Ḥārith b. Asad al-Muḥāsibī (d. 243/857 [*q.v.*]) whose few biographers state that he was a friend of al-Shāfiʿī; Abu 'l-Ḳāsim al-Djunayd (d. 297/910 [*q.v.*]), although al-Ḳushayrī asserts that he adhered rather to the *madhhab* of Abū Thawr; the *shaykh* Abū ʿAbd Allāh b. Khafīf (d. 391/1001); etc.

The history of relations between Shāfiʿism and Ashʿarism [see ASHʿARIYYA] is, however, more problematical and has for a long time been the object of debate in Islamic studies. With regard to theology, it is appropriate first to distinguish between two tendencies among Shāfiʿī jurists. The first—represented by scholars such as Abū Ḥātim al-Rāzī (d. 327/939), al-Bayhaḳī (d. 458/1066), Ibn al-Ṣalāḥ (d. 643/1245), al-Dhahabī (d. 748/1348) or indeed Ibn Kathīr (d. 774/939)—was, for various reasons and to differing degrees, hostile to the exercise of this discipline as such. This tendency is often described as "traditionalist", although there is doubt as to whether this adjective is well-chosen.

The second tendency was for its part enthusiastically in favour of the development of the *ʿilm al-kalām* in the Muslim community and it is represented by Shāfiʿīs—Abū Isḥāḳ al-Isfarāyīnī, Ibn Fūrak (d. 406/1015), al-Djuwaynī, Fakhr al-Dīn al-Rāzī, al-Āmidī (d. 631/1233), etc.—who include some of the best Muslim theologians. It is asserted that more than a large majority of the Shāfiʿīs favouring the exercise of speculative theology supported Ashʿarism (with a few exceptions, including, famously, the *Ḳāḍī* ʿAbd al-Djabbār (d. 415/1024 [*q.v.*]) who was a Shāfiʿī in legal matters and a Muʿtazilī in theology). It seems to be accepted furthermore, among the majority of Shāfiʿī biographers (see, for example, Ibn al-Ṣalāḥ, al-Nawawī and al-Mizzī, *Ṭabaḳat al-fuḳahāʾ al-shāfiʿiyya*, Beirut 1992, ii, 604-6), that the theologian al-Ashʿarī (d. 324/935-6 [*q.v.*]) was himself a Shāfiʿī. It is, however, impossible to state this categorically (see D. Gimaret, *La doctrine d'al-Ashʿari*, Paris 1990, 517-9; on the question of relations between Shāfiʿism and Ashʿarism, see, with regard to Abū Isḥāḳ al-Shīrāzī, C. Gilliot in *SI*, lxviii [1988], 170-86, and, in reply to the latter, E. Chaumont in *SI*, lxxiv [1991], 168-77, and with regard to al-Djuwaynī, T. Nagel, *Die Festung des Glaubens*, Munich 1988).

It is not, however, appropriate to speak of a special relationship between Shāfiʿism and Ashʿarism since, on the one hand, as has been observed, numerous Shāfiʿīs were opposed to any speculative theology, and on the other hand, not all Ashʿarīs were Shāfiʿīs, indeed, far from it. Furthermore, bearing in mind the fact that, over the centuries, Ashʿarism tended to be regarded as the supreme theological doctrine of Sunnī Islam—at the expense of Muʿtazilism and, to a lesser degree, of creeds of the Ḥanbalī type—the presence of a majority of Ashʿarīs among the Shāfiʿīs is hardly surprising (on this point, see *T.Sh.K.*, iii, 377-8, where al-Subkī draws up a contemporary table of the theological allegiances represented in the *madhhabs* and stresses the fact that, while Ashʿarīs constitute the majority in all the schools, with the exception of Ḥanbalism, it is only the Mālikīs who are exclusively Ashʿarī). It is apparent, therefore, that the question of relations between Shāfiʿism and Ashʿarism is subordinate, by comparison with a more general enquiry, not yet undertaken, which would seek to determine the precise nature of the causes capable of explaining why and how Ashʿarism was implanted in the Islamic legal system and its institutions with greater ease than other theological doctrines.

Bibliography: The majority of important references are indicated in the text. For a more extensive bibl., recourse may be had to the exhaustive and thematically classified compilation given by Schacht in his *Introduction to Islamic law*, 215-85. See also ASHʿARIYYA, ḤANĀBILA, ḤANAFIYYA, MĀLIKIYYA, MUʿTAZILA. (E. CHAUMONT)

SHAFSHĀWAN (dialect, Shāwan, usual Fr. rendering Chaouen, Span. Xauen), a town of Morocco in the country of the Ghumāra [*q.v.*]. The term is said to mean "horn or horns" in Tamazight, referring to the mountain peaks (over 2,000 m/6,500 feet) which surround the town. Situated at an altitude of 600 m/2,000 feet, Shafshāwan is rich in springs of water, the best-known being that of Raʾs al-Māʾ. Equally situated between Oazzane and Tetuan, with which it has always been in close contact, the town occupies a strategic position 40 km/25 miles from the coast, and in the past played the role of a crossroads for the Djbāla region.

It was founded in 876/1471-2 on the right bank of the wadi of the same name by Ḥasan b. Muḥammad b. Rāshid, a descendant of the Idrīsid saint ʿAbd al-Salām Ibn Mashīsh [*q.v.*]. It was moved to the right bank by ʿAlī b. Rāshid. It sheltered waves of Moriscos, Muslims and Jews, expelled from al-Andalus, and still bears the imprint of this history, seen in the utilisation of space and colours, the architecture, as well as the customs and patronymics attesting this Andalusian grafting. The town's history is linked with that of the founding Banū Rāshid, the most famous of whom being Mawlāy Ibrāhīm (895-946/1490-1539). The family cultivated matrimonial alliances with the powerful caïds of the region;

Mawlāy Ibrāhīm's sister, Sayyida al-Ḥurra, married the *ḳāʾid* of Tetuan al-Mandrī and, after becoming a widow, became the wife of the Waṭṭāsid sultan Aḥmad. She played a leading role in the politics of the region, and Mawlāy Ibrāhīm himself distinguished himself in warfare against the Portuguese of Aṣīla before succeeding his father as *ḳāʾid* of Shafshāwan. As a splendid and faithful warrior, Sīdī Brāhīm/Mawlāy Ibrāhīm compelled the admiration of his enemies, who did not cease to heap praises on his great deeds and generosity (Bernardo Rodrigues, *Anals de Arzila*, ed. D. Lopes, Lisbon 1915-20; R. Ricard, *Moulay Ibrahim, caïd de Chefchaouen*, in *Sources inédites de l'histoire du Maroc, Portugal*, Paris 1948, iii, 146-57, and the same article in *al-And.* [1941]). But his family fell victim to the conflicts between the last Waṭṭāsids and the Saʿdids. After Abū Ḥassūn's capture of Fās in 961/1554, Shafshāwan was besieged by the minister Abū ʿAbd Allāh Muḥammad ʿAbd al-Ḳādir in the name of the sultan al-Ghālib, and the Banū Rāshid fled in Safar 969/October 1562 and disappeared from the political scene.

Shafshāwan played an essential role in the fight against the Portuguese installed at Ceuta, Tangiers and Aṣīla, and Leo Africanus states that its citizens were "freed from taxes because they serve as cavalrymen and infantrymen in the fight against the Portuguese". The 9th/15th century was its most brilliant one, when it produced several renowned scholars, such as Abū Muḥammad ʿAbd Allāh al-Habtī (d. 963/1556) and Ibn ʿAskar, the author of the *Dawḥat al-nāshir*, banished by the Banū Rāshid. Once occupied by the Saʿdids, the town lost its importance and, henceforth, is hardly ever mentioned. Mawlāy Ismāʿīl built a *ḳaṣba* there. It was in turn held by al-Raysūnī, al-Khaḍir Ghaylān and then by the *pasha* Aḥmad al-Rīfī (d. 1146/1743), and in October 1920 was occupied by Spain. During 1922-6 ʿAbd al-Krīm made it a base of operations for the war in the Rīf [*q.v.*].

The surrounding region, despite its steep slopes, is fertile and well-watered and produces cereals and fruit (grapes, figs, pomegranates etc.), but the water-mills and the presses which gave the town its fame survive only vestigially. The activity recorded by G. Colin in the earlier decades of this century (*EI*[1] art. *s.v.*) is only a memory, and Shafshāwan lives essentially off tourism, with many tourists attracted by the climate and the beauty of its site, and with handicrafts: textiles (*drāza*), pottery, leatherwork and copper ware. The fortified town has walls pierced by eleven gates. Its clearly individual quarters, its numerous mosques, its *ḳaṣba* and the shrine of Sīdī ʿAlī Ben Rāshid, bear witness to a past era now completed, for the town now suffers from its cramped site. It remains a modest place, and its eccentric position and the poverty of the region have not encouraged the growth of population which characterises other urban centres of Morocco. It is thought to have had between 3,000 and 7,000 inhabitants before 1918. In 1953 the census counted 11,500 Muslims, 2,500 Spanish and 15 Jews. The population reached 16,850 in 1969, but did not go beyond 24,000 in 1982.

(Halima Ferhat)

SHĀH "king", and **SHĀHANSHĀH** "king of kings", two royal titles in Persian.

They can be traced back to the Achaemenid kings of ancient Persia, who, from Darius I (521-486 B.C.) onwards, refer to themselves in their inscriptions both as *xšāyaθiya* "king" (from the root *xšay-* "to rule", cognate to Sanskrit *kṣáyati* "possess" and Greek *κτάομαι* "acquire") and as *xšāyaθiya xšāyaθiyānām* "king of kings". Even earlier the title "king of kings" had been used by the rulers of Assyria and of Urartu (in the Caucasus) and it is not unlikely that the Persians adopted it from the latter (see O.G. von Wesendonk, *The title "King of Kings"*, in *Oriental studies in honour of Cursetji Erachji Pavry*, London 1933, 488-90). The implication of this title would seem to have been, not that the Achaemenid monarch was the chief king over other sub-kings (there is no evidence that there were any other "kings" within the empire), but rather that he was the king *par excellence*. We have thus to do with a rhetorical figure which might be called the superlative genitive, as also in the Biblical "vanity of vanities" (*hăbel hăbālīm*).

The same two titles, in their Western Middle Iranian forms *shāh* and *shāhān shāh*, occur in the inscriptions of the Arsacid and Sāsānid kings. In inscriptions in the Parthian language these are represented by the Aramaeograms MLKʾ and MLKYN MLKʾ respectively; Middle Persian uses the Aramaeogram MLKʾ (also MRKʾ and in books occasionally the "phonetic" spelling šḥ) for the former and the "semi-phonetic" spelling MLKʾ-n MLKʾ (and variants) for the latter (for references, see Ph. Gignoux, *Glossaire des inscriptions Pehlevies et Parthes*, London 1972, 28, 57, and add the new Arsacid inscription discussed by E. Lipiński in *Orientalia Lovaniensia analecta*, xlviii [1993], 127-34). The Sāsānid inscriptions refer to the emperor consistently as *shāhān shāh*, and use *shāh* as a title for other members of his family: the emperors appointed their sons as "kings" of the outlying provinces, assigning them the royal titles of the former rulers of those regions (e.g. *Kushān shāh* "king of the Kushāns"), in much the same way that the heir to the English throne bears the title "Prince of Wales". However, in a contemporary Manichaean text (published by W.B. Henning, *Mani's last journey*, in *BSOS*, x/4 [1942], 941-53) the Sāsānid Wahrām I is referred to merely as "the king" (*shāh*). It would thus appear that, although in official protocol the ruler was always *shāhān shāh*, in everyday speech he could be simply *shāh*. The distinction between the "king of kings" and the subordinate "kings/princes" is mirrored by the title "queen of queens" (Middle Persian *bāmbishnān bāmbishn*, written MLKTʾ-n MLKTʾ), borne by the monarch's principal wife, to distinguish her from the other queens in the royal household, and similarly further down the hierarchy, with the *mowbed ī mowbedān* "priest of priests", and so forth. It is not unlikely that Islamic titles like *ḳāḍī 'l-ḳuḍāt* continue this Iranian tradition.

Neo-Persian *shāh* (also *shah*) is the usual word for "king" in that language, and is used either by itself or else in conjunction with a personal name. In the latter case it can precede the name (e.g. *shāh Maḥmūd*), follow it in an *iḍāfa*-construction (*Maḥmūd-i shāh*), or be appended directly to the name and form an accen-

tual unit with it (*Maḥmūd-shāh*). The latter usage is the most common and, though found already in early texts (such as Firdawsī's *Shāh-nāma*), is anomalous in Neo-Persian; it seems likely that it is either an isolated relic from Middle Persian or else an imitation of Turkish constructions with titles such as *khān*. Compounds with *shāh* (as the first or last element) or indeed *shāh* on its own occur quite frequently as proper names of kings, but also of commoners; the given name of the famous Saldjūḳ ruler Malik Shāh, for example, is formed simply by combining the Arabic and Persian words for "king". As a common noun (without a name) *shāh* is widely used in poetry and non-official prose of all periods to designate potentates who, in their official protocol, styled themselves *malik, sulṭān, amīr, pādshāh* or whatever. It is also used with reference to the kings of pre-Islamic Persia and in works of fiction. Sometimes it is applied to princes (as already in Middle Persian; many references in F. Wolff, *Glossar zu Firdosis Schahname*, Berlin 1935, 549, 583). In a number of compounds or set phrases *shāh* means "pre-eminent, principal", e.g. in *masdjid-i shāh* "congregational mosque" (not "king's mosque"), or *shāh-rāh* "principal road, highway". In the Indian subcontinent, *shāh* is appended to the names of persons claiming descent from the Prophet and has today become a surname.

As for the title *shāhān shāh*, this naturally fell into disuse with the collapse of the Sāsānid empire, but it remained in popular memory in its Neo-Persian form *shāhanshāh* (the vowels in the first and last syllables can be shortened when required by the metre; modern Western Persian has also the vulgar form *shāhinshāh*). This is an inseparable compound (from which is derived an adjective *shāhanshāhī*) and in the context of Neo-Persian it can no longer be analysed morphologically, though there has never been any doubt that its meaning is indeed "king of kings". It was adopted as his official title by the Būyid ʿAḍud al-Dawla (338-72/949-83 [*q.v.*]), and continued to be used by his successors on their coins and in court documents, sometimes in conjunction with its Arabic equivalent *malik al-mulūk*, despite the objections raised by religious authorities (for details, see LAḲAB and the literature cited there), but after the fall of the Būyids it does not seem to have figured in official protocol until the 20th century, when it was adopted by the self-styled "Pahlawī" dynasty in Persia. It has, however, always been used quite freely by poets. Thus the Ghaznavid Masʿūd I, who would hardly have tolerated such a sacrilegious title in his official documents, had evidently no scruples about his court poet Manūčihrī addressing him as *shahanshāh, shāhanshah-i dunyā, shāh-i malikān* and the like, and similar expressions are used by the panegyrists of the Saldjūḳs and others after them.

SHĀH ʿABD AL-ʿAẒĪM AL-ḤASANĪ, Abu 'l-Ḳāsim b. ʿAbd Allāh b. ʿAlī b. al-Ḥasan b. Zayd b. al-Ḥasan b. ʿAlī b. Abī Ṭālib, Shīʿī ascetic and traditionist, well-known under the name of Imāmzāde (Shāh) ʿAbd al-ʿAẓīm. He is buried in the principal sanctuary of Rayy [see AL-RAYY].

1. *The holy man.*

Only sparse biographical data are available on ʿAbd al-ʿAẓīm, who must have been born in Medina before 200/815 and who was a companion of the ninth and tenth Imāms, Muḥammad al-Djawād al-Taḳī (d. 220/835) and ʿAlī al-Hādī al-Naḳī (d. 254/868) [see AL-ʿASKARĪ]. When the latter, at the order of caliph al-Mutawakkil, was forced to go to Sāmarrāʾ in 233/848, ʿAbd al-ʿAẓīm followed him there. He is said to have been ordered by al-Naḳī, apparently under the caliphate of al-Muʿtazz, to go to Persia in exile. He stayed in Ṭabaristān, and then in Rayy, where he lived in the *sikkat al-mawālī* in the quarter of Sarbānān, hidden in the house of a Shīʿī. He passed his time in prayers, ascetic practices, study and teaching, and visited the tomb of an ʿAlid which was later reputed to be that of Ḥamza b. Mūsā al-Kāẓim (see below). He died perhaps before al-Naḳī (towards 250/864?, see Karīmān, i, 384 ff.) although, according to some Shīʿī sources (Sharīf al-Murtaḍā, al-Ṭūsī, see Madelung, quoted in the *Bibl.*), he also was a companion of the eleventh Imām, Ḥasan al-ʿAskarī (d. 260/874 [*q.v.*]).

In the small Imāmī community of Rayy, ʿAbd al-ʿAẓīm occupied an important position as *sayyid*, companion of the Imāms, traditionist and teacher. His works, now lost, were used and quoted until the 5th/11th century: *Kitāb Yawm wa-layla* (on the daily rituals); *Riwāyāt ʿAbd al-ʿAẓīm*; *Kitāb Khuṭāb Amīr al-muʾminīn* (on the sermons of Imām ʿAlī). His views on the concepts of *ʿadl* and *tawḥīd* (cf. Karīmān, i, 386 ff.) were praised by Ibn ʿAbbād, the Būyid vizier in Rayy. The Imāmī traditionist Ibn Bābuya/Bābawayh [*q.v.*], who in part continued ʿAbd al-ʿAẓīm's efforts, devoted a now lost biography to him, *Akhbār ʿAbd al-ʿAẓīm al-Ḥasanī*.

2. *The sanctuary.*

ʿAbd al-ʿAẓīm was buried in a garden under an apple-tree (*shadjara tuffāḥ*), opposite the tomb of Ḥamza b. Mūsā which was situated outside the walls, to the west of al-Rayy, in the partly Sunnī quarter of Bāṭān (see Karīmān, i, 264 ff.). The garden belonged to a certain ʿAbd al-Djabbār, probably a Sunnī (see Karīmān, i, 388; ii, 316). A Shīʿi is said to have heard in a dream the Prophet telling him that one of his descendants of the *sikkat al-mawālī* should be buried there. The tomb was venerated by the Shīʿīs at a very early date. According to the Imām al-Naḳī, pilgrimage to there was as meritorious as the one to the tomb of the Imām al-Ḥusayn (Ibn Kulūya, *Kāmil al-Ziyārāt*, see Madelung; Karīmān, i, 386, ii, 51). The sanctuary, mentioned as a *mashhad* by Ibn ʿAbbād and known under the name of *Mashhad al-Shadjara*, was restored during the Saldjūḳid period thanks to the patronage of the Shīʿī vizier Madjd al-Dīn Barāwistānī al-Ḳummī (ʿAbd al-Djalīl Rāzī, *Kitāb al-Naḳḍ*, in Karīmān, i, 389, ii, 191, 419). Ḥusām al-Dawla Ardashīr (d. 602/1205-6), the Bāwandid ruler of Māzandarān, used to send every year 200 dīnārs to the sanctuary (Ibn Isfandiyār, *Tārīkh-i Ṭabaristān*, ed. ʿA. Iḳbāl, Tehran 1320, i, 120).

The most ancient trace of the mausoleum consists of a coffin of precious wood (aloe, betel, walnut), carrying a Ḳurʾānic inscription, part of which is the *āyat al-kursī* (*sūrat al-baḳara*, II, 256). The coffin is a gift of Nadjm al-Dīn Muḥammad, vizier under the Ilkhān Abū Saʿīd (d. 737/1335), see Karīmān, i, 392. The sanctuary was visited by famous Tīmūrid and Turkmen pilgrims (Karīmān, ii, 225 ff.) and then by the Ṣafawids. Under the patronage of Ṭahmāsp I (1524-76), it was restored. An *īwān* (*aywān*) was constructed in 944/1537. A robust balustrade (*muḥadjdjar*) of boxwood was erected around the coffin in 950/1543-4 (Karīmān, i, 390 ff., with reference to a *farmān* by Ṭahmāsp I preserved in the sanctuary) in order to protect it against depredations by the pilgrims. When Shāh ʿAbbās I [*q.v.*], about to attack the Özbegs in 996/1587-8, fell ill, he recovered his health after a pilgrimage to the sanctuary (Karīmān, ii, 239).

Notwithstanding the interest shown to the sanc-

tuary by notables or rulers up to the Ṣafawids, it is quite difficult to form a picture of its importance in former days. Since it was called Mas̲h̲had or Masd̲j̲id al-S̲h̲ad̲j̲ara, and its cemetery, according to some sources, Gūristān al-S̲h̲ad̲j̲ara (Karīmān, i, 328 ff.), it must have developed in conjunction with the neighbouring Imāmzāda [*q.v.*] dedicated to Ḥamza b. Mūsā al-Kāẓim. The Ṣafawids pretended to descend from this *sayyid ḥusaynī-mūsāwī*, whose supposed burial place is also located at Turs̲h̲īz or in a village near S̲h̲īrāz. It is at this last site, and not at Rayy, that they caused a richly endowed mausoleum to be built (*ibid.*, 395 ff.). Until the beginning of the 19th century, the tombs of ᶜAbd al-ᶜAẓīm, of Ḥamza and other holy men were situated outside the town of Rayy (*ibid.*, 392 ff.). The sanctuary must have included a rather important garden. On his way to Māzandarān, ᶜAbbās II (1643-66) camped there with his suite for nine days in 1070/1659-60 (Muḥammad Ṭāhir Waḥīd Ḳazwīnī, *ᶜAbbās-nāma*, ed. Ibrāhīm Dihgān, Arāk 1329, 265 ff.).

The administrator of the sanctuary (*mutawallī*) was designated and appointed by the central government. This practice was continued by Karīm K̲h̲ān Zand (see J.R. Perry, *Karim Khan Zand. A history of Iran, 1747-1779*, Chicago 1979, 220) and after that by the Ḳād̲j̲ārs. Fatḥ ᶜAlī S̲h̲āh [*q.v.*], who was an assiduous pilgrim of the sanctuary, had it embellished (Karīmān, i, 392; Algar, 48). The same was the case with Nāṣir al-Dīn S̲h̲āh [*q.v.*], who in 1270/1853-4 had the cupola covered with gold and the *īwān* decorated with stalactites consisting of mirrors; the latter initiative was due, at least to a certain extent, to his vizier Mīrzā Āḳā K̲h̲ān Nūrī (1851-8) (Karīmān, i, 391 ff.; Algar, 159).

Like other S̲h̲īᶜī sanctuaries, S̲h̲āh ᶜAbd al-ᶜAẓīm constitutes a place of asylum reputed to be inviolable for persons (or animals), lawbreakers or others, who are menaced by people in power [see BAST; and J. Calmard, art. *Bast (sanctuary, asylum)*, in *EIr*]. When the neighbouring town of Tehran was promoted to be the capital by Āg̲h̲ā Muḥammad K̲h̲ān in 1786, the pilgrimage to the sanctuary and its use for politico-religious protests, in particular against foreign influence, developed considerably. The project of constructing a railway line between Tehran and the sanctuary made people fear, erroneously, that the extension of the line to Ḳum would mean the end of this town. The line was indeed constructed and exploited by a Belgian company (8 km between 1888-93) notwithstanding the fact that it was ransacked by a furious crowd in December 1888 (see Algar, 175 ff., 182). Under Nāṣir al-Dīn S̲h̲āh, the sanctuary formed the most important place of *bast*, criminals or debtors, as well as political opponents. finding there protection in several degrees (see E.G. Browne, *A year among the Persians*, London 1893, 174). The most ominous violation of the right of *bast* occurred in January 1891 when the Muslim reformist D̲j̲amāl al-Dīn Asābādī "al-Afg̲h̲ānī" [*q.v.*] was brutally expelled from the sanctuary (see Calmard, *loc. cit.*). Nāṣir al-Dīn was murdered in the courtyard of the mausoleum on the eve of his jubilee (fifty lunar years) on 1 May 1896 by Mīrzā Riḍā Kirmānī, a partisan of al-Afg̲h̲ānī. During the events of the Constitutional Revolution (1905-11), about 2,000 *ᶜulamāʾ* (*mullas*, *mud̲j̲tahids*, *ṭullābs*), opposed to the authoritarian measures of the vizier ᶜAyn al-Dawla and financially supported by shopkeepers of the bazaar and several notables or dignitaries who had passed to the opposition, captured the *bast* at S̲h̲āh ᶜAbd al-ᶜAẓīm (mid-December 1905-12 January 1906). The establishment of a *ᶜadālat-k̲h̲āna* ("house of justice") in each province was only one of the seven or eight of their demands which did not entail a demand for a constitution (see Martin, 70-6). In February 1907 Sayyid Akbar S̲h̲āh, an opponent of the constitution, took refuge in the sanctuary with his partisans. Supported by the governor of Tehran, his initiative had no popular success whatsoever (Martin, 115, 148). On the other hand, the action of the most notorious of the anti-constitutional *ᶜulamāʾ*, the *mud̲j̲tahid* S̲h̲ayk̲h̲ Faḍl Allāh Nūrī [*q.v.*], who, probably supported by Muḥammad ᶜAlī S̲h̲āh [*q.v.*], took the *bast* of the sanctuary with *ca.* 500 partisans (June-September 1907), had a durable success among the numerous Imāmī *ᶜulamāʾ* (see Martin, 121-38), extending even into the current which assured the triumph of the Iranian Islamic Revolution of 1978-9.

The pilgrimage to the sanctuary, which forms a whole with neighbouring Imāmzādas dedicated to Ḥamza, Ṭahir and his son Muṭahhar (Karīmān, i, 395 ff.), now incorporated with Rayy into the great agglomeration of Tehran, was very much frequented in the 19th century (see H. Massé, *Croyances et coutumes persanes*, Paris 1938, ii, 403). Although Nad̲j̲af and Karbalā [*q.v.*] have a greater reputation as burial places, many notables, dignitaries, *ᶜulamāʾ*, members of the Ḳād̲j̲ār family, etc., are buried at S̲h̲āh ᶜAbd al-ᶜAẓīm. The most renowned royal tomb is that of Nāṣir al-Dīn S̲h̲āh, situated at the western corner at a place known under the name of Masd̲j̲id-i Hūlāgū. An imposing mausoleum dedicated to Riḍā S̲h̲āh Pahlawī [*q.v.*] was erected on the site of the ancient quarter of Bāṭān, south-east of the sanctuary (Karīmān, i, 395). It was destroyed during the events of the Islamic Revolution.

Bibliography: On the bio-hagiography of ᶜAbd al-ᶜAẓīm (ancient and modern works) and the principal data of the history of the sanctuary, see H. Karīmān, *Ray-i bāstān*, 2 vols., Tehran 1345-9/1966-70; W. Madelung, art. *ᶜAbd al-ᶜAẓīm al-Ḥasanī*, in *EIr*. Above all, see the Ṣāḥib Ibn ᶜAbbād, *Risāla fī aḥwāl ᶜAbd al-ᶜAẓīm al-Ḥasanī*, Bag̲h̲dād 1374/1955, in Karīmān, i, 385-7; M.B. Kud̲j̲ūrī, *D̲j̲annat al-naᶜīm...*, Tehran 1298/1881; M. Rāzī, *Zindagānī-yi Ḥaḍrat ᶜAbd al-ᶜAẓīm...*, Tehran 1367/1947. On the modern history of the sanctuary, see H. Algar, *Religion and state in Iran, 1785-1906*, Berkeley 1969; V. Martin, *Islam and modernism. The Iranian Revolution of 1906*, London 1989 (abundant bibl.).

(J. CALMARD)

S̲H̲ĀH ᶜABD AL-ᶜAZĪZ [see ᶜABD AL-ᶜAZĪZ AL-DIHLAWĪ].

S̲H̲ĀH ᶜABD AL-ḲĀDIR [see ᶜABD AL-ḲĀDIR DIHLAWĪ].

S̲H̲ĀH ᶜĀLAM II (1142-1220/1729-1806, r. 1173-1202/1759-88, 1203-21/1788-1806), later Mug̲h̲al emperor, son of the Mug̲h̲al Emperor ᶜĀlamgīr II.

His original name was Mīrzā ᶜAbd Allāh, the title ᶜAlī Gawhar was conferred in 1168/1754, and that of S̲h̲āh ᶜĀlam in 1170/1756. As a prince, he led an unsuccessful raid into Bihar in D̲j̲umādā II 1172/February 1759, and claimed the throne in 1173/1759. He was, however, unable to rule from Dihlī. Becoming an ally of S̲h̲ud̲j̲āᶜ al-Dawla and Mīr Ḳāsim [*q.vv.*], he shared in their defeat at Baksar (Buxar) in 1178/1764 at the hands of the British. In 1179/1765 he granted the *dīwānī* of Bengal, Bihar and Orissa to the East India Company, receiving in return Allāhābād (as his seat) and an annual pension of 2.6 million rupees. Seeking to return to Dihlī, Shāh ᶜĀlam sought an alliance with the Marāthās, and escorted by them rode into his capital Dihlī in Ramaḍān 1185/January 1772. He thereupon lost

both Allāhābād and his annual pension from the British. Mahādji Sindhia, who was now responsible for the safety of the Emperor, was constantly faced by local malcontents. The Rohilla chief Ghulām Ḳādir held Dihlī in 1202/1788 for two-and-a-half months. He blinded Shāh ʿĀlam, but was himself captured and put to death. In 1203/1789 Mahādji Sindhia provided Shāh ʿĀlam with a daily cash pension of 300 rupees; later territories were assigned to him yielding on paper nearly 1.7 million a year. In 1217/1803 Dihlī fell to the British, who refused to make any treaty arrangements with him allowing him maintenance and control of the Dihlī fort along with his titles. Shāh ʿĀlam died there in 1220/1806, his long "reign" merely reflecting the utter ruin of the Mughal Empire.

(M. Athar Ali)

SHĀH-I ARMAN, "king of the Armenians", denoted the Turcoman rulers of Akhlāṭ [*q.v.*] from 493/1100 to 604/1207. Their role in eastern Anatolian history is difficult to reconstruct from local sources alone but they are mentioned periodically in the wider context of late Saldjūḳ and Ayyūbid affairs. The first Shāh-i Arman, Sukmān al-Ḳuṭbī, took Akhlāṭ in 493/1100 from the Marwānids [*q.v.*] and seized Mayyāfāriḳīn in 502/1108-9 (Ibn al-Athīr, x, 330; Ibn al-Ḳalānisī, 164; Ibn al-Azraḳ, 249-50). Within Diyār Bakr, his particular rivals were the Artuḳids [*q.v.*]. He participated in *djihād* against the Franks under Mawdūd of Mawṣil and died at Bālis during the campaign in 506/1112-13 (Ibn al-Athīr, x, 340-1; *Atābegs*, 18; Michael the Syrian, 216; Matthew of Edessa, 275-6; Ibn al-Ḳalānisī, 164-5, 169, 174-5). Before his death, Sukmān had extended his territory to include Ardjīsh and Malāzgird.

Little is known of Sukmān's ineffectual successor, his son Ibrāhīm (ruled 506-21/1112-26). He lost Mayyāfāriḳīn to Il-Ghāzī in 512/1118 (Ibn al-Azraḳ, 34). After Ibrāhīm's death, power was soon seized by Inandj Khātūn, Sukmān's widow, on behalf of her six-year old grandson, Sukmān II, whose long reign (522-81/1128-85) represents the high point of Shāh-i Arman power (Abu 'l-Fidāʾ, 17). The Georgians, profiting from Muslim disunity, were pursuing an expansionist policy towards eastern Anatolia; in 556/1161, they defeated the forces of Sukmān II and Saltuḳ, the ruler of Erzerum (Ibn al-Athīr, xi, 184; Matthew, 361-2). In 558/1163, however, Sukmān joined Eldigüz of Ādharbaydjān in repelling further Georgian aggression (Ibn al-Athīr, xi, 188; Ibn al-Azraḳ, fols. 181b, 183b-184b, 185b; *Akhbār*, 158-9). Another Muslim campaign into Georgia was successful in 571/1175 (Ibn al-Azraḳ, fol. 199b). After Sukmān's death in 581/1185 (Ibn al-Athīr, x, 338-9) without male issue, the race for Sukmān's lands between Ṣalāḥ al-Dīn Ayyūbī and the Eldigüzid ruler, Pahlawān, was won by the latter (*ibid.*; Ibn Shaddād, 84-5; Sibṭ Ibn al-Djawzī, 383-4, 423; Bar Hebraeus, 318). From 581/1185 the Shāh-i Arman state rapidly declined under a series of *mamlūk* commanders—Bektimur, Aḳ Sunḳur, Muḥammad and Balabān (Bar Hebraeus, 343, 362-4; Ibn al-Athīr, xi, 67, 167-9). Ṣalāḥ al-Dīn Ayyūbī's brother, al-ʿĀdil, maintained Ayyūbid interest in Armenia; Akhlāṭ was taken by his son al-Malik al-Awḥad in 604/1207-8. Thus ended the Shāh-i Arman state (Makīn, 18-19; Abu 'l-Fidāʾ, 71; Humphreys, 128-9). Regrettably, little is known of the Shāh-i Arman socio-cultural life, but it must have been an interestingly mixed ethnic and religious milieu.

(Carole Hillenbrand)

SHĀH BANDAR (P.), literally "harbour, port master". The term was used before the Ottoman period to denote the chief of the merchants, and sometimes the representative of foreign merchant communities, at the Indian Ocean ports of India; the form *Xabandar* is found in the Portuguese chronicles. It appears in Ibn Baṭṭūṭa in regard to the Muslim chief of the merchants (*amīr al-tudjdjār*) at Calicut [see KALIKAT in Suppl.], "Ibrāhīm Shāh Bandar (the king or chief of the port), originally from Baḥrayn" (tr. Gibb and Beckingham, iv, London 1994, 812). See also Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian words and phrases*², 816-17 s.v. *Shabunder*.

1. In the Arab world.

Here, he was not known in Mamlūk times, when there is mentioned the *raʾīs* or *kabīr al-tudjdjār*. The frequent use of the term in the *Thousand and one nights* confirms the comparatively late redaction of a certain number of its stories. After the Ottoman conquest, *shāh bandar* is attested in all the Arab countries of the Near East in the sense of provost or overseer of the merchants (notably, at Cairo, Aleppo, Mecca and Baghdād), and likewise at Istanbul, where the expression *bazirgan bashi* was also used, "merchants of the Black Sea and of the Mediterranean" (also found at Cairo and Aleppo). On the other hand, the term was unknown in the Maghrib; at Tunis, the *amīn al-tudjdjār* was an Andalusian, the trade organisation

there, it appears, having been formed by these immigrants.

We are best informed about the *shāh bandar* in the great centres of Cairo and Aleppo, where there existed an important international trade, which enriched powerful communities of merchants. In Cairo, the *shāh bandar* was at the head of a group of around 500-600 merchants who specialised in the large-scale traffic in coffee, spices and textiles. He was a person of considerable status; in official ceremonies, he had precedence over the *muḥtasib*. He was probably appointed by the community, with ultimate control by the authorities. The office was usually for life, and in some cases, was hereditary (cf. the Sharāʾibīs in the 18th century). The *shāh bandar* seems to have been chosen from amongst the richest *tudjdjār*, which is the case for the greater part of the *shāh bandars* whom we know, the best-known being Aḥmad al-Ruwīʿī, Ismāʿīl Abū Ṭākiyya (d. 1624), Djamāl al-Dīn al-Dhahabī (alive in 1630), Dāda (d. 1724) and then Ḳāsim al-Sharāʾibī (d. 1734), Aḥmad b. ʿAbd al-Salām (d. 1791), Maḥmūd Muḥarram (d. 1793) and Aḥmad al-Maḥrūḳī (d. 1804). The *shāh bandar* arbitrated in disputes between merchants and was their intermediary *vis-à-vis* the authorities. Normally, the community of merchants lay outside the jurisdiction of the *muḥtasib* and even outside that of the Agha of the Janissaries. But the *shāh bandar*'s power resided largely in his own, personal prestige; thus the Sharāʾibīs clearly exercised political influence and had links with the ruling classes. The "house of the chief of the merchants" mentioned on the plan of Cairo in the *Description de l'Egypte* (VIIᵉ arrondissement, 85 I 4) had been the personal residence of ʿAbd al-Salām and then of al-Maḥrūḳī, but does not appear to have played any "administrative" role.

The *maḥkama* or legal tribunal documents which have been studied for Aleppo bring some details on the functions of this dignitary, in all cases analogous to those of his counterpart at Cairo. He apparently had his seat in the *khān* of the customs officials (*gumruk*), according to the information of Thévenot (1664). He regulated disputes between the merchants. He gave expert witness in the courts where legal cases involved commercial matters, and represented the merchants *vis-à-vis* the administration. The position was held by local notables. Two cases are known where the holder of the office was deprived of it by the authorities at the request of the merchants, on grounds of senility (1645) or incapacity (1689). Alexander Russell (*The natural history...*, London 1794, i, 323) gives the specific information that he was a member of the Pasha's council (*dīwān*) *ca.* 1760.

Everything leads us to believe that the importance which the *shāh bandar* Muḥammad al-Maḥrūḳī assumed in Cairo during the decade beginning in 1810 (going as far as jurisdiction over the whole body of artisans and merchants in 1813), and his conflict with an especially energetic *muḥtasib* in 1817, was linked to this person's influence with Muḥammad ʿAlī, rather than to a growth in the powers of the office. However, Lane, enumerating the councils set up by Muḥammad ʿAlī, mentions a "Court of the Merchants" (*dīwān al-tudjdjār*) presided over by the *shāh bandar* (*Manners and customs*, ch. iv). In reality, the deep changes in the economy and in society in both Egypt and Syria, led in the 19th century to a weakening of the traditional corporative structures, and also of the group of great merchants who had dominated international trade. Although the term itself, and the functions of the *shāh bandar*, are still mentioned for a long time after this in Egypt (ʿAlī Pasha Mubārak records a "Muḥammad Bāshā al-Suyūfī who is at present *shāh bandar al-tudjdjār bi-Miṣr*"), the institution had lost all importance and was on its way to disappearing, just like the whole of the corporative organisation.

2. In South-East Asia.

This term (modern spelling in South-East Asia, *syahbandar*) has a long history in the Islamic lands east of India, and refers primarily to the official who directed trade in the maritime cities of Malaysia and Indonesia [*q.vv.*]. Within this broad definition, three distinct but related uses of the term can be traced.

(1) *As a member of a "Royal Council"*. Taking the royal court of Melaka (*ca.* 14th-15th centuries) [see MALACCA] as a paradigm, we find a number of named officials with specific functions and duties, such as the Bendahara (treasurer), Temenggong (in charge of public order), Laksamana (commander of warships), etc. The Shāh Bandar was intimately involved with trade at the ports (this trade being a royal monopoly), and was part of the inner circle of government, though to what exact extent is not clear. Much depended on his own personality. Some were apparently quite wealthy; it seems that the holder of the office was entitled to a proportion of the duty levied on trade goods, calculated either on place of origin of the goods or on the type of goods concerned.

(2) *Administration of trade*. At the apogee of the Melaka sultanate (late 15th century), the Shāh Bandar's rights and obligations were clearly defined. The laws of Melaka (*Undang-Undang Melaka*, see *Bibl.*) have various specific references. Thus he is described as the "Father and Mother" of foreign merchants. He generally determined weights and measures. He had his own court for settling commercial disputes by applying elements of the *Sharīʿa*, though we have no direct evidence of how this actually functioned. He could order various punishments, up to death, for theft and murder at sea. He was responsible for public order in the ports (hence his title is sometimes translated as "harbourmaster") and for giving succour to and supervising shipwrecked sailors.

(3) *Controller of trade groups*. The entrepôt trade in Malaysa and Indonesia involved many different nationalities, and each had its own Shāh Bandar (thus for the Čam, the Siamese, the Javanese, the Kling (Indians), the Arabs, etc.). The function of each of these officials was to organise trade and finance within his own community, and between its members and the wider port community.

In addition to the above, there are minor references to the office. The term is still used as a general honorific. It appears in Lingga [see RIAU] in the first half of the 19th century. In the Negri Semblan, in Malaysia, it appears as a clan title in the form "Dato Bandar", although there is no trade connection here.

SHĀH DJAHĀN (1000-76/1592-1666, r. 1037-68/1628-57), Mughal emperor, son of the Emperor Djahāngir [*q.v.*] and his Rādjput wife Manmati; his personal name was Khurram, the title of Shāh Djahān being granted to him by his father in 1025/1616.

His first responsible assignment came with his appointment to the Mēwāṙ campaign in 1022/1614. He was subsequently appointed *ṣūbadār* of the Deccan in 1025/1616 and again in 1030/1621. In 1031/1622 he procured the murder of his elder brother Khusraw and afterwards rebelled in 1032/1623; driven out of the Deccan, he made his way to Bengal, but was defeated there, too, hence returned to the Deccan, where he submitted to his father (1035/1626). On Djahāngir's death in 1036/1627, through the machinations of Āṣaf Khān, he ascended the throne in 1037/1628 and ordered the execution of his nearest kinsmen as potential rivals—the first instance of such massacres in the Indian Mughal dynasty, and an unhappy precedent for the future. Shāh Djahān's approach to nobles who had supported his rivals was, on the other hand, moderate, and he loved to contrast his moderation with the bloodthirstiness of rulers in other Islamic countries.

To support his ambitions, Shāh Djahān increased the income of his treasury by enlarging the *khāliṣa* (imperial reserved lands). The *Djāmadāmī* (net revenue annual income) of the empire during his reign was about 9,03,74,20,000 *dāms* (22,59,35,000 rupees); Shāh Djahān was probably the richest monarch in the world.

Shāh Djahān annexed Aḥmednagar in 1045/1636, allowing to Bidjāpur [*q.v.*] a portion of it, and standing forth as a protector of Golkoṅdā, which now paid him annual tribute. In 1047/1638 the Ṣafawid governor of Ḳandahar handed it over to the Mughals, but the Persians re-captured it in 1058/1649. In 1055/1646 Shāh Djahān attacked the Uzbek khānate, and temporarily occupied Balkh and Badakhshān, but finally had to withdraw in 1056/1647.

Shāh Djahān was a vigorous administrator, and introduced certain important changes (new pay-schedules, month-ratio system for classification of *djāgīrs*, etc.); and re-inforced the central authority. He also enjoys a deserved reputation as a builder. The classical product of his interest is the Tādj Maḥall [*q.v.*]. On 7 Dhu 'l-Ḳaʿda 1040/6 June 1631 Shāh Djahān ordered the construction of a mausoleum for his wife Mumtāz Maḥall. It was completed in 1053/1643 at the cost of 50 lakhs of rupees. In 1048/1638 he founded the imperial city of Shāhdjahānābād at Dihlī at the cost of 60 lakhs of rupees. Lāhōrī, the official historian, records that the total expenditure on buildings under Shāh Djahān up to the year 1057/1647-8 was rupees 2 crores, 50 lakhs of rupees.

Though Shāh Djahān began to introduce Islamic observances into Mughal court etiquette, he largely continued the tolerant policy of his two predecessors. He promoted Rādjputs to high ranks and patronised Hindī poetry. His eldest son Dārā Shukōh [*q.v.*] translated the Upaniśads and wrote a tract (the *Madjmaʿ al-baḥrayn*) comparing Ṣūfism with Vedanta. Under the patronage of Shāh Djahān, an intellectual movement to bridge the gap between Hinduism and Islam was started and an attempt was made to evolve a common language for both religions.

He fell ill in Dhu 'l-Ḥidjdja 1067/September 1657, and his four sons Dārā Shukōh, Shāh Shudjāʿ, Awrangzīb and Murād Bakhsh started making preparations to contest the throne. Awrangzīb emerged victorious, and dethroned and imprisoned his father in 1068/1658. In his imprisonment in the Āgra fort, he was looked after by his loyal and talented eldest daughter Djahān Ārā. He died in 1076/1666, and lies buried by the side of his wife Mumtāz Maḥall in the Tādj Maḥall.

SHĀH MALIK b. Alī Yabghu, the Oghuz Turkish [see ghuzz] ruler in the town of Djand [*q.v.* in Suppl.] on the lower Syr Darya in Transoxania during the second quarter of the 11th century A.D.

Shāh Malik, who is given by Ibn Funduḳ the *kunya* of Abu 'l-Fawāris and the *laḳabs* of Ḥusām al-Dawla and Niẓām al-Milla, was the son and successor of the Oghuz Yabghu, head of a section of that Turkish tribe in rivalry with that one led by the Saldjūḳ family of chiefs [see saldjūḳids. ii]. It was this hostility that made Shāh Malik ally with the Ghaznawid Masʿūd b. Maḥmūd [*q.v.*] against his kinsmen the Saldjūḳs, and in 429/1038 the sultan appointed him as his governor over Khʷārazm [*q.v.*]. Shāh Malik successfully overran Khʷārazm, but with the triumph at Dandānḳān [*q.v.* in Suppl.] in Khurāsān of Ṭoghrïl and Čaghrï Begs, was driven out of Khʷārazm by 435/1043-4. He fled southwards through Persia to Makrān and was eventually killed there, his short line being thus extinguished; by the time of his flight from Khʷārazm, Djand had probably already fallen into the hands of the Ḳïpčaḳ [*q.v.*] Turks.

SHĀH MANṢŪR SHĪRĀZĪ, finance minister of the Mughal emperor Akbar (963-1014/1556-1605).

Of Indian origin, he held an appointment as *mushrif* (accountant) of the Royal *khūshbū-khāna* (perfume department), but incurred the hostility of powerful

nobles and, dismissed from that post, became *dīwān* (finance superintendent) at Djawnpur. After Khān Zamān's rebellion and death (973/1566) he served as Munᶜim Khān's *dīwān* and then as *bakhshī* (paymaster of troops). After Munᶜim Khān's death (984/1576), he was again in some personal difficulty, but won Akbar's approval and was appointed *wazīr*, sharing the control of finance ministry with Muẓaffar Khān and Ṭōdar Mall. However, the latter two were soon assigned other duties, and Manṣūr was mainly responsible for the new system of land revenue collection and payment of cash salaries to nobles according to their ranks or *manṣabs*. In 986/1578 he prepared a new record of estimated revenues (*djamᶜ*) based on the preceeding ten years' collections. He was himself raised to 1,000 *dhāt*, a high rank at the time. But his rigour made him many enemies; and the rebellion of 988/1580 in Djawnpur, Bihār and Bengal was attributed to this cause. In 988/1580, while Akbar marched north-westwards to meet the danger from his foster-brother, Mīrzā Muḥammad Ḥakīm, ruler of Kābul, Manṣūr was accused of secret correspondence with him. Since none of the nobles would come forward to stand surety for him, he was executed in 989/1581. Later on, the charge was found to be based on a forgery; but since some very high nobles (Mān Singh [*q.v.*] and Shāhbāz Khān) were involved in it, Akbar seems to have decided to close the case.

(M. Athar Ali)

SHĀH MUḤAMMAD b. ᶜABD AḤMAD, popularly known as Mullā Shāh, a distinguished saint of the Ḳādirī *silsila* in India (992-1072/1584-1661). According to Djahān Ārā, the name of his father was Mawlānā ᶜAbdī, but Mullā Shāh refers to him in his *mathnawī Risāla-yi nisbat* as ᶜAbd Aḥmad. Born in 992/1584, in Arkasa, a village of Badakhshān, he lived there for about 21 years. Later he visited Balkh, Kābul and other places in search of a spiritual teacher. He reached Lahore in 1023/1614-15 and felt attracted towards Miyān Mīr [*q.v.*], remaining in this latter's service for about thirty years. At the direction of his master, he settled in Kashmīr and built there a garden house for himself. Dārā Shukōh and Djahān Ārā also built buildings and fountains there, and the Emperor Shāh Djahān visited him. Mullā Shāh used to spend his summers in Kashmīr and winters in Lahore. He breathed his last in Lahore in 1072/1661, and was buried there in a small mosque at some distance from the mausoleum of Miyān Mīr.

Mullā Shāh's spiritual fame attracted the Mughal prince Dārā Shukōh and his sister Djahān Ārā to his mystic fold, and both of them wrote their accounts of him (see *Bibl.*). Mullā Shāh was a believer in pantheism. His poetic works, for which he used the nom-de-plume of Mullā, particularly his *Mathnawiyyāt* and *Rubāᶜiyyāt*, are known for their spiritual sensitivity, though they lack poetic elegance. Some of his verses, steeped as they were in pantheistic ideas, provoked orthodox criticism, and Awrangzīb summoned him from Kashmīr in order to question him about these verses; Dārā Shukōh's association with him must have also created suspicion in the new Emperor's mind but Mullā Shāh wrote a congratulatory chronogram on Awrangzīb's accession and thus saved his skin. He wanted to write a commentary on the Ḳurʾān in the light of his mystic ideology, but was unable to proceed beyond the first part. His works have not been published. The following 10 *mathnawīs*, interspersed with prose lines, are found in an excellent India Office ms. (dated 1580), with some autographic remarks: (i) *Risāla-yi walwala*, (ii) *Risāla-yi hōsh*, (iii) *Risāla-yi taᶜrīfāt khānahā wa bāghhā wa manāzil-i Kashmīr*, (iv) *Risāla-yi nisbat*, (v) *Risāla-yi murshid*, (vi) *Yūsuf u Zulaykhā*, (vii) *Risāla-yi dīwānā*, (viii) *Risāla-yi shāhiyā*, (ix) *Risāla-yi ḥamd wa naᶜt*, (x) *Risāla-yi bismillāh*. A copy of his *Kulliyyāt* is found in the Bankipore Library (ms. no. 326).

(K.A. Nizami)

SHĀH-NAWĀZ KHĀN [see maʾāthir al-umarāʾ].

SHĀH NIᶜMAT ALLĀH [see niᶜmat-allāhiyya].

SHĀH RŪD, a hydronym and toponym of Persia.

1. A river of the Elburz Mountains region of northwestern Persia.

It runs from the south-east northwestwards from a source in the mountains west of Tehran and joins the Ḳïzïl Üzen [*q.v.*] at Mandjīl, the combined waters then making up the Safīd Rūd [*q.v.*], which flows into the Caspian Sea. The upper reaches of the Shāh Rūd are known as the Shāh Rūd-i Ṭālaḳān, to distinguish it from its right-bank affluent the Shāh Rūd-i Alamūt. This last rises near the Takht-i Sulaymān peak and is hemmed in by high mountains; its flanks are dominated by the ruins of a series of Assassin fortresses from mediaeval Islamic times, the most famous of which is Alamūt [*q.v.*]. In the wider, more fertile parts of the Shāh Rūd valleys rice and corn are grown.

The Shāh Rūd is not navigable and is little noted in mediaeval sources. The first notice seems to be that of the 8th century Armenian geography, which describes it as a river of Daylam rising in the mountains of Ṭālaḳān (see Marquart, *Ērānšahr*, 126). In the 19th century, it became known through the travels of W. Monteith (1832) and H. Rawlinson (1838), the first of whom identified ruins of the Assassins from the time of Ḥasan-i Ṣabbāḥ [*q.v.*] (see A. Gabriel, *Die Erforschung Persiens*, Vienna 1952, 147, 155, 217-18).

2. A district, mentioned by Ḥamd Allāh Mustawfī, *Nuzha*, 82, tr. 85, as adjoining the districts

of Ṭālis̲h̲ [*q.v.*] (the *Ṭawālis̲h̲*) in the north of Gilan; he states that its people were nominally S̲h̲āfiʿīs.

3. A town of western K̲h̲urāsān, lying just to the south of Bisṭām [*q.v.*] in lat. 36° 25′ N. and long. 55° 00′ E, altitude 1,360 m/4,460 feet. The town is unmentioned in mediaeval sources, but has become important since the 19th century from its position on the high road from Tehran to K̲h̲urāsān and now on the railway; there is also a road from it across the Elburz to Astarābād/Gurgān and the Caspian coastlands, which is normally passable all through winter. After the Iranian Revolution of 1979, the town was renamed Imāmrūd but has now reverted to the old name of S̲h̲āhrūd; it comes within the Simnān province. The population in 1991 was 92,195 (*Preliminary results of the 1991 census*, Statistical Centre of Iran, Population Division).

(C.E. Bosworth)

S̲H̲ĀH RUK̲H̲ b. Tīmūr, fourth son and successor of Tīmūr (Tamerlane), was born on 14 Rabīʿ II 779/20 August 1377 of one of Tīmūr's concubines, Tag̲h̲āy Tarkān Āg̲h̲ā. In 794/1392 Tīmūr appointed him to the new fortress of S̲h̲āhruk̲h̲iyya north of the Jaxartes, and in 799/1397 made him governor of K̲h̲urāsān, Sīstān, and Māzandarān. S̲h̲āh Ruk̲h̲ was married to two prestigious women, Gawhars̲h̲ād bt. G̲h̲iyāt̲h̲ al-Dīn Tark̲h̲ān and Malikat Ag̲h̲a, the Čingisid widow of his eldest brother ʿUmar S̲h̲ayk̲h̲.

As governor of K̲h̲urāsān, S̲h̲āh Ruk̲h̲ was in a strong position in the struggle after Tīmūr's death on 17 S̲h̲aʿbān 807/18 February 1405. He gave limited support to Tīmūr's designated successor, Pīr Muḥammad b. D̲j̲ahāngīr, while allowing other princes to exhaust their resources. In 811/1408, he campaigned against the insubordinate rulers of Sīstān, devastating their irrigation systems. After Pīr Muḥammad died in 809/1407 and dissident *amīrs* deposed his nephew K̲h̲alīl Sulṭān in Transoxiana, S̲h̲āh Ruk̲h̲ entered Samarḳand in late 811/Spring 1409 and installed his son Ulug̲h̲ Beg as governor, retaining Harāt as the main capital. In late 815/Spring 1413, his army retook K̲h̲ʷārazm from the Golden Horde.

Southwestern Persia was held by the sons of ʿUmar S̲h̲ayk̲h̲ b. Tīmūr, who gave S̲h̲āh Ruk̲h̲ nominal recognition. In 816/1413 Iskandar b. ʿUmar S̲h̲ayk̲h̲ took the title Sulṭān and prepared to oppose S̲h̲āh Ruk̲h̲. S̲h̲āh Ruk̲h̲ defeated him at Iṣfahān on 3 D̲j̲umādā I 817/21 July 1414. ʿUmar S̲h̲ayk̲h̲'s other sons continued to be troublesome; in the autumn of 818/1415, S̲h̲āh Ruk̲h̲ attacked them and installed his son Ibrāhīm Sulṭān as governor of Fārs. In the next two years he undertook campaigns to Ḳandahār and Kirmān, and dismissed the rebellious governor of Andid̲j̲ān, Aḥmad b. ʿUmar Shayk̲h̲. By 821/1418 S̲h̲āh Ruk̲h̲ had removed his nephews from all major provinces.

Ḳara Yūsuf Ḳara Ḳoyunlu had taken Ād̲h̲arbayd̲j̲ān, killed Mīrāns̲h̲āh b. Tīmūr and annexed Sulṭāniyya, Ḳazwīn and Hamadān [see ḳara ḳoyunlu]. On 11 S̲h̲aʿbān 823/21 August 1420, S̲h̲āh Ruk̲h̲ began a long-projected campaign against him, probably with the encouragement of the Aḳ Ḳoyunlu (J.E. Woods, *The Aqquyunlu: clan, confederation, empire*, Chicago 1976, 58; ʿAbd al-Ḥusayn Nawāʾī (ed.), *Asnād wa mukātabāt-i tārīk̲h̲ī-yi Īrān*, Tehran 2536/1977, 179-85) Ḳara Yūsuf died before S̲h̲āh Ruk̲h̲ arrived. Ād̲h̲arbayd̲j̲ān had not been strongly held by Tīmūr, and S̲h̲āh Ruk̲h̲ was content with nominal overlordship and the possession of Ḳazwīn and Sulṭāniyya. After a year pacifying the region he installed ʿAlī b. Ḳara ʿUt̲h̲mān Aḳ Ḳoyunlu as governor, and put an *amīr* with an army in Sulṭāniyya.

The rule of S̲h̲āh Ruk̲h̲

S̲h̲āh Ruk̲h̲ was quite willing to use violence; he executed both insubordinate followers and religious figures, and wrought deliberate destruction in Sīstān and Ād̲h̲arbayd̲j̲ān. He was at the same time a cautious ruler, who rarely undertook campaigns without provocation and the assurance of military superiority and of local alliances. Most of his reign he spent in K̲h̲urāsān, going in spring to hunt in Sarak̲h̲s and to visit the Mas̲h̲had shrine. Many military expeditions were entrusted to his sons and *amīrs*. Ulug̲h̲ Beg campaigned aggressively against the Mog̲h̲uls and the D̲j̲očids, and Ibrāhīm Sulṭān campaigned in K̲h̲uzistān and southern Persia. The balance of power in the north shifted after 830/1426-7 when the Uzbeks defeated Ulug̲h̲ Beg and Muḥammad D̲j̲ūkī b. S̲h̲āh Ruk̲h̲; after this Ulug̲h̲ Beg stopped campaigning in person. The Mog̲h̲uls became aggressive and took Kās̲h̲g̲h̲ar in 1435, while the Uzbeks under Abu 'l-K̲h̲ayr K̲h̲ān raided Transoxiana for the rest of S̲h̲āh Ruk̲h̲'s reign. Abu 'l-K̲h̲ayr invaded K̲h̲ʷārazm in 834/1430-1 and 839/1435; S̲h̲āh Ruk̲h̲ quartered a winter army in Māzandarān to protect the frontier. In the west, S̲h̲āh Ruk̲h̲ defended his political claims. On 5 Rad̲j̲ab 832/10 April 1429 he set out against Iskandar b. Ḳara Yūsuf Ḳara Ḳoyunlu, who had seized Sulṭāniyya. He defeated Iskandar near Salmās on 18 D̲h̲u 'l Ḥid̲j̲d̲j̲a 832/18 September 1429, and appointed Iskandar's brother Abū Saʿīd governor. In spring 838/1435 S̲h̲āh Ruk̲h̲ set out again against Ād̲h̲arbayd̲j̲ān, which had fallen to Iskandar. Iskandar fled and local rulers submitted with little resistance. S̲h̲āh Ruk̲h̲ made D̲j̲ahāns̲h̲āh b. Ḳara Yūsuf governor of the region; this arrangement lasted until S̲h̲āh Ruk̲h̲'s death.

S̲h̲āh Ruk̲h̲ exchanged embassies with a large number of powers. He received homage from many neighbouring rulers: the Aḳ Ḳoyunlu, the Dihlī Sultan, the rulers of Hurmuz and, at least at the beginning of his reign, the Ottoman sultans. S̲h̲āh Ruk̲h̲'s attempts to assert superiority over the Mamlūk sultans evoked increasing hostility up to the accession of Čaḳmaḳ in 842/1438, after which relations were cordial though equal. Until the death of the Yung-lo emperor in 1424, S̲h̲āh Ruk̲h̲ exchanged frequent embassies with China (a total of 20), and established a rare level of formal equality with the emperor (M. Rossabi, *Two Ming envoys to Inner Asia*, in *T'oung Pao*, lxii/1-3, 1-34).

S̲h̲āh Ruk̲h̲ governed by balancing the power of his subordinates, allowing individuals to hold office for long periods. The power of his two most eminent *amīrs*—ʿAlīka Kūkeltās̲h̲ and D̲j̲alal al-Dīn Fīrūzs̲h̲āh—was kept in check by overlapping responsibilities and the administrative authority of S̲h̲āh Ruk̲h̲'s son Bāysung̲h̲ur. In his *dīwān* the two preeminent viziers—Sayyid Fak̲h̲r al-Dīn Aḥmad up to 819/1416-17 and K̲h̲ʷād̲j̲a G̲h̲iyāt̲h̲ al-Dīn Pīr Aḥmad thereafter—shared authority with partners, and suffered periodic demotions. S̲h̲āh Ruk̲h̲ initiated the fiscal decentralisation of the Tīmūrid realm by distributing numerous *soyurg̲h̲als*, grants of land with tax immunity. The magnificence of provincial courts suggests that not all revenues were forwarded to the centre. Nonetheless, S̲h̲āh Ruk̲h̲ retained sufficient funds to field a large army and to undertake major

restoration works in Balkh, Marw and Harāt. Provincial governors enjoyed considerable autonomy but required permission for important campaigns. Shāh Rukh, moreover, appointed his own *amīrs* to nearby cities, and interfered occasionally in provincial affairs. From 820/1417-18 until near the end of his life, he suffered little insubordination.

Shāh Rukh was presented as a ruler of exceptional piety, even as a renewer of the Islamic order. In the beginning of his reign he apparently proclaimed the restoration of the *Sharīʿa* and abrogation of the *yasa* (Djalāl al-Dīn Abū Muḥammad al-Ḳāyinī, *Naṣāʾiḥ-i Shāhrukhī*, ms. Vienna, Nationalbibliothek Cod. A.F. 112, fols. 1b-2b; Ḥāfiẓ-i Abrū, *Zubdat al-tawārīkh-i Bāysunghurī*, ms. Istanbul, Fatih 4371/1, fol. 486b, letter to China). He avoided drinking and twice publicly poured away wine. He was conspicuous in his involvement with religious affairs and his patronage of shrines, but harsh towards *ʿulamāʾ* whose loyalty he questioned and popular religious movements such as the Nūrbakhshiyya [*q.v.*] movement among the Kubrawiyya. On 23 Rabīʿ I 830/22 January 1427, a member of the Ḥurūfiyya [*q.v.*] sect tried to assassinate Shāh Rukh. This led to executions and the exile of the Ṣūfī poet Ḳāsim al-Anwār [*q.v.*], whom Shāh Rukh linked to this event.

Shāh Rukh did not fully abandon Mongol tradition. Mongol taxes remained in force, as did the Turco-Mongolian *yarghu* court, and Shāh Rukh claimed to punish infringements against Mongol custom. He presented his dynasty as successor to the Īl-Khāns; his government was styled "Īl-Khānī", and he used Īl-Khānid titles earlier applied to Tīmūr's Činggisid puppet khāns, whom he no longer maintained. (Nawāʾī, 163, 165, 171, etc.) His major act of literary patronage was the copying and continuation of Rashīd al-Dīn's works.

Shāh Rukh's reign initiated an upsurge of Persian and Turkic cultural activity. There was a brief revival of the Uyghur alphabet, and the beginnings of Čaghatay Turkic literature. He reconstructed the city walls and bazar of Harāt and built a magnificent shrine for ʿAbd Allāh Anṣārī [*q.v.*] at Gāzurgāh. Gawharshād built and endowed a shrine mosque at Mashhad, and a large mosque, *madrasa* and mausoleum complex outside Harāt. Numerous other buildings were endowed by Shāh Rukh's *amīrs*. His son Bāysunghur [*q.v.*] was a major patron of book production. Provincial courts also flourished, under Ulugh Beg in Samarḳand and Ibrāhīm Sulṭān in Shīrāz, and under major *amīrs* in Yazd and Khwārazm.

Near the end of Shāh Rukh's life, the death of several sons and *amīrs* upset the balance of power in government. After Bāysunghur died in 837/1433, and Amīr ʿAlīka in 844/1440, Fīrūzshāh was without equal in army and administration. His subsequent abuses led to an investigation by Shāh Rukh, during which Fīrūzshāh died. Further financial scandals followed as well as a number of local rebellions, and increasing dissension within the dynasty. When Shāh Rukh became ill in 848/1444-5, disorder broke out, particularly in Khurāsān. Gawharshād tried to engineer the succession of her favourite grandson ʿAlāʾ al-Dawla b. Bāysunghur. These events encouraged Sulṭān Muḥammad b. Bāysunghur to rebel; Shāh Rukh went against him, and executed several of his *ʿulamāʾ* supporters, but died during the campaign, on 25 Dhu 'l-Ḥidjdja 850/13 March 1447.

The ensuing succession struggle ravaged Khurāsān and opened western Persia to the Ḳara Ḳoyunlu. Within fifteen years, Shāh Rukh's line had largely destroyed itself, and Abū Saʿīd [*q.v.*], a descendant of Mīrānshāh, succeeded in taking power.

SHĀH-i SHUDJĀʿ, Djalāl al-Dīn Abu 'l-Fawāris (d. 786/1384), a prince of the Muẓaffarid [*q.v.*] dynasty in Persia (for the correct form of his name, see J. Aubin, *La fin de l'état sarbadâr du Khorassan*, in *JA*, cclxii [1974], 101-2 n. 32). Born on 22 Djumādā II 733/10 March 1333, he was the son of the dynasty's founder, Mubāriz al-Dīn Muḥammad, who gave him Kirmān as his appanage in 754/1353 and recognised him as his heir. In the division of the Muẓaffarid territories following Mubāriz al-Dīn's deposition and blinding by his sons in 760/1359, Shāh-i Shudjāʿ received Fārs and the status of paramount ruler, residing at Shīrāz. In his early years Shāh-i Shudjāʿ had to check the depredations of the Shūl and of Mongol and Türkmen tribes who sought the restoration of the Īndjūid [*q.v.*] dynasty (*Manāhidj*, fol. 654b). But much of his reign was absorbed in conflict with the rival Djalāyirid [*q.v.*] dynasty in ʿIrāḳ and Ādharbāydjān, and with his turbulent relatives, of whom his brothers Shāh Maḥmūd and Sulṭān Aḥmad ruled respectively in Iṣfahān and Kirmān and a nephew Shāh Yaḥyā in Yazd. An attempt to bolster his authority by accepting, as his father had done, a diploma from the puppet ʿAbbāsid Caliph in Cairo and performing homage to his representative (770/1368-9) does not seem to have brought Shāh-i Shudjāʿ any advantage.

In 765/1364 he was confronted by a particularly serious threat when Shāh Maḥmūd revolted. Shāh-i Shudjāʿ's army was defeated outside Iṣfahān and obliged to retreat, whereupon Shāh Maḥmūd summoned to his aid Shāh Yaḥyā and the Djalāyirid ruler Shaykh Uways, whose daughter he had married, and the allies moved on Shīrāz. Shāh-i Shudjāʿ was deserted by his brother Sulṭān Aḥmad and himself besieged in Shīrāz. In Rabīʿ II 766/December 1364-January 1365 (*Manāhidj*, fol. 657a) he surrendered Shīrāz to Shāh Maḥmūd and was allowed to leave for

Abarkūh. Here he built up a power-base, taking Kirmān from a rebel who had seized possession of it. Together with his nephew Shāh Yaḥyā, who had submitted to him once more, and the latter's brother Shāh Manṣūr, he advanced on Shīrāz and routed Shāh Maḥmūd's forces. Sulṭān Aḥmad in turn went over to Shāh-i Shudjāʿ, and Shāh Maḥmūd abandoned the city in Dhu 'l-Kaʿda 767/August 1366. The recovery of his capital, however, did not mean that Shāh-i Shudjāʿ enjoyed undisturbed rule. Although in 768/1366-7 Shāh Maḥmūd again acknowledged his overlordship, the two rulers continued to engage in periodic conflict; at one point Shāh-i Shudjāʿ's eldest son Sulṭān Uways rebelled and took refuge with Shāh Maḥmūd. Following the latter's death on 9 Shawwāl 776/13 March 1375, however, Shāh-i Shudjāʿ was able to take over Iṣfahān despite a faction within the city which supported Uways.

Shaykh Uways having also died in 776/1375, Shāh-i Shudjāʿ sought to avenge himself on the Djalāyirids. He invaded Ādharbāydjān, defeated the Djalāyirid army on 6 Djumādā I 777/3 October 1375 (*Manāhidj*, fol. 660a), and occupied Tabrīz, Ḳarabāgh and Nakhčiwān, but was shortly obliged to withdraw. Peace was made with Uways's son and successor, Sulṭān Ḥusayn, and cemented by the marriage of Ḥusayn's sister to Shāh-i Shudjāʿ's son Zayn al-ʿĀbidīn, on whom his father now conferred Iṣfahān. A subsequent campaign against Yazd brought to heel Shāh Yaḥyā, who had again rebelled; but the prince's brother Shāh Manṣūr fled to Māzandarān and later to Baghdād. Over the next few years Shāh-i Shudjāʿ intervened once more in the upheavals afflicting the Djalāyirid principality, where the governor of Sulṭāniyya, Sārik ʿĀdil, rebelled and Ḥusayn was embroiled with his brothers. Sārik ʿĀdil was obliged to accept Muẓaffarid overlordship in 781/1379-80; and when in 784/1382 Ḥusayn was overthrown and killed by his brother Aḥmad, Shāh-i Shudjāʿ encouraged another dissident Djalāyirid commander to occupy Shushtar and Baghdād and to strike coins and make the *khuṭba* in his name. Although Aḥmad occupied Baghdād and sent the Muẓaffarid prince Shāh Manṣūr to seize Shushtar, he was soon confronted with a bid by Ṣārik ʿĀdil at Sulṭāniyya to seize the throne on behalf of a third brother, Bāyazīd, and appealed to Shāh-i Shudjāʿ for assistance. In order to attend to Shushtar, Shāh-i Shudjāʿ effected a reconciliation between the Djalāyirid brothers; but he was unable to make any headway against Shāh Manṣūr, with whom he made peace.

Soon after this campaign Shāh-i Shudjāʿ died on 22 Shaʿbān 786/9 October 1384. His son Uways had predeceased him, and he was succeeded at Shīrāz by his son Zayn al-ʿĀbidīn, who proved unable to enforce his authority over his kinsmen. One of Shāh-i Shudjāʿ's last actions had been to write a letter interceding with Tīmūr-i Lang on behalf of his family (Kutubī, 104-8), but this did not prevent the conqueror invading the Muẓaffarid territories and eventually destroying the dynasty. The chroniclers praise Shāh-i Shudjāʿ's cultural accomplishments (Kutubī, 63). Although he himself wrote indifferent verse, he studied grammar and is celebrated as the patron and friend of the famous poet Ḥāfiẓ [*q.v.*], who hails his accession as the dawn of a more liberal era. Yet Shāh-i Shudjāʿ was not without his dark side, as attested by his blinding both of his father and, in 785/1383, of his son Sulṭān Shiblī, whom he suspected, groundlessly, of plotting against him (Kutubī, 99-100).

(P. Jackson)

SHĀH SULṬĀN, a name used for several princesses of the Ottoman dynasty, among others for a daughter of Bāyezīd II (M. Çağatay Uluçay, *Padişahların kadınları ve kızları*, Ankara 1980, 29) and for a daughter of Muṣṭafā III (*ibid.*, 10), who endowed a mosque and *zāwiye* complex in Eyüp, Istanbul, still extant today. Here we will deal with two 10th/16th century princesses bearing this name.

1. Shāh Sulṭān, also known as Shāhī Sulṭān or Dewletshāhī, daughter of Selīm I, was married before 929/1523 to Lütfī Pasha, with whom she may have spent some time in Epirus. From this marriage two daughters were born, named Ismikhan and Ṣefākhan. But by Muḥarrem 948/May 1541, Shāh Sulṭān's marriage to Lütfī Pasha had ended in divorce, after Ḳānūnī Süleymān had removed Lütfī Pasha from his post as Grand Vizier. A *ḥüdjdjet* dated 22 Muḥarrem 948/28 May 1541, witnessed among others by the Chief Architect Miʿmār Sinān, states that the princess renounced her rights to *mehr-i müʾedjdjel* and support; in return, Lütfī Pasha handed over to her several of his Istanbul properties.

Shāh Sulṭān did not marry again, devoting herself instead to patronage of the arts and piety. She was a renowned collector of books, nine of which were purchased for the Palace after her death. According to the Khalwetī hagiographer Yūsuf Sinān Efendi (d. 989/1581), Shāh Sulṭān and Lütfī Pasha at the time of their married life had founded a Khalwetī *tekke* in the Istanbul region known as Davutpaşa (935/1528), and Shāh Sulṭān invited the well-known *shaykh* Yaʿkūb Efendi to be its *pūstnishīn* (see Ḥāfıẓ Ḥüseyin Aywansarayī, *Ḥadīḳat ül-djewāmiʿ*, Istanbul, 1281/1864-5, i, 132, who claims that Shāh Sulṭān was buried here). However, when the famous Khalwetī Shaykh Merkez Efendi died in 959/1552, Yaʿḳūb Efendi, to the frustration of Shāh Sulṭān, preferred to succeed the latter at the Ḳodja Muṣṭafā Pasha *zāwiye* in Iṣtanbul, whereupon the foundress apparently converted the *tekke* into a school.

In addition, Shāh Sulṭān, who belonged to the circle of Merkez Efendi, founded a mosque along with a Khalwetī *tekke* in the Eyüp area of Bahariye (inscription dated 963/1536-7). This site the foundress chose for her grave, probably due to the proximity of the tomb of Eyüb-i Enṣārī. Several of her descendants subsequently were buried in the same place. This foundation had originally been destined for Merkez Efendi himself; but when the latter declined the position, his *khalīfe* Gömleksiz Meḥmed Efendi (d. 951/1544) was appointed instead.

Both the Eyüp and the Davutpaşa mosques had

originally been established as *mesdjids*. In two *fermāns* dated 962/1555 and 970/1562-3 Ḳānūnī Süleymān accorded Shāh Sulṭān permission to upgrade these two foundations into Friday mosques. The Davutpaşa mosque today is located in the garden of the Djerrāḥ Pasha hospital; when it was restored in 1953, the original dome was supplanted by a tiled roof. The Eyüp foundation remained in the hands of the Khalwetī-Sünbülī dervishes until the *tekke*s were closed in 1925. After the earthquake of 1180/1766, the complex was restored several times, particularly in the reign of Maḥmūd II. Shāh Sulṭān's *türbe* was destroyed in the course of the 1953 restoration.

In addition to these two complexes, Shāh Sulṭān had built a mosque and *zāwiye* near the tomb of her *shaykh* Merkez Efendi, outside the Istanbul gate of Yeñi Ḳapu. Her continuing interest in the family of Merkez Efendi is documented by the pensions she granted in her *wakfiyye* both to his daughter and to his granddaughter.

All these foundations were to be supported by villages in the vicinity of Dimetoḳa [*q.v.*], donated to Shāh Sulṭān by Ḳānūnī Süleymān. As Shāh Sulṭān's former husband Lüṭfī Pasha had retired to the region after his deposition, the couple seems to have had a long-standing connection with Dimetoḳa. In addition, the princess endowed her foundations with extensive urban real estate, partly located in the vicinity of her own palace in the quarter of Hekimçelebi, later known as the Handjerli Sulṭān Sarayî. Some of Shāh Sulṭān's properties, not assigned to pious foundations, were left to her great-grandson Aḥmed Čelebi, and she appointed her niece, Ḳānūnī's daughter Mihr-i māh, as executor. Shāh Sulṭān must have died some time between 983/1575 and 985/1577; for at the earlier date, Murād III, who had recently acceded to the throne, confirmed the grant of Dimetoḳa villages originally assigned to Shāh Sulṭān by his grandfather Ḳānūnī Süleymān. At the latter date, a Palace account mentions her as deceased.

It is difficult to determine whether the Princess Shāh Sulṭān, for whose pilgrimage to Mecca the *Diwān-î humāyūn* made arrangements in 980/1572-3, is identical with Shāḥ Sulṭān, the daughter of Selīm I. Pilgrimages by princesses were of political significance, for no Ottoman sultan ever visited Mecca. Shāh Sulṭān's pilgrimage therefore was treated as an occasion to make the presence of the Ottoman dynasty visible. However, it is also possible that these preparations were intended for Shāh Sulṭān, the daughter of Selīm II. But pilgrims often set out for Mecca at an advanced age, and a testament such as the one left by this particular Shāh Sulṭān might be considered a suitable preparation for the pilgrimage. Moreover, as the Shāh Sulṭān discussed here possessed a special reputation for piety, it is probable that she was in fact the prospective pilgrim. Whether she reached Mecca remains unknown.

2. Shāh Sulṭān, daughter of Selīm II and Nūrbānū Sulṭān, was born in Manisa in 951/1544. In 969/1562 Süleymān I married off three of his granddaughters, an event accompanied by major festivities. Shāh Sulṭān was bestowed upon the Čaḳîrdjîbashî Ḥasan Agha (later Pasha and Vizier). The bridegroom was assigned 15,000 *flori* to spend on the wedding, while the best man (*saghdič*) received 10,000 and the bride 2,000 *flori*. Apart from these grants to the individuals involved, the Palace spent 25,000 *flori* on the festivities.

According to at least one chronicler, the marriage ended in divorce. After the death of her first husband in 981/1574, the princess married Zāl Maḥmūd Pasha, a special favourite of Süleymān; thereafter, she was sometimes known as the Zāl Maḥmūd Pasha Sulṭānî. A daughter and a son, the latter known as Shehīd Köse Khüsraw Pasha, were born of this union.

Donating twelve villages granted to her by her father, Shāh Sulṭān, together with her husband, endowed a mosque, *medrese* and mausoleum in Eyüp, whose architect was Miʿmār Sinān. According to one source, the mosque and *medrese* were Zāl Maḥmūd Pasha's foundations, while Shāh Sulṭān contributed a *zāwiye*. The exact date of construction remains unknown, but since in 987/1579 a *müderris* was appointed to the *medrese*, it must have been complete or else close to completion. While both mosque and mausoleum appear in two lists of Sinān's works, the *medrese* is only mentioned in a single one. During this period, Miʿmār Sinān must have spent most of his energy on Sultan Selīm II's mosque in Edirne. Therefore the *medrese*, built on two levels linked by a staircase, may well be at least partly the work of another architect. Both Shāh Sulṭān and her spouse died in 988/1580 and were buried in their common mausoleum.

(Suraiya Faroqhi)

SHĀH ṬĀHIR al-Ḥusaynī al-Dakkanī, son of the Imām Raḍī al-Dīn II, the most famous imām of the Muḥammad-Shāhī line of post-Alamūt [*q.v.*] Nizārī Ismāʿīlism [*q.v.*].

He was a theologian, a poet, a stylist, and an accomplished diplomat who gave valuable services to the Niẓām-Shāhī dynasty of Aḥmadnagar in southern India, hence the surname al-Dakkanī because of this affiliation. He was born and brought up in Khund near Ḳazwīn, where his ancestors had settled after the fall of Alamūt and had acquired a large following. He was a gifted man and attained a high reputation for his learning and piety. Subsequently, he was invited by the Ṣafawid Shāh Ismāʿīl I [*q.v.*] to join other scholars at his court; however, Shāh Ṭāhir's religious following aroused Shāh Ismāʿīl's suspicious mind, and only after the intercession of Mīrzā Ḥusayn Iṣfahānī (who was an influential dignitary and might have been a secret convert and a follower of the imām)

was Shāh Ṭāhir allowed to settle down in Kāshān, where he became a religious teacher. Soon his influence over the people and his popularity among them aroused the hostility of the local officials and the Twelver Shīʿī scholars, who maliciously reported to the Shāh, accusing Shāh Ṭāhir of heretical teaching. Hence, in 926/1520 the Imām was obliged to flee with his family.

He first went to Fārs and then sailed to India. After landing in Goa he went to the court of Ismāʿīl ʿĀdil Shāh in Bīdjāpūr. Disappointed with his reception, he decided to make a pilgrimage to Mecca and to the Shīʿī shrines in ʿIrāḳ before returning to Persia; however, on his way to the seaport he met some high dignitaries of Burhān Niẓām Shāh, the ruler of Aḥmadnagar, and was invited there. In 928/1522 the Imām arrived in the capital of Niẓām-Shāhī state and soon became the most trusted adviser of the Shāh and attained a highly privileged position at his court. The Indian historian Firishta, who has given the most detailed account of his life, relates an interesting story of his miraculous healing of Burhān Niẓām Shāh's young son, which brought about the latter's conversion from Sunnism to Shīʿism. Shortly after his own conversion, Burhān Niẓām Shāh proclaimed Twelver Shīʿism as the official religion of the state. Our sources state that the form of Shīʿism propagated by Shāh Ṭāhir, himself a Nizārī Imām, was Twelver Shīʿism, which may seem strange. However, one must bear in mind that Shāh Ṭāhir and his predecessors were obliged to observe *taḳiyya* [*q.v.*], so that they propagated Nizārī Ismāʿīlism in the guise of Twelver Shīʿism and Ṣūfism. This explains why he wrote several commentaries on the theological and jurisprudential works of the well-known Twelver scholars and a commentary on the famous Ṣūfī treatise *Gulshan-i rāz*. Except for some of his poetry and excerpts of his correspondence, nothing seems to have survived. He died at Aḥmadnagar between 952/1545-6, the year mentioned by the contemporary Ṣafawid prince Sām Mīrzā, and 956/1549, the date recorded by Firishta. His remains were later transferred to Karbalāʾ.

Bibliography: For a detailed description of his works and sources, see I. Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu 1977, 271-5; F. Daftary, *The Ismāʿīlīs: their history and doctrines*, Cambridge 1990, 453-4, 471, 487-90. (I. Poonawala)

SHĀH WALĪ ALLĀH [see al-dihlawī, shāh walī allāh].

SHAHĀDA (a.), the verbal noun from *shahida*, a verb which means successively (1) to be present (somewhere), as opposed to *ghāba* "be absent"; whence (2) see with one's own eyes, be witness (of an event); whence (3) bear witness (to what one has seen); whence (4), attest, certify s. th. *tout court*. *Shahāda* can thus mean in the first place "that which is there", whence "that which can be seen", as in the Ḳurʾānic formula in which God is described as *ʿālim al-ghayb wa 'l-shahāda* "He who knows what is invisible and visible" (VI, 73; IX, 94, 105; XIII, 9; etc.). Another sense, more commonly used, is that of witnessing, the declaration by means of which the witness to an event testifies to the reality of what he has seen (or claims to have seen); this is the sense in Ḳurʾān, II, 282-3 (in regard to a debt), V, 106-8 (in regard to a bequest), XXIV, 4, 6 (concerning adultery), LXV, 2 (at the time of a divorce), and, from this point of departure, in legal language [see shāhid]. A third usage (not directly Ḳurʾānic but implicit in III, 19, VI, 19 and LXIII, 1) is the religious sense, in which *shahāda* denotes the Islamic profession of faith, the act of declaring "There is no god but God, and Muḥammad is the Messenger of God". Sometimes, one speaks in this case of al-*shahādatān*ⁱ "the two *shahādas*" [see tashahhud]. Finally, by extension of this third sense, *shahāda* can refer to the supreme manner of affirming the Islamic faith, that of the martyr in the cause of Islam [see mashhad and shahīd].

Bibliography: See the *fiḳh* books and the *Bibl.* to shāhid. (D. Gimaret)

SHĀHANSHĀH [see shāh].

SHAHĀRA, also commonly Shuhāra, the name of a large mountain, town and fortress in the district (*nāḥiya*) of al-Ahnūm in the Yemen, placed by Werdecker (*Contribution*, 138) at 16° 14′ lat. N. and 43° 40′ long. E., i.e. approximately 90 km due east of the Red Sea coast and 110 km north, slightly west, of Ṣanʿāʾ [*q.v.*]. Al-Ahnūm was originally of Ḥāshid, one of the two divisions of Hamdān. Today, however, the majority of its tribal groups are of Bakīl, the other division, and it is counted as Bakīl territory.

The town itself, known in former times as Miʿattiḳ, is called Shahārat al-Raʾs since it is perched right on the summit of the mountain. The fortress is named Shahārat al-Fīsh and is situated to the east of the town. A famous and often photographed bridge was built on the instructions of Imām Yaḥyā Ḥamīd al-Dīn in about 1320/1902, and thus the town has spread in an easterly direction since that date. It has three gates through which all traffic entering and leaving the town must pass: Bāb al-Naḥr, Bāb al-Naṣr and Bāb al-Saraw. It is said (al-Ḥadjarī, *Madjmūʿ*, i, 95) that its *djāmiʿ* mosque was built in 1029/1620 by Imām al-Ḳāsim b. Muḥammad, who had made the town his capital and died and was buried there in 1054/1644, and that the town has seven other mosques.

Shahāra is firstly linked with the famous pre-Islamic Tubbaʿ, Asʿad al-Kāmil. Amīr Dhu 'l-Sharafayn Muḥammad b. Djaʿfar, son of Imām al-Ḳāsim b. ʿAlī al-ʿAyyānī, who died in 478/1085, made the town his headquarters, after which it was often referred to as Shahārat al-Amīr. Amīr Muḥammad is buried in the town.

The Turks during their two occupations of the Yemen made repeated assaults on Shahāra, but it was only in 995/1587 that their governor, Muṣṭafā ʿĀṣim Pasha, finally succeeded in taking it after a long siege. This proved to be their only conquest of the town, for, although again in 1323/1905 the Turks besieged Shahāra, they were unsuccessful. Of this unsuccessful siege and attack, a Yemeni poet wrote "[The Turks] came by night (*saraw*) against Saraw gate, but in the morning they were slaughtered (*nuḥirū*) at al-Naḥr [gate], when victory (*al-naṣr*, the name of the third gate) was something to be hoped for".

Shahāra was always a centre of learning and produced a number of famous *fuḳahāʾ*, *udabāʾ* and poets. Of the last may be mentioned Zaynab bt. Muḥammad al-Shahāriyya who died in 1114/1702. Although her poetry was never assembled into a *dīwān*, it finds a respected place in Yemeni literature; she also wrote some prose.

(G.R. Smith)

SHAHĀRIDJA (much less frequently *shahārīdj*; sing. *shahrīdj*), Arabised form of the Persian *shahrīg*/*shahrīgān*, and the name given to some local notables of ʿIrāḳ who survived the coming of Islam well into the medieval period.

The role of the Shahāridja in the Sāsānid period is vexing, since the evidence is all late and all literary. Al-Masʿūdī states that they were part of the nobility of the Sawād [*q.v.*] and superior in rank to the *dihḳāns*; meanwhile, al-Yaʿḳūbī glosses the *shahrīdj* as the *raʾīs al-kuwar*, and this has often been taken to mean that they were imperial appointees with broad responsibilities in provincial administration. However, the material testimony is conspicuously silent when it comes to the Shahāridja (as opposed to the *shahrabs*), and Gyselen has argued that the Shahāridja of the Sāsānid period were representatives of the *dihḳāns*, rather than administrative officials; insofar as the later evidence from northern Mesopotamia sheds any light on the Sāsānid period, the Shahāridja should certainly be interpreted as local notables, but how they related to the *dihḳāns* is less clear.

The earliest attestation of the Shahāridja in the Islamic sources comes in Abū Mikhnaf's account of the conquest of Takrīt (here put in year 16/637), where they join a Byzantine force and local Arab tribes in defence of the town; al-Balādhurī also mentions the toponym Tall al-Shahāridja in his account of the conquest of Mawṣil, which, if we admit it as authentic, indicates their presence in the north before Islam (for a possible parallel, see Nöldeke, *Geschichte der Perser und Araber*, 446, on Theophylactus Simocatta). Local Nestorian sources of the 9th century portray the Shahāridja as local headmen and wealthy notables, who lived in several towns and villages in the province of Mawṣil; according to Thomas of Marga, they levied onerous taxes on the *dihḳāns*. But Thomas also accuses them of holding the aberrant view that "Christ was a mere man" (*barnāshā shḥīmā*), and it is therefore hard to know how much of his information is polemical. Although an *ex eventu* prophecy recorded by Thomas suggests that their role in local taxation began to fade at the end of the 2nd Islamic century, they were known in the north as late as Ibn Ḥawḳal's time. The evidence for their presence in ʿIrāḳ (as opposed to Mawṣil) during the Islamic period is so thin and stereotypical that firm conclusions are impossible.

SHAHDĀNADJ (also *shahdānak*, *shāhdānadj*, *shādānak*, *sharānak*) hempseed. In Greek pharmacology and throughout its Arabic counterpart, it was known as a rather minor simple, useful for drying out fluid in the ear by dripping its oil into it, harmful in that it caused headache and sexual dysfunction when eaten in large quantities, and the like. The word was commonly accepted as the Persian equivalent of Greek *cannabis*, Ar. *ḳinnab*, and hence served as another term for *ḥashīsh* [*q.v.*]; this may explain why so many different forms were in use.

SHĀHDJAHĀNĀBĀD [see DIHLĪ].

AL-**SHAHHĀM**, Abu Yaʿḳūb Yūsuf b. ʿAbd Allāh b. Isḥāḳ, Muʿtazilī theologian of the Baṣran school (3rd/9th century). His exact dates are unknown. His biographers only say that he was the youngest, or among the youngest, of the disciples of Abu 'l-Hudhayl (d. ? 227/841 [*q.v.*]), that he died aged 80 and that his death was after 257/871, when he was for a while prisoner of the Zandj, when these last overran Baṣra.

As his name implies, he was a seller of fat, and under al-Wāthiḳ held administrative posts in the taxation office or *dīwān al-kharādj*. According to Ibn al-Nadīm (cited in Ibn Ḥadjar, *Lisān*, vi, 325), he is said to have even headed this department. According to other sources, he was reportedly simply charged as a "religious figure", and in the general framework of the suppression of abuses, to oversee in this regard the conduct of al-Faḍl b. Marwān [*q.v.*].

He was a disciple both of Abu 'l-Hudhayl and, it seems, of Muʿammar [*q.v.*] (thus according to al-Khayyāṭ, *Intiṣār*, ed. Nader, 45, ll. 15-17), and eventually became head of the Muʿtazilī school in Baṣra. He was the chief master of Abū ʿAlī al-Djubbāʾī [*q.v.*]. A trenchant polemicist, he is said to have written numerous refutations, as well as, notably, a Ḳurʾān commentary (for all biographical details, see ʿAbd al-Djabbār, *Faḍl al-iʿtizāl*, Tunis 1974, 280-1; al-Ḥākim al-Djushamī, *Sharḥ ʿuyūn al-masāʾil*, ms. Ṣanʿāʾ, Great Mosque, *ʿilm al-kalām*, no. 212, fol. 59a; Ibn al-Murtaḍā, *Ṭabaḳāt al-muʿtazila*, Beirut-Wiesbaden 1961, 71-2; and on the episode of the Zandj, ʿAbd al-Djabbār, *Tathbīt dalāʾil al-nubuwwa*, Beirut 1966, 341).

He is characterised by two main theses:

(1) Concerning the science of God, on the question whether God has known things from all eternity (*lam yazal ʿālim^an bi 'l-ashyāʾ*)—a question debated at length in al-Ashʿarī, *Maḳālāt*, Wiesbaden 1963, 158-63—he was amongst those answering affirmatively (see *ibid.*, 162, ll. 8-17). This means that he admitted that, given the fact that the universe is created, "things are things even before they come into existence", in other words, that "what is not yet in existence is a thing" (*al-maʿdūm shayʾ*), a thesis which the majority of later Muʿtazilīs, Baṣrans as well as Baghdādīs, made their own. A relatively late tradition holds that, within the Muʿtazilī school, al-Shahhām was the first to uphold such a principle (see al-Djuwaynī, *Shāmil*, Alexandria 1969, 124, ll. 6-7; al-Shahrastānī, *Nihāya*, Oxford 1934, 151, ll. 2-5). In reality, his contemporary and compatriot ʿAbbād b. Sulaymān [*q.v.*] held the same view (see *Maḳālāt*, 158, ll. 16 ff. and 495, ll. 9 ff.). Al-Shahhām simply went further, saying that bodies even are bodies before they come into existence, a viewpoint which was later taken up by the Baghdādī al-Khayyāṭ [*q.v.*] (in his *Farḳ*, ed. ʿAbd al-Ḥamīd, Cairo n.d., 179, ll. 15 ff., al-Baghdādī attributes to al-Khayyāṭ the reasoning that, in *Maḳālāt*, 162, ll. 12-16, 504, ll. 16 ff., al-Ashʿarī attributes to al-Shahhām).

(2) Regarding God's power, considered in its

connection with human acts, al-Shahhām upheld, against all the other Muᶜtazilīs (thus in *Makālāt*, 549, ll. 9-11; but if one believes Ibn Mattawayh, *Madjmūᶜ*, Beirut 1965, i, 379, ll. 9-13, Abu 'l-Hudhayl and Muḥammad b. Shabīb are said to have thought the same) that "God has power over what He gives power to mankind" (*yakdiru ᶜalā mā akdara ᶜalayhi ᶜibādahu*) cf. *Makālāt*, 199, l. 7, 549, l. 12), thus admitting the idea of "one object of power for the two wielders of power" (*makdūr wāḥid li 'l-kādirayn*) (cf. *Fark*, 178, ll. 4-6). Although, moreover, like Ḍirār, al-Nadjdjār [*q.vv.*] and, later, the Sunnī theologians, al-Shahhām apparently distinguished between "to create" (*khalaka*), which would be proper to God, and "to acquire" (*iktasaba*), which would be proper to man (cf. *Makālāt*, 550, ll. 2-3), one should not understand that, for him, as these other theologians thought, it was the very same act at the very same instant which is, at the same time, "created" by God and "acquired" by man. It appears in fact to be a question of an alternative (cf. *Fark*, 178, ll. 7-9): this common possibility is, whether it is God who produces it and it is then an act of God alone, or whether it is man, and in this case it is exclusively an act of man (see *Makālāt*, 199, ll. 8-9, 549, ll. 13 ff.; *Madjmūᶜ*, I, 379, ll. 11-12, 15-16; ᶜAbd al-Djabbār, *Mughnī*, Cairo 1963, viii, 275, ll. 16-18).

Bibliography: Given in the article, to which should be added Ashᶜarī, *Makālāt*, 277, ll. 3-13, 415, ll. 6-8; ᶜAbd al-Djabbār, *Faḍl*, 256, ll. 1-10; Abu 'l-Muᶜīn al-Nasafī, *Tabṣira*, Damascus 1993, ii, 548, ll. 8-10, 724, ll 9-11; Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, Cairo 1959, i, 7, ll. 6-10; J. van Ess, *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra*, iv, § 4.1.3.

(D. GIMARET)

SHĀHĪ (P.), lit. "royal, kingly". In numismatics, the name of a silver coinage denomination in Ṣafawid and post-Ṣafawid Persia until inflation gradually drove it out of circulation. The name originated in Persia after Tīmūr introduced his *tanga-yi nukra* in 792/1390 at 5.38 gr, half the weight of the Dihlī Sultanate tanga, 10.76 gr. Under Shāh Rukh the *tanga-yi nukra*'s weight was reduced to that of the *mithkāl*, 4.72 gr, and received the popular name *shāhrukhī*. Between Shāh Rukh's death in 853/1449 and the accession of Shāh Ismāᶜīl I Ṣafawī in 907/1501 the coinage of Persia underwent a rapid and continuous debasement. Shāh Ismāᶜīl then stabilised the coinage and issued three main silver denominations during the period of his first coinage standard, 908-23/1502-17 weighing one, two and four *mithkāls*. On the basis that the one *mithkal* coin weighed the same as the *shāhrukhī*, Fragner concluded that this was the *shāhī* valued at 50 dīnārs, but Rabino and Farahbakhsh assigned the same name and dīnār value of the *shāhī* to the two-*mithkal* weight denomination. There appears to be no contemporary historical evidence to decide this issue, although the Persian numismatic tradition may be favoured. After a series of steep devaluations in 923, 928, 938 and 945 A.H., all authorities are in agreement that the *shāhī* of Ṭahmāsb I now weighed a half-*mithkāl* (12 *nukhūd*), about 2.30 gr, and continued to be valued at 50 dīnārs, with 200 *shāhīs* being equal to one tūmān.

After periodic devaluations in the reigns preceding that of Karīm Khān Zand (1172-93/1759-79), the *shāhī* came to weigh a quarter-*mithkāl* (6 *nukhūd*), about 1.15 gr, and ten were valued at one rupee. Under the late Zands its weight was reduced to 5 *nukhūd*, 0.96 gr, with 12 being equal to one rupee. At this point the silver *shāhī* appears to have ceased to circulate as a coin in its own right because of its light weight and low value. After the silver *shāhī* had ceased to be struck, the name was applied to a copper coin weighing roughly one *mithkāl* which was issued by provincial governors rather than the central government mints.

Until the reign of Fatḥ ᶜAlī Shāh (1212-50/1797-1834), the double *shāhī* was known as the *muḥammadī* and the four *shāhī* as the *ᶜabbāsī*; but the first coinage reform of Fatḥ ᶜAlī Shāh in 1212/1797 introduced a new set of denominations in which one of his new *riyāls* was valued at 25 *shāhīs* or 1,250 dīnārs, 8 *riyāls* were worth one tūmān, while the smallest circulating coin, the *shahī safīd*, the white *shāhī* to distinguish it from the copper, or black *shāhī*, actually had a real value of 3.125 *shāhīs*. When the *kirān* standard was introduced in 1241/1825, 10 *kirāns* were valued at one tūmān, one *kirān* at 20 *shāhīs* or 1,000 dīnārs, while the circulating silver coins were issued at the value of one, half, quarter and eighth-*kirān*.

During the rule of Nāṣir al-Dīn Shāh Ḳādjār (1264-1313/1848-96 [*q.v.*]), under the coinage reform law of 1293/1877 all provincial mints were closed and the manufacture of machine-struck coinage was introduced at the central government mint at Tehran. Copper coins were then issued with the value of 200, 100, 50, 25 and 12 dīnārs, but in the year 1305 the 100-dīnār coin was actually named the *dō shāhī* and the 50-dīnār one the *shāhī*. Between 1296/1879 and 1342/1924, the smallest silver coin was the *shāhī safīd* weighing 3.25 *nukhūd* or 0.7 gr. These small coins, while named *shāhī*, had an actual value of three copper *shāhīs*, and were struck for special distribution at the *Nawrūz* [*q.v.*] celebrations. Three varieties are known. One bore the Shāhs' names and titles on the obverse, and the Persian lion and sun emblem and date on the reverse, and was presumably given as presents to and amongst the secular administration. The second carries the rulers' names and titles as before, with the legend "O Master of the Age! To Thee be Greetings!", referring to the Twelfth Imām, and the third bears the same invocation to the Twelfth Imām with the Persian lion and sun and the date on the reverse. These, presumably, were intended for distribution within the religious community. With the coming of the Pahlawīs, the striking of the *shāhī safīd* ceased, and privately struck tokens took its place as *Nawrūz* gifts.

In 1309 A.S.H./1930, Riḍā Shāh Pahlawī [*q.v.*] introduced his own *riyāl* standard, valuing the tūmān at ten *riyāls*, the *riyāl* at 100 dīnārs and the *shāhī* at five dīnārs. The last appearance of the *shāhī* denomination in the Persian coinage was in 1314 A.S.H/1935 when the half-*riyāl* (50 dīnārs) was given the name of 10 *shāhīs*. The final fractional riyāl, a 50-dīnār coin, which was the last vestige of the *shāhī*, appeared only once after the proclamation of the Islamic Republic of Iran when it was issued as part of the first republican coinage dated 1358 A.S.H./1979.

Elsewhere, there is evidence that the name *shāhī* as a shortened form of *shāhrukhī* was colloquially applied to those silver coins influenced by the Persian coinage system which circulated in pre- and early Mughal India, weighing around a half-*tanga* or one *mithkāl*.

(R.E. DARLEY-DORAN)

SHAHĪD (A., lit. "witness", pl. *shuhadā*ʾ), a word

often used in the sense of "martyr". In the Ḳurʾān it is attested in its primary meaning (e.g. II, 282, XXIV, 4) and also occurs as one of the divine names (e.g. V, 117). Muslim scholars maintain that in a number of verses *shuhadāʾ* means "martyrs", as in III, 140 ("So that God may know those who believe and may take *shuhadāʾ* from among you"), IV, 69 ("Whoever obeys God and the messenger—they are with those whom God has blessed, prophets, just men, *shuhadāʾ* and the righteous"), XXXIX, 69 and LVII, 19; and they explain in various ways how this meaning derives from the verb *shahida* (see Lane, s.v.). Goldziher, in contrast, thought that this sense of *shuhadāʾ* was post-Ḳurʾānic and reflected the use among Christians of the Greek *martys* and Syriac *sāhdā* (*Muslim studies*, ii, 350-1; cf. Wensinck, *The oriental doctrine*, 1, 9; SHAHĪD, in *EI*[1] [W. Björkman]). What is not in doubt is that the Ḳurʾān refers to the reward for those slain in the way of God (*fī sabīl Allāh*) (II, 154, III, 157, 169, IV, 74, IX, 111, XLVII, 4-6).

A large body of traditions describes the bliss awaiting the martyr. All his sins will be forgiven; he will be protected from the torments of the grave; a crown of glory will be placed on his head; he will be married to seventy-two houris and his intercession will be accepted for up to seventy of his relations. When the martyrs behold the delights awaiting them, they will ask to be brought back to life and killed again; but this is one request which even they will be denied. The Ḳurʾānic statement that the *shuhadāʾ* are alive (*aḥyāʾ*) is often (but not always) interpreted literally (see D. Gimaret, *Une lecture muʿtazilite du Coran*, Louvain-Paris 1994, 120, 202-3). According to some traditions, the spirits of the martyrs will ascend directly to Paradise, there to reside in the craws of green birds near God's throne. During the Resurrection these spirits will be returned to the martyr's earthly bodies and the martyrs will then be given their abode in Paradise (*dār al-shuhadāʾ*).

There are two main types of martyr, the difference between them being marked by the fact that martyrs of the first type have special burial rites while those of the second do not. The first type are *shuhadāʾ al-maʿraka*, "battlefield martyrs". They are referred to as "martyrs both in this world and the next" (*shuhadāʾ al-dunyā wa 'l-ākhira*), meaning that they are treated as martyrs both in this world (in that they undergo the special burial rites) and in the next.

The burial rites accorded to battlefield martyrs differ from those accorded to other Muslims in the following ways:

(1) *Ghusl* [*q.v.*]. There is widespread agreement among Sunnī and non-Sunnī jurists that the martyr's body should not as a rule be washed. This position is based on the precedent of the Prophet's actions at Uḥud and elsewhere and on the belief that martyrdom removes the impurity which adheres to a person's body at death. A minority view was held by some early authorities, including Saʿīd b. al-Musayyab (d. *ca.* 94/713), al-Ḥasan al-Baṣrī [*q.v.*] and the Baṣran ʿUbayd Allāh b. al-Ḥasan al-ʿAnbarī (d. 168/785). Their view is that the Prophet acted in extraordinary circumstances and that his actions should therefore not serve as a precedent; in addition, they hold that martyrs are subject to the same laws of impurity as others. A special case is the martyr who dies without having performed the *ghusl* following sexual intercourse. Jurists who hold that his body should be washed include Abū Ḥanīfa, the Ḥanbalīs and the Ibāḍīs. These jurists cite the precedent of the Anṣārī Ḥanẓala b. Abī ʿĀmir: he was with his wife when called upon to fight at Uḥud and was killed before he could perform the *ghusl*; the angels washed his body, and he is therefore known as *ghasīl al-malāʾika*. A further point, allegedly made by Abū Ḥanīfa, is that martyrdom does not cancel an impurity which adhered to a person while he was still alive. Those who say that a martyr of this kind should be treated like any other battlefield martyr by not being washed include Abū Yūsuf, al-Shaybānī and some later Ḥanafīs. Conflicting views on this point are also found among Mālikīs, Shāfiʿīs, Zaydīs and Imāmīs.

(2) Clothes. The belief that the martyr's blood-stained clothes will constitute proof of his status on the Day of Judgment is the main reason for holding that he should be buried in the garments in which he was killed. But items of clothing which cannot normally serve as shrouds (e.g. headgear, footgear, fur or skin clothes) may not be buried with him; nor should his weapons accompany him to the grave, as this was a Djāhilī custom. The Shāfiʿīs, Mālikīs and Ḥanbalīs maintain that if the martyr's next of kin (*awliyāʾ*) do not wish to bury him in his garments, they may use shrouds instead.

(3) Prayer. There are conflicting accounts of the Prophet's behaviour at Uḥud: according to some he prayed over the martyrs, according to others he did not. Those who hold that the former should serve as a precedent include the Ḥanafīs, Zaydīs and Imāmīs. Opponents of prayers over the martyrs include the Shāfiʿīs and Mālikīs, as well as many of the older Meccan and Medinan authorities. Ibn Ḥazm argues that both accounts are equally reliable and that either practice may therefore be followed, while the Ḥanbalīs are split over the issue, depending on which of two *riwāyas* from Ibn Ḥanbal they choose to follow. One argument (attributed to al-Shāfiʿī) against prayers over the martyrs is that the martyrs are alive, while prayers are held only for the dead. Another argument is based on the notion that the aim of such prayers is to intercede on the dead person's behalf; as the martyr has been cleansed of all sins, he is in no need of such intercession. In contrast, supporters of such prayers claim that no-one can dispense with a request to God for His mercy and forgiveness, and that the martyrs, more than anyone else, deserve to have this request made on their behalf.

There is some difference of opinion as to who is included in the category of battlefield martyrs. While it is agreed that they are those who went into battle in order to further God's religion and in anticipation of His reward (*iḥtisāb*), there are some jurists who add that they must have died in a battle against unbelievers, whereas others maintain that their death in battle should have been caused by an act of injustice (*ẓulm*). Again, some jurists insist that these martyrs must have been killed by an enemy soldier, while others do not make this stipulation. All agree that death must be a direct and immediate result of the wounds received, but the interpretation of this rule varies; it is often taken to mean that the warrior must die before he has had a chance either to eat, drink, sleep, receive medical treatment, be moved away, or dictate his last will and testament. The Shāfiʿīs stipulate only that he should not have eaten during the time between his injury and his death, and that his death should have occurred either before or shortly after the battle ended.

Tradition has recorded the names of numerous battlefield martyrs who died during the Prophet's lifetime; they include members of his immediate family, such as his paternal uncle Ḥamza b. ʿAbd al-Muṭṭalib (known as *sayyid al-shuhadāʾ*) and his cousin Djaʿfar b. Abī Ṭālib [*q.vv.*]. Far greater numbers fell

during the conquests which followed the Prophet's death. Most died on land, some at sea; the latter are said to receive the reward of two martyrs who die on land. Many fought with extraordinary bravery against heavy odds and their behaviour is cited as an example of the "wish for martyrdom" (*ṭalab al-s̲h̲ahāda*). Such zeal was also common among various K̲h̲āridjī groups. The number of martyrs of this kind declined with the end of the first great wave of conquests, although it rose again whenever particular historical circumstances (such as the Crusades) revived calls for *d̲j̲ihād* (cf. E. Sivan, *L'Islam et la croisade*, Paris 1968, 60-2, 110, 134 and *passim*). At the same time, the increasing importance attached to the defence of the border areas led to the elevation of fallen *murābiṭūn* to the rank of martyrs [see RIBĀṬ]. In eschatological times, martyrs will fight on the side of the Mahdī [*q.v.*], just as the early martyrs fought alongside the Prophet.

Battlefield martyrdom has captured the imagination of Muslims throughout the ages. A martyr's death in combat is the apogee of the believer's aspirations; it is the noblest way to depart this life (hence the motif of the old man who rushes forth to battle) and is a guarantee of God's approval and reward. In his willingness to lay down his life for a higher cause the believer overcomes that most basic of instincts, fear of death. Nor is the reaction to his death necessarily one of grief: there are accounts in mediaeval Sunnī sources of mothers who express gratitude at the news of their sons' martyrdom and forbid any mourning over them; and similar reports have appeared in modern times, most spectacularly on the Iranian side during the Iran-ʿIrāḳ war (1980-8). It is the behaviour of these mothers which is so striking, regardless of whether it reflects their true feelings. The significance of the martyr's death transcends the individual; in the eyes of ordinary Muslims, he endows his entire community with purity and grace, and his immediate family are the object of admiration and support.

The second major type of martyr are the "martyrs in the next world only" (*s̲h̲uhadāʾ al-āk̲h̲ira*); they are not accorded distinctive burial rites. Among them are the *murtat̲h̲t̲h̲ūn*, lit. "those who are worn out", i.e. warriors who in other respects qualify as battlefield martyrs, but whose death is not a direct and immediate result of their wounds. The question whether a person is to be regarded as a battlefield martyr or as a martyr only in the next world arose particularly in three cases. The first is that of a warrior accidentally killed by his own weapon; one example is that of ʿĀmir b. al-Akwaʿ (or b. Sinān), whose sword slipped from his hand during the battle of K̲h̲aybar [*q.v.*] and fatally wounded him. The Imāmīs and some Ḥanbalīs maintain that such a warrior is a battlefield martyr; others dispute this. The second case concerns those killed by *bug̲h̲āt* ("rebels"; cf. Kh. Abou El Fadl, *Aḥkām al-bughāt: irregular warfare and the law of rebellion in Islam*, in *Cross, crescent, and sword*, ed. J.T. Johnson and J. Kelsay, New York, Westport and London 1990, 149-76). For the Zaydīs and Imāmīs, the *bug̲h̲āt* are unbelievers, since they rose against a legitimate ruler; hence those who fall while fighting them (such as ʿAlī's supporters in the battles of the Camel, Ṣiffīn and al-Nahrawān) are considered to be battlefield martyrs. Sunnī scholars generally regard the *bug̲h̲āt* as erring Muslims and treat those who fall while fighting them as the victims of injustice. For some Ḥanbalīs, Ḥanafīs and S̲h̲āfiʿīs, this is sufficient grounds for according them the status of battlefield martyrs; while those who hold that such a martyr must have died in a war against unbelievers maintain that victims of the *bug̲h̲āt* are *s̲h̲uhadāʾ al-āk̲h̲ira*. Finally, there are those who die while defending themselves, their families or their property against brigands (*luṣūṣ*) [see LIṢṢ] or highway robbers (*ḳuṭṭāʿ al-ṭuruḳ*). (The assumption appears to be that these brigands and robbers are Muslims rather than unbelievers.) Theirs is a special case, in that their death does not occur on a battlefield. Jurists none the less draw an analogy between such persons and warriors who were killed on the battlefield. According to al-Awzāʿī [*q.v.*] and some Ḥanafīs and Ḥanbalīs, they are to be regarded as battlefield martyrs; most jurists, however, consider the victims of brigands or highway robbers as martyrs in the next world only.

The decrease in the number of battlefield martyrs that followed the early conquests coincided (perhaps not fortuitously) with a large extension of the category of martyrs in the next world only. These further types may conveniently be grouped under three major headings:

(1) Persons who die violently or prematurely. Martyrs of this type include:

(a) *Those murdered while in the service of God.* Foremost among them are the caliphs ʿUmar, ʿUt̲h̲mān (who is sometimes regarded as a battlefield martyr) and ʿAlī. The Prophet himself was occasionally described as a *s̲h̲ahīd*, since his death was supposedly precipitated by his tasting a piece of poisoned mutton offered him by Zaynab bt. al-Ḥārit̲h̲ at the time of the K̲h̲aybar expedition.

(b) *Those killed for their beliefs.* Pre-Islamic figures include various prophets, most prominently Yaḥyā (John the Baptist) (for whom see e.g. Ibn Abi 'l-Dunyā, *Man ʿās̲h̲a baʿd al-mawt*, Cairo 1352/1934, 17-8), and righteous persons such as Ḥabīb al-Nadjdjār [*q.v.*]. During the early years of Muḥammad's mission, Sumayya, the mother of ʿAmmār b. Yāsir [*q.v.*] (who himself fell at Ṣiffīn), is said in some reports to have been stabbed to death by Abū D̲j̲ahl after she had openly embraced Islam; some say that she was the very first martyr in Islam. An example from the time of the *miḥna* [*q.v.*] is that of Aḥmad b. Naṣr al-K̲h̲uzāʿī, who refused to acknowledge that the Ḳurʾān was created and was beheaded in 231/846 by order of the caliph al-Wāt̲h̲iḳ. Those executed by a ruler for enjoining him to do what is proper and forbidding him from what is reprehensible (*al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar*) are sometimes described as martyrs. Among Ṣūfīs, the most renowned martyr is al-Ḥallādj [*q.v.*] (see L. Massignon, *The passion of al-Ḥallāj: mystic and martyr of Islam*, tr. H. Mason, Princeton 1982, i, 560-645). The list of Imāmī S̲h̲īʿī martyrs is particularly long, with many names appearing in the *maḳātil* literature; some became posthumously known as "al-S̲h̲ahīd" (e.g. al-S̲h̲ahīd al-T̲h̲ānī [*q.v.*]). The most prominent of these martyrs are the Imāms, with Ḥusayn in particular occupying a unique position. He has traditionally been regarded as having sacrificed himself in order to revive the Prophet's religion and save it from destruction; yet he has also been seen (particularly in recent years) as a battlefield martyr to be emulated for his willingness to fight for justice against all odds. The tombs of Ḥusayn and the other Imāms are the most important shrines in the S̲h̲īʿī world; many non-S̲h̲īʿī martyrs also generated a cult, and their burial places became centres of pilgrimage [see MAS̲H̲HAD].

(c) *Those who die through disease or accident.* Early collections of Ḥadīt̲h̲ specifically mention victims of the plague (*ṭāʿūn* [*q.v.*]), of pleurisy or of an abdominal disease (diarrhoea or colic), those who drown, die in a fire or are struck by a falling house or wall, and

women who die in childbirth; other forms of death were added at a later date. According to al-Bādjī [*q.v.*], the elevation of these persons to the rank of martyrs is divine compensation for the painful deaths which they suffer.

(d) *The "martyrs of love"* (shuhadā᾽ al-ḥubb) *and the "martyrs who died far from home"* (shuhadā᾽ al-ghurba) *may also belong here.* The former are, according to a Prophetic tradition, those who love, remain chaste, conceal their secret and die (Ibn Dāwūd, *K. al-Zahra* [first part], ed. A.R. Nykl in collaboration with I. Ṭūḳān, Chicago 1932, 66; see the discussion in J.-C. Vadet, *L'esprit courtois en Orient dans les cinq premiers siècles de l'hégire*, Paris 1968, 307-16; L.A. Giffen, *Theory of profane love among the Arabs*, New York and London 1971, 99-115). The latter are those who leave their homes (e.g. in order to preserve their faith in times of persecution) and who die in a foreign land.

(2) Persons who die a natural death, either (a) while engaged in a meritorious act such as a pilgrimage, a journey in search of knowledge (*fī ṭalab al-ʿilm*) or a prayer (including a prayer for death on the battlefield); or (b) after leading a virtuous life. In ascetic circles, those who died after spending their lives waging war against their appetitive soul (*nafs*) were regarded as martyrs in the "greater *djihād*" [see DJIHĀD]; and according to some Imāmī traditions, every believer (i.e. every Imāmī Shīʿī), even if he dies in his own bed, is a *shahīd* who will be treated as if he had been killed fighting alongside the Prophet. Other Imāmī traditions declare as martyrs those who in their lifetime practised *mudārāt*, i.e. who treated others in a friendly manner while concealing their true attitude towards them. It has been suggested that the extension of the term *shahīd* to cover cases of non-violent death was a reaction against what was deemed a fanatical enthusiasm for self-sacrifice (Goldziher, *Muslim studies*, ii, 352).

(3) Living martyrs. They include those who, having joined the "greater *djihād*", successfully fight their *nafs*. The Ṣūfī author Abū ʿAbd al-Raḥmān al-Sulamī (d. 412/1021) [*q.v.*] declares that the battlefield martyr is a *shahīd* only externally (*fi 'l-ẓāhir*); the true martyr (*fi 'l-ḥaḳīḳa*) is he whose *nafs* has been slain while he continues to live in accordance with the Ṣūfī rules (*Manāhidj al-ʿārifīn*, ed. E. Kohlberg, in *JSAI*, i [1979], 30).

A number of questions relating to *shahāda* (particularly of the military kind) were debated in theological circles. For example, a majority of Muʿtazilīs are said to have held that "no one is allowed to wish for martyrdom ... A Muslim is only obliged to wish for fortitude (*ṣabr*) to bear the pain of wounds, should he be afflicted with them". The argument put forward was that the Muslim's wish for martyrdom could only be fulfilled by his being killed; and since killing a Muslim is an act of unbelief, it follows that the Muslim would be wishing for such an act to take place. A related question concerns God's attitude to the death of His servants as martyrs. This question was already addressed by the Ibāḍī ʿAbd Allāh b. Yazīd (*fl.* second half of the 2nd/8th century): he argued that since martyrdom could only come about through death at the hands of a sinner, it followed that God wants (*aḥabba*) the sinner to perform the sin which God knows he will perform. In his refutation of this view, the Zaydī Imam Aḥmad al-Nāṣir (d. 322/934) maintained that God does not want sinners to kill believers, nor does He determine that this should happen; only after a Muslim has been killed does God refer to him as a *shahīd* (al-Nāṣir, *K. al-Nadjāt*, ed. W. Madelung, Wiesbaden 1405/1985, 127-39). For ʿAbd al-Djabbār [*q.v.*], God's wish that martyrdom should occur does not mean that He wishes His servants to die: one may wish for something without wishing for the prerequisites for its attainment. Muʿtazilī exegetes, in line with their belief that God does not command evil, interpret the "permission" (*idhn*) of Ḳur᾽ān, III, 166 ("And what happened to you on the day on which the two armies clashed happened with God's permission"), as meaning that God allowed the unbelievers freedom of action (*takhliya*) by removing any obstacles from their way; it does not mean that God decreed the death of the believers.

A genuine battlefield martyr is one whose actions proceed from the right intention (*niyya*) [*q.v.*]. But people's intentions are only known to God; in this world people are treated according to their apparent state. This means that even those who went into battle for the wrong reasons (for instance, to show off their prowess or to partake of the spoils) or without true belief in their hearts (as in the case of the *munāfiḳūn*) are nevertheless accorded the burial rites of the battlefield martyr (provided of course that they meet the other necessary conditions). They are known as "martyrs in this world only" (*shuhadā᾽ al-dunyā*), and will not enjoy the rewards of martyrs in the next world; indeed, some reports say that they will suffer the torments of hell. The right intention is also required of certain kinds of *shuhadā᾽ al-ākhira* (though not, say, of victims of disease or accident); but there is no specific term to designate the pseudomartyrs among them.

Bibliography: [i] *Ḥadīth*: references to the most important traditions are given in A.J. Wensinck, *Handbook*, s.v. "Martyr(s)". Further material may be found e.g. in ʿAbd al-Razzāḳ, *al-Muṣannaf*, ed. H. al-Aʿẓamī, Beirut 1390-2/1970-2, iii, 540-8, v, 253-87; Ibn Abī Shayba, *al-Muṣannaf*, ed. ʿA. al-Afghānī *et al.*, Karachi 1406/1986-7, iii, 252-4, xii, 287-92; al-Bayhaḳī, *al-Sunan al-kubrā*, ed. (E. Kohlberg)

SHĀHID (a.) "witness".

In Islamic law, testimony (*shahāda*) is the paramount medium of legal evidence (*bayyina* [*q.v.*]), the other means being acknowledgement (*iḳrār* [*q.v.*]) and the oath (*yamīn* [*q.v.*]). Testimony is "a statement in court based on observation, introduced by the words 'I testify (*ashhadu*)', concerning the rights of others." Giving testimony in court on what one has seen or heard is a collective obligation (*farḍ ʿalā 'l-kifāya*), which becomes an individual one in case someone will loose his right if a specific person does not testify to it. This is based on Ḳurʾān, II, 282, "The witnesses must not refuse whenever they are summoned." However, with regard to *ḥadd* [*q.v.*] offences, it is better not to give evidence, since the Prophet said to a man who testified to such an offence: "It would have been better for you if you would have covered [the offence] under your cloak." (Abū Dāwūd, *Sunan*, *Ḥudūd*, 7; Ibn Ḥanbal, *Musnad*, V, 217).

In principle, testimony can only be given by a sane, adult, free, male Muslim of good morals (*ʿadl*, pl. *ʿudūl* [*q.v.*]). In exceptional cases, the testimonies of women are accepted e.g. with regard to facts of which in general only women are cognisant, such as menstruation, childbirth, virginity and defects of the female sexual organs, or in combination with a male witness (see below). All schools except the Ḥanbalīs agree that slaves cannot bear witness. Nor can non-Muslims. The Ḥanafīs, however, accept their testimony against other non-Muslims. There is some difference of opinion with regard to the question of whether adherents of Islamic sects are accepted as witnesses. The Ḥanafīs take the most inclusive position and allow the testimonies of practically all *ahl al-ḳibla*. In Twelver Shīʿī law, only the testimony of Twelver Shīʿīs (*muʾminūn*) is admitted.

Being *ʿadl* (of good morals) is defined as not having committed great sins or persevered in small sins and not displaying unbecoming behaviour, such as playing backgammon, walking around bareheaded, or eating or urinating in public. According to the Ḥanafīs, unbecoming behaviour does not affect the status of being *ʿadl* but may cause the *ḳāḍī* to reject someone's testimony. Before a witness is allowed to testify, the *ḳāḍī* has to establish his good morals by secret and public inquiry (*tazkiya, taʿdīl*).

Witnesses must be beyond suspicion of bias. Therefore, one cannot validly testify against one's enemy. Further, testimony in favour of close relatives and, according to most legal schools, one's wife, is not admitted. The various schools differ somewhat as to who must be regarded as close relatives, but all of them include one's ascendants and descendants. Most schools do not admit a witness who would profit from his testimony. For the Twelver Shīʿīs, this is the only criterion and they allow in principle testimonies in favour of relatives.

As a rule, the *ḳāḍī* must find for the plaintiff if the latter can prove his claim by corresponding testimonies given by two male witnesses. In financial matters, the testimony of one man and two women is also admitted as legal evidence. The Ḥanafīs, but not the other schools, allow such evidence also with regard to the status of persons (marriage, divorce, manumission, bequest). All schools except the Ḥanafīs regard the testimony of one male witness corroborated by an oath of the plaintiff also as sufficient evidence in financial matters. In the trial of *ḥadd* offences or of manslaughter or wilful grievous bodily harm where retribution is at stake, only the testimony of male witnesses is admitted. The Mālikīs, however, exclude here wilful grievous bodily harm and allow in these cases the testimony of one man and two women. For proof of illicit sexual relations, four male witnesses are required (cf. Ḳurʾān, IV, 15, and XXIV, 4). The Twelver Shīʿīs allow here also the testimonies of three men and two women or even two men and four women, but only if the punishment at stake is flogging, not if it is lapidation [see further, ḲADHF]. The schools differ with regard to the minimum number of female witnesses testifying to facts usually known only

to women; the Ḥanafīs and Ḥanbalīs consider one woman sufficient, the Mālikīs require two and the Shāfiʿīs four.

An interesting development took place in North Africa during the 16th and 17th centuries, when the practice (*ʿamal*) came into existence of admitting as legal evidence the *shahādat al-lafīf*, i.e. the testimony of a group of at least twelve men, who need not be *ʿadl*. This practice was justified by necessity (*ḍarūra*) deriving from the absence of *ʿudūl*, especially in rural communities. If such testimony would not be recognised, it was argued, people would not be able to enforce their rights (Sayyidī ʿAbd al-ʿAzīz Djaʿīṭ, *al-Ṭarīḳa al-marḍiyya fī 'l-idjrā'āt ʿalā madhhab al-Mālikiyya*, ²Tunis n.d., 171-8).

One can only testify to what one has heard or seen. However, with regard to certain facts one can give evidence on the strength of public knowledge, without having witnessed the event or the legal act that is at the basis of it (*al-shahāda bi 'l-tasāmuʿ*). Thus one may give evidence concerning e.g. a person's descent, marital status or death, without actually having been present at the time of his birth, his marriage contract or his decease. If a witness has a legal excuse for not attending the court session, his testimony may be transmitted by two other witnesses (*al-shahāda ʿalā 'l-shahāda*), except in cases of *ḥadd* offences or retribution.

Once a testimony has been given, it can be withdrawn only before a *ḳāḍī*. If this occurs before the end of the proceedings, the *ḳāḍī* cannot give judgement. If withdrawal takes place after the verdict has been pronounced, the sentence remains valid but the witness is liable for half of the damage of the party who had lost the case on the strength of the testimony that was later withdrawn. If the defendant was sentenced to death on the strength of a testimony that was later withdrawn, the witness is liable for blood-money (*diya*). According to the Shāfiʿīs, he can even be brought to death if he had wilfully borne false witness.

Already at a very early period, testimonies of legal acts were recorded in deeds in order to preserve the exact wording of the act. However, since under Islamic law documentary evidence is not admitted, the deed itself does not furnish proof, but, in cases of ligitation, the testimonies given in court by the witnesses who have signed the deed. In order to avoid the danger that such testimonies might be rejected because the witnesses were not *ʿadl*, professional witnesses, whose *ʿadāla* had been established by the court, and who were called *shāhid ʿadl* (or, briefly, *shāhid* or *ʿadl*), were employed for recording important transactions. They first appear in Egypt at the beginning of the 8th century A.D. These witnesses, who had a legal training, were appointed and dismissed by the *ḳāḍīs* of the courts where they performed their duties. Their task, however, was more comprehensive than acting as notaries public, for they functioned in general as judicial auxiliaries and occasionally, with the *ḳāḍī*'s authorisation, even as judges, and heard minor cases independently. The office of *shahāda* was often regarded as a training period for future judges.

Strictly speaking, the profession of drafting deeds (*muwaththiḳ, shurūṭī*) and that of testifying to it could be separated. In practice, however, they were not, and the notary would put his signature under the deed as a witness, together with those of the other witnesses. Although the signatures of two witnesses would technically be sufficient, for greater security many more were placed in the document, sometimes up to 48. Often these testimonies were added years after the original drafting.

Nowadays, with regard to those domains of the law where the *Sharīʿa* is applied, most countries have modernised the law of evidence e.g. by admitting documentary evidence. With regard to the testimony of witnesses, however, some of the classical rules are often maintained, such as the rule that the testimony of one witness does not count. In Morocco, the classical system of appointed *ʿudūl* still exists. Some of the countries that have recently expanded the application of the *Sharīʿa* to fields such as criminal law, have also enacted legislation to reintroduce to some extent the classical rules of evidence (cf. the Sudanese *Ḳānūn al-Ithbāt* of 1983 and the Pākistānī *Ḳānūn-e-Shahādat* of 1984).

(R. Peters)

SHAHĪD (or perhaps better, Shuhayd) b. al-Ḥusayn al-Balkhī al-Warrāḳ al-Mutakallim, Abu 'l-Ḥasan, a philosopher and a poet in Persian and Arabic, died (according to Yāḳūt, followed by al-Ṣafadī) in 315/927.

He was a contemporary and close friend of the polymath Abū Zayd al-Balkhī and of the Muʿtazilī theologian Abu 'l-Ḳāsim al-Balkhī (see AL-BALKHĪ; the three Balkhīs were the subject of a joint biography, used by Yāḳūt) and a bitter rival of the famous philosopher Abū Bakr al-Rāzī [*q.v.*]; the latter wrote a polemic against Shahīd on the subject of pleasure (*al-ladhdha*) and another on eschatology (*al-maʿād*), both now lost. The epitome of al-Sidjistānī's *Ṣiwān al-ḥikma* contains a short extract from a work by Shahīd on the "superiority of the pleasures of the soul over those of the body", perhaps the object of al-Rāzī's attack.

Shahīd was a professional scribe and had a reputation as a meticulous copyist. His Arabic poetry, which is quoted by al-Marghīnānī, Yāḳūt and ʿAwfī, includes two *ḳiṭʿa*s mocking Aḥmad b. Abī Rabīʿa, who was the *wazīr* of the Ṣaffārid ʿAmr b. al-Layth [*q.v.*] between 278/891 and 287/900. Yāḳūt tells us that he also satirised Aḥmad b. Sahl, the famous governor of Khurāsān, and had to flee his anger, but returned to Balkh after Aḥmad's execution (i.e. in 307/920).

Shahīd is mainly remembered as one of the earliest poets in Persian. His famous contemporary Rūdakī [*q.v.*] wrote an elegy on his death, and he is mentioned with respect by other Persian poets of the 4th/10th to 6th/12th centuries, but afterwards his poems fell into oblivion, apart from the hundred-odd verses preserved by the anthologists and lexicographers. These include an amatory poem of eight lines quoted by Djādjarmī, an extract from a *ḳaṣīda* which ʿAwfī says he dedicated to the Sāmānid Naṣr II (301-31/914-43), a poem with alternating Persian and Arabic verses and some couplets from a narrative poem, apparently

of romantic content. Not surprisingly, several of the stray verses cited in the dictionaries have a philosophic or gnomic flavour.

AL-SHAHĪD AL-AWWAL [see MUḤAMMAD B. MAKKĪ].

AL-SHAHĪD AL-THĀNĪ, Zayn al-Dīn b. ʿAlī (in some sources, erroneously, Zayn al-Dīn ʿAlī) b. Aḥmad b. Muḥammad al-ʿĀmilī, known like his father as Ibn al-Ḥudjdja (or al-Ḥādjdja), Twelver Shīʿī author and jurist. He was born in the Lebanese town of Djubaʿ on Tuesday, 13 Shawwāl 911/9 March 1506, and studied with his father until the latter's death in Radjab 925/July 1519. He then embarked on a series of travels *fī ṭalab al-ʿilm* which took him to Mays and Karak Nūḥ in his native Djabal ʿĀmil (925-34/1519-28) and also (in 937/1530-1 and 942/1535) to Damascus. In mid-Rabīʿ I 942/September 1535 he left the Syrian capital for an 18-month sojourn in Egypt, where he studied with a number of Sunnī scholars. He returned to Djubaʿ after performing the pilgrimage to Mecca and Medina, but left it again to visit the shrines of the Imāms in ʿIrāḳ (946/1539-40) and, later, to visit Jerusalem (Dhu 'l-Ḥidjdja 948/March-April 1542).

On 17 Rabīʿ I 952/29 May 1545 the Shahīd arrived in Istanbul, where he stayed for three-and-a-half months. His purpose was to obtain a licence to teach in a *madrasa*. The normal procedure would have been for him to produce a petition (*ʿarḍ*) from his local judge (in the case of the Shahīd, this would have been the *ḳāḍī* Maʿrūf of Ṣaydā), addressed to the Ḳāḍī ʿAskar [*q.v.*] of Anadolu and requesting that the bearer be given the licence in question. But instead, the Shahīd presented an epistle that he himself had composed and that showed his command of ten different branches of knowledge. The Ḳāḍī ʿAskar, Muḥammad b. Ḳuṭb al-Dīn Muḥammad, known as Mīrim Kösesi (d. 957/1550) (cf. R.C. Repp, *The Müfti of Istanbul: a study in the development of the Ottoman learned hierarchy*, Oxford 1986, 256, n. 177), was so impressed that he offered him a choice of any teaching position in Damascus or Aleppo; the Shahīd opted for the Madrasa Nūriyya in Baʿlabakk. Sultan Sulaymān the Magnificent (r. 926-74/1520-66) issued the necessary documents and provided a stipend for him. After a second visit to ʿIrāḳ, the Shahīd took up his new post in 953/1546. He held it for a number of years (five, according to some reports, two according to others). In addition to teaching, he also issued responsa to Shīʿīs and to Sunnīs of the four schools, each responsum being in accordance with the petitioner's legal affiliation. His last years were spent in his home town, where his son, the author Djamāl al-Dīn al-Ḥasan Ṣāḥib al-Maʿālim, was born (17 Ramaḍān 959/6 September 1552; he died at the beginning of Muḥarram 1011/June 1602). This was the first son to survive into adulthood, others having died in their infancy; the Shahīd's *Musakkin al-fu'ād ʿinda/fī faḳd al-aḥibba wa 'l-awlād* was written following the death in Radjab 954/August-September 1547 of one of his infant sons. The Shahīd's disciples included Ḥusayn b. ʿAbd al-Ṣamad al-Ḥārithī (d. 984/1576), the father of Shaykh Bahā'ī [see AL-ʿĀMILĪ]; Ḥusayn accompanied him to both Cairo and Istanbul.

The Shahīd is said to have often lived in fear, though whether of local enemies or of the Ottoman authorities is not stated; his death, however, is attributed to the latter. According to one version, this followed a complaint by a disgruntled litigant to the *ḳāḍī* Maʿrūf. The latter wrote to Sultan Sulaymān accusing the Shahīd of heresy, whereupon the Sultan ordered that he be brought before him for interrogation (al-Ḥurr al-ʿĀmilī, *Amal al-āmil*, i, 90-1). Elsewhere, it is the Grand Vizier Rüstem Pasha [*q.v*] who is said to have ordered the Shahīd's arrest after being told that he was actively propagating Shīʿism (Ḥasan-i Rūmlū, *Aḥsan al-tawārīkh*, ed. and tr. C.N. Seddon, Baroda 1931-4, i, 406). The Shahīd, who had escaped to Mecca, was detained there and was kept in prison for 40 days. One account has it that he was then sent by ship to Istanbul, where he was killed without being brought before the sultan, and his body thrown into the sea. According to a second account, the Shahīd's captor killed him shortly after the two of them had landed in Anadolu. This account adds that the Shahīd was buried at the spot where he had died and that a shrine (*ḳubba*) was erected over his grave. The date of his death is given as 965/1557-8 or 966/1558-9. In Ramaḍān 975/March 1568 he was already being referred to as al-Shahīd al-Thānī (al-Madjlisī, *Biḥār al-anwār*, cviii, 181).

The Shahīd is credited with over 70 works. They deal with a variety of topics, including *tafsīr*, *ḥadīth*, grammar and *kalām*; but his main contribution to Shīʿī literature was in the realm of *fiḳh*. His major legal works are in the form of commentaries, particularly on the writings of the Muḥaḳḳiḳ, the ʿAllāma [see AL-ḤILLĪ] and al-Shahīd al-Awwal [see MUḤAMMAD B. MAKKĪ]. These works are noted for the clarity of their exposition and argument, as well as for their use of *al-sharḥ al-mazdjī*, a method of interweaving the text with its commentary in such a way that the two together form a smooth and coherent whole. This method is employed in some of his best-known works: the early *Rawḍ al-djinān fī sharḥ irshād al-adhhān*, a commentary on a work of the ʿAllāma which the Shahīd did not complete; the *Masālik al-afhām* (or *ifhām*), a 7-volume commentary on the Muḥaḳḳiḳ's *Sharā'iʿ al-islām;* and *al-Rawḍa al-bahiyya* (probably the Shahīd's last work), a commentary on al-Shahīd

al-Awwal's *al-Lum'a al-dimashkiyya*. Among the themes which the Shahīd elaborated was that of the fully qualified jurist (*fakīh*) as a general representative (*nā'ib 'āmm*) of the Hidden Imām and the repository of judicial authority within the Twelver Shī'ī community during the Imām's occultation. In line with this position, he insisted on the jurist's right to conduct Friday prayers and to collect and distribute the Imām's shares of *zakāt* and *khums*. He also argued against blindly following the legal judgments of deceased jurists (*'adam djawāz taklīd al-amwāt/al-mudjtahid al-mayyit*).

Bibliography (in addition to the references given in the text): Muḥammad b. 'Alī b. al-Ḥasan Ibn al-'Ūdī al-Djizzīnī, *Bughyat al-murīd fī 'l-kashf 'an aḥwāl al-shaykh Zayn al-Dīn al-Shahīd*. This biography, which was written by one of the Shahīd's disciples, has not survived, apart from an excerpt which was included by the Shahīd's great-grandson 'Alī b. Muḥammad b. al-Ḥasan al-Djuba'ī al-'Āmilī (d. 1103/1691-2) in his *al-Durr al-manthūr min al-ma'thūr wa-ghayr al-ma'thūr*, Ḳumm 1398, ii, 149-98; Muṣṭafā al-Tafrishī, *Nakd al-ridjāl*, Tehran 1318/1900-1, 145; Madjlisī, *Biḥār al-anwār*, Tehran 1956-74, cviii, 133-72 (where some of the Shahīd's *idjāzas* are published); 'Abd Allāh Afandī, *Riyāḍ al-'ulamā'*, Ḳumm 1401, ii, 365-86; al-Ḥurr al-'Āmilī, *Amal al-āmil*, Nadjaf 1385, i, 85-91 and index; Yūsuf al-Baḥrānī, *Lu'lu'at al-Baḥrayn*, ed. SHĀHĪN, ĀL, a family of Ottoman officials and governors who came to be especially identified with Ghazza [*q.v.*] or Gaza.

1. Ḳara Muṣṭafā Shāhīn Pasha, the patriarch of the line, was an Ottoman official, serving Süleymān the Magnificent as a governor, including in the *sandjaḳ* of Ghazza, part of the province of Damascus. In 963/1555 he went as governor of Yemen, and was then in Egypt, but was dismissed from his post as governor in 973/1565 and died shortly afterwards. His habit of carrying with him a peregrine falcon gave him the name of Shāhīn, by which the family was subsequently known. For further details, see MUṢṬAFĀ PASHA, ḲARA SHĀHĪN.

2. His son Riḍwān took charge of Ghazza whilst his father was away from it. In 973/1565 he was appointed governor of Yemen, and combatted there the Zaydī Imām, the Ismā'īlīs and local tribal chiefs. His lack of success in the difficult situation led to his dismissal and imprisonment at Istanbul in 974/1566. He was later pardoned and served as governor at Ghazza, in Ḥabesh, at Baṣra and in Diyār Bakr, taking part in the war against Persia in 987/1579. Three years later he became governor of Anatolia, where he died in 993/1585. Amongst public works of his in the province of Damascus are mentioned his reconstruction of fortresses, especially that at Bayt Djibrīn, for the protection of caravans and travellers.

3. His son Aḥmad (d. 1015/1606) governed Ghazza for thirty years, and through his connections with the court at Istanbul built up a network of official posts for his family, with his son Süleymān becoming governor in the *sandjaḳ* of Jerusalem, and his brother in the *sandjaḳ* of Nābulus. Residing in Damascus, he had a reputation as a maecenas for poets and scholars.

4. On his retirement in 1009/1600, his son Muḥammad succeeded him in Ghazza. In 1022-3/1613-14 Muḥammad took part in an expedition led by the governor of Damascus against the Druze chief Fakhr al-Dīn Ma'n II [*q.v.*].

5. His son Ḥasan (d. 1054/1644) was likewise governor in Ghazza, and was succeeded by

6. His son Ḥusayn (d. 1071/1660), who had previously been governor of Jerusalem. Ewliyā Čelebi visited Ghazza in 1059/1649, and describes Ḥusayn as a generous man, himself a writer of poetry and history, who was tolerant towards Samaritans, Jews and Christians of the various Eastern Churches. These latter attitudes may have cast doubts on his loyalty, for in 1073/1662 he was arrested, jailed at Damascus and executed on charge that he had failed in his duties as *amīr al-ḥadjdj*.

7. His brother Mūsā replaced him, but the sources say little about him, and he appears to have been the last governor of the Āl Shāhīn.

The extant *tapu defters* do not specify the names of the Āl-Shāhīn governors, nor do they register their names amongst the 41 *tīmār* holders in Ghazza; on the other hand, the several palaces, mosques, schools and cemetery that belonged to them (some still in use today) are described at some length.

SHĀHĪN DIZH [see ṢĀʾĪN ḲALʿA].

SHĀHĪN, LALA, according to the early Ottoman chronicles, the preceptor or tutor (*lala*) of the Ottoman sultan Murād I [*q.v.*] and the first to occupy the post of the *beglerbegi* [*q.v.*] of Rumelia. Perhaps he can be identified with Shāhīn b. ʿAbd Allāh who signed a *waḳf* document issued by sultan Orkhan [*q.v.*] in 1360; or also with the military leader Ἰσαΐμ, who, according to a Greek contemporary chronicle, supported the Lord of Yanina Thomas Prealimbos against the Albanians in 1380. Shāhīn crossed from Anatolia to Thrace in the 1360s, probably accompanying Murād when he was still a prince, and fought against the Christians successfully, especially in Bulgaria, where he conquered several fortresses and towns. In 1388 he invaded Bosnia and, according to Neshri [*q.v.*], he died shortly afterwards.

SHĀHĪN-I SHĪRĀZĪ, 14th-century Judaeo-Persian epic poet, the most brilliant name in Judaeo-Persian original literature. Mawlānā ("Our Master") Shāhīn ("the Falcon", a name in common use among the Jews of Persia at that time) wrote under one of the Mongol Īlkhāns, Abū Saʿīd Bahādūr (1316-35 [*q.v.*]). The comparatively numerous extant manuscripts with miniature paintings can be taken as a sign of his popularity.

Although influenced by the great epic poets of Persia, Firdawsī and Niẓāmī, Shāhīn was by no means a mere epigone. The metre he used was the *hazadj musaddas makhzūf* (⏑–––/⏑–––/⏑––). Shāhīn himself never gave titles to his epic works, and only not very informative words like *sharḥ* ("explanation"), *tafsīr* ("commentary") or (B.L. Or. 4742, fol. 3a, l. 1) *Kitāb az tafsīr-i Tōrāh* (in other manuscripts *Kitāb-i Shāhīn* and *Dāstān* "Story" occur). The titles chosen by Wilhelm Bacher have been commonly adopted, viz. the *Book of Genesis* (now mostly *Bereshit-nāma*), the *Book of Moses* (now commonly *Mūsā-nāma*), the *Book of Ardashīr*, consisting of two parts, Megillat Esther and the story of Shērō and Mahzād, and the *Book of Ezra*. The brief epic *King Kishwar*, the story of King Kishwar and his seven pieces of advice to his son Bahrām (known in only one manuscript, ENA 396, fols. la-4b, The Jewish Theological Seminary of America in New York) could be by Shāhīn, but it is doubtful. If it were genuine, it would be the only purely Persian work by Shāhīn devoid of any specific biblical influence.

The sources of Shāhīn were the biblical books (as for the Pentateuch, almost exclusively the non-legal parts), non-biblical Jewish material (midrash, folk-traditions), and Islamic elements.

(J.P. Asmussen)

SHĀHNĀMEDJI (or Shehnāmedji) (t.), the term for an Ottoman writer of literary-historical works in a style inspired by the *Shāh-nāma* of the Persian poet Firdawsī [*q.v.*], i.e. works composed in Persian, in the *mathnawī* form of rhymed couplets in the *mutaḳārib* metre, describing in fulsome terms the military exploits of the reigning sultan. The first Ottoman compositions in the *shehnāme* genre date from the mid-9th/15th century, as occasional works written for presentation to Meḥemmed II (1451-81).

An official, salaried post of *shehnāmedji* "writer of *shehnāmes*", was established by Süleymān II (1520-66) in the 1550s as a form of court historiographer. Of its five incumbents, three produced between them at least fifteen known works, largely chronicles of the military and imperial achievements of contemporary Ottoman sultans, particularly Süleymān, Selīm II (1566-74), and Murād III (1574-95). In line with developing literary taste, many of the later works were composed in Ottoman Turkish prose rather than Persian verse. Most of the manuscripts (few of which have been published) were richly illustrated by palace artists with specially commissioned miniature paintings and were intended as *objets d'art* for the sultan's private collection. The *Süleymān-nāme* of the first *shehnāmedji*, ʿĀrif (or ʿĀrifī, d. 969/1561-2), contains 62 miniatures (Esin Atıl, *Süleymānnāme: the illustrated history of Süleyman the Magnificent*, New York 1986).

Principal among the works composed by the third *shehnāmedji*, Loḳmān (in post *ca.* 1569-96), are: *Zübdetü ʾt-tewārīkh* ("Essence of history") (completed 991/1583), a world history in Ottoman prose; the two-volumed *Hüner-nāme* ("Book of accomplishments") (992/1584 and 996/1588), also in Ottoman prose, on Selīm I (1512-20) and Süleymān II respectively; the three-volumed *Shāhinshāh-nāme* ("Book of the Shāh of Shāhs") (991/1581-2, 1001/1592, and 1004/1596), in Persian verse, on the reign of Murād III; *Ḳiyāfetü ʾl-insāniyye fī shemāʾil ʿOthmāniyye* ("Description of the features of the Ottoman sultans") (987/1579), essentially an album of portraits of the sultans with accompanying text in Ottoman with physiognomical observations (facsimile text in *Kıyâfetü ʾl-insâniyye fî şemâili ʾl-ʿOsmâniyye*, ed. M. Tayşi, Historical Research Foundation, Istanbul 1987).

Loḳmān's successor Taʿlīḳī-zāde (in post *ca.* 1590-1600) composed a *Shemāʾil-nāme* ("Book of descriptions") (1002/1593) in Ottoman prose on the strengths of the Ottoman dynasty (cf. C. Woodhead, "*The present terror of the world?*" *Contemporary views of the Ottoman empire c. 1600*, in *History*, lxxii/234 [1987], 20-37); and narratives of the Hungarian campaigns of 1593-4 and 1596, in Ottoman prose and verse respectively (for the former, see Woodhead (ed.), *Taʿlīḳī-zāde's Şehnāme-i hümāyūn on the Ottoman campaign into Hungary, 1593/94*, Berlin 1983).

The post lapsed soon after 1600 for reasons which are unclear but probably related to the changing role of the sultan, which rendered the *shehnāme* style inap-

propriate. *Ad hoc* commissions of *shehnāmes* were made by ʿOthmān II (1618-22) and Murād IV (1623-40), but the permanent position of *shehnāmedji* was not revived.

(Christine Woodhead)

SHAHR (p.) "town". The word goes back to Old Persian *xšaça-* (cf. Avestan *xšaθra-*, Sanskrit *kṣatrá-*; all from the same root as New Persian *shāh* [*q.v.*]), "kingship, royal power", thence "kingdom". The latter meaning is still the usual one for Middle Persian *shahr* and it survives in the *Shāh-nāma*, especially in set phrases such as *shahr-i Ērān* (used *metri causa* instead of *Ērān-shahr* "kingdom of the Aryans", the official name of the Sāsānid empire), *shahr-i Tūrān*, *shahr-i Yaman*, etc. But already in the earliest New Persian texts, the usual meaning, and soon the only meaning, is "town". The depreciation of *xšaça-/shahr* from "kingdom" to "town" runs parallel to that of *daheyu/dēh/dih* from "land, country" to "village". But it is also possible that *shahr* in the sense "town" is merely a curtailment of *shahristān* [*q.v.*]

The Persian word was borrowed into Turkish as *shehir/şehir* and figures as the final component of the names of many Turkish towns.

Bibliography: See that in shahristān.

SHAHRANGĪZ (p.) or Shahrāshūb ("upsetting the town"), a genre of short love poems on young craftsmen, often related to the bazaars of specific towns.

1. In Persian

In Persian literature, the genre is usually referred to under the latter name. E.J.W. Gibb's contention that the genre was invented by the Turkish poet Mesīḥī [*q.v.*] of Edirne (*HOP*, ii, 232), was challenged already by E.G. Browne who, pointing to Persian specimens mentioned by the Ṣafawid anthologist Sām Mīrzā [*q.v.*], concluded that "though they were probably written later than Masíḥí's Turkish *Shahr-angíz* on Adrianople, there is nothing to suggest that they were regarded as a novelty or innovation in Persia" (*LHP*, iv, 237). Since then, many examples of mediaeval Persian poems on craftsmen have come to light, showing that *shahrāshūb* poems can be attributed to early poets like Rūdakī, Kisāʾī and Labībī [*q.vv.*]. The genre was very popular during the Saldjūḳ period, when it was most often used for quatrains (see the examples mentioned by Meier, *Mahsatī*, 94). The *Dīwān* of the 11th-12th century poet Masʿūd-i Saʿd-i Salmān [*q.v.*] contains 93 short poems (*muḳaṭṭaʿāt*) on the subject, apparently written as a coherent collection although it is not clear whether or not a particular city was envisaged.

The formula of the genre consists of three main ingredients, each of which has had a separate existence in the Persian tradition. The first element is the motive of the uproar created in the city; it occurs in one of Sanāʾī's poems, in which a beloved produces this effect by suddenly appearing to the waiting lovers from the tavern (*Dīwān*, 89: *shūr dar shahr fikand ān but-i zunnār-parast*). This found an echo in several later *ghazals*, e.g. by Anwarī (*Dīwān*, ii, 864: *bāz dūsh ān ṣanam-i bāda-furūsh/shahrī az walwala āwurda ba-djūsh*) and Ḥāfiẓ (*Dīwān*, i, no. 3,3: *lūliyān-i shīrīn-kār-i shahrāshūb*). Secondly, the beloved is specified as a craftsman, an artist (e.g. ʿAwfī, *Lubāb*, ii, 318: a *nay-zan*), an ethnic type (e.g. ʿAwfī, *op. cit.*, ii, 344: a *ghuzz bačča*; the beloved is very often referred to as a *turk* in Persian poetry) or a member of a religious community (e.g. Masʿūd-i Saʿd, *Dīwān*, 636/ii, 915: a *tarsā bačča*; cf. Ḥāfiẓ, *Dīwān*, i, no. 119, l. 8). Poems of this kind were used to create hagiographical legends, notably in Kamāl al-Dīn Gāzurgāhī's *Madjālis al-ʿushshāḳ*, e.g. Sanāʾī's quatrain on a butcher (*ḳaṣṣāb*; cf. *Dīwān*, 1146, and J.T.P. de Bruijn, *Of piety and poetry*, Leiden 1983, 6-7). Thirdly, there were the representations, in a panegyric or a satire, of a group of people belonging to a single court or city. Early specimens of this type are Masʿūd-i Saʿd's *mathnawī* on the court of Lahore (*Dīwān*, 562-79/ii, 787-817) and Sanāʾī's *Kār-nāma-yi Balkh* (in *Mathnawīhā-yi Ḥakīm Sanāʾī*, ed. M.T. Mudarris-i Raḍawī, Tehran 1348 *sh.*/1969, 142-78).

As a fully developed genre, the *shahrāshūb* became particularly fashionable in late Tīmūrid and early Ṣafawid literature [*q.v.*]. Mīr ʿAlī Shīr Nawāʾī [*q.v.*] made mention of it for the first time in his *tadhkira*, the *Madjālis al-nafāʾis*, with reference to Sayfī Bukhārī (d. 909/1503), who made a collection of *shahrangīz* poems in *ghazal* form, entitled *Ṣanāʾiʿ al-badāʾiʿ* (Gulčīn-i Maʿānī, 26-8). Lisānī of Shīrāz was particularly renowned for his quatrains in this genre which together form a city-panegyric of Tabrīz, known as *Madjmaʿ al-aṣnāf* or *Shahrāshūb-i khiṭṭa-yi Tabrīz* (ed. and French tr. Bricteux; ed. Gulčīn-i Maʿānī, *op. cit.*, 96-161). The genre was used for satire by Āgāhī of Khurāsān (d. 932/1525-6), against Harāt, and Ḥarfī Iṣfahānī (d. 971/1563-4) against the province of Gīlān (cf. Rypka, 297, 303-4, with further references). In the 11th/17th century Sayyidā Nasafī described the craftsmen of Bukhārā in this manner (cf. A. Mirzoyev, *Sayyido Nasafi i yego mesto v istorii tadzhikskoy-literaturi*, Stalinabad 1955, 143 ff., 161). Various poetical forms, and even prose, were used for writing *shahrāshūb*. It was also a favourite subject in the Indian Subcontinent with poets writing in Persian and Urdu (see section 3., below).

(J.T.P. de Bruijn)

2. In Turkish

This genre was popular from the early 16th to the early 19th century in *Dīwān* (classical Ottoman Turkish) poetry, serving mainly to praise a major city and its beauties. In modern Turkish, it is rendered as *şehrengiz*. The genre is represented by about fifty major works, of which less than forty are extant. The special place it holds in the Ottoman tradition has led numerous 20th-century Turkish scholars to the erroneous assumption that the *shahrangīz* existed only in Ottoman *Dīwān* literature.

Usually written in the stanzaic form of the *mathnawī* (rhyming couplets) and always in *ʿarūḍ* metres, the *shahrangīz* conforms, on the whole, to a special se-

quence of internal elements, starting with a brief *munādjāt* (doxological supplication) and/or *naʿt* (encomium of the Prophet), followed by the *sabab-i taʾlīf* (reason for writing), descriptions of the city's natural setting and aspects of its life, general or specific citations of the city's beautiful women or men and sometimes its notables, ending with a *khātima* (epilogue) in which the poet offers prayers to God for the protection of the city's beauties and praises his own poetic accomplishments.

Most of the major *shahrangīz* works in Ottoman Turkish take as their subject such principal cities as Istanbul, Bursa, and Edirne. Among other cities featured in this genre are Skopje, Belgrade, Yenice, Rize, Yenişehir, Sinop, Manisa, etc. The *shahrangīz* often provides vivid descriptions of urban life as well as information about topographical characteristics of individual cities.

Many works in this genre were commissioned by or dedicated and presented to prominent patrons. Their length ranges from 70-odd couplets (Ḥayretī on Yenice) to more than 1,600 couplets (Ṣāfī on Istanbul, composed in Persian) to 3,600 couplets (Dhātī on Adrianople).

The first *shahrangīz* is by Mesīḥī [*q.v.*], who wrote it *ca.* 918/1512 about Adrianople. E.J.W. Gibb translated the title as "city thriller", pointing out that all such works in later periods bore the same title, whence the name of the genre, and credited Mesīḥī with the invention of the *shahrangīz* as a literary form. The humorous element in Mesīḥī's work, which Gibb singled out for its originality, came to be a recurring feature of most of the subsequent works in this category. Many of them contain either a romantic description of a city's beautiful young men, often cited by name and profession—less frequently, young women were listed—or humorous, sometimes satirical, characterisation. Several *shahrangīz* (principally Fehīm's work on Istanbul in the 17th century) are explicitly pornographic.

Variations of the genre include the *sergüdhesht-nāme* (tale of adventure), where the poet tells the story of an affair with one beautiful person or stories of four people. Some concentrate on a single profession, as in the *Čengī-nāme* ("Book of dancers") by Enderūnī Fāḍil (d. 1810), while others, like his *Zenān-nāme* ("Book of women"), describe women of a wide variety of nations and ethnic groups. A few are essentially versified lists of the names of urban neighbourhoods or musical modes or types of tulips.

The best Ottoman *shahrangīz*, according to von Hammer-Purgstall, was Lāmiʿī's [*q.v.*] work on Bursa written on the occasion of Sultan Süleymān the Magnificent's visit in 928/1522. Although most specimens of the genre are not notable for literary merit, Lāmiʿī's *shahrangīz*, the first substantive part of which provides vivid descriptions of Bursa, displays poetic virtuosity.

3. In Urdu

In Urdu literature, the term *shahrangīz* is used only rarely if at all. The most common designation, also employed in Persian and Turkish, and identical in meaning with *shahrangīz*, is *shahr-āshob* (Persian: *shahr-āshūb*). The tradition of the Urdu *shahr-āshob* is markedly different from the one found in Persian and Turkish poetry. The type of verse which goes by that name in the other two languages is generally a poem describing the author's attraction for handsome artisan boys in a city. In Urdu, the number of such poems is exceedingly small. It is limited to stray examples seen in the writings of Mīrzā Djaʿfar ʿAlī Ḥasrat (d. 1206/1791-2) (see *Kulliyyāt-i Ḥasrat*, ed. Nūr al-Ḥasan Hāshimī, Lakhnaw 1966, 382-91), Mīr Ḥasan (d. 1201/1786), Mīr Muḥammad Taḳī Mīr (d. 1225/1810 [*q.v.*]), and a few other poets, all of whom seemed to have based their compositions, by way of imitation, upon similar models in Persian. Unlike these examples, the standard *shahr-āshob* in Urdu is a socially-motivated poem. Its main purpose is the portrayal of a city in disarray. The picture it paints reflects the breakdown of the established order, the dislocation of the social, economic and moral life of the people, and the topsy-turvy nature of things. One of the major conventions of the *shahr-āshob* is to name a series of professions and to describe the state of affairs governing the individuals associated with each of them. The *shahr-āshobs* are determined by the nature of their content, rather than by any separate form, and many of them appear in the works of the poets under titles other than *shahr-āshob*. They could be found in any of the traditional verse forms employed in Urdu poetry, though it is possible that some forms might have been favoured more than others during a particular period. Characteristic of the genre, at least during its pre-1857 phase, is the use of satire and ridicule as weapons of criticism—a feature that makes it difficult sometimes to draw a line between a *shahr-āshob* and a *hadjw* ("insult poem").

The real beginnings of the *shahr-āshob* may be traced to the 18th century, marking the decline of Mughal power. Following the death of Awrangzīb in 1707, the Mughal empire collapsed into anarchy and disintegration. In 1739 the Persian monarch Nādir Shāh (*r.* 1736-47 [*q.v.*]) invaded a weakened Mughal empire, and sacked Dihlī, and it was again sacked in 1756 by Aḥmad Shāh Durrānī [*q.v.*]. From the time of Shāh ʿĀlam II (*r.* 1759-1806 [*q.v.*]), the Mughal ruler was merely a figurehead maintained by one or the other power. The poems in which the effects of these developments found direct interpretation received the name of *shahr-āshob*.

Nothing can be said with certainty regarding the earliest *shahr-āshob* in Urdu. It has been suggested that the first poet who attempted this kind of verse was Mīr Muḥammad Djaʿfar, better known as Djaʿfar Zatallī (d. between 1125-28/1713-16). The latter has earned general notoriety as the author of obscene verses, which has distracted attention from the social aspect of some of his writing. His poems *Nawkarī* "Service", and *Dastūr al-ʿamal dar ikhtilāf-i zamāna-yi nā-handjār* "A guide to the incompatibility of these rough times", which are cited as *shahr-āshobs*, represent satirical statements commenting on the hardships of employment and on the distortion of social and moral values.

With the successful efforts led by Mīrzā Muḥammad Rafīʿ Sawdā (d. 1195/1781 [*q.v.*]), the *shahr-āshob* acquired increased recognition. His two *shahr-āshobs*, one in the form of a *ḳaṣīda* and the other entitled *Mukhammas dar wīrānī-yi Shāhdjahānābād* "A *mukhammas* on the destruction of Shāhdjahānābād", may be regarded as real masterpieces. Both are comparatively lengthy poems, and constitute a unified theme dealing with the devastation of Dihlī, the economic adversities of the people, and the contemporary social and moral decay.

Mīr Muḥammad Taḳī Mīr, who was a contemporary of Sawdā, composed several poems which resemble the *shahr-āshob*. One of these poems is the *Mukhammas dar ḥāl-i lashkar* "On the condition of the

army", which describes not only the plight of the soldiery but also points out, with bitterness and sorrow, the pitiable state of the court and nobles.

A number of *s̲h̲ahr-ās̲h̲obs* are significant because of their historical interest. These include poems by Mīrzā D̲j̲aʿfar ʿAlī Ḥasrat and Ḳiyām al-Dīn Ḳāʾim (d. 1208/1793-4), referred to respectively as *Muk̲h̲ammas dar aḥwāl-i D̲j̲ahānābād* "On the condition of D̲j̲ahānābād", and *Muk̲h̲ammas*. The first of these poems describes the destruction of Dihlī and its citizens caused by the invasion of Aḥmad S̲h̲āh Durrānī, and the second contains a denunciation of S̲h̲āh ʿĀlam II for his role in connection with the battle of Sakartāl (1772), in which he, with the support of the Marāthās [*q.v.*], attacked and defeated Ḍābiṭa K̲h̲ān, son of Nad̲j̲īb al-Dawla [*q.v.*], and leader of the Rohilla Afg̲h̲āns.

Other *s̲h̲ahr-ās̲h̲obs*, which have won critical approval, comprise Ẓuhūr al-Dīn Ḥātim's (d. 1197/1783) *Muk̲h̲ammas*, Ḳalandar Bak̲h̲s̲h̲ D̲j̲urʾat's (d. 1224/1810) *Muk̲h̲ammas-i tard̲j̲īʿ-band*, and Walī Muḥammad Naẓīr Akbarābādī's (d. 1246/1830) work mentioned as *Dunyā-yi dūn ke tamās̲h̲e* "Scenes of the contemptible world". Ḥātim's poem, described sometimes as the first *s̲h̲ahr-ās̲h̲ob* composed in Urdu (see D̲j̲amīl D̲j̲ālibī, *Tārīk̲h̲-i adab-i Urdū*, ii/1, Lahore 1981, 441), presents an account showing the change of fortune suffered by members of various social groups after Nādir S̲h̲āh's invasion. The *s̲h̲ahr-ās̲h̲obs* of D̲j̲urʾat and Naẓīr Akbarābādī are conspicuous for their out-of-the-ordinary imagery with insects, birds and animals serving as metaphors. All three poems share one assumption in common: that those regarded as occupationally "inferior" had risen in status, while those of the upper rank had lost their former position.

Most *s̲h̲ahr-ās̲h̲obs* composed by Urdu poets have Dihlī as their setting, but some of them describe other cities as well. For instance, Naẓīr Akbarābādī is the author of a *s̲h̲ahr-ās̲h̲ob* having Agra for its locale, and G̲h̲ulām ʿAlī Rāsik̲h̲ (d. 1238/1823) has left a *mat̲h̲nawī* which is placed in Patna, both poets portraying the destitution of the citizens in their respective towns.

The *s̲h̲ahr-ās̲h̲obs* discussed so far belong to the period before 1857. The uprising which took place in 1857-8 had a deep impact upon the minds of the poets, whose response to the events found expression in numerous poems dealing mainly with the trials and tribulations suffered by Dihlī during that time. These poems have been called *s̲h̲ahr-ās̲h̲ob* although they do not subscribe entirely to the classical pattern of the genre followed by earlier poems. One important element which is missing in them is the narrative dealing with different professions—an essential feature of previous *s̲h̲ahr-ās̲h̲obs*. In fact, the *s̲h̲ahr-ās̲h̲obs* of 1857 are mere elegies mourning the passing away of Mug̲h̲al Dihlī and the end of an era.

The poems connected with the fortunes of Dihlī at this time are contained in two collections named *Fug̲h̲ān-i Dihlī* "The lament of Dihlī", and *Inkilāb-i Dihlī* "Revolution of Dihlī", also known as *Faryād-i Dihlī* "The cry of Dihlī". The first-named work was edited by Tafaḍḍ al-Ḥusayn Kawkab, and was published in 1280/1863-4; the second, containing poems reproduced from the former work together with some additions, came out in 1932. Included in *Fug̲h̲ān-i Dihlī* is the famous *musaddas* by Nawwāb Mirzā Dāg̲h̲ (d. 1322/1905 [*q.v.*]) regarding the demise of old Dihlī, a poem full of pathos, which may be regarded as one of the finest pieces composed upon the subject.

(Munibur Rahman)

SHAHRĀSHŪB [see s̲h̲ahrangīz].

AL-SHAHRASTĀNĪ, Abu 'l-Fatḥ Muḥammad b. ʿAbd al-Karīm b. Aḥmad, Tād̲j̲ al-Dīn, thinker and historian of religious and philosophical doctrines, who lived in Persia in the first half of the 6th/12th century. He received other honorific titles such as al-Afḍal or al-Imām. Besides a few landmarks, little is known of his life. Al-S̲h̲ahrastānī (the customary Arabic vocalisation is retained here) was born in the small town of S̲h̲ahristān, on the northern frontier of K̲h̲urāsān, not far from Nasā, at the edge of the desert of Ḳara Ḳum (currently in the Republic of Turkmenistan) [see s̲h̲ahristān (6)]. His contemporary al-Samʿānī is supposed to have written (according to Ibn K̲h̲allikān): "I asked him the date of his birth, and he told me: 479/[1086-7]." Other ancient authors give the dates 467 and 469, but the testimony of al-Samʿānī seems authoritative. Nothing is known of his family; however, the attribution by Yāḳūt of a *kunya* to his father (Abu 'l-Ḳāsim) and to his grandfather (Abū Bakr) could indicate a privileged background.

After what was definitely a very substantial traditional education, he was sent to the prestigious metropolis of Nīs̲h̲āpūr. It was there that he embarked on detailed study of the Islamic sciences. His principal masters are known; most of them were in their turn disciples of al-D̲j̲uwaynī. In *tafsīr*, and in As̲h̲ʿarī *kalām*, he was the pupil of Abu 'l-Ḳāsim Salmān b. Nāṣir al-Anṣārī (d. 412/1118), who exerted great influence over him. *Ḥadīt̲h̲* was taught him by Abu 'l-Ḥasan ʿAlī b. Aḥmad al-Madīnī (d. 494/1100). In S̲h̲āfiʿī *fiḳh*, he was trained by the *ḳāḍī* Abu 'l-Muẓaffar Aḥmad b. Muḥammad al-K̲h̲ʷāfī, a friend of al-G̲h̲azālī and a judge at Ṭūs (d. 500/1106) and by Abū Naṣr ʿAbd al-Raḥīm b. Abi 'l-Ḳāsim ʿAbd al-Karīm al-Ḳus̲h̲ayrī (d. 514/1120, son of the eminent mystic). It may be noted that the date of the death of al-Madīnī is a *terminus ad quem* for the arrival of al-S̲h̲ahrastānī at Nīs̲h̲āpūr.

Impelled no doubt by religious motives, but also by the desire to consolidate his reputation, in 510/1117 he made the Pilgrimage to Mecca. On the return journey, he visited Bag̲h̲dād. His friend Abu 'l-Fatḥ Asʿad b. Muḥammad al-Mayhanī (d. 523/1129 ac-

cording to Ibn al-Athīr, x, 660; but 520 according to Djalāl Humā'ī, *Ghazzālī-nāma*, Tehran 1318/1939, 308) was then teaching at the Niẓāmiyya. With Mayhanī's assistance, al-Shahrastānī obtained a post at the Niẓāmiyya. For three years, and with considerable success, he devoted himself to teaching, preaching, disputation. Around 514/1120 he returned to Persia.

The Saldjūḳ ruler of Khurāsān Sandjar had recently taken there, in 511/1118, the full title of sultan. Marw, his capital, was a magnet. Through the good offices of Naṣīr al-Dīn Abu 'l-Ḳāsim Maḥmūd b. al-Muẓaffar al-Marwazī, who was *wazīr* from 521 to 526/1127-31 (see Humā'ī, *ibid.*), al-Shahrastānī was appointed *nā'ib* of the chancellery (*dīwān al-rasā'il*). He even became a close friend of Sandjar and "his confidant" (*ṣāhib sirrihi*). However, al-Shahrastānī ultimately returned to his native village. It is not known when, or why. The fact remains that there was a succession of tragic events in the year 548/1153. The sultan was taken prisoner by the Ghuzz [*q.v.*]. Marw fell six months later, and the Ghuzz advanced on Nīshāpūr. It was then, according to the testimony of al-Sam'ānī related by Ibn Khallikān, that al-Shahrastānī died in his native village "towards the end of Sha'bān 548 [November 1153]".

Al-Shahrastānī was responsible for a score of works. See the precise and detailed study by Nā'īnī, *Sharḥ-i ḥāl*..., also Dānish-pazhūh, *Nāma*..., vii, 72-80, viii, 61-5. The twelve most important works, beginning with those which can be dated, are:

1. *al-Milal wa 'l-niḥal*, which, according to the author, was written in the year 521, i.e. 1127-8 (ed. Badrān, i, 630 (cf. 358) = *Livre*, i, 662 (cf. 503)). There are numerous editions, including two semi-critical ones: W. Cureton, 2 vols., London 1842-6; and Muḥammad Fatḥ Allāh Badrān, 2 vols., Cairo 1370-5/1951-5 (Shaykh Badrān has published, in small format, without critical apparatus but with a thorough introduction, a second edition, 2 vols., Cairo 1375/1956). At least two Persian translations exist: by Turkā-yi Iṣfahānī (in 843/1440), Tehran 1321/1942, 3rd ed. 1350/1972, and by Muṣṭafā b. Khāliḳdād (in 1021/1612), Tehran, 2nd ed. 1358/1979. Turkish translation by Nūḥ b. Muṣṭafā (d. 1070/1660), Cairo 1263/1847, then Istanbul 1279/1862. German translation by Th. Haarbrücker, *Religionspartheien und Philosophenschulen*, 2 vols., Halle 1850-1, repr. Wiesbaden 1969. French translation with introduction and notes by D. Gimaret, J. Jolivet and G. Monnot, *Livre des religions et des sectes*, 2 vols., Louvain 1986-93. There are also partial translations.

This monumental work aspired to present "the doctrinal opinions of all the world's people", i.e. to reveal the entirety of religions and philosophies, past or present. To what extent it succeeded will be seen at a later stage.

2. *Nihāyat al-aḳdām fī 'ilm al-kalām*, later than the *Milal* which it mentions several times (e.g. 5, l. 10; 377, l. 17). The title is given at the end of p. 4. The vocalisation of the second word (and not *al-iḳdām* as Guillaume writes; this has already been noted by P. Kraus) clearly results from the parallellism between *nihāyāt* (note the plural) *aḳdām ahl al-kalām* and *nihāyāt awhām al-ḥukamā' al-ilāhiyyīn* (503-4). English edition and translation by Alfred Guillaume, *The Summa Philosophiae*..., Oxford 1934; Arabic text alone repr. Baghdād n.d. The edition is mediocre; the "translation" is not always worthy of the name.

The book is divided into 20 chapters, each of which examines discussions of one of the "foundations" (*ḳawā'id*) of theological science. This classic work has been understood as reviewing the attainments of Muslim theology. In fact, it sets out to show its limits. "The furthest steps of the people of *kalām*" cannot be exceeded. Should the sum total of theology not be an admission of failure?

3. *Mas'ala fī ithbāt al-djawhar al-fard*. A brief monograph on the concept of the atom (*al-djuz' alladhī lā yatadjazza'*), edited by Guillaume at the end of the *Nihāya* (505-14).

4. *Muṣāra'at al-falāsifa*, ed. Suhayr Muḥammad Mukhtār, Cairo 1396/1976. Explicitly posterior to the *Milal* (14), this little book is dedicated to Madjd al-Dīn Abu 'l-Ḳāsim 'Alī b. Dja'far al-Mūsawī, chief (*naḳīb*) of the Imāmī Shī'ī community of Tirmidh. This is a thorough criticism of Avicennan philosophy. It is supposed to comprise seven "questions", but at the end of the fifth (118), the author bemoans thc serious troubles of the time and comes to an abrupt end. The circumstances evoked could be the defeat of Sandjar by the Ḳara Khiṭāy in 536/1141.

5. *Mafātīḥ al-asrār wa-maṣābīḥ al-abrār*, edited facsimile of the *unicum*, with introduction and index, 2 vols., Tehran 1409 A.H./1368 A.H.S./1989. The text comprises 434 folios, or 868 pages with 25 lines. It is a Ḳur'ānic commentary. After an autobiographical preface come the 12 chapters of an introduction to the study of the Ḳur'ān, then a complete commentary on the first two sūras. The first volume (up to II, 122) of the lost autograph manuscript had been composed between 538 and 540. It is not known whether, as is probable, the author continued beyond *Sūrat al-Baḳara*.

6. *Madjlis* on the Creation and the Order (*al-khalḳ wa 'l-amr*). This remarkable set speech, in Persian (whereas all the other known works of this author are in Arabic) was delivered in Khwārazm; it is not known when. It was edited (in 38 pages) by Nā'īnī at the end of his *Sharḥ-i ḥāl* and then in his *Dū maktūb*, Tehran 1369/1990.

7. *al-Manāhidj wa 'l-āyāt*. Mentioned by Bayhaḳī. Apparently lost.

8. *Ḳiṣṣat Mūsā wa 'l-Khaḍir*. Mentioned by Bayhaḳī. Apparently lost.

9. *Risāla* on the knowledge possessed by the Necessary Being, addressed to Sharaf al-Zamān Abū 'Abd Allāh Muḥammad b. Yūsuf al-Īlāḳī. The latter, a philosopher and physician of renown, died in 536/1141 at the Battle of Ḳatawān, facs. ed. of the *unicum* in Nā'īnī's *Dū maktūb*.

10. *Risāla* to the *Ḳāḍī* 'Umar b. Sahl (or Sahlān?) against Avicenna. Manuscript.

11. *Risāla* to Muḥammad al-Sahlānī. Manuscript.

12. *Sharḥ sūrat Yūsuf*. Mentioned by Yāḳūt. Manuscript.

The contribution of this vast corpus is twofold. In the first place, this author has transmitted and presented to generations of readers a mass of information on previous opinions and doctrines, in numerous domains. First, the doctrines of sects or persuasions internal to Islam. It is with these that the *Milal* begins, at length, to be completed, in quite another way, by the *Nihāya*. The overall picture is impressive, although containing inaccuracies. "In terms of the scale of the text, they represent little that is of importance. But they encourage circumspection" (D. Gimaret). Now the detailed survey of philosophers occupies the longest section of the *Milal*, and great hopes could be placed in it. In fact, it derives principally from two sources: the *Ṣiwān al-ḥikma* and the *Ārā' al-falāsifa* of pseudo-Ammonius. Above all, he projects on to the majority of articles the religious vision of the Muslim thinkers. At a deeper level, and despite appearances,

al-Shahrastānī is hostile to philosophy. But the *Milal* has yet another object. Up to and including the present day, this book owes its immense reputation to the treatment of religions external to Islam: Christians and Jews, Mazdaeans and Manichaeans, hermeticist Sabians, disciples of ancient Arab cults and of Hindu sects, etc. Not one of these chapters is of inferior quality. As a carefully crafted whole, they remained, until the 18th century, totally unique. They represent the high point of Muslim histories of religion. Finally, the rediscovery of the *Mafātīḥ al-asrār* should be taken into account. Each verse, before being clarified by the corresponding "mysteries", is initially the object of a commentary which could be described as classical. This *tafsīr* is situated in the very first rank of Ḳur'ānic commentaries, equal and sometimes superior to those of al-Ṭabarī or al-Rāzī in terms of precision, breadth, antiquity and variety of sources quoted; lists of the sūras in pre-ʿUthmānic collections, Saʿīd b. Djubayr, al-Ḥasan al-Baṣrī, al-Kalbī, Abū ʿUbayda, al-Farrā', al-Zadjdjādj and many others.

Al-Shahrastānī does not only expound the thought of others. He has his own, which is immediately apparent in the refutation of Ibn Sīnā; he devotes numerous monographs to this purpose, attacking the philosopher from every angle. But the full expression of al-Shahrastānī's thought is to be sought elsewhere, sc. in the *Mafātīḥ al-asrār*. Usually, in fact, the above-mentioned long classical commentary is followed by the unfolding of "mysteries" (*asrār*). The author insists on presenting them as received from a tradition, but the manner in which they are set forth bears the distinct mark both of his personal genius and of his deep-rooted conviction. These, scattered amongst consistent passages, written in a compact, sometimes vehement style, permit the reconstruction of a vision of the world.

At the summit is God, the One, of Whom we know nothing of the qualities except the ipseity (*huwiyya*). The world of the Divine Order is prior to the world of Creation, and traverses it, in seven cycles, passing from the universe of Laws (domain of the inchoative, *musta'naf*) to that of Resurrection (domain of the concluded, *mafrūgh*). The divine and eternal letters and names, the origin of everything, set out their manifestations (*maẓāhir*) according to two parallel lines: verbal allocutions (*kalimāt ḳawliyya*), meaning the text of the Scriptures, and active allocutions (*kalimāt fiʿliyya*), meaning the corporeal individuality (*ashkhāṣ*) of the prophets, the *imāms* and their heirs. This dynamic vision is dominated by two principles: the hierarchy (*tarattub*) of beings, and the opposition (*taḍādd*) which pits the side of evil against the side of good.

This is evidently a Nizārī Ismāʿīlī doctrine. Al-Khʷārazmī and al-Samʿānī, contemporaries of al-Shahrastānī, had already accused him of Ismāʿīlism. But later, he was generally considered to be a spokesman for Ashʿarism. In recent times, Nā'īnī has re-opened the debate. Decisive clarification is finally given by the *Mafātīḥ al-asrār*. Al-Shahrastānī fully adheres there to the positions described above, and some more particular points establish beyond doubt that his thought was at that time Ismāʿīlī. He does not confine himself, either to recognising the prerogatives of the *Ahl al-Bayt* with regard to the Ḳur'ān, or to integrating Ismāʿīlī elements into a Sunnī theology. He propounds a global religious view, which he has received and accepted. Since when? A long time ago. It is not only the *Madjlis* and the *Muṣāraʿa* which are impregnated with Ismāʿīlism, but the *Milal* and the *Nihāya* also bear subtle hints of it.

Should our author therefore be seen as a secret but licensed member of the Alamūt organisation? Naṣīr al-Dīn al-Ṭūsī, in a pro-Ismāʿīlī monograph (*Sayr al-sulūk*, in *Madjmūʿa-yi rasā'il*, Tehran 1335/1956, 38), writes that his great-uncle must have been a pupil of the "*dāʿī 'l-duʿāt* Tādj al-Dīn Shahristāna-ī". But this title does not seem to have been employed by the Ismāʿīlīs of Persia (cf. Daftary, 227, 336, 394). The incidental and belated statement of Ṭūsī is thus to be treated with caution.

(G. MONNOT)

AL-SHAHRASTĀNĪ, SAYYID MUḤAMMAD ʿAlī al-Ḥusaynī, known as HIBAT AL-DĪN al-Shahrastānī, ʿIrāḳī Shīʿī religious scholar and politician. He was born at Sāmarrā' on 20 May 1884. His pedigree, reaching back to ʿAlī b. Abī Ṭālib, is given by Khāḳānī (see *Bibl.* below), 65. The *nisba* al-Shahrastānī is that of his mother's family and was adopted by Hibat al-Dīn's father (Ṭihrānī, 1414). Both of his parents descended from families with a long tradition of religious scholarship, with branches in ʿIrāḳ (including the Āl Ḥakīm), Persia and elsewhere. Two works by Hibat al-Dīn concerning the history of his family apparently remained unpublished (Ṭihrānī, 1413; Khāḳānī, 78, nos. 39 and 64).

After the death there, in 1894, of the famous Mīrzā Muḥammad Ḥasan al-Shīrāzī, Hibat al-Dīn's father left Sāmarrā' and returned with the family to his native town, Karbalā'. Hibat al-Dīn began his religious studies there, but left Karbalā' for Nadjaf following the death of his father in 1902. In Nadjaf, he studied with some of the most prominent *mudjtahids* of the time, such as Sayyid Muḥammad Kāẓim al-Yazdī and Shaykh al-Sharīʿa al-Iṣfahānī, and especially with Mullā Muḥammad Kāẓim al-Khurāsānī [*q.v.*], known as Ākhund. In addition to the traditional fields of study, Hibat al-Dīn soon developed a special interest in the modern natural sciences and in the inter-

pretation of its recent findings according to some Muslim modernist writers in India and Egypt. The first and most important fruit of his endeavours in this respect was a book on astronomy [see ʿILM AL-HAYʾA] called *al-Hayʾa wa ʾl-Islām*. It was published in Baghdād in 1910, went into several re-editions and was translated into some other languages (for the genesis of this book see Ḥusaynī, *taḳdīm*, 13-14; for a list of translations, *ibid.*, 7). In March 1910, Hibat al-Dīn started the publication, in Nadjaf, of a monthly periodical called *al-ʿIlm*, the first Arabic journal to appear in that town (ʿAbd al-Razzāḳ al-Ḥasanī, *Taʾrīkh al-ṣiḥāfa al-ʿirāḳiyya*, i, ³Sidon 1971, 30). During the short period of its publication (the number of its issues reaching only 21 in total), it became an important platform for the reformist ideas and proposals which were discussed in the circle around Khurāsānī. Among these topics was that of *naḳl al-djanāʾiz*, i.e. the transfer of corpses to the Shīʿī shrine towns and their burial there. This practice was sharply criticised as a *bidʿa* by Hibat al-Dīn in *al-ʿIlm* (on the background of his criticism and on the ensuing controversy over this issue, see Nakash, esp. 192-7). Being ardently in favour of the constitutional movement in Persia [see DUSTŪR. iv], he became involved in the factional strife between its supporters and critics in Nadjaf (see Khāḳānī, 79-90; Luizard, 243 ff.).

Shortly after Khurāsānī's death in December 1911, Hibat al-Dīn stopped publication of his journal and, in 1912, set out on a long journey to Syria and Lebanon, Egypt, the Ḥidjāz (where he performed the pilgrimage to Mecca), Yaman and India. He returned to ʿIrāḳ in 1914. Already before the time when, in November 1914, Turkey entered the First World War, Hibat al-Dīn as well as a number of other Shīʿī *ʿulamāʾ* had been approached by Ottoman officials in order to find support for the common, pan-Islamic *djihād* [*q.v.*] against the Allies. Hibat al-Dīn responded with enthusiasm (Khāḳānī, 69). It is in this connection that he produced, in 1915, a special *fatwā* [*q.v.*] concerning the friendship between the Muslims and the Germans (German tr. H. Ritter, in *WI*, iv [1916], 217-20; for the background, see W. Ende, *Iraq in World War I*, in R. Peters (ed.), *Proceedings of* the *Ninth Congress of the Union Européenne des Arabisants et Islamisants*, Leiden 1981, 57-71.)

After the British had taken Baghdād in March 1917, Hibat al-Dīn settled again in Karbalāʾ. He soon became involved in the resistance against the British occupation, which culminated in the revolt of 1920 (for his role there, see, e.g. ʿAbd al-Razzāḳ al-Ḥasanī, *al-Thawra al-ʿirāḳiyya al-kubrā*, ³Sidon 1972, index 302; Luizard, 403 ff.).

In September 1921, Hibat al-Dīn became Minister of Education in the second cabinet of ʿAbd al-Raḥmān al-Naḳīb. His term of office was marked by serious tensions between him and the Director-General at the Ministry, Sāṭiʿ al-Ḥuṣrī (see the latter's *Mudhakkirātī fi ʾl-ʿIrāḳ*, i, Beirut 1967, esp. 147-155, and Heine, 57-65). These tensions, together with a number of other factors, led to his resignation in August 1922 (see ʿAbd al-Razzāḳ al-Ḥasanī, *Taʾrīkh al-wizārāt al-ʿirāḳiyya*, ⁷Baghdād 1988, 74-115). From 1923 to 1934, Hibat al-Dīn served as president of the *Djaʿfarī* Court of Cassation (*maḥkamat al-tamyīz*), in spite of the fact that soon after his taking over this position he had lost his eyesight. In 1934-5 he was a deputy (for Baghdād) in the Parliament of ʿIrāḳ. After its dissolution, he chose to withdraw to Kāẓimiyya, where he established, in the early 1940s, the *Maktabat al-Djawādayn*, a rich scholarly library. On a few occasions, Hibat al-Dīn later on voiced his opinion in political matters. Thus his visit to Persia in 1955, where he was received by many *ʿulamāʾ* and a number of high government officials, was generally seen as an attempt to further strengthen the consolidation process between the Shīʿī clergy and the Shah after the ousting, in 1953, of the Muṣaddiḳ government (see Sh. Akhavi, *Religion and politics in contemporary Iran*, Albany 1980, 75-6). He died in Baghdād on 2 February 1967.

(W. ENDE)

SHAHRAZĀD, a figure in the *Thousand and One Nights*.

As E. Cosquin has shown, the motif of the wise young woman who tells stories in order to put off, and at length remove a danger, comes from India. The name, confirming Ibn al-Nadīm's statement about the Iranian source of the *Nights* [see ALF LAYLA WA-LAYLA], is Persian, derived from *čihrāzād* "of noble appearance/origin." In Ibn al-Nadīm's report, Shahrazād is of royal blood; in al-Masʿūdī's, she is the daughter of a vizier. Of greater interest are the variations at the end of the frame story. In Ibn al-Nadīm, as in the Būlāḳ and Second Calcutta editions of the *Nights*, Shahrazād becomes a mother, thus securing the goodwill of the king who already admires her mind. In the Breslau edition and in several mss. which date from the period between the 10th/16th and 12th/18th centuries, Shahrazād's last tale is, or includes, a compressed version of the prologue. The king, who sees himself in the story, admits that his deeds of blood had been wicked and sinful.

The first and second parts of the prologue to the *Nights* (the deceived royal husbands, their wanderings and seduction by the *djinnī*'s prisoner) appeared in Europe early. In a novella by Giovanni Sercambi of Lucca (d. 1424), the *djinnī* has turned into a Sienese burgher carrying his young wife in a box. Ariosto uses the first theme (*Orlando Furioso*, xxviii). Shahrazād

herself was only introduced to the Western world by Galland, and remains there, in her appearances in literature (as in Gautier, Poe, and many others) and music (as in the violin solos in Rimsky-Korsakov's symphonic suite) a more or less exotic visitor. Her character is central to a large number of modern Arabic plays and novels.

Grotzfeld, *Neglected conclusions of the* Arabian Nights, in *JAL*, xvi (1985) 73-87; H. Aboul-Hussein and Ch. Pellat, *Chéhérazade, personnage littéraire*, with bibl. of both Arabic and Western works, Algiers 1981. On the name, see F. Justi, *Iranisches Namenbuch*, Marburg 1895, 163a. (A. Hamori)

SHAHRAZŪR, Shahrizūr (in Sharaf Khān Bidlīsī's *Sharaf-nāma*, Shahra-zūl), a district in western Kurdistān lying to the west of the Awrāmān mountain chain, essentially a fertile plain some 58 x 40 km/36 x 25 miles in area, watered by the tributaries of the Tāndjarō river, which flows into the Sīrwān and eventually to the Diyālā and Tigris. In the wide sense, Shahrazūr denoted in Ottoman times the *eyālet* or province of Kirkūk, a source of considerable confusion in geographical terminology. The district is closely associated with the Ahl-i Ḥakk [*q.v.*], and the initiates of the sect await the Last Judgment which is to take place on the plain of Shahrazūr: "on the threshing floor of Shahrazūr (*Shahrazūlūñ kharmanında*) all the faithful will receive their due".

History. For the epoch of the Assyrians, Billerbeck places at Shahrazūr the centre of the Zamua country, inhabited at the time of Aššurnāsir-pal by the Lullu people. Streck seems to agree with this localisation of Zamua (*ZA*, xv [1900], 284). The Arabs (Abū Dulaf) associated with Shahrazūr (more precisely Duzdān) the biblical legends concerning Saul (Ṭālūt) and David, which suggests the presence in these districts of strong Jewish colonies.

The numerous tumuli in the plain of Shahrazūr confirm the testimony—of Theophanes as well as of Abū Dulaf—regarding the number of settlements in this region. The most important town bore the name of Nīm-az-rāy (Nīm-rāh), i.e. "half-way" between Ctesiphon and the great fire-altar of Shīz [*q.v.*] (Takht-i Sulaymān in Ādharbāydjān). Čirikov and Herzfeld (on his map) identify Nīmrāh with Gul'anbar, and this corresponds with the indication of Abū Dulaf regarding the proximity of the town to the mountains of Sha'rān and Zalm. The most persistent tradition (Ibn al-Faḳīh, 199; Mustawfī, 107) attributes its construction to the Sāsānid Kawādh, the son of Pērōz (488-531). The ruins of a Sāsānid bridge on the Sirwān protected by the fort of Shamīrān indicate the line of communications of Nīm-rāh with Ḳasr-i Shīrīn. At this latter point, the route coming from Ctesiphon forked to run towards Hamadān and towards Shahrazūr (Ibn Rusta, 164; Idrīsī, ed. Jaubert, 156). On the other hand, according to Rawlinson (*JRAS* [1868], 296-300), the monument of Pāy-kūlī on the right bank of the Sīrwān not far from the ford of Bānkhēlān marked a station on the road from Nīm-rāh, which the great explorer thought was to be found at Yāsīn-tapa to the north-west of the plain of Shahrazūr. As the monument dates back to the epoch of the first Sāsānids, the road, before the construction of Nīm-rāh, might well have followed another direction in the plain. According to Ibn Khurradādhbih (120) the Sāsānids, after their accession to the throne, made a pilgrimage on foot to Shīz. The monument of Pāy-kūlī may mark the road. Finally, the Kurds told Rich (i, 269) that "the ancient town of Shahrazūr" was at Ḳīzḳal'a to the south-east of Arbet (cf. Haussknecht's map).

Shahrazūr, forming part of the diocese of Bēth Garmay (Bā-Djarmaḳ) is often mentioned in the history of the Nestorian Church. The *Synodicon Orientale* (ed. Chabot, Paris 1902, 266) gives the names of its bishops between 554 and 605.

During his third Persian campaign, the Emperor Heraclius spent the month of February in 628 in Shahrazūr "laying waste the district and towns by fire" (*Theophanis Chronographa*, ed. de Boor, 325: εἰς τὸν Σιάζουρον; *Chronicon Paschale*, ed. Dindorf, i, 730: ἕως τοῦ Σιαρσούρων—the two graphies indicate the pronunciation *-zūr* and not *-zōr*).

The Arabs had reached Shahrazūr even in Sāsānid times (Ibn al-Faḳīh, 130). The remote situation of Shahrazūr frequently attracted rebels and schismatics to it (Khāridjīs, Khurramīs). The district is often mentioned along with Dāmaghān and Dārābād (Kudāma, 232), the exact sites of which are unknown. In the time of Abū Dulaf (338/950), there were in Shahrazūr 60,000(?) tents of Kurds: Djalāli (Rich, i, 280, Ghellali?), Bāsyān, Ḥakamī and Sūlī (Shūlī?).

The same author counts Shīz (perhaps a misreading, cf. Hoffmann, 251) among the towns of Shahrazūr and mentions a little town Duzdān(?) between Nīm-rāh and Shīz. The other names of places in the region of Shahrazūr were Tīrānshāh (Ibn al-Athīr), Ḳinā(?) and Daylamastān (Yāḳūt). Between 400 and 434/1010-43, scions of the Kurdish dynasty of the Ḥasanwayhids ruled at Shahrazūr. In the 6th/12th century the Turkomans and the Zangid Atābegs held the district. In the time of Yāḳūt, Muẓaffar al-Dīn Kökböri, Atābeg of Irbil, had settled himself there. In 623/1226 an earthquake ruined the district. According to al-'Umarī (d. 749/1348), Shahrazūr "before its depopulation" was inhabited by Kūsa Kurds (Rich, i, 281 notes a few remnants of them in this region; cf. also place-names like Kosa-madīna, Māmenū-Kosa). After the capture of Baghdād by Hūlāgū, these Kurds migrated to Egypt and Syria and their place was taken by the Ḥwsna(?) who "are not true Kurds". The reference is perhaps to the mountaineers of Awrāmān, who still occupy the western slope of the mountains. On the other hand, a Kūsa whom A. von Le Coq met in 1901 at Damascus spoke the *Zaza* dialect which is not a proper Kurdish one.

Tīmūr crossed Shahrazūr in 803/1411 on his way from Baghdād to Tabrīz (*Ẓafar-nāma*, ii, 370; *az rāh-i Shahrizūr wa Ḳalāghī*(?)).

Shahrazūr played an important part in the Turco-Persian wars. According to the *Sharāf-nāma*, the Ardilān family [see sinna] had been at first settled in Shahrazūr. The local history of Sinna even claims that the fort of Zalm was built by Bābā Ardilān in 564/1158. Sultan Süleymān I about 944/1537 sent the governor of 'Amādiyya to conquer Shahrazūr but although a fortress was built at Gul-'anbar, the Ardilān re-established their authority in the region (*Sharaf-nāma*, 84). Shāh 'Abbās I dismantled this fortress, but it was restored during the Persian campaign of Khosrew Pasha [*q.v.*] in 1039/1630. The treaty of 1049/1639 allotted to Turkey the western slope of the Awrāmān with the fort of Zalm. Changes, however, must have taken place slowly, for Tavernier on his journey in 1644, seems to place the Turco-Persian frontier much further west. The representative of Sulaymān Khān, *Wālī* of Ardilān, maintained a garrison in a "large town", the situation of which corresponds to that of Gul-'anbar. We may note here that Tavernier seems to mention the town of Altun-

köprü(?) under the name "Shehrazul".

Ardilān being finally removed from Shahrazūr, the district was governed by local hereditary chiefs who received their investiture from Istanbul. At the beginning of the 18th century, the governor of ʿIrāḳ, Ḥasan Pasha, was allowed by the Porte to have southern Kurdistān placed under his control. The *eyālet* of Shahrazūr was then formed containing the *sandjaḳs* of Kirkūk, Arbil, Kōy-sandjaḳ, Ḳara-čolān (Shārabāžēr), Rawānduz and Ḥarīr, the *mütesellims* of which were appointed from Baghdād (Khurshīd Efendī, 199-262). But soon the Bābān chiefs [see SULAYMĀNIYYA] attained to power, and Shahrazūr was placed under them. After the administrative reforms of 1867 and the creation of the *wilāyet* of Mawṣil, the name of Shahrazūr was given to the *sandjaḳ* of Kirkūk (the *ḳaḍās* were: Kirkūk, Arbil, Rāniya, Rawānduz, Kōy and Ṣalāḥiyya), but to complete the confusion, the plain of Shahrazūr proper was included in the *sandjaḳ* of Sulaymāniyya (see Cuinet, *La Turquie d'Asie*, ii, 764).

From the 18th century, a branch of the tribe of Djāf [see SINNA] had been established on Turkish territory. The plain of Shahrazūr, as well as many villages in Kifrī, Pandjwīn, etc., belonged before the world war to the powerful Djāf chiefs, ʿOthmān Pasha and Maḥmūd Pasha. This family exercised administrative functions, of which the Porte gradually tried to deprive them. For a considerable time, the effective administration of Shahrazūr was in the hands of the widow of ʿOthmān Pasha, the energetic ʿĀdila Khānum, a native of Sinna. Soane has given an interesting description of her little court at Alabča.

After 1920, the district came within the newly-formed Kingdom (after 1958, Republic) of ʿIrāḳ. Today the district is known as the plain of Ḥalabdja, from its main urban and administrative centre, a town which has grown steadily since its repopulation by Djāf Kurds in the 18th century. The plain now includes an extensive irrigation system formed by damming the Tan and Sīrwān rivers.

Finally, one should add that the plain has extensive archaeological remains, including tells and ruined fortresses guarding the plain from invasion from the east.

AL-SHAHRAZŪRĪ, the *nisba* of four distinguished dignitaries, great-grandfather, grandfather, father and son, originally from Mawṣil and occupying important offices under the Saldjūḳs, Zangids and Ayyūbids.

The latest in date of the members of this prestigious line of Shāfiʿī *fuḳahāʾ* was Muḥyī al-Dīn Abū Ḥāmid Muḥammad b. Kamāl al-Dīn Abi ʾl-Faḍl Muḥammad b. ʿAbd Allāh al-Shahrazūrī. He was a disciple in *fiḳh* at Baghdād of Abū Manṣūr Ibn al-Razzāz. He entered the service of Nūr al-Dīn b. Zangī (d. 569/1174 [*q.v.*]) at Damascus, replacing his father as minister in Ṣafar 555/February-March 1160, and was subsequently *ḳāḍī* of Aleppo and then Mawṣil. He achieved fame and influence there, having, like his father, the reputation of being a generous and enlightened maecenas; according to Ibn Khallikān, one day he gave the *fuḳahāʾ*, writers and poets a gift of 10,000 dīnārs. Whilst acting as chief *ḳāḍī* at Mawṣil, it is related, he never imprisoned anyone who had not paid a debt of two dīnārs or less, preferring, if necessary, to pay the debt himself. His biographers attribute to him a certain number of verses judged competent, and among his poetic descriptions is that of a bat and of abundantly-falling snow, whilst other poems treat such varied themes as friendship, fidelity, etc.; on his father's death, in 572/1176-7, he composed an elegy upon him.

The author of *maḳāmāt*, Abu ʾl-ʿAlāʾ Aḥmad b. Abī Bakr al-Rāzī al-Ḥanafī (who seems to have lived towards the end of the 6th/12th century), dedicated 30 *maḳāmāt* to the chief judge of Mawṣil, Muḥyī al-Dīn al-Shahrazūrī, who died at Mawṣil in Djumādā I 586/June 1190 aged 62 (but al-Ṣafadī places his death in Djumādā II 584/August 1188).

Bibliography: ʿImād al-Dīn al-Kātib al-Iṣfahānī, *Kharīdat al-ḳaṣr*, 3rd part, iv-v, Damascus 1955-9; Ibn Khallikān, Cairo 1367/1948, iii, 379, no. 571; Ṣafadī, *Wāfī*, i, 210-12, no. 138; Ibn al-ʿImād, *Shadharāt*, iv, 287. (A. BEN ABDESSELEM)

AL-SHAHRAZŪRĪ, SHAMS AL-DĪN MUḤAMMAD B. MAḤMŪD, Illuminationist philosopher of the 7th/13th century.

He has suffered by an ironical stroke of fate, in that, although he wrote a substantial work on the biographies of thinkers, sages and scholars of the times preceding his own, his own life is totally unknown. Hence neither his birth nor his death date are known; only a copyist's note indicates that he was still alive in 687/1288 (cf. H. Corbin's introd. to his *Œuvres philosophiques et mystiques d'al-Suhrawardī*, ii, Tehran-Paris 1976, p. lxxi). His own written œuvre was nevertheless considerable. His *Nuzhat al-arwāḥ wa-rawḍat al-afrāḥ* (*fī taʾrīkh al-ḥukamāʾ wa ʾl-falasifa*) gives 122 biographies of philosophers of Antiquity and the Islamic period, of which the notice on Shihāb al-Dīn Yaḥyā al-Suhrawardī [*q.v.*] (ed. S.H. Naṣr in his Persian introd. to *Œuvres philosophiques*, ii, 13-30) remains our main source of information on this principal *shaykh* of the Ishrāḳīs. His *Rasāʾil al-shadjara al-ilāhiyya*, dated 680/1282, are a real encyclopaedia of philosophy and the sciences, in which al-Shahrazūrī's own Illuminationist beliefs do not affect at all his objectivity in setting forth the various doctrines concerned (résumé and analysis by Ḥusayn Ḍiyāʾī, *Muʿarrifī wa barrasī-yi*

nuskha-yi khaṭṭī-yi Shadjara-yi ilāhiyya ..., in *Madjalla-yi Īrānshināsī*, ii/1 [1990]). His *K. al-Rumūz wa 'l-amthāl* is a treatise on noetics concerning the modalities of metaphysical knowledge by the Illuminative Way. But paradoxically, al-Shahrazūrī seems to have revealed his most inner personal beliefs in his commentaries on the two basic works of al-Suhrawardī, the *Ḥikmat al-ishrāḳ* and the *Talwīḥāt*, commentaries which have done much to reveal the *shaykh* of the Illuminationists' thought, and which inspired other later commentators such as Ḳuṭb al-Dīn al-Shīrāzī [*q.v.*] on the first work and Ibn Kammūna [*q.v.*] on the second—at least, in the opinions of Corbin and Ḍiyā'ī. Al-Shahrazūrī seems to have been totally taken up by al-Suhrawardī's Illuminationist philosophy—possibly as the result of a sudden conversion, in Corbin's conjecture, since there are no references to the *shaykh* in the *K. al-Rumūz*, ostensibly the oldest of al-Shahrazūrī's works (cf. *En Islam iranien*, Paris 1971, ii, 347). In his commentary on the *Ḥikmat al-ishrāḳ*, he goes so far as to describe himself as the *ḳayyim* "upholder" of the science of that work, thus claiming a hierarchic function in the chain of Illuminationist theosophists which remains somewhat mysterious to us now (*ibid.*, 348).

At all events, one should stress the independence of mind of a scholar who proclaimed loudly the necessity of studying the philosophy of Aristotle (and of the Greek sages in general) at a time when the anti-rationalist Ash'arī reaction was gaining ground everywhere. Nevertheless, al-Shahrazūrī, in his commentaries, stands out as much more than a servile glosser on Aristotle or on al-Suhrawardī; he displays there the work of a true thinker, dialectician and philosopher.

Bibliography: Al-Sharazūrī's works, despite their great interest for the history of Islamic thought, have only been partially edited so far. There is an ed. of his *Nuzhat al-arwāḥ* by Khurshīd Aḥmad, Ḥaydarābād Dn. 1976, a Persian tr. by Ḍiyā' al-Dīn Durrī, as *K. Kanz al-ḥikma*, Tehran 1937, and, under its original title, by M.'A. Tabrīzī, ed. M.T. Dānish-Pazhūh and M. Sarwar Mawlā'ī, Tehran 1986. His comm. on the *Ḥikmat al-ishrāḳ* also has a critical ed. by Ḍiyā'ī, Tehran 1993, with a Fr. tr. of the Preface by Corbin in his *Le Livre de la Sagesse orientale*, Paris 1986, 75 ff. (P. Lory)

SHAHR-I SABZ [see kish].

SHAHRĪR [see ta'rīkh].

SHAHRISTAN (p.) "province", "provincial capital", "[large] town". The word continues Middle Persian *shahrestān*, which has the same meanings, though it is certainly possible that it goes back even further to an unattested Old Persian **xšaça-stāna-*. In any case, it is derived from *shahr* [*q.v.*]—or its ancestor—and *-stāna* "place" (in compounds); a *shahristān* is thus literally a "place of kingship", i.e. the seat of the local representative of royal power (the provincial capital) and then also the region over which that representative exercised his authority (the province itself). The semantic background is similar to that of Aramaic *mdīntā/mdītta* (the source of the Arabic loan-word *madīna*), etymologically "place of judgment", then both "town" (as the seat of a judge) and "province" (the area under the authority of a judge). There is a little Middle Persian text, put together (at least in its extant form) during the 'Abbāsid period, listing the *shahrestāns* of the Sāsānid empire with brief remarks, mostly of mythological content, on each one of them (see the edition, with translation and very extensive notes, by J. Markwart, ed. G. Messinna, *A catalogue of the provincial capitals of Ērānshahr*, Rome 1931).

In Islamic Persia, "Shahristān" is frequently used, in effect as a place name, to distinguish the principal town of a given region from the eponymous province, or else to single out that part of the provincial capital in which the seat of government was located. Among the places mentioned in classical texts that were known alternatively, or even exclusively, by this name one can mention:

(1) Sābūr (older: Bīshābuhr) in Fārs is often referred to as Shahristān, whereby al-Muḳaddasī specifies that it is the provincial capital (*ḳaṣaba*) of Sābūr which is known by this name, as opposed to the other towns (*mudun*) in the vicinity, such as Kāzarūn. See al-Muḳaddasī, 30, 424, 432; Yāḳūt, 342.

(2) The city of Iṣfahān (Sipahān) consisted of two parts, Shahristān (also called al-Madīna and Djayy, evidently the seat of the governor) and Djahūdhān (Arabicised: al-Yahūdiyya, i.e. the old Jewish quarter). See *Ḥudūd al-'ālam*, 131; al-Iṣṭakhrī 198-9; Yāḳūt, 343.

(3) The city of Djurdjān (Gurgān) also consisted (according to the *Ḥudūd al-'ālam*, 133) of two parts, Shahristān and Bakrābād, separated from one another by the river Hirand. See also al-Muḳaddasī, 30, 354, 357; Ibn al-Faḳīh, 330.

(4) Kāth, the new capital of Khwārazm, was, according to al-Muḳaddasī (30, 287), also known as Shahristān.

(5) Al-Muḳaddasī (360) says that Shahristān was the name given to the seat of government in *Brw'n* (Barwān?), the capital (*ḳaṣaba*) of Daylam.

(6) Shahristāna (al-Muḳaddasī, 51), Shāristāna (idem, 300-1 n. 1; 320) or Shahristān (Yāḳūt, 343-4) was the name of a town in Khurāsān, three days' journey from Nasā, the birth-place of the celebrated al-Shahrastānī [*q.v.*]. Yāḳūt says that he was present when it was sacked by the Mongols in 617/1220.

Modern Īrān is divided into 43 *shahristāns*, or sub-provincial administrative districts.

SHAHRIYĀR, Sayyid (or Mīr) Muḥammad Ḥusayn, a modern Persian poet. He was born about 1905 at Tabrīz as the son of a lawyer, and belonging to a family of *sayyid*s in the village of Khushgnāb. In his early work he used the pen name Bahdjat, which he later changed to Shahriyār, a name chosen from the *Dīwān* of Ḥāfiẓ, who was his great model as a writer of *ghazal*s. He read medicine at the Dār al-Funūn in Tehran, but left his studies unfinished to become a government clerk in Khurāsān. After some time he returned to Tehran, where for many years he was employed by the Agricultural Bank, living a sober and secluded life devoted mostly to poetry and mysticism. In the 1950s he married and settled down in Tabrīz. Shahriyār died on 18 September 1988 in a Tehran hospital. His literary success came very early; already in 1931 a volume of collected poems was published with introductions by influential men of letters like M.T. Bahār, Pizhmān Bakhtiyār and S. Nafīsī. His *Dīwān* was repeatedly reprinted in amplified editions.

Shahriyār's work consists of lyrical poetry in various forms as well as a number of larger narrative compositions. Although he was essentially a neo-classical poet, there are frequent references to the modern world both in the choice of subjects and imagery. He was a great master of the traditional literary language, but also wrote in a simple contemporary idiom. Love poetry in the classical *ghazal* was his most important genre, which he revitalised with fresh psychological nuances and realistic settings, without changing much the formal rules and conventions. During a short period in the 1940s he tried his hand,

not without success, on modern poetical forms as they were propagated by his friend Nīmā Yūshīdj [*q.v.*], but soon he returned to classical prosody. In spite of his deep involvement in mysticism, he committed himself from time to time to political and social issues. During the Pahlawī period, he wrote nationalistic poems, like *Takht-i Djamshīd*, an evocation in a *mathnawī* of the ancient glory of Persia as symbolised by the ruins of Persepolis (*Dīwān*, 626-54). In *Ḳahramānān-i Istalingrād* he sang the praise of the heroes of the Red Army during the Second World War (*Dīwān*, 528-36). In many poems he expressed a great devotion to the Shīʿī imāms, especially during his later years. Shahriyār also gained renown as a poet in Azeri Turkish by the long poem *Ḥēyder Babaya selām* (part I, Tabrīz 1953, part II, Tabrīz 1966; Persian translation of the first part only, in *Dīwān*, 655 ff.), which celebrates the countryside of his youth.

(J.T.P. de Bruijn)

SHAHRIYĀR b. al-**ḤASAN**, an Ismāʿīlī *dāʿī* in Fārs and Kirmān, who lived during the reign of the Fāṭimid caliph al-Mustanṣir [*q.v.*]. Nothing is known about his life except the fact that he went to Yemen during the heyday of the Ṣulayḥid [*q.v.*] dynasty and was subsequently sent by al-Mukarram b. ʿAlī al-Ṣulayḥī as his envoy to Cairo, where he became acquainted with al-Muʾayyad fi 'l-Dīn al-Shīrāzī [*q.v.*]. An official letter of al-Mustanṣir (*al-Sidjillāt al-Mustanṣiriyya*, ed. ʿAbd al-Munʿim Mādjid, Cairo 1954, 202; cf. H. Hamdani, *The letters of al-Mustanṣir bi'llāh*, in *BSOS*, vii (1934), 323-4) to al-Mukarram dated 15 Ramaḍān 461/1069, states: "As for your inquiry about Shahriyār b. Ḥasan, [we have to state that] al-Muʾayyad will deal with the matter as he sees fit." He is the author of the following treatises: refutation of those who deny the existence of the spiritual world; about the meaning of the verse of the Ḳurʾān, XLVIII, 1 (composed in reply to a query by al-Sulṭān ʿĀmir b. Sulaymān al-Zawāḥī, a powerful dignitary at the Ṣulayḥid court of queen Arwā); and understanding [the meaning of] the prophets' sins.

Bibliography: In addition to the works mentioned in the text, see I. Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Cal. 1977, 125-6.

(I. Poonawala)

SHĀHSEWAN (p. and Tkish.), literally, "Friend of the Shāh", a designation of certain groups in Persia since Ṣafawid times. The name originated in appeals by the early Ṣafawid Shāhs to personal loyalty and religious devotion to the dynasty. In the 20th century it is the name of a number of tribal groups located in various parts of north-western Persia, notably in the region of Mūghān [see mūḳān] and Ardabīl [*q.v.*], and in the Kharaḳān and Khamsa districts between Zandjān and Tehran. Most of, if not all the latter groups also came from Mūghān, where ancestors of the present Shāhsewan tribes were located some time between the 16th and the 18th centuries. The tribes of Mūghān and Ardabīl were formed into a confederacy during the 18th century. Their history since then is fairly well-documented, but their origins remain obscure.

The Shāhsewan pursued a pastoral nomadic way of life, wintering near sea-level on the Mūghān steppe and summering 100 miles or so to the south on the high pastures of the Sawalān and neighbouring ranges, in the districts of Ardabīl, Mishkīn and Sarāb. By the late 20th century, most Shāhsewan were settled villagers or townspeople and preserved little of their former tribal organisation or pastoral nomadic culture, but some 5-6,000 households (40,000 people) still lived a nomadic or semi-nomadic life. The Shāhsewan *el* (tribal confederacy) was loosely organised in a series of some 40 *ṭāyfa*s, "tribes", containing from as few as fifty to several hundred households. Shāhsewan nomads formed a minority of the population in this region, though like the settled majority, whom they knew as "Tāt" [*q.v.*], they were Shīʿī Muslims, and spoke Ādharbāydjānī Turkish.

(i) *Origins and history.*

Although the ancestors of several component tribes were of Kurdish or other origins, Turkic identity and culture were overwhelmingly dominant among the Shāhsewan. Many features of their culture and way of life were found among other Turkic groups in Persia and elsewhere, and they can often be traced to the Ghuzz [*q.v.*] tribes of Central Asia which invaded south-western Asia in the 11th century A.D.

There are three rather different versions of the origin of the Shāhsewan tribe or confederacy. The most widely known is that recounted by Sir John Malcolm in his *History of Persia* (1815): Shāh ʿAbbās I (1857-1929 [*q.v.*]) formed a special composite tribe of his own under the name of Shāhsewan, in order to counteract the turbulence of the rebellious Ḳïzïl-Bāsh [*q.v.*], who had helped his ancestor Shāh Ismāʿīl to found the Ṣafawid dynasty a century earlier. Vladimir Minorsky, in his article *Shāh-sewan* for *EI*[1], noted that "the known facts somewhat complicate Malcolm's story" and that the references in contemporary Ṣafawid chronicles did not amount to evidence that "a single regularly constituted tribe was ever founded by Shāh ʿAbbās under the name of Shāh-sewan." In later readings of Malcolm's account, the Shāhsewan appear as a personal corps or militia, a royal guard, and there is some evidence for the existence of a military corps named Shāhsewan in the mid-17th century. Recent research has failed to produce any documentation for Malcolm's story of Shāh ʿAbbās's formation of a tribe, and has shown how it was based on his misreading of the chronicles. Most historians, however, have adopted Malcolm's story, which has thus been assimilated through modern education into Iranian and even current Shāhsewan mythology. Among recent writers on the Ṣafawids, only a few acknowledge the doubts that have been expressed about Malcolm's story; some refrain from comment on Shāhsewan origins, others, while referring to Minorsky's and sometimes the present writer's previous investigations, nevertheless ignore the conclusions and reproduce the old myth as historical fact.

Minorsky drew attention to the writings of a number of Russians who recorded the traditions of the Shāhsewan of Mūghān with whom they were in contact towards the end of the 19th century. These traditions—which differ from but do not contradict Malcolm's story—vary in detail, but agree that Shāhsewan ancestors, led by one Yūnsür Pasha, immigrated from Anatolia; they present the Shāhsewan tribes as

ruled by *khāns* appointed as *el-beys* (paramount chiefs) descended from Yūnsür Pasha, and as divided between *bey-zāda* (nobles) and *hāmpā* or *rāyat* (commoners), and they refer to an original royal grant of the pasture lands of Ardabīl and Mūghān, and to the contemporary royal appointment of the chiefs. These legends, presumably originating with the nobles, thus legitimate their authority over the commoners, and their control of the pastures, the most important resource for all their nomad followers. The present author heard similar legends in the 1960s from descendants of former *el-beys*.

A third version of Shāhsewan origins, commonly articulated in the 20th century among ordinary tribespeople and in writings on them, states that the Shāhsewan are "32 tribes" (*otūz ikī ṭāyfā*), all of equal status, and each with its own independent *bey* or chief, and makes no mention of nobles or of *el-beys*. The basis of this story is obscure, but it may refer to the presumed origin of the Shāhsewan from among the 16-17th century Ḳizil-Bāsh tribes, which in several sources also numbered 32.

Contemporary sources record groups and individuals bearing the name Shāhsewan, often as a military title in addition to Ḳizil-Bāsh tribal names such as Afshār [*q.v.*] and Shāmlū (and Shāmlū components such as Beydili, Īnāllu, Adjirli), in Mūghān and Ardabīl in the late 17th century. Other prominent tribes in the region were the Ḳizil-Bāsh Takile/Tekeli, and the Kurdish Shaḳāḳī [*q.v.*] and Mūghānī/Mūghānlu. But there is no evidence of the formation of a unified Shāhsewan tribe or confederacy as such until the following century, in the time of Nādir Shāh Afshār [*q.v.*].

In the 1720s, with the rapid fall of the Ṣafawid dynasty to the Afghāns at Iṣfahān, and Ottoman and Russian invasions in north-western Persia, for several crucial years Mūghān and Ardabīl were at the meeting-point of three empires. Records for those years, the first that mention in any detail the activities of the Shāhsewan and other tribes of the region, depict them as loyal frontiersmen, struggling to resist the Ottoman invaders and to defend the Ṣafawid shrine city of Ardabīl, especially in the campaigns of 1726 and 1728. Ottoman armies crushed the Shaḳāḳī in Mishkīn in autumn 1728, and then in early 1729 cornered the other tribes in Mūghān. Leaving the Īnāllu and Afshār to surrender to the Ottomans, the Shāhsewan and Mūghānlu crossed the Kur river to Sālyān to take refuge with the Russians, under the leadership of ʿAlī-Ḳulu Khān Shāhsewan, a local landowner. They returned to Persian sovereignty in 1732, when Nādir Afshār recovered the region. Thereafter, he appears to have formed the Shāhsewan into a unified and centralised confederacy under Badr Khān, one of his generals in the Khurāsān and Turkistān campaigns. Possibly a son of ʿAlī-Ḳulu Khān, Badr Khān is linked by 19th-century legends with Yūnsür Pasha, and there is strong evidence that Badr Khān's family, the Sārī-khānbeyli, were from the Afshārs of Urmiya. Former *beyzāda* (noble) tribes such as Ḳodjabeyli, ʿĪsālu, Bālābeyli, Mast-ʿAlībeyli, ʿAlībābālu, Polātlu and Damīrcīlī, traced cousinship with the Sārī-khānbeylī Afshār, whereas many commoner tribes bear names indicating Shāmlū origins.

The Shaḳāḳī, Īnāllu and Afshār from Mūghān who had been defeated by the Ottomans were probably among the numerous tribes whom Nādir exiled to his metropolitan province, Khurāsān. After his death (1747), the Shaḳāḳī returned to settle around Miyāna, Sarāb and Khalkhāl, and the Īnāllu and Afshār (both now bearing the name Shāhsewan too) to the Kharaḳān, Khamsa and Ṭārīm regions south and south-west of Ardabīl. One of Nādir's assassins, Mūsā Bey Shāhsewan, was apparently from the Afshār who settled in Ṭārīm.

In the turbulent decades after Nādir's death, Badr Khān's son (or brother?) Naẓar ʿAlī Khān Shāhsewan governed the city and district of Ardabīl. Towards the end of the 18th century the Sārī-khānbeylī family split, dividing the Shāhsewan confederacy into two, associated with the districts of Ardabīl and Mishkīn. Shāhsewan *khāns* participated actively in the political rivalries and alliances of the time, with the semi-independent neighbouring *khāns* of Ḳara Dāgh, Ḳara Bāgh, Ḳubba, Sarāb and Gīlān, the Afshār, Afghān, Zand and Ḳādjār tribal rulers of Persia, and agents and forces of the Russian Empire.

Under the early Ḳādjārs, two wars with Russia raged across Shāhsewan territory and resulted in the Russian conquest of the best part of their winter quarters in Mūghān, and considerable movements of tribes southwards. The *khāns* of Ardabīl, notably Nadhr ʿAlī Khān's(?) nephew Faradj Allāh Khān and grandson, also called Nadhr ʿAlī Khān, despite deposition from the governorship in 1808, generally supported the Ḳādjār régime; their cousins and rivals, the *khāns* of Mishkīn, especially ʿAṭāʾ Khān and his brother Shukür Khān, accommodated the Russian invaders.

For some decades after the Treaty of Turkmančāy (1828), Russia permitted Shāhsewan nomads limited access to their former pasturelands in Mūghān; but they failed to observe the limitations. The Russians wished to develop their newly-acquired territories, and for this and other more strategic reasons found Shāhsewan disorder on the frontier a convenient excuse for bringing moral and political pressure to bear on the Persian government, insisting that they restrain or settle the "lawless" nomads. Persian government policy towards the tribes varied from virtual abdication of authority to predatory punitive expeditions, and an attempt in 1860-1 at wholesale settlement.

The mid-19th century is the first period for which there is any detailed information on Shāhsewan tribal society; the main sources are the reports of Russian officials, especially Mūghān Frontier Commissioner (from 1869) I.A. Ogranovič and the Tabrīz Consul-General E. Krebel, though British Consul-General Keith Abbott is also informative. By the time of the Russian conquest of Mūghān, most of the Ardabīl tribes, like their *khāns*, were already settled. Despite the settlement of 1860-1 and the famine and bad winters of 1870-2, most of the Mishkīn tribes remained nomadic and their *el-beys* active, especially ʿAṭāʾ Khān's son Fardī Khān (*el-bey* until 1880) and his son ʿAlī-Ḳulu Khān (until 1903), but they too had settled bases and in their turn lost overall control of the tribes. No longer a unified confederacy with a dynastic central leadership, Shāhsewan tribal structure reformed on new principles. Clusters of dependent tribes formed around the new élite of warrior *beys* of the Ḳodjabeylī (notably Nūr Allāh Bey), ʿĪṣālu, Ḥādj-khodjālu and Geyikli in Mishkīn, and the Polātlu and Yortči in Ardabīl. A shifting pattern of rivalries and alliances extended into neighbouring regions, involving the powerful *beys* of the Alārlu of Udjārūd (who soon came to be counted as Shāhsewan), the Shatrānlu (an offshoot of the Shaḳāḳī) of Khalkhāl, and the Čalabīānlu and Ḥādj-ʿAlīlī of Ḳara Dāgh.

The Russian frontier in Mūghān was finally closed to the Shāhsewan in 1884. Although the winter pasturelands in Persia were redistributed among the tribes, the region of Mūghān and Ardabīl and the nomads confined there underwent a drastic social and eco-

nomic upheaval, whose causes were to be found not simply in the closure but also the behaviour of administrative officials. The S̲h̲āhsewan, numbering over 10,000 families, for nearly four decades were virtually independent of central government. Although some, such as Mūg̲h̲ānlu, the largest tribe of all, pursued their pastoral life peacefully as best they could, for most nomads life was dominated by insecurity and the increasing banditry and vendettas by the warriors of the chiefly retinues; the period was known as *k̲h̲ān-k̲h̲ānlīk̲h̲* or *as̲h̲rārlīk̲h̲*, the time of the independent *k̲h̲āns* or rebels.

Russian officials give a detailed and depressing picture of the upheaval, though without appreciating or admitting the degree to which Russian imperialism and 19th-century rivalry with Britain were largely responsible for both the frontier situation and the abuses of the Persian administration. V. Markov, concerned only to justify Russian actions and their benefits to the inhabitants of Russian Mūg̲h̲ān, having narrated in detail the events leading up to the closure, does not consider its effects on the Persian side. L.N. Artamonov, however, who visited the region to make a military-geographical study in November 1889, a year after Markov, was shocked at the poverty and oppression of the peasantry and the obvious distress and disorder suffered by the nomads as a result of the closure; his observations were mainly of the Mis̲h̲kīn tribes. In 1903, Col. L.F. Tigranov of the Russian General Staff carried out an investigation of the region and published an informative and perceptive account of the economic and social conditions of the Ardabīl province and of the nomad and settled S̲h̲āhsewan. The detailed reports of Artamonov and Tigranov, although clearly to an extent influenced by political bias, are corroborated by other sources, including accounts recorded by the present writer among elderly S̲h̲āhsewan in the early 1960s.

The S̲h̲āhsewan tribes reached the heydey of their power and influence in the first decades of the 20th century. They were involved in various important events in this critical period of the Constitutional Revolution [see DUSTŪR. iv] and the years leading to the rise of Riḍā K̲h̲ān. In spring 1908, border incidents involving S̲h̲āhsewan tribesmen and Russian frontier guards provided the Russians with a pretext for military intervention in Ād̲h̲arbāyd̲j̲ān on a scale which hastened the fall of the Constitutionalist government in Tehran. During the winter of 1908-9, a few S̲h̲āhsewan joined the Royalist forces besieging Tabrīz. In late 1909, while the new Nationalist government struggled to establish control of the country, most of the S̲h̲āhsewan *beys* joined Raḥīm K̲h̲ān Čalabīānlu of Ḳara Dāg̲h̲ and Amīr ʿAs̲h̲āyir S̲h̲atrānlu of K̲h̲alk̲h̲āl in a union of tribes of eastern Ad̲h̲arbāyd̲j̲ān, proclaiming opposition to the Constitution and the intention of marching on Tehran and restoring the deposed Muḥammad ʿAlī S̲h̲āh [*q.v.*]. They plundered Ardabīl, receiving wide coverage in the European press, but were defeated soon after by Nationalist forces from Tehran under Yeprem K̲h̲ān. Subsequent S̲h̲āhsewan harrying of Russian occupying forces at Ardabīl led to a major campaign against them in 1912 by 5,000 troops under General Fidarov, who after many reverses succeeded in rounding up most of the tribes and depriving them of half their property. Despite this catastrophe, remembered in the 1960s as *bölgī īlī*, the year of division, S̲h̲āhsewan warriors continued their guerrilla resistance. During World War One, they were wooed in turn by Russian, Turkish and British forces. Until the restoration of central government authority under Riḍā K̲h̲ān [*q.v.*], the S̲h̲āhsewan *beys* usually controlled the region, pursuing their local ambitions and rivalries, focused on the city of Ardabīl and smaller urban centres, and uniting only to oppose Bolshevik incursions in 1920 and 1921. Prominent among the *beys* (those of Ḳara Dāg̲h̲, Sarāb and K̲h̲alk̲h̲āl were now generally talked of as S̲h̲āhsewan too) were Bahrām Ḳod̲j̲abeyli, Amīr Aslān ʿĪṣālu, D̲j̲awād Ḥād̲j̲-k̲h̲od̲j̲ālu, Ḥād̲j̲ Farad̲j̲ Geyikli, Nad̲j̲af-ḳulū Alārlu, Amīr Ars̲h̲ad Ḥād̲j̲-ʿAlīli, Naṣr Allāh Yortči, Amīr ʿAs̲h̲āyir S̲h̲atrānlu, and his sister ʿAzamat K̲h̲ānum, leader of the Polātlu.

During the winter and spring of 1922-3, the S̲h̲āhsewan were among the first of the major tribal groups to be pacified and disarmed by Riḍā K̲h̲ān's army. Under the Pahlavīs, the tribes were at first integrated within the new nation-state as equal units under recognised and loyal *beys*; they then suffered economic and social destitution (though less than some other groups in Persia) as a result of the enforced settlement of the 1930s. In the 1940s they resumed pastoral nomadism and revived a loose, decentralised, tribal confederacy, causing trouble to the Soviet occupation forces and the subsequent Democrat régime of 1946. A disastrous winter in 1949 led to the construction of an irrigation scheme in the Mūg̲h̲ān steppe; settlement of the nomads remained an axiom of government policy. From 1960 on, a series of measures broke down the tribal organisation, while pastoralism suffered a sharp decline: the *beys* were dismissed, and the S̲h̲āh's Land Reform not only deprived many *beys* of their power base but nationalised the range-lands and opened them to outsiders. Forced to apply for permits for their traditional pastures, and increasingly using trucks in place of camels for their migrations, the pastoralists were drawn into national and wider economic and political structures. More extensive irrigation networks were constructed in Mūg̲h̲ān, and the promotion of agro-industry there in the 1970s seemed likely to provide settled bases for most if not all the nomads.

The Islamic Revolution of 1978-9 was largely an urban phenomenon, and S̲h̲āhsewan nomads themselves played little part. Settled tribespeople did participate in events in towns such as Mis̲h̲kīn-S̲h̲ahr and in strikes at the Agro-Industry Company in Mūg̲h̲ān, and there were a number of S̲h̲āhsewan "martyrs". A few former *beys* were killed, others went into exile. The S̲h̲āhsewan were officially renamed "Elsewan", literally "those who love the people (or tribe)", but they themselves never accepted the new name, and by 1992 it was no longer widely used officially. Pastoral nomadism experienced a modest revival among the S̲h̲āhsewan, as elsewhere in Persia, such that in the Socio-Economic Census of Nomads of 1986 the S̲h̲āhsewan nomads numbered nearly 6,000 families, as they had around 1960. At the same time, settlement has continued, following the inexorable spread of various government-supported developments, notably the agro-industrial schemes started in Mūg̲h̲ān under the last S̲h̲āh. In the mid-1990s, with extensive encroachments on S̲h̲āhsewan pasturelands in both Mūg̲h̲ān and the mountains, pastoral nomadism did not seem likely to survive much longer.

(ii) *Economic and social organisation of the Mūg̲h̲ān S̲h̲āhsewan.*

Apart from their frontier location and history, the S̲h̲āhsewan differ from other nomadic tribal groups in Persia in various aspects of their culture and social and economic organisation. Most distinctive is their dwelling, the hemispherical, felt-covered *ālāčīg̲h̲*. In each *ālāčīg̲h̲* lives a household of, on average, seven to eight people. In the 1960s, groups of three to five

closely related nomad households co-operated in an *obā*, a herding unit that camped on its own in the mountain pastures between June and early September, but joined with one or two others to form a winter camp of 10 to 15 households during the period November to April. Two or three such winter camps, linked by agnatic ties between the male household heads as a *göbak* "navel" or descent group, would form a *tira*, tribal section. The *göbak/tira* was usually also a *djāmāhāt* (from Ar. *djamāʿa*) community, which moved and camped as a unit during the autumn migration in October and the spring migration in May, and performed many religious ceremonies jointly. Every group, from herding unit to community, was led by a recognised *āḳ sāḳāl*, "grey-beard" or elder. The *ṭāyfā* or tribe, comprising from two to over 20 *tira* sections, was a larger community, members of which felt themselves different in subtle ways from members of other *ṭāyfās*, and few contacts, and only one in ten marriages, were made between *ṭāyfās*. After the abolition of the *beys*, the government attempted to deal directly with the *tiras* and their *āḳ sāḳāls*; as a result, the "grey-beard" was often a younger man from the wealthiest family in the community, with the skills and resources to deal with the authorities. But the *ṭāyfā* continued to be important, and remained the main element in Shāhsewan identity, nomadic or settled.

Perhaps the most important feature distinguishing the Shāhsewan from other nomadic tribal groups in Persia was their system of grazing rights. Where other nomads operated some version of communal access to grazing, the Shāhsewan developed an unusual system whereby individual pastoralists inherited, bought or rented known proportions of the grazing rights to specific pastures, though in practice members of an *obā* would exploit their rights jointly. This system was invalidated by the nationalisation of the pastures in the 1960s, but still operates clandistinely.

Shāhsewan nomads traditionally raised flocks of sheep and goats, the former for milk and milk products, wool, and meat, the latter only in small numbers mainly as flock leaders. Camels, donkeys, and horses were used for transport. Most families raised chickens for eggs and meat, and a few kept cows. Every family had several fierce dogs, for guarding the home and the animals against thieves and predators. Bread was their staple food. Some nomads had relatives in villages, with whom they co-operated in a dual economy, sharing or exchanging pastoral for agricultural produce. Most, however, had to sell milk, wool and surplus animals to tradesmen in order to obtain wheat flour and other supplies. Some worked as hired shepherds, paid 5% of the animals they tended for every six-month contract period. Others went to towns and villages seasonally for casual wage-labour. Every camp was visited most days by itinerant pedlars, but householders went on shopping expeditions to town at least twice a year, for example during the migrations. Most purchases were made on credit, against the next season's pastoral produce. The wealthiest nomads raised flocks of sheep commercially, and owned shares in village lands as absentee landlords.

Women too had their elders, *āḳ birčak* "grey hairs", comparable to male *āḳ sāḳāls* and consulted privately by them; among the women they exercised their influence in public, at feasts attended by guests from a wide range of communities. At feasts, men and women were segregated. While the men enjoyed music and other entertainment, in the women's tent the *āḳ birčaks* discussed matters of importance to both men and women, such as marriage arrangements, disputes, irregular behaviour among community members or broader subjects bearing on economic and political affairs. Opinions were formed and decisions made, which were then spread as the women returned home and told their menfolk and friends. This unusual information network among the women served a most important function for the society as a whole.

Shāhsewan women produced a variety of colourful and intricate flatwoven rugs, storage bags and blankets, and some knotted pile carpets, but these were all for domestic use, and figured prominently in girls' trousseaux on marriage. After about 1970, however, the international Oriental Carpet trade recognised that a whole category of what had previously been regarded as "Kurdish" or "Caucasian" tribal weavings were in fact the product of Shāhsewan nomads. Meanwhile, hard times and escalating prices forced many nomads to dispose of items never intended for sale. Since the Islamic Revolution, however, Shāhsewan weavers have increasingly produced for the foreign market, adjusting their styles accordingly.

(iii) *The Shāhsewan of Kharaḳān and Khamsa.*

In the 19th century there were five major Shāhsewan groups in these regions: Īnāllu, Baghdādī, Ḳurtbeyli, Duwayran and Afshār-Duwayran. These descend from groups moved from Mūghān in the 18th century, except for the Baghdādī, who have a separate history: Nādir Shāh Afshār brought them from northern ʿIrāḳ (Kirkūk) to Khurāsān, and later they joined Karīm Khān Zand in Shīrāz before being brought to their present location (Sāwa and Kharāḳān by Agha Muḥammad Khān Ḳādjār). Most of these tribes were settled by 1900; the Īnāllu and Baghdādī provided important military contingents for the Ḳādjār army (Tapper, *The king's friends*, Appendix 2).

On Shāhsewan textiles, see Jenny Housego, *Tribal rugs: an introduction to the weaving of the tribes of Iran*, London 1978; Siyawosch Azadi and P. Andrews, *Mafrash*, Berlin 1985; Parviz Tanavoli, *Shahsavan: Iranian rugs and textiles*, New York 1985.

(R. Tapper)

SHAʿĪR (a.), barley (*Hordeum* L., Gramineae family, the Arabic term being applied to several different species), one of the major cereals cultivated throughout the Middle East from earliest times. Mediaeval medical texts classify it among the numerous "grains" (*ḥubūb*, which, naturally, included wheat but also pulses like lentils and beans) which, in bread preparation, formed an essential part of the diet of all but the most well-off of the population. The semantic association between bread (of whatever substance), sustenance, and life itself is found in several Semitic vocabularies. Even if more widely consumed than the scarcer (and hence more expensive) and less hardy wheat cereal, barley was judged less nourishing than wheat. The term occurs in the Traditions, suggesting its use both in the baking of inexpensive bread as well as in other popular dishes like *khaṭīfa, talbīna, tharīd* and *sawīḳ* [see ghidhāʾ].

By nature it was said to be moderately cold and dry (in contrast to wheat, which was hot and moist), which made it suitable for persons of hot complexion in summer, or with a fever. Hence medical opinion held that barley bread was also convenient for young persons but not for the elderly. The medical texts describe the benefits of certain barley preparations: flour, or barley water applied to the skin was said to remove blemishes as well as providing protection against leprosy. A preparation of barley and milk (called *kishk*) was an antidote to fever, and washing the body with it opened the pores, a treatment also for exhaustion and for travellers. Barley water had the properties of a diuretic and emenagogue. Barley *sawīḳ* was good for fever.

These and other preparations are also found in the mediaeval cookbooks as purely food for pleasure. One barley water recipe is designated especially for Ramaḍān. Barley flour was also the chief ingredient in the famous condiment *murrī*. A recipe for the beverage *fuḳḳāʿ* (apparently intended to be alcoholic) employs barley flour, while in another similar preparation it is advised against as being harmful; it was also used in the popular drink *aḳsimāʾ* and in the condiment of pickled garlic. Finally, a recommended means of preventing bunches of grapes from rotting is to bury them in barley.

1. In the Arab world.

A. Pre-Islamic and Umayyad periods.

Among those endowed with knowledge and with power in ancient Arabia stands the figure of the *shāʿir*, whose role is often confused with that of the *ʿarrāf* (*shaʿara* and *ʿarafa* having the same semantic value: cf. I. Goldziher, *Abhandlungen*, i, 3 ff.) and of the *kāhin* [*q.v.*]. They were credited with the same source of inspiration, the djinns (Goldziher, *Die Ǧinnen der Dichter*, in *ZDMG*, xlv [1891], 685 ff.). However, the *shāʿir* was, originally, the repository of magical rather than divinatory knowledge; his speech and his rhythms were directed towards enchantment. *Hidjāʾ* and *rithāʾ*, satire and elegy respectively, were the primordial expressions of his magical power (T. Fahd, *La divination arabe*, 117, where, under n. 4, the principal references are to be found).

Like the *kāhin*, the *shāʿir* "guided the tribe on the ways of booty and of war". Both of them "advised, arbitrated, judged, decided, to the extent that, either their roles were blended with that of the tribal chieftain or they became the latter's advisers, flatterers or instigators" (*ibid.*). Their functions often coincided with that of the *khaṭīb* (Goldziher, *Der Chaṭīb bei den altern Arabern*, in *WZKM*, vi [1892], 97-102, summarised in French in *Arabica*, vii [1960], 16-18).

Kāhin and *shāʿir* expressed themselves in *sadjʿ* and in *radjaz* [*q.vv.*], a rhythmic style originally used for the enunciation of the oracle of the *kāhin* and for the chanting of verses of the *shāʿir* at the head of a column of troops setting out for war. The two functions, united at the outset, became progressively differentiated, as their sources of inspiration diversified. Thus *radjaz* was the basis of secular poetry and *sadjʿ* remained the mode of expression of the *kāhin*. This distinction appears clearly in Ḳurʾān, LXIX, 40-3 (cf. LXXXI, 19-25), where the text reads: "This is the word of a respected Prophet and is not that of a poet (*shāʿir*), men of little faith; nor is it that of a soothsayer (*kāhin*), men of little memory. It is a revelation (*tanzīl*) of the Master of the Universe" (cf. Fahd, *op. cit.*, 156, 64).

The functions of the *kāhin* and the *shāʿir* were frequently assumed by the *sayyid* [*q.v.*]. This resulted from the fact that "in the Central Arabia of the 6th century, a *sayyid* was chosen who, among the members of the tribe, was distinguished by his qualities of elocution, of decision and of persuasion. The desert Arab was determined to defend his liberty and would only be induced to submit to the chief's authority through reasoning and conviction; furthermore, the *sayyid* was entrusted with no powers of coercion and his prerogatives were limited. His prestige depended on his ability to influence his fellow-tribesmen with wisdom, with prudence, with informed advice, on his connections with the chiefs of neighbouring tribes, on his wealth and generosity" (*ibid.*, 118-19).

The first reference to the role of the *shāʿir* in the tribe is found in the *Ecclesiastical history* by Sozomenus (vi, 38, ll. 1-9), who was writing between 443 and 450. This author, born in a small village near Gaza, takes up what had previously been written by Rufinus, a contemporary of St. Jerome, who completed the *Church history* by Eusebius of Caesarea and translated it into Latin after 402, and Socrates, another historian of the Church (*Ecc. hist.*, iv, 36, ll. 1-12). These authors speak of a "queen of the Saracen tribe (Arabs)" (*saracenorum gentis regina*), called Mawia, who led a stub-

born war against the Romans on the borders of Palestine and Arabia (*vehementi bello Palaestini et Arabi limitis*/var. *limites*), defeated them and imposed her conditions on Valens (Emperor 364-78). According to Sozomenus, Mawia, widow of a chieftain killed in battle, played a very important role at the head of her tribe. After repudiating the accords (σπονδαί) concluded between her husband and the Romans, which were followed by excessive taxation demands, she set out to raid villages between Palestine and Egypt. Her victories and her courage were celebrated among the Arab tribes with popular songs (ᾠδαί). These songs were adaptations of poems in *radjaz* (see on this subject F. Altheim-R. Stiehl, *Die Araber in der alten Welt*, iii, Berlin 1966, 101 ff.; Fahd, *Mawia et Ḍudjʿum aw al-ʿArab wa ʾl-Rūmān fī awākhir al-karn al-rābiʿ*, in *Actes du Congrès International sur l'histoire de Bilād al-Shām*, ʿAmmān 1983). The connections which have always linked song and poetry are well known (cf. Blachère, *HLA*, ii, 357 ff.). It is also well known that poetic talent was widely distributed among both nomadic and sedentary Arabs (*ibid.*, 331 ff.).

Poets may be divided into two categories: the poet of the tribe and the poet of the court.

i. *The poet of the tribe.*

In a series of concisely written pages (*ibid.*, 238 ff.), R. Blachère has painted a vivid and very detailed portrait of this poet, the heir to a prestigious tradition. He is the quintessence of his tribal group, to which he is viscerally attached, even when he breaks his links with the latter (as in the case of the *ṣaʿālīk* or outlaws); as the spokesman of this group he participates in the essential manifestations of collective life (festivities, battles, delegations, etc.).

His verbal talents sometimes lead him to take on the role of *sayyid* (as in the case of Ibn ʿAdjlān among the Nahd, Zuhayr b. Djanāb among the Kalb, Muhalhil b. ʿAdī, ʿAmr b. Kulthūm and Durayd b. al-Ṣimma among the Djusham, Bisṭām b. Ḳays among the Shaybān, Laḳīṭ b. Zurāra among the Dārim, Mālik b. Nuwayra among the Thaʿlaba, al-Mukhabbal among the Tamīm, ʿAwf b. ʿAṭiyya among the Taym, Ḥātim and Zayd al-Khayl among the Ṭayyiʾ, ʿAbbās b. Mirdās among the Sulaym, ʿĀmir b. al-Ṭufayl among the ʿĀmir b. Ṣaʿṣaʿa, ʿAmr b. Maʿdīkarib and ʿAbd Yaghūth b. Ṣalāʾa among the Madhhidj, Uḥayḥa b. al-Djulāḥ among the Aws, Kaʿb b. al-Ashraf among the Naḍīr, etc.). Such talents enhance the prestige of the entire group. "The biographical accounts teem with anecdotes where the poet manifests himself by means of his incomparable renown and the unique power of his speech. Such an image could not be an imaginary invention. It must have corresponded to observed facts" (*ibid.*, 338).

We have here a being passionately devoted to the cause of his clan; he espouses its conflicts, he attacks its enemies, he replies to invectives (*hidjāʾ*) of which it is the object, he praises its past and present glories, he is the repository of its achievements. "Poetry", the caliph ʿUmar was supposedly told, "is the *dīwān* (the register, the memory) of the Arabs". Poets and poetesses often contributed to victory, with their presence at the head of armies, and to the comfort of survivors, with praise of the courage and valour displayed by those who had fallen in the course of the battle.

His public—it is hard to imagine him without a public—consists of his family and of his tribe, a whole world which "places its hopes in him, urges him on in his contests, praises him when he wins, turns to others when his inadequacies endanger the honour of the group" (*ibid.*, 339). His source of inspiration is found in his public, but this does not prevent him withdrawing into himself and expressing his own opinions and his disappointments regarding the human condition (for a selection of verses of this type, cf. Fahd, *L'homme vu par les poètes préislamiques*, in *Quaderni di Studi Arabi*, x [Venice 1992], 3-19). A tribe without a poet of renown was considered inferior (as was the case of the Murād and the Khathʿam). It was usually in the context of fairs, generally organised in the vicinity of pilgrimage routes, the most celebrated being ʿUkāẓ and Dhu ʾl-Madjāz near Mecca, that poetic competitions were held between tribes or between poets of the same tribe. "These competitions could exert the same attraction as duels: a day was appointed, the participants arrived in their finest garments, mounted on sumptuously appointed beasts; the audience formed a circle round them and, at the conclusion of the contest, congratulated the winner" (Blachère, *op. cit.*, 341).

The foregoing account constitutes the permanent core of the conception which may be held of the poet of the tribe. This core will be found in a more or less explicit fashion throughout the periods of evolution of the function of the poet in Arab society, as the latter glides imperceptibly from nomadism to sedentarisation, by way of a long period of semi-sedentarisation.

ii. *The poet of the court.*

Attracted by the glamour of urban or semi-urban society, the nomad poet, without leaving his group and without renouncing its defence, attached himself to a patron whose panegyrist he became, at the risk of losing a part of his liberty and sometimes his life. Becoming peripatetic, he had occasion to transfer his allegiance from one patron to another (as in the cases of al-Mutalammis, al-Nābigha al-Dhubyānī and Ḥassān b. Thābit). Lakhmids and Ghassānids competed in the collection of poets (as in the case of ʿAmr b. Kulthūm, Ṭarafa, al-Aʿshā Maymūn, Abū Zubayd b. Ḥarmala b. al-Mundhir, al-Ḥuṭayʾa, etc.): they demanded of them that they celebrate their achievements and their munificence in long poems. Generous towards those poets whom they considered the best, they could be cruel and despotic towards the others. The poets who frequented their courts brought with them their tribal quarrels; "their fury was fanned there by the game of covetousness, of personal quarrels, of sentimental intrigues, of the vanity peculiar to the *genus irritabile poetarum*" (cf. the quarrel of al-Nābigha al-Dhubyānī and al-Munakhkhal, *ibid.*, 299, 346).

Poetic circles were formed around Ghassānid and Lakhmid phylarchs at Djillīḳ in the vicinity of Damascus and at Ḥīra (around ʿAdī b. Zayd), by means of which Bedouin poetry began a process of evolution in contact with Syro-Mesopotamian civilisation. "At Ḥīra the personality of the poet was forged in the form in which it was to flourish at Baṣra or at Kūfa when ʿIrāḳ became the intellectual centre of Arabo-Islamic civilisation" (*ibid.*, 347).

iii. *The poet (of the tribe and of the court) after the advent of Islam.*

Following the disappearance of the Lakhmids and the Ghassānids, the poet of the court returned to his role as poet of the tribe, confronted by the hostility of nascent Islam towards poetry, considered decadent and a survival of Arab paganism. Dubbed a "djinn-inspired poet" by his Meccan adversaries (Ḳurʾān, XXI, 5; XXVI, 224-28, XXXVII, 35-36; LII, 29; etc.), Muḥammad denounced poets and poetry. As a result of this, the production of poetry declined. However, on arriving in Medina, he was unable to ignore the effective instrument of propaganda constituted by poetry. In the manner of a *sayyid*, he took

into his service an eminent poet who had been a protégé of the Ghassānids and of the Lakhmids, Ḥassān b. Thābit [*q.v.*], who became his accredited panegyrist. Other poets rallied around the founder of Islam, seen as a head of state unlike any other in the Arab world (as in the case of Kaʿb b. Mālik, ʿAbd Allāh b. Rawāḥa, Abū Ḳays b. al-Aṣlat, Bashīr b. Saʿd); others opposed him at the cost of their lives (as in the case of the Jewish poet of Medina Kaʿb b. al-Ashraf and others).

Under the first four caliphs, there was a gradual return to the appreciation of poetry, on condition that it upheld a certain ethic (*makārim al-akhlāḳ*). The poet Suḥaym was put to death, under ʿUmar, on account of his amorous escapades. This was not unaccompanied by a degree of embarrassment, "a sort of bad conscience paving the way for a process of rehabilitation" (*ibid.*, 355). Some went so far as to show the Prophet allowing improvisation and even improvising himself on the *radjaz* metre (al-Bukhārī, ed. Cairo, iv, 51) or reciting a fragment from a pagan poet (*ibid.*, iv, 52).

It was in the Umayyad period that the poet was to regain his place in his tribal group and as client of numerous patrons, caliphs, governors and prosperous merchants enriched by the wealth accruing from the tide of conquests. This was the age of prestigious poets such as al-Akhṭal, Djarīr and al-Farazdaḳ [*q.vv.*]. In accordance with the attachment of the Umayyad princes to Bedouin tradition, the poet returned to his original function as representative of his tribe and champion of its interests. He spoke of its past, of its glories, of its merits, either in eulogistic poems addressed to his patrons, or in contests of *fakhr* (boasting) or *hidjāʾ* (satire) in which he engaged with his rivals. All this was done with the aim of gaining credit for himself or for his tribe in the estimation of the one who was the subject of the eulogy. The poet of the court, in the terms previously described, was superseded by the poet of the tribe, even though his role was essentially played in the court. The vast majority of the poets who achieved eminence in this period were natives of the desert; throughout their careers, they remained in close contact with their tribes, to which they returned after the completion of their tasks in the court and in the presence of their patrons. Al-Akhṭal, a Christian of the great tribal confederation of the Taghlib, began with the celebration of local *sayyids* in the region of Kūfa. His career as "cantor of the Umayyads" started when Yazīd I, still the heir presumptive, commissioned him to satirise the Anṣār of Medina who claimed to be of "Yemeni" descent; he unleashed a poetical campaign which was to earn him vehement ripostes on the part of ʿAbd al-Raḥmān b. Ḥassān, al-Nuʿmān b. Bashīr and al-Nābigha al-Djaʿdī. Thus he found himself embroiled in the perpetual dispute between the Arabs of the South (Yemenis) and Arabs of the North (Ḳaysīs), the dispute which was to wreak such damage in all the phases of Arab history.

For his part, Djarīr also began his career with his tribe (the Tamīm); throughout his life, he remained attached to his ancestral desert, the Yamāma, returning to it after brief periods in Baṣra or in Damascus; he, too, was the spokesman of the Ḳaysīs against the Yemenis. Al-Farazdaḳ (also of the Tamīm), born like Djarīr in the Yamāma, began his career as a tribal poet, then served a number of patrons before succeeding in becoming official poet of the court, under the reign of al-Walīd I. It was in Baṣra that he spent the major part of his life; it was also there that he died.

Not one of these three poets resided in the caliphal court at Damascus. While politico-religious controversies (Ḳaysīs and Yemenis, Sunnīs and Shīʿīs) appear in their eulogistic and satirical poems, there is no echo to be found there of the life of the court. The sumptuous palaces of Damascus could not make them forget the desert in which they had been brought up; their poetic art, which is that of the great poets of pre-Islam, bears witness to this.

Hence the poet of the Umayyad period remained in the service of his tribe, like his predecessor in the pre-Islamic era. But his audience had changed. Conquests had fragmented the tribes and caused the proliferation of urban centres, colonised by segments of peninsular tribes; it was in these "colonies" that young poets were accepted and helped to make their way in this evolving society. The poet, usually of modest background, sought to exploit his art as a means of acquiring wealth and distinction. On the way he encountered rivals and competitors, and also risked making deadly enemies. Hence the important role of *hidjāʾ* in this period (in particular between Djarīr and al-Farazdaḳ). There would also be instances where he was caught in a vice between his ancestral group and the central or local power; it was then incumbent on him to attempt to serve the interests of both (for example, al-Farazdaḳ reminding the caliph of the support given him by the Tamīm at the time of the suppression of the Yemenis, in revolt at the instigation of Yazīd b. al-Muhallab, Blachère, 544 n. 4). There were instances where the poet refused to submit and appealed to his group for assistance; then, following a trivial incident, the issue grew in importance and "fire engulfed the tribe" (for example: a Sulamī poet, insulted by al-Akhṭal in the presence of the caliph, left in fury and incited his people to attack the Taghlib, *ibid.*, 544 n. 6).

Two factors contributed greatly to the popularity of the poets in the Umayyad period. On the one hand, the large number of patrons emerging from the governmental and military aristocracy, enriched by the acquisition of large estates (as in the case of Djunayd, governor of Sind, eulogised by Djarīr and al-Farazdaḳ); on the other, the return of the same aristocracy to its desert origins and to the chivalrous values of its ancestors. Also, panegyric (*madḥ*) and glorification (*fakhr*) occupied an important place in the poetry of this period.

From the point of view of the court, the poet was considered to be "an auxiliary of the central power and a link with the peninsular world, the upheavals in which should not be ignored" (*ibid.*, 546); he was "an element, if not permanent then at least influential", of the court. His talent, initially exploited politically under the Marwānids, was ultimately recognised in artistic terms, from the time of al-Walīd I (86-96/705-15 [*q.v.*]), himself a poet. For this caliph, the art of versification was not only a recreation; it was also "the instrument of expression of the 'self' and the source of intense emotions" (*ibid.*, 548).

The governors of provinces (Ziyād, al-Ḥadjdjādj, Khālid al-Ḳasrī, etc.) also employed poets for their propaganda, keeping them in a state of dependence as a means of avoiding conflict. Those opposed to the Umayyad régime themselves had recourse to the talents of poets (al-Aʿshā of the Hamdān paid with his life for his attachment to Ibn al-Ashʿath); numerous poets supported al-Muhallab as a supporter of the régime; others applauded his son Yazīd when he rebelled against the caliphal authority, but abandoned him immediately after his defeat. The same applied to the secessionist Zubayrids.

In this way the Umayyad poet, like the poet of the tribe in the pre-Islamic period, served the cause of his tribe and the politics which it espoused. Among the poets of the time, two themes often appear in their *dīwāns*; the quarrel between Ḳaysīs and Yemenis and the taking of sides in the conflict then in progress between Djarīr and al-Farazdaḳ. The dominant ideology remained the tribal affiliation which linked the two generations, that of pre-Islam and that of the Umayyad period.

An exception to this dominant current is constituted by the poetical school of the Ḥidjāz. The very rigid society which had formed in the urban centres of the region (Mecca, Medina and Ṭāʾif) under the first four caliphs, allowed no place for the poet, still regarded as representing the customs of pre-Islamic times and denounced by the Prophet. But as a result of the wealth which abounded in these cities, on account of the conquests and of the isolation in which they had lived for ten years, following the uprising of ʿAbd Allāh b. al-Zubayr, a perceptible evolution of customs and behavior led towards a sophisticated society in which song and poetry, favoured and cultivated by new patrons, underwent a striking development. Thus the poet was once again in service. But, remote from the centre of power and from tribal quarrels, he devoted himself to renewing an almost forgotten ancestral lyricism. So a type of literal "romanticism" was born, the hero being the poet himself, an amorous poet, deprived of his loved one on account of the rigidity of tribal morals (as in the cases of Ḳays b. Dharīḥ, Waḍḍāḥ al-Yaman, Madjnūn and Djamīl). Thus the poet became a character of romance.

A certain degree of female emancipation is evident in this period. Some women enjoyed a social promotion such that they were enabled to maintain literary "salons" and to receive poets (as in the case of ʿĀʾisha, daughter of Ṭalḥa, grand-daughter of Abū Bakr, the first caliph; Zaynab, daughter of Muʿayḳib; Zaynab, daughter of Mūsā; and most notably, Thurayyā, daughter of a wealthy family of Ṭāʾif, and Sukayna, grand-daughter of ʿAlī b. Abī Ṭālib, the fourth caliph). These women exerted considerable influence over the poets who entertained them, in particular, over ʿUmar b. Abī Rabīʿa, Kuthayyir and Nuṣayb.

The greatest poet of this period was undoubtedly ʿUmar b. Abī Rabīʿa [*q.v.*], a man of wealth and independence. He made a name for himself with his countless affairs with aristocratic ladies (including Fāṭima, daughter of the caliph ʿAbd al-Malik, and Umm Muḥammad, daughter of the caliph Marwān). His *dīwān* abounds with poems recounting his tempestuous loves, inspired by "a violent and mutual passion, coupled with estrangements and reconciliations" (*ibid.*, 631). Singers both male and female borrowed his poems, and storytellers made him a legend in his own lifetime, hence his considerable renown, which eclipsed that of the other poets of his time. He opened up a new direction in courtly poetry, a direction denounced by the moralists of the time (in particular by the Shīʿī circles of Medina) but much appreciated by the new poetical movement which came into being at the end of the Umayyad period. ʿUmar b. Abī Rabīʿa is far removed from the poet of the tribe, although retaining a few of the clichés, just as he is far removed from the poet of the court. More than any other poet of the time, he is the poet of the "self".

Bibliography: The principal source of material for this article is R. Blachère, *Histoire de la littérature arabe des origines à la fin du XV^e^ siècle de J.-C.* (of which all that has appeared is *La littérature et la poésie archaïque des origines jusque vers 107/725*), Paris 1952, 1964 and 1966, 3 vols. in continuous pagination (865 pp.); Arabic tr. Ibrāhīm al-Kīlānī, Damascus 1973, repr. 1984, 983 pp. In this writer's opinion, this is the only work which provides a comprehensive and accurate survey of the period in question. It is based on a vast bibliography, taking into account *dīwāns*, anthologies, commentaries and recent studies. It would be inappropriate to list all these here, since they have not been directly consulted.

To this magisterial work, which replaces everything that has gone before it, may be added this writer's own *La divination arabe*, Leiden 1966, repr. Paris 1967, where the poet is observed in his most archaic role. The reader is further referred to the work of Francesco Gabrieli on *La poésie religieuse de l'ancien Islam*, Paris 1974 (= *REI*, special edition, no. 8), since the limitations of this article have made it impossible to dwell for long on this period of transition. (T. Fahd)

B. From the ʿAbbāsid period to the *Nahḍa* [see Suppl.].

C. From 1850 to the present day.

The role of the Arab poet in society during the second half of the 19th century was a natural continuation of the low status of the Arab convivial poet (*al-shāʿir al-nadīm*) [see NADĪM], who composed panegyric poetry to earn his living by entertaining and celebrating his patron's generosity and "noble" character, and used his versification for celebrating his friends and society on their happy and sad occasions. The poet's role continued to be that of a platform orator celebrating, rejoicing, lamenting, inaugurating private and public buildings, criticising political and economic problems in conventional style and metaphors. Even in their panegyric poetry dedicated to the Prophet Muḥammad (*muwashshahāt* and *madāʾiḥ nabawiyya*) there was no serious attempt at metaphysical or spiritual expression.

However, an insight and an eyewitness to the condition of the role of the Arab poet in society is given in detail in the biographies written by ʿAbd al-Raḥmān al-Djabartī [*q.v.*] in his *ʿAdjāʾib al-āthār*. In fact, al-Djabartī is a rare example of Muslim scholar who classified the status of the poet in society as more important than that of the rulers, and below the religious scholars (*ʿulamāʾ*), because of the critical and intellectual role which the poet played in the Arab society.

According to al-Djabartī, the poet's role ranges from composing a verse to be engraved upon a seal in a finger-ring up to elegies. Verses and poems were ordered to be engraved on marble and plated with gold upon the vault of a reception room (*madjlis*) or upon the entrance of the mosques, on the walls of the sleeping room and on tomb stones, with blessings for good omen and the last verse denoting the date of the building and the name of the owner.

Al-Djabartī distinguished between the poor poets who earned their living by composing panegyrical poetry and the high-ranking scholars who wrote poetry to honour their friends as well as for social purposes and entertainment. The poorer poets used to attend ceremonies or to visit their generous patrons in their *madjlis* "near lunch hour" in order to get two presents, "a good lunch and a gift" in cash, sometimes of gold money. They used to recite their panegyrics standing before their patron or would hand him a written copy of their poem after kissing his hand or the edge of his attire, a custom which continued to

Aḥmad Shawḳī's time among conventional poets. High-class scholars like Ḥasan al-ʿAṭṭār (1766-1835), who later on became the Shaykh of al-Azhar, composed elegies to honour his deceased friends, scholars or rulers, and his poems were recited in the funeral by a special reciter (*munshid*) after the prayer. In his old age, he composed poetry to honour influential people, "only when necessary, and in order to show dissimulation towards them (*illā bi-ḳadr al-ḍarūra wa-nifāḳ ahl al-ʿaṣr*). However, a poet endowed with the ability of improvisation on subjects of discussion or in praise of his patron, and who was able to answer his patron or his friends in debate by improvised verses, was admired and considered of greater poetic talent.

During the 19th century and the first quarter of the 20th century, poets continued to serve as an effective mass medium for the rulers, rich patrons, merchants and religious scholars. Some poets were asked to compose poetry for the purpose of encouraging common people by their praise-poems (*madāʾiḥ*) to visit the shrines of Muslim saints (*walī*, pl. *awliyāʾ*). According to al-Djabartī, when al-Sayyid ʿAlī the dull-witted one (*ablah*), who was believed to be a saint, died on 16 Rabīʿ I 1214/17 September 1799, his brother brought poets and reciters of poetry (*shuʿarāʾ wa-munshidūn*) to sing his praise and enumerate his miracles and blessings in order to encourage people to visit his tomb and thereby to offer their donations and offerings to the saint in order to secure the income of the shrine.

Both patrons and poets were in need of each other: the patrons for the purpose of prestige and esteem and the poets for the purpose of living and for contacts with the ruling class and social connections. The generous Mamlūk *amīr* Murād Bey Muḥammad (d. 1215/1801) used to encourage poets to join his *madjlis* and lavished presents on poets who composed poems in his honour and increased his notability. When he died, poetesses and women singers composed elegies and sang them accompanied by music to lament his death. During revolts against oppressive Ottoman pashas and other officials, poets composed critical poems and versified slogans and taught them to children to chant them in the streets and in front of the rulers' palaces.

These conditions continued as late as the beginning of the 1920s. The Greek Orthodox poet and writer Mīkhāʾīl Nuʿayma (1889-1988 [*q.v.*]), under the influence of his Russian education and Romanticism, criticised in his book *al-Ghirbāl* the role of the poet in the Arab society. He accused contemporary poets of being platform orators and convivial poets who were engaged in the communal and festive life of his society. He unconsciously summarised al-Djabartī's description of the role of the poet in society, saying that they only deal with subjects such as *tahānī* (congratulations), *ikhwāniyyāt* (exchanging friendly poems), *musādjalāt* (debates) which were dedicated to other poets, *madīḥ* (eulogy), *rithāʾ* (elegy) for his patron, *ghazal* (erotic poetry), *wasf* (description) and celebration of a memorable occasion, an official or religious holiday, a public, political or military event, or the inauguration of public and private buildings. Nuʿayma attacked conventional poets, calling them "versifiers and craftsmen who versified every aspect of communal life, such as birth, death, wine-drinking, greeting friends. Thus everything is versified in Arab cultural life, except feelings and thought" (*al-Ghirbāl*, 122).

With the renaissance of the Arabic language and culture during the 19th century under the reforms of Muḥammad ʿAlī Pāshā [*q.v.*] in Egypt and the Christian missionary activities in Syria and Lebanon, a class of secular officials who were endowed with poetic talents sought to revive the classical Arabic rhetorics, style and themes, and used the method of *muʿāraḍa* [*q.v.*] (imitation of classical poems) for this purpose.

The semi-independent rulers in North Africa and the Middle East, the courts of such rulers as Amīr Bashīr II al-Shihābī (1767-1850) in Lebanon, the Egyptian Khedives from the accession of Ismāʿīl Pasha (1863-79) onwards, the court of King Fayṣal I in ʿIrāḳ (1921-33), and King ʿAbd Allāh (1921-51) in Jordan, looked for an entourage of poets and men of letters to speak their praise and merits as well as for the purpose of entertainment and social activities. In these courts, the status of *al-shāʿir al-nadīm* and/or of the poet laureate (*shāʿir al-balāṭ*) gained great esteem and respect with secured income. The duty of such court poets was to compose a poem to greet the ruler on feasts and holidays, birthdays, write poems of farewell when the ruler departed for a journey abroad and another at the reception on his return, greeting guests as well as on other occasions. The new courts were interested in neo-classical poets for their panegyrics in order to raise the rulers' esteem in the eyes of their people.

With the development of printing and journalism in the Arab world during the 19th century, poetry played an important role. Panegyric poems to the rulers published on the front page opened the gates of the sovereign's courts to these writers. When Fāris al-Shidyāḳ [*q.v.*] heard of the charitable deeds of Aḥmad Pasha, the Bey of Tunis, in Marseilles and Paris, he composed a panegyric poem on the Bey; the latter was so impressed with it that he sent a naval vessel to London to bring him and his wife to Tunis. This generous gesture made a great impression on al-Shidyāḳ, who praised the famed generosity of the Arabs in his book *al-Sāḳ ʿalā ʾl-sāḳ fī-mā huwa al-Fāryāḳ*, Paris 1855. Al-Shidyāḳ compared the role of the Arab poet in his society to that of European poets. He found that the main difference was that the Arab poets were eulogists who praised their patrons in exchange for their generous presents, and cited the old Arab maxim attributed to the Andalusian poet Abū Muḥammad ʿAbd al-Djalīl b. Wahbān that "presents open the mouth of the poets [to praise their patrons] (*al-luhā taftaḥu al-lahā*).

Subsequently, Fāris al-Shidyāḳ converted to Islam, a step influenced also by revenge for the death of his brother who was tortured to death (1829) by the Maronite clergy because of his conversion to Protestantism. Later on, he established his newspaper *al-Djawāʾib* and devoted most of his poems in praise of the Ottoman sultan and his officials.

The founder of *al-Ahrām* newspaper (Alexandria 1875), Salīm Taklā (1849-92), used to publish on the front page congratulatory poems to the Khedives Ismāʿīl and Tawfīḳ on their birthdays and the anniversaries of their ascension to the throne, as did also Yaʿḳūb Ṣannūʿ [*q.v.*] in his newspaper *Abū Naḍḍāra*, in which he published poems in praise of the Sultan and Prince Ḥalīm.

Aḥmad Shawḳī (1868-1932 [*q.v.*]) is considered the most famous poet laureate in the modern Arab world, and he was proud of his office as a court poet of the Khedive ʿAbbās Ḥilmī II (1892-1914), who bestowed on him the title of Bey (1905). When the British deposed ʿAbbās II, Shawḳī composed a poem in praise of the Sultan Ḥusayn Kāmil (d. 1917) (*al-Shawḳiyyāt*, i, 214-18) and the descendants of the Khedive Ismāʿīl. For this poem, he was exiled by the British to Spain. He became a member of the Senate in the Egyptian Parliament. In 1927 he achieved the

dream of every Arab poet and was honoured by a festival (*mihradjān*) of delegations of poets from all the Arab countries, in which he was declared "prince of poets" (*amīr al-shuʿarāʾ*). Less famous poets in the Arab world such as ʿAbd al-Muḥsin al-Kāẓimī [*q.v.*] received pensions from the *awḳāf* through the intervention of Shaykh Muḥammad ʿAbduh [*q.v.*], in compensation for his panegyrics.

In ʿIrāḳ, the poet Maʿrūf al-Ruṣāfī [*q.v.*], who edited *al-Amal* (1923), published his poems on the front page as his main articles. In consequence of his poems criticising the King and the government, his newspaper was stopped and he was summoned before the court. In order to earn his living, he composed panegyrical odes to the Prime Minister, ʿAbd al-Muḥsin al-Saʿdūn, but after the latter's suicide he lost his patron, and in his old age had to sell cigarettes to earn his living and compose verses to publicise Ghāzī Cigarettes. He also received a monthly salary of forty *dīnārs* from his rich patron Muẓhir al-Shāwī, an ex-member of the ʿIrāḳī Parliament, and in gratitude al-Ruṣāfī would send him a panegyric poem as a receipt.

Muḥammad Mahdī al-Djawāhirī (?1900-) was likewise appointed for a short time (1927-30) as poet laureate at King Fayṣal's court. In his successive newspapers *al-Furāt* (1930), *al-Inḳilāb* (1937), *al-Raʾy al-ʿĀmm* (1937) and *al-Awḳāt al-Baghdādiyya* (1951), al-Djawāhirī used to publish his poems on current political events instead of the main articles. When he joined the leftist movement in ʿIrāḳ, he criticised the government in his poems. As a result, his newspapers were closed down and he was put in jail. His brother Djaʿfar joined the demonstrations against the Portsmouth Treaty between ʿIrāḳ and Great Britain, and ʿIrāḳī poets used to recite poems during the *Wathba* of 1948, i.e. the students' revolt in Baghdād. As was the custom of many other nationalist and leftist poets as early as the ʿIrāḳī revolts against the British in 1920, they used to stand on cars or be carried on peoples' shoulders to recite their poems. Al-Djawāhirī's poems, lamenting the death of his brother who was killed in these demonstrations, were recited with amplifiers from the mosques and attracted a great crowd of mourners. In 1992 al-Djawāhirī recited a panegyric poem in front of King Ḥusayn of Jordan, praising him and the Hāshimite Royal Family; the poem received great attention in the Arab world and was broadcast several times on Jordanian television (S. Djubrān, *Ṣill al-falā*, 32-63).

The Prince, later King, ʿAbd Allāh of Jordan used to admit to his court poets of all ranks, who would recite poems after lunch in his praise written in grammatical Arabic as well as in Bedouin and urban dialects (Khayyāṭ, *al-Takassub*, 95). Even Jewish poets from ʿIrāḳ in Israel continued this Arab tradition, and the poets Salīm Shaʿshūʿ, Abraham Obadya and others greeted their friends and celebrated Israel's Independence Day with poems. They also recited elegies at the graves of the poets Anwar Shāʾūl [*q.v.*] and Dr. Murād Mīkhāʾīl and on the anniversaries of their deaths.

Under the influence of Western thought and poetry, a new generation of Arab poets (from 1850 up to 1920, the year when al-Rābiṭa al-Ḳalamiyya was established, and later with the establishment of the *al-Dīwān* group headed by al-ʿAḳḳād, al-Māzinī and Shukrī [*q.vv.*], and of the *Apollo* magazine by Aḥmad Zakī Abū Shādī in 1932), began to break completely with the tradition of *al-shāʿir al-nadīm*, seeing poetry as a serious and creative art. They were convinced that poets have a great responsibility towards their nation, country and culture, and can bring a moral, cultural, national, and spiritual revival to their countries. The young secular generation, especially, the Mahdjarī poets of al-Rābiṭa (1920-31) strove to revive the old function of the poet-prophet by claiming that the poet is not a beggar or a convivial companion, but something greater. Indeed, he is a creative artist, a prophet, a philosopher, a painter, musician and priest, who might have to sacrifice his life for his ideals and principles (see Abū Māḍī, *al-Djadāwil*, n.d., 73; Nuʿayma, *al-Ghirbāl*, Cairo 1946, 73-4; Djibrān, Muḥyī al-Dīn Riḍā (ed.), in *Balāghat al-ʿArab*, 55). There are no eulogies or elegies in the anthologies of the new generation of poets. Many poets since the 1920s have specialised in such topics as nationalism (*ḳawmiyya*), patriotism (*waṭaniyya*), social affairs, erotic poetry (*ghazal*), feminine affairs, etc.

All the revolutions and grave events in the Arab world, such as the female liberation movement, the events of World War II, the rise and fall of Nazi Germany, the Palestinian Question and the Arab-Israeli conflict, the Algerian uprising against France, the Civil War in Lebanon, the *Intifāḍa* in the Occupied Territories in Ghazza and the West Bank, all have had their own poets and poetry. Poets such as Ibrāhīm Ṭūḳān of Nābulus and his sister Fadwā Ṭūḳān, who started her poetic activities with elegies on her friends and relatives, have defended the Arab Palestinian question (F. Ṭūḳān, *Riḥla*, 72, 87-113), whilst leftist poets such as Badr Shākir al-Sayyāb, ʿAbd al-Wahhāb al-Bayātī and Kāẓim Djawād have recited their poems at demonstrations in defence of their liberal political views.

Although nowadays, due to the spread of printed and electronic mass media, the role of the Arab poet has become limited to a more confined audience, famous poets such as Nizār Ḳabbānī, Maḥmūd Darwīsh, Samīḥ al-Ḳāsim, etc., are still able to attract great Arab audiences during their poetry evenings, when they recite their poems concerning political, national and social subjects in many Arab and European capitals.

(S. Moreh)

D. In Muslim Spain.

The power of tradition in the Arabo-Muslim world

is such that the typology of the Andalusian *shāʿir* seems to have barely undergone any major transformations, in spite of a quite eventful political and military history. It is interesting to note, furthermore, that this typology follows, except in a few details, its eastern model; whatever may be said regarding this point, the fact is that the Orient, cradle of the Arabic language and of Islam, remained, for this distant province, the supreme cultural and spiritual reference. It may be recalled that the conquest of Spain was undertaken by Arabs, in 92/711, during the reign of the Umayyad caliph al-Walīd I, who ruled from 86/705 to 98/715, and that al-Andalus was administered, until the fall of the Umayyad dynasty in 132/715, by a score of governors who successively headed this country, on behalf of the caliphs of Damascus [see AL-ANDALUS. vi]. According to the sparse information which is available, poet-soldiers participated more or less directly in this expedition. Others, arriving from Syria or elsewhere, subsequently joined them. All played, to varying degrees, a not insignificant political role. By means of their poetic talents, they contributed to the consolidation of the authority of local governors and to the reinforcement of the prestige of the central power in Damascus. After the arrival of the ʿAbbāsids in the east and the profound political upheavals which ensued, the official Andalusian poets remained faithful to the "Syrian tradition".

In fact, very soon after the fall of the Umayyad caliphate, a Marwānid prince, ʿAbd al-Raḥmān I, nicknamed al-Dākhil (the Immigrant), secretly arrived in Spain and succeeded in reviving the Umayyad dynasty, having himself proclaimed *amīr* of al-Andalus in 138/756. In order to confirm his authority and restore the grandeur of his escutcheon, he enlisted to his cause a number of propagandists and poets who celebrated the glory of his family and his own in return for favours, money or rank. All his successors adopted the same line of conduct.

It is to be noted that the majority of these poets were of Arab origin, in most cases emigrants from Syria who remained closely attached to the traditions of this country. Furthermore, many of them ultimately became absorbed into the Arab aristocracy, the ruling caste of al-Andalus. But, following the start of the amīrate of ʿAbd al-Raḥmān II (206-38/822-52), Spain was "ʿIrāḳised" and gradually broke its links with the "Syrian tradition". The principal proponent of this "ʿIrāḳisation" was the eminent ʿIrāḳī poet Ziryāb (173-243/789-857 [*q.v.*]), who arrived in Cordova and introduced into the Iberian Peninsula the fashions of the ʿAbbāsid court (see E. Lévi-Provençal, *Civilisation*, 69 ff.). Henceforward, Damascus was also replaced by Baghdād as a model.

Another phenomenon, perhaps not unrelated to the afore-mentioned "ʿIrāḳisation", came into existence at about the same period, at any rate during the 3rd/9th century. After what was in fact a long period of mutual ignorance, the two very different ethnic elements populating Muslim Spain began to come closer together, in a process which gradually culminated in a kind of fusion particularly favourable to the birth of an original literature. These two phenomena had major repercussions regarding the typology of the Andalusian poet who, from the 3rd/9th century onward, freed himself to some extent from the hegemony of the "Syrian tradition" on the one hand, and showed greater awareness of what was fashionable in the ʿAbbāsid court of Baghdād, or what was developing before his very eyes, in his own country, on the other.

Very little information is available regarding the Hispano-Muslim poets who lived in the first centuries of Arab domination. One of the first anthologies, the *Kitāb al-Ḥadāʾiḳ* of Ibn Faradj al-Djayyānī (d. *ca.* 366/976) has not survived. That of Abu 'l-Walīd al-Ḥimyarī (d. *ca.* 440/1048) contains a selection of texts devoted to gardens and to the springtime, and gives information exclusively regarding floral poetry and the bucolic poets.

For the end of the 4th/10th century, and in particular the 5th/11th century, dearth of material is less of a problem, since there is access to a number of valuable documents and, in particular, two anthologies: *Ḳalāʾid al-ʿiḳyān* and *Maṭmaḥ al-anfus* by Fatḥ Ibn Khāḳān (d. 529/1134 [*q.v.*]), and especially *al-Dhakhīra fī maḥāsin ahl al-Djazīra* by Ibn Bassām (d. 542/1147 [*q.v.*]) (on the value and the importance of these anthologies, see Afif Ben Abdesselem, *La vie littéraire dans l'Espagne musulmane sous les Mulūk al-Ṭawāʾif* (*Ve/XIe siècle*), unpubl. thesis, Sorbonne-Paris 1992). The very existence of these Andalusian anthologies proves that during this period, poets were quite numerous.

The latter were highly esteemed by Umayyad sovereigns and ʿĀmirid *ḥādjibs*, who engaged their services in exchange for all kinds of favours. But after the collapse of the power of the Banū ʿĀmir (*ca.* 399/1009) and the outbreak of the civil war, the *fitna* which was to bring fire and bloodshed to the land, the poets were dispossessed, enduring these troubled times without the support of patrons. Some were obliged to leave the capital, Cordova, to seek out patrons elsewhere, and to live a peripatetic life similar to that of the troubadours (see Ibn Bassām, *Dhakhīra*, i/1, 67). "During this turbulent period," writes Ibn al-Khaṭīb, "the poets of the ʿĀmirids and the [last of the] Umayyads, on whose mouths and whose meeting-places spiders had spun their webs, lived in acute destitution; their natural dispositions were ruined. They were like lonely and famished falcons, forced by extreme necessity to subsist on a diet of grasshoppers" (see Ibn al-Khaṭīb, *Aʿmāl*, 122; H. Pérès, *La poésie andalouse en arabe classique*, 80).

But the most favourable period for the Andalusian poets was undoubtedly that of the Mulūk al-Ṭawāʾif [*q.v.*], who succeeded in building on the ruins of the Umayyad caliphate of Cordova principalities, some of which were particularly dynamic and prosperous. In the interests of propaganda and for reasons of prestige, all these sovereigns made it a point of honour to attract to their courts the best artists, writers, and poets in particular. Thus poetry became a highly esteemed product. This extraordinary fascination with the rhyming game was shared—no doubt for the same reasons—by the most varied classes and levels of the population. At the summit of the social scale, were princes, *wazīrs*, senior dignitaries, etc. Marwān al-Ṭalīḳ, a descendant of the caliph ʿAbd al-Raḥmān al-Nāṣir, may be said to have found his true royalty in poetry, after the model of the ʿAbbāsid Ibn al-Muʿtazz, to whom he is often compared (see Ibn al-Abbār, *Ḥulla*, i, 221). It would be tedious and unnecessary to list here all the Andalusian poet-princes and to analyse their poetical works. Suffice it to say that, in aristocratic circles, the composition of verse was learnt at a very early age. It constituted an essential element of the education of the young aristocrat. Occasional courting of the muses was a popular pastime, practised most often for personal gratification, or in order to conform to a fashion, or to advertise a certain art of living. The poetic themes most often tackled were *fakhr* [see MUFĀKHARA] and descriptions. The most mundane incidents of daily life were recounted in verse. The prince of Seville al-Muʿtamid

Ibn ʿAbbād [*q.v.*] whose life was "pure poetry in action" (see E. García Gómez, *Poesía*, 70), addressed himself in verse to his father al-Muʿtaḍid, asking for a bay horse or a shield, requesting his permission to go hunting, or begging his forgiveness in the wake of his unsuccessful attempt to seize Malaga (see *Ḳalāʾid*, 21-2; *Dhakhīra*, ii/1, 47-8; *Bayān*, iii, 275).

The circle of the élite (*khāṣṣa*) was not limited to the prince and to his family; it also included dignitaries of all kinds and members of the middle classes who, having received a similar education, shared the same passion for poetry and the same ideals of culture and refinement as were demonstrated by their masters. Also belonging to this social category were numerous poets who, as scions of prosperous families, were not obliged to market their talent in order to make a living. However, in the interests of maintaining good relations with the prince, such poets would from time to time address verse to him, with the aim of assuring him of their devotion and fidelity. A wealthy aristocrat of Seville, Abū ʿĀmir Ibn Maslama (d. after 441/1049) compiled, for the ʿAbbādid king al-Muʿtaḍid, *Ḥadīḳat al-irtiyāḥ fī waṣf ḥaḳīḳat al-rāḥ*, a collection of choice fragments in praise of wine. This collection includes extracts from Andalusian authors, as well as texts composed by Ibn Maslama himself (see *Maṭmaḥ*, 203-6; *Dhakhīra*, ii/1, 105-12; *Mughrib*, i, 96-7; *Nafḥ*, iii, 544-5).

It is altogether remarkable that, in the time of the Mulūk al-Ṭawāʾif, the number of poets belonging to the lower orders (*ʿāmma*) was considerably greater than the number belonging to the upper classes. These multitudinous versifiers were in the majority from the original population of Spain (*muwalladūn*) and of modest extraction. Most were of peasant origin, which would explain their intense love of nature and their passionate attachment to the land. They practiced the most diverse professions, but teaching was the commonest occupation for them. It was also the least well remunerated. Thus their living circumstances were not enviable. At the same time, they knew that generous patrons were not in short supply and that the profession of poetry could shield them from need and provide them with self-respect—and money. Also, the number of professional poets was never so great, and the career never so popular, as in this period. The multiplicity of princely courts and their constantly-growing need for ceremonies, talents and abilities of all kinds, encouraged the proliferation of rhymers for hire. In this period, poetry was subject, in fact, to the law of the market, which was particularly ebullient, since, to quote an expert judge of Andalusian poetry, E. García Gómez, "an improvisation could be worth a vizierate". To varying degrees, all the Mulūk al-Ṭawāʾif left behind them a reputation as protectors of literary men and of poets in particular. But in giving aid and protection to the latter, their actions were not altruistic or disinterested. On the contrary, their motivations were very precise. They reckoned that it was in their interest as well as their duty to perpetuate a tradition which appreciated the value of the role of poets in Arabo-Muslim society. Born with Arabic literature, patronage became in effect "a mode to which one must conform or risk falling from high estate" (see R. Blachère, *Aboû ṭ-Ṭayyib al-Motanabbî*, Paris 1935, 6).

Furthermore, it is said that there was established, between the patron and the hired panegyrist, a relationship in which the former enjoyed a net advantage, imposing on the second the choice of language and of themes. Poetry thus became a domain reserved for the aristocracy, the inspirers and consumers of this culture, in which the role of the creator was considerably reduced (see *Yatīma*, ii, 285).

The objective sought by the above-mentioned prince-patron was probably the political exploitation of the poet, whose role resembled that played today by the press. Following the fall of the Umayyads of Cordova, certain panegyrists attempted to legitimise the claims to the caliphate of the first Mulūk al-Ṭawāʾif by inventing an Arab genealogy for them, although it was common knowledge that they were ethnically Berbers.

Political circumstances required that the Andalusian poetry of the 5th/11th century should be principally a poetry of the court and that the vast majority of poets should be panegyrists. Despite their impressive number, living in thrall to princes and other powerful individuals brought them mixed fortunes. But without such patronage, they stood little chance of making themselves known and pursuing a successful career. If Ibn Bassām, the author of the *Dhakhīra*, is to be believed, a literary person must always put his talent to the service of a prince or else his works will be disparaged and he will never acquire renown. In this regard, he mentions the case of ʿAbd al-ʿAzīz Ibn al-Labbāna (the brother of Abū Bakr al-Dānī Ibn al-Labbāna) who, in spite of his erudition and his talent, having refused to use his poetry as a means of gaining a livelihood, or a device for seeking the protection of a king, fell into total obscurity, his poetry not surviving him (see *Dhakhīra*, iii/2, 667; *Muʿdjib*, 93, tr. Fagnan, 126; Ben Abdesselem, *ibid.*, 356).

If an attempt is made to sketch the *curriculum vitae* of an average Andalusian poet, typically of humble origin, it may be noted that, after more or less thorough studies in his native village and then in a large town, he launches himself upon an errant life, offering compositions in praise of a wealthy bourgeois person, a senior official or a generous prince with the object of obtaining from him gifts in money or in kind. But success is not always assured, and the apprentice-poet must demonstrate modesty and patience if he is to surmount the obstacles liable to be placed in his path. At the outset of his career, Abū Bakr Ibn ʿAmmār [*q.v.*], making his way to Silves [see SHILB], addressed some verses to a dignitary of this town, who sent him the princely reward of a small bag of barley (see *Dhakhīra*, ii/1, 369-71; Ben Abdesselem, *ibid.*, 350).

The ideal situation for the poet was to be taken into the service of a prince and included in the list of pensioners (*dīwān*) (see al-Ḍabbī, *Bughya*, 148; Ibn al-Khaṭīb, *Iḥāṭa*, ii, 71). But in order to be placed on this list, it was necessary first to pass successfully a kind of examination. The candidate presented himself at the court, where he was put into the charge of a functionary who had the responsibility of arranging accommodation for the sovereign's guests and for itinerant poets in the precincts of the palace. This accommodation officer, called *ṣāḥib al-inzāl*, did not always have the best of relations with his charges, who tended to be hard to please, even unconventional (see Pérès, *Poésie andalouse*, 72 ff.). Subsequently, the candidate was obliged to wait his turn to be heard by the prince, who usually set aside one day each week for the reception of poets. This day varied from one prince to another. Under the reign of al-Muʿtaḍid of Seville, it was normally a Monday (see *Nafḥ*, iv, 243-4). Historians have supplied detailed accounts of some of these receptions, including that of Ibn Djākh who so impressed al-Muʿtaḍid that, having heard him, he allowed no others to mount the rostrum that day. At this time, patrons were both men of power and men of letters. They applied meticulous commentaries

and criticisms to the compositions of their poets, who were obliged constantly to take account of their literary preferences. Even after his inclusion in the list of pensioners, the official poet was almost always under pressure, since the relationship linking him to his benefactor was in fact that of master and servant. He supplied the echo to the deeds and achievements of the prince, celebrating in particular his political, diplomatic and military exploits. He was at the mercy of the smallest caprice on the part of his patron. At any moment, he might receive the order to compose a piece regarding such-and-such a subject. The poet Abu 'l-Walīd al-Naḥlī was required to be constantly at the disposal of al-Mu'tamid, the king of Seville (see *Nafḥ*, iii, 234). On one occasion, the latter summoned Ibn Ḥamdīs, one of his official poets, in the middle of the night, requiring him to complete some verses which he had begun drafting himself (*Nafḥ*, iii, 616-17). The majority of patrons enjoyed putting their client-poets to the test in such ways.

But the most skilful and the luckiest acolytes found it was to their advantage to show themselves particularly demanding, going so far as to determine in advance the price to be paid for a panegyric. Abū 'Alī Idrīs Ibn al-Yamanī composed his eulogistic poems to order and at a fee of 100 dīnārs per composition (see *Dhakhīra*, iii/1, 336-7). These professional poets acknowledged without the slightest scruple that it was "presents which loosened tongues" (Pérès, *ibid.*, 36 n. 2, 81). Furthermore, their demands were in their view amply justified, since princes found difficulty in doing without their services. In this regard, 'Abd al-Djalīl Ibn Wahbūn, addressing al-Mu'tamid Ibn 'Abbād, said "O you who hold the glory! This would be as a beast astray were it not upheld by poetry" (see *Dhakhīra*, ii/1, 502). When his abilities permitted, the poet of the court was not content with playing the role of a hired flatterer; he could rise to high office and become an ambassador, governor, minister or even chief minister (*dhu 'l-wizāratayn*). Such was the case with Abu 'l-Walīd and Abū Bakr Ibn Zaydūn, Abū Bakr Ibn 'Ammār, Abū Muḥammad Ibn 'Abdūn, among others (see Pérès, *ibid.*, 84 ff.). Furthermore the word *wazīr* (vizier), which had the meaning of *kātib* (secretary), became, in the 5th/11th century, a synonym of "poet". A good prose-writer was, most often, a poet as well. "Al-Mu'tamid," says al-Marrākushī, "appointed as viziers only men of letters, poets versed in all kinds of expertise, so that he had around him an assembly of minister-poets such as never had been seen before" (see *Mu'djib*, 65, tr. Fagnan, 90).

But even if all his hopes were realised, the court poet could not be sure of keeping his acquired privileges indefinitely. Disgrace was just as likely an outcome as was promotion, and the occasions of risk were not lacking. Often, he was the victim of jealousy and treacherous attacks on the part of his colleagues, who baulked at no calumny in their efforts to dislodge him. An example of this would be the intense and prolonged rivalry between the two 'Abbādid ministers Abu 'l-Walīd Ibn Zaydūn [*q.v.*] and Abū Bakr Ibn 'Ammār (see *Dhakhīra*, ii/1, 429).

The Andalusian poets were not only hired panegyrists or shameless mendicants. The majority of them had occasions at some time or other in their lives to act as the spokesmen of their community and as interpreters of public opinion. Certain disasters which entailed collective grief did not leave them indifferent. Events which had a traumatic effect on their compatriots, such as the capture of Barbastro by the Normans in 456/1064, or that of Toledo by Alfonso VI in 478/1085, inspired them to compose verse suffused with profound emotion. The poem of al-Sharīf al-Rundī (9th/15th century) lamenting the fall of the last Muslim metropolises of al-Andalus into the hands of the Christians, was especially influential (see Mustapha Hassen, *Recherches sur les poèmes inspirés par la perte ou la destruction des villes dans la littérature arabe du III^e/IX^e siècle à la prise de Grenade en 897/1492*, unpubl. thesis, Sorbonne-Paris 1977).

Relatively reticent and few in number until the end of the era of the Mulūk al-Ṭawā'if, the *washshāḥūn* and the *zadjdjālūn* subsequently acquired some eminence in those minor poetic genres, *muwashshaḥ* and *zadjal*, which they practised successfully until the end of the Arab presence in the Peninsula. It may be noted that the compositions of these popular poets were principally addressed to the general public, unlike the "standard" poetry, conforming to the taste of the élite.

Although considerably more numerous than in other countries of the Arabo-Muslim world, Andalusian poetesses were decidedly less numerous in Spain than their male counterparts. In all periods there had been, in the entourage of the prince, educated women who were capable of writing in verse and in prose; but there were never court poetesses playing the role of accredited panegyrists. Women capable of composing verse belonged to several major categories. Some lived in harems, where most existed in servile conditions, bought in exchange for gold, having been instructed by experienced professionals. Others were wives or daughters of princes, such as I'timād, the favourite legitimate wife of the king of Seville, al-Mu'tamid Ibn 'Abbād, or Umm al-Kirām, the daughter of al-Mu'taṣim Ibn Ṣumādiḥ of Almeria. Others displayed great independence and frequented literary societies and salons. Such was the case of Wallāda, the daughter of the caliph al-Mustakfī, who, after the death of her father, maintained a salon which attracted the most renowned of writers. In the *Nafḥ al-ṭīb*, al-Makkarī supplies biographical notes and quotations concerning twenty-five Andalusian poetesses, whose poetry is generally personal and small in quantity: al-Makkarī quotes only a hundred or so of their verses (see *Nafḥ*, iv, 205-11).

At first sight, it would be tempting to believe that the typology of the Andalusian poet is a carbon copy of that of his Syrian, Egyptian or 'Irāḳī counterpart. There is an impression that there is a single type of standard poet, unaffected by place or time, so striking is the similarity between these different types of poets. However, on closer inspection it becomes clear that beyond a certain undeniable similarity, it is impossible not to recognise the existence of a local colour and a typically Andalusian flavour, creating an integral element of the world of the Hispano-Arabo-Muslim poet.

(A. Ben Abdesselem)

E. The folk poet in Arab society.

Arabic folk poetry and song exhibit a far greater formal diversity than the written tradition of Arabic poetry. In contrast to the strict monorhyme structure of the classical ode, *ḳaṣīda* [*q.v.*], the multi-rhyme strophic *muwashshaḥ*, and *zadjal* [*q.vv.*], or even modern free-verse, local genres of folk poetry and song exhibit a multitude of distinct forms. In addition, the composition, transmission, and performance of these forms

varies from genre to genre across different regions and even within particular communities; some genres are entirely pre-composed and are typically preserved, transmitted, and performed with little change, while others are improvised in performance with little or no attempt at preservation, and still others may be the combined work of several individuals, being initially composed by one person, set to music by another, and publicly performed by still another. As the terminology and social characteristics attributed to poets, the act of poetry-making, and the performance of poetry, contrast sharply from one area to the next, regional conceptualisations of the figure of the folk poet and his or her role in society are quite diverse.

The performances of folk poets are a widespread form of expressive art found in rural and urban areas throughout the modern Arab Middle East. The repertory of these performances is primarily oral, composed in traditional forms, often improvised, and produced in colloquial Arabic rather than literary Arabic or *fuṣḥā*. Much of Arabic folk poetry exists as song rather than as declaimed or recited verse. Among some social groups such as the Banī Ḥalba of Sudan, for example, poetry exists only as song, is identified directly with singing, and may be additionally associated with dance and/or other forms of coordinated movement such as Ṣūfī *dhikr* [*q.v.*]. In contrast, among tribesmen of the Khawlān al-Ṭiyāl region of North Yemen, it is considered undignified for a man to raise his voice in song, and men's poetry is instead recited or chanted, unless presented by professional male performers who sing publicly.

Folk poets and poetry have survived in an ambiguous and at times conflicted relationship vis-à-vis the poetic traditions of Arab "high" culture. Part of this ambiguity lies in their intimate association with music, which has held a disputed place in Islamic religious thought since the early centuries of Islam, and part in their connection to colloquial Arabic as a medium of expression, which historically has been denigrated in contrast to literary Arabic. The first known public defence of colloquial poetry as an art form possessing aesthetic merit is that penned by Ibn Khaldūn [*q.v.*] in the 8th/14th century in the final sections of his *Muḳaddima*. Many of these literary and religious tensions have indirectly affected perceptions of the status and function of the folk poet; despite the negative views espoused by both literary figures and religious scholars over the centuries, Arabic folk poetry has survived as a vibrant and rich force in Arab culture.

In many communities a significant portion of the adult population is expected to display competence as composers and/or participants in various common genres of folk poetry. Such is the case with the *bāla* for men in North Yemen tribal areas, the women's *ghināwa* among the Awlād ʿAlī Bedouin of Northern Egypt, the *sāmir* or *sāmrī* of the Arabian Gulf, and the *ḥawfī* and *zindāna* song forms among women in western Algeria, among other examples. General participation in singing genres such as wedding and work songs, which include the composition of spontaneously improvised verses, is widespread in rural areas of Egypt, Palestine, Lebanon, Morocco, Saudi Arabia, Sudan, Yemen and elsewhere. In many cases, these poetic/song genres are specific to one gender or one social group. These communal forms of poetic composition and performance, however, do not usually confer the title or status of "poet" upon participants, but rather are regarded as basic social activities within the community.

The concept of *shāʿir* as a distinct social category in different traditional communities is delineated by various combinations of social, economic, ethnic, and literary considerations. The term *shāʿir* may refer to an ordinary individual with a particular talent, a specialised but non-professional social function within the community, a professional artisan of either high or low status, an ethnically marginal and even predatory figure, or the paid performer of a single particular genre. Depending upon the genre and the region, *shāʿir* may indicate primarily a transmitter of previously composed poetry, a figure who pre-composes set pieces which are then performed by himself or others, or an extemporising performer whose spontaneous creations are rarely preserved except anecdotally. In addition, in almost all rural areas and in lower-class urban settings of the modern Arab Middle East, the literary concept of "poet" exists alongside the concept of the local, traditional folk poet. To label an illiterate older man a *shāʿir* in village conversation may indicate a proficiency in composing and singing a colloquial, improvised form of folk poetry; to apply the term *shāʿir* to a young college-educated man from the same community may indicate an entirely different ability to compose written poetry in literary Arabic which is recited but not sung.

The distinction drawn between poet (*shāʿir*), reciter (*rāwī*), and singer (*mughannī* or *muṭrib*) in literary histories is often blurred within the domain of folk poetry and song; in many communities, however, this division of labour is maintained in a highly articulated system. Such is the case in North Yemeni tribal poetry of the Khawlān al-Ṭiyāl region. A spectrum of poetic forms exists there ranging from widely-practised genres such as the improvised *bāla* performed at weddings and other celebrations by most adult males, to the *ḳaṣīda* which is pre-composed by an individual poet (*ḳaṣṣād* or *shāʿir*) and then usually passed on to a *dōshān* (town crier) or a *mulaḥḥin* (composer/singer) or *ṣayḥa* (declaimer of tribal poetry) who performs it publicly.

In Lebanese colloquial poetry, a poet of *zadjal* [*q.v.*] verse may be referred to as a *zadjdjāl* (a composer of *zadjal* vernacular poetry), a term which implies a lack of ability to spontaneously or extemporaneously compose when contrasted with a *ḳawwāl* (a performer or "speaker" of *zadjal*) or *shāʿir*. The latter term in modern times has also come to connote a literate composer of written *zadjal*. Amongst the Sinai and Negev Bedouin, a composer adept at spontaneous improvisation is termed a *baddāʿ* rather than a *shāʿir*. Such contrasting sets of terms gloss gradations of ability, social origin, performance roles and even gender in various regions of the Arab Middle East.

In those regions where the function of performer is distinct from that of composer, the public performers of poetry are often accorded far less respect than the original poet and are in many cases from marginal social groups. Alois Musil's brief but now classic description of poets among the Rwala Bedouin in Northern Arabia from the early 20th century presents such a bifurcation in the status of the tribal poet. Musil documents the Rwala's intense love of poetry and poetry-making alongside their belief that a poet cannot be trusted, as expressed in the proverb: *ḳaṣṣād kadhdhāb* "a poet is a liar" (Musil, 283). In addition, he notes the general lack of esteem with which Rwala men regarded itinerant or beggar poets, who are deemed predatory social figures often suspected of lying and stealing. In North Yemen, the performing figures of *dōshān*, *mulaḥḥin*, or *ṣayḥa* mentioned above, are all granted considerably less status than the composer of a *ḳaṣīda*. This respect for the art of poetry-making coupled with widespread distrust

of those persons who are either paid or seek remuneration for their public performance of that art is found in many communities of the Arab Middle East.

However, the opposite situation is also found, even among neighbouring Bedouin tribes; among these groups it is considered honourable to recite poetry, but not to compose it. Among the Balḳāʾ tribes of Jordan, for example, the term *s̲h̲āʿir* was traditionally applied to men who sang to the accompaniment of the *rabāba* (Arabian one-string spike-fiddle) for pay and who composed praise poetry for men of noble lineage or for political patrons of their clan. All men can recite poetry without having their reputation tainted, but to compose poetry implies socially subservient, even slave, status and a lack of political power. The preferred situation is to have others compose poetry about you and your family, poetry which may then be recited by one and all. To compose poetry means that a man is either not powerful enough or noble enough to be the recipient rather than the producer of poems.

A social function filled by folk poets in many areas is that of oral historian. A large portion of the poetry of a community may be devoted to the preservation of historical knowledge concerning lineages, conflicts, heroic deeds, and other defining elements of the group's present identity. The folk poet may be considered a poet not primarily for his/her ability to compose new poetry, but rather for the ability to memorise and transmit a body of poetry from the past. As communal identies are in constant flux, a folk poet may serve the key function of maintaining and performing one specific view of history, one local identity, in a market place of competing poetic traditions which document other constructs of the same historical events. Where such historical poetry is widespread, it is almost always linked to prose narratives recounting the events touched upon in the poem; indeed, it is common for the main historical information to be embedded in the accompanying narrative while the poem itself may provide only a rather clichéd description of battle or some other common motif. The two parts function as a single discursive unit each lending the other validity. The poem is thus rendered comprehensible and meaningful when performed along with its narrative; the story is given authority and historical substance by the presence of the poem. This view is documented by a statement from the Balḳāʾ Bedouin of Jordan: "A story without a poem is a lie" (*al-guṣṣa illī mā ʿindhā gaṣīda kid̲h̲ib*). The interactive role of poetry and narrative in the functioning of the poet as historian is also documented in the Arabian peninsula and the Sinai and Negev deserts.

In many regions, the division between professional and non-professional poets lies not only in the financial realm but also in the musical aspect of the performance. Those genres of poetry which are performed in full singing voice and/or to the accompaniment of instrumental music are nearly always the domain of professional performers. The term *s̲h̲āʿir* is often applied within a community to either the musical or non-musical performer, but rarely to both.

In areas where genres of poetry, song and/or dance are an integral part of social occasions and celebrations, folk poets at times exist as respected specialised artisans whose status as recognised craftsmen is untainted by the fact that they are professionals who perform for pay. Such is the case with performers of various genres of Palestinian, Lebanese, and Syrian folk poetry common to weddings and other festivities. Performers of the Palestinian *ḳṣīdih, ḥidā* and *ḳarrādī*, for example, are virtuoso performers of improvised verse who perform as solo singers or in poetic duels pitting one poet's skill against other poets or audience members. Poetic duelling involving two or more poets improvising spontaneous verse is found in many other regions, including Arabia, Lebanon, Palestine and Turkey. Poetry of these genres is thus a discourse which emerges through the figure of poet in competition and contest. These exchanges may take the form of insult matches or be based upon other themes including sharp political and social commentary on local affairs. Non-professional participants at times enter into the competition, but if a regional class of recognised, professional poet-singers exist, they usually dominate the performances.

The term *s̲h̲āʿir* may refer to an ordinary person who happens to compose poetry or it may gloss a whole complex of social marginality and outsider status. In the example of North Yemen, the composing poet is understood to be an ordinary individual with a particular talent or poetic inspiration (*hād̲j̲is*). He plays a role not only in maintaining tribal honour and identity through the composition of praise poetry but may also play a political role in local dispute resolution, which is conducted in poetry, and occasionally even at the level of national politics. Similarly, in the Lebanese, Syrian and Palestinian traditions, a poet is a gifted individual. In some communities, however, professional poets may be viewed as possessing different social or even ethnic origins. Such is the case of the professional singers of the oral folk epic *Sīrat Banī Hilāl* in Egypt, the Ṣlubba of the Arabian peninsula, and to a lesser degree, the slave-poets of Jordanian Bedouin tribes.

Egyptian performers of the *Sīrat Banī Hilāl* are hereditary professional performers most often from marginal social groups grouped together under the rubric of Gypsies (*g̲h̲ad̲j̲ar*). The epic singers are perceived as both the source of an appreciated art form, the epic itself, and a source of public praise or blame due to their ability to insert social commentary aimed at individuals, groups, or local political situations into their performances. This power is frequently a source of anxiety and tension in small communities and the poet is therefore often accorded great displays of respect in performances, while often denigrated and shunned outside that context. In the Nile Delta region of northern Egypt, almost all epic singers are ethnically from the Ḥalaba or Wilād Ḥalab groups commonly recognised as Gypsies. Since the terms Ḥalaba and *g̲h̲ad̲j̲ar* are considered derogatory, the epic singers and their families are referred to as *s̲h̲uʿarāʾ* (pl. of *s̲h̲āʿir*) whether or not the individual in question is a performing poet and whatever their current occupation; the term carries an almost ethnic significance. Performers of other genres of folk poetry are referred by other terms such as *muns̲h̲id, maddāḥ* [*q.v.*], *mug̲h̲annī* or simply *s̲h̲ayk̲h̲* [*q.v.*] to avoid the locally-stigmatised status of the term *s̲h̲āʿir*, which has come to mean Gypsy poets who perform on the *rabāb* [*q.v.*] (the Egyptian two-string spike-fiddle). The Egyptian *muns̲h̲id* and *maddāḥ*, by contrast, are also folk poets, associated primarily with a religious repertory; neither, however, are commonly referred to as a *s̲h̲āʿir*.

Although most forms of folk poetry are oral in both composition and transmission, in some forms of folk poetry the boundaries between the written and the oral are not distinct. This is the case of the Egyptian *muns̲h̲idīn*, who utilise both fragments of classical poetry and improvised sections in colloquial Arabic, as well as performers of the folk *mawwāl* [*q.v.*] and the religious song-tales, *ḳiṣaṣ dīniyya* or *ḳiṣaṣ al-mas̲h̲āyik̲h̲* ("religious stories" or "stories of the *s̲h̲ayk̲h̲*s"), who

often rely upon literate ghost-writers and written forms of transmission for the content of their partially-improvised performances. Whether or not these are to be treated separately as "popular" rather than purely "folk" poetry, this interactive process is not a purely modern innovation but rather has been going on for centuries.

Performers of religious folk poetry transmit a body of traditional lore which greatly shapes the views of many believers in rural and lower-class urban areas about their religion, whether they be Christians or Muslims. Though the repertory itself may at times be referred to as poetry or song, the purveyors of these traditions are rarely if ever referred to as "poets".

The use of the female form *s̲h̲āʿira* appears to be quite limited. In most folk cultures of the Arab Middle East neither the male nor the female form of the term "poet" are applied to the composition or performance of genres of communal singing or poetry-making but rather only to individual public performance or composition, and within that realm the term is most often used for the composition of pre-composed rather than improvised genres. (The *s̲h̲āʿir* as performer of Lebanese, Palestinian, and Syrian improvised *zad̲j̲al* and *ʿatāba*, however, is a notable exception to this rule). Since the majority of women's poetic genres are not public performance genres, the term finds little usage. There is still, however, regrettably little documentation of the terminology used among women for performers of women's poetry.

In the classical Arabic literary tradition, *s̲h̲āʿir* has most commonly been contrasted to the term *rāwī*, indicating respectively a poet who actively composed new poetry versus a reciter who primarily performed the work of other poets, alive or dead. Both, however, were expected to be capable of performing a large repertoire of memorised poems; the additional ability to compose was the feature which distinguished the *s̲h̲āʿir*. This distinction is still maintained in some communities of the modern Arab world. It is, however, far more common in traditional communities to find *s̲h̲āʿir* applied to a specific type of performer distinguished by the financial remuneration given to a performer with professional status, the musical dimension of the performance in the form of either the use of instrumental accompaniment or simply by the use of full singing voice (in contrast to recitation or chanting), or to a specific class of performer marked by a different social origin or status. Despite the overall respect accorded literate poets and both literary and oral poetic traditions, *s̲h̲āʿir* in Arab folk society just as often indicates a suspect or ambiguous social figure as it does a respected artist.

2. In Persia.

In pre-Islamic Persia, secular poetry was almost exclusively an oral art. This ancient tradition was carried on by minstrels who were called *gōsān* during the Parthian period and later, in Middle Persian, *huniyāgar* (New Persian *k̲h̲unyāgar*). They were performing artists in the first place: storytellers, singers and musicians as well as improvising poets. Their répertoire already included several of the lyrical and epic genres known from Islamic times. However, the virtual absence of a written transmission of poetry, which became the cause of the almost complete loss of pre-Islamic poetry, determined the type of secular poet known in Persia prior to the coming of the Arabs. As M. Boyce has remarked, the Persian language lacks a proper indigenous term for "poet" as the term was understood in the classical tradition: "Presumably Arabic *šāʿir* was adopted for 'poet' when the conception of separate, literary composition came to develop after the conquest" (*The Persian gōsān*, 21).

When in the course of the 3rd/9th century an Islamic literature in Persian emerged in the eastern parts of the caliphate, the model for this new type of poet was already available. The earliest Persian poets were quite familiar with Arabic poetry, by then a well-established literary tradition based on philological principles. Already Ḥanẓala Bād̲h̲g̲h̲īsī, who probably still belonged to the Ṭāhirid period (205-59/821-73), left a *dīwān* of his poetry (mentioned by Niẓāmī ʿArūḍī, 42), and it cannot be doubted that similar collections were made of the works of other Persian poets living before the 5th/11th century, though none of these have survived.

The minstrels did not disappear altogether from the literary scene. As a performing artist, increasingly referred to by *rāmis̲h̲gar* or the Arabic *muṭrib* rather than by any of the pre-Islamic terms, they retained a position of their own within the framework of convivial entertainment. Scenes from G̲h̲aznawid court life in the early 5th/11th century, as depicted by Bayhaḳī [*q.v.*], show their presence at various occasions including hunting parties and other outings as well as the usual "pleasure-making and drinking" (*nas̲h̲āṭ wa s̲h̲arāb*). However, a specialisation developed within the literary profession between poets on the one hand and minstrels on the other. In the context of the small courts where Persian poetry was first cultivated, this may not have led immediately to a personal division of roles. Our sources show that Rūdakī [*q.v.*], the most prominent poet of the Sāmānid period (4th/10th century), still acted as a minstrel; also Farruk̲h̲ī Sīstānī, who lived in the early 5th/11th century, was an accomplished musician as well as a court poet. A sharp distinction between the two functions was made by Kay Kāwūs [*q.v.*] in his *Ḳābūs-nāma*, written in 475/1082-3, where they are discussed separately. In his advice to would-be poets (ch. xxxv, 189-92; *dar āyīn-u rasm-i s̲h̲āʿirī*) the emphasis is on the technical skills and the knowledge writers of poetry should command. The few remarks added on the proper behaviour in their dealings with a patron of their art picture the poets as participants in social life

on an equal footing with other courtiers. Together with physicians, astrologers and other scholars, one finds poets mentioned among the *nadīms* [*q.v.*], the personal circle of people with whom a royal patron would spend his leisure time. The Saldjūḳ sultan Alp Arslān even preferred the company of poets (Niẓāmī ʿArūḍī, 69). To Kay Kāwūs the profession of the poets was a branch of learning, not a craft like that of the minstrels (*op. cit.*, 157). He strictly limits minstrelsy to the serving role of a performing art and consequently does not allow the performers to mix freely with their audience. The minstrel should also act as the interpreter of the poems written by others and avoid his own compositions in his répertoire (ch. xxxvi, 193-7: *dar āyīn-u rasm-i khunyāgarī*).

Another classic statement of the professional qualities of poets is the second discourse in Niẓāmī ʿArūḍī's *Čahār maḳāla* (42-86: *dar māhiyyat-i ʿilm-i shiʿr wa ṣalāḥiyyat-i shāʿir*). In a terse description of the profession, he stresses the social function of poetry as a means to establish a lasting reputation, not only for the poet himself but also for the patron to whom his panegyrics are addressed. The preparation for the profession consists of getting a good education, not merely in prosody and rhetorics, but also generally, "as every branch of knowledge is useful in poetry". The young poet should also strive to become well acquainted with the literary tradition by learning a large quantity of lines from the works of ancient and modern poets by heart. He should further subject himself to the supervision by an accomplished master (*ustād*) of the art. The ability to improvise poems (*badīha guftan*) was regarded as the poet's greatest asset in social life. Equally interesting are the examples which Niẓāmī ʿArūḍī gives of incidents and situations characteristic of the profession in a series of anecdotes about the lives of famous poets. They exemplify the effects of poetry on the mind and the acts of a patron, the ways to get entrance to a court and the strategies for gaining a handsome reward, but also the mishaps in the careers of poets.

In these early reflections on the ways and conditions of the poet (often referred to by the abstract noun *shāʿirī*), it is always understood that he was primarily a professional encomiast. To the anthologist ʿAwfī [*q.v.*], the literary scene was occupied by only two protagonists: on one side there were the panegyrists (*mādiḥān*) and on the other the patrons, the "praised ones" (*mamdūḥān*), who "with perishable goods bought themselves lasting remembrance" (*Lubāb*, i, 7). At least until the 6th/12th century, the courts of local Persian and Turkish rulers provided the normal environment for poets, who could make a living by providing these courts with poetry, both for ceremonial purposes and entertainment. The relationship between poet and patron was therefore one of mutual advantage. The idea that poetry was an important means to enhance reputations gave it a great political value, not only to rulers but to everyone who held a position of influence near the seat of power. The mechanism by which this kind of publicity could work was specifically the mentioning of a patron's name in a panegyric discourse which was most often written in the form of a *ḳaṣīda* [*q.v.*]. The effectiveness of this depended on the survival of such poems and their distribution after they had fulfilled their original function. The artistic reputation of the poet was, therefore, also a matter of great advantage to his patron. Through the copying, collecting and transmission of poems in *dīwāns* and anthologies, the products of the poet's art could overcome the barriers of time and space.

To become a court poet one should not only have had the prescribed education and training; it was equally necessary to find the proper way to get introduced. The mediaeval courts, which attracted many aspiring talents, seem to have used the institution of the poet laureate (*malik al-shuʿarāʾ* [*q.v.*]) for the selection of candidates, but this was only one of the possible approaches to the favour of a royal patron (see, e.g. the anecdote about Muʿizzī's entrance to the court of Sandjar as related by Niẓāmī ʿArūḍī, 65-9). The obligations of the court poet included first of all the presentation of ceremonial poems at a number of fixed occasions like the Persian seasonal festivals Nawrūz and Mihragān [*q.vv.*] and the Islamic *ʿīd al-fiṭr* ending the month of fasting, as well as every other event where formal odes were in order: at birth or death, in war or at hunting parties, at the foundation of buildings and of pleasure gardens. In addition to these occasional poems, he also wrote compositions which were meant to entertain the court. They consisted of short lyrics, from which eventually the classical Persian *ghazal* developed, and narratives in *mathnawīs* [*q.v.*]. The heroic and romantic stories presented in the latter form exemplified codes of behaviour both to rulers and courtiers. Besides, the poet was expected to provide food for thought through wisdom formulated in poetry. In a gibe at a fellow poet the Sāmānid poet Shahīd-i Balkhī [*q.v.*] reproached him for not having the necessary wisdom, pleasure and elegant wit (*čam*) (G. Lazard, *Premiers poètes*, ii, 31). A poet should therefore be able to handle the entire range of forms and genres which the literary tradition put at his disposal. The rewards he could expect were of an incidental nature and depended very much on the whims of the patrons. Lavish remunerations, mentioned in anecdotes, were usually spontaneous reactions to improvisations and show the great appreciation of verbal virtuosity and sharp wit. The gifts requested by poets in their poems consisted not only of money but also of kind, among which pieces of clothing are conspicuous. A *malik al-shuʿarāʾ* [*q.v.*] could hope to receive the more regular income usually attached to an official post (cf. Niẓāmī ʿArūḍī, 66). It was not uncommon that poets fulfilled other duties at a court. By doing this they ran the normal risks of an official career, as the example of the disgrace of Masʿūd-i Saʿd-i Salmān [*q.v.*], caused by his association with a rebellious Ghaznavid prince, showed in a manner which has remained exemplary. Professional rivalry was a common thing in court life. Niẓāmī ʿArūḍī (73-5) gives the example of the struggle between the poets ʿAmʿaḳ [*q.v.*] and Rashīdī for the first position at the court of the Ḳara Khānids or Ilek Khāns [*q.v.*]. Fraternal animosity within the profession gave rise to a huge corpus of satire in Persian literature. The weapon of poetical invective was also effective against patrons who did not fulfill the expectations of poets.

It is too narrow a view to restrict the Persian poet, even of the earliest period, to his role as a court poet. Poetry, which was highly appreciated because of its association with eloquence [see further, SHIʿR], belonged to the erudition of every educated person. Many anthologies have special sections with poems composed by kings, viziers, scholars, *shaykhs* and other dilettante poets (see, e.g. ʿAwfī, *Lubāb*, i, 22 ff.). As is often emphasised in handbooks of poetics, prose writers were also expected to have a critical knowledge of poetical techniques and to be able to use poems in Arabic and Persian in their writings. The value attached to wisdom in poetry, a legacy from pre-Islamic Persia, gave the poet the additional dignity

of a sage whose maxims and epigrams provided spiritual food to patrons and other readers alike. Already Rūdakī, who in the 4th/10th century was the first successful court poet in the history of Persian literature, was also a poet of wisdom, representing the type of poet which the tradition used to honour with the epithet *ḥakīm*. Among his contemporaries were the philosopher-poet Shahīd-i Balkhī and Abū Shakūr, who wrote the earliest didactic poem in Persian known to us. During the 6th/12th century, when a display of learning and knowledge of Arabic vocabulary became fashionable in Persian poetry, the type of the *poeta doctus* appeared more clearly. Anwarī and Khāḳānī [*q.vv.*] were particularly representative of this trend, as was Niẓāmī [*q.v.*] of Gandja who applied it to narrative poetry. Whereas the first two had to resign themselves to the traditional role of a court poet, whether voluntary or not, Niẓāmi seems to have been able to keep a certain distance from the patrons to whom he dedicated his *mathnawī* poems.

The use of Persian poetry for religious purposes is for the first time attested in the Ismā'īlī propaganda, to which the philosopher Abu 'l-Haytham Gurgānī, a contemporary of Rūdakī's, was attached. Kisā'ī [*q.v.*], whose religious denomination remains uncertain, seems to have combined the ways of a court poet with an ascetic orientation of his poetry. In the 5th/11th century the prime example of a poet distancing himself from the conventional framework of the art was Nāṣir-i Khusraw [*q.v.*], another follower of the Ismā'īliyya. In strong terms he scolded the court poets for their venality and insincerity (cf. S.Ḥ. Tāḳīzāde, *Dīwān*, introd., pp. *lw-lz*). These incriminations of the established ways of *shā'irī* are the earliest instances of a *topos* which was further elaborated by many later poets, to begin with, in the early 6th/12th century by Sanā'ī [*q.v.*]. The remarkable turn Sanā'ī made from a probably not very successful career as a court poet to the service of patrons belonging to the religious classes, both preachers and mystics, is the first well-documented case of such a change in practice. Subsequently, dependence on secular patronage was not a matter of course any more in a poet's life, although for centuries to come the courts continued to provide poets with the best opportunities for a professional career. Among the great mystical poets following in Sanā'ī's footsteps there were many who dispensed with secular patronage altogether, like Farīd al-Dīn 'Aṭṭār [*q.v.*], whose poems are free from any panegyrical references. In the case of Djalāl al-Dīn [*q.v.*] Rūmī, the community of his pupils took the place of the courtly environment, the expression of a mystical bond with one or the other of his favourite adepts replacing the *mamdūḥ*'s praise in the poems of the secular encomiast. Notwithstanding the considerable impact Ṣūfism had on the further course of Persian poetry, this did not always entail a quite uncompromising attitude with regard to the ways of the world. The local court of Shīrāz in the 7th/13th and 8th/14th centuries gave a clear example of a symbiosis of spirituality and courtly panegyrics both in the works of Sa'dī and Ḥāfiẓ [*q.vv.*].

In later centuries, the various shapes which the profession of poetry had taken during the Middle Ages continued to exist side-by-side, most often interacting with each other. There were poets both at the courts and outside. In either case, it was possible that they gave expression to mystical and moral ideas, and increasingly devotion to the Shī'ī Imāms, but they could also be mere entertainers and encomiasts. This situation did not change essentially under the Ṣafawids [*q.v.*], even if the best prospects for professional poets came to lie outside Persia, particularly at the Indian courts. In the early 19th century, the Ḳādjār Fatḥ 'Alī Shāh brought to life again the practices of ancient court poetry, as they had existed in the days of Sultan Maḥmūd of Ghazna, in his *andjuman-i khāḳānī*, translating thus into forms of social life the neo-classicist style which prevailed in contemporary poetry.

A fundamentally new concept of the poet did not emerge before the outbreak of the Constitutional Revolution in Persia during the first decade of the 20th century. Under the impact of this upheaval, poets who had been raised as traditional panegyrists, like Muḥammad Taḳī Bahār [*q.v.*] and Adīb al-Mamālik Amīrī [*q.v.* in Suppl.], almost overnight abandoned the ancient ways of a court poet and took a stand in the political struggle of the day. The new role of the poet in Persian society, as an advocate of the people's rights and a critic of social injustice, entailed a change in the economics of the profession. With the ending of the old autocracy, the mediaeval tradition of patronage, to which the Ḳādjārs had clung till the end of the 19th century, also disappeared and for good. Poets had to rely on other sources of income, among which journalism and the editing of publications were the most important. Magazines and even newspapers provided the means for the propagating of their works. In more recent times, the cassette provided another medium which has made it possible to reach a wide and anonymous public.

Even after the rise of the Pahlawī dynasty, when the free expression of political views was curtailed, there was no return to the old ways. Poets found employment in government offices, at the newly-founded universities or in the modern news media. In their art, they took their models from contemporary Western literature rather than from the classical Persian tradition. As lyricists they used poetry as a means for expression of personal emotions and ideas, whether in only slightly modernised classical forms, or in the new poetry which was introduced by Nīmā Yūshīdj [*q.v.*]. In numerous manifestos and essays, reflections on the role of the poet, both as an artist and as member of society, can be found. They show that a commitment to social and political causes has remained a generally accepted part of the modern Persian poet's self-image. Although the democratisation of literature is an avowed aim of all modern poets and prose writers, the modernisation of style and idiom which has dominated Persian poetry since the Second World War, has created a serious problem of communication with readers, to whom sophisticated modernisms are difficult to understand. Together with the negative effects of censorship or the alienation caused by living in exile, this tends to isolate the modern Persian poet from his public. Attempts to organise literary artists professionally, such as the First Congress of Iranian Writers held in 1946 or the short-lived Writer's Union of the 1970s, have not led to permanent institutions.

3. In Turkey.

Since poetry constituted the principal literary genre in the Turkish experience from its earliest times until the latter part of the 19th century, and still holds a significant place in Turkish culture, the role of the poet in pre-Islamic Central Asia, during the period of nomadic life and migrations into Asia Minor, throughout the Saldjūḳ era and the Ottoman centuries, was a dynamic, interactive, and influential one.

The term *shāʿir* (spelt *şair* in modern Turkish) probably came into use no later than the middle of the 11th century. Earlier, Central Asian Turks employed several different terms for "poet", e.g. *ozen, olun, bakshî* (*bahşı*), and others. Poets who functioned as shamans and performed thaumaturgy were known as *shaman* or *ḳam* (the latter among the Uyghur Turks). In Central Asia, a larger and more precise vocabulary emerged in time, corresponding to minstrel, bard, folk poet, singer of epics, etc.

Among the Turks of Asia Minor, *shāʿir* became established, and continues to be employed, as the generic term meaning "poet", especially in reference to the educated poets in the urban areas. For folk poets, the Central Asian Turkic word *ozan* still applies; however, the minstrels of the countryside who compose (or often extemporise) their poems as lyrics of songs as they accompany themselves on a simple string instrument are called *saz şairi* or *âşık* [see ʿĀSHIḲ; SĀZ]. The Ottomans, however, called their city poets *shāʿir*. The term is still in extensive use, although supporters of the *Öztürkçe* ("pure Turkish") movement, dedicated to the cause of ridding the language of words borrowed from Arabic and Persian, employ *ozan* in lieu of *şair*.

In pre-Islamic settled and nomadic Turkish society, poetry played a focal role in communication and entertainment, and strengthened solidarity and cultural cohesion. Unable to create works of architecture and other genres produced by secure sedentary nations, most Turkic communities concentrated on poetry, music and dance. Given the dominance of the spoken word among them, shamanistic poets enjoyed a special influence. Poetry was an integral part of religious experience and secular ritual; pre-hunt ceremonies (*sïgïr*) and post-hunt feasts (*shölen*) as well as weddings and funeral services (*yug*) featured poetry.

The Book of Dede Korkut [*q.v.*], generally recognised as the Turkish national epic, with more than a third of it in poetic form in the transcriptions made several centuries after its gradual evolution in the oral tradition, has as its narrator (as well as a principal character) the sagacious religious leader as well as a poet. He stands at the wellspring of the traditional perception in the Turkish countryside of the poet as a revered figure who combines in himself such functions as moral guidance, conveying of communal values, entertainment and education, and heightened verbal communication. Many bards were close to the leadership of the community, and some leaders were poets themselves.

The first major written poetic work in Turkish (*ca.* 1070), a mirror for princes, is the *Ḳutadghu bilig* [*q.v.*] (Eng. tr. R. Dankoff, *Wisdom of royal glory*) by Yūsuf Khāṣṣ Ḥādjib, a Ḳarakhānid chancellor-poet. Emphasising the importance of speech ("Human beings attain happiness through language. But it can also demean man and cause heads to roll. It is on words that man can rise, and acquire power and prestige"), Yūsuf advises the prince to pay attention to "poets, wordsmiths, eulogists, and satirists", because "their tongues are sharper than swords ... When they praise a man, his good name spreads, but when they poke fun at him, his reputation is damaged for good."

In Anatolian Saldjūḳ society (late 11th century-late 13th century), many of the urban and rural poets were engaged in propagating the values and culture of Islam, to which the Turks were newcomers. In the 13th century, the mystical faith of Mawlānā Djalāl al-Dīn Rūmī (1207-73 [*q.v.*]), who composed the vast majority of his poems in Persian rather than the Turkish more extensively spoken in Anatolia, achieved considerable spiritual authority. His ideas and ideals were to have an enduring impact on a broad spectrum of intellectuals and creative artists in later centuries; and his humanitarian and universalist themes have provided inspiration to an impressive number of poets in the 20th century. Rūmī maintained an ambivalent stance toward poetry. Although he employed it as his principal vehicle of expression and occasionally lauded it, there are passages in his work, especially in *Fīhi mā fīhi* written in prose, which denigrate it ("God knows I detest poetry. Nothing is worse as far as I am concerned").

This ambivalence parallels the paradoxes revealed in the Ḳurʾān and *Ḥadīth* in regard to poets. Sūras XXVI and XXXVI present poets in a negative light [see SHIʿR. 1. A], but the Prophet, who also offered his animadversions, said in a *ḥadīth* considered *ṣaḥīḥ*, "God has Treasures beneath his Throne, the Keys of which are the Tongues of the Poets." The same ambivalence has been true of the attitudes of the *ʿulamāʾ*, many of whom approved of verse as an effective medium for the dissemination of the faith, but remained wary of its non-religious themes and seductive powers.

The gulf between doxological verse and mystical poetry, which had started in the Turkish tradition with the *Dīwān* of Aḥmad Yasawī [*q.v.*] in the 12th century, was to continue through the Saldjūḳ and Ottoman periods.

Combining these two categories, as well as serving as a wellspring of both Anatolian folk poetry and the burgeoning Ottoman élite poetry, the work of Yūnus Emre (*ca.* 1241-*ca.* 1321 [*q.v.*]), echoing some of Rūmī's themes of mystical humanism, established new prospects for poets to serve as critics of society, religion and government. Many of his verses, kept alive in the oral tradition of the countryside, came to constitute the basis for Turkey's secular humanist literature in the second half of the 20th century, with Yūnus Emre hailed as the paragon of the poet dedicated to progressive ideals of social justice and the ecumenical spirit.

As a whole, poetry served through the course of Ottoman history both as a cohesive force for continuity and a vehicle of criticism to stimulate change. Although most of the classical poets, as well as the rural minstrels, produced lyrical verses dealing with such universal themes as love, natural beauty, etc., some of them openly or cryptically challenged the authorities or the political system itself. Through panegyrics or by adhering to themes acceptable within the established canon, numerous classical poets were able to lead a calm and comfortable life. Loyalty to the existing order usually brought rewards—and most panegyrists reaped excellent benefits.

Dīwān poetry, composed by poets close to the court

and by independent authors who stayed within this tradition of the educated élite's classical verse, often enabled its practitioners to enjoy prestige and influence. As E.J.W. Gibb pointed out in his *A history of Ottoman poetry*, two-thirds of the sultans wrote poetry. As patrons, they were favourably disposed to rewarding the poetic works presented to them. Süleyman the Magnificent (d. 1566), whose personal *dīwān* contains nearly 3,000 verses, had a close relationship with numerous poets, especially with Bākī (d. 1600 [*q.v.*]), who held an esteemed position, referred to as *sulṭān al-shuʿarāʾ* ("sultan of poets"), comparable to "poet laureate", although no such title existed in the Ottoman system.

Various prominent poets occupied important positions: Shaykh al-Islām Yaḥyā (d. 1644), one of the greatest lyric poets of the *Dīwān* tradition, served for four decades as *ḳāḍī ʿasker* and *shaykh al-Islām*. It is difficult, however, to determine whether Yaḥyā and others rose to high positions thanks to their poetry, or if they qualified for other reasons but also happened to write verse as well. By the same token, no definite determination can be made about the awarding of the honorific title of *pasha* to such poet-statesmen as Rāghib Pasha (d. 1763) and Ḍiyāʾ Pasha (d. 1880).

Among the Ottoman educated élite, composing verses was virtually a *sine qua non* of being an intellectual. Poetry not only held a privileged place, but often served in ways that are normally in the realm of prose (verse chronicles and histories, internal rhyming in many prose works, even a few dictionaries and text books in verse form, etc.). Occasionally, sultans, princes, grand viziers, commanders and other notables sent or exchanged communications composed in metre and rhyme. Such occasional verse, especially in retrospect, is disqualified as poetry, which, in its proper sense, was written by the *shāʿir*, a professional poet with a firm commitment to the art and with established credentials as a creative artist.

Satire and other types of criticism frequently entailed deprivation and punishment. Poetry could be a matter of life-and-death in many stages of Ottoman history. Because of their unorthodox, heretical or rebellious attitudes expressed in verse, Nesīmī (d. 1404 [*q.v.*]) was flayed alive, and the folk poet Pīr Sulṭān Abdāl was hanged (at some point in the 16th century). For satire directed against high-ranking officials, Nefʿī (d. 1635 [*q.v.*]), the great classical poet, was condemned to death, and was either strangulated or drowned. Due to their poems of protest or criticism, Sheykhī (d. *ca.* 1431) suffered injustice; ʿIzzet Molla, Nāmiḳ Kemāl [*q.vv.*], and many others, were penalised, imprisoned or sent into exile in the last century of the Ottoman state.

Inasmuch as poetry was a principal means of communication and criticism, many poets were taken very seriously and punished as dissidents or subversives not only for their outright objections, but sometimes even for their allegorical or subtly metaphorical statements. Some classical poets renounced their own credibility: One of the foremost poets of the 16th century, Fuḍūlī [*q.v.*], wrote the famous line "Do not be deceived, the poet's words are surely lies."

In a sense, mystical poetry expressed a continual opposition to mainstream Islam, and often endeavoured to undermine the theocratic establishment. Through a three-level disguise, whereby they extolled the "darling-king-God", the *shāʿirs* complained of the cruelties inflicted by the "beloved". The *ʿāshiḳs* and the *ozans* of the countryside, embodying their regeneration of a pantheistic, Turkic, rural value-system, seemed to maintain a frontal opposition to the Empire's central authority as well as offering a quasi-secular challenge to Islamic culture. *Tekke* or dervish convent poetry, abundantly produced by poets linked with the various Anatolian sects, often functioned as an expression for the heterodoxy.

Consequently, the instance of rewards, high positions and financial gains notwithstanding, Ottoman poets were, on the whole, outside the religio-political system, often opposed to it, and sometimes in rebellion against it. Especially in the Empire's closing decades, some foremost poets, for example, Nāmiḳ Kemāl (d. 1888) and Tewfīḳ Fikret (d. 1915 [*q.v.*]), played a forceful role in mobilising public opinion against the Ottoman régime.

Under the influence of accelerating Europeanisation of Turkish culture, the concept of the poet, held by the Ottoman élite, as virtually divinely-inspired or as possessing spiritual and visionary powers of an extraordinary nature, gave place to the idea that, although an apolitical stance is natural for many lyric poets, it is a respectable mission for politically-conscious poets to give expression to ideological convictions. Tewfīḳ Fikret championed social and governmental reforms, taking a stand against many aspects of Islam, whereas Meḥmed ʿĀkif Ersoy (d. 1936 [*q.v.*]) propagated the Islamic faith as a panacea for the decline of the Ottoman state. Ḍiyāʾ (Ziyā) Gökalp (d. 1924 [*q.v.*]) and Meḥmed Emīn Yurdakul (d. 1944 [*q.v.*]), in their verse written in a simple, colloquial vocabulary, furthered the cause of Turkish nationalism.

The strongest voice for revolution based on Marxist-Leninist ideas came from Nāẓim Ḥikmet Ran (d. 1963 [*q.v.*]) who also introduced brave new innovations to the formal structure, prosody, and tenor of 20th century Turkish poetry. Proclaiming that he conceived of art as "an active institution in society" and that "the poet is the engineer of the human soul," he assigned to himself and other poets the task of "organising life". As a romantic revolutionary with superlative creative talent, as a result of which he achieved extensive fame not only in Turkey but in scores of other countries as well, Nāẓim Ḥikmet was probably the most potent Turkish voice for Communism in the 20th century. For his combative ideological poems, he spent about thirteen years of his life in prison and lived in exile for a dozen years.

Following the path opened by Nāẓim Ḥikmet, hundreds of modern poets in Turkey, including leftists and non-leftists, produced a huge corpus of verse dedicated to political themes, social ills and evils, peace and justice. Some poets virtually functioned as journalists, frequently commenting on socio-economic problems. By the end of the 20th century, the role of the poet was established as a champion of democratic ideals. Non-political verse, however, continues to flourish as well.

4. In Muslim India.

One of the major cultural contributions resulting from the Muslim conquest of India was the origin and development of Persian poetry in the sub-continent. From the ascendancy of Muslim rule in the 13th century till its decline in the 18th century, there was a continuous flow of poets into India from Persia

and from the neighbouring regions where the Persian language represented the dominant cultural influence. In the beginning, the number of poets who came to India was comparatively small, but it multiplied sharply after the establishment of the Mug̲h̲al rule in the 16th century. The Mug̲h̲al court was famous for its munificence and attracted poets keen to seek their fortune outside their native land. This resulted in the influx of many gifted poets, and the centre of Persian poetry gradually shifted to India.

Persian poetry in India was an object of interest and entertainment for the Muslim upper class. The social and political conditions in which it developed made the royal court a focal point towards which the hopes and energies of most poets tended to gravitate. Gaining access to it signified for the poet the highest recognition of his achievements and talents. Muslim rulers, generally speaking, were men of taste and showed their appreciation for literature by surrounding themselves with poets and writers. Thus the historian Abu 'l-Faḍl gives a list of 51 poets who were in the service of Akbar (r. 963-1014/1556-1605). However, it was not easy to obtain admission to the royal court. The poet Kalīm (d. 1061/1651 [*q.v.*]), for instance, came to India during D̲j̲ahāngīr's reign (1014-37/1605-27), but had to wait for a long time until he secured entry to the court of S̲h̲āh D̲j̲ahān (r. 1037-68/1627-57). Very often the poet needed the help of some influential nobleman for his access to the royal court. It was customary for important noblemen, and even lesser dignitaries, to keep poets and other literary men in their employment. The name of ʿAbd al-Raḥīm K̲h̲ān-i K̲h̲ānān (d. 1036/1627), Akbar's principal dignitary, stands out in this connection. His generous patronage benefited a large number of poets and has been praised by every writer. Another source of patronage consisted of the provincial courts, some of whose rulers, such as the ʿĀdil S̲h̲āhīs [*q.v.*] of Bīd̲j̲āpūr (895-1097/1490-1686) and the Niẓām S̲h̲āhīs [*q.v.*] of Aḥmadnagar (895-1046/1490-1636), were noted for their liberal support of art and letters.

The poets were paid a monthly allowance and could receive a robe of honour and a monetary reward for their performance on special occasions. Some poets became recipients of land grants, and some were made holders of military or civil command (*manṣabdār*). Among the poets who came to India, several returned home after their fortunes were made, while others, such as Naẓīrī (d. 1021/1612-13), Ṭālib Āmulī (d. 1036/1626-7) and Kalīm, stayed on till the end, and found their permanent resting place in the soil of their adopted country. There are several instances where a poet was called upon to perform duties unrelated to his vocation. Ātis̲h̲ī of Ḳandahār (d. 973/1565-6) was a chronicler in Bābur's (r. 932-7/1526-30) service, and later held high offices in the government; S̲h̲ayk̲h̲ Gadāʾī of Dihlī (d. 976/1568-9), who was a scholar and poet of Humāyūn's reign (r. 937-47/1530-40 and 962-3/1555-6), occupied the high position of *ṣadr* (director of religious affairs [see ṢADR. 5. In Mug̲h̲al India]), under Akbar; Fayḍī (d. 1004/1595-6 [*q.v.*]) was appointed tutor to Akbar's son Dāniyāl, and led government embassies to the Deccan rulers; and D̲j̲ahāngīr's court poet Ṭālib Āmulī acted initially as the seal-keeper of Iʿtimād al-Dawla (d. 1621), the father-in-law of the emperor and a leading dignitary of the empire.

The court poet was supposed to dedicate his art to the service of his patron. In return for the wages received by him, or in the hope of obtaining further rewards, he composed praise poems eulogising his benefactor. This promoted the development of the *ḳaṣīda*, whose main exponents in India were ʿUrfī (d. 999/1590), Ṭālib Āmulī, Ḳudsī (d. 1056/1646), Kalīm and Muḥammad Ḳulī Salīm (d. 1057/1647-8). Some poets were also assigned the task of writing dynastic histories in verse—a tradition that started already with the Dihlī Sultanate (1206-1526). Amīr K̲h̲usraw (d. 725/1325) composed the *Tug̲h̲luḳ-nāma*, which sheds light on the latter part of the K̲h̲ald̲j̲ī rule (689-720/1290-1320) and the early period of the Tug̲h̲luḳ régime (720-816/1320-1413). Muḥammad b. Tug̲h̲luḳ's (r. 725-52/1325-51) poet Badr-i Čāč (d. 747/1346) wrote a *S̲h̲āh-nāma* describing the military expeditions of the sulṭān. ʿIṣāmī (b. 711/1311) was the author of a verse account of Muslim India from the G̲h̲aznawids up to the mid-8th/14th century, entitled *Futūḥ al-salāṭīn* "Victories of the sultans", which he completed in 750/1349-50 for ʿAlāʾ al-Dīn Abu 'l-Muẓaffar (d. 759/1358), the first ruler of the Bahmanī dynasty of Deccan (748-934/1347-1528). Also from the same period came the history of the Bahmanī dynasty named *Bahman-nāma*, which was started by Ād̲h̲arī, the court poet of Aḥmad S̲h̲āh Bahmanī (r. 822-39/1422-36), and subsequently expanded by Naẓīrī and other poets. To the Mug̲h̲al period belongs Kalīm's *S̲h̲āh D̲j̲ahān-nāma*, which deals with the Mug̲h̲al rulers and their Tīmūrid ancestry down to the reign of S̲h̲āh D̲j̲ahān. Another work dealing with S̲h̲āh D̲j̲ahān's reign is the *Ẓafar-nāma* "Book of victory", by Ḳudsī, which gives a verse account of the emperor's exploits.

A common practice among the court poets was the composing of poems with a chronogram commemorating an event of special importance. By the time of Humāyūn, the making of chronogram poems became steadily popular. They treated of such events as the births, deaths and weddings of the members of the royal household; imperial coronations; victories in battles; hunting exploits; and launchings of building projects and their completion. An interesting example of this kind of verse is a poem by Saʿīdā Gīlānī [*q.v.*], of which only a fragment has survived. This poem is said to have comprised 134 couplets, of which each hemistich represented a chronogram.

It was the duty of the poet to defend and uphold the dignity of his royal patron as and when the need arose. Illustrative of this tendency are two examples, one by Fayḍī and the other by Kalīm. In the first, Fayḍī is represented as improvising a poem of two couplets, which eulogised Akbar, and was intended to be a rebuttal of a similar poem written in praise of S̲h̲āh ʿAbbās I of Persia. The second example shows Kalīm defending S̲h̲āh D̲j̲ahān, who had been reproached by the sultan of Turkey for the audacity of calling himself the "king of the world" when he was only "king of India". "Since Hind (India) and *d̲j̲ahān* (world)," wrote Kalīm in his reply, "are equal in their numerical value, the right of the ruler to be called 'king of the world' is well-established" (*Hind u d̲j̲ahān zi rū-yi ʿadad har dū čūn yakīst s̲h̲ah-rā k̲h̲iṭāb-i s̲h̲āh-i d̲j̲ahānī mubarhan ast*).

The highest rank among court poets was held by the *malik al-s̲h̲uʿarāʾ*, an institution established in the Mug̲h̲al period. The designation of the *malik al-s̲h̲uʿarāʾ* was perhaps a title more than anything else, and did not constitute a regular post in the government. However, it involved a number of duties. As a member of the royal train, the *malik al-s̲h̲uʿarāʾ* accompanied the ruler wherever he went. He was supposed to attend all the functions, feasts and celebrations at the court, and to present his poem for the occasion. Every new poet sought his favour and good offices

for gaining entry into the court. He chose the poets who were to recite their verse in the royal presence, as well as those to be rewarded and honoured. His appointment was made by the ruler, and implied an official recognition of the poet's superiority over his colleagues. The tradition of appointing the *malik al-shu'arā'* was started by Akbar and survived until Awrangzīb's time (1656-1707), when it was discontinued by the orders of the emperor. During this period, four poets served thus: Ghazālī Mashhadī (d. 980/1572-3), followed by Fayḍī, under Akbar; Ṭālib Āmulī under Djahāngīr; and Kalīm under Shāh Djahān.

Apart from the court, Ṣūfism was the next most important platform for the poet's activity. After the conquest of northern India by the Muslims, various Ṣūfī orders were established, such as Čishtiyya, Suhrawardiyya, Naḳshbandiyya and Ḳādiriyya [*q.vv.*]. In India, poetry was the chief vehicle through which Ṣūfī ideas were disseminated. The preoccupation of the poet with Ṣūfism went beyond mere intellectual interest; very often poets had a practical involvement with the Ṣūfī way through their affiliation either with a Ṣūfī centre (*khānaḳāh*), or as members of an order, or as disciples of some spiritual director. Amīr Khusraw, the most eminent Persian poet of India, though serving under successive sultans, was the favourite disciple of the Čishtī *shaykh* Niẓām al-Dīn Awliyā (d. 723/1323 [*q.v.*]), and so was the poet's contemporary, Ḥasan Sidjzī Dihlawī (d. 736/1336), who compiled his master's utterances (*malfūẓāt*) under the title *Fawā'id al-fu'ād* "Things beneficial to the heart". In the time of Fīrūz Tughluḳ (1351-88) flourished the poet Mas'ūd Beg (d. probably in 800/1397), a relative of the ruling family, who gave up wealth and fortune to join the Čishtī order under the guidance of his spiritual mentor Shaykh Naṣīr al-Dīn Čirāgh-i Dihlī (d. 769/1367). The reign of Sikandar Lodī (1489-1517) saw the poet Ḥāmid b. Faḍl Allāh Djamālī (d. 943/1536), who was also a Ṣūfī hagiologist, and is said to have met Djāmī in his travels to foreign lands. It is reported that Akbar's poet Fayḍī courted the company of dervishes and spiritual leaders, and some of the poems he composed suggest his devotion to the Ṣūfī luminary Farīd al-Dīn Gandj-i Shakar (or Shakar Gandj, d. 664/1265 [*q.v.*]). In later times, we find Muḥammad Sarmad (d. 1071/1660-1 [*q.v.*]), a writer of mystical quatrains, who was a distinguished Ṣūfī, and suffered execution on the alleged charge of heterodoxy. In brief, it is safe to assume that the interaction of the poets with Ṣūfism was a fairly widespread phenomenon which made poetry increasingly receptive to Ṣūfī influence.

With the decline of the Mughal empire in the 12th/18th century, and the emergence of Urdu as a rival to Persian, the latter lost its place of importance, and was supplanted by Urdu as a medium of literary expression. Already in the 11th/17th century, Urdu (known as Dakanī) had won acceptance at the courts of Golkondā and Bīdjāpūr, whose rulers were generous in their patronage to men of letters. The identification of the poet with the court continued in the 12th/18th century first under the Mughal kings at Dihlī and subsequently in Lakhnaw under the Nawwābs of Awadh. Together with the court, Ṣūfism continued to play a contributory role in the life of Urdu poets. Among those who were practising Ṣūfīs, one may include Walī (d. 1119/1707), Shāh Mubārak Ābrū (d. 1145/1733), Shāh Ḥātim (d. 1197/1783), Mīrzā Maẓhar Djān-i Djānān (d. 1195/1781), and Mīr Dard (d. 1199/1785 [*q.v.*]). In the 19th century, *marthiyas*, or elegies on the death of Ḥasan and Ḥusayn, and those who died at Karbalā', became a popular subject for the poets at Lakhnaw. The growth of the *marthiya* in Urdu [see MARTHIYA. 4.] was associated with the influence of Shī'ism, professed by the Nawwābs of Awadh who patronised this kind of composition. Under them, there appeared a host of *marthiya* writers, headed by Anīs (d. 1874) and Dabīr (d. 1875).

The failure of the Indian Revolt of 1857-8 dealt a serious blow to the existing social and political order, and laid the basis for the future emergence of a new Muslim middle class trained in Western thought and motivated by ideas of social justice. It also foreshadowed a change in the direction of Urdu literature, which was to be guided by a fresh alignment of social attitudes. Whereas the poet's material and spiritual concerns were hitherto identified with court patronage and Ṣūfism respectively, he now turned his artistic loyalties to the middle class, which was destined to play a leading part in the evolving situation. This development demanded the involvement of the poet in the affairs of the society at large—a view illustrated vividly in the writings of Alṭāf Ḥusayn Ḥālī (d. 1915 [*q.v.*]), who sought to define poetry as an instrument of social reform.

The widening scope of the *mushā'ira* (correctly *mushā'ara* [*q.v.*]) also had its impact upon the poet in bringing him closer to a large segment of the society. These poetic assemblies, which were formerly held in the court or at the house of some nobleman, and were restricted to the élite, now acquired a more democratic character with the participation of the general public. Occasionally, they were sponsored by some social or political organisation, which used the appeal of the *mushā'ira* to advance its own cause.

During the early part of the present century, Iḳbāl (d. 1938 [*q.v.*]) became the most prominent figure to symbolise the new role of the poet in Muslim society. Not only did he express in his poems the aspirations and feelings shared by the majority of Indian Muslims, but he also formulated the concept of India's partition on a religious basis, which eventually materialised in the establishment of Pakistan in 1947.

5. In the western and central Sudan.

The poetry of the societies of the western and central Sudan, both that of religious and that of secular inspiration, may be expressed in Western languages but equally in Arabic and Negro African languages. Whilst the first type is the product of the colonial influence, that in African languages and Arabic is attested over several centuries.

Introduced into the *bilād al-Sūdān* with Islam, Arabic has served since the 13th century as a language of expression for West African poets. Abū Isḥāḳ Ibrāhīm b. Yaʿḳūb al-Kānemī, one of the first known West African poets using Arabic, was received at Marrakesh by the Almohad sultan Abū Yūsuf Yaʿḳūb al-Manṣūr (r. 580-95/1184-99) and improvised in his presence some verses which did not fail to impress the monarch. Kanem-Borno, which was Islamised very early, produced some poets of considerable fame. As well as the al-Kānemī just mentioned above, the Imām Muḥammad b. ʿAbd al-Raḥmān al-Barnāwī became celebrated by his poem *Shurb al-zulāl*, on the subject of *fiḳh* and of a didactic character, written towards the end of the 17th century and the object of a commentary written in Egypt.

The surrounding Hausaland became the centre for the diffusion of Islam in the central Sudan after the *djihād* of ʿUthmān b. Fūdī [*q.v.*] (Usuman dan Fodio), not to mention various previous Arabised poets. One might cite Dan Marina, Arabic name Ibn al-Ṣabbāgh (18th century). He was a famous *ʿālim* and the author of numerous works in various disciplines, and acquired the stamp of nobility in poetry with his *mazdjarat al-fityān*, a didactic poem exhorting the pursuit of Islamic knowledge and enumerating the essential bases of the sciences taught in his time (philology, metrics, exegesis, *ḥadīth*, morphology, syntax, numerology, law, etc.).

Timbuctu (in modern Mali) was from mediaeval times onwards reputed for the teaching of Arabic language and the Islamic sciences, which were to enjoy a relatively important diffusion over the last two centuries.

The *djihāds* of the 18th-19th centuries in Fūta Djallon [*q.v.*] and Fūta Toro, in Masina and in Hausaland, to cite only these, contributed at the same time to the spreading of Islam and of the Ṣūfī orders, to the diffusion of centres of teaching in the Islamic sciences and to the considerable increase in the number of scholars, various factors which were to contribute to the development of Arabic poetry of Islamic religious inspiration.

In order to render the Word of God and the Islamic religious precepts accessible to illiterate populations, the Sudanese *ʿulamāʾ* went on to translate and comment upon in their own languages the Ḳurʾān and its exegesis, as well as the Arabo-Islamic classical texts. They produced glosses, but also, like their counterparts in the Arab lands, composed poetry. Without monopolising poetic activity, these *ʿulamāʾ* formed, without any doubt, the greater part of the poets, since it was rare to find a scholar worthy of the name who could not handle the art of producing a *ḳaṣīda*. There were likewise numerous poets engaged in didacticism, exhortation, eulogy, the exchange of civilities, and veneration for the Prophet and the leading figures in the *ṭuruḳ*. Virtually all the great scholar-poets wrote panegyrics (*madḥ*, *madīḥ* [*q.v.*]) on Muḥammad. Ahmadu Bamba (d. 1927), founder of the Murīdiyya [*q.v.*] confraternity, was the author of thousands of poems of this type, many of them in acrostics of Ḳurʾānic verses. There are also many eulogies with opening sections constructed on the model of the *Muʿallaḳāt*, such as the *Badīʿ* of the Senegalese Madior Malick Cissé (d. 1907), which also recalls to mind the *Burda* ode of al-Būṣīrī [*q.v.* in Suppl.].

A substantial part of religious poetry is devoted to the veneration of saints, reflecting Ṣūfī inspiration coming from the Maghrib, in which one of the modalities in the very important cult of saints was certainly the composition of poems. Veneration for the founders of the two most popular West African orders, ʿAbd al-Ḳādir al-Djīlānī [*q.v.*] for the Ḳādiriyya and Aḥmad al-Tidjānī (d. 1815) for the Tidjāniyya, but also for more recent Ṣūfī order leaders such as the Senegalese Ibrāhim Niasse (d. 1975), has led to a poetry expressing this veneration, mainly in Arabic but also occasionally in indigenous African languages.

If certain poets respect rigorously the rules of Arabic metre, others sacrifice this rigour for didactic considerations. *Naẓm*, the versifying of an existing prose text, is a current procedure in poetic production. Some poets compose entirely out of their own invention, but many others proceed by extending an earlier, original poem. There are various ways here, the most common being the *tarbīʿ*, the addition of two hemistichs after each pair of hemistichs of the original poem; the *takhmīs*, the addition of three hemistichs; and finally, the *tashṭīr*, the intercalation of two hemistichs between the first two of an existing poem. In West Africa, Hausa and Pular or Fulani dominate in writing in African languages, although there is some religious poetry in other languages, such as in Mandingo, Wolof, Songhay, etc.

It is known that even renowned Islamic religious scholars composed secular verse. Hence Muḥammad al-Amīn b. Muḥammad al-Kānemī, on his return from a military campaign in Bagirmi [*q.v.*] in 1821, expressed his nostalgia for his favourite wife in details recalling amorous poetry, whilst the Senegalese Dhu 'l-Nūn Ly (d. 1927) in his love poetry sang the praises of the gracious charmers of Saint-Louis in Senegal.

With the spread of the Arabic language, a large number of literate herdsmen and peasants are also writing poetry which, unlike that of the scholars, finds its inspiration in the folklore of the land and the pastoral horizons of the Fulbe or Fulani peoples. And if, from the fact of colonisation, more and more African poets are writing in French or English, one still finds in the lands from Senegal to Dārfūr, traversing the Niger bend, Hausaland and Borno, poets who are writing religious verse, in particular, but sometimes also secular verse, in Arabic or in *ʿAdjamī*.

(OUSMANE KANE)

6. In Hausaland.

The Hausa Muslim poet (*mai wallafa wakoki* or sometimes *mai waka*) belongs to the wider category of *malamai* (sing. *malam*), that is, "Muslim scholar" or "literate person" (< Ar. *ʿālim*). He, and less frequently she, performs the role of Muslim teacher, moralist and guardian of Islamic social norms. He is likely to specialise in one or more of the categories of Hausa Islamic verse listed in the articles HAUSA iii. and in SHIʿR, which are associated with certain Islamic institutions and festivals.

During the colonial period, the Hausa poets increasingly concerned themselves with the innovations brought in by the Europeans. Thus an anonymous writer of *ca.* 1920 inveighs against such features of Western life and activity as electric torches, shirt buttons, cabin biscuits and an assortment of other items which aroused his ire. More recently, such poets have written against prostitution and the adoption by Hausa women of European dress styles, which they tend to regard as immoral. It seems probable that this tradition of Islamic puritanism has been influenced by a wider anti-modernist trend consequent on the Wahhābī movement beginning in Arabia [see WAHHĀBIYYA]. Islamic marriage is also a favourite topic [see NIKĀḤ. 6].

Since the introduction of modern, Western-style democratic political parties into Nigeria [*q.v.*], the Hausa Muslim poets have taken on the role of political propagandists. Thus a poet will claim the Islamic virtues for his own party e.g. the Northern People's Congress (NPC), whilst attributing the betrayal of Islam to the other main Northern Nigerian party of the pre-independence period, the Northern Elements Progressive Union (NEPU). The NEPU poet will riposte with the accusation that the NPC falsifies Islam and that only NEPU deserves the allegiance of Muslims. Such political verse has, however, much diminished in Northern Nigeria since it was banned by the military administration [see NIGERIA].

One interesting development is the emergence since Nigerian independence of women poets. The composing of verse by Hausa Muslim women has a precedent in the work of the 19th century writer Nanan Asma'u, the grand-daughter of ʿUthmān b. Fūdī [*q.v.*], but it was infrequent in subsequent decades. However, the spread of feminism within Islam [see MARʾA] has caused such compositions by women, interpreting women's issues in an Islamic context, to flourish.

7. In Malaysia and Indonesia.

In Malay and modern Indonesian the Arabic loan word *syair* refers to an extended verse form, which may run to hundreds of stanzas, each of which consists of four lines with the same end rhyme, with every line carrying four stresses and divided by a caesura. The author or creator of this form of verse is referred to as *penyair*.

In pre-modern Malay society the role of the poet was functional, that is, to provide material in a pleasant form, for instruction or for entertainment, or both. Poets had to have specialised knowledge of their topics, because central to their work was the expression of values or information, not the outpouring of individual emotion for its own sake. The earliest evidence of the use of the form in the Malay world is from the late 16th century, and *syair* were still being composed up until World War II. The form was popular in all Malay-speaking regions and was both oral and written. The traditional mode of delivery was by singing the verses to set tunes in a way which enhanced the verbal message. Verse was considered easier to compose than prose, easier to memorise and recite, and easier for an audience to follow. The language of verse was closer to colloquial Malay in grammar and syntax, and its units brief and predictable.

A comparison of the earliest *syair* with those written during and after the 19th century suggests that the earlier poets were specialists and professionals, but that as literacy became more widespread so too did composing, and *syair* became no longer solely the domain of professionals.

(a) *Pre-19th century*. The first poet whose name is known is (Hamzah) Fanṣūrī [*q.v.*], indicating that he came from Fansur (or Barus, an entrepôt on the northwest coast of Sumatra) and who lived in the second half of the 16th century. The *syair* identified as being composed by Hamzah are poems of worship in the mystical tradition of Ibn al-ʿArabī, which affirm the unity of the Creator and the Created, and yearn for ultimate union with the Godhead through the seven stages of mystical ascent. Great Ṣūfī poets such as the Persian Djalāl al-Dīn Rūmī [*q.v.*], who was undoubtedly read by Hamzah, believed in the doctrine of the Divine Word embodied in the sacred text of Revelation (the Ḳurʾān) and reflected in symbolically conceived and interpreted poetry (see Braginsky, 1993). In the act of creating a poem the poet became a channel through which the energy of the Creator flowed into the poem, and from the poem reached out to and inspired readers or listeners, and through which, in the reverse process, they could ascend the seven stages to unity with Him.

The poems of Hamzah are both acts of worship and instructional texts in the Ṣūfī mode. There are reports that *syair* are still used by members of mystical brotherhoods in Malaysia as chants after the recitation of *zikr* or *dhikr* [*q.v.*] in order to regain a sense of reality after intense meditation. Hamzah's poems may also have been used in this way in earlier times. Examples of written Malay before the 19th century are all too rare. One text which has survived is the long *Syair Perang Mengkasar*, composed in the mid-17th century, by Encik Amin. In 534 verses this *syair* describes the wars between the Dutch and Makassarese for control of the spice trade in Eastern Indonesia, and indicates that poets were not restricted to religious topics. The background of Encik Amin provides further detail about the poet's function in the pre-modern period. Encik Amin was a professional writer, who served as clerk or secretary to the Sultan of Goa in Sulawesi. His duties included the drafting of treaties, official correspondence, copying of manuscripts and the recording of events of significance for his patron. In his *syair* which relates Makassarese resistance to Dutch attacks, Encik Amin quotes verses from Hamzah Fanṣūrī's poems, indicating the regard in which they were held even outside their area of composition. If Hamzah and Encik Amin are in any sense representative of pre-modern poets, their works suggest that poems in written form were the result of specialist training, and that literacy set them apart from their peers and provided the basis of their livelihood.

It is very likely that non-literate Malays used the *syair* form when reciting or singing for a variety of

audiences and purposes. We know, for example, that rhythmical and rhymed verse was sung or chanted by puppetmasters (*dalang*), shamans, curers, diviners, story-tellers and young men and women during courting rituals, as an essential part of traditional social life.

(b) *The 19th century and after.* In contrast to the earlier period, an impressive number of written *syair* have survived. During the 19th century it became the form for popular improvisation, although it could still be used for religious topics. There are surviving examples of religious handbooks on prayer, basic duties and obligations, marriage law, the pilgrimage to Mecca, and in the realm of the supernatural, *syair* on divination and the interpretation of dreams.

The greatest number of surviving *syair* texts are lengthy adventure romances, which were primarily for entertainment but were also didactic. Much of the material in these texts was adapted from Persian, Egyptian, Turkish, or Indian stories. The 19th-century Malay-Bugis court at Riau [*q.v.*] provides an example of an active literary centre. Prose and poetry was written by both men and women, only a few of whom, for example Raja Ali Haji, were "professional" writers. Raja Ali Haji, a religious scholar and historian, used the *syair* form only rarely, but his relatives wrote copiously in verse about their travels, local wars, current happenings and romances. These writers were not specialists in the sense of writing for their livelihood, and so did not need patrons. They were literate and leisured, and wrote to entertain as well as to provide material that would bring moral benefit to themselves and their audience.

In urban centres, especially where there were printing presses, *syair* appeared in lithographed and print form, from the late 19th century into the early 20th. There are numerous instances of *syair* versions of popular prose narratives, the verse forms going into more reprintings than the prose originals. However, as the numbers of secular educated Malays and Indonesians grew, western influenced verse forms gradually replaced the *syair* as the preferred form for poetry. Although he did not use the *syair* form, the Sumatran poet Amir Hamzah (1911-46) is one of the few from the early modern period who wrote verse with a religious theme. Inspired both by emotion and religion, his two volumes of verse echo the intensity and depth of the *syair* of Hamzah Fanṣūrī. In the late 20th century, poetry in this spirit is still being composed by the Javanese poet Emha Ainon Nadjib, and being received with acclaim.

(Virginia Matheson Hooker)

SHAKĀK, a large Kurdish tribe on the Turkish-Iranian border, in the mountainous districts to the west and northwest of Lake Urūmiyya (Somāy [*q.v.*] Brādōst, Čahrīḳ and Ḳuṭūr). In the 1960s it was estimated that the tribe numbered 4,400 households in Iran alone; smaller numbers are based in Turkey. The Shakāk are Sunnī Muslims and speak the northern (Kurmāndjī) dialect of Kurdish. In the literature, the Shakāk are frequently confounded with the Shaḳāḳī [*q.v.*] Shiḳāghī, a Turkish-speaking Shīʿī (Ḳizilbāsh) tribe of Kurdish origins presently living to the east and northeast of Tabrīz. Although presently distinct, the relationship between both tribes appears to consist of more than just the similarity of names. Two sections of the Shakāk, the Fanak/Finik and the Būtān, bear the names of districts in the Djazīra. The *Sharaf-nāma* of Idrīs Bidlīsī [*q.v.*] (late 16th century) does not mention Shakāk, but it describes the Shaḳāḳī as a (Kurdish-speaking) nomadic tribe in the district of Finik in the Djazīra. Ottoman documents of the same period also mention Shaḳāḳī in Mārdīn and Vān provinces. It appears that sections of the Shaḳāḳī, Ḳizilbāsh by religious affiliation, migrated eastward from the Djazīra to Ādharbāydjān, where they became turkicised. On their way east, they passed very close by the districts presently inhabited by the Shakāk; conceivably the latter incorporate sections of the Shaḳāḳi that settled in their midst and lent them their name.

The Shakāk consist of a large number of named sections (*tīra* or *ṭāʾifa*); lists of these sections, compiled at different times, show great variation, indicating considerable flux in the composition of the tribe. Certain sections were at other times listed as separate tribes. The paramount chieftains of the tribe's known history belonged to one of two chiefly lineages (*Pisāḳā*), the ʿAbdovī/ʿAvdōʾī and the Kārdār. Other important sections in Iran include the Māmadī, Hanāre, Aṭmānī, Īwerī, Fanak, Būtān, Mūḳurī, Shapīrān, Gawrik and Nīsānī. On Ottoman soil, Sykes lists the said Mūḳurī and Būtān besides three other sections named Shakiftī, Shavalī and Shakāk. In the late 19th century, the Mūḳurī and Shakiftī, each numbering around 1,200 households, provided the Ottoman government with a Ḥamīdiyye regiment each (Kodaman 1987, 54). So did two other tribes of the same region, the Shamsikī and the Takūrī, which were sometimes also considered as sections of the Shakāk. The semi-nomadic Shakāk of Somāy and Brādōst dominated a non-tribal, Kurdish-speaking peasant population (named *Kirmāndj*) that was three times more numerous than themselves; similar relations probably prevailed on the Ottoman side of the border.

The earliest remembered paramount chieftain of the Shakāk was Ismāʿīl Āghā of the ʿAvdōʾī Pisāḳā, who flourished in the early 19th century. Under Ismāʿīl's son ʿAlī, the Shakāk first established themselves in Somāy, expelling the Turkish lords who had until then controlled the district. Later, the ʿAvdōʾī established their headquarters even further north, at Čahrīḳ. In the first quarter of the 20th century it was Ismāʿīl Āghā's great-grandsons Djaʿfar and especially Ismāʿīl, nicknamed Simkō, who caused the Shakāk to acquire a certain fame or notoriety. Djaʿfar Āghā established his control of the entire tribe by, on the one hand, offering his services to the provincial government and, on the other, carrying out daring raids on the surrounding districts. He was finally captured and publicly hung in Tabrīz in 1905. The career of Ismāʿīl Āghā "Simkō" owed much to the vicissitudes of the First World War and its aftermath. He was in contact with the Ottomans and Russians as well as the local Christian communities and the Persian authorities, and by keeping equal distance from all he maintained wide room for manoeuvre. In the power vacuum resulting from the withdrawal of Russian and Ottoman troops, Simkō brought a large area under his control. In 1918 he murdered the Nestorian patri-

arch, Mār Shimūn, who was perhaps his most serious local rival. (The Nestorians had fled their mountain fastnesses in Ḥakkārī during the war, and settled in the fertile plain of Urūmiyya, with the clear intention to stay there.) During the following years, Simkō gradually extended the area under his control, and by early 1922 he *de facto* governed most of the Kurdish-inhabited parts of Ādharbāydjān as well as the (Turkish-inhabited) Urūmiyya plain. Although begun as a traditional tribal rebellion, Simkō's movement acquired Kurdish nationalist overtones. He was in contact with Kurdish leaders in ʿIrāḳ and Turkey, nationalists from other parts of Kurdistan joined him, and he had a Kurdish newspaper published in Ṣāwūdj-Bulāḳ (Mahābād [*q.vv.*]). In August 1922 a strengthened Iranian army finally defeated Simkō, who fled to ʿIrāḳ. After a final, unsuccessful, bid to establish himself as a local powerholder in 1926, he was ambushed and killed by Iranian government forces in 1929.

Paramount leadership of the Shakāk passed to Simkō's rival ʿAmr Āghā of the Kārdār Pisāḳā, who had acted as Simkō's deputy as long as the latter was in a strong position but had in time transferred his loyalties to the central government. His control of the tribe was less complete than Simkō's had been, and some sections, notably the ʿAvdōʾī under Simkō's son Ṭāhir and the Māmadī under their own leading family, often acted independently. Under ʿAmr Āghā, the Shakāk took a half-hearted part in the short-lived Kurdish republic of Mahābād (1946). ʿAmr Āghā was one of the founding members of the Democratic Party of Kurdistan, and both he and Ṭāhir Āghā contributed cavalry regiments to the republican army (800 and 500 men, respectively). However, these tribal regiments never took active part in the military defence of the republic against the Iranian army, and ʿAmr Āghā again in time made diplomatic overtures to the central government. The same cautious relationship with Kurdish nationalist politics has been characteristic of the Shakāk for most of the following half-century. Even in 1979, when following the Islamic revolution central authority was temporarily absent and the Kurdish nationalist cause briefly appeared successful, only a few urban-educated Shakāk became involved in it. Ṭāhir Āghā, who had by then become the paramount chieftain, ruled the Shakāk territories as an independent lord, unwilling to cede authority to the Kurdish political parties. In the following years, the tribe soon again reached an accommodation with the central government.

(M.M. van Bruinessen)

SHAḲĀḲĪ or shiḳāghī, a tribe of Kurdish origin centred on Ādharbaydjān. According to Yūsuf Ḍiyāʾ al-Dīn, the word *shiḳāḳī* means in Kurdish a beast which has a particular disease of the foot. According to Sharaf al-Dīn Bidlīsī's *Sharaf-nāma* (i, 148), the Shaḳāḳī were one of the four warrior tribes (*ʿashīrat*) in the *nāḥiya* of Finik of the principality of the Djazīra. According to the Ottoman *sāl-nāmes*, there were Kurdish Shaḳāḳī in the *nāḥiye* of Sheykhler in the *ḳaḍāʾ* of Ḳillīs in the *wilāyet* of Aleppo (cf. Spiegel, *Eran. Altertumskunde*, i, 744). The *nāḥiya* Shaḳāḳ of the *Djihān-numā* (between Mukus and Djulāmerg) is certainly only a mis-reading for Shatākh. As a result of certain movements, probably in the time of the Turkmen confederation of the Aḳ Ḳoyunlu [*q.v.*], we find the Shaḳāḳī leading a nomadic life on the Mughān river on the frontier of Transcaucasia [see shāhsewan]. At the beginning of the 19th century, there were 8,000 families on Russian territory. Dupré speaks of 25,000 hearths of Shaḳāḳī among the tribes speaking Kurdish. About 1814, J. Morier numbered them at 50,000 grouped along the Tabrīz-Zandjān road in the districts of Hashtarūd, Garmarūd and Miyāna as well as at Ardabīl. The Ḳādjār prince ʿAbbās Mīrzā drew from this tribe the main cadres of his infantry drilled in European fashion. According to Morier, the Shaḳāḳī spoke Turkish. Shīrwānī puts the summer and winter quarters of the 60,000 families of Shaḳāḳī in the region of Tabrīz-Sarāb (on the road from Ardabīl) and adds that it is a Kurdish tribe whose language is Turkish, which forms part of the Ḳizil-bash (*min tawābiʿ-i ḳizil-bash*), which evidently means that the tribe is Shīʿī, as is also suggested by its association with the Shāhsewan. The importance of the tribe may be judged from the fact that, at the beginning of the 20th century, the Ḳādjār government recruited four regiments from the Shaḳāḳī; we do not know the connections that may exist between the Shaḳāḳī and the Kurdish Shakāk, but all indications point to their being a Turkicised Kurdish tribe (like the Kurds of Gandja). In the toponymy of the region south of Lake Urmiya [see sāwdj-bulāḳ], we find traces of the passage of the Shaḳāḳī (the village of Ḳishlaḳ Shiḳāḳī at Suldūz).

(V. Minorsky)

SHAKAR GANDJ [see farīd al-dīn masʿūd].

SHAKARKHELDĀ, a village of the pre-modern Indian province of Berār [*q.v.*] situated on an affluent of the Pengangā river. Its main claim to fame is that it was the site of the battle in 1137/1724 when Niẓām al-Mulk Čīn Ḳilič Khān [*q.v.*] defeated the deputy governor of Ḥaydarābād Mubāriz Khān and thereby established the virtual independence of the Niẓāms of Ḥaydarābād from the Mughal empire. Niẓām al-Mulk changed the village's name to Fatḥkheldā, and this is now a small town in the Buldāna District in Marāshtra State of the Indian Union (lat. 20° 13' N., long. 76° 29').

Bibliography: *Imperial gazetteer of India*[2], xii, 86; and see ḥaydarābād, at III, 320a and map at 321.

(Ed.)

SHAḲĀWA (a.) means misfortune or misery; equivalents are *shakwa*, *shaḳāʾ* and *shaḳan*. The concept is the opposite of *saʿāda* [*q.v.*]. According to Ḳurʾān,

XX, 122, he who follows God's "right guidance" (*hudā*) escapes from the situation of unhappiness and "does not become unhappy". Accordingly, in the story of the Fall, Adam's expulsion from Paradise is described as "misfortune", into which he ended up for not having followed God's admonition (XX, 117 ff.). But in the Ḳur'ān the derivations from the root *sh-ḳ-w* (*shaḳāwa* itself is not found) are mainly used eschatologically: the "unhappy one" (*shaḳiyy*) will find himself in the fire of Hell, in contrast to the "blissful" (*saʿīd*), who will stay in Paradise (XI, 105/107 ff.).

In the *ḥadīth*, this eschatological usage is taken up in the doctrine of God's predestination; following a prophetic tradition, "the blissful are placed [by God] in a position in which they are able to act as the blissful do, but the unhappy ones can only act as the unhappy do" (Muslim, *Ṣaḥīḥ*, *kitāb al-ḳadar*, no. 6).

The deterministic usage of *shaḳāwa* is also taken up by Islamic theology, where distinction is made between the divine attributes *al-ḳaḍā' wa 'l-ḳadar* [*q.v.*], which determine the contents of the "preserved table" (*al-lawḥ al-maḥfūẓ* [*q.v.*]) on the one hand, and "what is written down" (*al-maktūb*) on the "preserved table" on the other; the latter is a human attribute "in the form of bliss or misfortune" (*saʿadat^un aw shaḳāwat^un*) which can be changed into its opposite by the acts of man (see Abu 'l-Layth al-Samarḳandī, *Sharḥ al-fiḳh al-absaṭ li-Abī Ḥanīfa*, ed. H. Daiber, *The Islamic concept of belief in the 4th/10th century*, Tokyo 1994 [= Studia culturae islamicae], Arabic text, ll. 301 ff., 319 ff.).

In his commentary on the Ḳur'ān, the scholar al-Rāghib al-Iṣfahānī (d. 5th/11th century [*q.v.*]) connects the concept of *shaḳāwa* in analogy with *saʿāda* (cf. Daiber, *Griechische Ethik in islamischem Gewande*, in *Historia philosophiae*, ed. B. Mojsisch and O. Pluta, Amsterdam-Philadelphia 1991, 184-5), with the hereafter and with this world, and he divides the "unhappiness of this world" into three kinds: unhappiness of the soul (*nafsiyya*), unhappiness of the body (*badaniyya*) and external (*khāridjiyya*) unhappiness (see *Muʿdjam mufradāt alfāẓ al-Ḳur'ān*, ed. Nadīm Marʿashlī, (n.p. 1972, 271, *s.v.*).

To sum up, the term *shaḳāwa* is used both in the meaning of a situation in this world and also of the situation in the hereafter, which is determined by God but for which man is responsible through his behaviour. The term does not therefore play a role in the Islamic discussions on theodicy (see E.L. Ormsby, *Theodicy in Islamic thought*, Princeton 1984).

In astrology, the concept of "misfortune" is described by *naḥs*, pl. *nuḥūs*. The question is discussed whether unlucky stars (such as Saturn and Mars [see AL-MIRRĪKH]) dominate the hour of birth, and whether they are able to exercise their calamitous influence (*nuḥūsa*). See *Rasā'il Ikhwān al-Ṣafā'*, ed. Ziriklī, iii, Cairo 1928, 341, tr. S. Diwald-Wilzer, *Arabische Philosophie und Wissenschaft in der Enzyklopädie* Kitāb Ihwān aṣ-ṣafā' (*iii*), Wiesbaden 1975, 468. See also Abū Maʿšar, *The Abbreviation of the Introduction to astrology*, ed. and tr. Ch. Burnett, Keji Yamamoto and Michio Yano, Leiden 1994 (= IPTS, XV), index of Arabic terms. s.v. According to Abū Maʿshar, the (evil as well as good) influence of the planets does not exclude chance or freedom (see R. Lemay, *Abu Maʿshar and Latin Aristotelianism in the twelfth century*, Beirut 1962, 125 ff.).

Bibliography: Given in the article.

(H. DAIBER)

SHAKHṢ (A.), lit. "bodily form, shape". The noun form does not occur in the Ḳur'ān, although verbal and adjectival forms of its root, here denoting a different range of meaning, that of staring fixedly (of the eyes), do occur (XIV, 43/42, XXI, 97).

1. In philosophy.

Here, *shakhṣ*, pl. *ashkhāṣ*, is equivalent to the Greek ἄτομον meaning an individual, a person. Philosophically, the *ashkhāṣ* are to be distinguished from *adjnāṣ* (genera) and *anwāʿ* (species), as well as Arabic words which may have connotations of the particular or individual such as *khāṣṣ* and *adjzā'*. Individuation may be rendered in philosophy by the term *tashakhkhuṣ*. The term *shakhṣ* and its plural is used not only in Islamic philosophy (e.g. by al-Kindī, al-Fārābī, Ibn Sīnā, Ibn Rushd) but also in Arabic theological commentary. When Christian theologians like John of Damascus, talking of the Trinity, held that every hypostasis (ὑπόστασις) was an individual (ἄτομον), al-Kindī believed that the Greek word ὑποστάσεις was best rendered by the Arabic *ashkhāṣ* (Wolfson, 321-2). Here then, specifically and theologically, *shakhṣ* bore the sense of Trinitarian "Person". More usually, however, in Islamic philosophy the term was a mainly neutral one simply rendering such terms as "individual" (see Booth, 112). It is worth noting that, while the great Neoplatonist Porphyry of Tyre (A.D. 234-*ca.* 305) in his *Eisagōgē* identified five "voices" or "predicables" (species, genus, difference, property and accident), the Ikhwān al-Ṣafā' [*q.v.*] added a sixth term, the individual (*al-shakhṣ*), to the standard list of five. In this they may have followed al-Kindī, who was the only other Islamic philosopher to espouse a sixfold list. Alternatively, and depending of course on when the *Rasā'il Ikhwān al-Ṣafā'* are believed to have been written, it is possible that the Ikhwān were inspired to add and use the term *al-shakhṣ* after becoming familiar with al-Khʷārazmī's definition of this term (141) as one used "by logicians to designate Zayd and ʿAmr and this man and that donkey and horse".

2. In law.

The term *shakhṣ* is employed in modern law in some Muslim countries such as Egypt, Syria, Libya, and ʿIrāḳ, where it would appear to have been coined under the influences of western legal systems. It means either the natural person (*shakhṣ ṭabīʿī*) or the assumed person (*shakhṣ iʿtibārī*). The life of a natural person starts with the formation of the embryo, providing it is born alive or even assumed to be alive (*taḳdīr^an*). The Ḥanafīs, however, give the living status to a "human" once most of it is born alive. They also assume a personality for the embryo even if its life is taken prior to the birth. Accordingly, the baby is

treated as having a legal entity that can inherit and be inherited from. Syrian Law, both the civil code (art. 31) and the law of personal status (art. 236/1, 2360/2) have incorporated an opposing legal view to that of Ḥanafīs. It stipulates that an embryo can only be considered a person if separated from his mother's body. The natural personality normally ends by natural death. Legally, it can be ended by a court injunction that assumes a missing person to be dead by estimating his life in comparison to his age when he disappeared. The legal responsibility (*d̲h̲imma*) of a deceased person can remain after his death until all his rights and duties are cleared.

Although the concept of *s̲h̲aḵh̲ṣiyya*, legal personality, does not exist in Islamic law, at least historically, its meaning was subsumed under the heading of *ahliyya* or the legal capacity of an individual to be a subject of the law. *Ahliyya* can be either a right-acquiring capacity (*ahliyyat wud̲j̲ūb*) or execution capacity (*ahliyyat idā'*) which involves the ability to contract, to dispose, and therefore also validly to fulfil one's obligations. In Islamic law, the assumed personality (*s̲h̲aḵh̲ṣiyya iʿtibāriyya*) seems to have been synthesised during the discussions by the *fuḳahā'* regarding the capacity of a "person" for obligation (*ahliyyat wud̲j̲ūb*). Ownership also poses a problem when an endowment or legacy is made to non-living establishments and institutions; does it own that endowment or not? The Ḥanafīs appear to restrict the status of ownership to living persons, although the S̲h̲āfiʿīs and the Mālikīs grant the right of ownership to assumed persons.

S̲H̲AKĪB ARSLĀN (1869-1946), a Durūz [*q.v.*] notable from the S̲h̲ūf region of Lebanon and polemicist. During the first fifty years of his life, he established a reputation as an accomplished Arab poet and journalist and as an Islamic-oriented activist dedicated to the preservation of the Ottoman Empire. In the period between the two World Wars he became an anti-imperial agitator and a relentless spokesman for the cause of Islamic solidarity. His voluminous writings, his well-connected network of associates, and his knack for attracting publicity made him one of the most visible Arab figures of the interwar era.

The Arslāns were a powerful Durūz family whose members had the right to bear the title of *amīr* [*q.v.*]. Educated at Maronite and Ottoman secondary schools, Arslān at first eschewed the family tradition of politics in favour of literature. He published his first volume of poetry at the age of seventeen and continued to engage in literary pursuits for the next several years, earning the honorific title *amīr al-bayān* ("the prince of eloquence") by which he was known for the rest of his life. Eventually, he assumed the role expected of an Arslān *amīr* by serving as *ḳā'immaḳām* of the S̲h̲ūf [*q.v.*] on two different occasions (1902; 1908-11). He was elected to the Ottoman Parliament in 1914 and devoted the war years to defending the Ottoman cause.

With the Ottoman defeat and the imposition of the mandate system, Arslān became an exile, barred by British and French authorities from entering the states under their control. Instead of becoming marginalised by his changed circumstances, Arslān emerged as an international figure during the interwar period. His residence in Geneva served as a gathering point for Arab and Muslim activists, and his position as the unofficial representative of the Syro-Palestinian delegation to the League of Nations afforded him opportunities to present the Arab case to the European community. His influence was expanded through the journal *La Nation Arabe* (1930-8), that he founded and edited with his Syrian associate, Iḥsān al-D̲j̲ābirī. *La Nation Arabe* attacked all aspects of European imperialism in the Arab world, but devoted special attention to French policies in North Africa and Zionist activities in Palestine.

Notwithstanding his Durūz origins, Arslān made his reputation as a staunch defender of Sunnī Islam. He contributed regular articles to Islamic-oriented Egyptian journals such as *al-Fatḥ* and wrote several books on Islamic subjects. The purpose of his writings was to awaken among Muslims an awareness of their shared Islamic heritage and to summon them to political action against European imperialism in the name of Islamic unity.

More than any other figure of the era, Arslān endeavoured to bring together the leaders of the North African and Eastern Arab independence movements. He played an especially important role as political strategist and personal mentor to the group of young Moroccans associated with the Free School movement, and his orchestration of their international Islamic propaganda campaign against the French decree known as the Berber *ẓahīr* (1930) was one of the most successful interwar Arab protest movements.

Arslān's final reputation was diminished by his association with the Axis powers. At the peak of his popularity, he endeavoured to coordinate an Italian-German alliance with the Arab world in order to generate leverage against Britain and France. His efforts generated much publicity but few results, and his continued pro-Axis stance during World War II discredited him. His death in Beirut in 1946 attracted little notice.

S̲H̲AḲĪḲAT AL-NUʿMĀN (A.) is the anemone. It flourishes in the lands around the Mediterranean and in Asia Minor. The *Anemone coronoria L.* or the *Anemone hortensis L.*, Ranunculaceae, qualify as mother plants. Both *s̲h̲aḳīḳat* (*s̲h̲aḳā'iḳ*) *al-nuʿmān* and the words *s̲h̲aḳā'iḳ* and *nuʿmān* taken separately are in general synonymous. Other synonyms are *s̲h̲aḳir*, Persian *lāla*, Berber *ṭīkūk*, in Spanish Arabic *ḥababawar* < Castilian *hamapola* < *papaver*, Greek *arg̲h̲āmūna* (= ἀργεμώνη, the poppy, instead of ἀνεμώνη). So far a satisfactory explanation of the name has not been given. Many scholars have wished to derive ἀνεμώνη from *al-nuʿmān*, while others prefer the opposite explanation. In ʿIrāḳ the anemone was called *ḵh̲add al-ʿad̲h̲rā'* "virgin's cheek", which already existed as a by-name of Kūfa. The Laḵh̲mid king al-Nuʿmān b. al-Mund̲h̲ir (II) (r. towards the end of the 5th century A.D.) is said

to have been so much enraptured by the beauty of the anemone that the flower was called *al-nuʿmān* after him, while *shaḳīḳa* is said to have preserved the name of his mother *Shaḳīḳa*. The *nuʿmān* is described as being similar to the poppy (*khashkhāsh*); the difference is said to be recognisable from the fact that the edges of the petals of the *nuʿmān* are laciniated (*kathīr al-taḳṭīʿ*), while those of the *khashkhāsh* are only slightly dentated (*ḳalīl al-tashrīf*). The anemone exists in two kinds: a cultivated one, whose petals are red, white or purple and which spreads out on the ground with long stalks, and a wild one, which is bigger and more solid than the cultivated one, has larger petals and longer tops (*ruʾūs*), and is scarlet-coloured. It opens during the day, turns towards the sun and shuts at night. ʿAbd Allāh b. Ṣāliḥ, Ibn al-Bayṭār's teacher (see Dietrich, *Dioscurides triumphans*, ii, 159), rightly recognised that anemones cannot belong to the species of the poppy plants (Papaveraceae), the nearest related family. On superficial inspection, the petals of some species of the Ranunculaceae show similarity with those of the Papaveraceae.

In medicine, the anemone at present seems hardly to be used any more. In the drug bazaar in Cairo, pulverised petals of the anemone are sold as decoctions against ailments of the eye. According to the Arab authors, the anemone is above all useful against skin diseases, and it dissolves ulcers and supports their ripening. Its juice blackens the pupil, cuts off an incipient cataract, strengthens the eye and sharpens the eyesight. Boiled together with their stalks, anemones further the formation of milk. If a woman inserts the anemone with the help of a woollen tampon (*ṣūfa*), she increases the flowing of the menstrual blood (i.e. if an abortive effect is aimed at). Ibn Riḍwān (in Ibn al-Bayṭār, *Djāmiʿ*, iii, 65, 25-7) is even of the opinion that seeds of anemones, if taken during several consecutive days, would cure leprosy.

On the anemone in Arab poetry, see al-Nuwayrī, *Nihāya*, xi, 281-5, who gives many examples.

(A. Dietrich)

SHĀKIR, AḤMAD MUḤAMMAD (1892-1958), well-known Egyptian scholar and editor of classical Arabic texts dealing with poetry, *adab* [*q.v.*] and especially *ḥadīth* [*q.v.*]. He received his religious education at al-Azhar [*q.v.*], whereafter he was appointed *ḳāḍī* in Zagazig. Already during his lifetime Shākir was considered as the foremost *ḥadīth* expert of his generation. He was particularly famous for his alleged expertise in the relationships between transmitters featuring in *isnāds* [*q.v.*]. He died just before a stormy controversy on the value of Muslim tradition broke out which was to upset religious circles in Egypt first and then, in later years, to cause ripples also in other countries of the Middle East. Already in the period leading up to this event, in the course of which a certain *ḥadīth* scholar, Maḥmūd Abū Rayya, had been airing his intention to publish several most unorthodox ideas on various vital *ḥadīth* issues, Shākir had occasionally made his strictly orthodox point of view on the matter very clear. For an analysis of this controversy, see G.H.A. Juynboll, *The authenticity of Muslim tradition literature. Discussions in modern Egypt*, Leiden 1969, 38-46, and idem, *Muslim tradition* etc., Cambridge 1983, 190-1, 204-6.

Shākir's main editorial enterprise comprised a new edition of the *Musnad* of Aḥmad b. M. b. Ḥanbal (d. 241/855 [*q.v.*]), which he did not complete: only some two-fifths of the work were eventually printed, vols. i-xv, Cairo 1946-56, with a posthumously published vol. xix of 1980. For a survey of other texts which Shākir edited, some of them in cooperation with his brother Maḥmūd or with ʿAbd al-Salām Muḥammad Hārūn, see *Madjallat maʿhad al-makhṭūṭāt al-ʿarabiyya*, iv/2 (1378/1958), 356-8; al-Ziriklī, *Aʿlām*, [4]1979, i, 253. Beside these editions he published a number of assorted monographs on subjects dealing with (often Shāfiʿī) *fiḳh* and religio-political issues raised by the Salafiyya reform movement [*q.v.*] and the doctrines of Muḥammad b. ʿAbd al-Wahhāb [*q.v.*], several of which contained polemical treatises in which he grappled with fellow-scholars, e.g. *al-Sharʿ wa 'l-lugha*, Cairo 1944 (on the undesirability of introducing modern western legislation into Islamic countries and on his disapproval of writing Arabic with the Latin alphabet proposed by ʿAbd al-ʿAzīz Fahmī) and *Baynī wa-bayna al-shaykh Ḥāmid al-Fiḳī*, Cairo 1955 (on a putative misconception attributed to Ibn Taymiyya [*q.v.*], the mediaeval scholar who is so revered by the Wahhābiyya). For more polemics between him and al-Sayyid Aḥmad Ṣaḳr, see Shākir's edition of Ibn Ḳutayba's *K. al-Shiʿr wa 'l-shuʿarāʾ*, [2]Cairo 1966, 5-35. He also seems to have fallen out with another Egyptian *ḥadīth* expert, Muḥammad Fuʾād ʿAbd al-Bāḳī, at whose contacts with western scholars he looked askance. In his newly initiated edition of *al-Djāmiʿ al-ṣaḥīḥ* of Abū ʿĪsā al-Tirmidhī (d. 279/892 [*q.v.*]), Shākir therefore declined to conform with Wensinck's proposed chapter numbering of the canonical collections for the *Concordance et indices de la tradition musulmane*, which was then in the process of being printed, this much to the chagrin of ʿAbd al-Bāḳī, who saw the future utility of that work gravely impaired, cf. vol. iii of al-Tirmidhī, 3-4. For more details on Shākir's life, his criticism of mediaeval and contemporary oriental scholars and westerners, as well as an extensive analysis of his work as a 20th century orthodox Muslim *muḥaddith*, see Juynboll, *Aḥmad Muḥammad Shākir (1892-1958), and his edition of Ibn Ḥanbal's Musnad*, in *Isl.*, xlix (1972), 221-47.

(G.H.A. Juynboll)

AL-**SHĀKIRIYYA** (A.), a term denoting private militias fighting under the patronage of princes from the ruling dynasty, or commanders belonging to the class of military nobility, during the reign of the Umayyad and ʿAbbāsid dynasties. Classical Arabic lexicography does not provide a satisfactory explanation for this term, correctly associating it with the Persian term *Čākir*; for a discussion of possible etymologies, see C.E. Bosworth, *The History of al-Ṭabarī*, xxxiii, 179 and n. 506. The institution of the *shākiriyya*, from the historical standpoint, probably existed in the Iranian lands of Central Asia during the Sāsānid period and into the period after the Islamic conquest. According to Narshakhī, the Shākiriyya in Bukhārā were not a field military unit, but rather, a bodyguard at the court of Khātūn, the queen of Bukhārā in the late 7th century A.D. (*Taʾrīkh-i Bukhārā*, ed. M. Riḍawī, Tehran n.d. [1939], 46, tr. R.N. Frye, *The history of Bukhara*, 39).

After the Arab invasions of Transoxania, the Arab commanders and governors in the eastern province

followed in the footsteps of the local princes and established their own units of *shākiriyya*, who served as bodyguards, and then combattants.

This was the result of growing pressure on the part of the Türgesh toward the end of the 7th century and the first and second decades of the eighth, when the Arabs in Central Asia were compelled to enlist the aid of the *shākiriyya* which were under the command of the local nobility. Prominent among the latter were two brothers, Thābit and Ḥurayth, sons of Ḳuṭba. The phenomenon did not remain limited to the eastern provinces; it also spread westward to ʿIrāḳ and Syria, where *shākiriyya* units operated as private militias under the command of Arab commanders and princes for the purpose of putting down the insurrections of the Khāridjites [*q.v.*] alongside the semi-regular army of the Arab *muḳātila*. The struggle for power and disputes within the dynasty toward the end of the Umayyad period, encouraged and expedited the existence of such private units.

Under the ʿAbbāsids, the institution of the *shākiriyya* flourished, thanks to the growing tendency of the caliphs to eliminate their dependency upon Arab tribesmen and to rely more heavily upon the *mawālī* element. Decisive steps in this direction were taken by al-Maʾmūn, and also al-Muʿtaṣim, during whose reign the *shākiriyya* became a national military institution which, along with other ethnic groups, replaced the classical structure of the Arab tribal fighters. This was expressed in the establishment of a separate office, the *dīwān al-shākiriyya*, and the *shākiriyya* troops received monthly salaries which were quite high in comparison with those received by their colleagues, the Turkish troops and the *Maghāriba*.

Because they were subordinate to the caliphs, the *shākiriyya* forces were stationed in the capital Baghdād, and later in Sāmarrā. But the establishment of the *dīwān al-shākiriyya* did not change the nature of the *shākiriyya* as a private militia; military commanders, *ḳuwwād*, of both Arab and non-Arab origin, continued to keep *shākiriyya* as their own private militias, as witness the existence of *shākiriyya* militias in such cities as Kūfa, Medina, Raḳḳa and Malaṭya, as well as in such provinces as Ahwāz, Fārs, Ḥidjāz and Egypt.

In contrast to other militias, Arab sources do not indicate the ethnic identity of the *shākiriyya*, a fact which may point to their having belonged to a variety of ethnic groups, seen in traditions which speak of *shākiriyya* of Arab origin as well as *shākiriyya* from various nations and ethnic groups which lived within the borders of the former Sāsānid Persia. Whatever their origin, their loyalty to their patron the caliph was the common denominator which united them; manifestations of this loyalty could be seen after the murder of al-Mutawakkil (247/861) by Turkish commanders, and also in the loyalty toward the deposed caliph al-Mustaʿīn in 252/866 and the *shākiriyya*'s support of al-Muhtadī in his struggle against the Turkish commanders in 256/869.

SHAKK (A.) "perplexity", "uncertainty", "doubt" in the philosophical sense (though not the vernacular English sense of "being suspicious, dubious"). In ritual, *shakk* signifies uncertainty over the effective performance of an act. In epistemology, it is part of an epistemic ranking from *yaḳīn* (certainty) to *ghalabat al-ẓann* (likelihood), to *ẓann* (presumption), to *shakk* (uncertainty), to *shubha* (suspicion).

1. In Islamic legal and religious practice.

In the Ḳurʾān there are 15 usages, all in noun form, often in a formulaic combination with *murīb*, e.g. XI, 110; XXXIV, 54. Ḳurʾānic usages taken together suggest that *shakk* is hesitation in response to a summons (*daʿwa*) (XI, 62; XIV, 9-10). *Shakk* occurs despite a clear sign (XL, 34) and as a result of difference (*ikhtilāf*). Chastisement would resolve the uncertainty (VIII, 38), which is a kind of lack of seriousness (*yalʿabūna*) (XLIV, 9). It is a state opposed to knowing (*ʿilm*), and usage suggests a holding back from commitment (*īmān*) (XXXIV, 21). In the clearest (and perhaps latest) Ḳurʾānic usage (IV, 157), the entire epistemological ranking system is laid out, from errant supposition, to wilful pluralism as a cause of uncertainty: "Those who are errant have no knowledge, no certainty, but at best only supposition; it is said that those who assert that they killed the Messiah Jesus, son of Mary, the Messenger of God, are in error, and those who disagree are uncertain about it (*la-fī shakkⁱⁿ minhu*)".

In ritual, the term refers to uncertainty whether some condition of a ritual has been properly performed, e.g. when performing a specified number of *rakaʿāt*, if one loses track of the number completed, this uncertainty is called *shakk*. For the Shāfiʿīs, Mālikīs and Ḥanbalīs, the person who has lost track must begin again from whatever point he is confident he completed. For the Ḥanafīs, one is enjoined to try to recall how many had been done. If, upon reflection, one still cannot recall, then, like the other Sunnīs, Ḥanafīs are enjoined to begin at the point of certainty. The Zaydīs generally follow the Sunnī *madhhab* in this (Ibn al-Murtaḍā, ii, 337-9). Imāmī Shīʿīs hold that if the uncertainty occurs either during a *ṣalāt* for which the stipulated number of *rakaʿāt* is only two—as with the prayer of the two festivals—or during the first two of a *ṣalāt* for which four is stipulated, such as the *ʿishāʾ*, then the entire effort is voided and one must begin again from the beginning. If the uncertainty arises in the second pair of the *ʿishāʾ*, only the latter part must be repeated. For all schools, the completion of the ritual renders irrelevant any subsequent doubts about its performance.

In epistemology, *shakk* refers to a state of uncertainty resulting from the equipollence of beliefs or evidence. It is a sub-species of ignorance (al-Tahānawī, 780). In a commonly cited definition, Ibn Fūrak (d. 406/1015 [*q.v.*]) says that *shakk* is the judgment of possibility (*tadjwīz*) of two matters with no advantage to one over the other (*K. al-Ḥudūd*, 34).

This definition, however, al-Ghazālī criticises, arguing that, "*shakk* refers to contradictory beliefs grounded on two [different] motivations to belief (*sababayn*). Something which has no motivation to belief cannot be affirmed by the soul so that one thereby equipollates the contrary belief and it becomes uncertain. Thus we say: if one is uncertain whether one has prayed three or four [*rakaʿāt*], choose 'three' since the basic principle is 'no additional.' But, if one were asked whether the noon prayer which he performed ten years before was three or four, he cannot verify absolutely that it was four, so he cannot eliminate the possibility that it was three. This judgment of possibility (*tadjwīz*) is not *shakk*, since he has no motivation that would oblige him to believe it was three. Let us therefore understand the precise meaning of *shakk* so that it is not conflated with fancy (*wahm*), or judgment of possibility (*tadjwīz*) without motivation" (*Iḥyāʾ*, ii, 99; see also Jabre, *Lexique de Ghazālī*, 131).

Al-Tahānawī (*Kashshāf*, 780-1) is proof, however, that al-Ghazālī's distinction did not completely find favour, since he says, quoting al-Rāghib al-Iṣbahānī (*al-Mufradāt*, i, 388) "*shakk* is judging equal two antithetical notions and equipollating them. This may be from the presence of two equivocal signs (*amāratayn*) ... or from the absence of signs." Al-Nawawī (676/1278 [*q.v.*]) confirms this understanding, saying, "*fukahā'* apply the word *shakk* in many books of *fikh* to wavering (*al-taraddud*) between two sides, whether they are equal or one is preferred, as one says 'uncertainty about the *ḥadīth*, or concerning impurity, or one's *ṣalāh* or one's circumambulation, or intention, or divorce'" (*Tahdhīb al-asmā'*, ii, 166-7; Abu 'l-Baḳā', *Kulliyyāt*, iii, 63).

There is some suggestion that *shakk* refers to the objective fact of uncertainty and another word, *rayb*, to the state of perplexity consequent to that fact. Abu 'l-Baḳā' says in his *Kulliyyāt*, iii, 63, that "*shakk* is the cause of *rayb* ... *shakk* is the basis (*mabda'*) of *rayb*, as knowledge is the basis of certainty"; and al-Nawawī (*ibid.*) says that *shakk* is "a wavering of the mind" (*taraddud al-dhihn*).

2. In philosophy.

In one of its senses, *shakk* is an appropriate rendition of the Greek ἀπορία (defined by Liddell and Scott as "want of means or resource, embarrassment, difficulty, hesitation, perplexity"). However, the Ikhwān al-Ṣafā' in their *Rasā'il* considered "doubt" (*al-shakk*) more starkly as a sickness of the soul while its opposite "certainty" (*al-yakīn*) constituted that soul's health. For al-Djurdjānī, *shakk* was a hesitation between two antitheses. It is also useful to go behind such snap definitions and examine what "doubt" meant in terms of the *development* of Islamic philosophy. While no formal school of Islamic sceptics ever established themselves after the manner of a Pyrrho or a Timon, it is clear that monolithic "certainty" was no more to be observed in Islamic philosophy than it was in theology. Fakhr al-Dīn al-Rāzī, indeed, gained a reputation as a doubter and a critic of both philosophers and theologians. Al-Ghazālī's method has been described as one of doubt or scepticism with antecedents both in the reductionist atomism of the Ash'arīs and the thought of such Mu'tazilīs as al-Naẓẓām and Abu 'l-Hudhayl [*q.vv.*] for whom knowledge began with doubt. As M. Saeed Sheikh puts it, "The most important thing about al-Ghazālī's system of thought is its method which may be described as that of the courage to know and the courage to doubt. The best expression of it is given in his famous autobiographical work, *al-Munqidh min al-Ḍalāl*." However, the archetypal paradigm of "doubt" in the whole of Islamic philosophy must surely be the eponymous hero of Ibn Ṭufayl's [*q.v.*] *Ḥayy b. Yakẓān*. The philosopher presents his hero intellectually "naked", free from all presuppositions, free to accept or *doubt*. Sami S. Hawi puts it in a nutshell: "By removing Ḥayy from the social situation, Ibn Ṭufayl had done what Descartes, Hume and Husserl did. *He was attempting a hypothetical destruction of and universal doubt in the surrounding world of tradition and early education.*"

SHAKKĀZIYYA (a.), the name given to the markings of a universal stereographic projection which underlies a family of astronomical instruments serving all terrestrial latitudes.

The standard astrolabe [see asṭurlāb] contains a series of plates for different latitudes. Originally, on Greek astrolabes and the first Islamic astrolabes, these served the seven climates of Antiquity [see iklīm]. However, already in the 3rd/9th century specific latitudes were selected and sometimes lists of localities served by these would also be engraved on the plates. In al-Andalus in the 5th/11th century two astronomers, Abū Isḥāḳ Ibn al-Zarkāllu and 'Alī b. Khalaf, developed instruments in which these plates for a series of latitudes were replaced by a single plate (*ṣafīḥa*), essentially an astrolabic plate serving the latitude of the equator, but more precisely a stereographic projection of the celestial sphere from the vernal point on to the plane of the solstitial colure. This had the technical advantage that it could be used for any terrestrial latitude. It also had aesthetic advantages: the markings, which consist of two families of orthogonal circles (for, say, meridians and parallels of declination, or for longitudes and latitudes), are symmetrical with respect to both axes (in other words, they are the same in all four quadrants) and they do not crowd together in any place.

The *ṣafīḥa zarkālliyya* (see below) became known to modern scholarship through the researches of J.M. Millás Vallicrosa. But the meaning and significance of the term *shakkāziyya* was unknown when Willy Hartner published his masterly study of the theory of the astrolabe in Pope's *Survey of Persian art* (1939) and the summary thereof in the article asṭurlāb [*q.v.*]. In the latter he wrote (vol. I, 727a): "Another early variety of al-Zarkālī's astrolabe is the *ṣafīḥa shakāziyya* (or *shakāriyya*), about which we do not possess any accurate information." We now possess a great deal of information about this, but have still not solved some of the basic problems.

In spite of the research of various scholars over the past two decades, the details of the development of the various universal devices associated with Ibn al-Zarḳāllu and ʿAlī b. Khalaf, the relationship between them, as well as the nature of their respective contributions, remain somewhat unclear. What is clear is that Ibn al-Zarḳāllu wrote treatises on two different universal instruments, both plates, and that ʿAlī b. Khalaf wrote a treatise on a universal astrolabe.

The *ṣafīḥa shakkāziyya* bears a set of *shakkāziyya* markings with a graduated straight line drawn across it at an angle to the equator equal to the obliquity of the ecliptic [see MAYL] to represent the projection of the ecliptic. The circles of longitude for the beginning of each pair of signs are drawn for this second coordinate system. The ensemble can be used, together with a diametral rule attached at the centre, to solve various problems of spherical astronomy, although the solution of the most important of these, the determination of time from celestial altitude, can only be achieved approximately. In other words, the instrument has some limitations. On the back are scales for finding the solar longitude from the day of the solar year and others for finding shadow lengths.

The *ṣafīḥa zarḳālliyya* consists of two sets of *shakkāziyya* markings superposed one upon the other, with their axes inclined at an angle equal to the obliquity. This results in a somewhat cluttered ensemble and these markings have but one use: to convert celestial coordinates from the ecliptic to the equatorial system and *vice versa*. The back of this *ṣafīḥa* was marked with a trigonometric grid bearing an orthogonal meridian projection. This allows exact solutions to be found for all of the standard problems of spherical astronomy. There is also a curious small circle offset from the centre (see below).

The universal astrolabe consists essentially of a plate with *shakkāziyya* markings and a rete with the same; the latter can then rotate over the former. The combination can be used to solve any problem of spherical astronomy, since one can consider the two sets of markings as representing a horizon-based or equatorial or ecliptic coordinate grid. ʿAlī b. Khalaf further restricted the *shakkāziyya* grid on the rete to one-half of the rete, leaving the other free for a celestial mapping of both the northern and southern halves of the ecliptic superposed one upon the other. With this problems relating to the sun and various fixed stars could be solved using the *shakkāziyya* plate below. The universal astrolabe is no longer an analogue computer like the standard astrolabe.

Mainly as a result of the influence of the 13th-century *Libros del saber de astronomía*, in which these three instruments were featured, European astronomers learned of the *shakkāziyya* grid and called it *safea* or *saphea* after the Arabic *ṣafīḥa* (see Poulle, 1969). It is found on several European astrolabes after the 14th century. The universal astrolabe of ʿAlī b. Khalaf, called *lámina universal* in Old Spanish, was "reinvented" in England in the late 16th century by John Blagrave of Reading. For details of the various treatises on them, as well as their rôle in the transmission of astronomical knowledge to Europe, the reader is referred to the secondary literature listed below.

The utility and aesthetic appeal of the *shakkāziyya* markings led to their application on a celestial map, contained in a 15th-century manuscript of the *Libros del saber*. On this the coordinate grid is identical with that of the *shakkāziyya* plate (Madrid 1992 exhibition catalogue, 229, listed under Puig, 1992 below).

On the trigonometric grid on the back of the *ṣafīḥa zarḳālliyya* there is a small circle set below the centre. Only recently has the function of this been understood (Puig, 1989). With remarkable ingenuity of conception the apparently simple device serves to calculate the lunar distance and hence the lunar parallax for any position of the moon on its orbit.

The Aleppo astronomer Ibn al-Sarrādj also reinvented the universal astrolabe of ʿAlī b. Khalaf some 250 years before Blagrave. He was clearly aware of at least the single *shakkāziyya* plate, but he stated that he invented the instrument himself and boldly labelled it *al-Sarrādjiyya*. There is no (other) known direct evidence of the influence of ʿAlī b. Khalaf's astrolabe west of the Maghrib. However, Ibn al-Sarrādj then went several steps further and developed a second variety, fitted with additional plates and astronomical markings. In short, he produced an instrument that can be used universally in five different ways. An example of this remarkable quintuply-universal astrolabe, made by Ibn al-Sarrādj himself in 729/1328-29, is happily preserved in the Benaki Museum, Athens. It is the most sophisticated astrolabe ever made, and astronomers in Renaissance Europe would have been hard put to understand all of its functions. Fortunately a treatise on the use of this instrument survives, written by the Cairene astronomer ʿAbd al-ʿAzīz al-Wafāʾī (*ca.* 850/1450), whose mark of ownership is engraved on the Benaki astrolabe. He complained that Ibn al-Sarrādj failed to provide any instructions on its use, and proceeded to provide these himself, admirably completing the task to the very last detail.

Other Mamlūk astronomers in the 8th/14th century wrote on the simpler variety of universal astrolabe, which they called *al-asṭurlāb al-mughnī* [*ʿan al-ṣafāʾiḥ*], "the astrolabe that does not need any plates". They also developed the single and double *shakkāziyya* quadrant. With the former (see Samsó, 1971 and Samsó and Catalá, 1971) the problem of determining time from celestial altitudes is solvable only approximately. With the latter (see King, 1974) the solution is exact for any latitude. No such Islamic instruments survive; they are known only from texts. A double *shakkāziyya* quadrant from late-16th-century Louvain, now in the Adler Planetarium, Chicago, shows that Renaissance European instrument-makers, if only the most ingenious, were interested in the same kind of device.

Closely related to the *shakkāziyya* and *zarḳālliyya* plates, and certainly inspired by their utility, was the more flexible universal plate (*al-ṣafīḥa al-djāmiʿa li-djamīʿ al-ʿurūḍ*) of Abū ʿAlī al-Ḥasan b. Muḥammad b. Bāṣo of Granada (*fl. ca.* 675/1275). Only recently has it become known how this plate, a common feature on later Andalusian and Maghribī astrolabes, and occasionally also on Mamlūk Syrian and even on one Mughal Lahore astrolabe, functions (see Calvo, 1992 and 1993). The underlying notions reflect an almost incredible skill with the problems of spherical astronomy. Essentially, the plate is used with different arguments (such as terrestrial latitude, solar or stellar declination, and solar or stellar altitudes) entered on different families of circles, and the appropriate operations yield, for example, the time of day or the azimuth of the sun or a given star. A single plate of a similar kind is found on a 15th-century German astrolabe, now in Columbia University, New York City; it proves that European astronomers later approached the same problem in the same way.

The development of these universal instruments in al-Andalus in the 5th/11th century testifies to the remarkable abilities of astronomers there at that time. The interest of Muslim astronomers in universal instruments in general is part of their fascination with and

mastery of universal solutions to diverse problems of spherical astronomy (see King, 1987 and 1988). These, attested from the 3rd/9th to the 10th/16th century, represent a particularly sophisticated tradition in Islamic astronomy.

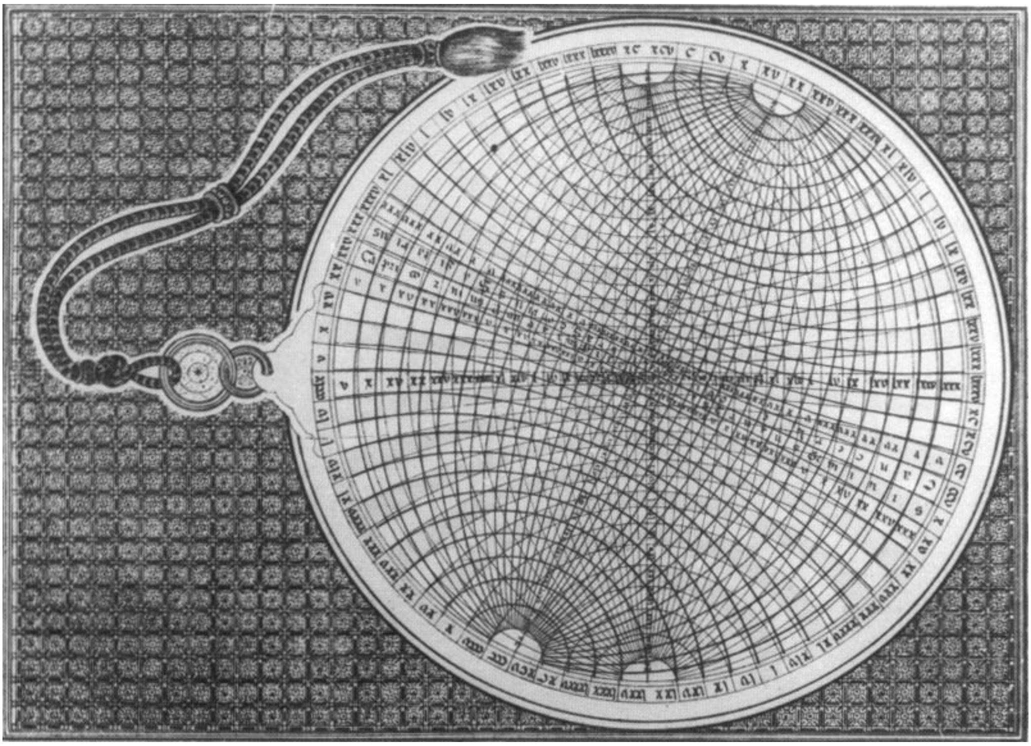
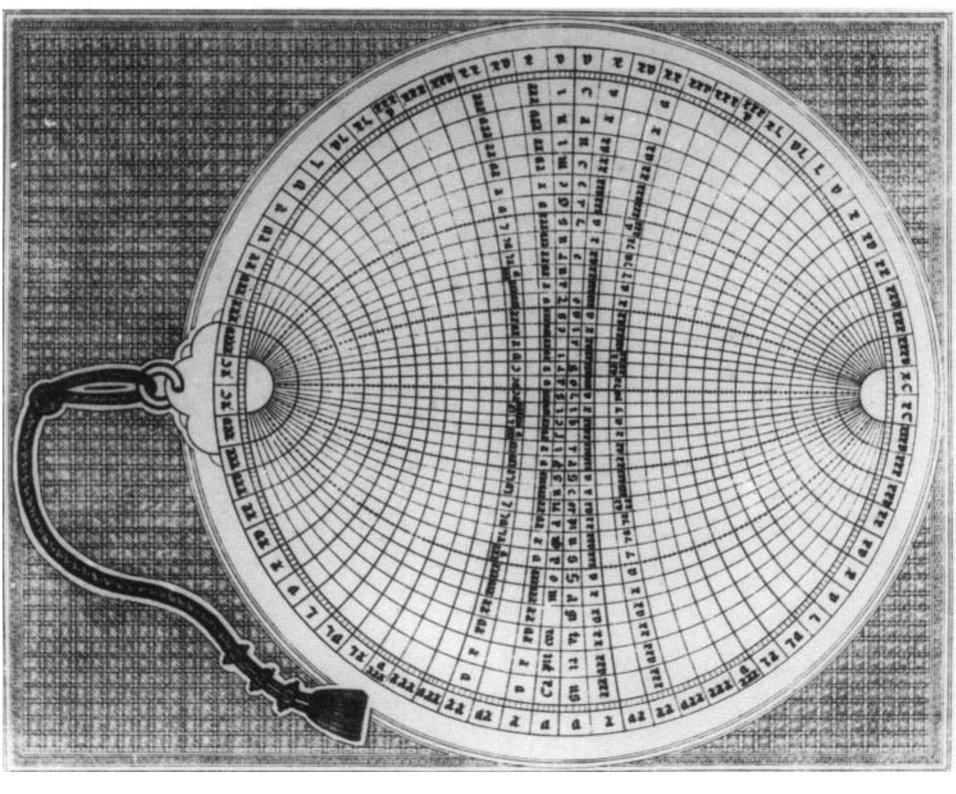
(D.A. King)



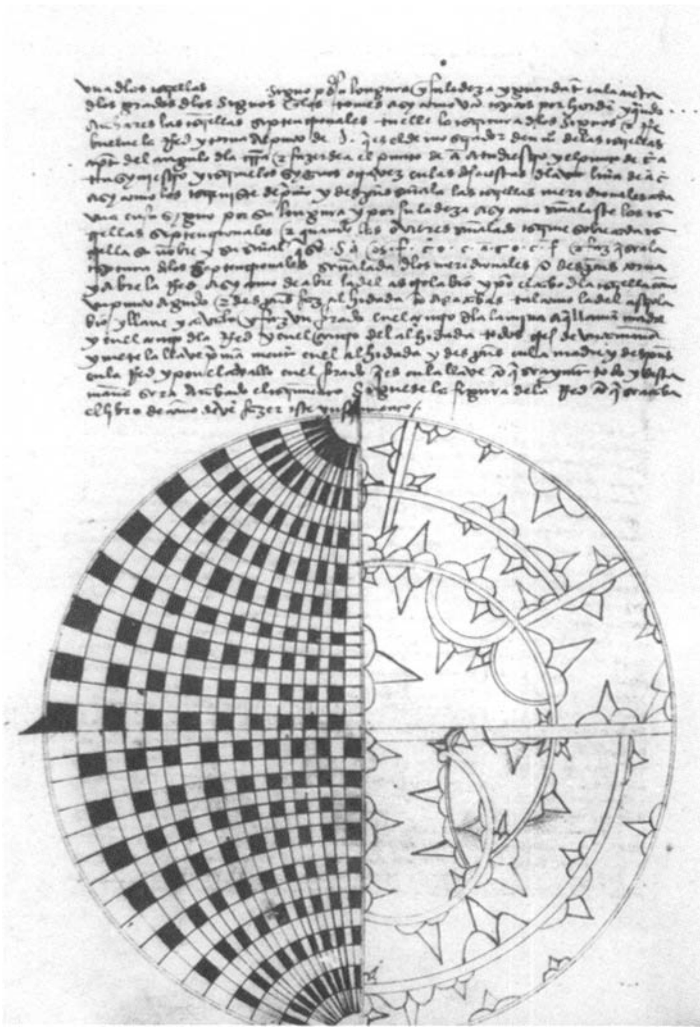
SHAKKĪ, a district in Eastern Transcaucasia. In Armenian it is called Shakʿē, in Georgian Shakʿa (and Shakikh?); the Arabs write Shakkay = Shakʿē (Ibn Khurradādhbih, 123, al-Iṣṭakhrī, 183, al-Balādhurī, 206), Shakkī (Yāḳūt, iii, 311), Shakkan (Ibn al-Faḳīh, 293, al-Balādhurī, *Futūḥ*, 194), Shakīn (al-Masʿūdī, *Murūdj*, ii, 68-9 = § 500).

The usual boundaries of Shakkī were: on the east, the Gök-čay which separates it from Shīrwān [*q.v.*] proper; on the west, the Alazan (Turk. Ḳanïḳ?) and its left tributary the Ḳashḳa-čay, which separates Shakkī from Georgia (Kakhetia) and the Georgian cantons later occupied by the Dāghistānīs (Eli-su, now Zakāt ʿAlī); in the north, the southern slopes of the Caucasus (Ṣalawāt Daghï, the passes of which, however, are within the confines of Dāghistān); to the south the Kura (Kur). Shakkī is watered by the tributary of the Alazan, Ägri-čay ("river running diagonally", i.e. from east to west) and the river Aldjigān (Gīlān) and Tūriyān, which run towards the Kura. Shakkī consists of three regions, one of high valleys covered with forests and orchards; a central one, a treeless and desert plateau; lastly, a fertile plain declining to the Kura.



The variety of the factors that have influenced this remote region is responsible for the remarkable character of its local history, in which we see pass before us in succession, the Albanians (Aghowāns), Armenians, Georgians, the people of Dāghistān, Persians, Turks and Russians.

In ancient time it formed part of Caucasian Albania [see ARRĀN], which was a confederation of 26 tribes speaking different languages (Strabo, xi, 4). The remnants of one of these tribes are believed to survive in the Udi, who are still to be found at Shakkī (al-Balādhurī, 203: Ūdh). From their name they must have originally come from the region of Uti (Strabo, xi, 7; Οὐίτιοι; Pliny, vi, 13: Otene) lying on the right bank of the Kura (the modern Gandja, Shamkūr, Ṭāwūs); it at first belonged to Armenia Major but was later occupied by the Albanians (cf. "the Armenian Geography" of the 7th century translated into Russian by Patkanov, 1877, 51). The present language of the Udi is related to the southeastern group of languages of Dāghistān (Khinalugh, Budugh, etc.) and has been subjected to very heterogeneous influences, especially Turkish (Marquart, *Streifzüge*, 49). The Albanians were very early converted by the Armenians and, according to the Armenian legend, the church of Gish (now Kīsh) was built by Elishē, a disciple of the Apostle Thaddeus.



Among the places mentioned in Albania by Ptolemy, Χαβάλα and αἱ Ἀλβάνιαι πύλαι occupying the same position, long. 80°, lat. 47°, must correspond to Ḳabala and to the passes which above it give access to the valley of Samūr (Khačmaz and Kutkashen roads). The ruins of Ḳabala lie near the confluence of the two branches of the Tūrīyān čay. Ὄτικα (long. 77° 30', lat. 44° 45') may correspond to the town of Shakkī which has now disappeared (Yanovski places it to the south-west of Nūkhā, near the village of Shekīlī). The other identification (Νίγα = Nīž) has still to be examined carefully. The present chef-lieu Nūkhā or Nūkhī (on the river Kīsh) is said to have taken its name from a village more to the east (Sulṭān Nūkhā near Nīž); its name is only found from the 18th century

onwards, unless it is connected with Iekhni (name of an Albanian canton, according to the Armenian geographers).

When the Arabs talk of towns of Arrān built by the Sāsānids, they probably only refer to the rebuilding of ancient sites; thus Ḳubād b. Fīrūz (488-531) is credited with the building of Ḳabala (Ibn al-Faḳīh, 288; Yāḳūt, iv, 32) and his son Khusraw Anūshirwān (531-79) with Abwāb-Shakkan, Ḳambīzān (Καμβυσήνη, K'ambēč'an in Kakhetia) and Abwāb al-Dūdāniyya (al-Balādhurī, 194).

Under the caliph ʿUthmān, Salmān b. Rabīʿa, having crossed the Kura, conquered Ḳabala, but confined himself to concluding a treaty of peace with the chiefs of Shakkan and Ḳambīzān. Later, al-Djarrāḥ b. ʿAbd Allāh al-Ḥakamī halted at Shakkī on his return from the Dāghistān campaign.

We have a certain amount of information on Shakkī in mediaeval Islamic times from an anonymous history of Darband, the *Taʾrīkh Bāb al-Abwāb*, known from citations in the late Ottoman historian Münedjdjim Bashī's [*q.v.*] *Djāmiʿ al-duwal* (gathered together, with translation and detailed commentary, by Minorsky in his *A history of Sharwān and Darband*). From this, it is clear that Arab control in the first centuries was only light. A revolt in 205/820-1 killed the deputy of al-Maʾmūn's governor. At this time, Arrān and Shakkī were controlled by the vigorous Armenian prince Sahl b. Sunbāṭ, who surrendered the fugitive Bābak al-Khurramī [*q.v.*] to al-Muʿtaṣim (see al-Ṭabarī, iii, 1222-6, tr. Bosworth, *The History of al-Ṭabarī. xxxiii. Storm and stress along the northern frontiers of the ʿAbbāsid caliphate*, Albany 1991, 76-80; Minorsky, in *BSOAS*, xv [1953], 505-10).

The Christians of Shakkī remained for a long time in the majority. According to al-Masʿūdī, *loc. cit.*, the principality of Shakīn, adjoining that of Ṣanārī (Ptolemy, v, 9; Σάναροι, Dzanar in the valley of the river Samūr), was inhabited by Christians and Muslims, who worked as merchants and artisans. The king was called Adarnarsē b. Humām. The next district on the east was Ḳabala, "a haunt of robbers and bad characters", the town of which had a Muslim population while the environs were inhabited by Christians. The king (*Malik*) of Ḳabala was called ʿAnbasa al-Aʿwar (the "one-eyed"). The identity of these is still uncertain. Towards the end of the 7th century, Georgian and Armenian sources mention a mysterious Adarnarsē the Blind (Brosset, i/1, 249); in the 9th century, the name of Atrnarse was fairly common in the family of Mihrakān (Albanian princes of Sāsānid origin, Brosset, i/2, 480). According to al-Muḳaddasī, 51, Ḳabala and Shakkī were only little towns.

Shakkī later belonged to the Shīrwānshāhs [*q.v.*], with whom, however, the Georgians disputed its possession. In 1117 King David conquered Gishi (Kīsh above Nūkhā on one of the tributaries of the Ägri čay). This little town was the residence of the governor (*eristʿaw*) of Tsukʿetʿ (district to the north-east of Alazan), and of the bishop whose diocese comprised Elisen (Eli-su), Tsukʿetʿ and Shakikh. Brosset, i/1, 250, thought the latter name identical with Shakkī.

In 622/1225 we again have the Shīrwānshāh Farīburz complaining to the Khwārazmshāh Djalāl al-Dīn of the loss of Shakkī and Ḳabala, which had been taken by the Georgians. Towards 626/1229, Djalāl al-Dīn established his authority over both towns simultaneously (al-Nasawī, ed. Houdas, i, 146, 176).

In the time of Tīmūr we find Sīdī ʿAlī of the Arlāt tribe acting as *wālī* of the *wilāyet* of Shakkī. (Arlāt is the name of one of the four chief tribes of the Ulūs of Čaghatāy.) A punitive expedition sent by Tīmūr (796/1393) drove him from his office. Although a "good Muslim", he joined the Georgians and perished in a skirmish under the walls of the fortress of Alindjaḳ (near Nakhčiwān). About 801/1398, through the intercession of Amīr Shaykh Ibrāhīm of Shīrwān (who had originally been a humble landowner in Shakkī), Sīdī Aḥmad, son of Sīdī ʿAlī, was re-established as chief of tribe and governor of Shakkī. Ibrāhīm and Aḥmad afterwards acted in concert (Yazdī, *Ẓafar-nāma*, Calcutta 1885-9, i, 731, ii, 204, 218, 222).

To judge from the dates upon tombstones found by Yanovski in the cemetery of Ḳabala (890-901/1474-85), this town must have no longer existed towards the period of the Ḳara-Ḳoyunlu and Aḳ-Ḳoyunlu dynasties.

At the beginning of the Ṣafawid period, Shakkī was ruled by the hereditary chief Ḥusayn Beg, a scion (according to the *Gulistān-i Iram*) of the Shīrwānshāh dynasty. Hard pressed by the Georgians, he appealed for help to Shāh Ismāʿīl, but was killed in a battle against Lewan I, king of Kakhetia (1520-74). When Shīrwān was conquered by Shāh Ṭahmāsp (in 945/1538), Darwīsh Muḥammad, son of Ḥusayn, aided the last Shīrwānshāh against the Persians. In 958/1551 Shāh Ṭahmāsp, with the help of King Lewan, besieged Kīsh and the fort of Gelesin-göresin ("come and see it") near the modern Nūkhā. Shakkī was then annexed by Persia.

When in 984/1578 the Ottoman troops under Lālā Muṣṭafā Pasha [*q.v.*] fought a battle at Ḳanïḳ against the Khāns of Gandja, Erīwān and Nakhčiwān, King Alexander II of Kakhetia, an ally of the Turks, occupied Shakkī without striking a blow, and it became an Ottoman *sandjaḳ*. The Turks re-established at Shakkī the son of the former governor Aḥmad Khān (Hammer, *GOR*², ii, 484) but an Ottoman governor (Ḳayṭās Pasha) was placed in Āresh.

When the Ṣafawids again became masters of Transcaucasia, Shāh ʿAbbās appointed the Georgian prince Constantin Mīrzā (son of Alexander II of Kakhetia) *wālī* of Shīrwān (in 1014/1606). Shāhmīr Khān of Shakkī became his faithful vassal. Later, the Ṣafawids removed their protection from the kings of Kakhetia, who were turning towards Moscow, tried to reduce their possessions and towards 1643, Shakkī fell into the power of local *maliks* and *sulṭāns*. Under ʿAbbās II, Ewliyā Čelebī visited Shakkī (ii, 286-93). At this time (about 1057/1647), the sultan of Shakkī was under the Khān of Āresh. The town had 3,000 houses although he puts the stronghold of Shakkī in the *eyālet* of Shīrwān. Ewliyā adds that it is considered to belong to Georgia, "because the Georgians had founded it". Ewliyā's notes on the tribe of Ḳaytāḳ whom he met near Maḥmūdābād (Ḳabala?) are very curious; these people talked pure Mongol (ii, 291), which has now completely disappeared from these regions.

Nādir Shāh [*q.v.*] and his troops several times traversed the territory of Shakkī and Ḳabala (in 1147, 1154). To be able the better to resist him, the local petty chiefs chose as their leader (*Āthār-i Dāghistān: bashči*), the former tax-collector Ḥādjdjī Čelebī, son of Ḳurbān. In 1157/1744 Nādir Shāh besieged the fortress of Gelesin-göresin without success. After the death of Nādir (1160/1747), local dynasties arose again throughout the Eastern Caucasus. Ḥādjdjī Čelebī consolidated his position and only allowed authority to the sultans of Āresh and Ḳabala. On two occasions he inflicted defeats on King Irakli of Georgia. This energetic man, whose character is not without chivalrous features, played a considerable part in Transcaucasia (Brosset, *Hist. de la Géorgie*, ii, 2, 131). Ḥādjdjī

Čelebī, a grandson, we are assured, of the priest (Ḳara Ḳashīsh) of the former church of Kīsh, was a zealous Muslim and converted to Islam forcibly a large number of his Christian subjects. He died in 1172/1759. His descendants (Agha Kishi, Ḥusayn, ʿAbd al-Ḳādir), relying alternately on their neighbours in Darband (Fatḥ ʿAlī Khān) or Ḳarabāgh (Ibrāhīm Khān), expended their energies in intrigues and internal struggles. Finally, on 21 December, 1783, Muḥammad Ḥasan, son of Ḥusayn Khān, established himself at Nūkhā after having massacred the whole family of ʿAbd al-Ḳādir (who had murdered Muḥammad Ḥasan's father). He proved an able administrator. He annexed to Shakkī the cantons of Āresh and Ḳabala, colonised the open lands and drew up a written canon of laws (*dastūr al-ʿamal*) by which the population were divided into five classes: the begs (3 categories; in all 1,550, of whom 51 were Armenians); the monks; the *maʾaf* (= *muʿāf*), 700 men-at-arms excepted from taxation; the *raʿiyyat* (peasant proprietors); and the *randjbar* (peasants).

About 1209/1795 Salīm Khān, brother of Muḥammad Ḥasan, seized Shakkī and transferred the seat of government to Gelesin-göresin. Muḥammad Ḥasan, taking refuge with Agha Muḥammad Ḳādjār, was blinded by his orders and ended his days in exile in Russia. In May 1805 Salīm Khān submitted to the Russians and promised to pay tribute, but soon rebelled against his new suzerains. On 10 December 1806, the Russians invested Djaʿfar Ḳulī Khān Dumbulī, the former governor of Khoy [*q.v.*], who had been expelled by the Persians, with the governorship of Shakkī. By the treaty of 1813 Persia recognised Russian suzerainty over Shakkī and the other neighbouring khānates. After the death in 1819 of the unpopular Ismāʿīl Khān, son of Djaʿfar Ḳulī, General Yermolov incorporated Shakkī as a separate province in the Russian empire. At this date (1824), the khānate covered 7,600 square miles, contained 200 villages and had a population of 98,500, of whom 80,000 were Ādharbāydjān Turks, 15,300 Armenians, 1,500 Udi and 1,000 Jews.

After 1846, Shakkī, divided into two districts (*uyězd*), Nūkhā and Āresh (capital Aḳ-dash), was under the Imperial Russian governor of Elizavetpol (Gandja). According to the census of 1896, the district of Nūkhā (1,600 square miles) had a population of 94,767, of whom 66,000 were Turks, 14,800 Armenians, 7,400 Udi, 4,400 Lezgīs and 1,800 Jews. The town of Nūkhā had 25,000 inhabitants (81% Turks and 18% Armenians). Among the villages of Nūkhā may be mentioned the two last refuges of the Udi: Wartashen (majority Jewish; the Udi half-Armenian-Gregorians and Orthodox), and Nīž or Než (5,000 Udi, Armenian-Gregorians).

After the Bolshevik Revolution in Russia, the old khānate briefly formed part of the independent Azerbaijan Republic, affiliated to the Transcaucasian Federation, and then, after 1920, came within the Soviet Union and the Azerbaijan S.S.R. Since the break-up of the Soviet Union, it has been part of the independent Azerbaijan Republic.

(V. MINORSKY-[C.E. BOSWORTH])

SHAḲŪBIYA, the designation in Arabic of the Spanish town of Segovia, an important and ancient centre, now the capital of the province of the same name, situated in Old Castile, 100 km/60 miles to the north-west of Madrid, 998 m/3,300 feet above sea-level, on an isolated rock near one of the last spurs of the Sierra de Guadarrama. This town is famous for its Roman (aqueduct) and Christian (alcazar) remains, and was only under Muslim rule for a short time. It was recaptured in 140/757 by Alfonso I of Astuvias or his son Fruela I at the same time as Zamora, Salamanca and Avila. It was, like those towns, recaptured, but only for a very brief period, by the *ḥādjib* al-Manṣūr Ibn Abī ʿĀmir in the second half of the 4th/10th century.

After the capture of Toledo by Alfonso VI in 478/1085, Shaḳūbiya, in a rearguard position facing the Muslims, was "re-peopled" by the Castilians in 1088, although recent Spanish historiography has called into question whether the region had previously been completely depopulated. It then became the seat of a small Muslim community subject to the Christian ruling power as Mudéjares [*q.v.*], shown, in the mid-15th century, by ʿĪsā b. Djābir (*Içe de Gebir*), author of the *Suma de los principales mandamientos y devedamientos de la Ley y Çunna*, the first attempt at Muslim literature in the Spanish language.

(E. LÉVI-PROVENÇAL-[J.-P. MOLÉNAT])

SHAḲUNDA, arabicised form of Secunda, name of a little town opposite Cordova on the left bank of the Guadalquivir. According to al-Maḳḳarī and Ibn Ghālib, it was originally surrounded by a rampart. It was here that a decisive battle was fought in 129/747 between the Maʿaddī clan under Yūsuf al-Fihrī [*q.v.*] and al-Ṣumayl b. Ḥātim [*q.v.*] and the Yamanī clan commanded by Abu 'l-Khaṭṭār, who was defeated. Later, at the zenith of the Umayyad caliphate, Secunda became one of the richest suburbs of Cordova and was also called the "southern suburb" (*al-rabaḍ al-djanūbī*). The celebrated Abu 'l-Walīd Ismāʿīl b. Muḥammad al-Shaḳundī [*q.v.*], the most famous man of letters in al-Andalus in his day, was born in Secunda; he was appointed *ḳāḍī* of Baeza and Lorca by the Almohad sultan Yaʿḳūb al-Manṣūr and died in 629/1231-2. It was he who wrote the famous epistle (*risāla*) on the merits of his native country as a companion piece to that which the author Abū Yaḥyā b. al-Muʿallim of Tangier had composed on the excellence of North Africa. The text is given almost in full by al-Maḳḳarī in his *Nafḥ al-ṭīb*.

Bibliography: *Akhbār madjmūʿa* and *Ajbar machmuâ*, ed. and tr. E. Lafuente y Alcantara, Madrid 1867, 61 of the Arabic text and 264-5; Ibn al-ʿIdhārī, *al-Bayān al-mughrib*, ed. Dozy, ii, 37-8, tr. E. Fagnan, ii, 54-5; Ibn al-Athīr, v, 343, 376, partial tr. Fagnan, *Annales du Maghreb et de l'Espagne*, 88, 96; Maḳḳarī, *Nafḥ al-ṭīb*, ed. Leiden, i, 16, 304; R. Dozy, *Histoire des Musulmans d'Espagne*, i, 286 ff.

(E. LÉVI-PROVENÇAL)

AL-SHAKUNDĪ, ABU 'L-WALĪD ISMĀʿĪL b. Muḥammad (d. at Seville, 629/1231-2), scholar of al-Andalus, originally from the village of Shakunda, which faced Cordova, on the left bank of the Guadalquivir, and who functioned as *kāḍī* of Baeza, Lorca and Ubeda. He was at the court of the Almohad al-Manṣūr, and addressed to him a poem of congratulation on his victory at Alarcos (591/1195). He was a great friend of the father of Ibn Saʿīd al-Maghribī [*q.v.*], who sought out his company and transmitted the sparse biographical information which we possess on him. He is above all known for his *Risāla* (see below).

His works comprise:

1. *R. fī faḍl al-Andalus*, an epistle on the merits of his land and its superiority over the Maghrib. The text is cited by Ibn Saʿīd, *Mughrib*, and by al-Makkarī, *Nafḥ*, and there are mss. at Tunis (Aḥmadiyya, *madjmūʿ*, 4551) and the National Library there (Ṣādikiyya, 8845, under the title of *R. fī tafḍīl barr al-Andalus ʿalā barr al-ʿidwa*); at Madrid (Acad. de la Historia, 29); and in the Mingana collection, 1379 (same title as the preceding). Ed. Ṣ. al-Munadjdjid, *Faḍāʾil al-Andalus wa-ahlihā li-Ibn Ḥazm wa-Ibn Saʿīd wa 'l-Shakundī*, Beirut 1967. Partial tr. in P. de Gayangos, *The hist. of the Mohammedan dynasties in Spain*, London 1840-3, i, 32-3, 44-5, 48-9, 52-4, 57-9, 66-9, 72-3, 123-5. Tr. with introd. E. García Gómez, Madrid-Granada 1934 (review by I. Guidi in *RSO*, xv [1935], 108), repr. in his *Andalucía contra Berbería*, Barcelona 1976, 44-141. M. al-Ḥabīb, *Ḥaḍārat al-Andalus min khilāl risālatay Ibn Ḥazm wa 'l-Shakundī*, in *Le patrimoine hispano-mauresque*, Rabat 1993, 47-88.

2. *K. al-Ṭuraf/Ṭuraf al-ẓurafāʾ/ẓaraf al-ẓurafāʾ*, a poetic anthology cited by al-Makkarī and Ibn Saʿīd (in *Rāyāt al-mubarrizīn*, 19 citations).

3. and 4. *Manākil al-durar wa-manābit al-zuhar* and *al-Muʿdjam*, according to the very dubious attribution of al-Ziriklī.

5. A few verses from his poems preserved by Ibn Saʿīd.

SHAKŪRA, a Spanish Arabic place-name corresponding to the Spanish Segura. This last name is now only applied to the river which waters Murcia and Orihuela and flows into the Mediterranean near Guardamar. In the Muslim geographers, this river is usually called the "white river" (*al-nahr al-abyaḍ*). It rises, like the Guadalquivir, in the range called Djabal Shakūra, but on the eastern slope. The mountains to which this name was given are of considerable extent. They were, according to the Arab geographers, covered with forests and had no fewer than 300 towns and villages and 33 strongholds. They corresponded apparently not only to the Sierra de Segura, still called on the maps Sierra de Segura, but also to those called del Yelmo, de las Cuatro Villas, de Castril and de Cazorla. The highest points are the Yelmo de Seguar (1,809 m/6,000 feet) and the Blanquilla (1,830 m/6,100 feet).

Shakūra was also the name in the Arab writers of a fairly important town in the district, clustered round a castle reputed to be almost inaccessible. It was here that Ibn ʿAmmār, the vizier of the ʿAbbādid al-Muʿtamid, came to seek refuge with Ibn Mubārak, lord of the town, who handed him over to his master. At the end of the Almoravid dynasty, Segura was the usual residence of Abū Isḥāk Ibrāhīm b. Hemoshko, lieutenant and vassal of the famous king of Murcia, Abū ʿAbd Allāh Muḥammad Ibn Mardanīsh [*q.v.*].

(E. LÉVI-PROVENÇAL)

SHALAMANKA or SHALAMANTIKA, the modern Salamanca, provincial capital in the autonomous Commune of Castile and León and the seat of a famous university since the close of the Middle Ages.

We have no information on what happened in the ancient Roman, then Visigothic town and its region at the time of the Muslim conquest of Spain. One may posit the establishment there of Berber groups, as in other parts of the Meseta of the north, who must then have fallen back southwards after 740, leaving the region depopulated, at least substantially so, if not totally. The policy of leaving a desert zone practised by the nucleus of Hispano-Christian resistance in the Asturias must also have contributed to this. Salamantica appears amongst the *civitates* taken and cleared of their population by Alfonso I (739-57); *omnes quoque Arabes gladio interficiens, Xpianos autem secum ad patriam ducens*, according to the chronicle of Alfonso III.

Ibn al-Athīr and Ibn Khaldūn confirm the Christians' conquest of Segovia, Salamanca, Zamora and other towns of the north-west of the peninsula in the course of the 8th century, but attribute this not to Alfonso I but rather to his successor Fruela (757-68), a divergence possibly explicable by mention in the Christian texts of a Fruela, brother of Alfonso I, who is not his successor of the same name; the Arabic texts have doubtless mixed the two up. Then there is total silence about Salamanca for a century and a half; a notice in the text of the *Cronica Abeldense* according to which Ordoño II (850-66) is said to have seized Salamanca probably results from a confusion with Talamanca, in the modern province of Madrid.

Although we have a series of names of the bishops of the town for the 9th and 10th centuries, we cannot assume *a priori* that they effectively occupied their see, as in the case of Dulcidius, captured in 308/920 at the battle of Valdejunquera in Navarre and brought in captivity to Cordova. However, for much of the 10th century, it is clear that the town existed and was in Christian hands, with inhabitants and with a Leonese count. After his victory of 327/939 over ʿAbd al-Raḥmān III at Simancas and Alhándega in 327/939, Ramiro II (930-51) led an expedition on the banks of the Tormes, and repopulated its deserted towns: *et civitates desertas ibidem populavit*, amongst which Salamanca figures prominently. In 942 Bermudo Núñez, count of Salamanca, was defeated, with 300 knights, by the Muslims when he attacked the Berber town—whose site remains uncertain—of Saktān, at a

place called Fadjdj al-Masādjid, clearly one of the entries to the Middle Marches. In 953, Ordoño III, king of León, gave to the bishop of his capital the churches of the region of Salamanca built, in Ramiro II's time, by colonists from León: *ecclesias in alhauce de Salamantica quantas hedificaverunt ibidem populatores patris mei qui fuerunt de Legiones.* In 360/971 the envoys of Fernand Flaínez, "son of the count of Salamanca", were received at Cordova. In the time of the *ḥādjib* al-Manṣūr, several expeditions were launched at Salamanca by him. In 367/977, the Muslims entered the town and seized its suburbs (*arbāḍ*), and 373/983 there was a second attack. In 376/986, al-Manṣūr conquered (*fataḥa*) the town, as well as Alba (de Tormes), León and Zamora. However, no more than in other places, does it seem that a garrison remained there to assure its reintegration in the Islamic sector. Although there is a fleeting mention of *Shalamantiḳa* in the 5th/11th century author al-Bakrī, one which does not necessarily relate to the author's own time, it is possible that al-Manṣūr's campaigns led to an abandonment of the town, a "second depopulation", which would explain why the Christians had, at the very end of the 11th century, to undertake a new repopulating of the town, when the capture of Toledo had repelled towards the south the danger of a Muslim counter-offensive. Whilst the authors speaking of this repopulating (Jiménez de Rada, Lucas de Tuy) give no date, the award in 1102 by Count Raymond of Burgundy to the church of Salamanca, for its restoration, which involved also the repopulation of a quarter of the town, *ut populetis ilium*, is a useful reference point. The gift involved mills, fisheries and fields of which the Count held seisin (*aprendiwimus, accepimus*), and has been variously interpreted. Sánchez-Albornoz saw in this *presura* proof of a preceding depopulation; Barvero and Vigil have retorted that already the existence of these installations and agricultural workings proves the existence of a prior population, which is said precisely to have been expropriated, whilst neglecting the fact that the mills and fisheries were to be constructed (*pro facere*) and the fields to be ploughed and sown (*pro arare et pro seminare*).

The *fuero* of Salamanca attests the presence of Mozarabs [*q.v.*] in the town after the begining of the 11th century. But the origin of these "Arabised" Christians cannot be established with certainty, and there are on the question almost as many opinions as scholars: some supposing a local origin, and others an immigration from Andalusia or the adjacent part of Extremadura before the arrival of the Almoravids and then Almohads, or then from the Sharḳ al-Andalus [*q.v.*] at the time of the fall of the Cid's principality at Valencia, or an arrival from the Mozarab centres of the León region, as part of a movement of Christian colonisation. The traces left by the Mozarabs of Salamanca are, moreover, minimal, and not to be compared with their equivalents in León or above all in Toledo, amounting only to a few toponyms, often of dubious interpretation, the clearest apparently being Coreses and Cordovilla, evoking a migration from the south, from the nearby Coria and from the more distant Cordova. One theory sees in the *Serranos*, known as an element in the repopulation of Salamanca, as also of Ávila, not Castilians from the *sierras* around Burgos, Soria and La Rioja, but people from the *sierras* of the Middle March, who had remained in place. This accords ill with the texts' distinction between them and the Mozarabs.

Salamanca was henceforth a town and military base for the Christians, the departure point for expeditions against the remaining part of al-Andalus to the south of the Middle March, until the conquest of the modern Spanish Extremadura and the definitive union of León and Castile in 1230. Thereafter, the development of the university, laboriously established in the 13th century, plus the consolidation of a nobility, gave Salamanca its constitution lasting till the verge of modern times. The subjugated Muslims (Mudéjars [*q.v.*]) do not figure there any more than in all the northwestern sector of modern Spain, in contrast to the Castilian lands and the modern Extremadura. But Arabic was taught at the University of Salamanca at the beginning of the 16th century.

AL-**SHALAWBĪN**, ABŪ ʿALĪ ʿUMAR B. MUḤAMMAD b. ʿUmar b. ʿAbd Allāh al-Azdī al-Ishbīlī al-Naḥwī (562-645/1166-1247), Andalusī grammarian.

He was known as al-Shalawbīn, a *laḳab* derived by some biographers from Shalawbīniyya, today Salobreña, which would have been his place of origin (so that he is also called al-Shalawbīnī). Others, however, explain that *al-shalawbīn* is a word which in the language of the Christians of al-Andalus means *al-ashkar*

al-azraḳ (another version *al-abyaḍ al-ashḳar*), i.e. of a ruddy complexion combined with fairness. He is also known as al-Shalawbīn al-kabīr to distinguish him from another grammarian, Abū ʿAbd Allāh Muḥammad b. ʿAlī al-Anṣārī al-Mālaḳī, also called al-Shalawbīn (d. 660/1262). ʿUmar al-Shalawbīn was born in Seville, where his father was a baker, and from childhood devoted himself to the study of grammar. At the age of 22 he had mastered Sībawayhi's *Kitāb*. Al-Marrākushī records a complete list of his teachers, two of whom, Abu 'l-Ḳāsim b. Ḥubaysh and Abū Bakr b. Khayr, gave him the *idjāza*, together with his only non-Andalusian teacher, Abū Ṭāhir al-Silafī of Alexandria. Al-Shalawbīn is described as *raʾīs al-nuḥāt* and *imām fī ʿilm al-naḥw* in al-Andalus, and his mastery of the Arabic language was such that it was said none of his contemporaries could rival him. His work and fame reached Syria and ʿIrāḳ in his own lifetime. He started teaching at a very young age, around the year 580/1184, and continued until 640/1242, stopping not only because of his advanced age but, especially, owing to the serious political circumstances of the moment, with the advance of the Christians, who had conquered Cordova, Valencia and Murcia. He died in Seville during the siege of the town, which fell into Christian hands a year later (646/1248). During his life he seems to have won the favour of the Almohad rulers (he visited Marrākush in the times of al-Manṣūr), and also had a close relationship with the Banū Zuhr. His works comprise *al-Ḳawānīn fī ʿilm al-ʿarabiyya*, *Sharḥ Kitāb Sībawayhi*, two *Sharḥs* called *al-Muḳaddima al-Djazūliyya* (one large, the other small), *Taʿlīḳ ʿalā Sharḥ Mufaṣṣal al-Zamakhsharī li-Fakhr al-Dīn al-Rāzī*, *al-Tawṭiʾa fī 'l-naḥw*, and a *Mashyakha*. He also wrote poetry, some of a homosexual nature. He was also an important transmitter of grammar works, Ḳurʾānic readings and poetry. Surprisingly, he also held *idjāzāt* from Ibn Rushd and Abū Bakr Ibn Zuhr and may have kindled the philosophical interests of his student, the poet and literary theorist Ḥāzim al-Ḳarṭādjannī [*q.v.*] (al-Ruʿaynī, 84-5). His contemporary Ibn al-Ḳifṭī believed that al-Shalawbīn's dedication to grammar was just a means of earning a living rather than a genuine vocation, because of a report from Abu 'l-ʿAbbās Aḥmad b. Mufarridj Ibn al-Rūmiyya al-Ishbīlī (d. 637/1239) that al-Shalawbīn had sold him a rare and valuable work (the *Kitāb al-ʿālam fī 'l-lugha* written by Aḥmad b. Abān al-Ishbīlī in the 4th/10th century) which no real lover of the *ʿilm al-ʿarabiyya* would have sold.

(MARIBEL FIERRO)

SHALBAṬARRA, the modern Salvatierra, a fortress of mediaeval Spanish al-Andalus, in the Sierra Morena, in the territory of the modern commune of Calzada of Calatrava (Ciudad Real province). It was re-conquered in 1198 by a surprise attack of the Knights of the Order of Calatrava, after the Christian defeat of al-Arak/Alarcos in 591/1195, which had brought the loss of the whole of this sector. However, it was regained by the Almohad caliph al-Nāṣir in 608/1211, the year before the campaign of al-ʿUḳāb/Las Navas de Tolosa, the organising of which ended up, in large degree, on the Christian side, with the fall of Salvatierra. The nearby fortress of Dueñas became, after 1212, Calatrava la Nueva, replacing the earlier seat of the Order, the former Ḳalʿat Rabāḥ, known today as Calatrava la Vieja.

(J.-P. MOLÉNAT)

SHALLA, current form CHELLA, an ancient town of Morocco, whose ruins are to be found on a height which dominates the Bouragrag river to the north-east of Rabat at some 3 km/2 miles from the sea. The site, its situation, the presence of an abundant and perennial spring, and fertile land, explain the antiquity of habitation there. Archaeological excavations have shown traces of several occupations (Mauretanian, Phoenician, Roman and Islamic), and the site has yielded artifacts going back to the 7th century B.C. Shalla was a Phoenician port between Lixus and Mogador before becoming a Roman town. As the capital of Juba II, the town was given a rampart in the year A.D. 140 and seems to have formed part of the fortified line of the *limes* before being abandoned in the 4th century.

It is difficult to follow its evolution over succeeding centuries. Often confused with Salā [*q.v.*] or Salé, Shalla figures in the succession of Idrīs II; ʿĪsā b. Idrīs inherited it before rebelling against the ruler of Fās. Once the Idrīsids were eliminated, Shalla became the capital of the Maghrāwa Banū Ifran [*q.v.*], but we know nothing of its role in the warfare against the Barghwāṭa [*q.v.*]. After the foundation of Salé,

Shalla was partially abandoned before being destroyed by the Almoravids.

At the end of the 7th/13th century, the Marīnids [*q.v.*] transformed Shalla into a royal necropolis. The princess Umm al-ʿAzīz, wife of Abū Yūsuf Yaʿkūb and mother of Yūsuf, was the first to be buried there in 682/1284, and when he died at Algeciras two years later, Yūsuf was brought back there. The first edifice was confined to a simple mosque with the tombs. It was the Marīnid Abu 'l-Ḥasan who undertook vast works there and created the monumental necropolis; the protective wall, with its three gates, was completed in 739/1339. The whole ensemble included funeral chapels, two mosques (one of whose minarets, still surviving, is decorated with polychrome tiles), a *madrasa* and a library; substantial *aḥbās* were allotted for its upkeep. After he died in the mountains of the Hintāta, Abu 'l-Ḥasan was buried at Shalla, where his tomb became an object of a curious popular veneration. He was the last monarch to be buried in the necropolis.

Some Ṣūfīs installed themselves there, and Sīdī al-Ḥādjdj ʿAbd Allāh al-Yabūrī founded "a *zāwiya* inside the necropolis of Shalla to the left, as one enters" (P. Nwyia, *Ibn ʿAbbād de Ronda*, Beirut 1956, 58). It was there that Ibn ʿAshīr [*q.v.*] settled when he arrived in the region. But economic crisis seems to have preceded a political one, and according to Ibn ʿAbbād, commercial activity at Shalla, which had had two famous fairs each year, was only a memory (*al-Rasāʾil al-kubrā*, lith. Fās 1320). The necropolis was plundered during the anarchy after the end of the Marīnids. Al-Liḥyānī seized some works from the library, which he stripped of their precious ornamentation. Its royal *aḥbās* were the subject of a legal consultation, giving some idea of their importance (al-Wansharīsī, *Miʿyār*, vii, 18-21). In the 17th century, the Sabbāḥ tribe transformed Shalla into a fortress and used it as a base for plundering the region.

It was not till the beginning of the 20th century that excavations were undertaken at Shalla. The Roman town has largely been revealed, and the Marīnid monuments, which partially cover the classical ruins, have been identified. In a remarkable article, H. Basset and E. Lévi-Provençal described the necropolis, brought to light its inscriptions and gathered together the legends and accounts of the cults, of varying degrees of orthodoxy, which have grown up around Shalla (*Chella, une nécropole mérinide*, in *Hespéris* (1922), 1-92, 255-316, 385-425). Despite its age, this study has never been surpassed.

At the present time, Shalla, with its gardens and its ruins inhabited by storks, has become an important tourist spot.

AL-**SHALMAGHĀNĪ** [see muḥammad b. ʿalī].

SHALṬĪSH, Saltés, a town of southwestern Spain (lat. 37° 12' N., long, 6° 59' W.), opposite Huelva, in the marshes of the mouths of the Tinto and Odiel rivers. The Island of Saltés is made up of three zones of lands and sands (El Amendral, El Acebuchal and La Cascajera), covered with low vegetation and pine trees, of a quality emphasised by al-Idrīsī. The highest point (15 m) is on El Acebuchal; El Amendral is no higher than 7 m—at the site of the Almohad fortress—despite the man-made accumulations of the Islamic town.

Shalṭīsh is not mentioned by Ibn Ḥayyān, al-Mukaddasī or Ibn Ḥawkal, although all three mention the nearby *ḥiṣn* of Gibraleón (Djabal al-ʿUyūn) or the neighbouring town of Niebla (Labla); al-Rāzī no longer mentions the site. However, the place name appears in al-ʿUdhrī in the story of events during the *amīr* ʿAbd al-Raḥmān II's reign (3rd/9th century), in regard to the campaign of 219/834, during which the Norsemen, after a raid on Seville (Ishbīliya), "swept down ... as far as the Island of Saltés" (*Fragmentos*, 100, 175). From the end of the 4th/10th century, the position of the island and the site are known from the Arab geographers (J. Vernet, *España en la geografía de Ibn Saʿīd al-Magribī*, in *Hespéris* [1958], 314; al-Idrīsī, *Los caminos de al-Andalus en el siglo XII*, ed. and tr. J. Abid Mizal, Madrid 1989, 139, 141-2, 145). In the 6th/12th century, al-Idrīsī (see E. Molina López, *Una descripcion anonima de al-Andalus*, ed. and tr. of *Dhikr bilād al-Andalus*, Madrid 1983, i, 178-216) mentions the island site of the town, but also the existence of a well-used port, a market, a dense urban pattern and an iron-working industry; whereas Yākūt and Ibn Saʿīd (early 7th/13th century) mention it only as a small town (Yākūt, *Buldān*, iii, 359) and an important centre for fishing, where fish was salted before being sent to Seville and other towns of al-Andalus (al-Makkarī, *Analectes*, i, 104; Ibn Saʿīd, *Mughrib*, i, 342-3, 346, 357). A little later, al-Ḥimyarī gives us a more detailed picture of the town, its agricultural hinterland and its economic life: the urban area was built up, without any empty space between buildings, but the town, which had an arsenal, lacked any protective wall (*al-Rawḍ al-miʿṭār*, 44, 135-6). Shalṭīsh is still mentioned in the 8th-9th/14th-15th centuries.

At the opening of the 5th/11th century there was constituted a principality of Saltés-Huelva, which Abū Zayd Muḥammad b. Ayyūb (399-402/1008-12) governed, followed by his son ʿAbd al-ʿAzīz (403-43/1012-51). When the latter abdicated, his son ʿAbd al-ʿAzīz al-Bakrī, the great geographer, who was born at Saltés, was 30 years old [see abū ʿubayd al-bakrī]. In the ʿAbbādid kingdom of Seville, Saltés was merely an administrative district (M. Alarcón and C.A. González Palencia, in *Miscelanea arabe*, Madrid 1915, 459-60). It was during the Almoravid period that the town saw its most splendid growth, according to al-Idrīsī and al-Ḥimyarī. From 539/1144-5 onwards, Saltés became part of a new geopolitical complex which embraced, as well as Niebla and Huelva, the *mudun* or *ḥuṣūn* of Silves, Mértola, Évora and Beja, which became in Almohad times the economic bases for the new power. After a period when Saltés was closely linked with the Portuguese Algarve (6th/12th century and the first half of the succeeding one), there followed a phase of about a century (1151-1257) during which Saltés and Huelva were districts of the province of Niebla (A. Huici Miranda, *Historia politica del imperio almohade*, Tetuán 1956, i, 240-2). However, Christian pressure increased. The Portuguese took the town in 1179 and captured numerous prisoners. It was partly destroyed, but again became active and prosperous in Almohad times, before being attached to the principality of Niebla towards 655/1257; at the time of the Christian reconquest, it became rapidly depopulated and was never re-occupied.

From 1945 to 1970, Saltés was the object of excavations aimed at discovering the site of Tartessos. Little has been published; the oldest ceramic fragments are apparently of Punic type, but most are of "Arab" type, mixed up with some Roman *tegulae*, the

latter recalling the fact that, according to Strabo, III. 5. 5, confirmed by al-Ḥimyarī, there was a sanctuary dedicated to Hercules. F. Wattenberg put forward the hypothesis, after several visits there, that Saltés was possibly the mythical Tartessos, and there have been found traces of activity stretching over several hectares. At the northern point of El Almendral, the Islamic town of Shalṭīsh shows traces of its last phase of occupation (end of the 6th/12th century and first half of the 7th/13th). A *ḳaṣaba*, of quadrangular plan (70 m by 40 m), with six bastions, including four at the angles, covers 3,500 m². Excavations made since 1988 confirm al-Idrīsī and al-Ḥimyarī on the urban structure, with streets and alleys—1.30 m to 1.60 m wide and with a sub-orthagonal orientation—marking out the "islands" of houses; this regular urban pattern gives the lie to the "traditional" view of the anarchic structure of the Hispano-Muslim town.

In the high period, the pottery shows two phases of occupation, one 9th-10th century and the other at the end of the 10th and the beginning of the 11th century. Then traces of later building, with the Almohad houses built upon foundations of the older levels, silos, rubbish-filled ditches and workings where earth was extracted for *ṭābiyas*, mark the active period of the 11th and 12th centuries. The final stage, Almoravid and Almohad, is well preserved: a symmetrical, almost square plan, 12th and 13th-century houses built round a patio on to which open at least two large rectangular rooms with alcoves, which seem to correspond to an oriental mode of habitation. There is also a tendency towards the specialised use of space (kitchens, storerooms, latrines); brick paving and wells of sweet water and channels for running off surplus, waste dirty water complete the arrangements. Construction materials include, predominantly, earth, used in shuttering on stone bases. The Almohad level shows much re-use of earlier materials and foundations. All over the site there are numerous deposits of metallic slag and ashes showing the existence of metal-working; the workshops were situated slightly to one side (the north-east) of the *madīna*, where the prevailing winds could carry away smoke and sulphurous emissions. The island location of Shalṭīsh facilitated the transport of materials and fuel.

The Christian conquest of the mid-13th century meant the disappearance of the Muslim population, and texts are henceforth limited to mentioning the *ḳaṣaba*; as for the town, it was not even used for building material. To explain this abandonment, it has been suggested that there might have been an earthquake (L. Torres-Balbás, *Ciudades yermas de la España musulmana*, in *Bol. de la Real Academia de la Historia*, cxli [1957], 167-8). In the excavations, there has been noted the relative evenness of the terrain which seems, on the contrary, to bear witness to a departure which was neither urgent nor violent. Perhaps one should also take into account, in order to explain this 13th-century decline, the growing and irreversible salinisation of the water in the wells of Shalṭīsh .

(A. Bazzana)

SHALTŪT, MAḤMŪD, Egyptian Sunnī religious scholar, rector (*shaykh*) of al-Azhar [*q.v.*] from October 1958 until his death on 13 December 1963, an influential author of Islamic reform [see IṢLĀḤ. 1.] in the tradition of Muḥammad ʿAbduh [*q.v.*] and his school of thought.

He was born on 23 April 1893 in Minyat Banī Manṣūr, a village of Lower Egypt, in the province of Buḥayra [*q.v.*]. In 1906 he was enrolled at the *maʿhad dīnī* of Alexandria, a religious institute founded in 1903 and affiliated to al-Azhar (for details see Lemke, 34-46). He received his diploma (*shahādat al-ʿālimiyya*) in 1918, and early in 1919 started teaching at the *maʿhad dīnī*. In 1927, he was transferred to Cairo in order to lecture at the Higher Division (*al-ḳism al-ʿālī*) of al-Azhar.

Having developed some ideas of a reform of al-Azhar (including steps to achieve greater independence from the state) as early as 1924, Shaltūt fervently supported Shaykh Muḥammad Muṣṭafā al-Marāghī and his reform programme when the latter became rector in 1928. After Marāghī's resignation and the appointment of Shaykh Muḥammad al-Aḥmadī al-Ẓawāhirī as rector in October 1929, Shaltūt was one of those who resisted the new *Shaykh al-Azhar* and his course of action, which he considered to be more or less reactionary. This led to his dismissal in September 1931. Until 1935, when he was reinstated following Marāghī's second appointment as rector (1935-45), Shaltūt worked as a lawyer in the *Sharīʿa* courts. Back at al-Azhar, he became Vice-Dean (*wakīl*) of the *Kulliyyat al-Sharīʿa* and, in 1939, inspector of the religious institutes (*mufattish bi 'l-maʿāhid al-dīniyya*).

In 1937 Shaltūt was one of three scholars representing al-Azhar at the Deuxième Congrès International de Droit Comparé held at The Hague. The lecture he gave there on civil and criminal liability in Islamic law was well received, not only by many participants of the congress but also in Azhar circles. It paved the way for him to become, in 1941, a member of the *Djamāʿat kibār al-ʿulamāʾ* (see Lemke, 116-20, and Aḥmad Fatḥī Bahnasī, *Sharḥ wa-taʿlīḳ ʿalā risālat al-marḥūm al-imām al-shaykh Shaltūt ʿan al-masʾūliyya al-madaniyya wa 'l-djināʾiyya fī 'l-sharīʿa al-islāmiyya*, Cairo 1407/1987).

In 1946, he was elected to the Arabic Language Academy in Cairo (see the obituaries by ʿAlī ʿAbd al-Rāziḳ and Muḥammad Mahdī ʿAllām in the Academy's journal, *Madj. Madjmaʿ al-Lugha al-ʿArabiyya*, xix [1965], 147-53 and 155-62, respectively). In November 1957, he was appointed by presidential decree to the position of Vice-Rector (*wakīl*), and in October 1958 to that of *Shaykh al-Azhar* (Zebiri, 12). Soon after taking up office, Shaltūt announced his determination to work for a far-reaching reform of al-Azhar. He praised the Reform Law passed by the National Assembly in June 1961 (for an analysis and evaluation of that law, see Lemke, 166-232), but as a result of what he saw as constant interference in Azhar affairs by the government, he became increasingly dissatisfied with its implementation (ʿAbd al-ʿAẓīm, 202 ff.; Zebiri, 28-31). During the last two years of his life, poor health forced him more and more to withdraw from public life. His funeral on 14 December 1963 was attended by huge crowds of mourners.

To a considerable extent Shaltūt's popularity was due to his outstanding oratorical skills. He is said to have been the first Azhar scholar to use broadcasting regularly for religious sermons and for answering

queries (partly printed as *Aḥādīth al-ṣabāḥ fī 'l-midhyā'*, with Muḥammad Muḥammad al-Madanī, i, Cairo 1947, and *Yas'alūna*, published by the Ministry of National Guidance in its series *Mukhtārāt al-idhā'a*, ²Cairo 1958). From among his works especially two are widely used: (1) *al-Islām, 'aḳīda wa-sharī'a*, ¹Cairo 1959, ¹⁷1991; (2) *al-Fatāwā, dirāsa li-mushkilāt al-muslim al-mu'āṣir fī ḥayātihi al-yawmiyya al-'āmma*, ¹Cairo 1964, ¹⁶1991. In both publications Shaltūt amply discussed problems of contemporary Muslim society such as family law (strongly defending the principle of polygamy), birth control, private property etc. (for a commentary on the first work, see the review article by Y. Linant de Bellefonds, in *Orient*, Paris, no. 19 [1961], 27-42; for details, Zebiri, index). His booklet on *djihād* [*q.v.*], *al-Ḳitāl fī 'l-islām*, written in 1940 and published in 1948, has been translated into English (R. Peters, *Jihad in mediaeval and modern Islam*, Leiden 1977, 26-79). Shaltūt's Ḳur'ān commentaries, especially his *Tafsīr al-ḳur'ān al-karīm: al-adjzā' al-'ashara al-ūlā*, Cairo 1959, ¹¹1988, and its characteristics, are described by Zebiri, 150-80. For further titles of Shaltūt's books, see Dāghir, 388-9, and Lemke, 261-2, who in addition lists articles which appeared in *Madjallat al-Azhar* or elsewhere (see also Zebiri, 188).

Especially among Shī'īs, Shaltūt is well remembered for his zeal to promote a rapprochement between the Muslim schools of law in general and between Sunnīs and Shī'īs in particular, i.e. to overcome misunderstandings, avoid polemics and establish a basis for discussion and cooperation—without, however, merging all the *madhāhib* into one (Zebiri, 24-6). In this connection, he actively supported the *Djamā'at al-Taḳrīb bayn al-Madhāhib al-Islāmiyya*, founded in Cairo in 1947, and its institute there, the *Dār al-Taḳrīb*. He kept up a correspondence with Shī'ī religious leaders such as Āyatullāh Burūdjirdī [*q.v.* in Suppl.]. In summer 1959 Shaltūt issued a *fatwā* to the effect that worship according to the doctrine of the Twelver Shī'a was valid and that this school was a recognised *madhhab* within Islam (for the Arabic text, see, e.g. 'Abd al-'Aẓīm, 188; for translations into other languages, Ende, 312, n. 13). The *fatwā*—originally an answer cut out from a newspaper interview and distributed by the *Dār al-Taḳrīb*—was greeted with enthusiasm in the Shī'ī world, but also kindled sharp criticism on the part of certain circles of the Salafiyya [*q.v.*]. Its effect at al-Azhar and elsewhere, however, was soon counteracted by both internal and external opposition as well as by international developments, such as the outbreak of a crisis between Persia and Egypt in summer 1960 (Ende, 314 ff.). For all Muslims striving for a rapprochement, however, Shaltūt's *fatwā* remains a source of inspiration [see further, TAḲRĪB].

(W. ENDE)

AL-SHĀM, AL-SHA'M, Syria, etymologically, "the left-hand region", because in ancient Arab usage the speaker in western or central Arabia was considered to face the rising sun and to have Syria on his left and the Arabian peninsula, with Yaman ("the right-hand region"), on his right (cf. al-Mas'ūdī, *Murūdj*, iii, 140-1 = § 992; al-Muḳaddasī, partial French tr. A. Miquel, *La meilleure répartition pour la connaissance des provinces*, Damascus 1963, 155-6, both with other, fanciful explanations). In early Islamic usage, the term *bilād al-Shām* covered what in early 20th-century diplomatic and political usage became known as "Greater Syria", including the modern political entities of Syria, Lebanon, Jordan, and Israel and the West Bank of Palestine, in the north spreading into the modern Turkish *ils* or provinces of Hatay (the former *sandjak* of Alexandretta [see ISKANDARŪN]), Gaziantep [see 'AYNTĀB] and Diyarbakır [see DIYĀR BAKR]. As often happened in the earliest Islamic times (cf. Miṣr = both Egypt and its capital), al-Shām could also denote the historic administrative capital of the region, Damascus [see DIMASHḲ].

For the modern component countries of this Greater Syria, see FILASṬĪN, LUBNĀN, AL-URDUNN. The modern Syrian Republic is known as Sūriyā or Sūriya. The geographical section 1. below deals with the region of modern Syria. The historical section 2. necessarily deals with the Greater Syrian region as a whole for the earlier Islamic centuries, when the modern political divisions had little distinctive history as such until the approach of modern times. By then, however, such a region as Lebanon, with its own long-standing separate cultural, religious and political traditions, began to pursue a historical role of its own; this is considered in LUBNĀN.

1. Geography.

Modern Syria falls naturally into a western, Levantine section bordering on the Mediterranean, characterised by mountain ranges and hills with valleys and depressions between them, and with a maritime climate; and an eastern one, in which these hills and valleys gradually subside into a table-land, steppes and deserts, naturally bounded by the Taurus Mountains to the north, crossed by low ridges of hills and having a more continental climate. In its north-east, it is crossed by the Euphrates [see AL-FURĀT] and Khābūr [*q.v.*] rivers.

The western section contains rivers running into the Mediterranean like the Orontes or al-'Āṣī [*q.v.*], the Nahr al-Kabīr, the Nahr al-Sinn and the river of Ḥimṣ. Inland from the narrow coastal plain are mountain and hill ranges running roughly north-south. In the far north are the Amanus Mountains or Gavur Dağ and the Djabal al-Akrād or Kurt Dağ, then the Orontes river valley, and then the classical Casius or Djabal al-Aḳra' ("bald mountain", from its white appearance). To the south of the Nahr al-Kabīr valley is the gently-folded limestone plateau of the Djabal al-Anṣāriyya (highest point, Nabī Yūnus, 1,583 m/5,194 feet). To the south of the River of Homs the Djabal 'Akkār marks the beginning of the much higher Lebanon Mountains (highest point, al-Ḳarna al-Sawdā', 3,086 m/10,131 feet).

To the east of these ranges lies the northernmost section of the depression of the Great Rift Valley of East Africa, the Red Sea, the Dead Sea and its Syrian continuation: in the north, the 'Amḳ depression [see AL-'AMḲ], with its lake, the classical Islamic Buḥayrat Anṭākiya, modern Amuk Gölü; the long valley of the Orontes, forming the Ghāb, regulated by the Lake of

Homs, and south of Ḥimṣ forming the Biḳāʿ [*q.v.*] or Bekaa between the Lebanon and Anti-Lebanon Mountains. Finally, to the east of this series of valleys and depressions lies a further line of hills and mountains: the Dj̲abal al-Zāwiya to the east of the Gh̲āb (highest point, Dj̲abal Ayyūb, 935 m/3,068 feet), and then south of Ḥimṣ, the much higher Anti-Lebanon range, al-Dj̲abal al-Sh̲arḳī, culminating at its southernmost tip in Mount Hermon or Dj̲abal al-Sh̲ayk̲h̲ (2,814 m/9,232 feet).

From the eastern slopes of these hills and mountains begin the steppes and deserts, with the great cities of Syria—Aleppo [see ḤALAB], Ḥamā, Ḥimṣ [*q.vv.*] and Damascus—lying in the agricultural zone of the foothills and with cultivable lands in their rain shadow. The steppelands run eastwards to the Euphrates banks and beyond, with a purely artificial frontier separating Syria and ʿIrāḳ. There are various low, broken ridges within the northern part of these plains, such as the series of low hills stretching north-eastwards from Damascus and ending in the Dj̲abal al-Bis̲h̲rī. Here in this semi-arid steppeland, crops have for long been possible where springs and wells can be found; but extensive dams and irrigations works along the course of the middle Euphrates have made possible a great extension of agriculture there at the present time. South of the ancient desert caravan station of Palmyra [see TADMUR], however, is the true Syrian Desert, the Ḥamaḍ, where springs are almost unknown and the few wells have only a limited supply of water. To the south of the agriculturally rich Damascus basin (the classical Islamic Gh̲ūṭa [*q.v.*]), there runs from the base of Mount Hermon and the Golan Heights [see AL-DJ̲AWLĀN] a basaltic, volcanic zone, with such lava-fields as the Lad̲j̲āʾ [*q.v*], classical Trachonitis, to the south of Damascus; the Ṣafāʾ [*q.v.*] to its south-east; and then, running southwards beyond Ṣalk̲h̲ad [*q.v.*] into modern Jordanian territory, the Ḥawrān [*q.v.*], classical Auronitis, or Dj̲abal al-Durūz (highest point, 1,734 m/5,687 feet).

2. History.

(a) To 1918.

Syria had become a Roman province in 64-63 B.C., when Pompey annexed it after the decline of the Seleucids. It became one of the most important provinces of the Roman empire, as the key to the defence of the empire's Asiatic territories. Administratively, it was divided by Septimius Severus into the two provinces of Syria Coele in the north and Syria Phoenice in the south, but by the early 5th century, various local, hitherto autonomous principalities had been brought under direct rule, and Syria was subdivided into at least five provinces. The land frontiers of Roman and Byzantine Syria were under continuous pressure from formidable military powers of the east, first the Parthians and then, from the 3rd century onwards, the Sāsānids [*q.v.*]. Hence the importance of the *limes* there, an elaborate system of defences in depth, with strongholds connected by a network of roads across the country, running roughly from Bostra (Boṣrā [*q.v.*]) in the Hawrān northeastwards to the Euphrates, crossing the river at Circesium (the later Islamic Ḳarḳīsiyā [*q.v.*]) and then on to the Singara (Dj̲abal Sind̲j̲ār [see SINDJ̲ĀR]).

For the manning of this broad defensive zone, the Romans and Byzantines relied on native auxiliaries as well as their own professional troops. These auxiliaries were in a treaty relationship with the empire, hence called *foederati* or *symmachoi*, and included various Arab tribesmen who figure in the Islamic accounts of the Arab conquests as the *Mustaʿriba*. Tribes represented in their ranks included the Kalb, Balī, Dj̲ud̲h̲ām, Lak̲h̲m, Tag̲h̲lib, Tanūk̲h̲, Iyād, etc., many of whom became at least superficially Christian. Especially notable here was the Arab kingdom of Gh̲assān, of South Arabian origin but from *ca.* A.D. 500 enthusiastic Monophysite Christians, who promoted and controlled much of the economic and cultural prosperity of the rural and desert fringes of Syria [see GH̲ASSĀNIDS]. Their florescence was bound up with that of Byzantium, and they went down with the Byzantine cause in the Arab-Islamic conquests period, fighting in the Emperor Heraclius's forces at the Battle of the Yarmūk (see below) under their last king Dj̲abala b. Ayham [*q.v.*], in his last years a fugitive in Byzantium. For the detailed history of the relations between the Arabs of Syria and the Romans and Byzantines, see the works of Irfan Shahid, including his *Rome and the Arabs*, Washington D.C. 1984; *Byzantium and the Arabs in the fourth century*, Washington D.C. 1984; *Byzantium and the Arabs in the fifth century*, Washington D.C. 1989; *Byzantium and the Arabs in the sixth century*, i, Washington D.C. 1995.

The caravan route up the west coast of Arabia, connecting Mecca with Syria, was familiar to the Prophet Muḥammad and the first Muslims. The youthful Muḥammad's trading trip with his uncle Abū Ṭālib to Boṣrā and his alleged meeting with the Christian monk Baḥīrā, who recognised him as a future prophet, figures in the accounts of the *Sīra* (see, e.g. Ibn Isḥāḳ, tr. in W.M. Watt, *Muhammad at Mecca*, Oxford 1953, 36-8, and BAḤĪRĀ). It should also be recalled that Jerusalem [see AL-ḲUDS] was a city of Syria and, as the original *ḳibla* of the new faith and traditionally identified with the *masd̲j̲id al-aḳṣā* of the Ḳurʾānic *isrāʾ* or night journey [see MIʿRĀDJ̲], was of great religious significance to Muḥammad and the early Muslims. The whole province of Syria was in fact to be famed in subsequent Islamic times for its innumerable *mas̲h̲āhid*, holy sites, tombs and places of pilgrimage, identified above all with the Old Testament prophets and patriarchs, a Holy Land *par excellence* (see the eulogies of al-Muḳaddasī, tr. Miquel, 117-20, 145-52, 228; the minor genre of the *kutub al-ziyārāt*, such as the *K. al-Ziyārāt* of ʿAlī b. Abī Bakr al-Harawī [*q.v.*], French tr. Janine Sourdel-Thomine, Damascus 1957, 6-78; and the extensive *faḍāʾil al-Ḳuds* literature [see AL-ḲUDS. II.11.]).

Hence military probes in the direction of Syria began in the Medinan period of Muḥammad's prophethood, but a large-scale expedition to Muʾta [*q.v.*], to the east of the later Karak, in 8/629, was decisively defeated by Byzantine defence forces. Hence the definitive onslaught on Syria by the Muslims did not begin until the last months of Abū Bakr's caliphate and the beginning of ʿUmar's one, after the safety of the Arabian peninsula for Islam had been assured by the suppression of the Ridda [*q.v.* in Suppl.] outbreaks against the political control of Medina. At the outset, there seem to have been four main Arab leaders operating against Syria, ʿAmr b. al-ʿĀṣ [*q.v.*] in southern Palestine, Sh̲uraḥbīl b. Ḥasana in Jordan,

Yazīd b. Abī Sufyān in the Balḳā' [*q.v.*] to the east of the Jordan, and Abū 'Ubayda [*q.v.*] in the Djawlān, and from the information in such sources as Ibn A'tham al-Kūfī, al-Ṭabarī and Ibn 'Asākir, it seems that the Muslim forces numbered some 24,000, mainly settled Ḥidjāzīs, from Mecca and Medina, nomads from the Ḥidjāz and tribesmen from Yemen. The real breakthrough came with the arrival of a fifth group, via 'Irāḳ, under the Meccan general Khālid b. al-Walīd [*q.v.*]. The first major battle took place at Adjnādayn [*q.v.*] between Ramla and Bayt Djibrīn in Palestine (Djumādā I 13/July 634 or Dhu 'l-Ḳa'da 13/January 635). The defeated forces tried to reform behind the marshes of Baysān. Dislodged, they crossed the Jordan, to be again defeated at Fiḥl or Faḥl [*q.v.*] (Pella). Palestine was definitely lost to the empire.

In Muḥarram 14/March 635, the Arabs took up their position under the walls of Damascus. Abandoned by the Greek garrison, the citizens capitulated in the following Radjab/September. The army collected by Heraclius to raise the siege arrived too late. The Arabs established themselves in Djābiya [*q.v.*], then retired to entrench themselves behind the Yarmūk, an eastern tributary of the Jordan. Although some of the Armenian troops may have been disaffected, this does not seem to have caused the Emperor problems, and for a long time to come, Armenian troops continued to form an important proportion of the Imperial army. More serious was the flight of some of the Christian Arab troops, as a result of which the imperial forces were completely routed. This battle (Radjab 15/August 636) settled the fate of Syria. The conquest of the north and of the Phoenician coast was simply a route march. Everywhere the towns, abandoned by their garrisons, paid contributions. Nowhere was a serious resistance encountered. This was literally the *fatḥ yasīr*, easy conquest, as al-Balādhurī tactfully calls it. Nevertheless, Jerusalem did not surrender till the end of 16 or beginning of 17/early 638, and Caesarea or Ḳayṣariyya [*q.v.*] after more or less continuous siege of seven years, in 19/640. After the surrender of the last coast towns of Palestine, the conquest could be regarded as complete.

The reasons for such a speedy collapse of Byzantine authority in Syria, which had seemed to have recovered after the Persian invasion, were complex. It had, as noted above, been part of the Roman east for some seven centuries, but the impact of Graeco-Roman civilisation had been greatest in the coastal zone, where lay the permanent military and naval garrisons and where the cities had a Roman-Byzantine official class; the rural and desert interior of Syria had remained essentially a Semitic, ethnically and linguistically Aramaic and Arab region, where resistance to Hellenism expressed itself in a strong attachment to the Monophysite theology of the Jacobite Church, hence opposed to the theology of the Imperial Orthodox or Melkite official creed. Byzantine policy in the empire's later years seems to have been—at least in retrospect—faulty. The Emperors Tiberius and Maurice had in the later 6th century undermined the position of their Ghassānid allies, whilst the Sāsānid invasion of 613-14, which penetrated as far as Egypt, showed that the Byzantine position in the Levant was far from impregnable. Heraclius may have underestimated the numbers and the bellicosity of the invading Arabs, but the religious fervour of the Muslims—whose faith seemed at the time to be only yet another Christian heresy arising from the east—could not be foreseen. Recently, Walter F. Kaegi has stressed that there was nothing inevitable about the Arab conquests in Syria and the Djazīra. He has suggested that the Byzantine defeat was the result, to some extent, of unwise military decisions and the effects of contingent events, but that, above all, Heraclius had not had enough time to repair the financial situation and the frontier defences devastated by the Persians, so that he had serious problems in paying both his professional troops and the Arab auxiliaries, the *Musta'riba*, on which the empire had traditionally relied for the defence of the *limes*. See, amongst an extensive literature on the conquests in general, D.R. Hill, *The termination of hostilities in the early Arab conquests A.D. 634-656*, London 1971; F.McG. Donner, *The early Islamic conquests*, Princeton 1981, ch. 3; I.M. Lapidus, *The Arab conquests and the formation of Islamic society*, in G.H.A. Juynboll (ed.), *Studies on the first century of Islamic society*, Carbondale and Edwardsville, Ill. 1982, 49-72; M. Gil, *A history of Palestine, 634-1099*, Cambridge 1992, ch. 1; Kaegi, *Byzantium and the early Islamic conquests*, Cambridge 1992.

Shortly before the capitulation of Jerusalem, the caliph 'Umar arrived in Syria, to preside over the congress or "Day of Djābiya" [*q.v.*]. The question of the organisation of Syria was debated. The year 18/639 was marked by the plague of 'Amwās [*q.v.*]. Abū 'Ubayda died, and Yazīd b. Abī Sufyān, governor of Damascus, perished in the epidemic and was replaced by his brother, Mu'āwiya. 'Umar rigorously maintained the political inequality of the conquerors and conquered. The latter, the Ahl al-Kitāb [*q.v.*] or Dhimmīs "protected peoples" [see DHIMMA], formed the majority of the population. The privileged race of Arabs, the *muḳātila* or warriors, was to furnish the framework of a military and salaried aristocracy. Syria was divided into *adjnād* or military districts: Damascus, Ḥimṣ, Palestine and al-Urdunn or the province of Jordan. Yazīd I later added the *djund* of Ḳinnasrīn for the north of Syria. From their military cantonments—the chief of which was Djābiya—the conquerors controlled the country and collected the taxes. Besides the land tax or *kharādj* [*q.v.*], the *Dhimmīs* paid a personal or poll-tax, the *djizya* [*q.v.*]. In Syria, as in the other conquered provinces, "organisation was confined to a military occupation for the exploitation of the natives. The Arab government was confined to finance; their chancellery was an audit office" (Wellhausen, *Das arabische Reich u. sein Sturz*, 20, Eng. tr., *The Arab kingdom and its fall*, 32).

At the beginning of his administration, which under 'Uthmān extended over all Syria, Mu'āwiya realised the necessity of getting the support of the Arab tribes of Syria, politically more developed than the Bedouins of the Arabian peninsula. For his policy and military operations, see MU'ĀWIYA.

'Alī, 'Uthmān's successor, wanted to dismiss him, but the Syrians took the side of their governor. The encounter between Syrians and 'Irāḳīs on the battlefield of Ṣiffīn [*q.v.*] being indecisive, arbitrators were appointed to decide between the two parties. The conference at Adhruḥ [*q.v.*] between Ma'ān and Petra did not reach a clear decision, but the outcome was clearly unfavourable for 'Alī. Profiting by this diplomatic success, Mu'āwiya sent 'Amr b. al-'Āṣ, his lieutenant, to conquer Egypt. On 17 Ramaḍān 40/24 January 661, 'Alī fell victim to a Khāridjite dagger, and the field was left clear for his rival.

Umayyad Syria. The field was now clear for Mu'āwiya to found a dynasty, that of the Umayyads [*q.v.*].

He was acclaimed as caliph at Jerusalem by the troops and *amīrs* of Syria. By taking up his residence in Damascus, he made it the capital instead of Medina or Kūfa. Whether deliberate or not, this step dis-

placed the centre of gravity of the caliphate to the advantage of Syria, and the Islamic capital never returned to the Arabian peninsula. Muʿāwiya made the Syrian Arabs, and especially those of the South Arabian or Kalb group, supreme, and under the early Umayyads they held all the principal offices. He twice tried to besiege Constantinople. For a verdict on the policy and character of the sovereign, who was with ʿUmar I the real founder and organiser of the caliphate, see MUʿĀWIYA. He died at Damascus in Radjab 60/April 680, aged 75.

His son and successor, Yazīd I, had to face a rebellion, which the ability of his father had been able to prevent breaking out. Al-Ḥusayn b. ʿAlī and ʿAbd Allāh b. al-Zubayr [*q.vv.*], nephew of ʿĀʾisha, the prophet's widow, refused to recognise Yazīd and took refuge in the inviolable territory of Mecca. Al-Ḥusayn renounced allegiance and left the sanctuary, to fall in the massacre of Karbalāʾ [*q.v.*]; in 61/680 Medina quarrelled with Syria, and its inhabitants proclaimed Yazīd deposed. After futile negotiations, recourse was had to arms. Victorious on the day of al-Ḥarra [*q.v.*], the Syrians marched on Mecca, where Ibn al-Zubayr had declared himself independent. His headquarters were in the great mosque. A scaffolding of wood covered with mattresses protected the Kaʿba from the Syrian catapults. The carelessness of a Meccan set it on fire (Rabīʿ I 64/November 683). The news of the death of Yazīd at this point decided the Syrian army to retreat. Yazīd was not a worthless sovereign, still less the tyrant depicted by anti-Umayyad, pro-ʿAbbāsid and Shīʿī annalists. He continued his father's policy. The patron of artists and poets, and himself a poet, he completed the administrative organisation of Syria by creating the *djund* of Ḳinnasrīn (see above). He perfected the irrigation of the Ghūṭa of Damascus by digging a canal which was called after him. The *Continuatio Byzantino-Arabica* calls him *jucundissimus et cunctis nationibus regni ejus gratissime habitus ... cum omnibus civiliter vixit.* "No caliph," says Wellhausen, "ever had such praise; it comes from the heart."

His younger son, the valetudinarian Muʿāwiya II [*q.v.*], had but a transitory reign. He was apparently carried off by the plague which was raging in 684. His brothers were all equally very young. The fact that they were minors compelled the Syrian chiefs of the Kalb to give their support to Marwān b. al-Ḥakam [*q.v.*], first caliph of the Marwānid branch (June 22, 684). The Ḳaysīs of northern Syria and the Djazīra, having refused to recognise him, were defeated at Mardj Rāhiṭ [*q.v.*]. His reign was a continual series of battles. A rapid campaign secured him Egypt. Exhausted with his exertions, the septuagenarian caliph returned to Damascus to die in Ramaḍān 65/May 685. His eldest son ʿAbd al-Malik [*q.v.*] succeeded him. He had to retake the eastern provinces and Arabia from the anti-caliph Ibn al-Zubayr, and at the same time repel an invasion of the Mardaïtes or Djarādjima [*q.v.*]. In Jerusalem, we owe him the building of the mosque of al-Aḳṣā [see AL-MASDJID AL-AḲṢĀ].

ʿAbd al-Malik's reign sees a shift to a more centralised form of government and uniformity in its execution, after the Second Civil War had shown the fragility of loyalty to the Umayyads even amongst the tribesmen of Syria and the Djazīra, and after there was taking place an acceleration in the numbers of the Syrian population converting to Islam and becoming *mawālī* [see MAWLĀ] or clients of the ruling class of Arabs. For the first time, something like a standing army of loyal Syrian troops appears during the Marwānid period, additional to the older tribal contingents. At the same time, a certain process of Arabisation in the state is observable, with the *naḳl al-dīwān* or change from local languages, Greek in the case of Syria, to Arabic as the chief administrative language, although the process was not completed till some decades later [see DĪWĀN. I]. Similarly, there was the appearance of a specifically Muslim, purely epigraphic form of coinage after earlier reliance, in the case of Syria and Egypt, on the older Byzantine gold coinage pattern [see SIKKA. 2], and a decisive proclamation of the triumph of Islam, seen in the inscriptions of the Dome of the Rock in Jerusalem [see AL-ḲUDS. I, and ḲUBBAT AL-ṢAKHRA], perhaps as part of the building-up of Jerusalem as a pilgrimage centre at the side of Mecca and Medina. All in all, it now becomes possible to speak of the emergence in Syria of a distinctive Arab-Islamic state rather than what had been, in many respects, a successor-state to Byzantium.

His successor in Shawwāl 86/October 705, al-Walīd I, brought to the throne an autocratic temperament and a display of religious fervour unknown in his predecessors. He was the great builder of the dynasty. According to the earliest evidence, it seems that the Christians of Damascus had been allowed to retain the splendid Basilica of St. John the Baptist. Al-Walīd purchased it from them and turned it into a mosque. In his reign, the Arab empire attained its greatest extent. Al-Walīd was singularly successful in his enterprises. His autocratic mood revealed itself in a diminution in tolerance to the conquered peoples. The great administrative offices were definitely taken from the Christians. By his fondness for magnificence, al-Walīd secured undisputed popularity with the Arabs of Syria. He died in Djumādā II 96/February 715.

His brother, Sulaymān b. ʿAbd al-Malik [*q.v.*], founder of al-Ramla [*q.v.*] in Palestine, succeeded him. He perished on the way back from the disastrous siege of Constantinople. He was succeeded by his cousin ʿUmar II b. ʿAbd al-ʿAzīz [*q.v.*] who was replaced by the incapable Yazīd II. From the time of al-Walīd I, the Umayyads had begun to forsake Damascus and to reside more and more on their rural estates [see BĀDIYA in Suppl.]; although Damascus remained the official capital, it ceased to be the caliph's residence. Hishām, who succeeded Yazīd II, did much to revive the prestige of the Syrian caliphate. The conquests, however, had by now slowed down. In France the Arabs suffered the disastrous defeat of Poitiers in Ramaḍān 114/October 732 [see BALĀṬ AL-SHUHADĀʾ]. Hishām allowed the Melkite patriarchs of Antioch to reside in Syria. He was the last successful Umayyad caliph, and was even praised by the following ʿAbbāsids for his knowledge of statecraft, his industriousness as a ruler and his frugality, though his later years, which he passed largely on his desert estate of al-Ruṣāfa near the Euphrates [see AL-RUṢĀFA. 3], were clouded by succession troubles.

He was succeeded in 125/743 by his nephew, Walīd II, son of Yazīd II. This prince, an artist and poet, lived contentedly in the desert, where he began the building of the splendid palace of Mshattā [*q.v.*]. He died at the hands of an assassin before finishing it (126/744). His successor, Yazīd III, was the first caliph born of a slave. He died five months later, having designated as his successor his insignificant brother, Ibrāhīm, who did not succeed in getting himself acknowledged.

In the midst of the general anarchy, there came on the scene the energetic governor of Mesopotamia, Marwān b. Muḥammad [*q.v.*], grandson of the caliph Marwān I. The victory of ʿAyn al-Djarr [*q.v.*] or ʿAndjar in the Biḳāʿ broke the resistance of his adver-

saries, the Syrian Yemenīs. Becoming caliph in 127/744, Marwān II moved his capital to Ḥarrān (Mesopotamia), which brought him nearer to the troubled region of the Djazīra but alienated the Syrians from him. He exhausted himself in putting down such rebellions as those of the Khāridjites. The ʿAbbāsids were now secretly conspiring against the Umayyad dynasty. Taking advantage of the disaffection in Syria, Abu ʾl-ʿAbbās al-Saffāḥ [*q.v.*] had himself proclaimed caliph at Kūfa (132/749). After his defeat on the Great Zāb (132/750), Marwān had to evacuate Mesopotamia, and then Syria. Abandoned by the Syrians, he took refuge in Egypt, where he died at Abūṣīr in Dhu ʾl-Ḳaʿda 132/June 750. The Umayyads were everywhere pursued and exterminated, their tombs desecrated, and their ashes scattered to the winds. The Syrians tried in vain to regain their lost ground. They raised the "white flag" of the Umayyads in opposition to the "black flag" of the ʿAbbāsids. They found too late that by indifference to the fall of the Umayyads they had thrown away the future and supremacy of Syria. They hoped henceforth for speedy, chiliastic coming of al-Sufyānī [*q.v.*], a national hero and champion of Syrian liberty. As his name shows, al-Sufyānī, was to be a descendant of Abū Sufyān and the line of Muʿāwiya. He was to bring back the golden age and the happy days of the dynasty, the memory of which his name perpetuates.

The Umayyad court at Damascus, and the caliphal residences scattered up and down Syria, became lively cultural centres once Arabic literature revived after its period of quiescence during the period of the early Arab conquests [see SHIʿR. 1 (a)]. The Monophysite Christian al-Akhṭal (*q.v.*, and Blachère, *HLA*, iii, 466-74; Salma Jayyusi, in *Camb. hist. Arabic lit.*, i. *Arabic literature to the end of the Umayyad period*, Cambridge 1983, 396-401), of the tribe from the Rabīʿa group of Taghlib [*q.v.*], was the eulogist of the caliphs from Muʿāwiya to al-Walīd I; Djarīr (*q.v.*, and *HLA*, iii, 484-95; Jayyusi, 401-9) was the proponent of the Ḳaysī cause at Damascus under ʿAbd al-Malik and al-Walīd I: al-Farazdaḳ (*q.v.*, and Jayyusi, *loc. cit.*) was likewise the champion of Ḳays and especially of his own tribe of Tamīm, under several rulers from ʿAbd al-Malik to Hishām. Their poetry also reflected the fierce tribal rivalry of South and North Arabs which at times racked the Syrian countryside and was to contribute to the fall of Umayyad power there. The achievements of Umayyad art and architecture, concentrated in Syria, are described in UMAYYADS. Art and architecture.

We also have the first appearance of sectarian currents within the mainstream of the Islam of the time, such as that of the Ḳadariyya [*q.v.*], which had representatives in Syria and which came to attract the wrath of Hishām and subsequent caliphs; and Damascus seems to have been a lively centre of Muslim-Christian debate and polemics, even though the correspondence allegedly between ʿUmar II and the Byzantine Emperor Leo III is presumably the work of a Syrian Muslim rather than of the caliph himself.

Agriculture remainded flourishing in spite of the greed of the exchequer. As a result of the war with Byzantium, maritime trade had considerably diminished. On the other hand, the fall of the Persian empire had opened up possibilities in Persia and the east to the Syrians, but they were soon to meet the competition of the commercial cities of ʿIrāḳ, notably Baṣra. Syrian commerce, so active in the time of Justinian, became dormant under the Arabs. When maritime relations were resumed, it was the western peoples who secured the advantage from it, at the time of the Crusades. From the time of the Marwānids, the great towns of inland Syria—Damascus, Ḥimṣ, etc.—began to be Islamised as a result of the abolition of the military cantonments. The subject races learned Arabic, without, however, abandoning Aramaic or Greek. Decimated by epidemics, famine, civil strife and foreign wars, the Arab population of Syria grew slowly. If we neglect local outbursts of fanaticism, there is no evidence of systematic persecution or proselytising encouraged by the authorities. The latter only exercised pressure on the Christians of Arab race, the Tanūkh and Taghlib. The Kalb and other Syrian tribes had adopted Islam soon after the conquest.

In spite of their position as second-class citizens, this was a period of marked tranquillity and tolerance for non-Muslims, if we compare it with the troubles that awaited them under the ʿAbbāsids. For the Arabs, paid and fed by the state, it was a golden age, a continual feast, and their chiefs, growing rich in exploiting the provinces, acquired enormous fortunes.

The history of Syria at this time is essentially that of the Umayyad dynasty. Hence see UMAYYADS, and meanwhile, ʿA.A. ʿAbd Dixon, *The Umayyad caliphate 65-86/684-705, a political study*, London 1971; G. Rotter, *Die Umayyaden und der zweite Bürgerkrieg* (*680-692*), Wiesbaden 1982; G.R. Hawting, *The first dynasty of Islam. The Umayyad caliphate A.D. 661-750*, London 1986.

ʿAbbāsid and Fāṭimid Syria. With the fall of the Umayyads, Syria lost its privileged position, and ceased to form the centre of a vast empire. It found itself reduced to the rank of a simple province, and jealously watched on account of its attachment to the old régime. The capital of the caliphate was moved across the Euphrates. Straining under a power, the hostility of which they never ceased to feel, the Syrians found themselves systematically excluded from all share in government affairs, as they continued to be under the Fāṭimid and succeeding rulers. The caliphs of Baghdād only intervened in Syria to make it feel its position of inferiority by inflicting increased taxation on it. Driven to extremes by the exactions of the caliph's agents, the Christians of Lebanon attempted without success to gain their freedom in 759-60. On the occasion of the Pilgrimage or of the war against the Byzantines, the caliphs al-Manṣūr, al-Mahdī, Hārūn al-Rashīd and al-Maʾmūn passed through Syria. In the midst of the troubles that preceded the accession of al-Maʾmūn (813-833), the position of the Christians became intolerable and many of them migrated to Cyprus.

In the later 2nd/8th century and the early 3rd/9th one, Syria became the centre of power of the family of Ṣāliḥ b. ʿAlī [*q.v.*], uncle of the caliphs al-Saffāḥ and al-Manṣūr, who took over the Umayyad estates there and married the widow of Marwān II. He and his descendants were prominent in the frontier warfare with Byzantium in northern Syria, the region of the *ʿawāṣim* and *thughūr* [*q.vv.* and ṢĀʾIFA. 1]. Ṣāliḥ's son ʿAbd al-Malik later brought the support of Syrian troops to the side of al-Amīn in the civil warfare with the latter's brother al-Maʾmūn.

The misfortunes of their country, the loss of its autonomy, could not induce Ḳaysīs and Yamanīs to forget their regrettable differences, which ended by weakening the Syrians and dooming to failure their efforts to shake off the ʿAbbāsid yoke. A descendant of Muʿāwiya, ʿAlī b. ʿAbd Allāh al-Sufyānī, raised the "white standard" which had become the symbol of Syrian independence. But to get the support of the

Kalbīs, he alienated the Ḳaysīs (193-7/809-13). Another rising was no more successful. An Arab of obscure antecedents, named Abū Ḥarb of Yamanī origin, called al-Mubarḳaʿ "the veiled one" [*q.v.*], proclaimed himself the Sufyānī (see above). The indifference of the Ḳaysīs once again brought about his defeat in the reign of the caliph al-Muʿtaṣīm (218-27/833-47). The caliph al-Mutawakkil (232-47/847-61) thought of shifting his capital and living in Damascus. A mutiny in his guard forced him to return to Mesopotamia. His reign was a period of severe trial for the Christians of Syria. From his reign dates, for the most part, the intolerant legislation, which became traditionally but implausibly attributed to ʿUmar I: the wearing of a special dress, the prohibition of riding on horseback, etc. [see GHIYĀR]. Numerous churches were turned into mosques. At this date, there were no longer any Christians of Arab stock in Syria. Under the Umayyads, the Tanūkh had resisted all advances of the government. The caliph al-Mahdī (158-69/775-85), however, forced them to convert.

In 293/906 an agitator claiming to be the Sufyānī was arrested. This was the last attempt at an Umayyad restoration; it failed before the apathy of the demoralised Syrians. A Turkish Mamlūk, Aḥmad b. Ṭūlūn [*q.v.*], already caliphal governor of Egypt, invaded Syria under pretext of defending it against the Byzantines, and ruled it as an autonomous province. The dynasty which he founded had only an ephemeral existence (254-92/868-905), as had that of the Ikhshīdids (323-58/935-69), who repeated the experience of the Ṭūlūnids. In the interval, the fringes of Syria and Palestine as far as Damascus and Ramla had been devastated by the Carmathians [see ḲARMAṬĪ], who left behind them the germ of Ismāʿīlī doctrines. From the time of the Ṭūlūnids, the country may politically speaking be considered lost to the ʿAbbāsids. Their power was only felt there during a few brief periods of restoration.

In their turn, the Bedouin tribes wished to take their share in plundering an empire in decay. A Taghlibī clan, the Banū Ḥamdān [see ḤAMDĀNIDS], found themselves entrusted with the reconquest of Syria for the Ikhshīdids and checking the Byzantine advance. They installed themselves as masters of the north of the country, without, however, breaking with the ʿAbbāsid caliphate. The most famous of these Ḥamdānid *amīrs* was Sayf al-Dawla [*q.v.*], who in his court at Aleppo, showed himself an enlightened patron of arts and letters (333-56/945-67). After the fall of the Ḥamdānids (394/1004), in spite of a brief ʿAbbāsid reaction at Damascus (364-6/975-7). Syria fell into and remained for over a century (366-491/977-1098) in the hands of an ʿAlid, or more accurately, Ismāʿīlī, dynasty, that of the Fāṭimids [*q.v.*].

Having conquered Egypt, the Fāṭimid armies invaded Syria (358/969), and conquered Palestine and then Damascus, without encountering any particular resistance. In the centre and north it is difficult to say what form the Egyptian conquest took. The direct authority of the Fāṭimids was enforced so long as their troops occupied the region. After their departure, the local *amīrs* did as they pleased without openly breaking with the suzerain in Cairo. Fāṭimid rule was only kept up in Syria by continually dismissing the agents to whom it was forced to delegate its authority, thus perpetuating administrative instability. In Palestine it had to reckon with the Djarrāḥids [*q.v.*]. These *amīrs* of the tribe of Ṭayyiʾ arrogated to themselves for over a century a regular hegemony over the nomad Syrians. In the reign of al-Ḥākim (386-411/996-1021 [*q.v.*]), the Banu ʾl-Djarrāḥ amused themselves by appointing an anti-caliph, and then sending him back to Mecca, whence they had brought him. In Tyre a humble boatman succeeded for a time in declaring himself independent (387/997).

Taking advantage of the anarchy, the Emperor Nicephorus Phocas (963-9) had conquered Northern Syria. His successors, John Tzimisces (969-76) and Basil II (976-1025), easily conquered the valley of the Orontes and the Phoenician coast. Of all these conquests, all that the Byzantines were able to keep for over a century was the "duchy" of Antioch, which included northern Syria, except the amīrate of Aleppo. We have already mentioned the caliph al-Ḥākim with whom is connected the origin of the Druze [see AL-DURŪZ]. This prince quarrelled with the Christians and ordered the Basilica of the Resurrection in Jerusalem to be destroyed. Syria gradually detached itself from Egypt. In the midst of the political disorders, the pernicious influence of the Bedouins increased. In 415-1024, the Banū Mirdās [*q.v.*] of the Ḳaysī tribe of Kilāb established themselves in Aleppo, and held it with interruptions till 472/1079.

By this time the Saldjūḳs [*q.v.*] had already gained a footing in Syria. The provinces of Syria fell into their power, Damascus in 467/1075. At Jerusalem a Saldjūḳ *amīr*, Artuḳ b. Ekseb, founded a local dynasty (479-80/1086-7). In 477/1084, the Greeks lost Antioch, their last possession in Syria. Syria was now divided into two Saldjūḳ principalities, that of Aleppo and that of Damascus. Saldjūḳ *amīrs* more or less independent commanded at Aleppo and Ḥimṣ, all at war with one another [see SALDJŪḲIDS. III. 4]. At Tripoli, a humble *ḳāḍī* founded the dynasty of the Banū ʿAmmār [*q.v.*]. To the south of this town, the towns on the coast remained in the hands of the Egyptians. Into the midst of this confusion, this piecemeal distribution of territory, came the armies of the Crusaders.

The persistent hostility shown by the ʿAbbāsids to the intellectuals of Syria, the political anarchy, the rule of Turkish adventurers, were all circumstances unfavourable to the progress of literature and learning, but a few poets gathered at the court of the Ḥamdānids and Mirdāsids of Aleppo. The patronage of Sayf al-Dawla encouraged the preparation of the celebrated *Kitāb al-Aghānī* and supported the poet al-Mutanabbī [*q.v.*]. Less tolerant than the Umayyads, the authorities began to encourage conversion to Islam. Arabic slowly began to take the place of Aramaic as the spoken and written language of the original inhabitants, who began to speak and write in it. The end of this period coincides with the spread of the *madrasas* [*q.v.*], which appeared under the stimulus of the Saldjūḳs, especially in Aleppo and Damascus. The lack of respect into which the ʿAbbāsid caliphate had fallen adversely affected orthodox Islam; this backlash favoured the growth in Syria of sects practising initiation and following the Shīʿa: the Druze, Ismāʿīlīs, Nuṣayrīs and Imāmīs.

The exactions of the ʿAbbāsid and Fāṭimid agents diminished without, however, destroying the great vitality of the country. In 311/923, a governor of Damascus was sentenced to pay 300,000 dīnārs to the treasury.

The northern fringes of Syria naturally suffered from the effects of the Byzantine-Arab frontier warfare there, and there were additionally the ravages of the Bedouins in northern and central parts of the land, who secured an increased ascendancy in the countryside there after the decline of ʿAbbāsid control and the failure of the Fāṭimids to establish lasting authority there. The ascendancy of the Kilāb in

Aleppo and northern Syria has been mentioned. The exactions and confiscations of the Ḥamdānids in northern Syria and the Djazīra are denounced by the traveller Ibn Ḥawḳal, in particular, those of Nāṣir al-Dawla al-Ḥasan (317-58/929-69) as causes of agricultural decline. There were, however, compensatory economic trends. Al-Muḳaddasī testifies to the vitality of the Syrian cities and their artisanal activities. Sugar cane cultivation was introduced into Syria in the 3rd-4th/9th-10th centuries, and became extensive along the Mediterranean coast and in the Jordan valley, with factories or refineries (*maṭābikh*) springing up there [see SUKKAR]. Syria also became one of the most important manufacturing centres of the Middle East for paper, and Nāṣir-i Khusraw [*q.v.*] described the paper of Tripoli as even better than that of Samarḳand, the original centre of the industry in the Islamic world [see KĀGHAD]. See in general, Muhsin D. Yusuf, *Economic survey of Syria during the tenth and eleventh centuries*, Berlin 1985. A demographic factor in the history of Syria in mediaeval times was the incidence of plague outbreaks there, and *wabāʾ ʿaẓīm* is mentioned at such times as 469/1076-7, 537/1142-3, 558/1163 and 656-7/1258-9, culminating in the notorious Black Death of the 8th/14th century. See M.W. Dols, *The Black Death in the Middle East*, Princeton 1977, 32-5, 143 ff.

Syria under the Franks. On 21 October 1097, the army of the Crusaders appeared before the walls of Antioch. After a very laborious siege, they entered it on 3 June 1098. Then following the valley of the Orontes through the mountains of the Nuṣayrīs and along the coast, the Franks, now reduced to 40,000 men, debouched before Jerusalem. The city, which the Fāṭimids had just retaken from the Artuḳids, was taken by assault on 15 July 1099, and Godfrey of Bouillon elected head of the new Latin state (1099-1100). But the first Frankish king of Jerusalem was really his brother and successor, Baldwin I. He conquered the towns on the coast, Arsūf, Caesarea, Acre, Sidon, Beirut and Tripoli (1109-10). This brave leader, the most remarkable of the crusading sovereigns, died during an expedition against Egypt (1118). His successor, Baldwin II du Bourg, captured Tyre in 1124; he failed before Damascus, but the town had to promise to pay tribute.

It was towards 1130 that the Latin kingdom attained its greatest extent, stretching from Diyārbakr to the borders of Egypt. In Syria its frontier never crossed the valley of the Upper Orontes nor the crest of the Anti-Lebanon. The great cities of the interior, Aleppo, Ḥamā, Ḥimṣ, Baʿlabakk and Damascus, while agreeing to pay tribute, remained independent. The kingdom consisted of a confederation of four feudal states: 1. On the east, the county of Edessa lay along the two banks of the Euphrates. 2. In the north the principality of Antioch included in its protectorate Armenian Cilicia. 3. In the centre the county of Tripoli stretched from the fort of Margat (al-Marḳab [*q.v.*]) to the Nahr al-Kalb. 4. Lastly came the royal domains, or kingdom of Jerusalem, strictly speaking. It included all cis-Jordan Palestine and, in Transjordan, the ancient districts of Moab and Edom, which became the seigneury of Crac (Karak [*q.v.*]) and of Montréal [see SHAWBAK] "in the land of Oultre-Jourdain". For a time it had a dependency, the port of Ayla-ʿAḳaba. To defend these possessions, the Crusaders built strong castles: the Crac des Chevaliers (Ḥiṣn al-Akrād [*q.v.*]), Chastel-Blanc (Ṣāfītha [*q.v.*]), Maraclea (Maraḳiyya), Margat (al-Marḳab) and, in southern Lebanon, Beaufort (Shaḳīf Arnūn). Lastly, in Transjordan, the two massive fortresses of Crac and Montréal.

After the death of Baldwin II (1131), the decline of the Latin state began; it was hastened by the isolation of the Crusaders and their lack of unity. The Byzantines claimed the rights of a suzerain over the north of the kingdom. The Armenians sought to form a national state for themselves in the region of the Taurus. Instead of coming to an agreement, Franks, Byzantines and Armenians only succeeded in enfeebling one another to the advantage of the Muslims, who were gathered round remarkable leaders like Zangī, Nūr al-Dīn and Ṣalāḥ al-Dīn [*q.vv.*]. Baldwin III (1144-62) resumed the siege of Damascus (23-8 July 1148), without any more success than his predecessors. Already lord of Aleppo, Nūr al-Dīn installed himself in Damascus. Amaury, king of Jerusalem from 1162, formed the bold project of seizing the heritage of the dying dynasty of the Fāṭimids. He was anticipated by Nūr al-Dīn. The latter sent his lieutenant, the Kurd Ṣalāḥ al-Dīn, to Egypt. On the death of the last Fāṭimid caliph, Ṣalāḥ al-Dīn proclaimed himself independent in Egypt, and founded the Ayyūbid dynasty [*q.v.*] there, then seized Damascus from the sons of Nūr al-Dīn. On 4 July 1187, at Ḥaṭṭīn or Ḥiṭṭīn [*q.v.*] between Tiberias and Nazareth, the whole Christian army under Guy de Lusignan fell into the hands of Ṣalāḥ al-Dīn. Jerusalem capitulated on 2 October following. Deprived of their defenders, the other cities, except Antioch, Tripoli and Tyre, had to surrender.

The preaching of the Third Crusade brought to the camp before Acre, which the Franks had been besieging for two years, Philip Augustus of France and Richard Cœur-de-Lion of England. The town surrendered on 19 July 1191. A truce between the belligerents ceded the coast from Jaffa to Tyre to the Crusaders. In default of Jerusalem, which they had been unable to reconquer, Acre was henceforth the capital of the kingdom. The death of Ṣalāḥ al-Dīn produced dissension among his numerous heirs. The Emperor Frederick II took advantage of the discord to negotiate with al-Malik al-Kāmil [*q.v.*], Ayyūbid sultan of Egypt, for the cession of Jerusalem and other places of no strategic importance. Threatened by the sons of Ṣalāḥ al-Dīn, who had made an alliance with the Franks, their uncle al-Malik al-Kāmil called in the help of the Khʷārazmians, who crushed the combined Syrian and Frankish forces near Ghazza (1244) and enabled the Egyptians to occupy Jerusalem, Damascus and Ḥimṣ.

The Seventh Crusade brought St. Louis to Syria after the check to his expedition to Egypt. For four years (1250-4) he was engaged in fortifying the towns of the coast. It was the Mamlūk sultans, Baybars, Ḳalāwūn and al-Malik al-Ashraf, son of the latter, who dealt the last blow to the Latin kingdom. Acre fell (31 May 1291) after a heroic defence. In the course of the next months, Tyre, Ḥayfā, Ṣaydā, Beirut and Ṭarṭūs were taken or evacuated. ʿAthlīth [*q.v.*], the imposing fortress between Ḥayfā and Caesarea, was the last to surrender (14 August 1291). The Frankish colonies in Syria were at an end.

The Crusades introduced into Syria the feudal organisation of contemporary Europe. The elective character of the kingship soon gave place to dynastic succession. The king only ruled directly the Palestinian kingdom of Jerusalem. His authority was limited by the privileges of the three orders: the clergy, nobility and bourgeoisie. "He cannot," notes Usāma b. Munḳidh [*q.v.*], "annul the decisions of the Court of Seigneurs." The authority of the great feudatories within their principalities was circumscribed in the same way. Agricultural serfdom was retained, as had

been the custom in Syria. The name "poulains" (*pullani*) was given to the issue of marriages between Franks and natives; the etymology of this word is still obscure. The army was recruited not only from Franks but also from Armenians and Maronites. The Turcopoloi [*q.v.*] were the Muslim auxiliaries. The position of Muslims and Jews recalled that of the *Dhimmīs* in Muslim lands, with this difference that they were not so heavily taxed. According to Ibn Djubayr, his co-religionists did not conceal their satisfaction with Frankish rule.

Every principality had its own silver coin. There were also gold ducats, "besants sarracenats", or "sarrasins" with Arabic inscriptions. Commerce, more or less dormant since the Arab conquest, again became active as a result of maritime relations with the west, which were never greater. The principal ports were Acre, Tyre and Tripoli. In the principalities of the north, the terminus for continental trade was La Liche (Lādhikiyya [*q.v.*]) or Soudin (Suwaydiyya [*q.v.*]), now called Port St. Simeon. We have to go back to the time of the Phoenicians to find a period of so great economic activity.

The state of war hampered, but did not put a stop to intellectual activity among the Muslims of Syria. In Damascus, Ibn al-Ḳalānisī was busy with his history, and Ibn ʿAsākir finished his monumental encyclopaedia, the *Taʾrīkh Dimashk*, devoted to individuals who had a more or less remote connection with Syria. At the end of his troubled career, the *amīr* of Shayzar, Usāma b. Munḳidh, produced an autobiography which is very valuable for the study of the relations which existed between Franks and Muslims. Barhebraeus, a Syrian and Mesopotamian, wrote Arabic and Syriac with equal elegance. It was in this last language that the Jacobite cleric wrote a voluminous *Chronicle* [see IBN AL-ʿIBRĪ]. Muslims, Christians and Jews studied medicine with success. Never, except in the Roman period, had there been so much building. The fortresses built by the Crusaders are wonderful specimens of mediaeval military architecture. Among the churches which they built, we mention that of Djubayl, the monumental basilica at Ṭarṭūs and the graceful cathedral of John the Baptist, now the great mosque of Beirut, with its walls once covered with pictures. Many Crusading lords had adopted Syrian customs (*taballadū*, in the words of Usāma). In the collaboration of Franks and natives was hailed, as by Pope Honorius III, a *Nova Francia*, the dawn of a new civilisation. The destruction of the Latin kingdom destroyed any hopes based on it. The coming of the Turkish slave dynasty of the Mamlūks opened a period of anarchy such as Syria had not yet seen.

Mamlūk Syria. We have already given a resumé of the exploits of the early Mamlūk Sulṭāns against the crusader principalities. Fearing a return of the Franks and the warships of the European navy, which ruled the Mediterranean, the Mamlūks began to lay waste the towns of the coast, not even excepting the most prosperous, Acre, Tyre and Tripoli; they demolished the citadels at Sidon and Beirut, and Tripoli was rebuilt two miles from the coast. See on Mamlūk maritime and naval policy, D. Ayalon, *The Mamluks and naval power. A new phase of the struggle between Islam and Christian Europe*, in *Procs. of the Israel Acad. of Sciences and Humanities*, i (1965), 1-12, also in his *Studies on the Mamlūks of Egypt (1250-1517)*, Variorum, London 1977, no. VI; BAḤRIYYA. II. The navy of the Mamlūks. From the administrative point of view, they retained the old Ayyūbid appanages and divided Syria into six main districts called *mamlakas* or *niyābas*: Damascus, Aleppo, Ḥamā, Tripoli, Ṣafad and Karak (Transjordania). See for details, M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks d'après les auteurs arabes*, Paris 1923.

The past history of Damascus assured its *nāʾib*, or viceroy, not only authority over his Syrian colleagues, but a special prestige of his own. This high official had little difficulty in persuading himself that he had the same rights to the throne as his suzerain in Egypt. To guard against the ambition of the Syrian *nāʾibs*, Cairo took care to change them continually (Ṣāliḥ b. Yaḥyā, *Taʾrīkh āl Buḥtur*). Never did instability of government and greed of rulers, uncertain of the morrow, attain such proportions. Lebanon continued to enjoy a kind of autonomy. The dissenting Muslims of the Lebanese highlands—Druze and Imāmīs—took advantage of the troubles of the Mamlūks, occupied with the Franks and Mongols, to proclaim their independence. All the forces of Syria had to be mobilised, and a long and bitter war followed (692-704/1293-1305), which ended in the complete destruction of the rebels and the devastation of central Lebanon.

The Mongol Il Khāns of Persia were burning to avenge the military defeats which the Mamlūks had inflicted upon them. The most energetic of these sovereigns, Ghazan (694-703/1295-1304), in 698/1299 secured the support of the Armenians and Georgians as well as of the Franks of Cyprus, and routed the Mamlūks near Ḥimṣ. The troops occupied Damascus, and advanced up to Ghazza. The Egyptians having again invaded Syria, Ghazan recrossed the Euphrates to meet them, but he was defeated in 502/1303 at Mardj al-Ṣuffar [*q.v.*] near Damascus. Syria had nothing to gain by the coming of the Burdjīs, who in 784/1382 replaced the Baḥrī dynasty. They "preserved," Ibn Iyās tells us, "the old laws", that is to say the anarchical rule of their predecessors. Sultan Faradj (801-15/1399-1412 [*q.v.*]) had to begin the reconquest of Syria no less than seven times. The year 1401/803-4 coincided with the invasion of Tīmūr [*q.v.*]. After the capture of Aleppo, which they sacked, his hordes appeared before Damascus. The town having agreed to surrender, the Tīmūrid forces plundered it methodically. The majority of the able-bodied inhabitants were carried off into slavery, especially artists, architects, workers in steel and glass. They were almost all taken to Samarḳand. Fire was then set to the city, to the mosque of the Umayyads and other monuments. Tīmūr led back his army and left Syria a prey to epidemics and bands of brigands. Meanwhile, on the plateaux of Anatolia, the power of the Ottomans was gathering. The capture of Constantinople (857/1453) had increased their ambition. Death alone prevented Meḥemmed II Fātiḥ from invading Syria. His successors did not cease preparations. Ḳāʾitbāy (872-901/1468-96) and Bāyezīd II [*q.v.*] signed a treaty of peace, but it was only to be a truce.

The destruction of Baghdād by Hülegü and the fall of the ʿAbbāsid caliphate had shifted the centre of the Muslim world to the west of the Euphrates, and the cultural and religious pre-eminence within the Arab world of Cairo and, to a lesser extent, Damascus, was irrevocably established. Arabic literature entered into one of its most active and quantitatively significant phases during the Mamlūk period, although this literary production still needs fuller evaluation (as does that also of Turkish writers within the ethnically Ḳipčaḳ Turkish Baḥrī Mamlūk society). See MAMLŪKS. Bibl., section (i) (b). It is, however, true that it tended to be an age of epitomisers, compilers, authors of handbooks and encyclopaedias. They were interested in collecting knowledge and learning it by heart. Among the encyclopaedists a special place must be given to

the worthy Shihāb al-Dīn Ibn Faḍl Allāh al-ʿUmarī, author of the *Masālik al-abṣār*, a voluminous compilation of a historical, geographical and literary character for the use of officials of the Mamlūk chancellery. We may next mention Abu 'l-Fidā' [*q.v.*], historian and geographer, and the geographer Shams al-Dīn al-Dimashḳī (d. 727/1327), markedly inferior to his predecessor al-Muḳaddasī [*q.v.*]. The versatile al-Dhahabī [*q.v.*] was born in Mesopotamia but lived and died in Damascus (784/1348 or 753/1352). Ibn ʿArabshāh (d. 854/1450) was the author of a history of Tīmūr. Al-Ṣafadī (d. 764/1363 [*q.v.*]) compiled a great biographical dictionary, Ṣāliḥ b. Yaḥyā (d. 839/1436), the author of the *Taʾrīkh Bayrūt*, has left us, in this work on the Amīrs of the Gharb, the best contribution to the history of the Lebanon and a valuable supplement to the annals of the Frankish states. Ibn Taymiyya and his pupil Ibn Ḳayyim al-Djawziyya [*q.vv.*] were amongst the most original figures of this period. Their writings covered the whole field of Islamic studies. They were eager polemicists and controversialists, concerned with what they viewed as both internal and external threats to Islam; and they are important for transmitting the Ḥanbalī legal and political heritage into later times [see ḤANĀBILA], when it was subsequently picked up by the 12th/18th century Arabian reformer Muḥammad b. ʿAbd al-Wahhāb [see IBN ʿABD AL-WAHHĀB] and by various traditionalist-inclined elements in North Africa [see SALAFIYYA. 1.], Egypt and Syria [see SALAFIYYA. 2.], and Northern India, loosely but not always entirely accurately called Neo-Wahhābī [see MUDJĀHID. 2.].

The departure of the Crusaders marks the end of a period of astonishing economic prosperity. Syrian commerce fell back into stagnation. Little by little, however, necessity forced the resumption of relations with Europe. The decline of Acre, Tyre and Tripoli, ruined by the Mamlūks, and the fall (748/1347) of the Little Armenian kingdom of Cilicia [see SĪS], to which western merchants had first gone, were to the advantage of Beirut. For over a century this town became the principal port of Syria. Near Damascus and opposite Cyprus—the kingdom of the Lusignans and rendezvous of the European shipping—Beirut was every year visited by ships of the Venetians, Genoese, Catalans, Provençals and Rhodians. These various communities had henceforth consuls as their representatives, officially recognised by the Mamlūks and receiving a grant or *djāmakiyya*. On the other hand, the Cairo government regarded them as "hostages" (*rahīna*) (Khalīl al-Ẓāhirī); it held them responsible not only for those under their jurisdiction, but also for acts of hostility by corsairs. The consuls protected pilgrims and intervened if required on behalf of native Christians. Thus we already have the system of capitulations which was to be developed in succeeding centuries [see IMTIYĀZĀT]. For trade during this period, see W. Heyd, *Histoire du commerce du Levant au Moyen-Âge*, ²Leipzig 1923, i, 129-426, ii, 23-64; E. Ashtor, *A social and economic history of the Near East in the Middle Ages*, London 1976, 202 ff., 285 ff.; idem, *Levant trade in the later Middle Ages*, Princeton 1983, esp. 64-102. For the specific connections of Mamlūk Egypt and Syria with the Italian trading cities, see J. Wansbrough, *A Mamluk ambassador to Venice in 913/1507*, in *BSOAS*, xxvi (1963), 503-30, idem, *Venice and Florence in the Mamluk commercial privileges*, in *BSOAS*, xxviii (1965), 483-523; idem, *A Mamlūk commercial treaty concluded with the Republic of Florence 894/1489*, in S.M. Stern (ed.), *Documents from Islamic chanceries*, Oxford 1966, 39-79; idem, *The safe-conduct in Muslim chancery practice*, in *BSOAS*, xxxiv (1971), 20-35.

Syria under the Ottomans. With the opening of the 10th/16th century the rule of the Mamlūks had begun to break up. Their exactions had exasperated the populace. The Ottoman sultan, Selīm I [*q.v.*], resolved to take advantage of the occasion to invade Syria. Taking the initiative, the Mamlūk sultan, Ḳānṣūḥ al-Ghawrī [*q.v.*] mobilised his forces, and marched via Damascus and Aleppo towards Anatolia. The two armies met at Dābiḳ, a day's journey north of Aleppo. The Turkish artillery and the Janissary infantry scattered disorder through the Egyptian ranks. Ḳānṣūḥ disappeared in the disaster of Dābiḳ (25 Radjab 922/24 August 1516 [see MARDJ DĀBIḲ]). Aleppo, Damascus and the towns of Syria opened their gates to the conqueror who went on to Egypt and put an end to Mamlūk rule. The Turks retained at first the territorial divisions or *niyāba*. The Mamlūk Ghazālī, *nāʾib* of Damascus, had gone over to the Ottoman camp after Dābiḳ. The renegade was in return given the administration of the country except the *niyāba* of Aleppo, which was reserved for a Turkish Pasha.

On the death of Selīm I (926/1520), Ghazālī had himself proclaimed sultan under the name of al-Malik al-Ashraf. He was defeated and killed at Ḳābūn at the gates of Damascus (927/1521). Before the end of the 10th/16th century, Syria had become divided into three great *pashaliks*: 1. Damascus, comprising ten *sandjaks* or prefectures, the chief of which were Jerusalem, Ghazza, Nābulus, Ṣaydā and Beirut; 2. Tripoli, including the *sandjaks* of Ḥimṣ, Ḥamā, Salamiyya and Djabala; 3. Aleppo, including all North Syria, except ʿAynṭāb, which was included in the *pashalīk* of Marʿash. In the century following, the *pashalīk* of Ṣaydā was created to include Lebanon. In its main outlines, this administrative division lasted till the middle of the 18th century, when the centre of government of Ṣaydā was moved to Acre.

The Imperial *Dīwān* in Istanbul was only interested in Syria in so far as it enabled it to watch Egypt, and to levy upon its resources contributions to the expenses of the palace and for foreign wars. The taxes, which were put up to auction, went to the highest bidder, who became the *multazim* [see MÜLTEZIM]. According to a Venetian Consular report, the *pashalīk* was worth 80,000 to 100,000 ducats (probably the silver ducat, the Venetian *grosso*, whence *ḳirsh* pl. *ḳurūsh*, or piastre = 5 francs). The Pashas only administered directly the important towns and their immediate neighbourhood. The interior of the country was left to the old feudal lords, whose number and influence had increased since the Mamlūks: Bedouin *amīrs*, Turkomans, Mutawālīs, Druze and Nuṣayrīs. The Porte only asked them to pay the tribute, or *mīrī*, without worrying if it saw them fighting with its own representatives. Every year the Turkish Pasha, at the head of his artillery and Janissaries, set out to collect the taxes. The force lived on the country and laid it waste if the inhabitants resisted. It is not therefore remarkable that agriculture, the principal resource of Syria, declined, the population diminished, and the country districts emptied in favour of the Lebanon and mountainous districts, where the harassed people could find asylum.

The instability of their position increased the rapacity of the Turkish functionaries. Damascus saw 133 Pashas in 180 years. This period saw the rise of Fakhr al-Dīn Maʿn [*q.v.*], the champion of Syrian independence (1583-1635), the Mutawālī *amīrs*, the Banū Ḥarfūsh, lords of Baʿlabakk and the Biḳāʿ, the Banū Manṣūr b. Furaykh, Bedouin *shaykhs*, who carved out for themselves an appanage in Palestine and in the

region of Nābulus. These feudal lords were fairly well-organised in spite of their cupidity, and they were able to defend their gains from the arbitrary Turk. By sending round the Cape the traffic of the Middle East, the Portuguese occupation of India adversely affected Syria. The harbour of Beirut remained empty. Tripoli at first, then—thanks to the initiative of Fakhr al-Dīn—Sidon attracted European ships, which came for cargoes of silk and cotton. Aleppo, thanks to its location between Mesopotamia, the sea, and the Anatolian provinces whose market it was, and the situation there of a factory of the English Levant Company, remained the principal depot on the direct route to the Persian Gulf and was for three centuries the chief commercial centre of Northern Syria.

The decay of the Ottoman administrative system in Syria, with its concomitant rapid turnover of governors in Damascus, had the effect of increasing the power of the Janissary garrison troops of the Ottomans there, and subsequently, by the end of the 17th century, in Aleppo also. The Janissaries came in fact to be divided into two groups, the older-established ones being designated *Yerliyya* (< Tkish. *yerli* "local"), whilst new contingents sent out from Istanbul were known by various local corruptions of the Turkish term *Kapî Kullarî* "slaves of the Porte".

The governorship of Naṣūḥ Pasha (1708-14) was a turning point in the history of the Ottoman province of Damascus, in that his was the first of a series of longer tenures of office, giving the province a degree of stability which it had previously lacked. A powerful family, the ʿAẓms, then emerged in the 18th century, and extended its quasi-dynastic power from Damascus as far as Tripoli, Sidon and, at times, Aleppo. The rule in Damascus of Asʿad al-ʿAẓm (1743-57) was an unprecedentedly long governorship, later to be remembered by the people as one of justice and peace.
